[56] Mylius (*Phil, ref*., p. 106) says that the masculine and feminine components of the stone must first be killed “that they may be brought to life again in a new and incorruptible resurrection, so that thereafter they may be immortal.” The stone is also compared to the future resurrected body as a “corpus glorificatum.” The “Aurea hora,” or “Aurora consurgens” (*Art. aurif*., I, p. 201) says it is “like to a body which is glorified in the day of judgment.” Cf. de Hoghelande, *Theatr. chem*., I, p. 189; “Consilium coniugii,” *Ars chemica* (1566), p. 128; “Aurea hora,” *Art. aurif*., I, p. 195; Djabir, “Le Livre de la miséricorde,” in Berthelot, *La Chimie au moyen age*, III, p. 188; “Le Livre d’Ostanès,” in ibid., p. 117; Comarius, in Berthelot, *Alch. grecs*, IV, xx, 15; Zosimos, in ibid., III, viii, 2, and III, i, 2; *Turba phil*., ed. Ruska, p. 139; Michael Maier, *Symbola aureae mensae* (1617), p. 599; *Rosarium philosophorum* (1550), fol. 2a, IV, illustration.

[57] “Aphorismi Basiliani,” *Theatr. chem*., IV (1613), p. 368; de Hoghelande, ibid., (1602), p. 178; Dorn, “Congeries,” ibid., I, p. 585; and many other places.

[58] *Philosophia reformata* (1622), p. 21.

[59] Koepgen (see above, p. 59n.), rightly speaks of the “circular thinking” of the Gnostics. This is only another term for totality or “all-round” thinking, since, symbolically, roundness is the same as wholeness.

[60] Berthelot, *Alch. grecs*, IV, xx. According to F. Sherwood Taylor, in “A Survey of Greek Alchemy,” pp. 109ff., this is probably the oldest Greek text of the 1st century. Cf. also Jensen, *Die ālteste Alchemie*.

[61] Berthelot, III, *iff*.

[62] Scott, *Hermetica*.

[63] *Psychology and Alchemy*, pars. 401ff.

[64] Berthelot, *Alch. grecs*, II, *if*.

[65] Very early among the Greek alchemists we encounter the idea of the “stone that has a spirit” (Berthelot, *Alch. grecs*, III, vi). The “stone” is the *prima materia*, called *hyle* or chaos or *massa confusa*. This alchemical terminology was based on Plato’s *Timaeus*. Joannes C. Steeb (*Coelum sephiroticum Hebraeorum*, 1679) says: “Neither earth, nor air, nor fire, nor water, nor those things which are made of these things nor those things of which these are made, should be called the *prima materia*, which must be the receptacle and the mother of that which is made and that which can be beheld, but a certain species which cannot be beheld and is formless and sustains all things” (p. 26). The same author calls the *prima materia* “the primeval chaotic earth, Hyle, Chaos, the abyss, the mother of things.… That first chaotic matter … was watered by the streams of heaven, and adorned by God with numberless Ideas of the species.” He explains how the spirit of God descended into

matter and what became of him there (p. 33): “The spirit of God fertilized the upper waters with a peculiar fostering warmth and made them as it were milky.… The fostering warmth of the Holy Spirit brought about, therefore, in the waters that are above the heavens [*aquis supracoelestibus*; cf. Genesis 1:7], a virtue subtly penetrating and nourishing all things, which, combining with light, generated in the mineral kingdom of the lower regions the mercurial serpent [this could refer just as well to the caduceus of Aesculapius, since the serpent is also the origin of the *medicina catholica*, the panacea], in the vegetable kingdom the blessed greenness [chlorophyll], in the animal kingdom a formative virtue, so that the supracelestial spirit of the waters united in marriage with light may justly be called the soul of the world.” “The lower waters are darksome, and absorb the outflowings of light in their capacious depths” (p. 38). This doctrine is based on nothing less than the Gnostic legend of the Nous descending from the higher spheres and being caught in the embrace of Physis. The Mercurius of the alchemists is winged (“volatile”). Abu’l-Qāsim Muhammad (*Kitāb al’ilm al muktasab*, etc., ed. Holmyard), speaks of “Hermes, the volatile” (p. 37), and in many other places he is called a “spiritus.” Moreover, he was understood to be a Hermes *psychopompos*, showing the way to Paradise (Michael Maier, *Symbola*, p. 592). This is very much the role of a redeemer, which was attributed to the Nous in “Ερμοῦ πρὸς Τάτ .” (Scott, *Hermética*, I, pp. 149ff.). For the Pythagoreans the soul was entirely devoured by matter, except for its reasoning part. (Zeller, *Die Philosophie der Griechen*, III, II, p. 158.)

In the old “Commentariolum in Tabulam smaragdinam” (*Ars chemica*), Hortulanus speaks of the “massa confusa” or the “chaos confusum” from which the world was created and from which also the mysterious *lapis* is generated. The *lapis* was identified with Christ from the beginning of the 14th century (Petrus Bonus, *Pretiosa margarita*, 1546). Orthelius (*Theatr. chem*., VI, p. 431) says: “Our Saviour Jesus Christ … partakes of two natures.… So likewise is that earthly saviour made up of two parts, the heavenly and the earthly.” In the same way the Mercurius imprisoned in matter was identified with the Holy Ghost. Johannes Grasseus (“Area arcani,” *Theatr. chem*., VI, p. 314) quotes: “The gift of the Holy Spirit, that is the lead of the philosophers which they call the lead of the air, wherein is a resplendent white dove which is called the salt of the metals, in which consists the magistery of the work.”

Concerning the extraction and transformation of the Chaos, Christopher of Paris (“Elucidarius artis transmutatoriae,” *Theatr. chem*., VI, p. 228) writes: “In this Chaos the said precious substance and nature truly exists potentially, in a single confused mass of the elements. Human reason ought therefore to apply itself to bringing our heaven into actuality.” “Our heaven” refers to the microcosm and is also called the “quintessence.” It is “incorruptible” and “immaculate.” Johannes de Rupescissa (*La Vertu et la Propriété de la Quinte Essence*, 1581) calls it “le ciel humain.” It is clear that the philosophers projected the vision of the golden and blue circle onto their *aurum philosophicum* (which was named the “rotundum”; see Maier, *De circulo*, 1616, p. 15) and onto the blue quintessence. The terms chaos and *massa confusa* were in general use, according to the testimony of Bernardus Sylvestris, a contemporary of William of Champeaux (1070–1121). His work, *De mundi universitate libri duo*, had a widespread influence. He speaks of the “confusion of the primary matter, that is, Hyle” (p. 5, li. 18), the “congealed mass, formless chaos, refractory matter, the face of being, a discolored mass discordant with itself” (p. 7, li. 18–19), “a mass of confusion” (p. 56, XI, li. 10). Bernardus also mentions the *descensus spiritus* as follows: “When Jove comes down into the lap of his bride, all the world is moved and would urge the soil to bring forth” (p. 51, li. 21–22). Another variant is the idea of the King submerged or concealed in the sea (Maier, *Symbola*, p. 380; “Visio Arislei,” *Art. aurif*., I, pp. 146ff.). [Cf. *Psychology and Alchemy*, pars. 434ff.]

[66] For instance, the genius of the planet Mercury reveals the mysteries to Pseudo-Democritus. (Berthelot, *Alch. grecs*, I, Introduction, p. 236.)

[67] J. de Rupescissa, *La Vertu*, p. 19.

[68] Djabir, in *La Livre de la Miséricorde*, says that the philosophers' stone is equal to a microcosm. (Berthelot, *La Chimie au moyen âge*, III, p. 179.)

[69] It is difficult not to assume that the alchemists were influenced by the allegorical style of patristic literature. They even claimed some of the Fathers as representatives of the Royal Art, for instance Albertus Magnus, Thomas Aquinas, Alanus de Insulis. A text like the "Aurora consurgens" is full of allegorical interpretations of the scriptures. It has even been ascribed to Thomas Aquinas. Nevertheless, water was in fact used as an allegory of the Holy Spirit: "Water is the living grace of the Holy Spirit" (Rupert, Abbot of Deutz, in Migne, *P.L.*, vol. 169, col. 353). "Flowing water is the Holy Spirit" (Bruno, Bishop of Würzburg, in Migne, *P.L.*, vol. 142, col. 293). "Water is the infusion of the Holy Spirit" (Garnerius of St. Victor, in Migne, *P.L.*, vol. 193, col. 279). Water is also an allegory of Christ's humanity (Gaudentius, in Migne, *P.L.*, vol. 20, col. 983). Very often water appears as dew (*ros Gedeonis*), and dew, likewise, is an allegory of Christ: "Dew is seen in the fire" (Romanus, *De theophania*, in Pitra, *Analecta sacra*, I, p. 21). "Now has Gideon's dew flowed on earth" (Romanus, *De nativitate*, ibid., p. 237). The alchemists thought that their *aqua permanens* was endued with a virtue which they called "flos" (flower). It had the power of changing body into spirit and giving it an incorruptible quality (*Turba phil*., ed. Ruska, p. 197). The water was also called "acetum" (acid), "whereby God finished his work, whereby also bodies take on spirit and are made spiritual" (*Turba, p. 126*). Another name for it is "spiritus sanguis" (blood spirit, *Turba*, p. 129). The *Turba* is an early Latin treatise of the 12th century, translated from an originally Arabic compilation dating back to the 9th and 10th centuries. Its contents, however, stem from Hellenistic sources. The Christian allusion in "spiritualis sanguis" might be due to Byzantine influence. *Aqua permanens* is quicksilver, *argentum vivum* (Hg). "Our living silver is our clearest water" (*Rosarium phil*., in *Art. aurif*., II, p. 213). The *aqua* is also called fire (ibid., p. 218). The body, or substance, is transformed by water and fire, a complete parallel to the Christian idea of baptism and spiritual transformation.

[70] Missale Romanum. The rite is old and was known as the "lesser (or greater) blessing of salt and water" from about the 8th century.

[71] In "Isis the Prophetess to her Son Horus" (Berthelot, *Alch. grecs*, I, xiii), an angel brings Isis a small vessel filled with transparent water, the arcanum. This is an obvious parallel to the krater of Hermes (*Corpus Hermeticum*, I) and of Zosimos (Berthelot, III, li, 8), which was filled with *nous*. In the φυσικὰ καὶ μυστικά. of Pseudo-Democritus (Berthelot, II, i, 63), the divine water is said to effect a transformation by bringing the "hidden nature" to the surface. And in the treatise of Comarius we find the miraculous waters that produce a new springtime (Berthelot, Traductions, p. 281).

[72] Gnosius (in *Hermetis Trismegisti Tractatus vere Aureus, cum Scholiis Dominici Gnosii*, 1610, pp. 44 and 101) speaks of "Hermaphroditus noster Adamicus" when treating of the quaternity in the circle. The centre is the "mediator making peace between enemies," obviously a uniting symbol (cf. *Psychological Types*, 1923 edn., pp. 234ff. and Def. 51). [Further developed in *Aion*, pp. 194ff—EDITORS.] The hermaphrodite is born of the "self-impregnating dragon" (*Art. aurif*., I, p. 303), who is none other than Mercurius, the *anima mundi*. (Maier, *Symbola*, p. 43; Berthelot, I, 87.) The uroboros is an hermaphroditic symbol. The hermaphrodite is also called the Rebis ("made of two"), frequently depicted in the form of an apotheosis (for instance in the *Rosarium*, in *Art. aurif*., II, pp. 291 and 359; Reusner, *Pandora*, 1588, p. 253).

[73] *Aurora Consurgens* (ed. von Franz, p. 129) says, quoting Senior: "There is One thing that never dieth, for it continueth by perpetual increase, when the body shall be glorified in the final resurrection of the dead.… Then saith the second Adam to the first and to his sons: Come ye blessed of my Father," etc.

[74] Alphidius (12th cent.?): "Of them is born the modern light (*lux moderna*), to which no light is like in all the world." (*Rosarium*, in *Art. aurif.*, II, p. 248; "Tractatus aureus," *Ars chem*.)

[14] Cf. *Psychological Types*, Def. 30.

[15] “The world is narrow and the brain is wide;
Thoughts in the head dwell lightly side by side,
Yet things in space run counter and fall foul.”
—Schiller, *Wallensteins Tod*, II, 2.

[16] “Not being.”

[17] Cornford, p. 58, slightly modified.

[18] Theodor Gomperz (*Greek Thinkers*, III, p. 215) mentions two primary substances which are designated as follows in Plato’s *Philebus:* limit, unlimited; the same, the other; the divisible, the indivisible. He adds that Plato’s pupils would have spoken of “unity” and of “the great and the small” or of “duality.” From this it is clear that Gomperz regards the “Same” and the “indivisible” as synonymous, thus overlooking the resistance of the “Other,” and the fundamentally fourfold nature of the world soul. (See below.)

[19] [The version here given is translated from the German text of Otto Apelt (*Plato: Timaios und Kritias, p*. 52) cited by the author.—TRANS.]

[20] 
Τῆς ἀμερίστου καὶ ἀεὶ κατὰ ταὐτὰ ἐχούσης οὐσίας καὶ τῆς αὖ περὶ τὰ σώματα γιγνομένης μεριστῆς, τρίτον ἐξ ἀμφοῖν ἐν μέσῳ συνεκεράσατο οὐσίας εἶδος· τῆς τε ταὐτοῦ φύσεως αὖ πέρι καὶ τῆς τοῦ ἑτέρου, καὶ κατὰ ταὐτὰ συνέστησεν ἐν μέσῳ τοῦ τε ἀμεροῦς αὐτῶν καὶ τοῦ κατὰ τὰ σώματα μεριστοῦ· καὶ τρία λαβὼν αὐτὰ ὄντα συνεκεράσατο εἰς μίαν πάντα ἰδέαν, τὴν θατέρου φύσιν δύσμεικτον οὖσαν εἰς ταὐτὸν συναρμόττων βίᾳ, μειγνὺς δὲ μετὰ τῆς οὐσίας.

Cornford (pp. 59–60) translates as follows: “Between the indivisible Existence that is ever in the same state and the divisible Existence that becomes in bodies, he compounded a third form of Existence composed of both. Again, in the case of Sameness and in that of Difference, he also on the same principle made a compound intermediate between that kind of them which is indivisible and the kind that is divisible in bodies. Then, taking the three, he blended them all into a unity, forcing the nature of Difference, hard as it was to mingle, into union with Sameness, and mixing them together with Existence” (35A).

[21] Cf. *Timaeus* 37C, where the first God is described as the “father” and his creation as the copy of an original “pattern,” which is himself (Cornford, p. 97).

[22] This seems borne out by the fact that the first pair of opposites is correlated with οὐσία (being), and the second with φύσις (nature). If one had to choose between οὐσία and φύσις, the latter would probably be considered the more concrete of the two.

[23] Reprinted as Bollingen Series III, *Plato: Timaeus and Critias*, p. 71.

[24] *Timaeus* 36B (Cornford, p. 73).

[25] Taylor, p. 75.

[1] Here one might recall the legend that, after the death of Christ, Mary betook herself with John to Ephesus, where she is said to have lived until her death.

[1] *Panarium (Contra octoginta haereses*) LXXIX. See Migne. *P.G.*, vol. 41, cols. 739ff.

[3] “Quod genus lubricum et in errorem proclive, ac pusilli admodum et angusti animi esse solet.”

[4] The special emphasis I lay on archetypal predispositions does not mean that mythologems are of exclusively psychic origin. I am not overlooking the social conditions that are just as necessary for their production.

[5] The *ka* of the king even has an individual name. Thus “the living *ka* of the Lord of the Two Lands,” Thutmosis III, was called the “victorious bull which shines in Thebes.” Erman, *Life in Ancient Egypt*, p. 307.

[6] The “doubling” of the spirit occurs also in the Old Testament, though more as a “potency” emanating from God than as an hypostasis. Nevertheless, Isaiah 48:16 looks very like a hypostasis in the Septuagint text: Κύριος Κύριος ἀπεστειλέν με καὶ τὸ πνεῦμα αὐτοῦ (The Lord the Lord sent me and his spirit).

[7] For an instructive account of the Greek background *see* Harrison, *Themis*, ch. 1.

[8] Cf. the detailed exposition of the death and rebirth of the divine κοῦρος, in Harrison, *Themis*.

[9] The relation of Father to Son is not arithmetical, since both the One and the Other are still united in the original Unity and are, so to speak, eternally on the point of becoming two. Hence the Son is eternally being begotten by the Father, and Christ’s sacrificial death is an eternally present act.

[10] The *πάθη* of Dionysus would be the Greek parallels.

[1] The so-called “Comma Johanneum,” which would seem to be an exception, is a demonstrably late interpolation of doubtful origin. Regarded as a dogmatic and revealed text *per se*, it would afford the strongest evidence for the occurrence of the Trinity in the New Testament. The passage reads (I John 5:8: “And there are three that bear witness: the Spirit, and the water, and the blood; and these three are one” (DV). That is to say, they agree in their testimony that Christ “came in water and in blood” (verse 6, DV). [In verse 8, AV has “and these three agree in one”; RSV: “and these three agree.”—TRANS.] The Vulgate has the late interpolation in verse 7: “Quoniam tres sunt, qui testimonium dant *in caelo: Pater, Verbum et Spiritus Sanctus:* et hi tres unum sunt.” Note that in the Greek text the three neuter nouns πνεῦμα, ὕδωρ, and αἷμα are followed by a masculine plural: οἱ τρεῖς εἰς τὸ ἕν εἰσιν.

[2] II Cor. 13:14 (AV). The baptismal formula “In the name of the Father and the Son and the Holy Ghost” comes into this category, though its authenticity is doubted. It seems that originally people were baptized only in the name of Jesus Christ. The formula does not occur in Mark and Luke. Cf. Krueger, *Das Dogma von der Dreieinigkeit und Gottmenschheit in seiner geschichtlichen Entwicklung*, p. 11.

[3] I Peter 1:2 (RSV).

[4] Apostolic Fathers, trans. by Lake, I, p. 89. Clement was the third bishop of Rome after Peter, according to Irenaeus. His dating is unsure, but he seems to have been born in the second half of the 2nd cent.

[25] "The begetter is the Father, the begotten is the Son, and that which proceeds from both is the Holy Spirit." Ibid., p. 1195, D.

[1] Cf. my “On the Nature of the Psyche,” pp. 200ff.

[2] I have often been asked where the archetype comes from and whether it is acquired or not. This question cannot be answered directly. Archetypes are, by definition, factors and motifs that arrange the psychic elements into certain images, characterized as archetypal, but in such a way that they can be recognized only from the effects they produce. They exist preconsciously, and presumably they form the structural dominants of the psyche in general. They may be compared to the invisible presence of the crystal lattice in a saturated solution. As *a priori* conditioning factors they represent a special, psychological instance of the biological “pattern of behaviour,” which gives all living organisms their specific qualities. Just as the manifestations of this biological ground plan may change in the course of development, so also can those of the archetype. Empirically considered, however, the archetype did not ever come into existence as a phenomenon of organic life, but entered into the picture with life itself.

[3] Cf. the detailed argument which I have put forward in “On the Nature of the Psyche,” pp. 200ff.

[4] It is very probable that the activation of an archetype depends on an alteration of the conscious situation, which requires a new form of compensation.

[5] Koepgen makes the following trenchant remark in his *Gnosis des Christentums*, p. 198: “If there is such a thing as a history of the Western mind … it would have to be viewed from the standpoint of the personality of Western man, which grew up under the influence of trinitarian dogma.”

[6] “Deus est circulus cuius centrum est ubique, circumferentia vero nusquam” (God is a circle whose centre is everywhere and the circumference nowhere). This definition occurs in the later literature. In the form “Deus est sphaera infinita” (God is an infinite sphere) it is supposed to have come from the *Liber Hermetis*, *Liber Termegisti*, Cod. Paris. 6319 (14th cent.); Cod. Vat. 3060 (1315). Cf. Baumgartner, *Die Philosophie des Alanus de Insults*, p. 118. In this connection, mention should be made of the tendency of Gnostic thought to move in a circle, eg: “In the beginning was the Word, and the Word was with God, and God was the Word.” Cf. Leisegang, *Denkformen*, pp. 60ff.

[7] Koepgen (p. 307) puts it very aptly: “Jesus relates everything to his ego, but this ego is not the subjective ego, it is a cosmic ego.”

[8] Cf. Jacob’s struggle with the angel at the ford.

[9] “Reflection” should be understood not simply as an act of thought, but rather as an attitude. [Cf. *Psychological Types*, Def. 8.—EDITORS.] It is a privilege born of human freedom in contradistinction to the compulsion of natural law. As the word itself testifies (“reflection” means literally “bending back”), reflection is a spiritual act that runs counter to the natural process; an act whereby we stop, call something to mind, form a picture, and take up a relation to and come to terms with what we have seen. It should, therefore, be understood as an act of *becoming conscious*.

[10] “Active spiration” is a manifestation of life, an immanent act of Father and Son; “passive spiration,” on the other hand, is a quality of the Holy Ghost. According to St. Thomas, spiration does not proceed from the intellect but from the will of the Father and Son. In relation to the Son the Holy Ghost is not a spiration, but a procreative act of the Father.

[11] Cf. the Acts of Thomas (trans. by James, p. 388): “Come, O communion of the male; come, she that knoweth the mysteries of him that is chosen.… Come, holy dove that beareth the twin young; come, hidden mother.”

[12] For this seeming *contradictio in adjecto* see "On the Nature of the Psyche," p. 172.

[13] The existence of such process is evidenced by the content of dreams.

[14] *Die Gnosis des Christentums*, p. 194.

[15] In the *Rituale Romanum* ("On the Exorcism of Persons Possessed by the Devil": 1952 edn., pp. 839ff.), states of possession are expressly distinguished from diseases. We are told that the exorcist must learn to know the signs by which the possessed person may be distinguished from "those suffering from melancholy or any morbid condition." The criteria of possession are: "… speaking fluently in unknown tongues or understanding those who speak them; revealing things that take place at a distance or in secret; giving evidence of greater strength than is natural in view of one's age or condition; and other things of the same kind." The Church's idea of possession, therefore, is limited to extremely rare cases, whereas I would use it in a much wider sense as designating a frequently occurring psychic phenomenon: any autonomous complex not subject to the conscious will exerts a possessive effect on consciousness proportional to its strength and limits the latter's freedom. On the question of the Church's distinction between disease and possession, see Tonquédec, *Les Maladies nerveuses ou mentales et les manifestations diaboliques*.

[16] I am always coming up against the misunderstanding that a psychological treatment or explanation reduces God to "nothing but" psychology. It is not a question of God at all, but of man's ideas of God, as I have repeatedly emphasized. There are people who do have such ideas and who form such conceptions, and these things are the proper study of psychology.

[1] “Feeling is all; / Names are sound and smoke.” [This problem of the “fourth” in *Faust* is also discussed in *Psychology and Alchemy*, pars. 201ff.—EDITORS.]

[2] Cf. *Psychological Types*, Def. 30.

[3] Cf. the hymn of Valentinus (Mead, *Fragments of a Faith Forgotten*, p. 307): “All things depending in spirit I see; all things supported in spirit I view; flesh from soul depending; soul by air supported; air from aether hanging; fruits born of the deep; babe born of the womb.” Cf. also the προσφυὴς ψυχή of Isidorus, who supposed that all manner of animal qualities attached to the human soul in the form of “outgrowths.” [Cf. *Aion*, par. 370.]

[4] Cf. the alchemical symbol of the *umbra solis* and the Gnostic idea that Christ was born “not without some shadow.”

[5] The four ῥιζώματα of Empedocles.

[6] “On the Fourfold Root of the Principle of Sufficient Reason,” in *Two Essays by Arthur Schopenhauer*.

[7] In Plato the quaternity takes the form of a cube, which he correlates with earth. Lü Pu-wei (*Frühling und Herbst*, trans. into German by Wilhelm, p. 38) says: “Heaven’s way is round, earth’s way is square.”

[8] In her “Die Gestalt des Satans im Alten Testament” (*Symbolik des Geistes*, pp. 153ff”.), Riwkah Scharf shows that Satan is in fact one of God’s sons, at any rate in the Old Testament sense.

[9] The Suffix -*el* means god, so Satanaël = Satan-God.

[9a] Michael Psellus, “De Daemonibus,” 1497, fol. NVv, ed. M. Ficino. Cf. also Epiphanius, *Panarium*, Haer. XXX, in Migne, *P.G.*, vol. 41, cols. 406ff.

[10] Cf. Przywara’s meditations on the Cross and its relation to God in *Deus Semper Major*, I. Also the early Christian interpretation of the Cross in the Acts of John, trans. by James, pp. 228ff.

[11] See *Psychology and Alchemy*, fig. 28.

[12] Cf. *Psychology and Alchemy*, pars. 315ff., and the first paper in this volume, pars. 122ff.

[13] As this doctrine has already got beyond the stage of “conclusio probabilis” and has reached that of “conclusio certa,” the “definitio sollemnis” is now only a matter of time. The Assumption is, doctrinally speaking, a “revelatum implicitum”; that is to say, it has never been revealed explicitly, but, in the gradual course of development, it became clear as an original content of the Revelation. (Cf. Wiederkehr, *Die leibliche Aufnahme der allerseligsten Jungfrau Maria in den Himmel*.) From the psychological standpoint, however, and in terms of the history of symbols, this view is a consistent and logical restoration of the archetypal situation, in which the exalted status of Mary is revealed implicitly and must therefore become a “conclusio certa” in the course of time.

[This note was written in 1948, two years before the promulgation of the dogma. The bodily assumption of Mary into heaven was defined as a dogma of the Catholic faith by Pope Pius XII in November 1950 by the Apostolic Constitution *Munificentissimus Deus (Acta Apostolicae Sedis*, Rome, XLII, pp. 753ff), and in an Encyclical Letter, *Ad Caeli Reginam*, of October 11, 1954, the same Pope instituted a feast to be observed yearly in honour of Mary’s “regalis dignitas” as Queen of Heaven and Earth (*Acta Apostolicae Sedis*, XLVI, pp. 625ff.).—EDITORS.]

[14] Although the assumption of Mary is of fundamental significance, it was not the first case of this kind. Enoch and Elijah were taken up to heaven with their bodies, and many holy men rose from their graves when Christ died.

[15] Her divinity may be regarded as a tacit *conclusio probabilis*, and so too may the worship or adoration (*προσκύνησις*) to which she is entitled.

[16] Koepgen (p. 185) expresses himself in similar terms: “The essence of the devil is his hatred for God; and God allows this hatred. There are two things which Divine Omnipotence alone makes possible: Satan’s hatred and the existence of the human individual. Both are by nature completely inexplicable. But so, too, is their relationship to God.”

[17] Just how alive and ingrained such conceptions are can be seen from the title of a modern book by Sosnosky, *Die rote Dreifaltigkeit: Jakobiner und Bolscheviken* [“The Red Trinity: Jacobins and Bolsheviks”].

[18] Koepgen’s views are not so far from my own in certain respects. For instance, he savs that “Satan acts, in a sense, as God’s power.… The mystery of one God in Three Persons opens out a new freedom in the depths of God’s being, and this even makes possible the thought of a personal devil existing alongside God and in opposition to him” (p. 186).

[19] Since Satan, like Christ, is a son of God, it is evident that we have here the archetype of the hostile brothers. The Old Testament prefiguration would therefore be Cain and Abel and their sacrifice. Cain has a Luciferian nature because of his rebellious progressiveness, but Abel is the pious shepherd. At all events, the vegetarian trend got no encouragement from Yahweh [Gen. 4:5].

[20] See the first paper in this volume, par. 104.

[21] In antiquity, regard for astrology was nothing at all extraordinary. [Cf. “Synchronicity: An Acausal Connecting Principle,” pars. 872ff., and *Aion*, pars. 127ff.—EDITORS.]

[22] This applies to the zodion of the Fishes. In the astronomical constellation itself, the fish that corresponds approximately to the first 1,000 years of our era is vertical, but the other fish is horizontal.

[23] God’s antithetical nature is also expressed in his androgyny. Priscillian therefore calls him “masculofoemina,” on the basis of Genesis 1:27: “So God created man in his own image … male and female created he them.”

[24] Cf. *Psychology and Alchemy*, pars. 520ff.

[25] Cf. above, pars. 104ff.

[26] *Faust*, Part II, Act 5. (“Earth’s residue to bear / Hath sorely pressed us.” Trans. by Bayard Taylor.)

[27] Cf. James, *The Apocryphal New Testament*, p. 255.

[28] [From a play by Marc Connelly, adapted from stories by Roark Bradford based on American Negro folk-themes.—EDITORS.]

[1] Yahweh approaches the moral problem comparatively late—only in Job. Cf. "Answer to Job," in this volume.

[2] Koepgen (p. 231) therefore calls Jesus, quite rightly, the first "autonomous" personality.

[3] Justin Martyr, *Apologia* II: "that we may not remain children of necessity and ignorance, but of choice and knowledge." Clement of Alexandria, *Stromata*, I, g: "And how necessary is it for him who desires to be partaker of the power of God, to treat of intellectual subjects by philosophizing!" II, 4: "Knowledge accordingly is characterized by faith; and faith, by a kind of divine mutual and reciprocal correspondence, becomes characterized by knowledge." VII, 10: "For by it (Gnosis) faith is perfected, inasmuch as it is solely by it that the believer becomes perfect." "And knowledge is the strong and sure demonstration of what is received by faith." (Trans. by Wilson, I, p. 380; II, pp. 10, 446–47.)

[4] Submission to any metaphysical authority is, from the psychological standpoint, submission to the unconscious. There are no scientific criteria for distinguishing so-called metaphysical factors from psychic ones. But this does not mean that psychology denies the existence of metaphysical factors.

[5] The Church knows that the "discernment of spirits" is no simple matter. It knows the dangers of subjective submission to God and therefore reserves the right to act as a director of conscience.

[6] The "Oxford Movement" was originally the name of the Catholicizing trend started by the Anglican clergy in Oxford, 1833. [Whereas the "Oxford Groups," or "Moral Rearmament Movement," were founded in 1921. also at Oxford, by Frank Buchman as "a Christian revolution … the aim of which is a new social order under the dictatorship of the Spirit of God, and which issues in personal, social racial, national, and supernational renaissance" Buchman, cited in *Webster's International Dictionary*, 2nd edn., 1950—EDITORS.]

[7] Cf. *Psychology and Alchemy*, Part II.

[8] Thomas Aquinas (*Summa theologica*, I, xxxvi, art. 1): "Non habet nomen proprium" (he has no proper name). I owe this reference to the kindness of Fr. Victor White, O.P.

[9] Both these categories are, as we know, attributes of the *lapis philosophorum* and of the symbols of the self.

[10] It should not be forgotten, however, that the opposites which Nicholas had in mind were very different from the psychological ones.

[11] Cf. "Die Gestalt des Satans im Alten Testament," in *Symbolik des Geistes*, pp. 153ff.

[1] In the Greek Church the Trinity is called *τριάς*.

[1] "St. Thomas emphasizes that prophetic revelation is, as such, independent of good morals—not to speak of personal sanctity" *(De veritate*, xii, 5; *Summa theol*., I–II, p. 172). I take this remark from the MS. of an essay on "St. Thomas's Conception of Revelation," by Fr. Victor White, O.P., with the kind permission of the author.

[2] The Axiom of Maria. Cf. *Psychology and Alchemy*, pars. 209f.

[3] Cf. James, *The Apocryphal New Testament*, p. 33.

[4] I am thinking here of the *sola fide* standpoint of the Protestants.

[1] The following account and examination of the principal symbol in the Mass is not concerned either with the Mass as a whole, or with its liturgy in particular, but solely with the ritual actions and texts which relate to the transformation process in the strict sense. In order to give the reader an adequate account of this, I had to seek professional help. I am especially indebted to the theologian Dr. Gallus Jud for reading through and correcting the first two sections.

[2] [This is a translation of the Karl von Weizsäcker version (1875) used here by the author. Elsewhere the Biblical quotations are taken from the AV and occasionally from the RSV and the DV. Following are the Greek and Latin (Vulgate) versions of the italicized portion of this passage.—TRANS.]

"… τοῦτό μού ἐστιν τὸ σῶμα τὸ ὑπὲρ ὑμῶν. τοῦτο ποιεῖτε εἰς τὴν ἐμὴν ἀνάμνησιν. ὡσαύτως καὶ τὸ ποτήριον μετὰ τὸ δειπνῆσαι λέγων· τοῦτο τὸ ποτήριον ἡ καινὴ διαθήκη ἐστὶν ἐν τῷ ἐμῷ αἵματι." .

"… hoc est corpus meum, quod pro vobis tradetur: hoc facite in meam commemorationem. Similiter et calicem, postquam coenavit, dicens: Hic calix novum testamentum est in meo sanguine."

[3] δεῖπνον, 'coena.'

[4] This of course has nothing to do with the official conception of spirit by the Church.

[5] "τὸ σῶμα τὸ ὑπὲρ ὑμῶν."

[6] Kàsemann, *Leib und Leib Christi*, p. 120.

[7] Dr. Jud kindly drew my attention to the equally relevant passage in Malachi 1:10–11: "Who is there even among you that would shut the doors for nought? neither do ye kindle fire on mine altar for nought.… And in every place incense shall be offered unto my name, and a pure offering …"

[8] That is to say, not before he has accomplished the preparatory part of the service. In offering these gifts the priest is not the "master" of the sacrifice. "Rather that which causes them to be sacrificed in the first place is sanctifying grace. For that is what their sacrifice means: their sanctification. The man who each time performs the sacred act is the servant of grace, and that is why the gifts and their sacrifice are always pleasing to God. The fact that the servant may be bad does not affect them in any way. The priest is only the servant, and even this he has from grace, not from himself." Joseph Kramp, S.J., *Die Opferanschauungen der römischen Messliturgie*, p. 148.

[9] Ibid., p. 17.

[1] In the account that follows I have made extensive use of Brinktrine, *Die Heilige Messe in ihrem Werden und Wesen*.

[2] Τύπος τοῦ ἄρτου τῆς εὐχαριστίας.”

[3] That is, in the Roman rite. In the Greek Uniate rites, communion is received in bread *and* wine.

[4] This is the interpretation of Yves, bishop of Chartres (d. 1116).

[5] Cyprian attacks this heretical custom in his letter to Caecilius. Letter 63 to Caecilius, Migne, *P.L.*, vol. 4, cols. 372ff. (trans. by Carey, pp. 181ff.).

[6] “In umbra erat aqua de petra quasi sanguis ex Christo.” The *umbra*, ‘shadow,’ refers to the foreshadowing in the Old Testament, in accordance with the saying: “Umbra in lege, imago in evangelio, veritas in coelestibus” (The shadow in the Law, the image in the Gospel, the truth in Heaven). Note that this remark of Ambrose does not refer to the Eucharist but to the water symbolism of early Christianity in general; and the same is true of the passages from John. St. Augustine himself says: “There the rock was Christ; for to us that is Christ which is placed on the altar of God.” *Tractatus in Joannem*, XLV, 9 (trans. by Innes).

[9] *Corpus Hermeticum*, Lib. IV, 4, in *Hermetica*, I, p. 151.

[10] Strack and Billerbeck, *Kommentar zum Neuen Testament aus Talmud und Midrasch*, II, p. 492.

[11] A collection of Gnostic hymns from the 2nd cent.

[12] Ode VI in *The Odes of Solomon*, ed. Bernard, p. 55, after the J. Rendel Harris version. Cf. the ὕδωρ θεῖον, the *aqua permanens* of early alchemy, also the treatise of Komarius (Berthelot, IV, xx).

[13] “Deus, qui humanae substantiae dignitatem mirabiliter condidisti, et mirabilius reformasti; da nobis per huius aquae et vini mysterium, eius divinitatis esse consortes, qui humanitatis nostrae fieri dignatus est particeps, Jesus Christus …” [Here and throughout this essay the English translation is taken from *The Small Missal*, London, 1924.—TRANS.]

[14] This is *my* interpretation and not that of the Church, which sees in this only an act of devotion.

[15] “Mozarabic” from Arabic *musta‘rib*, ‘Arabianized,’ with reference to the Visigothic-Spanish form of ritual. [The Latin phrases: “Come, O sanctifying one.” “Come, O sanctifying spirit.”—EDITORS.]

[16] The circumambulation from left to right is strictly observed in Buddhism.

[17] The censing is only performed at High Mass.

[18] [“Let my prayer, O Lord, ascend like incense in thy sight.”]

[19] [“May the Lord enkindle in us the fire of his love.” / “I will wash my hands among the innocent.”]

[20] [“Blessed is he that cometh in the name of the Lord.”]

[21] [“Be present, be present in our midst, O Jesus, great High Priest: as thou wert in the midst of thy disciples.”]

[22] According to the edict of the Church these words ought not, on account of their sacredness, to be translated into any profane tongue. Although there are missals that sin against this wise edict, I would prefer the Latin text to stand untranslated.

[23] Klug, in *Theologie and Glaube*, XVIII (1926), 335f. Cited by Brinktrine, p. 192.

[24] “idem ille Christus continetur et incruente immolatur.” Sessio XXII. Denzinger and Bannwart, *Enchiridion Symbolorum*, p. 312.

[25] “Missa est sacrificium hac ratione quia Christus aliquo modo moritur et a sacerdote mactatur” (The Mass is a sacrifice for the reason that in it Christ dies after a certain manner, and is slain by the priest). Hauck, *Realenzyklopädie*, XII, p. 693. The question of the *mactatio* had already been raised by Nicholas Cabasilas of Thessalonica: “De divino altaris sacrificio,” in Migne, *P.G.*, vol. 150, cols. 363ff. The sword as a sacrificial instrument also occurs in the Zosimos visions (see section 3).

[26] Kramp, p. 56.

[27] “Unde et memores, Domine, nos servi tui, sed et plebs tua sancta, eiusdem Christi Filii tui, Domini nostri, tam beatae passionis, nec non et ab inferis resurrectionis, sed et in caelos gloriosae ascensionis: offerimus praeclarae majestati tuae de tuis donis ac datis, hostiam puram, hostiam sanctam, hostiam immaculatam, Panem sanctum vitae aeternae, et Calicem salutis perpetuae.

> “Supra quae propitio ac sereno vultu respicere digneris: et accepta habere, sicuti accepta habere dignatus es munera pueri tui justi Abel, et sacrificium Patriarchae nostri Abrahae: et quod tibi obtulit summus sacerdos tuus Melchisedech, sanctum sacrificium, immaculatam hostiam.
>
> “Supplices te rogamus, omnipotens Deus: jube haec perferri per manus sancti Angeli tui in sublime altare tuum, in conspectu divinae majestatis tuae: ut, quotquot ex hac altaris participatione sacrosanctum Filii tui corpus, et sanguinem sumpserimus, omni benedictione caelesti et gratia repleamur. Per eundem Christum, Dominum nostrum. Amen.”

[28] Eusebius, *Evangelica praeparatio*, I, 10, 11 (Migne, *P.G.*, vol. 21, col. 30).

[29] “Sidik” is a Phoenician name for God. Sir Leonard Woolley gives a very interesting explanation of this in his report on the excavations at Ur: *Abraham: Recent Discoveries and Hebrew Origins*.

[30] Kramp, p. 98.

[31] Rücker, ed., *Ritus baptismi et missae quam descripsit Theodorus ep. Mopsuestanus*.

[32] This unity is a good example of *participation mystique*, which Lévy-Bruhl stressed as being one of the main characteristics of primitive psychology—a view that has recently been contested by ethnologists in a very short-sighted manner. The idea of unity should not, however, be regarded as “primitive” but rather as showing that *participation mystique* is a characteristic of symbols in general. The symbol always includes the unconscious, hence man too is contained in it. The *numinosity* of the symbol is an expression of this fact.

[33] Kramp, p. 55.

[3] Cf. Frazer's *The Golden Bough*, Part III: "The Dying God." For the Eucharistic meal of fish, see *Aion*, pars. 174ff., 181ff.

[4] *Alchimistes*, III, i, 2, 3; III, v; III, vi.

[5] Cf. my paper "The Visions of Zosimos," par. 86, which quotes the relevant passages.

[6] *Alchimistes*, III, li, 8. Cf. supra, par. 313.

[7] Cf. the examples given in *Psychology and Alchemy*, pars. 347f.

[8] Olympiodorus says this is particularly the effect of lead. Cf. Berthelot, II, iv, 43.

[9] The dismemberment motif belongs in the wider context of rebirth symbolism Consequently it plays an important part in the initiation experiences of shamans and medicine men, who are dismembered and then put together again. For details, see Eliade, *Shamanism*, ch. II.

[10] [Cf. Berthelot, III, i, 3 and v, 1–2; and "The Visions of Zosimos," par. 86.—EDITORS.]

[11] Cf. Frazer's *The Golden Bough*, Part IV: *Adonis, Attis, Osiris*, pp. 242ff. and p. 405, and my *Symbols of Transformation*, pars. 594f. Cf. also Colin Campbell, *The Miraculous Birth of King Amon-Hotep III*, p. 142, concerning the presentation of the dead man, Sen-nezem, before Osiris, Lord of Amentet: "In this scene the god is usually represented enthroned. Before and behind him, hanging from a pole, is the dripping skin of a slain bull that was slaughtered to yield up the soul of Osiris at his reconstruction, with the vase underneath to catch the blood."

[12] Cf. Eduard Seler's account in Hastings, *Encyclopedia*, VIII, pp. 615f.

[13] [*Symbols of Transformation*, pars. 309f.; *Psychology and Alchemy*, par. 490.]

[14] Barbers were comparatively well-to-do people in ancient Egypt, and evidently did a flourishing trade. Cf. Erman, *Life in Ancient Egypt*, p. 304: "Barbers, all of whom must … have lived in easy circumstances."

[15] The real author of the *Chymische Hochzeit* was Johann Valentin Andreae. [It appeared under the pseudonym "Christian Rosencreutz," dated 1459, but actually published at Strasbourg, 1616. Concerning Andreae, cf. "The Psychology of the Transference," par. 407 and n. 18.—EDITORS.]

[16] As Andreae must have been a learned alchemist, he might very well have got hold of a copy of the Codex Marcianus and seen the writings of Zosimos. Manuscript copies exist in Gotha, Leipzig, Munich, and Weimar. I know of only one printed edition, published in Italy in the 16th cent., which is very rare.

[17] Hence the "shaving of a man" and the "plucking of a fowl," mentioned further on among the magical sacrificial recipes. A similar motif is suggested by the "changing of wigs" at the Egyptian judgment of the dead. Cf. the picture in the tomb of Sennezem (Campbell, p. 143). When the dead man is led before Osiris his wig is black; afterwards (at the sacrifice in the Papyrus of Ani) it is white.

[18] Plutarch, *Quaestiones convivales*, IV, 5, and Diogenes Laertius, II, §112: Reitzenstein, *Poimandres*, pp. 75f. and 112. In a text named "Ghāya al-hakīm," ascribed to Maslama al-Madjrītī, the following instructions are given when invoking Saturn: "Arrive vêtu à la manière des Juifs, car il est leur patron." Dozy and de Goeje, "Nouveaux documents pour l'étude de la religion des Harraniens," p. 350.

[19] Origen, *Contra Celsum*, VI, 31. Mead, *Pistis Sophia*, ch. 45. Bousset, *Hauptprobleme der Gnosis*, pp. 351ff. Roscher, *Lexikon*, s.v. Kronos, II, col. 1496. The dragon (*κρόνος*) and Kronos are often confused.

[20] Lippmann, *Entstehung und Ausbreitung der Alchemie*, II, p. 229.

[21] Cf. *Aion*, pars. 128f.

[22] "Beatus homo qui invenerit hanc scientiam et cui affluit providentia Saturni." [Ed. von Franz, pp. 37f.]

[23] See the illustration in Reusner, *Pandora* (1588), and in *Le Songe de Poliphile*, trans. Béroalde de Verville (1600). [*Psych. and Alch*., fig. 4.] Mostly the pictures show two lions eating one another. The uroboros, too, is often pictured in the form of two dragons engaged in the same process *(Viridarium chymicum*, 1624).

[24] Cf. the *Rosarium philosophorum*, in the *Artis auriferae* (1593), II, p. 206.

[25] Cf. the Cretan fragment of Euripides (Dieterich, *Eine Mithrasliturgie*, p. 105):

ἁγνὸν δὲ βίον τείνων ἐξ οὗ
Διὸς Ἰδαίου μύστης γενόμην
καὶ νυκτιπόλου Ζαγρέως βούτας
τοὺς ὠμοφάγους δαῖτας τελέσας

(living a holy life, since I have been initiated into the mysteries of the Idaean Zeus, and eaten raw the flesh of Zagreus, the night-wandering shepherd).

[26] [Cf. "The Visions of Zosimos," par. 86, III, i, 3, and—for the reference lower down to "blood"—III, v bis.]

[27] "Est et coelestis aqua sive potius divina Chymistarum … pneuma, ex aetheris natura et essentia rerum quinta" (There is also the celestial, or rather the divine, water of the alchemists … the pneuma, having the nature of the pneuma and the quintessence of things).—Hermolaus Barbarus, *Coroll. in Dioscoridem*, cited in M. Maier, *Symbola aureae mensae* (1617), p. 174.

"Spiritus autem in hac arte nihil aliud quam aquam indicari …" (In this art, spirit means nothing else but water).—Theobaldus de Hoghelande, in the *Theatrum chemicum*, I (1602), p. 196. Water is a "spiritus extractus," or a "spiritus qui in ventre (corporis) occultus est et fiet aqua et corpus absque spiritu: qui est spiritualis naturae" (spirit which is hidden in the belly [of the substance], and water will be produced and a substance without spirit, which is of a spiritual nature).—J. D. Mylius, *Philosophia reformata* (1622), p. 150. This quotation shows how closely spirit and water were associated in the mind of the alchemist.

"Sed aqua coelestis gloriosa *scil*. aes nostrum ac argentum nostrum, sericum nostrum, totaque oratio nostra, quod est unum et idem *scil*. sapientia, quam Deus obtulit, quibus voluit" (But the glorious celestial water, namely our copper and our silver, our silk, and everything we talk about, is one and the same thing, namely the Wisdom, which God has given to whomsoever he wished).—“Consilium coniugii,” in the *Ars chemica* (1566), p. 120.

[28] Berthelot, *La Chimie au moyen âge*, III, p. 53.

[29] Mylius, pp. 121 and 123. For the blood—water—fire equation see George Ripley, *Opera omnia chemica* (1649), pp. 162, 197. 295, 427.

[41] Ripley, *Opera*, Foreword, and in Khunrath’s *Chaos*. In Plutarch, Mercurius acts as a kind of world soul.

[42] Gerhard Dom, “Congeries Paracelsicae chemicae,” in the *Theatrum chemicum*, I. p. 589.

[43] Cf “The Spirit Mercurius,” pars. 255, 256ff.

[44] Illustration in “Splendor solis,” *Aureum vellus* (1598).

[45] Cf. Khunrath, *Chaos*, and *Amphitheatrum sapientiae aeternae* (1604).

[46] Dorn, “Speculativae philosophiae,” in the *Theatrum chemicum*, I, pp. 284ff. The whole passage runs as follows:

> “Post primam hominis inobedientiam, Dominus viam hanc amplissimam in callem strictissimam difficilimamque (ut videtis) restrinxit, in cuius ostio collocavit Cherubim angelum, ancipitem gladium manu tenentem, quo quidem arceret omnes ab introitu felicis patriae: hinc deflectentes Adae filii propter peccatum primi sui parentis, in sinistram latam sibimet viam construxerunt, quam evitastis. Longo postea temporis intervallo D. O. M. secreta secretorum suorum introivit, in quibus amore miserente, accusanteque iustitia, conclusit angelo gladium irae suae de manibus eripere, cuius loco tridentem hamum substituit aureum, gladio ad arborem suspenso: & sic mutata est ira Dei in amorem, servata iustitia: quod antequam fieret, fluvius iste non erat, ut iam, in se collectus, sed ante lapsum per totum orbem terrarum roris instar expansus aequaliter: post vero rediit unde processerat tandem, ut pax & iustitia sunt osculatae se, descendit

> affluentius ab alto manans aqua gratiae, totum nunc mundum alluens. In sinistram partem qui deflectunt, partim suspensum in arbore gladium videntes, eiusque noscentes historiam, quia mundo nimium sunt insiti, praetereunt: nonnulli videntes eius efficaciam perquirere negligunt, alii nec vident, nec vidisse voluissent: hi recta peregrinationem suam ad vallem dirigunt omnes, nisi per hamos resipiscentiae, vel poenitentiae nonnulli retrahantur ad montem Sion. Nostro iam saeculo (quod gratiae est) mutatus est gladius in Christum salvatorem nostrum qui crucis arborem pro peccatis nostris ascendit."
>
> (After man's first disobedience the Lord straitened this wide road into a very narrow and difficult path, as you see. At its entrance he placed an angel of the Cherubim, holding in his hand a double-edged sword with which he was to keep all from entering into Paradise. Turning from thence on account of the sin of their first parents, the sons of Adam built for themselves a broad left-hand path: this you have shunned. After a long interval of time the Deus Optimus Maximus immersed himself in the innermost of his secrets, and he decided, out of the compassion of his love as well as for the demands of justice, to take the sword of wrath from the hand of the angel. And having hung the sword on the tree, he substituted for it a golden trident, and thus was the wrath of God changed into love, and justice remained unimpaired. Previous to this, however, the river was not collected into one as it is now, but before the Fall it was spread equally over the whole world, like dew. But later it returned to the place of its origin. When peace and justice were united, the water of Grace flowed more abundantly from above, and now it bathes the whole world. Some of those who take the left-hand path, on seeing the sword suspended from the tree, and knowing its history, pass it by, because they are too entangled in the affairs of this world; some, on seeing it, do not choose to inquire into its efficacy; others never see it and would not wish to see it. All these continue their pilgrimage into the valley, except for those who are drawn back to Mount Zion by the hook of repentance. Now in our age, which is an age of grace, the sword has become Christ our Saviour, who ascended the tree of the Cross for our sins.) Cf. "The Philosophical Tree," pars. 447ff.

[47] Another remark of Dorn's points in the same direction: "The sword was suspended from a tree over the bank of the river" (p. 288).

[48] A few pages later Dorn himself remarks: "Scitote, fratres, omnia quae superius dicta sunt et dicentur in posterum, intelligi posse de praeparationibus alchemicis" (Know, brothers, that everything which has been said above and everything which will be said in what follows can also be understood of the alchemical preparations).

[49] Leisegang, *Die Gnosis*, pp. 171f.

[50] The passage which follows occurs in Hippolytus, *Elenchos*, vi, pp. 4f.

[51] Genesis 3:24.

[52] Leisegang, p. 80.

[53] That is why it is called "Hermaphroditus."

[54] One of its symbols is the scorpion, which stings itself to death.

[55] So far I have come across only one alchemical author who admits to having read the *Panarium* of Epiphanius, while declaring at the same time his sincere abhorrence of heresies. The silence of the alchemists in this matter is nothing to wonder at, since the mere proximity to heresy would have put them in danger of their lives. Thus even 90 years after the death of Trithemius of Spanheim, who was supposed to have been the teacher of Paracelsus, the abbot Sigismund of Seon had to compose a

moving defence in which he endeavoured to acquit Trithemius of the charge of heresy. Cf. *Trithemius sui-ipsius vindex* (1616).

[56] *Ars chemica*, p. 259. Printed in Manget (1702), II.

[57] “Micreris” is probably a corruption of “Mercurius.”

[75] Pars. 480–89.

[76] The classical example being *The I Ching or Book of Changes*.

[77] Mystical or *unconscious* identity occurs in every case of projection, because the content projected upon the extraneous object creates an apparent relationship between it and the subject.

[1] John 6:44: “No man can come to me, except the Father which hath sent me draw him.”

[2] “Et mortuus est Dei filius, prorsus credibile est, quia ineptum est. Et sepultus resurrexit; certum est, quia impossibile est” (And the Son of God is dead, which is to be believed because it is absurd. And buried He rose again, which is certain because it is impossible). Migne, *P.L.*, vol. 2, col. 751.

[3] The audacity of Tertullian’s argument is undeniable, and so is its danger, but that does not detract from its psychological truth.

[4] *Die Opferanschauungen*, p. 55.

[5] My reason for saying this is that every symbol has an objective and a subjective—or psychic—origin, so that it can be interpreted on the “objective level” as well as on the “subjective level.” This is a consideration of some importance in dream-analysis. Cf. *Psychological Types*, Defs. 38 and 50.

[6] Further material in Eisler, *Orpheus—the Fisher*, pp. 280f.

[7] Similarly, in hunting, the *rites d’entrée* are more important than the hunt itself, for on these rites the success of the hunt depends.

[8] Cf. *Psychological Types*, Def. 51.

[9] Leisegang, *Der Heilige Geist*, pp. 248ff.

[10] *How Natives Think*.

[11] Michael Sendivogius, “Tractatus de sulphure” (16th cent.), in the *Musaeum hermeticum* (1678), p. 617: “[Anima] quae extra corpus multa profundissima imaginatur” ([The soul] which imagines many things of the utmost profundity outside the body).

[12] The parallel to this is total destruction of the sacrificial gift by burning, or by throwing it into water or into a pit.

[13] If there were really nothing behind him but collective standards of value on the one hand and natural instincts on the other, every breach of morality would be simply a rebellion of instinct. In that case valuable and meaningful innovations would be impossible, for the instincts are the oldest and most conservative element in man and beast alike. Such a view forgets the creative instinct which, although it can behave like an instinct, is seldom found in nature and is confined almost exclusively to *Homo sapiens*.

[14] To the defiler of the Sabbath he said: “Man, if indeed thou knowest what thou doest, thou art blessed; but if thou knowest not, thou art cursed, and a transgressor of the law.” James, *The Apocryphal New Testament*, p. 33.

[15] In order to avoid misunderstandings, I must emphasize that I am speaking only from personal experience, and not of the mysterious reality which the Mass has for the believer.

[16] Cf. the “uniting symbol” in *Psychological Types*, Def. 51.

[17] In Indian philosophy we find a parallel in Prajapati and Purusha Narayana Purusha sacrifices himself at the command of Prajapati, but at bottom the two are identical. Cf. the Shatapatha-Brahmana (Sacred Books of the East, XLIV, pp. 172ff.); also the Rig-Veda, X, 90 (trans. by Macnicol, pp. 28–29).

[18] This contradiction is unavoidable because the concept of the self allows only of antinomial statements. The self is by definition an entity more comprehensive than the conscious personality. Consequently the latter cannot pass any comprehensive judgment on the self; any judgment and any statement about it is incomplete and has to be supplemented (but not nullified) by a conditioned negative. If I assert, “The self exists,” I must supplement this by saving, “But it seems not to exist.” For the sake of completeness I must also invert the proposition and say, “The self does not exist, but yet seems to exist.” Actually, this inversion is superfluous in view of the fact that the self is not a philosophical concept like Kant’s “thing-in-itself,” but an empirical concept of psychology, and can therefore be hypostatized if the above precautions are taken.

[19] In so far as it is the self that actuates the ego’s self-recollection.

[20] If I use the unhistorical term “self” for the corresponding processes in the psyche, I do so out of a conscious desire not to trespass on other preserves, but to confine myself exclusively to the field of empirical psychology.

[21] Firmicus Maternus, *De errore profanarum religionum,*7, 8.

[22] Hippolytus, *Elenchos*, VIII, 15.

[23] And also on account of the fact that the unconscious is only conditionally bound by space and time. The comparative frequency of telepathic phenomena proves that space and time have only a relative validity for the psyche. Evidence for this is furnished by Rhine’s experiments. Cf. my “Synchronicitv.”

[24] The word “hell” may strike the reader as odd in this connection I would, however, recommend him to study the brothel scene in James Joyce’s *Ulysses*, or James Hogg’s *The Private Memoirs and Confessions of a Justified Sinner*.

[25] How Jewish piety reacted to this sacrifice can be seen from the following Talmudic legend: “‘And I,’ cried Abraham, ‘swear that I will not go down from the altar until you have heard me. When you commanded me to sacrifice my son Isaac you offended against your word, “in Isaac shall your descendants be named.” So if ever my descendants offend against you, and you wish to punish them, then remember that you too are not without fault, and forgive them.’ ‘Very well, then,’ replied the Lord, ‘there behind you is a ram caught in the thicket with his horns. Offer up that instead of your son Isaac. And if ever your descendants sin against me, and I sit in judgment over them on New Year’s Day, let them blow the horn of a ram, that I may remember my words, and temper justice with mercy.’” Fromer and Schnitzer, *Legenden aus dem Talmud*, pp. 34f.

[26] Isaiah 53:5: “But he was wounded for our transgressions, he was bruised for our iniquities: the chastisement of our peace was upon him; and with his stripes we are healed.”

[27] See “Answer to Job,” in this volume.

[28] Caussin, *De symbolica Aegyptiorum sapientia. Polyhistor symbolicus, Electorum symbolorum, et Parabolarum historicarum stromata* (1618), p. 401. Cf. also Philippus Picinelli, *Mondo Simbolico*, p. 299: “Of a truth God, terrible beyond measure, appeared before the world peaceful and wholly tamed after dwelling in the womb of the most blessed Virgin. St. Bonaventura said that Christ was tamed and pacified by the most kindly Mary, so that he should not punish the sinner with eternal death.”

[29] Eliade, *Shamanism*, esp. chs. II and VII.

[30] Particularly in Gerhard Dorn, “Speculativae philosophiae,” *Theatrum chemicum*, I (1602), pp. 276f.

[31] Cf. my *Aion*, Ch. V.

[32] *The Apocryphal New Testament*. The Acts of John were probably written during the first half of the 2nd cent.

[33] Ibid., pp. 253f., modified.

[34] [Or: I will be freed and I will free.—TRANS.]

[35] Trans. based on James, pp. 253f., and that of Ralph Manheim from the German of Max Pulver, “Jesus’ Round Dance and Crucifixion according to the Acts of St. John,” in *The Mysteries*, pp. 179f.

[36] See James, p. 33.

[37] Another idea of the kind is that every human being is a ray of sunlight. This image occurs in the Spanish poet Jorge Guillen, *Cántico: Fe de Vida*, pp. 24–25 (“Más allá,” VI):

> Where could I stray to, where?
> This point is my centre …
> With this earth and this ocean
> To rise to the infinite:
> One ray more of the sun. (Trans. by J. M. Cohen.)

[38] Cf. *Aion*, Ch. IV.

[39] The universality of this figure may explain why its epiphanies take so many different forms. For instance, it is related in the Acts of John (James, p. 251) that Drusiana saw the Lord once “in the likeness of John” and another time “in that of a youth.” The disciple James saw him as a child, but John as an adult. John saw him first as “a small man and uncomely,” and then again as one reaching to heaven (p. 251). Sometimes his body felt “material and solid,” but sometimes “the substance was immaterial and as if it existed not at all” (p. 252).

[40] “The Spirit Mercurius,” pt. 2, ch. 9.

[41] “Haec meditare” (ταῦτα μελέτα) in I Tim. 4:15 has more the meaning of ‘see to’ or ‘attend to” these things. [Both DV and AV have “meditate on these things,” but RSV has “practise these duties.”—TRANS.]

[43] James, p. 335.

[44] James, p. 335.

[45] Ibid., p. 254.

[46] ’Ανάγγη βιάβα uncertain.

[47] Based on James, pp. 254ff., and the author’s modified version of Hennecke, ed., *Neutestamentliche Apokryphen*, pp. 186ff.

[48] Cf. *Aion*.

[49] The quaternity, earlier hinted at in the vision of Ezekiel, is patently manifest in the pre-Christian Book of Enoch. (Cf. “Answer to Job,” below, pars. 662ff.) In the Apocalypse of Sophonias [Zephaniah], Christ appears surrounded by a garland of doves (Stern, “Die koptische Apokalypse des Sophonias,” p. 124). Cf. also the mosaic of St. Felix at Nola, showing a cross surrounded by doves. There is another in San Clemente, Rome (Wickhoff, “Das Apsismosaik in der Basilica des H. Felix zu Nola,” pp. 158ff.; and Rossi, *Musaici Cristiani delle Chiese di Roma anteriori al secolo XV*, pl. XXIX).

[50] Symbolized by the formless multitude.

[51] Cf. “speaking with tongues” and glossolalia.

[52] Based on James, pp. 334f.

[53] Ibid., p. 255.

[54] Genesis 3:5.

[55] The possibility of inflation was brought very close indeed by Christ’s words: “Ye are gods” (John 10:34).

[56] Cf. Pauli, “The Influence of Archetypal Ideas on Kepler’s Scientific Theories.”

[57] Cf. the remarkable account of developing consciousness in an ancient Egyptian text, translated, with commentary, by Jacobsohn, entitled “Das Gespräch eines Lebensmüden mit seinem Ba.”

[58] [Cf. *Psychological Types*, Def. 18, and *Two Essays on Analytical Psychology*, par. 111 .—EDITORS.]

[59] This view may be implicit in the *kenosis* passage (Philippians 2:5f.): “Have this mind in you which was also in Christ Jesus, who though he was by nature God, did not consider being equal to God a thing to be clung to, but emptied himself [ἐκένωσεν, *exinanivit]*, taking the nature of a slave and being made like unto man” (DV).

[60] Including shamanism, whose widespread phenomenology anticipates the alchemist’s individuation symbolism on an archaic level. For a comprehensive account see Eliade, *Shamanism*.

[61] Cf. Portmann, “Die Bedeutung der Bilder in der lebendigen Energiewandlung.”

[62] Cf. Neumann, *The Origins and History of Consciousness*, pp. 220ff.

[63] *Aion*, pp. 162ff.

[1] [Originally trans. (by Fr. White) from the German ms. for publication in the book by Fr. Victor White, O.P. (London, 1952; Chicago, 1953). The foreword was there subscribed May 1952. It has been slightly revised, on the basis of the original ms.—EDITORS.]

[2] [The two previous ones were by the Protestant theologian Hans Schaer: *Religion and the Cure of Souls in Jung's Psychology*, and *Erlösungsvorstellungen und ihre psychotogischen Aspekte.—EDITORS.]*

[3] The fact that the psyche is not a *tabula rasa*, but brings with it instinctive conditions, just as somatic life does, naturally does not suit a Marxist philosophy at all. True, the psyche can be crippled just like the body, but such a prospect would not be pleasing even to Marxists.

[4] A recent suggestion that evil should be looked upon as a "decomposition" of good does not alter this fact in the slightest. A rotten egg is unfortunately just as real as a fresh one.

[5] The justice of this dictum strikes me as questionable, since Adam can hardly be held responsible for the wickedness of the serpent.

[1] [Originally trans. by R. F. C. Hull from the German ms. for publication in the book by R. J. Zwi Werblowsky (London, 1952). The present text contains only minor alterations. Professor Jung subscribed the foreword March 1951.—EDITORS.]

[24] Verses 28, 34, 35.

[25] Psalm 89:46, 47, 49 (AV; last line from RSV).

[26] Or to be “blessed,” which is even more captious of him.

[1] Zechariah 4:10 (AV). Cf. also the Wisdom of Solomon 1:10 (AV): “For the ear of jealousy heareth all things: and the noise of murmurings is not hid.”

[2] The 89th Psalm is attributed to David and is supposed to have been a community song written in exile.

[3] Satan is presumably one of God’s eyes which “go to and fro in the earth and walk up and down in it” (Job 1:7). In Persian tradition, Ahriman proceeded from one of Ormuzd’s doubting thoughts.

[4] Job 38:2 (ZB).

[5] Job 38:3 and 40:7.

[6] 40:8–9.

[7] 40:12–14 (“in the hidden place” is RSV alternative reading for “in the world below”).

[8] This is an allusion to an idea found in the later cabalistic philosophy. [These “shards,” also called “shells” (Heb. *kelipot*), form ten counterpoles to the ten *sefiroth*, which are the ten stages in the revelation of God’s creative power. The shards, representing the forces of evil and darkness, were originally mixed with the light of the *sefiroth*. The *Zohar* describes evil as the by-product of the life process of the *sefiroth*. Therefore the *sefiroth* had to be cleansed of the evil admixture of the shards. This elimination of the shards took place in what is described in the cabalistic writings—particularly of Luria and his school—as the “breaking of the vessels.” Through this the powers of evil assumed a separate and real existence. Cf. Scholem, *Major Trends in Jewish Mysticism*, p. 267.— EDITORS.]

[9] 42:2.

[10] 42:3–6 (modified).

[11] Job 41:25 (ZB); cf. 41:34 (AV and RSV).

[12] Ezekiel 1:26.

[13] The naïve assumption that the creator of the world is a conscious being must be regarded as a disastrous prejudice which later gave rise to the most incredible dislocations of logic. For example, the nonsensical doctrine of the *privatio boni* would never have been necessary had one not had to assume in advance that it is impossible for the consciousness of a good God to produce evil deeds. Divine unconsciousness and lack of reflection, on the other hand, enable us to form a conception of God which puts his actions beyond moral judgment and allows no conflict to arise between goodness and beastliness.

[13] 8:3. (συμβίωσιν ἔχουσα. /πάντων δεσπότης)

[14] 8:6.

[15] 9:10, 17.

[16] 6:18 and 8:13.

[17] 1:15–16 (mod.).

[18] 2:10–19.

[19] Job 2:3; Ecclesiastes 9:16.

[20] [As to that portion of humanity *not* divinely stamped, and presumably descended from the pre-Adamic anthropoids, see par. 576, above.—EDITORS.]

[21] πνευματικώτατον ζῷον.—A view that is found in Philo Judaeus.

[22] [Cf. the commentary on the *Tibetan Book of the Dead*, pars. 831ff., below.— EDITORS.]

[23] Cf. *φρονίμως* in the parable of the unjust steward (Luke 16:8).

[24] Job 28:12: “But where shall wisdom be found?” Whether this is a later interpolation or not makes no difference.

[1] John 1:3: “All things were made through him, and without him was not anything made that was made.”

[1] Proverbs 8:29–30.

[2] Job 40:15, 19 (last line, ZB).

[3] In Christian tradition, too, there is a belief that God's intention to become man was known to the Devil many centuries before, and that this was why he instilled the Dionysus myth into the Greeks, so that they could say, when the joyful tidings reached them in reality: "So what? We knew all that long ago." When the conquistadores later discovered the crosses of the Mayas in Yucatán, the Spanish bishops used the same argument.

[1] John 14:6.

[2] Mark 3:21.

[1] Luke 10:18.

[2] Revelation 7:4.

[3] Revelation 19:20.

[1] John 14:12.

[2] 10:34.

[3] Romans 8:17.

[4] John 14:16f.

[5] 14:26 and 16:13.

[6] Acts 14:11.

[7] “Mancipem quendam divinitatis qui ex hominibus deos fecerit.” *Apologeticus*. XI, in Migne, *P.L.*, vol. 1, col. 386.

[1] I John 4:1 (mod.).

[2] I Corinthians 2:10.

[3] Matthew 26:39.

[4] Abraham and Isaac.

[1] The vision in which he received his call occurred in 592 B.C.

[2] It is altogether wrong to assume that visions as such are pathological. They occur with normal people also—not very frequently, it is true, but they are by no means rare.

[3] Ezekiel 1:26.

[4] Daniel 7:13.

[5] Genesis 6:3f.

[6] Enoch 7:2.

[7] Enoch 7:3–6. [The translations of the Book of Enoch are from Charles, ed., *The Apocrypha and Pseudepigrapha of the Old Testament in English*, II, sometimes slightly modified.—TRANS.]

[8] Enoch 9:5–11.

[9] 22:2.

[10] Enoch 40:7.

[11] Cf. also ch. 87f. Of the four "beings who were like white men," three take Enoch by the hand, while the other seizes a star and hurls it into the abyss.

[12] Three had animal faces, one a human face.

[13] Enoch 46:1–3.

[14] 47:4.

[15] 48:1.

[16] 48:4, 6–7.

[17] Enoch 49:1–3.

[18] Synonym for Sheol.

[19] 51:1,3.

[20] 54:6. Here at last we hear that the exodus of the two hundred angels was a prank of Satan's.

[21] 58:6 (mod.).

[22] 60:10.

[23] 71:5–6.

[24] 71:14.

[25] 71:17.

[26] The author of the Book of Enoch chose, as the hero of his tale, Enoch the son of Jared, the seventh after Adam, who "walked with God," and, instead of dying, simply disappeared, i.e., was carried away by God ("… and he was not, for God took him."—Genesis 5:24).

[27] Job 19:25.

[1] As a consequence of her immaculate conception Mary is already different from other mortals, and this fact is confirmed by her assumption.

[2] Presumably the “morning star” (cf. Revelation 2:28 and 22:16). This is the planet Venus in her psychological implications and not, as one might think, either of the two *malefici*, Saturn and Mars.

[3] John 14:16.

[4] John 14:12.

[5] 10:35.

[6] An apocryphal insertion at Luke 6:4. [“Man, if indeed thou knowest what thou doest, thou art blessed; but if thou knowest not, thou art cursed, and a transgressor of the law” (trans. in James, *The Apocryphal New Testament*, p. 33)—TRANS.]

[1] I John 1:5.

[2] 2:1–2.

[3] 3:9.

[4] 2:18f., 4:3.

[5] Cf. Rev. 1:16–17

[6] Rev. 2:5.

[7] 2:20f.

[8] 3:3.

[9] 3:19.

[10] 4:3.

[11] 4:6f.

[12] This refers to the "luminosity" of the archetypes. [Cf. Jung, "On the Nature of the Psyche," pp. 190ff.—EDITORS.]

[13] Rev. 5:6.

[14] 6:10.

[15] 6:17 (AV).

[16] Rev. 12:1.

[17] Rev. 11:19. The *area foederis* is an *allegoria Marine*.

[18] "Heaven above, heaven below."

[19] Rev. 12:5; cf. 2:27.

[20] Rev. 12:9.

[21] It is very probable that John knew the Leto myth and used it consciously. What was unconscious and most unexpected. however, was the fact that his unconscious used this pagan myth to describe the birth of the second Messiah.

[22] Rev. 12:16 (AV).

[23] [Cf. Marie-Louise von Franz, "Die Passio Perpetuae."–EDITORS.]

[24] The son would then correspond to the *filius sapientiae* of medieval alchemy.

[1] Rev. 14:1. It may be significant that there is no longer any talk of the “great multitude which no man could number, from every nation, from all tribes and peoples and tongues, standing before the throne and before the Lamb,” who were mentioned in 7:9.

[2] 14:4 (AV).

[3] They really belong to the cult of the Great Mother, since they correspond to the emasculated Galli. Cf. the strange passage in Matthew 19:12, about the eunuchs “who have made themselves eunuchs for the sake of the kingdom of heaven,” like the priests of Cybele who used to castrate themselves in honour of her son Attis.

[4] Cf. also Rev. 19:5.

[5] 14:14 and 17. The auxiliary angel might well be John himself.

[6] 14:19–20.

[7] 15:6–7 and 16:1ff.

[8] Rev. 18:20 (AV).

[9] 19:15 (AV).

[10] 19:13.

[11] 19:11. Here again astrological speculations concerning the second half of the Christian aeon may be implied, with Pegasus as paranatellon of Aquarius.

[12] Rev. 20:3 (AV).

[13] 20:10 and 21:1.

[14] 19:7.

[15] 21:2.

[16] 21:11.

[17] 21:16–27.

[18] 22:1–2.

[19] In China, heaven is round and the earth square.

[20] Ecclesiasticus 24:11 and 18 (AV).

[21] Tertullian, *Adversus Judaeos*, XIII (Migne, *P.L.*, vol. 2, col. 635): “…. ilia terra virgo nondum pluviis rigata nec imbribus foecundata, ex qua homo tunc primum plasmatus est, ex qua nunc Christus secundum carnem ex virgine natus est” (… that virgin soil, not yet watered by the rains nor fertilized by the showers, from which man was originally formed [and] from which Christ is now born of a Virgin through the flesh).

[22] Ezekiel 1:18.

[1] Not for nothing was the apostle John nicknamed “son of thunder” by Christ.

[2] I John 4:7–21.

[1] [Herostratus, in order to make his name immortal, burned down the temple of Artemis in Ephesus, in 365 B.C.—EDITORS.]

[1] Psychologically the God-concept includes every idea of the ultimate, of the first or last, of the highest or lowest. The name makes no difference.

[2] The God-concept, as the idea of an all-embracing totality, also includes the unconscious, and hence, in contrast to consciousness, it includes the objective psyche, which so often frustrates the will and intentions of the conscious mind. Prayer, for instance, reinforces the potential of the unconscious, thus accounting for the sometimes unexpected effects of prayer.

[3] "Of changeful countenance, both white and black." Horace, *Epistulae*, II, 2.

[4] *Apostolic Constitution ("Munificentissimus Deus") of … Pius XII*, §22: "Oportebat sponsam quam Pater desponsaverat, in thalamis caelestibus habitare" (The place of the bride whom the Father had espoused was in the heavenly courts).—St. John Damascene, *Encomium in Dormitionem, etc*., Homily II, 14 (cf. Migne, *P.G*., vol. 96, col. 742). §30: Comparison with the Bride in the Song of Solomon. §33: "… ita pariter surrexit et Area sanctificationis suae, cum in hac die Virgo Mater ad aethereum thalamum est assumpta" (… so in like manner arose the Ark which he had sanctified, when on this day the Virgin Mother was taken up to her heavenly bridal-chamber).—St. Anthony of Padua, *Sermones Dominicales, etc*. (ed. Locatelli. III, p. 730).

[5] *Apostolic Constitution*, §31: "Ac praeterea scholastici doctores non modo in variis Veteris Testamenti figuris, sed in ilia etiam Muliere amicta sole, quam Joannes Apostolus in insula Patmo [Rev. 12:1ff.] contemplatus est, Assumptionem Deiparae Virginis significatam viderunt" (Moreover, the Scholastic doctors saw the Assumption of the Virgin Mother of God signified not only in the various figures of the Old Testament, but also in the Woman clothed with the sun, whom the Apostle John contemplated on the island of Patmos).

[6] The marriage of the Lamb repeats the Annunciation and the Overshadowing of Mary.

[1] Codex Bezae, apocryphal insertion at Luke 6:4. [Trans. by James; see above, par. 696. n. 6.—TRANS.]

[1] “A mediator making peace between enemies.”

[2] The papal rejection of psychological symbolism may be explained by the fact that the Pope is primarily concerned with the reality of metaphysical happenings. Owing to the undervaluation of the psyche that everywhere prevails, every attempt at adequate psychological understanding is immediately suspected of psychologism. It is understandable that dogma must be protected from this danger. If, in physics, one seeks to explain the nature of light, nobody expects that as a result there will be no light. But in the case of psychology everybody believes that what it explains is explained away. However, I cannot expect that my particular deviationist point of view could be known in any competent quarter.

[1] [Written in English in 1939 and first published in *The Tibetan Book of the Great Liberation*, the texts of which were translated from Tibetan by various hands and edited by W. Y. Evans-Wentz (London and New York, 1954), pp. xxix–lxiv. The commentary is republished here with only minor alterations.—EDITORS.]

[2] I am purposely leaving out of account the modernized East.

[3] *Psychological Types*, Defs. 19 and 34.

[4] Written in the year 1939.

[5] *Samyutta-nikāya* 12, *Nidāna-samyutta*.

[6] [Cf. Otto, *The Idea of the Holy*. pp. 26ff —EDITORS.]

[7] "Whereas who holdeth not God as such an inner possession, but with every means must fetch Him from without … verily such a man hath Him not, and easily something cometh to trouble him." Meister Eckhart (Büttner, II, p. 185). Cf. *Meister Eckhart*, trans. by Evans, II, p. 8.

[8] In so far as "higher" and "lower" are categorical judgments of consciousness, Western psychology does not differentiate unconscious contents in this way. It appears that the East recognizes subhuman psychic conditions, a real "subconsciousness" comprising the instincts and semi-physiological psychisms, but classed as a "higher consciousness."

[9] *Psychological Types* (1923 edn., pp. 472ff.).

[9a] [Date of Mohammed's flight (*hegira*) to Medina: beginning of Moslem era.]

[10] This is not the unacceptable translation of *άπιούσιος* by Jerome but the ancient spiritual interpretation by Tertullian, Origen, and others.

[11] *Psychological Types*, Def. *51*. [Cf. also "The Transcendent Function."]

[12] Some people find such statements incredible. But either they have no knowledge of primitive psychology, or they are ignorant of the results of psychopathological research. Specific observations occur in my *Symbols of Transformation* and *Psychology and Alchemy*, Part II; Nelken, "Analytische Beobachtungen über Phantasien eines Schizophrenen," pp. 504ff.; Spielrein, "Über den psychologischen Inhalt eines Falls von Schizophrenie" pp. 329ff.; and C. A. Meier, "Spontanmanifestationen des kollektiven Unbewussten."

[25] I have explained this in my "Commentary on *The Secret of the Golden Flower*," pars, 64ff.

[26] From the [German] trans. of L. C. Lo, I, p. 114. [Cf. *Golden Flower*, 1962, pp. 77f.]

[27] *Psychological Types, Def.* 25.

[28] Cf. Lévy-Bruhl, *How Natives Think*. Recently this concept as well as that of the *état prélogique* have been severely criticized by ethnologists, and moreover Lévy-Bruhl himself began to doubt their validity in the last years of his life. First he cancelled the adjective "mystique," growing afraid of the term's bad reputation in intellectual circles. It is rather to be regretted that he made such a concession to rationalistic superstition, since "mystique" is just the right word to characterize the peculiar quality of "unconscious identity." There is always something numinous about it. Unconscious identity is a well-known psychological and psychopathological phenomenon (identity with persons, things, functions, roles, positions, creeds, etc.), which is only a shade more characteristic of the primitive than of the civilized mind. Lévy-Bruhl, unfortunately having no psychological knowledge, was not aware of this fact, and his opponents ignore it.

[29] Cf. *The Critique of Pure Reason*, sec. i, Part I, 2, 3 (cf. trans. by Meiklejohn, p. 188).

[30] Cf. the first paper in this volume, chs. 2 and 3.

[1] [Originally published as a foreword to Suzuki, *Die grosse Befreiung: Einführung in den Zen-Buddhismus* (Leipzig, 1939). The Suzuki text had been translated into German by Heinrich Zimmer from the original edition of *An Introduction to Zen Buddhism*. The foreword by Jung was published in an earlier translation by Constance Rolfe in a new edition of the Suzuki work (London and New York, 1949).—EDITORS.]

[2] The origin of Zen, as Oriental authors themselves admit, is to be found in Buddha's Flower Sermon. On this occasion he held up a flower to a gathering of disciples without uttering a word. Only Kasyapa understood him. Cf. Shuei Ohazama, *Zen: Der lebendige Buddhismus in Japan*, p. 3.

[3] *Introduction to Zen Buddhism* (1949), p. 95.

[4] Ibid., pp. 89 and 92f.

[5] *The Religion of the Samurai*, p. 133.

[6] "Zen is neither psychology nor philosophy."

[7] "In Ohazama, p. viii.

[8] If in spite of this I attempt "explanations" in what follows, I am nevertheless fully aware that in the sense of satori I have said nothing valid. All the same, I had to make an attempt to manoeuvre our Western understanding into at least the proximity of an understanding—a task so difficult that in doing it one must take upon oneself certain crimes against the spirit of Zen.

[9] Cf. Spamer, ed., *Texte aus der deutschen Mystik des 14. und 15. Jahrhunderts*, p. 143; Evans, *Meister Eckhart*, I, p. 438; William White, *Emanuel Swedenborg*, I, p. 243.

[10] "There is no doubt that Zen is one of the most precious and in many respects the most remarkable [of the] spiritual possessions bequeathed to Eastern people." Suzuki, *Essays on Zen Buddhism*, I, p. 264.

[11] "Before a man studies Zen, to him mountains are mountains and waters are waters; after he gets an insight into the truth of Zen, through the instruction of a good master, mountains to him are not mountains and waters are not waters; after this when he really attains to the abode of rest, mountains are once more mountains and waters are waters." Ibid., pp. 22f.

[12] *Religion of the Samurai*, p. 123.

[13] Ibid., p. 124.

[14] Ibid., p. 132.

[15] *Theologia Germanica*, ed. by Trask, p. 115.

[16] Ibid., pp. 120–21.

[17] There is a similar image in Zen: When a Master was asked what Buddhahood consisted in, he answered, "The bottom of a pail is broken through" (Suzuki, *Essays*, I, p. 229). Another analogy is the "bursting of the bag" (*Essays*, II, p. 117).

[18] Cf. Suzuki, *Essays*, I, pp. 231, 255. Zen means catching a glimpse of the original nature of man, or the recognition of the original man (p. 157).

[19] Cf. Evans, *Meister Eckhart*, p. 221; also *Meister Eckhart: A Modern Translation*, by Blakney, pp. 231f.

[20] Suzuki, *Introduction*, pp. 93. S4.

[21] "Its root is above, its branches below—this eternal fig-tree! … That is Brahma, that is called the Immortal." Katha Upanishad, 6, 1, trans. by Hume, *The Thirteen Principal Upanishads*, p. 358.

[22] John of Ruysbroeck, *The Adornment of the Spiritual Marriage*, p. 47. One can hardly suppose that this Flemish mystic, who was born in 1273, borrowed this image from any Indian text.

[23] Ibid., p. 51.

[24] P. 57, modified.

[25] Ibid., p. 62, modified.

[26] "O Lord … instruct me in the doctrine of the non-ego, which is grounded in the self-nature of mind." Cited from the Lankavatāra Sutra, in Suzuki, *Essays*, I, p. 89.

[27] A Zen Master says: "Buddha is none other than the mind, or rather, him who strives to see this mind."

[28] Galatians 2:20: "It is no longer I who live, but Christ who lives in me."

[29] Suzuki says of this change, "The old way of viewing things is abandoned and the world acquires a new signification … a new beauty which exists in the 'refreshing breeze' and in the 'shining jewel.'" *Essays*, I, p. 249. See also p. 138.

[30] From *Der Cherubinischer Wandersmann*. [Trans. by W. R. Trask (unpub.).]

[31] "*Satori* is the most intimate individual experience." *Essays*, I, p. 261.

> A Master says to his pupil: "I have really nothing to impart to you, and if I tried to do so you might have occasion to make me an object of ridicule. Besides, whatever I can tell you is my own and can never be yours." *Introduction*, p. 91.
>
> A monk says to the Master: "I have been seeking for the Buddha, but do not yet know how to go on with my research." Said the Master: "It is very much like looking for an ox when riding on one." *Essays*, II, p. 74.
>
> A Master says: "The mind that does not understand is the Buddha: there is no other." Ibid., p. 72.

[32] *Essays*, II, pp. 84, 90.

[33] "Zen consciousness is to be nursed to maturity. When it is fully matured, it is sure to break out as satori, which is an insight into the unconscious." *Essays*, II, p. 60.

[34] The fourth maxim of Zen is "Seeing into one's nature and the attainment of Buddhahood" (I, p. 18). When a monk asked Hui-neng for instruction, the Master told him: "Show me your original face before you were born" (I, p. 224). A Japanese Zen book says: "If you wish to seek the Buddha, you ought to see into your own nature; for this nature is the Buddha himself" (I, p. 231). A satori experience shows a Master the "original man" (I, p. 255). Hui-neng said: "Think not of good, think not of evil, but see what at the moment your own original features are, which you had even before coming into existence" (II, p. 42).

[35] Bodhidarma, the founder of Zen in China, says: “The incomparable doctrine of Buddhism can be comprehended only after a long hard discipline and by enduring what is most difficult to endure, and by practising what is most difficult to practise. Men of inferior virtue and wisdom are not allowed to understand anything about it. All the labours of such ones will come to naught.” (Ibid., I, p. 188.)

[36] This is more probable than one that is merely “complementary.”

[37] This “necessity” is a working hypothesis. People can, and do, hold very different views on this point. For instance, are religious ideas “necessary”? Only the course of the individual’s life can decide this, i.e., his individual experience. There are no abstract criteria.

[38] “When the mind discriminates, there is manifoldness of things; when it does not it looks into the true state of things.” *Essays*, I, p. 99.

[39] See the passage beginning “Have your mind like unto space. . . .” Suzuki, *Essays*, I, p. 223.

[40] *Introduction to Zen Buddhism*, p. 94.

[41] In this connection I must also mention the English mystic, William Blake. Cf. an excellent account in Percival, *William Blake’s Circle of Destiny*.

[42] The genius of the Greeks lay in the break-through of consciousness into the materiality of the world, thus robbing the world of its original dreamlike quality.

[43] [Cf. above, par. 844.]

[4] Ibid.

[1] [Grateful acknowledgment is made here to Cary F. Baynes for permission to use, with a few minor changes, her translation of this Foreword, which Professor Jung wrote specially for the English edition of the *I Ching or Book of Changes*, translated by Mrs. Baynes from the German translation of Richard Wilhelm (New York and London, 1950); 2nd edn. in 1 vol., 1961; 3rd edn. in small format, 1967. References are to the 3rd edn.—TRANS.]

[2] Legge makes the following comment on the explanatory text for the individual lines: “According to our notions, a framer of emblems should be a good deal of a poet, but those of the *Yi* only make us think of a dryasdust. Out of more than three hundred and fifty, the greater number are only grotesque” (*The Yi King*, p. 22). Of the “lessons” of the hexagrams, the same author says: “But why, it may be asked, why should they be conveyed to us by such an array of lineal figures, and in such a farrago of emblematic representations” (p. 25). However, we are nowhere told that Legge ever bothered to put the method to a practical test.

[3] [Cf. Jung’s “Synchronicity: An Acausal Connecting Principle.” In that work (pp. 450–53) he is concerned with the synchronistic aspects of the *I Ching*.— EDITORS.]

[4] Cf. J. B. Rhine, *The Reach of the Mind*.

[5] They are *shén*, that is, ‘spirit-like.’ “Heaven produced the ‘spirit-like things’” (Legge, p. 41).

[6] [Cf. the *I Ching*, pp. 193ff.—EDITORS.]

[7] See the explanation of the method, ibid., pp. 721ff.

[8] For example, the *invidi* (‘the envious’) are a constantly recurring image in the old Latin books on alchemy, especially in the *Turba philosophorum* (11th or 12th cent.).

[9] From the Latin *concipere*, ‘to take together,’ e.g., in a vessel: *concipere* derives from *capere*, ‘to take,’ ‘to grasp.’

[10] This is the classical etymology. The derivation of *religio* from *religare*, ‘reconnect,’ ‘link back,’ originated with the Church Fathers.

[11] I made this experiment before I actually wrote the foreword.

[12] The Chinese interpret only the changing lines in the hexagram obtained by use of the oracle. I have found all the lines of the hexagram to be relevant in most cases.

[13] [Cf. Wilhelm and Jung, *The Secret of the Golden Flower* (1931), in which this address appears as an appendix. The book did not appear in English until a year after Wilhelm’s death.—C. F. B.]

[For the address, see vol. 15 of the *Coll. Works*.—EDITORS.]

[14] The reader will find it helpful to look up all four of these hexagrams in the [Baynes-Wilhelm] text and to read them together with the relevant commentaries.

PREFATORY NOTE TO THE ENGLISH EDITION

To the reader who knows little or nothing of my work, a word of explanation may be helpful. Some thirty-five years ago I noticed to my amazement that European and American men and women coming to me for psychological advice were producing in their dreams and fantasies symbols similar to, and often identical with, the symbols found in the mystery religions of antiquity, in mythology, folklore, fairytales, and the apparently meaningless formulations of such esoteric cults as alchemy. Experience showed, moreover, that these symbols brought with them new energy and new life to the people to whom they came.

From long and careful comparison and analysis of these products of the unconscious I was led to postulate a "collective unconscious," a source of energy and insight in the depth of the human psyche which has operated in and through man from the earliest periods of which we have records.

In this present study of alchemy I have taken a particular example of symbol-formation, extending in all over some seventeen centuries, and have subjected it to intensive examination, linking it at the same time with an actual series of dreams recorded by a modern European not under my direct supervision and having no knowledge of what the symbols appearing in the dreams might mean. It is by such intensive comparisons as this (and not one but many) that the hypothesis of the collective unconscious—of an activity in the human psyche making for the spiritual development of the individual human being—may be scientifically established.

[*Undated*]

C. G. JUNG

From EDITORIAL NOTE TO THE FIRST EDITION

This volume of Professor Jung's *Collected Works* is a translation, with minor alterations made at the instance of the author, of *Psychologie und Alchemie* (Zurich, 1944; 2nd edition, revised, 1952). That work was based on the two lectures mentioned in Professor Jung's foreword, "Traumsymbole des Individuations-prozesses," *Eranos-Jahrbuch 1935* (Zurich, 1936), and "Die Erlösungsvorstellungen in der Alchemie," *Eranos-Jahrbuch 1936* (Zurich, 1937).

The two lectures were previously translated by Stanley Dell and published in *The Integration of the Personality* (New York, 1939; London, 1940) under the titles "Dream Symbols of the Process of Individuation" and "The Idea of Redemption in Alchemy." Professor Jung then considerably expanded them and added an introduction, in which he set out his whole position particularly in relation to religion. These three parts together with a short epilogue make up the Swiss volume.

The translation now presented to the public has been awaited with impatience in many quarters, for it is one of Professor Jung's major works, to be compared in importance with *Psychology of the Unconscious* and *Psychological Types*. It may be said that round the material contained in this volume the major portion of his later work revolves. On this account *Psychology and Alchemy* is being published first, though it is not Volume 1 of the *Collected Works*.

EDITORIAL NOTE TO THE SECOND EDITION

For this second edition of Volume 12, technical considerations made it necessary to reset the text, and this in turn made various improvements possible. The translation has been thoroughly revised, and additions and revisions have been made in accordance with the second Swiss edition, 1952. The bibliography and the footnote references have been corrected and brought up to date, particularly in respect of the author's subsequent publications in English. The paragraph numeration has been preserved, but the pagination has unavoidably changed. An entirely new index has been prepared. The late Mr. A. S. B. Glover was responsible for numerous improvements in the translations from the Latin and in the bibliographical references. The illustrations are printed almost entirely from new photographs; consequently the sources have sometimes had to be altered. For valuable assistance in obtaining new photographs the Editors are indebted to Mrs. Aniela Jaffé, Dr. Jolande Jacobi, and Dr. Rudolf Michel; for general editorial help, to Mrs. B. L. Honum Hull.

After the author's death in 1961, the unpublished draft of a "prefatory note to the English edition," written in English, was found among his papers, and this has been added to the present edition. For permission to publish it, the Editors are indebted to the late Mrs. Marianne Niehus-Jung, then acting on behalf of the heirs of C. G. Jung.

A variant of the text of Part II presenting the essay in its *Eranos-Jahrbuch 1935* form appeared as "Dream Symbols of the Individuation Process" in *Spiritual Disciplines* (Papers from the Eranos Yearbooks, 4; New York and London, 1959).

TRANSLATOR'S NOTE

So far as concerns the translation of this and other volumes of these collected works, the primary aim has naturally been to reproduce the straightforward, lively, and often informal language of the author. In an undertaking such as this one, it would indeed be an act of presumption for the translator to ignore the labours of his predecessors, and the present edition does not seek to stress its newness and difference by studiously overlooking the manifold excellences of the existing translations. In general, therefore, the secondary aim has been to establish a standard terminology for all volumes in this series and to reduce them to a uniform style, while making the fullest use of previous work in this field. In preparing the text of the present volume I had frequent recourse to the material already translated by Stanley Dell in *The Integration of the Personality;* I gratefully acknowledge my debt to him, and also to Miss Barbara Hannah, who magnanimously placed her private, unpublished version of *Psychology and Alchemy* at my disposal, as well as giving me every possible help in the correction of the typescripts and the proofs.

FOREWORD TO THE SWISS EDITION

The present volume contains two major studies which grew out of lectures delivered at the Eranos Congress. They were first printed in the *Eranos-Jahrbuch* for 1935 and 1936. The present edition has been augmented by nearly a half through the inclusion of additional material and the full apparatus of documentation. The text has been improved in certain respects and part of it newly arranged. Another new feature is the wealth of illustrations, the large number of which is justified by the fact that symbolical images belong to the very essence of the alchemist's mentality. What the written word could express only imperfectly, or not at all, the alchemist compressed into his images; and strange as these are, they often speak a more intelligible language than is found in his clumsy philosophical concepts. Between such images and those spontaneously produced by patients undergoing psychological treatment there is, for the expert, a striking similarity both in form and in content, although I have not gone into it very deeply in the course of my exposition.

I am particularly indebted to Dr. M. L. von Franz for philological help in translating the Zosimos text, which, besides being corrupt, is hard to construe and controversial. I wish also to thank Miss R. Schärf for information on the Og and Unicorn legend in Talmudic literature and Mrs. O. Fröbe-Kapteyn for obtaining photographic copies of a number of alchemical pictures. Lastly, I should like to express my very warm thanks to Dr. J. Jacobi for choosing and arranging the illustrations and looking after the details of printing.

Küsnacht, January, 1943

PSYCHOLOGY AND ALCHEMY

TABLE OF CONTENTS

RELIGIOUS IDEAS IN ALCHEMY

LIST OF ILLUSTRATIONS

References to documentary sources, which are somewhat shortened in the captions to the illustrations, are given more fully in this list. For explanation of the abbreviations and acknowledgment of photographs, etc., see the note at the end of the list (p. xxxv).

Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 78.

10, 11, 12. Melusina; two-headed Melusina; mermaid with mask

Eleazar, *Uraltes chymisches Werk* (1760), pp. 85, 85, 98 resp. (M.C.A.O.)

13. The “tail-eater” (Uroboros) as the *prima materia*

Reusner, *Pandora* (1588), p. 257. (C.G.J.)

14. Jacob’s dream

Watercolour by William Blake. British Museum, P: John Freeman.

15. The *scala lapidis*

“Emblematical Figures of the Philosophers’ Stone,” MS. Add. 1316 (17th cent.), British Museum.

16. *Mercurius tricephalus* as Anthropos

Kelley, *Tractatus de Lapide philosophorum* (1676), p. 101.

17. The artifex (or Hermes) as shepherd of Aries and Taurus

Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 86.

18. Christ as shepherd

Mosaic, mausoleum of Galla Placidia, Ravenna (*c*. 424–51). P: Anderson.

19. The soul as guide, showing the way

Watercolour by William Blake for Dante’s *Purgatorio*, Canto IV. Tate Gallery.

20. The six planets united in the seventh, Mercury

Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 94a.

21. The seven gods of the planets in Hades

Mylius, *Philosophia reformata* (1622), p. 167, fig. 18. (C.G.J.)

22. Mercurius in the “philosopher’s egg”

Mutus liber (1702), p. 11, detail. (M.C.A.O.)

23. The mystic vessel

“Figurarum Aegyptiorum secretarum,” MS. in author’s coll. (18th cent.), p. 13. (C.G.J.)

24. The activities presided over by Mercurius

MS. (*c*. 1400), Tübingen, Universitätsbibliothek.

25. The fountain of life as *fons mercurialis*

Rosarium philosophorum (1550). (C.G.J.)

26. The Virgin Mary surrounded by her attributes

Devotional picture (17th cent.); from Prinz, *Altorientalische Symbolik*, p. 6. (C.G.J.)

27. Life-renewing influence of the conjoined sun and moon on the bath

Milan, Biblioteca Ambrosiana, Codex I, 6 inf. P: F. Busi, Milan.

28. Capture of the Leviathan

Herrad of Landsberg’s *Hortus deliciarum* (12th cent.); from the Keller and Straub edn., Pl. XXIV. (New York Public Library.)

29. Seven-petalled rose

Fludd, *Summum bonum* (1629), frontispiece. British Museum.

30. The red-and-white rose

“Ripley Scrowle,” MS. Add. 5025 (1588), British Museum, No. 1, detail.

31. The symbolic city as centre of the earth

Maier, *Viatorium* (1651), p. 57. (C.G.J.)

32. *Coniunctio solis et lunae*

Trismosin, “Splendor solis,” MS. Harley 3469 (1582), British Museum.

33. Poliphilo surrounded by nymphs

Béroalde de Verville, *Le Songe de Poliphile* (1600), p. 9. (M.C.A.O.)

34. The *nigredo* standing on the *rotundum*

Mylius, *Philosophia reformata* (1622), p. 117, fig. 9. (C.G.J.)

35. A medieval version of the “wild man”

Codex Urbanus Latinus 899 (15th cent.), Biblioteca Vaticana, fol. 85.

36. The devil as aerial spirit and ungodly intellect

Illustration by Eugène Delacroix (1799–1863) for *Faust*, Part I. P: Courtesy of The Heritage Club, New York.

37. The seven-petalled flower

Boschius, *Symbolographia* (1702), Symbol. LCCXXIII, Class. 1. Tab. XXI. (C.G.J.)

38. Mercurius as *virgo*

Thomas Aquinas (pseud.), "De alchimia," Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 95a.

39. Shri-Yantra

Traditional, from Avalon, *The Serpent Power*.

40. Tibetan World Wheel (*sidpe-korlo*)

Painted banner. Private collection.

41. The Aztec "Great Calendar Stone"

National Museum, Mexico. P: Instituto Nacional de Antropologia y Historia, Mexico.

42. Mandala containing the Infant Christ carrying the Cross

Mural painting by Albertus Pictor in the church of Harkeberga, Sweden (*c*. 1480); from Cornell, *Iconography of the Nativity of Christ*, p. 53. P: Courtesy of J. Jacobi.

43. Lamaic Vajramandala

Tibetan painted banner. Formerly in the China Institute, Frankfort on the Main; destroyed in 2nd World War.

44. Mexican calendar

Engraving from Herrliberger, *Heilige Ceremonien* (1748), Pl. XC, No. 1. (C.G.J.)

45. Hermes as psychopomp

Gem in a Roman ring; from King, *The Gnostics and Their Remains*, fig. 14. (C.G.J.)

Stained-glass window (14th cent.) in the choir of the former monastery church at Königsfelden (Aargau), Switzerland; from copy in author’s house at Küsnacht.

59. “All things do live in the three …”

Jamsthaler, *Viatorium spagyricum* (1625), p. 272. (C.G.J.)

60. Squaring of the circle to make the two sexes one whole

Maier, *Scrutinium chymicum* (1687), Emblema XXI, p. 61. (C.C.J.)

61. The pearl as symbol of Ch’ien

Chinese bronze mirror of the T’ang Period (7th to 9th cent.); from Laignel-Lavastine, *Histoire générale de la médecine*, I, p. 543. P: Courtesy of J. Jacobi.

62. Rectangular mandala with cross

Zwiefalten Abbey breviary (12th cent.), fol. 10; from Löffler, *Schwäbische Buchmalerei*, Pl. 20. P: Courtesy of J. Jacobi.

63. Hermes

Greek vase painting (Hamilton Collection); from Lenormant and Witte, *Élite des monuments céramographiques*, III, Pl. LXXVIII.

64. Christ as Anthropos

Glanville, *Le Propriétaire des choses* (1482). P: Inst.

65. Tetramorph standing on two wheels

Vatopedi Monastery, Mt. Athos (1213); from Gillen, *Ikono-graphische Studien*, p. 15. P: Courtesy of J. Jacobi.

66. Ammon-Ra

From Champollion, *Panthéon égyptien*. (New York Public Library.)

67. Demon in the shape of a monkey

“Speculum humanae salvationis,” Codex Latinus 511 (14th cent.), Paris, Bibliothèque Nationale.

68. Thoth as cynocephalus

From tomb of Amen-her-khopshef, near Der el-Medina, Luxor (XXth dynasty, 12th cent. B.C.). Formerly in the Hahnloser Collection, Bern.

69. Dante and Virgil on their journey to the underworld

Illumination for the *Inferno*, Codex Urbanus Latinus 365 (15th cent.), Biblioteca Vaticana. P: Inst.

70. Pagan rites of transformation in the Middle Ages

Gnostic design; from Hammer-Purgstall, *Mémoire sur deux coffrets gnostiques*, Pl. K. (C.G.J.)

71. Creation of Adam from the clay of the *prima materia*

Schedel, *Das Buch der Chroniken* (1493), p. V. P: Courtesy of J. Jacobi.

72. The “union of irreconcilables”: marriage of water and fire

After an Indian painting; from Mueller, *Glauben, Wissen und Kunst der alten Hindus*, Pl. II, fig. 17.

73. The deliverance of man from the power of the dragon

Wynandi de Stega, “Adamas colluctancium aquilarum,” Codex Palatinus Latinus 412 (15th cent.), Biblioteca Vaticana. P: Inst.

74. Heaven fertilizing Earth and begetting mankind

Thenaud, “Traité de la cabale,” MS. 5061 (16th cent.), Paris, Bibliothèque de l’Arsenal.

75. Trimurti picture

After an Indian painting; from Mueller, *Glauben, Wissen und Kunst der alten Hindus*, Pl. II, fig. 40.

76. The tortoise: an alchemical instrument

Porta, *De distillationibus* (1609), p. 40. P: Inst.

77. Telesphorus

Bronze figure from Roman Gaul; marble statuette from Austria; after figs. in Roscher, *Lexikon*, V, col. 316.

78. Maria Prophetissa

Maier, *Symbola aureae mensae* (1617), frontispiece. (M.C.A.O.)

79. King Sol with his six planet-sons

Bonus, *Pretiosa margarita novella* (1546). (M.C.A.O.)

80. Mercurius turning the eight-spoked wheel
“Speculum veritatis,” Codex Vaticanus Latinus 7286 (17th cent.), Biblioteca Vaticana. P: Inst.

81. “Sol et eius umbra”
Maier, *Scrutinium chymicum* (1687), p. 133.

82. The Anthropos with the four elements
Russian MS. (18th cent.). P: Inst.

83. Dante being led before God in the heavenly rose
Illumination for the *Paradiso*, Codex Urbanus Latinus 365 (15th cent.), Biblioteca Vaticana. P: Inst.

84. The fountain in the walled garden
Boschius, *Symbolographia* (1702), Symbol. CCLI, Class. I, Tab. XVI. (C.G.J.)

85. The eight-petalled flower
“Recueil de figures astrologiques,” MS. Français 14770 (18th cent.). Paris, Bibliothèque Nationale.

86. The alchemical apparatus for distillation
Kelley, *Tractatus de Lapide philosophorum* (1676), p. 109. (C.G.J.)

87. The Virgin as the *vas* of the divine child
From a Venetian *Rosario dela gloriosa vergine Maria* (1524), in Inman, *Ancient Pagan and Modern Christian Symbolism*, p. 62.

88. Vision of the Holy Grail
“Roman de Lancelot du Lac,” MS. Français 116 (15th cent.), Paris, Bibliothèque Nationale. fol. 610^{v}.

89. The pelican nourishing its young with its own blood
Boschius, *Symbolographia* (1702), Symbol. LXX, Class. I, Tab. IV. (C.G.J.)

90. The bear representing the dangerous aspect of the *prima materia*
Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 82.

91. *Anima Mundi*

Thurneisser zum Thurn, *Quinta essentia* (1574), p. 92, woodcut. (C.G.J.)

92. The alchemical process in the zodiac

"Ripley Scrowle," MS. Add. 5025 (1588), British Museum, No. 1, detail.

93. The Mountain of the Adepts

Michelspacher, *Cabala* (1654). P: Photo Archives, Marburg.

94. Etna: "gelat et ardet"

Boschius, *Symbolographia* (1702), Symbol. XXX, Class. II, Tab. II. (C.G.J.)

95. *Ludus puerorum*

Trismosin, "Splendor solis," MS. Harley 3469 (1582), British Museum.

96. Pygmies (helpful child-gods)

Fragments of an Egyptian mechanical toy, Cairo Museum. P: Courtesy of A. Piankoff.

97. The "Grand Peregrination" by ship

Maier, *Viatorium* (1651), p. 183. (C.G.J.)

98. The philosophical egg

Wynandi de Stega, "Adamas colluctancium aquilarum," Codex Palatinus Latinus 412 (15th cent.), Biblioteca Vaticana. P: Inst.

99. Time-symbol of the *lapis*

Thomas Aquinas (pseud.), "De alchimia," Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 74.

100. Horoscope, showing the houses, zodiac, and planets

Woodcut by Erhard Schoen for the nativity calendar of Leonhard Reymann (1515); from Strauss, *Der astrologische Gedanke*, p. 54.

101. Christ in the mandorla

Mural painting, church of Saint-Jacques-des-Guérets, Loir-et-Cher, France; from Clemen, *Die romanische Monumentalmalerei*, fig. 195, p. 260.

102. Osiris, with the four sons of Horus on the lotus

Budge, *The Book of the Dead* (1899), Papyrus of Hunefer, Plate 5.

103. *Sponsus et sponsa*

Detail from *Polittico con I'Incoronazione*, by Stefano da Sant'Agnese (15th cent.), Venice, Accademia. P: Alinari.

104. God as Father and Logos creating the zodiac

Peter Lombard, "De sacramentis," Codex Vaticanus Latinus 681 (14th cent.), Biblioteca Vaticana.

105. The Virgin, personifying the starry heaven

"Speculum humanae saluacionis," Codex Palatinus Latinus 413 (15th cent.), Biblioteca Vaticana.

106. "Elixir of the moon"

Codex Reginensis Latinus 1458 (17th cent.), Biblioteca Vaticana.

107. Virgin carrying the Saviour

"Speculum humanae saluacionis," Codex Palatinus Latinus 413 (15th cent.), Biblioteca Vaticana.

108. Maya encircled by the Uroboros

Damaged vignette from frontispiece of a collection of Brahminic sayings; from Mueller, *Glauben, Wissen und Kunst der alten Hindus*, Pl. I, fig. 91.

109. The four evangelists with their symbols and the four rivers of paradise

Miniature in an Evangeliary, Aschaffenburg, Codex 13 (13th cent.), fol. 177. P: Samhaber, Aschaffenburg.

110. Sand-painting of the Navajo Indians

Ethnological drawing; from Stevenson, "Ceremonial of Hasjelti Dailjis," Pl. CXXI.

111. The *cauda pavonis*

Boschius, *Symbolographia* (1702), Symbol. LXXXIV, Class. I, Tab. V. (C.G.J.)

112. The principal symbols of alchemy

Trismosin, *La Toyson d'or* (1612), frontispiece. Coll. C. A. Meier, Zurich.

113. Moon and sun furnaces

Mutus liber (1702), p. 14, detail. (M.C.A.O.)

114. The four stages of the alchemical process

Mylius, *Philosophia reformata* (1622), p. 96, fig. 2. (C.G.J.)

115. The *nigredo:* eclipse of *Mercurius senex*, exhaling the *spiritus* and *anima*

Jamsthaler, *Viatorium spagyricum* (1625), p. 118. (C.G.J.)

116. Crowned hermaphrodite

"Traité d'alchimie," MS. 6577 (17th cent.), Paris, Bibliothèque de l'Arsenal.

117. Anthropos as *anima mundi*

From Albertus Magnus, *Philosophia naturalis* (1650). (C.G.J.)

118. Brother-sister pair in the "bath of life"

Theatrum chemicum Britannicum (1652), p. 350. P: Inst.

119. Alchemical furnace

Geber, *De alchimia* (1529), frontispiece. (C.G.J.)

120. Mercurius in the vessel

Barchusen, *Elementa chemiae* (1718), fig. 75, Paris, Bibliothèque Nationale.

121. The transformations of Mercurius in the Hermetic vessel

"Cabala mineralis," MS. Add. 5245, British Museum, fol. 2. P: Inst.

122. The twelve alchemical operations in the form of the *arbor philosophica*

Samuel Norton, *Mercurius redivivus* (1630), British Museum.

123. Hermaphrodite

Hermaphroditisches Sonn- und Mondskind (1752), p. 16, detail. (C.G.J.)

124. Alchemists at work
Mutus liber (1702), p. 13, detail. (M.C.A.O.)

125. Mercurius as the sun-moon hermaphrodite, standing on the (round) chaos
Mylius, *Philosophia reformata* (1622), p. 354, fig. 5. (C.G.J.)

126. The six days of creation, culminating in the seventh day
St. Hildegarde of Bingen, "Scivias," MS. (12th cent.); from *Hildegard von Bingen: Wisse die Wege*, ed. Böckeler.

127. The transformation of Mercurius in the fire
Barchusen, *Elementa chemiae* (1718), fig. 76, Paris, Bibliothèque Nationale.

128. Hermes Trismegistus
Senior, *De chemia*, in Mangetus, *Bibliotheca chemica curiosa* (1702), Vol. II, facing p. 216. (M.C.A.O.) [In the original edition, Jung used the Strasbourg 1566 version of Senior's *De chemia*, now unavailable.]

129. Personified *spiritus* escaping from the heated *prima materia*
Thomas Aquinas (pseud.), "De alchimia," Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 60a, detail.

130. The Mercurial serpent devouring itself in water or fire
Barchusen, *Elementa chemiae* (1718), figs. 58–61, Paris, Bibliothèque Nationale.

131. Adam as *prima materia*, pierced by the arrow of Mercurius
"Miscellanea d'alchimia." MS. Ashburnham 1166 (14th cent.), Florence, Biblioteca Medicea-Laurenziana. P: Inst.

132. The "secret" contents of the work
Mutus liber (1702), fig. 3. (M.C.A.O.)

133. Alchemists at work
Mutus liber (1702), p. 6. (M.C.A.O.)

134. Saturn, or *Mercurius senex*, being cooked in the bath
Trismosin, “Splendor solis,” MS. Harley 3169 (1582), British Museum.

135. The skull, symbol of the *mortificatio* of Eve
“Miscellanea d’alchimia,” MS. Ashburnham 1166 (14th cent.), Florence, Biblioteca Medicea-Laurenziana. P: Inst.

136. God enlightening the artifex
Barchusen, *Elementa chemiae* (1718), fig. 2, Paris, Bibliothèque Nationale.

137. Alchemist in the initial *nigredo* state, meditating
Jamsthaler, *Viatorium spagyricum* (1625), p. 27. (C.G.J.)

138. The Mercurial spirit of the *prima materia*, as salamander, frolicking in the fire
Maier, *Scrutinium chymicum* (1687), Emblema XXIX, p. 85. (C.G.J.)

139. Hermes conjuring the winged soul out of an urn
Attic funeral lekythos, Jena; from Harrison, *Themis*, p. 295, fig. 78.

140. The artifex with his *soror mystica*, holding the keys to the work
Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 99.

141. The artifex with book and altar
Kelley, *Tractatus de Lapide philosophorum* (1676), p. 118.

142. The sequence of stages in the alchemical process
Libavius, *Alchymia* (1606), Commentarium, Part II, p. 55. (C.G.J.)

143. Alchemists at work
Mutus liber (1702), p. 7, detail. (M.C.A.O.)

144. Artists in library and laboratory
Maier, *Tripus aureus* (1618), from title-page (M.C.A.O.) [In his original edition, Jung used an identical version from *Musaeum hermeticum* (1678).]

145. Laboratory and oratory

Khunrath, *Amphitheatrum sapientiae* (1604), Tab. III. P: Courtesy of J. Jacobi.

146. Mercurius as “uniting symbol”

Valentinus. “Duodecim claves,” in *Musaeum hermeticum* (1678), p. 396. (C.G.J.)

147. Uroboros

Codex Marcianus (11th cent.), Venice, fol. 188^v; in Berthelot, *Collection des anciens alchimistes grecs*, Introduction, p. 132.

148. Mercurius as caduceus, uniting the paired opposites

“Figurarum Aegyptiorum secretarum,” MS. (18th cent.), in author’s coll., p. 14. (C.G.J.)

149. The sick king (*prima materia*)

“La Sagesse des anciens,” MS. (18th cent.), in author’s coll. (C.G.J.)

150. The penetrating Mercurius

“Speculum veritatis,” Codex Vaticanus Latinus 7286 (17th cent.), Biblioteca Vaticana. P: Inst.

151. Prisoners in the underworld

Izquierdo, *Praxis exercitiorum spiritualium* (1695), p. 72.

152. Saturn eating his children

Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 73.

153. The artist lifting the homunculus out of the Hermetic vessel

Kelley, *Tractatus de Lapide philosophorum* (1676), p. 108.

154, 155. The king with the six planets or metals; the renewed king (*filius philosophorum*) worshipped by the six planets

Kelley, *Tractatus de Lapide philosophorum* (1676), pp. 122, 125.

156. The Dyad (day and night)

“Très Riches Heures du duc de Berry,” MS. 1284 (15th cent.), Chantilly, Musée Condé, fol. 14^v. P: Giraudon.

157. *Anima Mercurii*

169. The “green lion” devouring the sun

Rosarium philosophorum (1550). P: Courtesy of J. Fraser.

170. The night sea journey

Biblia pauperum (1471); edn. of 1906, fig. 170.

171. Hercules on the night sea journey in the vessel of the sun

Base of an Attic vase (5th cent. B.C.), Etruscan Museum, Vatican. P: Alinari.

172. Jonah emerging from the belly of the whale

“Speculum humanae salvationis,” Codex Latinus 512 (15th cent.), Paris, Bibliothèque Nationale.

173. The slaying of the king

Stolcius de Stolcenberg, *Viridarium chymicum* (1624), fig. 101. (C.G.J.)

174. Jonah in the whale

Early Christian earthenware lamp, Marseilles Museum; from Eisler, *Orpheus—the Fisher*, Pl. XLVII.

175. The wolf as *prima materia*, devouring the dead king

Maier, *Scrutinium chymicum* (1687), Emblema XXIV. (C.G.J.)

176. Jonah in the belly of the whale

Khludov Psalter, Codex 129, fol. 157 (Monastery of St. Nicholas, Preobrazhensk, Russia), (Byzantine, 9th cent.); from Tikkanen, *Die Psalterillustration im Mittelalter*, p. 24.

177. The Resurrection

Biblia pauperum (1471); edn. of 1906, fig. 170.

178. The dove (*avis Hermetis*) rising from the four elements

“De summa et universalis medicinae sapientiae veterum philosophorum,” MS. 974 (18th cent.), Paris, Bibliothèque de l’Arsenal, fig. 18.

179. The alchemical trinity

Lambspringk, “Figurae et emblemata,” fig. XV, in *Musaeum hermeticum* (1678), p. 371. (M.C.A.O.)

180. The Christian Trinity with the Holy Ghost as a winged man

Engraving (15th cent.), by the Master of the Berlin Passion; from Molsdorf, *Christliche Symbolik*, Pl. I.

181. Sun as symbol of God

Boschius, *Symbolographia* (1702), Symbol. CXII, Class. I, Tab. VII. (C.G.J.)

182. Christ as the Saviour of souls

Mural painting in church of the Braunweiler monastery, Rhineland (12th cent.), P: Marburg.

183. Androgynous deity

Late Babylonian gem; from Lajard, “Mémoire sur une représentation figurée de la Vénus orientale androgyne,” p. 161.

184. The three youths in the fiery furnace

Early Christian ornament on sarcophagus from Villa Carpegna, Rome; from Ehrenstein, *Das alie Testament im Bilde*, p. 818.

185. Triad as unity; quaternity standing on the binarius

Valentinus, “Duodecim claves,” in *Musaeum hermeticum* (1678), p. 415. (C.G.J.)

186. The tree of coral in the sea

From Dioscorides, “De materia medica,” MS. (16th cent.), Vienna, Nationalbibliothek, fol. 391b; in Koemstedt, *Vormittelalterliche Malerei*, fig. 79.

187. The dragon spewing forth Jason

Attic vase (5th cent, B.C.), Etruscan Museum, Vatican. P: Anderson.

188. The tree of the philosophers

Mylius, *Philosophia reformata* (1622), p. 316. (C.G.J.)

189. Dragon with tree of the Hesperides

Boschius, *Symbolographia* (1702), Symbol. LVII, Class. III, Tab. IV. (C.G.J.)

190. Mayan ritual tree with serpent

Dresden Codex, Dresden, Landesbibliothek, Pl. XXVI, detail.

191. Descent of the Holy Ghost in the form of cloven tongues

Munich Lectionary or *Perikopenbuch*, Codex Latinus 15713 (12th cent.), Munich, Staatsbibliothek, fol. 37^{v};. P: Marburg.

192. The quaternity of the cross in the zodiac

Böhme, *Signatura rerum*, in Amsterdam edn. (1682), frontispiece. P: Inst.

193. The white and the red rose as end-product of the transformation of king and queen

“Trésor des trésors,” MS. 975 (17th cent.), Paris, Bibliothèque de l’Arsenal, figs. 11, 12.

194. Sulphur as sun and Mercurius as moon bridging the river of “eternal water”

Barchusen, *Elementa chemiae* (1718), fig. 9, Paris, Bibliothèque Nationale.

195. Creator, macrocosm, and microcosm in human form

St. Hildegarde of Bingen, “Liber divinorum operum,” Codex 1942 (12th cent.), Lucca, Biblioteca governativa. P: Inst.

196. The three manifestations of the Anthropos during his transformation

“Ripley Scrowle,” MS. Add. 5025 (1588), No. 2, detail, British Museum.

197. Christ in the midst of the four rivers of paradise

Peregrinus, “Speculum virginum,” Codex Palatinus Latinus 565 (13th cent.), Biblioteca Vaticana. P: Inst.

198. *Anser* or *cygnus Hermetis*

Hermaphroditisches Sonn- und Mondskind (1752), p. 54. (C.G.J.)

199. Hermaphrodite on the winged globe of chaos

Jamsthaler, *Viatorium spagyricum* (1625), p. 75. (C.G.J.)

200. Eagle and swan as symbols of the sublimated *spiritus*

Mylius, *Philosophia reformata* (1622), p. 126, fig. 13. (C.G.J.)

201. Sapientia as mother of the wise
Thomas Aquinas (pseud.), "De alchimia," Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 53, detail.

202. Communion table with seven fish
Christian earthenware lamp, Carthage; from Eisler, *Orpheus—the Fisher*, Pl. LIX.

203, 204. The Chnuphis serpent with seven-rayed crown
Gnostic gem and amulet; from King, *The Gnostics and Their Remains*, Pl. III, figs. 7 and 2.

205. Goddess of fate (?) as serpent with seven heads
Seal of St. Servatius, from Maastricht Cathedral; from King, *The Gnostics and Their Remains*, p. 119.

206. Helios riding a chariot with four horses
Theodore Psalter, MS. Add. 19352 (1066), British Museum.

207. The ascension of Elijah
Early Christian mural painting, crypt of Lucina, Rome; from Ehrenstein, *Das Alte Testament im Bilde*, p. 699. P: Courtesy of J. Jacobi.

208. Mercurius as *anima mundi*
"Turba philosophorum," Codex Latinus 7171 (16th cent.), Paris, Bibliothèque Nationale. P: Inst.

209. The winged sphere (*aurum aurae*)
Balduinus, *Aurum hermeticum* (1675), frontispiece. (C.G.J)

210. "The wind hath carried it in his belly" ("Tabula smaragdina")
Maier, *Scrutinium chymicum* (1687), Emblem I. (C.G.J.)

211. The god Aër as procreator of all harmony
"Recueil des fausses décrétales," MS. (13th cent.), Reims. P: inst.

212. The Trinity as *tricephalus*

Mylius, *Philosophia reformata* (1622), fig. 6, p. 243. P: Inst.

224. Transfiguration of the body portrayed as the coronation of the Virgin Mary

“Das Buch der heiligen Dreifaltigkeit,” Codex Germanicus 598 (1420), Munich, Staatsbibliothek. P: Inst.

225. The love-potion being handed to the brother-sister pair

Maier, *Scrutinium chymicum* (1687), Emblema IV, p. 10. (C.G.J.)

226. *Coniunctio* of opposites in the Hermetic vessel

“Trésor des trésors,” MS. 975 (17th cent.), Paris, Bibliothèque de l’Arsenal.

227. *Coniunctio* as a fantastic monstrosity

Brant, *Hexastichon* (1503). (C.G.J.)

228. The plumed king who plucks out his feathers for food

“Ripley Scrowle,” MS. Add. 5025 (1588), British Museum. P: Inst.

229. Eagle as symbol of the spirit ascending from the *prima materia*

Hermaphroditisches Sonn- und Mondskind (1752), p. 44. (C.G.J.)

230. The peacock rising from the retort

MS. (18th cent.), in coll. Dr. C. Rusch, Appenzell. P: Inst.

231. Mercurius as Pandora and *arbor philosophica*

Reusner, *Pandora* (1588), p. 225. (C.G.J.)

232. Glorification of the body portrayed as coronation of the Virgin Mary

Speculum Trinitatis, from Reusner, *Pandora* (1588), p. 253. (C.G.J.)

233. Christian quaternity: Trinity and Mary (detail)

French School (1457), Basel Museum.

234. The Risen Christ as symbol of the *filius philosophorum*

Rosarium philosophorum (1550). (C.G.J.)

235. Alchemical quaternity

Rosarium philosophorum (1550). (C.G.J.)

236. Contents of the *vas Hermetis*

Kelley, *Tractatus de Lapide philosophorum* (1676), p. 114.

237. The artifex at work with his *soror mystica*

Mutus liber (1702), p. 7, detail. (M.C.A.O.)

238. The brazen serpent of Moses on the cross

Eleazar, *Uraltes chymisches Werk* (1760), Part II, no. 10, facing p. 52. (M.C.A.O.)

239. Unicorn

Amman, *Ein neuw Thierbuch* (1569). P: Courtesy of J. Jacobi.

240. Stag and unicorn

Lambspringk, “Figurae et emblemata,” fig. III, in *Musaeum hermeticum* (1625 edn.), fig. III, p. 337. (New York Public Library.)

241. Virgin taming a unicorn

Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 87.

242. Slaying the unicorn in the Virgin’s lap

Initial from “Historia animalium cum picturis,” MS. Harley 4751, fol. 6V, British Museum. P: Inst.

243. Unicorn crest of the von Gachnang family

From the Zurich Roll of Arms (1340); from Merz, *Die Wappenrolle von Zürich*, p. 33.

244. The glorification of Ariosto

Drawing by Giovanni Battista Benvenuti, called Ortolano (1488–? 1525); formerly in A. O. Meyer collection; from Börner, *Auctions-Katalog 184* (1914), Pl. 30. P: Warburg Institute, London.

245. The Virgin Mary with the loving unicorn in the “enclosed garden”

Swiss tapestry (1480), Landesmuseum, Zurich; from Gysin, *Gotische Bildteppiche der Schweiz*, Pl. 5.

246. Mandala with four ornamental medallions

Pavement from St. Urban’s Monastery, Lucerne, Landesmuseum, Zurich.

247. Virgin with unicorn

Khludov Psalter, Codex 129, fol. 93^{v} (Monastery of St. Nicholas, Preobrazhensk, Russia), Byzantine (9th cent.); from Tikkanen, *Die Psalterillustration im Mittelalter*, p. 43.

248. The creation of Eve

Trésor de sapience,” MS. 5076 (15th cent.), Paris, Bibliothèque de l’Arsenal.

249. Wild unicorn

From Bock, *Kräuterbuch* (1595), p. 391. P: Courtesy of J. Jacobi.

250. Wild man riding the unicorn

Engraving from the *Grösseres Kartenspiel*, by the monogrammist E.S. (*c*. 1463); from Geisberg, *Die Kupferstiche des Meisters E.S.*, Pl. L269.

251. The seven stages of the alchemical process shown as a unity

“Ripley Scrowle,” MS. Add. 5025 (1588), British Museum, No. 4, detail.

252. Chastity

Les Triomphes du Pétrarche,” MS. Français 594 (16th cent.), Paris, Bibliothèque Nationale.

253. Harpokrates encircled by the Uroboros

Gnostic gem; from King, *The Gnostics and Their Remains*, Pl. II, fig. 8.

254. The so-called sea-unicorn

Pommet, *Histoire générale des drogues* (1694), II, p. 78, Paris, Bibliothèque Nationale.

255. Vishnu in his fish incarnation

Indian miniature (18th cent.), in the author’s collection.

256. Fabulous monster containing the *massa confusa*

Hermaphroditisches Sonn- und Mondskind (1752), p. 57. (C.G.J.)

257. The transformations of Mercurius

“Ripley Scrowle,” MS. Add. 5025 (1588), British Museum, No. 3, detail.

258. Unicorn and lion

From the tapestry series *La Dame à la Licorne* (16th cent.), Musée de Cluny, Paris. P: Bulloz.

259, 260. The ch’i-lin announcing the birth and death of Confucius

From a Chinese illustrated work (*c*. 18th cent.), *Shêng Chi-t’u*. School of Oriental Studies, London. P: John Freeman.

261. Pope with the unicorn as the symbol of the Holy Ghost

Scaliger, *Explanatio imaginum* (1570), p. 84, British Museum. P: John Freeman.

262. The lunar unicorn

Reverse of a medal (1447) by Antonio Pisano, British Museum.

263. The Campion Pendant

Formerly in possession of the Campion family, Sussex, England; probably 16th cent., Victoria and Albert Museum, London.

264. Mandala of the unicorn and the tree of life

Verteuil tapestry (15th cent.), “The Hunt of the Unicorn,” Cloisters, Metropolitan Museum of Art, New York.

265. The unicorn and his reflection

Boschius, *Symbolographia* (1702), Symbol. LXXXIX, Class. I, Tab. V. (C.G.J.)

266. Double-headed eagle with crowns of Pope and Emperor

Wynandi de Stega, “Adamas colluctancium aquilarum,” Codex Palatinus Latinus 412 (15th cent.), Biblioteca Vaticana. P: Inst.

267. The *prima materia* as the dragon, being fertilized by the Holy Ghost

“Hermes Bird,” *Theatrum chemicum Britannicum* (1652), p. 213 (M.C.A.O.)

268. *Fermentatio*, symbolic representation of the *coniunctio spirituum*

Rosarium philosophorum (1550). (C.G.J.)

269. The artifex and his *soror mystica* making the gesture of the secret
Mutus liber (1702), p. 14, detail. (M.C.A.O.)

270. The phoenix as symbol of resurrection
Boschius, *Symbolographia* (1702), Symbol. DCVI, Class. I, Tab. XXVI. (C.G.J.)

NOTE OF ACKNOWLEDGMENT

The illustrations are derived from:

(1) Rare books, MSS., and other works in the author’s collection at Küsnacht, which have been reproduced by kind permission of Mr. Franz Jung and photographed under the supervision of Mrs. Aniela Jaffé; indicated by the initials “C.G.J.”

(2) Rare books in Mr. Paul Mellon’s former collection, reproduced by kind permission of him and of the Yale University Library, where the collection has been deposited under the name “Mellon Collection of the Alchemical and Occult”; photographed by Yale University Library; indicated by the initials “M.C.A.O.”

(3) Photographs in private collections, in particular that of Dr. Jolande Jacobi, Zurich, and that of the C. G. Jung Institute, Zurich (indicated as “Inst.”).

(4) Books, MSS., and other works in various museums, libraries, archives, etc., as indicated; photographed by the institution unless otherwise noted. Commercial photographic agencies are credited.

(5) In a few cases, the blocks used in earlier editions and kindly made available by Rascher Verlag, Zurich.

1. The Creator as Ruler of the threefold and fourfold universe, with water and fire as the counterpart of heaven.—“Liber patris sapientiae,” *Theatrum chemicum Britannicum* (1652)

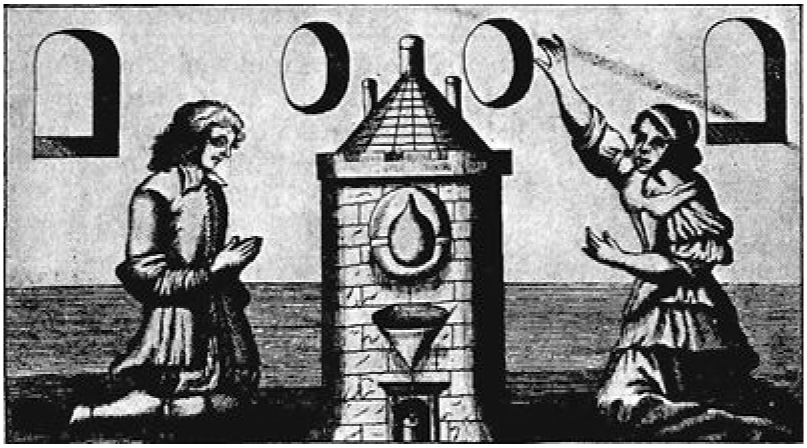
I

INTRODUCTION TO THE RELIGIOUS AND PSYCHOLOGICAL PROBLEMS OF ALCHEMY

Calamum quassatum non conteret, et linum fumigans non extinguet.…

—ISAIAS 42 : 3

The bruised reed he shall not break, and the smoking flax he shall not quench.… (D.V.)



2. A pair of alchemists, kneeling by the furnace and praying for God’s blessing.
–*Mutus liber* (1702)

[1] For the reader familiar with analytical psychology, there is no need of any introductory remarks to the subject of the following study. But for the reader whose interest is not professional and who comes to this book unprepared, some kind of preface will probably be necessary. The concepts of alchemy and the individuation process are matters that seem to lie very far apart, so that the imagination finds it impossible at first to conceive of any bridge between them. To this reader I owe an explanation, more particularly as I have had one or two experiences since the publication of my recent lectures which lead me to infer a certain bewilderment in my critics.

[2] What I now have to put forward as regards the nature of the human psyche is based first and foremost on my observations of people. It has been objected that these observations deal with experiences that are either unknown or barely accessible. It is a remarkable fact, which we come across again and again, that absolutely everybody, even the most unqualified layman, thinks he knows all about psychology as though the psyche were something that enjoyed the most universal understanding. But anyone who really knows the human psyche will agree with me when I say that it is one of the darkest and most mysterious regions of our experience. There is no end to what can be learned in this field. Hardly a day passes in my practice but I come across something new and unexpected. True enough, my experiences are not commonplaces lying on the surface of life. They are, however, within easy reach of every psychotherapist working in this particular field. It is therefore rather

absurd, to say the least, that ignorance of the experiences I have to offer should be twisted into an accusation against me. I do not hold myself responsible for the shortcomings in the lay public's knowledge of psychology.

[3] There is in the analytical process, that is to say in the dialectical discussion between the conscious mind and the unconscious, a development or an advance towards some goal or end, the perplexing nature of which has engaged my attention for many years. Psychological treatment may come to an *end* at any stage in the development without one's always or necessarily having the feeling that a *goal* has also been reached. Typical and temporary terminations may occur (1) after receiving a piece of good advice; (2) after making a fairly complete but nevertheless adequate confession; (3) after having recognized some hitherto unconscious but essential psychic content whose realization gives a new impetus to one's life and activity; (4) after a hard-won separation from the childhood psyche; (5) after having worked out a new and rational mode of adaptation to perhaps difficult or unusual circumstances and surroundings; (6) after the disappearance of painful symptoms; (7) after some positive turn of fortune such as an examination, engagement, marriage, divorce, change of profession, etc.; (8) after having found one's way back to the church or creed to which one previously belonged, or after a conversion; and finally, (9) after having begun to build up a practical philosophy of life (a "philosophy" in the classical sense of the word).

[4] Although the list could admit of many more modifications and additions, it ought to define by and large the main situations in which the analytical or psychotherapeutic process reaches a temporary or sometimes even a definitive end. Experience shows, however, that there is a relatively large number of patients for whom the outward termination of work with the doctor is far from denoting the end of the analytical process. It is rather the case that the dialectical discussion with the unconscious still continues, and follows much the same course as it does with those who have not given up their work with the doctor. Occasionally one meets such patients again after several years and hears the often highly remarkable account of their subsequent development. It

was experiences of this kind which first confirmed me in my belief that there is in the psyche a process that seeks its own goal independently of external factors, and which freed me from the worrying feeling that I myself might be the sole cause of an unreal—and perhaps unnatural—process in the psyche of the patient. This apprehension was not altogether misplaced inasmuch as no amount of argument based on any of the nine categories mentioned above—not even a religious conversion or the most startling removal of neurotic symptoms—can persuade certain patients to give up their analytical work. It was these cases that finally convinced me that the treatment of neurosis opens up a problem which goes far beyond purely medical considerations and to which medical knowledge alone cannot hope to do justice.

[5] Although the early days of analysis now lie nearly half a century behind us, with their pseudo-biological interpretations and their depreciation of the whole process of psychic development, memories die hard and people are still very fond of describing a lengthy analysis as "running away from life," "unresolved transference," "auto-eroticism"—and by other equally unpleasant epithets. But since there are two sides to everything, it is legitimate to condemn this so-called "hanging on" as negative to life only if it can be shown that it really does contain nothing positive. The very understandable impatience felt by the doctor does not prove anything in itself. Only through infinitely patient research has the new science succeeded in building up a profounder knowledge of the nature of the psyche, and if there have been certain unexpected therapeutic results, these are due to the self-sacrificing perseverance of the doctor. Unjustifiably negative judgments are easily come by and at times harmful; moreover they arouse the suspicion of being a mere cloak for ignorance if not an attempt to evade the responsibility of a thoroughgoing analysis. For since the analytical work must inevitably lead sooner or later to a fundamental discussion between "I" and "You" and "You" and "I" on a plane stripped of all human pretences, it is very likely, indeed it is almost certain, that not only the patient but the doctor as well will find the situation "getting under his skin." Nobody can meddle with fire or poison without being affected in some vulnerable spot; for the true physician does not stand outside his work but is always in the thick of it.

[6] This “hanging on,” as it is called, may be something undesired by both parties, something incomprehensible and even unendurable, without necessarily being negative to life. On the contrary, it can easily be a positive “hanging on,” which, although it constitutes an apparently insurmountable obstacle, represents just for that reason a unique situation that demands the maximum effort and therefore enlists the energies of the whole man. In fact, one could say that while the patient is unconsciously and unswervingly seeking the solution to some ultimately insoluble problem, the art and technique of the doctor are doing their best to help him towards it. “Ars totum requirit hominem!” exclaims an old alchemist. It is just this *homo totus* whom we seek. The labours of the doctor as well as the quest of the patient are directed towards that hidden and as yet unmanifest “whole” man, who is at once the greater and the future man. But the right way to wholeness is made up, unfortunately, of fateful detours and wrong turnings. It is a *longissima via,* not straight but snakelike, a path that unites the opposites in the manner of the guiding caduceus, a path whose labyrinthine twists and turns are not lacking in terrors. It is on this *longissima via* that we meet with those experiences which are said to be “inaccessible.” Their inaccessibility really consists in the fact that they cost us an enormous amount of effort: they demand the very thing we most fear, namely the “wholeness” which we talk about so glibly and which lends itself to endless theorizing, though in actual life we give it the widest possible berth.[1] It is infinitely more popular to go in for “compartment psychology,” where the left-hand pigeon-hole does not know what is in the right.

[7] I am afraid that we cannot hold the unconsciousness and impotence of the individual entirely responsible for this state of affairs: it is due also to the general psychological education of the European. Not only is this education the proper concern of the ruling religions, it belongs to their very nature—for religion excels all rationalistic systems in that it alone relates to the outer and inner man in equal degree. We can accuse Christianity of arrested development if we are determined to excuse our own shortcomings; but I do not wish to make the mistake of blaming religion for something that is due mainly to human incompetence. I am speaking therefore not of the deepest and best understanding of

Christianity but of the superficialities and disastrous misunderstandings that are plain for all to see. The demand made by the *imitatio Christi*—that we should follow the ideal and seek to become like it—ought logically to have the result of developing and exalting the inner man. In actual fact, however, the ideal has been turned by superficial and formalistically-minded believers into an external object of worship, and it is precisely this veneration for the object that prevents it from reaching down into the depths of the psyche and giving the latter a wholeness in keeping with the ideal. Accordingly the divine mediator stands outside as an image, while man remains fragmentary and untouched in the deepest part of him. Christ can indeed be imitated even to the point of stigmatization without the imitator coming anywhere near the ideal or its meaning. For it is not a question of an imitation that leaves a man unchanged and makes him into a mere artifact, but of realizing the ideal on one's own account—*Deo concedente*—in one's own individual life. We must not forget, however, that even a mistaken imitation may sometimes involve a tremendous moral effort which has all the merits of a total surrender to some supreme value, even though the real goal may never be reached and the value is represented externally. It is conceivable that by virtue of this total effort a man may even catch a fleeting glimpse of his wholeness, accompanied by the feeling of grace that always characterizes this experience.

[8] The mistaken idea of a merely outward *imitatio Christi* is further exacerbated by a typically European prejudice which distinguishes the Western attitude from the Eastern. Western man is held in thrall by the "ten thousand things"; he sees only particulars, he is ego-bound and thing-bound, and unaware of the deep root of all being. Eastern man, on the other hand, experiences the world of particulars, and even his own ego, like a dream; he is rooted essentially in the "Ground," which attracts him so powerfully that his relations with the world are relativized to a degree that is often incomprehensible to us. The Western attitude, with its emphasis on the object, tends to fix the ideal—Christ—in its outward aspect and thus to rob it of its mysterious relation to the inner man. It is this prejudice, for instance, which impels the Protestant interpreters of the Bible to interpret ἐντὸς ὑμῶν (referring to the Kingdom of God) as

"among you" instead of "within you." I do not mean to say anything about the validity of the Western attitude: we are sufficiently convinced of its rightness. But if we try to come to a real understanding of Eastern man—as the psychologist must—we find it hard to rid ourselves of certain misgivings. Anyone who can square it with his conscience is free to decide this question as he pleases, though he may be unconsciously setting himself up as an *arbiter mundi*. I for my part prefer the precious gift of doubt, for the reason that it does not violate the virginity of things beyond our ken.

[9] Christ the ideal took upon himself the sins of the world. But if the ideal is wholly outside then the sins of the individual are also outside, and consequently he is more of a fragment than ever, since superficial misunderstanding conveniently enables him, quite literally, to "cast his sins upon Christ" and thus to evade his deepest responsibilities—which is contrary to the spirit of Christianity. Such formalism and laxity were not only one of the prime causes of the Reformation, they are also present within the body of Protestantism. If the supreme value (Christ) and the supreme negation (sin) are outside, then the soul is void: its highest and lowest are missing. The Eastern attitude (more particularly the Indian) is the other way about: everything, highest and lowest, is in the (transcendental) Subject. Accordingly the significance of the Atman, the Self, is heightened beyond all bounds. But with Western man the value of the self sinks to zero. Hence the universal depreciation of the soul in the West. Whoever speaks of the reality of the soul or psyche[2] is accused of "psychologism." Psychology is spoken of as if it were "only" psychology and nothing else. The notion that there can be psychic factors which correspond to divine figures is regarded as a devaluation of the latter. It smacks of blasphemy to think that a religious experience is a psychic process; for, so it is argued, a religious experience "is not *only* psychological." Anything psychic is *only* Nature and therefore, people think, nothing religious can come out of it. At the same time such critics never hesitate to derive all religions—with the exception of their own—from the nature of the psyche. It is a telling fact that two theological reviewers of my book *Psychology and Religion*—one of them Catholic,

the other Protestant—assiduously overlooked my demonstration of the psychic origin of religious phenomena.

[10] Faced with this situation, we must really ask: How do we know so much about the psyche that we can say "only" psychic? For this is how Western man, whose soul is evidently "of little worth," speaks and thinks. If much were in his soul he would speak of it with reverence. But since he does not do so we can only conclude that there is nothing of value in it. Not that this is necessarily so always and everywhere, but only with people who put nothing into their souls and have "all God outside." (A little more Meister Eckhart would be a very good thing sometimes!)

[11] An exclusively religious projection may rob the soul of its values so that through sheer inanition it becomes incapable of further development and gets stuck in an unconscious state. At the same time it falls victim to the delusion that the cause of all misfortune lies outside, and people no longer stop to ask themselves how far it is their own doing. So insignificant does the soul seem that it is regarded as hardly capable of evil, much less of good. But if the soul no longer has any part to play, religious life congeals into externals and formalities. However we may picture the relationship between God and soul, one thing is certain: that the soul cannot be "nothing but."[3] On the contrary it has the dignity of an entity endowed with consciousness of a relationship to Deity. Even if it were only the relationship of a drop of water to the sea, that sea would not exist but for the multitude of drops. The immortality of the soul insisted upon by dogma exalts it above the transitoriness of mortal man and causes it to partake of some supernatural quality. It thus infinitely surpasses the perishable, conscious individual in significance, so that logically the Christian is forbidden to regard the soul as a "nothing but."[4] As the eye to the sun, so the soul corresponds to God. Since our conscious mind does not comprehend the soul it is ridiculous to speak of the things of the soul in a patronizing or depreciatory manner. Even the believing Christian does not know God's hidden ways and must leave him to decide whether he will work on man from outside or from within, through the soul. So the believer should not boggle at the fact that there are *somnia a Deo missa* (dreams sent by God) and illuminations of the soul which cannot be traced back to any external causes. It would be

blasphemy to assert that God can manifest himself everywhere save only in the human soul. Indeed the very intimacy of the relationship between God and the soul precludes from the start any devaluation of the latter.[5] It would be going perhaps too far to speak of an affinity; but at all events the soul must contain in itself the faculty of relationship to God, i.e., a correspondence, otherwise a connection could never come about.[6] *This correspondence is, in psychological terms, the archetype of the God-image*.

[12] Every archetype is capable of endless development and differentiation. It is therefore possible for it to be more developed or less. In an outward form of religion where all the emphasis is on the outward figure (hence where we are dealing with a more or less complete projection), the archetype is identical with externalized ideas but remains unconscious as a psychic factor. When an unconscious content is replaced by a projected image to that extent, it is cut off from all participation in and influence on the conscious mind. Hence it largely forfeits its own life, because prevented from exerting the formative influence on consciousness natural to it; what is more, it remains in its original form—unchanged, for nothing changes in the unconscious. At a certain point it even develops a tendency to regress to lower and more archaic levels. It may easily happen, therefore, that a Christian who believes in all the sacred figures is still undeveloped and unchanged in his inmost soul because he has “all God outside” and does not experience him in the soul. His deciding motives, his ruling interests and impulses, do not spring from the sphere of Christianity but from the unconscious and undeveloped psyche, which is as pagan and archaic as ever. Not the individual alone but the sum total of individual lives in a nation proves the truth of this contention. The great events of our world as planned and executed by man do not breathe the spirit of Christianity but rather of unadorned paganism. These things originate in a psychic condition that has remained archaic and has not been even remotely touched by Christianity. The Church assumes, not altogether without reason, that the fact of *semel credidisse* (having once believed) leaves certain traces behind it; but of these traces nothing is to be seen in the broad march of events. Christian civilization has proved hollow to a terrifying degree: it

is all veneer, but the inner man has remained untouched and therefore unchanged. His soul is out of key with his external beliefs; in his soul the Christian has not kept pace with external developments. Yes, everything is to be found outside—in image and in word, in Church and Bible—but never inside. Inside reign the archaic gods, supreme as of old; that is to say the inner correspondence with the outer God-image is undeveloped for lack of psychological culture and has therefore got stuck in heathenism. Christian education has done all that is humanly possible, but it has not been enough. Too few people have experienced the divine image as the innermost possession of their own souls. Christ only meets them from without, never from within the soul; that is why dark paganism still reigns there, a paganism which, now in a form so blatant that it can no longer be denied and now in all too threadbare disguise, is swamping the world of so-called Christian civilization.

[13] With the methods employed hitherto we have not succeeded in Christianizing the soul to the point where even the most elementary demands of Christian ethics can exert any decisive influence on the main concerns of the Christian European. The Christian missionary may preach the gospel to the poor naked heathen, but the spiritual heathen who populate Europe have as yet heard nothing of Christianity. Christianity must indeed begin again from the very beginning if it is to meet its high educative task. So long as religion is only faith and outward form, and the religious function is not experienced in our own souls, nothing of any importance has happened. It has yet to be understood that the *mysterium magnum* is not only an actuality but is first and foremost rooted in the human psyche. The man who does not know this from his own experience may be a most learned theologian, but he has no idea of religion and still less of education.

[14] Yet when I point out that the soul possesses by nature a religious function,[7] and when I stipulate that it is the prime task of all education (of adults) to convey the archetype of the God-image, or its emanations and effects, to the conscious mind, then it is precisely the theologian who seizes me by the arm and accuses me of “psychologism.” But were it not a fact of experience that supreme values reside in the soul (quite apart from the ἀντίμιμον πνεῦμα who is also there), psychology would not

interest me in the least, for the soul would then be nothing but a miserable vapour. I know, however, from hundredfold experience that it is nothing of the sort, but on the contrary contains the equivalents of everything that has been formulated in dogma and a good deal more, which is just what enables it to be an eye destined to behold the light. This requires limitless range and unfathomable depth of vision. I have been accused of “deifying the soul.” Not I but God himself has deified it! *I* did not attribute a religious function to the soul, I merely produced the facts which prove that the soul is *naturaliter religiosa,* i.e., possesses a religious function. I did not invent or insinuate this function, it produces itself of its own accord without being prompted thereto by any opinions or suggestions of mine. With a truly tragic delusion these theologians fail to see that it is not a matter of proving the existence of the light, but of blind people who do not know that their eyes could see. It is high time we realized that it is pointless to praise the light and preach it if nobody can see it. It is much more needful to teach people the art of seeing. For it is obvious that far too many people are incapable of establishing a connection between the sacred figures and their own psyche: they cannot see to what extent the equivalent images are lying dormant in their own unconscious. In order to facilitate this inner vision we must first clear the way for the faculty of seeing. How this is to be done without psychology, that is, without making contact with the psyche, is frankly beyond my comprehension.[8]

[15] Another equally serious misunderstanding lies in imputing to psychology the wish to be a new and possibly heretical doctrine. If a blind man can gradually be helped to see it is not to be expected that he will at once discern new truths with an eagle eye. One must be glad if he sees anything at all, and if he begins to understand what he sees. Psychology is concerned with the act of seeing and not with the construction of new religious truths, when even the existing teachings have not yet been perceived and understood. In religious matters it is a well-known fact that we cannot understand a thing until we have experienced it inwardly, for it is in the inward experience that the connection between the psyche and the outward image or creed is first revealed as a relationship or correspondence like that of *sponsus* and

sponsa. Accordingly when I say as a psychologist that God is an archetype, I mean by that the “type” in the psyche. The word “type” is, as we know, derived from τύπος, “blow” or “imprint”; thus an archetype presupposes an imprinter. Psychology as the science of the soul has to confine itself to its subject and guard against overstepping its proper boundaries by metaphysical assertions or other professions of faith. Should it set up a God, even as a hypothetical cause, it would have implicitly claimed the possibility of proving God, thus exceeding its competence in an absolutely illegitimate way. Science can only be science; there are no “scientific” professions of faith and similar *contradictiones in adiecto*. We simply do not know the ultimate derivation of the archetype any more than we know the origin of the psyche. The competence of psychology as an empirical science only goes so far as to establish, on the basis of comparative research, whether for instance the imprint found in the psyche can or cannot reasonably be termed a “God-image.” Nothing positive or negative has thereby been asserted about the possible existence of God, any more than the archetype of the “hero” posits the actual existence of a hero.

[16] Now if my psychological researches have demonstrated the existence of certain psychic types and their correspondence with well-known religious ideas, then we have opened up a possible approach to those experienceable contents which manifestly and undeniably form the empirical foundations of all religious experience. The religious-minded man is free to accept whatever metaphysical explanations he pleases about the origin of these images; not so the intellect, which must keep strictly to the principles of scientific interpretation and avoid trespassing beyond the bounds of what can be known. Nobody can prevent the believer from accepting God, Purusha, the Atman, or Tao as the Prime Cause and thus putting an end to the fundamental disquiet of man. The scientist is a scrupulous worker; he cannot take heaven by storm. Should he allow himself to be seduced into such an extravagance he would be sawing off the branch on which he sits.

[17] The fact is that with the knowledge and actual experience of these inner images a way is opened for reason and feeling to gain access to those other images which the teachings of religion offer to mankind.

Psychology thus does just the opposite of what it is accused of: it provides possible approaches to a better understanding of these things, it opens people’s eyes to the real meaning of dogmas, and, far from destroying, it throws open an empty house to new inhabitants. I can corroborate this from countless experiences: people belonging to creeds of all imaginable kinds, who had played the apostate or cooled off in their faith, have found a new approach to their old truths, not a few Catholics among them. Even a Parsee found the way back to the Zoroastrian fire-temple, which should bear witness to the objectivity of my point of view.

[18] But this objectivity is just what my psychology is most blamed for: it is said not to decide in favour of this or that religious doctrine. Without prejudice to my own subjective convictions I should like to raise the question: Is it not thinkable that when one refrains from setting oneself up as an *arbiter mundi* and, deliberately renouncing all subjectivism, cherishes on the contrary the belief, for instance, that God has expressed himself in many languages and appeared in divers forms and that all these statements are *true*—is it not thinkable, I say, that this too is a decision? The objection raised, more particularly by Christians, that it is impossible for contradictory statements to be true, must permit itself to be politely asked: Does one equal three? How can three be one? Can a mother be a virgin? And so on. Has it not yet been observed that all religious statements contain logical contradictions and assertions that are impossible in principle, that this is in fact the very essence of religious assertion? As witness to this we have Tertullian’s avowal: “And the Son of God is dead, which is worthy of belief because it is absurd. And when buried He rose again, which is certain because it is impossible.”[9] If Christianity demands faith in such contradictions it does not seem to me that it can very well condemn those who assert a few paradoxes more. Oddly enough the paradox is one of our most valuable spiritual possessions, while uniformity of meaning is a sign of weakness. Hence a religion becomes inwardly impoverished when it loses or waters down its paradoxes; but their multiplication enriches because only the paradox comes anywhere near to comprehending the fulness of life. Non-ambiguity and non-contradiction are one-sided and thus unsuited to express the incomprehensible.

[19] Not everyone possesses the spiritual strength of a Tertullian. It is evident not only that he had the strength to sustain paradoxes but that they actually afforded him the highest degree of religious certainty. The inordinate number of spiritual weaklings makes paradoxes dangerous. So long as the paradox remains unexamined and is taken for granted as a customary part of life, it is harmless enough. But when it occurs to an insufficiently cultivated mind (always, as we know, the most sure of itself) to make the paradoxical nature of some tenet of faith the object of its lucubrations as earnest as they are impotent, it is not long before such a one will break out into iconoclastic and scornful laughter, pointing to the manifest absurdity of the mystery. Things have gone rapidly downhill since the Age of Enlightenment, for, once this petty reasoning mind, which cannot endure any paradoxes, is awakened, no sermon on earth can keep it down. A new task then arises: to lift this still undeveloped mind step by step to a higher level and to increase the number of persons who have at least some inkling of the scope of paradoxical truth. If this is not possible, then it must be admitted that the spiritual approaches to Christianity are as good as blocked. We simply do not understand any more what is meant by the paradoxes contained in dogma; and the more external our understanding of them becomes the more we are affronted by their irrationality, until finally they become completely obsolete, curious relics of the past. The man who is stricken in this way cannot estimate the extent of his spiritual loss, because he has never experienced the sacred images as his inmost possession and has never realized their kinship with his own psychic structure. But it is just this indispensable knowledge that the psychology of the unconscious can give him, and its scientific objectivity is of the greatest value here. Were psychology bound to a creed it would not and could not allow the unconscious of the individual that free play which is the basic condition for the production of archetypes. It is precisely the spontaneity of archetypal contents that convinces, whereas any prejudiced intervention is a bar to genuine experience. If the theologian really believes in the almighty power of God on the one hand and in the validity of dogma on the other, why then does he not trust God to speak in the soul? Why this fear of psychology? Or is, in complete contradiction to dogma, the soul itself a hell from which only demons gibber? Even if this were really so it would not be

any the less convincing; for as we all know the horrified perception of the reality of evil has led to at least as many conversions as the experience of good.

[20] The archetypes of the unconscious can be shown empirically to be the equivalents of religious dogmas. In the hermeneutic language of the Fathers the Church possesses a rich store of analogies with the individual and spontaneous products to be found in psychology. What the unconscious expresses is far from being merely arbitrary or opinionated; it is something that happens to be "just-so," as is the case with every other natural being. It stands to reason that the expressions of the unconscious are natural and not formulated dogmatically; they are exactly like the patristic allegories which draw the whole of nature into the orbit of their amplifications. If these present us with some astonishing *allegoriae Christi*, we find much the same sort of thing in the psychology of the unconscious. The only difference is that the patristic allegory *ad Christum spectat*—refers to Christ—whereas the psychic archetype is simply itself and can therefore be interpreted according to time, place, and milieu. In the West the archetype is filled out with the dogmatic figure of Christ; in the East, with Purusha, the Atman, Hiranyagarbha, the Buddha, and so on. The religious point of view, understandably enough, puts the accent on the imprinter, whereas scientific psychology emphasizes the *typos*, the imprint—the only thing it can understand. The religious point of view understands the imprint as the working of an imprinter; the scientific point of view understands it as the symbol of an unknown and incomprehensible content. Since the *typos* is less definite and more variegated than any of the figures postulated by religion, psychology is compelled by its empirical material to express the *typos* by means of a terminology not bound by time, place, or milieu. If, for example, the *typos* agreed in every detail with the dogmatic figure of Christ, and if it contained no determinant that went beyond that figure, we would be bound to regard the *typos* as at least a faithful copy of the dogmatic figure, and to name it accordingly. The *typos* would then coincide with Christ. But as experience shows, this is not the case, seeing that the unconscious, like the allegories employed by the Church Fathers, produces countless other determinants that are not explicitly contained in

the dogmatic formula; that is to say, non-Christian figures such as those mentioned above are included in the *typos*. But neither do these figures comply with the indeterminate nature of the archetype. It is altogether inconceivable that there could be any definite figure capable of expressing archetypal indefiniteness. For this reason I have found myself obliged to give the corresponding archetype the psychological name of the “self”—a term on the one hand definite enough to convey the essence of human wholeness and on the other hand indefinite enough to express the indescribable and indeterminable nature of this wholeness. The paradoxical qualities of the term are a reflection of the fact that wholeness consists partly of the conscious man and partly of the unconscious man. But we cannot define the latter or indicate his boundaries. Hence in its scientific usage the term “self” refers neither to Christ nor to the Buddha but to the totality of the figures that are its equivalent, and each of these figures is a symbol of the self. This mode of expression is an intellectual necessity in scientific psychology and in no sense denotes a transcendental prejudice. On the contrary, as we have said before, this objective attitude enables one man to decide in favour of the determinant Christ, another in favour of the Buddha, and so on. Those who are irritated by this objectivity should reflect that science is quite impossible without it. Consequently by denying psychology the right to objectivity they are making an untimely attempt to extinguish the life-light of a science. Even if such a preposterous attempt were to succeed, it would only widen the already catastrophic gulf between the secular mind on the one hand and Church and religion on the other.

[21] It is quite understandable for a science to concentrate more or less exclusively on its subject—indeed, that is its absolute *raison d’être*. Since the concept of the self is of central interest in psychology, the latter naturally thinks along lines diametrically opposed to theology: for psychology the religious figures point to the self, whereas for theology the self points to its—theology’s—own central figure. In other words, theology might possibly take the psychological self as an allegory of Christ. This opposition is, no doubt, very irritating, but unfortunately inevitable, unless psychology is to be denied the right to exist at all. I

therefore plead for tolerance. Nor is this very hard for psychology since as a science it makes no totalitarian claims.

[22] The Christ-symbol is of the greatest importance for psychology in so far as it is perhaps the most highly developed and differentiated symbol of the self, apart from the figure of the Buddha. We can see this from the scope and substance of all the pronouncements that have been made about Christ: they agree with the psychological phenomenology of the self in unusually high degree, although they do not include all aspects of this archetype. The almost limitless range of the self might be deemed a disadvantage as compared with the definiteness of a religious figure, but it is by no means the task of science to pass value judgments. Not only is the self indefinite but—paradoxically enough—it also includes the quality of definiteness and even of uniqueness. This is probably one of the reasons why precisely those religions founded by historical personages have become world religions, such as Christianity, Buddhism, and Islam. The inclusion in a religion of a unique human personality—especially when conjoined to an indeterminable divine nature—is consistent with the absolute individuality of the self, which combines uniqueness with eternity and the individual with the universal. The self is a union of opposites *par excellence*, and this is where it differs essentially from the Christ-symbol. The androgyny of Christ is the utmost concession the Church has made to the problem of opposites. The opposition between light and good on the one hand and darkness and evil on the other is left in a state of open conflict, since Christ simply represents good, and his counterpart the devil, evil. This opposition is the real world problem, which at present is still unsolved. The self, however, is absolutely paradoxical in that it represents in every respect thesis and antithesis, and at the same time synthesis. (Psychological proofs of this assertion abound, though it is impossible for me to quote them here *in extenso*. I would refer the knowledgeable reader to the symbolism of the mandala.)

[23] Once the exploration of the unconscious has led the conscious mind to an experience of the archetype, the individual is confronted with the abysmal contradictions of human nature, and this confrontation in turn leads to the possibility of a direct experience of light and darkness, of

Christ and the devil. For better or worse there is only a bare possibility of this, and not a guarantee; for experiences of this kind cannot of necessity be induced by any human means. There are factors to be considered which are not under our control. Experience of the opposites has nothing whatever to do with intellectual insight or with empathy. It is more what we would call fate. Such an experience can convince one person of the truth of Christ, another of the truth of the Buddha, to the exclusion of all other evidence.

[24] Without the experience of the opposites there is no experience of wholeness and hence no inner approach to the sacred figures. For this reason Christianity rightly insists on sinfulness and original sin, with the obvious intent of opening up the abyss of universal opposition in every individual—at least from the outside. But this method is bound to break down in the case of a moderately alert intellect: dogma is then simply no longer believed and on top of that is thought absurd. Such an intellect is merely one-sided and sticks at the *ineptia mysterii*. It is miles from Tertullian's antinomies; in fact, it is quite incapable of enduring the suffering such a tension involves. Cases are not unknown where the rigorous exercises and proselytizings of the Catholics, and a certain type of Protestant education that is always sniffing out sin, have brought about psychic damage that leads not to the Kingdom of Heaven but to the consulting room of the doctor. Although insight into the problem of opposites is absolutely imperative, there are very few people who can stand it in practice—a fact which has not escaped the notice of the confessional. By way of a reaction to this we have the palliative of "moral probabilism," a doctrine that has suffered frequent attack from all quarters because it tries to mitigate the crushing effect of sin.[10] Whatever one may think of this phenomenon one thing is certain: that apart from anything else it holds within it a large humanity and an understanding of human weakness which compensate for the world's unbearable antinomies. The tremendous paradox implicit in the insistence on original sin on the one hand and the concession made by probabilism on the other is, for the psychologist, a necessary consequence of the Christian problem of opposites outlined above—for in the self good and evil are indeed closer than identical twins! The reality of evil and its

incompatibility with good cleave the opposites asunder and lead inexorably to the crucifixion and suspension of everything that lives. Since “the soul is by nature Christian” this result is bound to come as infallibly as it did in the life of Jesus: we all have to be “crucified with Christ,” i.e., suspended in a moral suffering equivalent to veritable crucifixion. In practice this is only possible up to a point, and apart from that is so unbearable and inimical to life that the ordinary human being can afford to get into such a state only occasionally, in fact as seldom as possible. For how could he remain ordinary in face of such suffering! A more or less probabilistic attitude to the problem of evil is therefore unavoidable. Hence the truth about the self—the unfathomable union of good and evil—comes out concretely in the paradox that although sin is the gravest and most pernicious thing there is, it is still not so serious that it cannot be disposed of with “probabilist” arguments. Nor is this necessarily a lax or frivolous proceeding but simply a practical necessity of life. The confessional proceeds like life itself, which successfully struggles against being engulfed in an irreconcilable contradiction. Note that at the same time the conflict remains in full force, as is once more consistent with the antinomial character of the self, which is itself both conflict and unity.

[25] Christianity has made the antinomy of good and evil into a world problem and, by formulating the conflict dogmatically, raised it to an absolute principle. Into this as yet unresolved conflict the Christian is cast as a protagonist of good, a fellow player in the world drama. Understood in its deepest sense, being Christ’s follower involves a suffering that is unendurable to the great majority of mankind. Consequently the example of Christ is in reality followed either with reservation or not at all, and the pastoral practice of the Church even finds itself obliged to “lighten the yoke of Christ.” This means a pretty considerable reduction in the severity and harshness of the conflict and hence, in practice, a relativism of good and evil. Good is equivalent to the unconditional imitation of Christ and evil is its hindrance. Man’s moral weakness and sloth are what chiefly hinder the imitation, and it is to these that probabilism extends a practical understanding which may sometimes, perhaps, come nearer to Christian tolerance, mildness, and

love of one’s neighbour than the attitude of those who see in probabilism a mere laxity. Although one must concede a number of cardinal Christian virtues to the probabilist endeavour, one must still not overlook the fact that it obviates much of the suffering involved in the imitation of Christ and that the conflict of good and evil is thus robbed of its harshness and toned down to tolerable proportions. This brings about an approach to the psychic archetype of the self, where even these opposites seem to be united—though, as I say, it differs from the Christian symbolism, which leaves the conflict open. For the latter there is a rift running through the world: light wars against night and the upper against the lower. The two are not one, as they are in the psychic archetype. But, even though religious dogma may condemn the idea of two being one, religious practice does, as we have seen, allow the natural psychological symbol of the self at one with itself an approximate means of expression. On the other hand, dogma insists that three are one, while denying that four are one. Since olden times, not only in the West but also in China, uneven numbers have been regarded as masculine and even numbers as feminine. The Trinity is therefore a decidedly masculine deity, of which the androgyny of Christ and the special position and veneration accorded to the Mother of God are not the real equivalent.

[26] With this statement, which may strike the reader as peculiar, we come to one of the central axioms of alchemy, namely the saying of Maria Prophetissa: “One becomes two, two becomes three, and out of the third comes the one as the fourth.” As the reader has already seen from its title, this book is concerned with the psychological significance of alchemy and thus with a problem which, with very few exceptions, has so far eluded scientific research. Until quite recently science was interested only in the part that alchemy played in the history of chemistry, concerning itself very little with the part it played in the history of philosophy and religion. The importance of alchemy for the historical development of chemistry is obvious, but its cultural importance is still so little known that it seems almost impossible to say in a few words wherein that consisted. In this introduction, therefore, I have attempted to outline the religious and psychological problems which are germane to the theme of alchemy. The point is that alchemy is rather like an

undercurrent to the Christianity that ruled on the surface. It is to this surface as the dream is to consciousness, and just as the dream compensates the conflicts of the conscious mind, so alchemy endeavours to fill in the gaps left open by the Christian tension of opposites. Perhaps the most pregnant expression of this is the axiom of Maria Prophetissa quoted above, which runs like a *leitmotiv* throughout almost the whole of the lifetime of alchemy, extending over more than seventeen centuries. In this aphorism the even numbers which signify the feminine principle, earth, the regions under the earth, and evil itself are interpolated between the uneven numbers of the Christian dogma. They are personified by the *serpens mercurii*, the dragon that creates and destroys itself and represents the *prima materia*. This fundamental idea of alchemy points back to the תְּהוֹם (Tehom),[11] to Tiamat with her dragon attribute, and thus to the primordial matriarchal world which, in the theomachy of the Marduk myth,[12] was overthrown by the masculine world of the father. The historical shift in the world’s consciousness towards the masculine is compensated at first by the chthonic femininity of the unconscious. In certain pre-Christian religions the differentiation of the masculine principle had taken the form of the father-son specification, a change which was to be of the utmost importance for Christianity. Were the unconscious merely complementary, this shift of consciousness would have been accompanied by the production of a mother and daughter, for which the necessary material lay ready to hand in the myth of Demeter and Persephone. But, as alchemy shows, the unconscious chose rather the Cybele-Attis type in the form of the *prima materia* and the *filius macrocosmi*, thus proving that it is not complementary but compensatory. This goes to show that the unconscious does not simply act *contrary* to the conscious mind but *modifies* it more in the manner of an opponent or partner. The son type does not call up a daughter as a complementary image from the depths of the “chthonic” unconscious—it calls up another son. This remarkable fact would seem to be connected with the incarnation in our earthly human nature of a purely spiritual God, brought about by the Holy Ghost impregnating the womb of the Blessed Virgin. Thus the higher, the spiritual, the masculine inclines to the lower, the earthly, the feminine; and accordingly, the mother, who was anterior to the world of the father, accommodates herself to the masculine principle and, with the aid of the human spirit (alchemy or "the philosophy"), produces a son—not the antithesis of Christ but rather his chthonic counterpart, not a divine man but a fabulous being conforming to the nature of the primordial mother. And just as the redemption of man the microcosm is the task of the "upper" son, so the "lower" son has the function of a *salvator macrocosmi*.

[27] This, in brief, is the drama that was played out in the obscurities of alchemy. It is superfluous to remark that these two sons were never united, except perhaps in the mind and innermost experience of a few particularly gifted alchemists. But it is not very difficult to see the "purpose" of this drama: in the Incarnation it looked as though the masculine principle of the father-world were approximating to the feminine principle of the mother-world, with the result that the latter felt impelled to approximate in turn to the father-world. What it evidently amounted to was an attempt to bridge the gulf separating the two worlds as compensation for the open conflict between them.

[28] I hope the reader will not be offended if my exposition sounds like a Gnostic myth. We are moving in those psychological regions where, as a matter of fact, Gnosis is rooted. The message of the Christian symbol is Gnosis, and the compensation effected by the unconscious is Gnosis in even higher degree. Myth is the primordial language natural to these psychic processes, and no intellectual formulation comes anywhere near the richness and expressiveness of mythical imagery. Such processes are concerned with the primordial images, and these are best and most succinctly reproduced by figurative language.

[29] The process described above displays all the characteristic features of psychological compensation. We know that the mask of the unconscious is not rigid—it reflects the face we turn towards it. Hostility lends it a threatening aspect, friendliness softens its features. It is not a question of mere optical reflection but of an autonomous answer which reveals the self-sufficing nature of that which answers. Thus the *filius philosophorum* is not just the reflected image, in unsuitable material, of the son of God; on the contrary, this son of Tiamat reflects the features of

the primordial maternal figure. Although he is decidedly hermaphroditic he has a masculine name—a sign that the chthonic underworld, having been rejected by the spirit and identified with evil, has a tendency to compromise. There is no mistaking the fact that he is a concession to the spiritual and masculine principle, even though he carries in himself the weight of the earth and the whole fabulous nature of primordial animality.

[30] This answer of the mother-world shows that the gulf between it and the father-world is not unbridgeable, seeing that the unconscious holds the seed of the unity of both. The essence of the conscious mind is discrimination; it must, if it is to be aware of things, separate the opposites, and it does this *contra naturam*. In nature the opposites seek one another—*les extrêmes se touchent*—and so it is in the unconscious, and particularly in the archetype of unity, the self. Here, as in the deity, the opposites cancel out. But as soon as the unconscious begins to manifest itself they split asunder, as at the Creation; for every act of dawning consciousness is a creative act, and it is from this psychological experience that all our cosmogonic symbols are derived.

[31] Alchemy is pre-eminently concerned with the seed of unity which lies hidden in the chaos of Tiamat and forms the counterpart to the divine unity. Like this, the seed of unity has a trinitarian character in Christian alchemy and a triadic character in pagan alchemy. According to other authorities it corresponds to the unity of the four elements and is therefore a quaternity. The overwhelming majority of modern psychological findings speaks in favour of the latter view. The few cases I have observed which produced the number three were marked by a systematic deficiency in consciousness, that is to say, by an unconsciousness of the “inferior function.” The number three is not a natural expression of wholeness, since four represents the minimum number of determinants in a whole judgment. It must nevertheless be stressed that side by side with the distinct leanings of alchemy (and of the unconscious) towards quaternity there is always a vacillation between three and four which comes out over and over again. Even in the axiom of Maria Prophetissa the quaternity is muffled and alembicated. In alchemy there are three as well as four *regimina* or procedures, three as

well as four colours. There are always four elements, but often three of them are grouped together, with the fourth in a special position—sometimes earth, sometimes fire. Mercurius[13] is of course *quadratus*, but he is also a three-headed snake or simply a triunity. This uncertainty has a duplex character—in other words, the central ideas are ternary as well as quaternary. The psychologist cannot but mention the fact that a similar puzzle exists in the psychology of the unconscious: the least differentiated or "inferior" function is so much contaminated with the collective unconscious that, on becoming conscious, it brings up among others the archetype of the self as well—*τὸ ἕν τέταρτον*, as Maria Prophetissa says. Four signifies the feminine, motherly, physical; three the masculine, fatherly, spiritual. Thus the uncertainty as to three or four amounts to a wavering between the spiritual and the physical—a striking example of how every human truth is a last truth but one.

[32] I began my introduction with human wholeness as the goal to which the psychotherapeutic process ultimately leads. This question is inextricably bound up with one's philosophical or religious assumptions. Even when, as frequently happens, the patient believes himself to be quite unprejudiced in this respect, the assumptions underlying his thought, mode of life, morale, and language are historically conditioned down to the last detail, a fact of which he is often kept unconscious by lack of education combined with lack of self-criticism. The analysis of his situation will therefore lead sooner or later to a clarification of his general spiritual background going far beyond his personal determinants, and this brings up the problems I have attempted to sketch in the preceding pages. This phase of the process is marked by the production of symbols of unity, the so-called mandalas, which occur either in dreams or in the form of concrete visual impressions, often as the most obvious compensation of the contradictions and conflicts of the conscious situation. It would hardly be correct to say that the gaping "rift"[14] in the Christian order of things is responsible for this, since it is easy to show that Christian symbolism is particularly concerned with healing, or attempting to heal, this very wound. It would be more correct to take the open conflict as a symptom of the psychic situation of Western man, and to deplore his inability to assimilate the whole range of the Christian

symbol. As a doctor I cannot demand anything of my patients in this respect, also I lack the Church's means of grace. Consequently I am faced with the task of taking the only path open to me: the archetypal images—which in a certain sense correspond to the dogmatic images—must be brought into consciousness. At the same time I must leave my patient to decide in accordance with his assumptions, his spiritual maturity, his education, origins, and temperament, so far as this is possible without serious conflicts. As a doctor it is my task to help the patient to cope with life. I cannot presume to pass judgment on his final decisions, because I know from experience that all coercion—be it suggestion, insinuation, or any other method of persuasion—ultimately proves to be nothing but an obstacle to the highest and most decisive experience of all, which is to be alone with his own self, or whatever else one chooses to call the objectivity of the psyche. The patient must be alone if he is to find out what it is that supports him when he can no longer support himself. Only this experience can give him an indestructible foundation.

[33] I would be only too delighted to leave this anything but easy task to the theologian, were it not that it is just from the theologian that many of my patients come. They ought to have hung on to the community of the Church, but they were shed like dry leaves from the great tree and now find themselves "hanging on" to the treatment. Something in them clings, often with the strength of despair, as if they or the thing they cling to would drop off into the void the moment they relaxed their hold. They are seeking firm ground on which to stand. Since no outward support is of any use to them they must finally discover it in themselves—admittedly the most unlikely place from the rational point of view, but an altogether possible one from the point of view of the unconscious. We can see this from the archetype of the "lowly origin of the redeemer."

[34] The way to the goal seems chaotic and interminable at first, and only gradually do the signs increase that it is leading anywhere. The way is not straight but appears to go round in circles. More accurate knowledge has proved it to go in spirals: the dream-motifs always return after certain intervals to definite forms, whose characteristic it is to define a centre. And as a matter of fact the whole process revolves about a central point

or some arrangement round a centre, which may in certain circumstances appear even in the initial dreams. As manifestations of unconscious processes the dreams rotate or circumambulate round the centre, drawing closer to it as the amplifications increase in distinctness and in scope. Owing to the diversity of the symbolical material it is difficult at first to perceive any kind of order at all. Nor should it be taken for granted that dream sequences are subject to any governing principle. But, as I say, the process of development proves on closer inspection to be cyclic or spiral. We might draw a parallel between such spiral courses and the processes of growth in plants; in fact the plant motif (tree, flower, etc.) frequently recurs in these dreams and fantasies and is also spontaneously drawn or painted.[15] In alchemy the tree is the symbol of Hermetic philosophy.

[35] The first of the following two studies—that which composes Part II—deals with a series of dreams which contain numerous symbols of the centre or goal. The development of these symbols is almost the equivalent of a healing process. The centre or goal thus signifies *salvation* in the proper sense of the word. The justification for such a terminology comes from the dreams themselves, for these contain so many references to religious phenomena that I was able to use some of them as the subject of my book *Psychology and Religion*. It seems to me beyond all doubt that these processes are concerned with the religion-creating archetypes. Whatever else religion may be, those psychic ingredients of it which are empirically verifiable undoubtedly consist of unconscious manifestations of this kind. People have dwelt far too long on the fundamentally sterile question of whether the assertions of faith are true or not. Quite apart from the impossibility of ever proving or refuting the truth of a metaphysical assertion, the very existence of the assertion is a self-evident fact that needs no further proof, and when a *consensus gentium* allies itself thereto the validity of the statement is proved to just that extent. The only thing about it that we can verify is the psychological phenomenon, which is incommensurable with the category of objective rightness or truth. No phenomenon can ever be disposed of by rational criticism, and in religious life we have to deal with phenomena and facts and not with arguable hypotheses.

[36] During the process of treatment the dialectical discussion leads logically to a meeting between the patient and his shadow, that dark half of the psyche which we invariably get rid of by means of projection: either by burdening our neighbours—in a wider or narrower sense—with all the faults which we obviously have ourselves, or by casting our sins upon a divine mediator with the aid of *contritio* or the milder *attritio*.[16] We know of course that without sin there is no repentance and without repentance no redeeming grace, also that without original sin the redemption of the world could never have come about; but we assiduously avoid investigating whether in this very power of evil God might not have placed some special purpose which it is most important for us to know. One often feels driven to some such view when, like the psychotherapist, one has to deal with people who are confronted with their blackest shadow.[17] At any rate the doctor cannot afford to point, with a gesture of facile moral superiority, to the tablets of the law and say, “Thou shalt not.” He has to examine things objectively and weigh up possibilities, for he knows, less from religious training and education than from instinct and experience, that there is something very like a *felix culpa*. He knows that one can miss not only one’s happiness but also one’s final guilt, without which a man will never reach his wholeness. Wholeness is in fact a charisma which one can manufacture neither by art nor by cunning; one can only grow into it and endure whatever its advent may bring. No doubt it is a great nuisance that mankind is not uniform but compounded of individuals whose psychic structure spreads them over a span of at least ten thousand years. Hence there is absolutely no truth that does not spell salvation to one person and damnation to another. All universalisms get stuck in this terrible dilemma. Earlier on I spoke of Jesuit probabilism: this gives a better idea than anything else of the tremendous catholic task of the Church. Even the best-intentioned people have been horrified by probabilism, but, when brought face to face with the realities of life, many of them have found their horror evaporating or their laughter dying on their lips. The doctor too must weigh and ponder, not whether a thing is for or against the Church but whether it is for or against life and health. On paper the moral code looks clear and neat enough; but the same document written on the “living tables of the heart”

is often a sorry tatter, particularly in the mouths of those who talk the loudest. We are told on every side that evil is evil and that there can be no hesitation in condemning it, but that does not prevent evil from being the most problematical thing in the individual's life and the one which demands the deepest reflection. What above all deserves our keenest attention is the question "Exactly *who* is the doer?" For the answer to this question ultimately decides the value of the deed. It is true that society attaches greater importance at first to what is done, because it is immediately obvious; but in the long run the right deed in the hands of the wrong man will also have a disastrous effect. No one who is far-sighted will allow himself to be hoodwinked by the right deed of the wrong man, any more than by the wrong deed of the right man. Hence the psychotherapist must fix his eye not on what is done but on how it is done, because therein is decided the whole character of the doer. Evil needs to be pondered just as much as good, for good and evil are ultimately nothing but ideal extensions and abstractions of doing, and both belong to the chiaroscuro of life. In the last resort there is no good that cannot produce evil and no evil that cannot produce good.

[37] The encounter with the dark half of the personality, or "shadow," comes about of its own accord in any moderately thorough treatment. This problem is as important as that of sin in the Church. The open conflict is unavoidable and painful. I have often been asked, "And what do you *do* about it?" I do nothing; there is nothing I can do except wait, with a certain trust in God, until, out of a conflict borne with patience and fortitude, there emerges the solution destined—although I cannot foresee it—for that particular person. Not that I am passive or inactive meanwhile: I help the patient to understand all the things that the unconscious produces during the conflict. The reader may believe me that these are no ordinary products. On the contrary, they are among the most significant things that have ever engaged my attention. Nor is the patient inactive; he must do the right thing, and do it with all his might, in order to prevent the pressure of evil from becoming too powerful in him. He needs "justification by works," for "justification by faith" alone has remained an empty sound for him as for so many others. Faith can sometimes be a substitute for lack of experience. In these cases what is

needed is real work. Christ espoused the sinner and did not condemn him. The true follower of Christ will do the same, and, since one should do unto others as one would do unto oneself, one will also take the part of the sinner who is oneself. And as little as we would accuse Christ of fraternizing with evil, so little should we reproach ourselves that to love the sinner who is oneself is to make a pact with the devil. Love makes a man better, hate makes him worse—even when that man is oneself. The danger in this point of view is the same as in the imitation of Christ; but the Pharisee in us will never allow himself to be caught talking to publicans and whores. I must emphasize of course that psychology invented neither Christianity nor the imitation of Christ. I wish everybody could be freed from the burden of their sins by the Church. But he to whom she cannot render this service must bend very low in the imitation of Christ in order to take the burden of his cross upon him. The ancients could get along with the Greek wisdom of the ages: Μηδὲν ἄγαν, τῷ καιρῷ πάντα πρόσεστι καλά (Exaggerate nothing, all good lies in right measure). But what an abyss still separates us from reason!

[38] Apart from the moral difficulty there is another danger which is not inconsiderable and may lead to complications, particularly with individuals who are pathologically inclined. This is the fact that the contents of the personal unconscious (i.e., the shadow) are indistinguishably merged with the archetypal contents of the collective unconscious and drag the latter with them when the shadow is brought into consciousness. This may exert an uncanny influence on the conscious mind; for activated archetypes have a disagreeable effect even—or I should perhaps say, particularly—on the most cold-blooded rationalist. He is afraid that the lowest form of conviction, namely superstition, is, as he thinks, forcing itself on him. But superstition in the truest sense only appears in such people if they are pathological, not if they can keep their balance. It then takes the form of the fear of “going mad”—for everything that the modern mind cannot define it regards as insane. It must be admitted that the archetypal contents of the collective unconscious can often assume grotesque and horrible forms in dreams and fantasies, so that even the most hard-boiled rationalist is not immune

from shattering nightmares and haunting fears. The psychological elucidation of these images, which cannot be passed over in silence or blindly ignored, leads logically into the depths of religious phenomenology. The history of religion in its widest sense (including therefore mythology, folklore, and primitive psychology) is a treasure-house of archetypal forms from which the doctor can draw helpful parallels and enlightening comparisons for the purpose of calming and clarifying a consciousness that is all at sea. It is absolutely necessary to supply these fantastic images that rise up so strange and threatening before the mind's eye with some kind of context so as to make them more intelligible. Experience has shown that the best way to do this is by means of comparative mythological material.

[39] Part II of this volume gives a large number of such examples. The reader will be particularly struck by the numerous connections between individual dream symbolism and medieval alchemy. This is not, as one might suppose, a prerogative of the case in question, but a general fact which only struck me some ten years ago when first I began to come to grips with the ideas and symbolism of alchemy.

[40] Part III contains an introduction to the symbolism of alchemy in relation to Christianity and Gnosticism. As a bare introduction it is naturally far from being a complete exposition of this complicated and obscure subject—indeed, most of it is concerned only with the *lapis*-Christ parallel. True, this parallel gives rise to a comparison between the aims of the *opus alchymicum* and the central ideas of Christianity, for both are of the utmost importance in understanding and interpreting the images that appear in dreams and in assessing their psychological effect. This has considerable bearing on the practice of psychotherapy, because more often than not it is precisely the more intelligent and cultured patients who, finding a return to the Church impossible, come up against archetypal material and thus set the doctor problems which can no longer be mastered by a narrowly personalistic psychology. Nor is a mere knowledge of the psychic structure of a neurosis by any means sufficient; for once the process has reached the sphere of the collective unconscious we are dealing with healthy material, i.e., with the universal basis of the individually varied psyche. Our understanding of these deeper layers of

the psyche is helped not only by a knowledge of primitive psychology and mythology, but to an even greater extent by some familiarity with the history of our modern consciousness and the stages immediately preceding it. On the one hand it is a child of the Church; on the other, of science, in whose beginnings very much lies hid that the Church was unable to accept—that is to say, remnants of the classical spirit and the classical feeling for nature which could not be exterminated and eventually found refuge in the natural philosophy of the Middle Ages. As the “spiritus metallorum” and the astrological components of destiny the old gods of the planets lasted out many a Christian century.[18] Whereas in the Church the increasing differentiation of ritual and dogma alienated consciousness from its natural roots in the unconscious, alchemy and astrology were ceaselessly engaged in preserving the bridge to nature, i.e., to the unconscious psyche, from decay. Astrology led the conscious mind back again and again to the knowledge of Heimarmene, that is, the dependence of character and destiny on certain moments in time; and alchemy afforded numerous “hooks” for the projection of those archetypes which could not be fitted smoothly into the Christian process. It is true that alchemy always stood on the verge of heresy and that certain decrees leave no doubt as to the Church’s attitude towards it,[19] but on the other hand it was effectively protected by the obscurity of its symbolism, which could always be explained as harmless allegory. For many alchemists the allegorical aspect undoubtedly occupied the foreground to such an extent that they were firmly convinced that their sole concern was with chemical substances. But there were always a few for whom laboratory work was primarily a matter of symbols and their psychic effect. As the texts show, they were quite conscious of this, to the point of condemning the naïve goldmakers as liars, frauds, and dupes. Their own standpoint they proclaimed with propositions like “Aurum nostrum non est aurum vulgi.” Although their labours over the retort were a serious effort to elicit the secrets of chemical transformation, it was at the same time—and often in overwhelming degree—the reflection of a parallel psychic process which could be projected all the more easily into the unknown chemistry of matter since that process is an unconscious phenomenon of nature, just like the mysterious alteration of substances. What the symbolism of alchemy expresses is the whole problem of the evolution of personality described above, the so-called individuation process.

[41] Whereas the Church's great buttress is the imitation of Christ, the alchemist, without realizing it and certainly without wanting it, easily fell victim, in the loneliness and obscure problems of his work, to the promptings and unconscious assumptions of his own mind, since, unlike the Christians, he had no clear and unmistakable models on which to rely. The authors he studied provided him with symbols whose meaning he thought he understood in his own way; but in reality they touched and stimulated his unconscious. Ironical towards themselves, the alchemists coined the phrase "obscurum per obscurius." But with this method of explaining the obscure by the more obscure they only sank themselves deeper in the very process from which the Church was struggling to redeem them. While the dogmas of the Church offered analogies to the alchemical process, these analogies, in strict contrast to alchemy, had become detached from the world of nature through their connection with the historical figure of the Redeemer. The alchemical four in one, the philosophical gold, the *lapis angularis*, the *aqua divina*, became, in the Church, the four-armed cross on which the Only-Begotten had sacrificed himself once in history and at the same time for all eternity. The alchemists ran counter to the Church in preferring to seek through knowledge rather than to find through faith, though as medieval people they never thought of themselves as anything but good Christians. Paracelsus is a classical example in this respect. But in reality they were in much the same position as modern man, who prefers immediate personal experience to belief in traditional ideas, or rather has it forced upon him. Dogma is not arbitrarily invented nor is it a unique miracle, although it is often described as miraculous with the obvious intent of lifting it out of its natural context. The central ideas of Christianity are rooted in Gnostic philosophy, which, in accordance with psychological laws, simply *had* to grow up at a time when the classical religions had become obsolete. It was founded on the perception of symbols thrown up by the unconscious individuation process which always sets in when the collective dominants of human life fall into decay. At such a time there is

bound to be a considerable number of individuals who are possessed by archetypes of a numinous nature that force their way to the surface in order to form new dominants. This state of possession shows itself almost without exception in the fact that the possessed identify themselves with the archetypal contents of their unconscious, and, because they do not realize that the role which is being thrust upon them is the effect of new contents still to be understood, they exemplify these concretely in their own lives, thus becoming prophets and reformers. In so far as the archetypal content of the Christian drama was able to give satisfying expression to the uneasy and clamorous unconscious of the many, the *consensus omnium* raised this drama to a universally binding truth—not of course by an act of judgment, but by the irrational fact of possession, which is far more effective. Thus Jesus became the tutelary image or amulet against the archetypal powers that threatened to possess everyone. The glad tidings announced: "It has happened, but it will not happen to you inasmuch as you believe in Jesus Christ, the Son of God!" Yet it could and it can and it will happen to everyone in whom the Christian dominant has decayed. For this reason there have always been people who, not satisfied with the dominants of conscious life, set forth—under cover and by devious paths, to their destruction or salvation—to seek direct experience of the eternal roots, and, following the lure of the restless unconscious psyche, find themselves in the wilderness where, like Jesus, they come up against the son of darkness, the ἀντίμιμον πνεῦμα. Thus an old alchemist—and he a cleric!—prays: "Horridas nostrae mentis purga tenebras, accende lumen sensibus!" (Purge the horrible darknesses of our mind, light a light for our senses!) The author of this sentence must have been undergoing the experience of the *nigredo*, the first stage of the work, which was felt as "melancholia" in alchemy and corresponds to the encounter with the shadow in psychology.

[42] When, therefore, modern psychotherapy once more meets with the activated archetypes of the collective unconscious, it is merely the repetition of a phenomenon that has often been observed in moments of great religious crisis, although it can also occur in individuals for whom the ruling ideas have lost their meaning. An example of this is the

descensus ad inferos depicted in *Faust*, which, consciously or unconsciously, is an *opus alchymicum*.

[43] The problem of opposites called up by the shadow plays a great—indeed, the decisive—role in alchemy, since it leads in the ultimate phase of the work to the union of opposites in the archetypal form of the *hierosgamos* or "chymical wedding." Here the supreme opposites, male and female (as in the Chinese *yang* and *yin*), are melted into a unity purified of all opposition and therefore incorruptible. The prerequisite for this, of course, is that the artifex should not identify himself with the figures in the work but should leave them in their objective, impersonal state. So long as the alchemist was working in his laboratory he was in a favourable position, psychologically speaking, for he had no opportunity to identify himself with the archetypes as they appeared, since they were all projected immediately into the chemical substances. The disadvantage of this situation was that the alchemist was forced to represent the incorruptible substance as a chemical product—an impossible undertaking which led to the downfall of alchemy, its place in the laboratory being taken by chemistry. But the psychic part of the work did not disappear. It captured new interpreters, as we can see from the example of *Faust*, and also from the signal connection between our modern psychology of the unconscious and alchemical symbolism.

INDIVIDUAL DREAM SYMBOLISM IN RELATION TO ALCHEMY

A STUDY OF THE UNCONSCIOUS PROCESSES AT WORK IN DREAMS

> *… facilis descensus Averno; noctes atque dies patet atri ianua Ditis;*
> *sed revocare gradum superasque evadere ad auras, hoc opus, hic labor est.…*

1. INTRODUCTION

I. THE MATERIAL

[44] The symbols of the process of individuation that appear in dreams are images of an archetypal nature which depict the centralizing process or the production of a new centre of personality. A general idea of this process may be got from my essay, “The Relations between the Ego and the Unconscious.” For certain reasons mentioned there I call this centre the “self,” which should be understood as the totality of the psyche. The self is not only the centre, but also the whole circumference which embraces both conscious and unconscious; it is the centre of this totality, just as the ego is the centre of consciousness.

[45] The symbols now under consideration are not concerned with the manifold stages and transformations of the individuation process, but with the images that refer directly and exclusively to the new centre as it comes into consciousness. These images belong to a definite category which I call mandala symbolism. In *The Secret of the Golden Flower*, published in collaboration with Richard Wilhelm, I have described this symbolism in some detail. In the present study I should like to put before you an individual series of such symbols in chronological order. The material consists of over a thousand dreams and visual impressions coming from a young man of excellent scientific education.[1] For the purposes of this study I have worked on the first four hundred dreams and visions, which covered a period of nearly ten months. In order to avoid all personal influence I asked one of my pupils, a woman doctor, who was then a beginner, to undertake the observation of the process. This went on for five months. The dreamer then continued his observations alone for three months. Except for a short interview at the very beginning, before the commencement of the observation, I did not see the dreamer at all during the first eight months. Thus it happened that 355 of the dreams were dreamed away from any personal contact with myself. Only the last forty-five occurred under my observation. No

interpretations worth mentioning were then attempted because the dreamer, owing to his excellent scientific training and ability, did not require any assistance. Hence conditions were really ideal for unprejudiced observation and recording.

[46] First of all, then, I shall present extracts from the twenty-two initial dreams in order to show how the mandala symbolism makes a very early appearance and is embedded in the rest of the dream material. Later on I shall pick out in chronological order the dreams that refer specifically to the mandala.[2]

[47] With few exceptions all the dreams have been abbreviated, either by extracting the part that carries the main thought or by condensing the whole text to essentials. This simplifying procedure has not only curtailed their length but has also removed personal allusions and complications, as was necessary for reasons of discretion. Despite this somewhat doubtful interference I have, to the best of my knowledge and scrupulosity, avoided any arbitrary distortion of meaning. The same considerations had also to apply to my own interpretation, so that certain passages in the dreams may appear to have been overlooked. Had I not made this sacrifice and kept the material absolutely complete, I should not have been in a position to publish this series, which in my opinion could hardly be surpassed in intelligence, clarity, and consistency. It therefore gives me great pleasure to express my sincere gratitude here and now to the "author" for the service he has rendered to science.

II. THE METHOD

[48] In my writings and lectures I have always insisted that we must give up all preconceived opinions when it comes to the analysis and interpretation of the objective psyche,[3] in other words the "unconscious." We do not yet possess a general theory of dreams that would enable us to use a deductive method with impunity, any more than we possess a general theory of consciousness from which we can draw deductive conclusions. The manifestations of the subjective psyche, or consciousness, can be predicted to only the smallest degree, and there is no theoretical argument to prove beyond doubt that any causal

connection necessarily exists between them. On the contrary, we have to reckon with a high percentage of arbitrariness and “chance” in the complex actions and reactions of the conscious mind. Similarly there is no empirical, still less a theoretical, reason to assume that the same does not apply to the manifestations of the unconscious. The latter are just as manifold, unpredictable, and arbitrary as the former and must therefore be subjected to as many different ways of approach. In the case of conscious utterances we are in the fortunate position of being directly addressed and presented with a content whose purpose we can recognize; but with “unconscious” manifestations there is no directed or adapted language in our sense of the word—there is merely a psychic phenomenon that would appear to have only the loosest connections with conscious contents. If the expressions of the conscious mind are incomprehensible we can always ask what they mean. But the objective psyche is something alien even to the conscious mind through which it expresses itself. We are therefore obliged to adopt the method we would use in deciphering a fragmentary text or one containing unknown words: we examine the context. The meaning of the unknown word may become evident when we compare a series of passages in which it occurs. The psychological context of dream-contents consists in the web of associations in which the dream is naturally embedded. Theoretically we can never know anything in advance about this web, but in practice it is sometimes possible, granted long enough experience. Even so, careful analysis will never rely too much on technical rules; the danger of deception and suggestion is too great. In the analysis of isolated dreams above all, this kind of knowing in advance and making assumptions on the grounds of practical expectation or general probability is positively wrong. It should therefore be an absolute rule to assume that every dream, and every part of a dream, is unknown at the outset, and to attempt an interpretation only after carefully taking up the context. We can then apply the meaning we have thus discovered to the text of the dream itself and see whether this yields a fluent reading, or rather whether a satisfying meaning emerges. But in no circumstances may we anticipate that this meaning will fit in with any of our subjective expectations; for quite possibly, indeed very frequently, the dream is saying something surprisingly different from what we would expect. As a matter of fact, if the meaning we find in the dream happens to coincide with our expectations, that is a reason for suspicion; for as a rule the standpoint of the unconscious is complementary or compensatory[4] to consciousness and thus unexpectedly "different." I would not deny the possibility of *parallel* dreams, i.e., dreams whose meaning coincides with or supports the conscious attitude, but, in my experience at least, these are rather rare.

[49] Now, the method I adopt in the present study seems to run directly counter to this basic principle of dream interpretation. It looks as if the dreams were being interpreted without the least regard for the context. And in fact I have not taken up the context at all, seeing that the dreams in this series were not dreamed (as mentioned above) under my observation. I proceed rather as if I had had the dreams myself and were therefore in a position to supply the context.

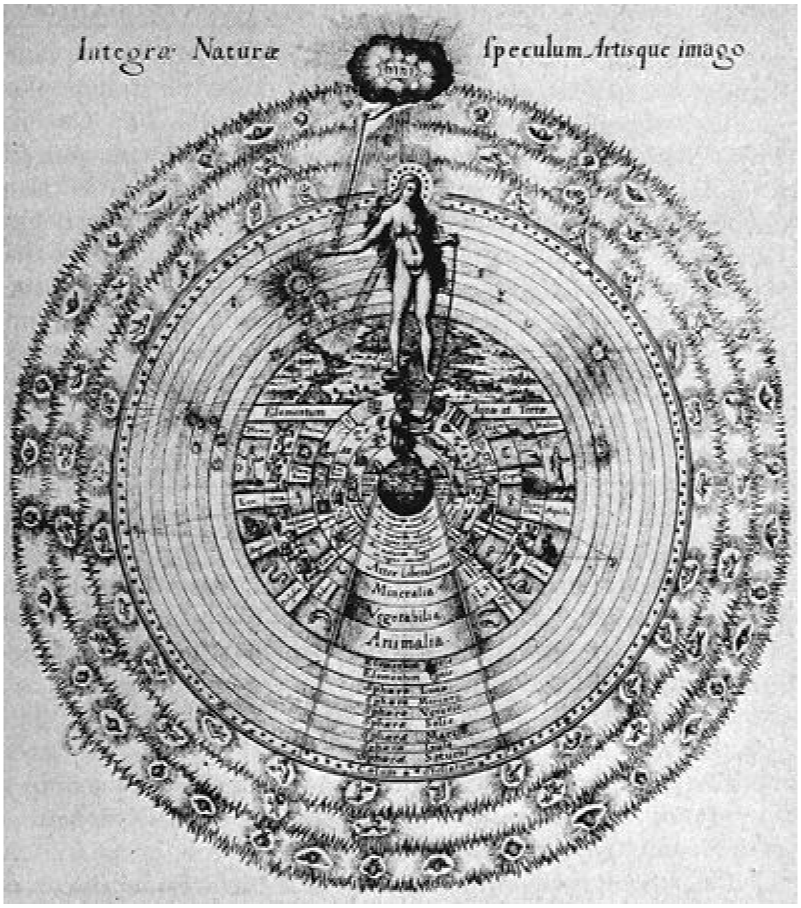
6. A maternal figure presiding over the goddesses of fate.—Thenaud, “Traité de la cabale” (MS., 16th cent.)

[50] This procedure, if applied to *isolated* dreams of someone unknown to me personally, would indeed be a gross technical blunder. But here we are not dealing with isolated dreams; they form a coherent series in the course of which the meaning gradually unfolds more or less of its own accord. *The series is the context which the dreamer himself supplies*. It is as if not one text but many lay before us, throwing light from all sides on the unknown terms, so that a reading of all the texts is sufficient to elucidate the difficult passages in each individual one. Moreover, in the third chapter we are concerned with a definite archetype—the mandala—that has long been known to us from other sources, and this considerably

facilitates the interpretation. Of course the interpretation of each individual passage is bound to be largely conjecture, but the series as a whole gives us all the clues we need to correct any possible errors in the preceding passages.

[51] It goes without saying that while the dreamer was under the observation of my pupil he knew nothing of these interpretations and was therefore quite unprejudiced by anybody else’s opinion. Moreover I hold the view, based on wide experience, that the possibility and danger of prejudgment are exaggerated. Experience shows that the objective psyche is independent in the highest degree. Were it not so, it could not carry out its most characteristic function: the compensation of the conscious mind. The conscious mind allows itself to be trained like a parrot, but the unconscious does not—which is why St. Augustine thanked God for not making him responsible for his dreams. The unconscious is an autonomous psychic entity; any efforts to drill it are only apparently successful, and moreover are harmful to consciousness. It is and remains beyond the reach of subjective arbitrary control, in a realm where nature and her secrets can be neither improved upon nor perverted, where we can listen but may not meddle.

7. The Uroboros as symbol of the aeon.—Horapollo, *Selecta hieroglyphica* (1597)



8. The *anima mundi*, guide of mankind, herself guided by God.—Engraving by J.-T. de Bry, from Fludd, *Utriusque cosmi* (1617)

2. THE INITIAL DREAMS

1. DREAM:

[52] *The dreamer is at a social gathering. On leaving, he puts on a stranger's hat instead of his own*.

[53] The hat, as a covering for the head, has the general sense of something that epitomizes the head. Just as in summing up we bring ideas "under one head" (*unter einen Hut*), so the hat, as a sort of leading idea, covers the whole personality and imparts its own significance to it. Coronation endows the ruler with the divine nature of the sun, the doctor's hood bestows the dignity of a scholar, and a stranger's hat imparts a strange personality. Meyrink uses this theme in his novel *The Golem*, where the hero puts on the hat of Athanasius Pernath and, as a result, becomes involved in a strange experience. It is clear enough in *The Golem* that it is the unconscious which entangles the hero in fantastic adventures. Let us stress at once the significance of the *Golem* parallel and assume that the hat in the dream is the hat of an Athanasius, an immortal, a being beyond time, the universal and everlasting man as distinct from the ephemeral and "accidental" mortal man. Encircling the head, the hat is round like the sun-disc of a crown and therefore contains the first allusion to the mandala. We shall find the attribute of eternal duration confirmed in the ninth mandala dream (par. 134), while the mandala character of the hat comes out in the thirty-fifth mandala dream (par. 254). As a general result of the exchange of hats we may expect a development similar to that in *The Golem:* an emergence of the unconscious. The unconscious with its figures is already standing like a shadow behind the dreamer and pushing its way into consciousness.

2. DREAM:

[54] *The dreamer is going on a railway journey, and by standing in front of the window, he blocks the view for his fellow passengers. He must get out of their way*.

[55] The process is beginning to move, and the dreamer discovers that he is keeping the light from those who stand *behind* him, namely the unconscious components of his personality. We have no eyes behind us; consequently "behind" is the region of the unseen, the unconscious. If the dreamer will only stop blocking the window (consciousness), the unconscious content will become conscious.

3. HYPNAGOGIC VISUAL IMPRESSION:

[56] *By the sea shore. The sea breaks into the land, flooding everything. Then the dreamer is sitting on a lonely island*.

[57] The sea is the symbol of the collective unconscious, because unfathomed depths lie concealed beneath its reflecting surface.[1] Those who stand behind, the shadowy personifications of the unconscious, have burst into the *terra firma* of consciousness like a flood. Such invasions have something uncanny about them because they are irrational and incomprehensible to the person concerned. They bring about a momentous alteration of his personality since they immediately constitute a painful personal secret which alienates and isolates him from his surroundings. It is something that we "cannot tell anybody." We are afraid of being accused of mental abnormality—not without reason, for much the same thing happens to lunatics. Even so, it is a far cry from the intuitive perception of such an invasion to being inundated by it pathologically, though the layman does not realize this. Isolation by a secret results as a rule in an animation of the psychic atmosphere, as a substitute for loss of contact with other people. It causes an activation of the unconscious, and this produces something similar to the illusions and hallucinations that beset lonely wanderers in the desert, seafarers, and saints. The mechanism of these phenomena can best be explained in terms of energy. Our normal relations to objects in the world at large are maintained by a certain expenditure of energy. If the relation to the object is cut off there is a "retention" of energy, which then creates an equivalent substitute. For instance, just as persecution mania comes from a relationship poisoned by mistrust, so, as a substitute for the normal animation of the environment, an illusory reality rises up in which weird ghostly shadows flit about in place of people. That is why primitive man

has always believed that lonely and desolate places are haunted by "devils" and suchlike apparitions.

4. DREAM:

[58] *The dreamer is surrounded by a throng of vague female forms* (cf. fig. 33). *A voice within him says, "First I must get away from Father."*

[59] Here the psychic atmosphere has been animated by what the Middle Ages would call succubi. We are reminded of the visions of St. Anthony in Egypt, so eruditely described by Flaubert in *La Tentation de Saint-Antoine*. The element of hallucination shows itself in the fact that the thought is spoken aloud. The words "first I must get away" call for a concluding sentence which would begin with "in order to." Presumably it would run "in order to follow the unconscious, i.e., the alluring female forms" (fig. 9). The father, the embodiment of the traditional spirit as expressed in religion or a general philosophy of life, is standing in his way. He imprisons the dreamer in the world of the conscious mind and its values. The traditional masculine world with its intellectualism and rationalism is felt to be an impediment, from which we must conclude that the unconscious, now approaching him, stands in direct opposition to the tendencies of the conscious mind and that the dreamer, despite this opposition, is already favourably disposed towards the unconscious. For this reason the latter should not be subordinated to the rationalistic judgments of consciousness; it ought rather to be an experience *sui generis*. Naturally it is not easy for the intellect to accept this, because it involves at least a partial, if not a total, *sacrificium intellectus*. Furthermore, the problem thus raised is very difficult for modern man to grasp; for to begin with he can only understand the unconscious as an inessential and unreal appendage of the conscious mind, and not as a special sphere of experience with laws of its own. In the course of the later dreams this conflict will appear again and again, until finally the right formula is found for the correlation of conscious and unconscious, and the personality is assigned its correct position between the two. Moreover, such a conflict cannot be solved by understanding, but only by experience. Every stage of the experience must be lived through. There is no feat of interpretation or any other trick by which to circumvent this

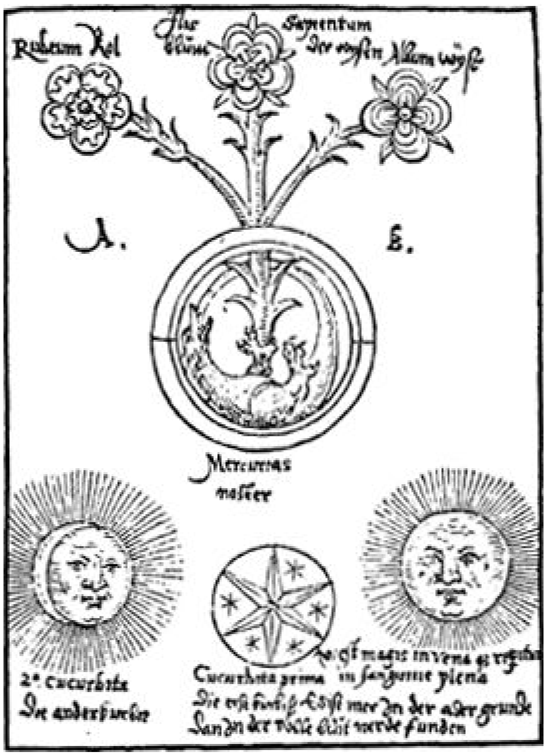
difficulty, for the union of conscious and unconscious can only be achieved step by step.

[60] The resistance of the conscious mind to the unconscious and the depreciation of the latter were historical necessities in the development of the human psyche, for otherwise the conscious mind would never have been able to differentiate itself at all. But modern man’s consciousness has strayed rather too far from the fact of the unconscious. We have even forgotten that the psyche is by no means of our design, but is for the most part autonomous and unconscious. Consequently the approach of the unconscious induces a panic fear in civilized people, not least on account of the menacing analogy with insanity. The intellect has no objection to “analysing” the unconscious as a passive object; on the contrary such an activity would coincide with our rational expectations. But to let the unconscious go its own way and to experience it as a reality is something that exceeds the courage and capacity of the average European. He prefers simply not to understand this problem. For the spiritually weak-kneed this is the better course, since the thing is not without its dangers.

9. The awakening of the sleeping king depicted as a judgment of Paris, with Hermes as psychopomp.
—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

10, 11, 12. Melusina; two-headed Melusina; mermaid with mask.—Eleazar, *Uraltes chymisches Werk* (1760)

[61] The experience of the unconscious is a personal secret communicable only to very few, and that with difficulty; hence the isolating effect we noted above. But isolation brings about a compensatory animation of the psychic atmosphere which strikes us as uncanny. The figures that appear in the dream are feminine, thus pointing to the feminine nature of the unconscious. They are fairies or fascinating sirens and lamias (figs. 10, 11, 12; cf. also fig. 157), who infatuate the lonely wanderer and lead him astray. Likewise seductive maidens appear at the beginning of the *nekyia*[2] of Poliphilo[3] (fig. 33), and the Melusina of Paracelsus[4] is another such figure.



13. The “tail-eater” (Uroboros) as the *prima materia* of the alchemical process, with the red-and-white rose, the *flos sapientum*. Below, *coniunctio solis et lunae*, with the *lapis philosophorum* as the son.—Reusner, *Pandora* (1588)

5. Visual impression:

[62] *A snake describes a circle round the dreamer, who stands rooted to the ground like a tree.*

[63] The drawing of a spellbinding circle (fig. 13) is an ancient magical device used by everyone who has a special or secret purpose in mind. He thereby protects himself from the "perils of the soul" that threaten him from without and attack anyone who is isolated by a secret. The same procedure has also been used since olden times to set a place apart as holy and inviolable; in founding a city, for instance, they first drew the *sulcus primigenius* or original furrow[5] (cf. fig. 31). The fact that the dreamer stands rooted to the centre is a compensation of his almost insuperable desire to run away from the unconscious. He experienced an agreeable feeling of relief after this vision—and rightly, since he has succeeded in establishing a protected *temenos*,[6] a taboo area where he will be able to meet the unconscious. His isolation, so uncanny before, is now endowed with meaning and purpose, and thus robbed of its terrors.

6. VISUAL IMPRESSION, DIRECTLY FOLLOWING UPON 5:

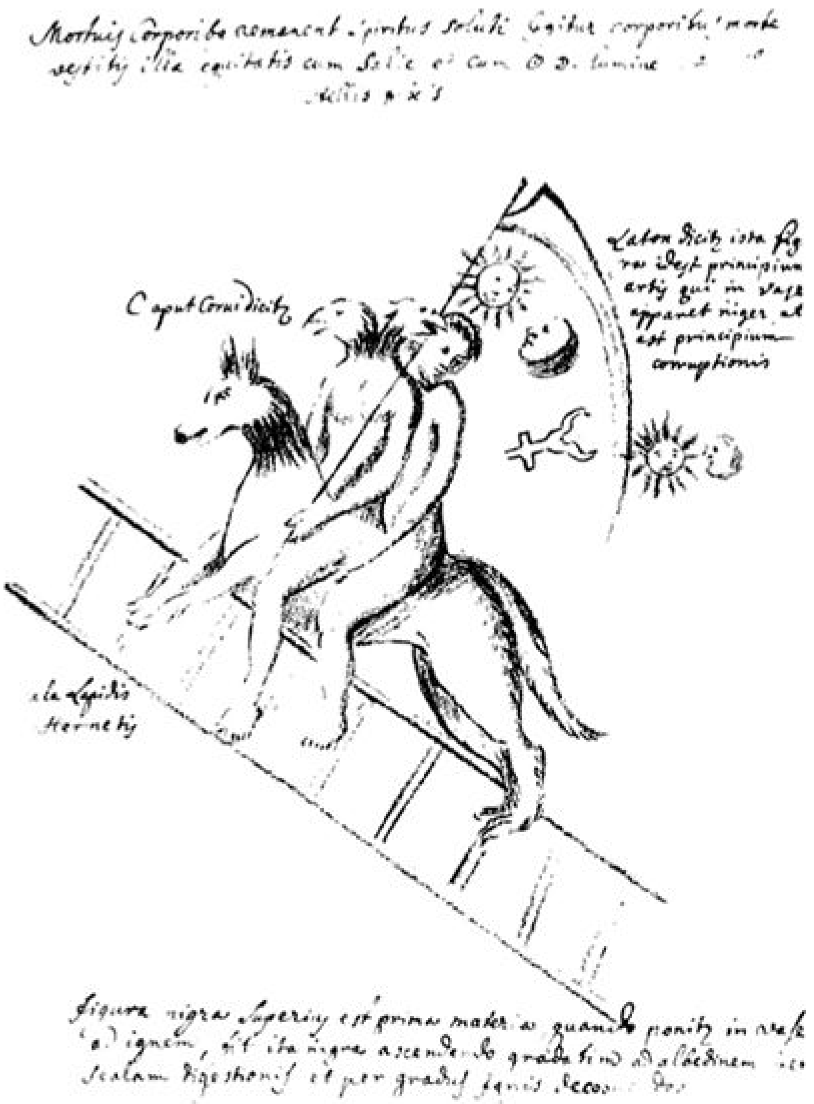
[64] *The veiled figure of a woman seated on a stair*.

[65] The motif of the unknown woman—whose technical name is the "anima"[7]—appears here for the first time. Like the throng of vague female forms in dream 4, she is a personification of the animated psychic atmosphere. From now on the figure of the unknown woman reappears in a great many of the dreams. Personification always indicates an autonomous activity of the unconscious. If some personal figure appears we may be sure that the unconscious is beginning to grow active. The activity of such figures very often has an anticipatory character: something that the dreamer himself will do later is now being done in advance. In this case the allusion is to a stair, thus indicating an ascent or a descent (fig. 14).

[66] Since the process running through dreams of this kind has an historical analogy in the rites of initiation, it may not be superfluous to draw attention to the important part which the Stairway of the Seven Planets played in these rites, as we know from Apuleius, among others. The initiations of late classical syncretism, already saturated with alchemy (cf. the visions of Zosimos[8]), were particularly concerned with the theme of ascent, i.e., sublimation. The ascent was often represented by a ladder (fig. 15); hence the burial gift in Egypt of a small ladder for

the *ka* of the dead.[9] The idea of an ascent through the seven spheres of the planets symbolizes the return of the soul to the sun-god from whom it originated, as we know for instance from Firmicus Maternus.[10] Thus the Isis mystery described by Apuleius[11] culminated in what early medieval alchemy, going back to Alexandrian tradition as transmitted by the Arabs,[12] called the *solificatio*, where the initiand was crowned as Helios.

14. Jacob’s dream.—Watercolour by William Blake



15. The *scala lapidis*, representing the stages of the alchemical process.—“Emblematical Figures of the Philosophers’ Stone” (MS., 17th cent.)

7. VISUAL IMPRESSION:

[67] *The veiled woman uncovers her face. It shines like the sun*.

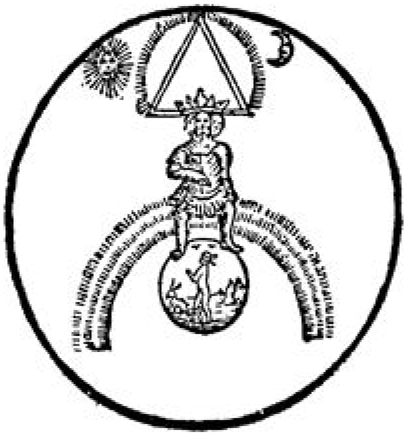
[68] The *solificatio* is consummated on the person of the anima. The process would seem to correspond to the *illuminatio*, or enlightenment. This “mystical” idea contrasts strongly with the rational attitude of the conscious mind, which recognizes only intellectual enlightenment as the highest form of understanding and insight. Naturally this attitude never reckons with the fact that scientific knowledge only satisfies the little tip of personality that is contemporaneous with ourselves, not the collective

psyche[13] that reaches back into the grey mists of antiquity and always requires a special rite if it is to be united with present-day consciousness. It is clear, therefore, that a "lighting up" of the unconscious is being prepared, which has far more the character of an *illuminatio* than of rational "elucidation." The *solificatio* is infinitely far removed from the conscious mind and seems to it almost chimerical.

8. VISUAL IMPRESSION:

[69] *A rainbow is to be used as a bridge. But one must go under it and not over it. Whoever goes over it will fall and be killed*.

[70] Only the gods can walk rainbow bridges in safety; mere mortals fall and meet their death, for the rainbow is only a lovely semblance that spans the sky, and not a highway for human beings with bodies. These must pass "under it" (fig. 16). But water flows under bridges too, following its own gradient and seeking the lowest place. This hint will be confirmed later.



16. *Mercurius tricephalus* as Anthropos. Below, blindfolded man led by an animal.—Kelley, *Tractatus de Lapide philosophorum* (1676)

9. DREAM:

[71] *A green land where many sheep are pastured. It is the "land of sheep."*

[72] This curious fragment, inscrutable at first glance, may derive from childhood impressions and particularly from those of a religious nature, which would not be far to seek in this connection—e.g., "He maketh me

to lie down in green pastures," or the early Christian allegories of sheep and shepherd[14] (fig. 18). The next vision points in the same direction.

10. VISUAL IMPRESSION:

[73] *The unknown woman stands in the land of sheep and points the way*.

[74] The anima, having already anticipated the *solificatio*, now appears as the psychopomp, the one who shows the way[15] (fig. 19). The way begins in the children's land, i.e., at a time when rational present-day consciousness was not yet separated from the historical psyche, the collective unconscious. The separation is indeed inevitable, but it leads to such an alienation from that dim psyche of the dawn of mankind that a loss of instinct ensues. The result is instinctual atrophy and hence disorientation in everyday human situations. But it also follows from the separation that the "children's land" will remain definitely infantile and become a perpetual source of childish inclinations and impulses. These intrusions are naturally most unwelcome to the conscious mind, and it consistently represses them for that reason. But the very consistency of the repression only serves to bring about a still greater alienation from the fountainhead, thus increasing the lack of instinct until it becomes lack of soul. As a result, the conscious mind is either completely swamped by childishness or else constantly obliged to defend itself in vain against the inundation, by means of a cynical affectation of old age or embittered resignation. We must therefore realize that despite its undeniable successes the rational attitude of present-day consciousness is, in many human respects, childishly un-adapted and hostile to life. Life has grown desiccated and cramped, crying out for the rediscovery of the fountainhead. But the fountainhead can only be found if the conscious mind will suffer itself to be led back to the "children's land," there to receive guidance from the unconscious as before. To remain a child too long is childish, but it is just as childish to move away and then assume that childhood no longer exists because we do not see it. But if we return to the "children's land" we succumb to the fear of becoming childish, because we do not understand that everything of psychic origin has a double face. One face looks forward, the other back. It is ambivalent and therefore symbolic, like all living reality.

17. The artifex (or Hermes) as shepherd of Aries and Taurus, who symbolize the vernal impulses, the beginning of the *opus*.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

18. Christ as shepherd.—Mosaic, mausoleum of Galla Placidia, Ravenna (*c*. 424–451)

[75] We stand on a peak of consciousness, believing in a childish way that the path leads upward to yet higher peaks beyond. That is the chimerical rainbow bridge. In order to reach the next peak we must first go down into the land where the paths begin to divide.

11. DREAM:

[76] *A voice says, “But you are still a child.”*

[77] This dream forces the dreamer to admit that even a highly differentiated consciousness has not by any means finished with childish things, and that a return to the world of childhood is necessary.

19. The soul as guide, showing the way.—Watercolour by William Blake for Dante’s *Purgatorio*, Canto IV

12. DREAM:

[78] *A dangerous walk with Father and Mother, up and down many ladders.*

[79] A childish consciousness is always tied to father and mother, and is never by itself. Return to childhood is always the return to father and

mother, to the whole burden of the psychic non-ego as represented by the parents, with its long and momentous history. Regression spells disintegration into our historical and hereditary determinants, and it is only with the greatest effort that we can free ourselves from their embrace. Our psychic prehistory is in truth the spirit of gravity, which needs steps and ladders because, unlike the disembodied airy intellect, it cannot fly at will. Disintegration into the jumble of historical determinants is like losing one's way, where even what is right seems an alarming mistake.

[80] As hinted above, the steps and ladders theme (cf. figs. 14, 15) points to the process of psychic transformation, with all its ups and downs. We find a classic example of this in Zosimos' ascent and descent of the fifteen steps of light and darkness.[16]

[81] It is of course impossible to free oneself from one's childhood without devoting a great deal of work to it, as Freud's researches have long since shown. Nor can it be achieved through intellectual knowledge only; what is alone effective is a remembering that is also a re-experiencing. The swift passage of the years and the overwhelming inrush of the newly discovered world leave a mass of material behind that is never dealt with. We do not shake this off; we merely remove ourselves from it. So that when, in later years, we return to the memories of childhood we find bits of our personality still alive, which cling round us and suffuse us with the feeling of earlier times. Being still in their childhood state, these fragments are very powerful in their effect. They can lose their infantile aspect and be corrected only when they are reunited with adult consciousness. This "personal unconscious" must always be dealt with first, that is, made conscious, otherwise the gateway to the collective unconscious cannot be opened. The journey with father and mother up and down many ladders represents the making conscious of infantile contents that have not yet been integrated.

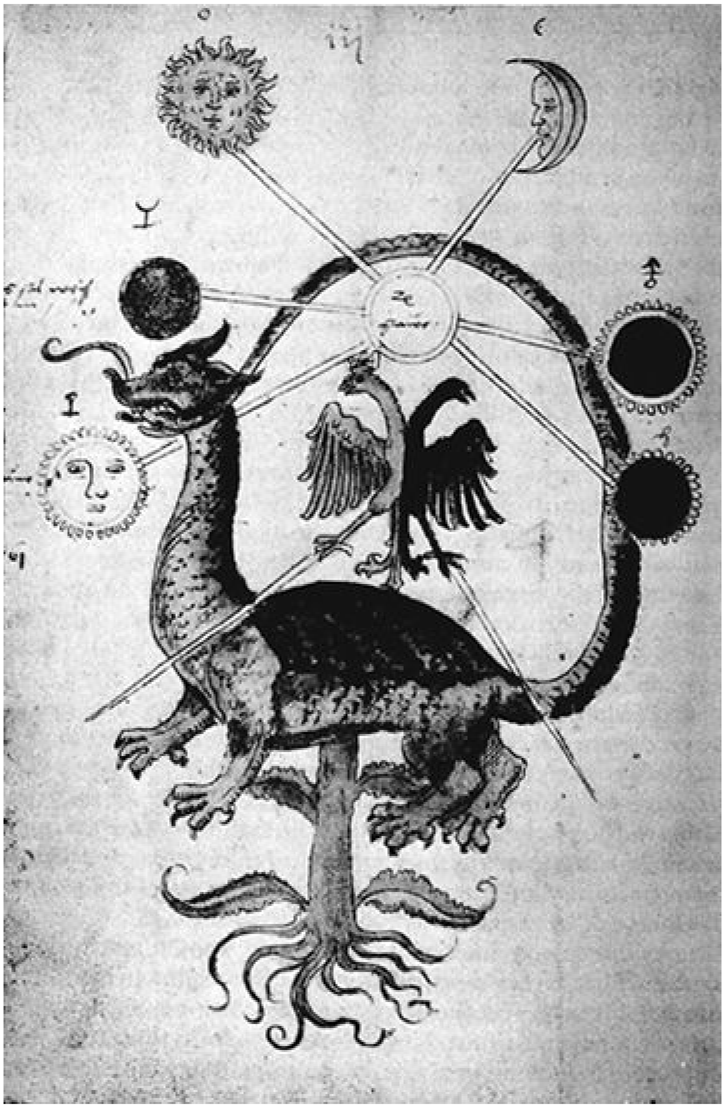
13. DREAM:

[82] *The father calls out anxiously, "That is the seventh!"*

[83] During the walk over many ladders some event has evidently taken place which is spoken of as “the seventh” (fig. 20). In the language of initiation, “seven” stands for the highest stage of illumination and would therefore be the coveted goal of all desire (cf. fig. 28). But to the conventional mind the *solificatio* is an outlandish, mystical idea bordering on madness. We assume that it was only in the dark ages of misty superstition that people thought in such a nonsensical fashion, but that the lucid and hygienic mentality of our own enlightened days has long since outgrown such nebulous notions, so much so, indeed, that this particular kind of “illumination” is to be found nowadays only in a lunatic asylum. No wonder the father is scared and anxious, like a hen that has hatched out ducklings and is driven to despair by the aquatic proclivities of its young. If this interpretation—that the “seventh” represents the highest stage of illumination—is correct, it would mean in principle that the process of integrating the personal unconscious was actually at an end. Thereafter the collective unconscious would begin to open up, which would suffice to explain the anxiety the father felt as the representative of the traditional spirit.

[84] Nevertheless the return to the dim twilight of the unconscious does not mean that we should entirely abandon the precious acquisition of our forefathers, namely the intellectual differentiation of consciousness. It is rather a question of the *man* taking the place of the *intellect*—not the man whom the dreamer imagines himself to be, but someone far more rounded and complete. This would mean assimilating all sorts of things into the sphere of his personality which the dreamer still rejects as disagreeable or even impossible. The father who calls out so anxiously, “That is the seventh!” is a psychic component of the dreamer himself, and the anxiety is therefore his own. So the interpretation must bear in mind the possibility that the “seventh” means not only a sort of culmination but something rather ominous as well. We come across this theme, for instance, in the fairytale of Tom Thumb and the Ogre. Tom Thumb is the youngest of seven brothers. His dwarflike stature and his cunning are harmless enough, yet he is the one who leads his brothers to the ogre’s lair, thus proving his own dangerous double nature as a bringer of good and bad luck; in other words. he is also the ogre himself. Since

olden times “the seven” have represented the seven gods of the planets (fig. 20); they form what the Pyramid inscriptions call a *paut neteru*, a “company of gods”[17] (cf. figs. 21, 23). Although a company is described as “nine,” it often proves to be not nine at all but ten, and sometimes even more. Thus Maspero[18] tells us that the first and last members of the series can be added to, or doubled, without injury to the number nine. Something of the sort happened to the classical *paut* of the Greco-Roman or Babylonian gods in the post-classical age, when the gods were degraded to demons and retired partly to the distant stars and partly to the metals inside the earth. It then transpired that Hermes or Mercurius possessed a double nature, being a chthonic god of revelation and also the spirit of quicksilver, for which reason he was represented as a hermaphrodite (fig. 22). As the planet Mercury, he is nearest to the sun, hence he is pre-eminently related to gold. But, as quicksilver, he dissolves the gold and extinguishes its sunlike brilliance. All through the Middle Ages he was the object of much puzzled speculation on the part of the natural philosophers: sometimes he was a ministering and helpful spirit, a πάρεδρος (literally “assistant, comrade”) or *familiaris;* and sometimes the *servus* or *cervus fugitivus* (the fugitive slave or stag), an elusive, deceptive, teasing goblin[19] who drove the alchemists to despair and had many of his attributes in common with the devil. For instance he is dragon, lion, eagle, raven, to mention only the most important of them. In the alchemical hierarchy of gods Mercurius comes lowest as *prima materia* and highest as *lapis philosophorum*. The *spiritus mercurialis* (fig. 23) is the alchemists’ guide (Hermes Psychopompos: cf. fig. 146), and their tempter; he is their good luck and their ruin. His dual nature enables him to be not only the seventh but also the eighth—the eighth on Olympus “whom nobody thought of” (see infra, par. 204f.).



20. The six planets united in the seventh, Mercury, depicted as the Uroboros, and the red-and-white (hermaphroditic) double eagle.—Thomas Aquinas (pseud.). “De alchimia” (MS., 16th cent.)

21. The seven gods of the planets in Hades.—Mylius, *Philosophia reformata* (1622)

22. Mercurius in the “philosopher’s egg” (the alchemical vessel). As *filius* he stands on the sun and moon, tokens of his dual nature. The birds betoken spiritualization, while the scorching rays of the sun ripen the homunculus in the vessel.—*Mutus liber* (1702)

[85] It may seem odd to the reader that anything as remote as medieval alchemy should have relevance here. But the "black art" is not nearly so remote as we think; for as an educated man the dreamer must have read *Faust*, and *Faust* is an alchemical drama from beginning to end, although the educated man of today has only the haziest notion of this. Our conscious mind is far from understanding everything, but the unconscious always keeps an eye on the "age-old, sacred things," however strange they may be, and reminds us of them at a suitable opportunity. No doubt *Faust* affected our dreamer much as Goethe was affected when, as a young man in his Leipzig days, he studied Theophrastus Paracelsus with Fräulein von Klettenberg.[20] It was then, as we certainly may assume, that the mysterious equivalence of seven and eight sank deep into his soul, without his conscious mind ever unravelling the mystery. The following dream will show that this reminder of *Faust* is not out of place.

14. DREAM:

[86] The dreamer is in America looking for an employee with a pointed beard. They say that everybody has such an employee.

[87] America is the land of practical, straightforward thinking, uncontaminated by our European sophistication. The intellect would there be kept, very sensibly, as an employee. This naturally sounds like *lèse-majesté* and might therefore be a serious matter. So it is consoling to know that everyone (as is always the case in America) does the same. The "man with a pointed beard" is our time-honoured Mephisto whom Faust "employed" and who was not permitted to triumph over him in the end, despite the fact that Faust had dared to descend into the dark chaos of the historical psyche and steep himself in the ever-changing, seamy side of life that rose up out of that bubbling cauldron.

[88] From subsequent questions it was discovered that the dreamer himself had recognized the figure of Mephistopheles in the "man with the pointed beard." Versatility of mind as well as the inventive gift and scientific leanings are attributes of the astrological Mercurius. Hence the man with the pointed beard represents the intellect, which is introduced by the dream as a real *familiaris*, an obliging if somewhat dangerous

spirit. The intellect is thus degraded from the supreme position it once occupied and is put in the second rank, and at the same time branded as daemonic. Not that it had ever been anything but daemonic—only the dreamer had not noticed before how possessed he was by the intellect as the tacitly recognized supreme power. Now he has a chance to view this function, which till then had been the uncontested dominant of his psychic life, at somewhat closer quarters. Well might he exclaim with Faust: “So that’s what was inside the poodle!” Mephistopheles is the diabolical aspect of every psychic function that has broken loose from the hierarchy of the total psyche and now enjoys independence and absolute power (fig. 36). But this aspect can be perceived only when the function becomes a separate entity and is objectivated or personified, as in this dream.

23. The mystic vessel where the two natures unite (*sol* and *luna*, *caduceus*) to produce the *filius hermaphroditus*, Hermes Psychopompos, flanked by the six gods of the planets.—"Figurarum Aegyptiorum secretarum" (MS., 18th cent.)

[89] Amusingly enough, the "man with the pointed beard" also crops up in alchemical literature, in one of the "Parabolae" contained in the "Güldenen Tractat vom philosophischen Stein,"[21] written in 1625, which Herbert Silberer[22] has analysed from a psychological point of view. Among the company of old white-bearded philosophers there is a young man with a black pointed beard. Silberer is uncertain whether he should assume this figure to be the devil.

[90] Mercurius as quicksilver is an eminently suitable symbol for the "fluid," i.e., mobile, intellect (fig. 24). Therefore in alchemy Mercurius is

sometimes a "spirit" and sometimes a "water," the so-called *aqua permanens*, which is none other than *argentum vivum*.

15. DREAM:

[91] *The dreamer's mother is pouring water from one basin into another*. (The dreamer only remembered in connection with vision 28 of the next series that this basin belonged to his sister.) *This action is performed with great solemnity: it is of the highest significance for the outside world. Then the dreamer is rejected by his father*.

24. The activities presided over by Mercurius.—Tübingen MS. (*c*. 1400)

25. The fountain of life as *fons mercurialis.—Rosarium philosophorum* (1550)

[92] Once more we meet with the theme of “exchange” (cf. dream 1): one thing is put in the place of another. The “father” has been dealt with; now begins the action of the “mother.” Just as the father represents collective consciousness, the traditional spirit, so the mother stands for the collective unconscious, the source of the water of life[23] (fig. 25). (Cf. the maternal significance of πηγή,[24] the *fons signatus*,[25] as an attribute of the Virgin Mary, etc.—fig. 26.) The unconscious has altered the locus of the life forces, thus indicating a change of attitude. The dreamer’s subsequent recollection enables us to see who is now the source of life: it is the “sister.” The mother is superior to the son, but the sister is his equal. Thus the deposition of the intellect frees the dreamer from the domination of the unconscious and hence from his infantile attitude. Although the sister is a remnant of the past, we know definitely from later dreams that she was the carrier of the anima-image. We may therefore assume that the transferring of the water of life to the sister really means that the mother has been replaced by the anima.[26]

26. The Virgin Mary surrounded by her attributes, the quadrangular enclosed garden, the round temple, tower, gate, well and fountain, palms and cypresses (trees of life), all feminine symbols.—17th-century devotional picture

[93] The anima now becomes a life-giving factor, a psychic reality which conflicts strongly with the world of the father. Which of us could assert, without endangering his sanity, that he had accepted the guidance of the unconscious in the conduct of his life, assuming that anyone exists who could imagine what that would mean? Anyone who could imagine it at all would certainly have no difficulty in understanding what a monstrous affront such a *volte face* would offer to the traditional spirit, especially to the spirit that has put on the earthly garment of the Church. It was this subtle change of psychic standpoint that caused the old alchemists to resort to deliberate mystification, and that sponsored all kinds of heresies.

Hence it is only logical for the father to reject the dreamer—it amounts to nothing less than excommunication. (Be it noted that the dreamer is a Roman Catholic.) By acknowledging the reality of the psyche and making it a co-determining ethical factor in our lives, we offend against the spirit of convention which for centuries has regulated psychic life from outside by means of institutions as well as by reason. Not that unreasoning instinct rebels of itself against firmly established order; by the strict logic of its own inner laws it is itself of the firmest structure imaginable and, in addition, the creative foundation of all binding order. But just because this foundation is creative, all order which proceeds from it—even in its most "divine" form—is a phase, a stepping-stone. Despite appearances to the contrary, the establishment of order and the dissolution of what has been established are at bottom beyond human control. The secret is that only that which can destroy itself is truly alive. It is well that these things are difficult to understand and thus enjoy a wholesome concealment, for weak heads are only too easily addled by them and thrown into confusion. From all these dangers dogma—whether ecclesiastical, philosophical, or scientific—offers effective protection, and, looked at from a social point of view, excommunication is a necessary and useful consequence.

[94] The water that the mother, the unconscious, pours into the basin belonging to the anima is an excellent symbol for the living power of the psyche (cf. fig. 152). The old alchemists never tired of devising new and expressive synonyms for this water. They called it *aqua nostra, mercurius vivus, argentum vivum, vinum ardens, aqua vitae, succus lunariae*, and so on, by which they meant a living being not devoid of substance, as opposed to the rigid immateriality of mind in the abstract. The expression *succus lunariae* (sap of the moon-plant) refers clearly enough to the nocturnal origin of the water, and *aqua nostra*, like *mercurius vivus*, to its earthliness (fig. 27). *Acetum fontis* is a powerful corrosive water that dissolves all created things and at the same time leads to the most durable of all products, the mysterious *lapis*.

[95] These analogies may seem very far-fetched. But let me refer the reader to dreams 13 and 14 in the next section (pars. 154 and 158), where the water symbolism is taken up again. The importance of the action "for

the outside world," noted by the dreamer himself, points to the collective significance of the dream, as also does the fact—which had a far-reaching influence on the conscious attitude of the dreamer—that he is "rejected by the father."

[96] The saying "extra ecclesiam nulla salus"—outside the Church there is no salvation—rests on the knowledge that an institution is a safe, practicable highway with a visible or definable goal, and that no paths and no goals can be found outside it. We must not underestimate the devastating effect of getting lost in the chaos, even if we know that it is the *sine qua non* of any regeneration of the spirit and the personality.

16. DREAM:

[97] *An ace of clubs lies before the dreamer. A seven appears beside it.*

[98] The ace, as “1,” is the lowest card but the highest in value. The ace of clubs, being in the form of a cross, points to the Christian symbol.[27] Hence in Swiss-German the club is often called *Chrüüz* (cross). At the same time the three leaves contain an allusion to the threefold nature of the one God. Lowest and highest are beginning and end, alpha and omega.

[99] The seven appears after the ace of clubs and not before. Presumably the idea is: first the Christian conception of God, and then the seven (stages). The seven stages symbolize the transformation (fig. 28) which begins with the symbolism of Cross and Trinity, and, judging by the earlier archaic allusions in dreams 7 and 13, culminates in the *solificatio*. But this solution is not hinted at here. Now, we know that the regression to the Helios of antiquity vainly attempted by Julian the Apostate was succeeded in the Middle Ages by another movement that was expressed in the formula “per crucem ad rosam” (through the cross to the rose), which was later condensed into the “Rosie Crosse” of the Rosicrucians. Here the essence of the heavenly Sol descends into the flower—earth’s answer to the sun’s countenance (fig. 29). The solar quality has survived in the symbol of the “golden flower” of Chinese alchemy.[28] The well-known “blue flower” of the Romantics might well be the last nostalgic perfume of the “rose”; it looks back in true Romantic fashion to the medievalism of ruined cloisters, yet at the same time modestly proclaims something new in earthly loveliness. But even the golden brilliance of the sun had to submit to a descent, and it found its analogy in the glitter of earthly gold—although, as *aurum nostrum*, this was far removed from the gross materiality of the metal, at least for subtler minds. One of the most interesting of the alchemical texts is the *Rosarium philosophorum*, subtitled *Secunda pars alchimiae de lapide philosophico vero modo praeparando.… Cum figuris rei perfectionem ostendentibus* (1550).[29] The anonymous author was very definitely a “philosopher” and was apparently aware that alchemy was not concerned with ordinary goldmaking but with a philosophical secret. For these alchemists the gold

undoubtedly had a symbolic nature[30] and was therefore distinguished by such attributes as *vitreum* or *philosophicum*. It was probably owing to its all too obvious analogy with the sun that gold was denied the highest philosophical honour, which fell instead to the *lapis philosophorum*. The transformer is above the transformed, and transformation is one of the magical properties of the marvellous stone. The *Rosarium philosophorum* says: “For our stone, namely the living western quicksilver which has placed itself above the gold and vanquished it, is that which kills and quickens.”[31] As to the “philosophical” significance of the *lapis*, the following quotation from a treatise ascribed to Hermes is particularly enlightening: “Understand, ye sons of the wise, what this exceeding precious stone proclaims … “And my light conquers every light, and my virtues are more excellent than all virtues.… I beget the light, but the darkness too is of my nature. …’”[32]

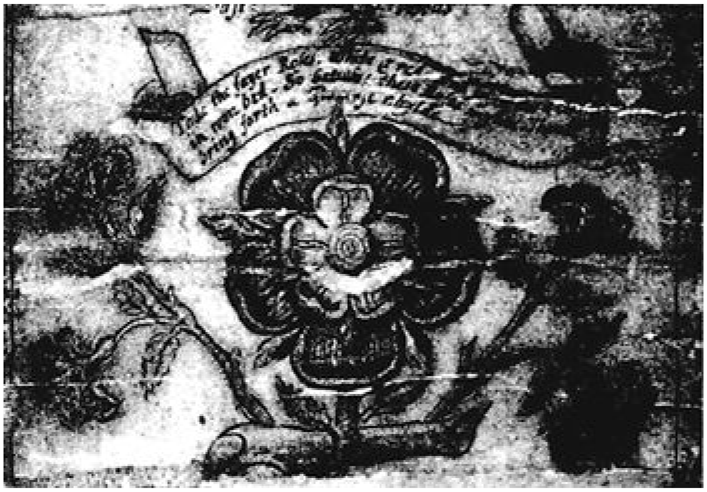
17. DREAM:

[100] *The dreamer goes for a long walk, and finds a blue flower on the way.*

[101] To go for a walk is to wander along paths that lead nowhere in particular; it is both a search and a succession of changes. The dreamer finds a blue flower blossoming aimlessly by the wayside, a chance child of nature, evoking friendly memories of a more romantic and lyrical age, of the youthful season when it came to bud, when the scientific view of the world had not yet broken away from the world of actual experience—or rather when this break was only just beginning and the eye looked back to what was already the past. The flower is in fact like a friendly sign, a numinous emanation from the unconscious, showing the dreamer, who as a modern man has been robbed of security and of participation in all the things that lead to man's salvation, the historical place where he can meet friends and brothers of like mind, where he can find the seed that wants to sprout in him too. But the dreamer knows nothing as yet of the old solar gold which connects the innocent flower with the obnoxious

black art of alchemy and with the blasphemous pagan idea of the *solificatio*. For the “golden flower of alchemy” (fig. 30) can sometimes be a blue flower: “The sapphire blue flower of the hermaphrodite.”[33]



30. The red-and-white rose, the “golden flower” of alchemy, as birthplace of the *filius philosophorum*.—“Ripley Scrowle” (MS., 1588)

18. DREAM:

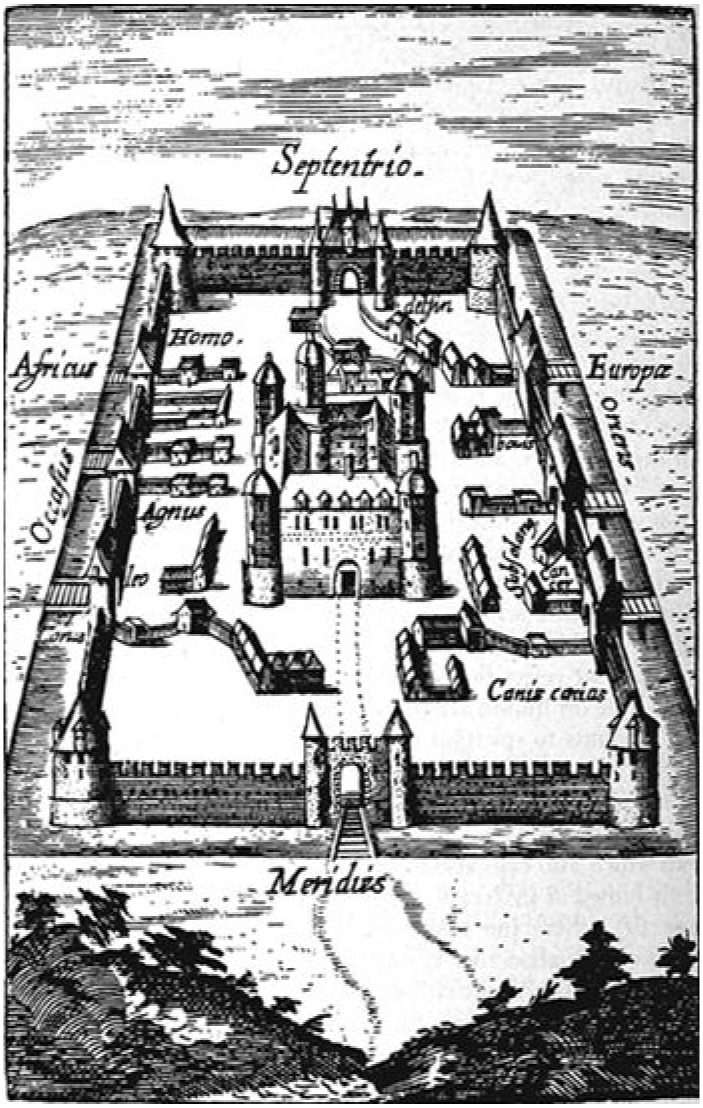
[102] *A man offers him some golden coins in his outstretched hand. The dreamer indignantly throws them to the ground and immediately afterwards deeply regrets his action. A variety performance then takes place in an enclosed space.*

[103] The blue flower has already begun to drag its history after it. The “gold” is offered and is indignantly refused. Such a misinterpretation of the *aurum philosophicum* is easy to understand. But hardly has it happened when there comes a pang of remorse that the precious secret has been rejected and a wrong answer given to the riddle of the Sphinx. The same thing happened to the hero in Meyrink’s *Golem*, when the ghost offered him a handful of grain which he spurned. The gross materiality of the yellow metal with its odious fiscal flavour, and the mean look of the grain, make both rejections comprehensible enough—but that is precisely why it is so hard to find the *lapis:* it is *exilis*, uncomely, it is thrown out into the street or on the dunghill, it is the commonest thing to be picked up anywhere—“in planitie, in montibus et aquis.” It has this “ordinary” aspect in common with Spitteler’s jewel in *Prometheus and Epimetheus*, which, for the same reason, was also not

recognized by the worldly wise. But "the stone which the builders rejected, the same is become the head of the corner," and the intuition of this possibility arouses the liveliest regret in the dreamer.

[104] It is all part of the banality of its outward aspect that the gold is minted, i.e., shaped into coins, stamped, and valued. Applied psychologically, this is just what Nietzsche refuses to do in his *Zarathustra:* to give names to the virtues. By being shaped and named, psychic life is broken down into coined and valued units. But this is possible only because it is intrinsically a great variety of things, an accumulation of unintegrated hereditary units. Natural man is not a "self"—he is the mass and a particle in the mass, collective to such a degree that he is not even sure of his own ego. That is why since time immemorial he has needed the transformation mysteries to turn him into something, and to rescue him from the animal collective psyche, which is nothing but a *variété*.

[105] But if we reject this unseemly *variété* of man "as he is," it is impossible for him to attain integration, to become a self.[34] And that amounts to spiritual death. Life that just happens in and for itself is not real life; it is real only when it is *known*. Only a unified personality can experience life, not that personality which is split up into partial aspects, that bundle of odds and ends which also calls itself "man." The dangerous plurality already hinted at in dream 4 (par. 58) is compensated in vision 5 (par. 62), where the snake describes a magic circle and thus marks off the taboo area, the *temenos* (fig. 31). In much the same way and in a similar situation the *temenos* reappears here, drawing the "many" together for a united variety performance—a gathering that has the appearance of an entertainment, though it will shortly lose its entertaining character: the "play of goats" will develop into a "tragedy." According to all the analogies, the satyr play was a mystery performance, from which we may assume that its purpose, as everywhere, was to re-establish man's connection with his natural ancestry and thus with the source of life, much as the obscene stories, αὶσχρολογία, told by Athenian ladies at the mysteries of Eleusis, were thought to promote the earth's fertility.[35] (Cf. also Herodotus' account[36] of the exhibitionistic performances connected with the Isis festivities at Bubastis.)



31. The symbolic city as centre of the earth, its four protecting walls laid out in a square: a typical *temenos*.—Maier, *Viatorium* (1651)

[106] The allusion to the compensatory significance of the *temenos*, however, is still wrapped in obscurity for the dreamer. As might be imagined, he is much more concerned with the danger of spiritual death, which is conjured up by his rejection of the historical context.

19. VISUAL IMPRESSION:

[107] *A death's-head. The dreamer wants to kick it away, but cannot. The skull gradually changes into a red ball, then into a woman's head which emits light*.

[108] The skull soliloquies of Faust and of Hamlet are reminders of the appalling senselessness of human life when “sicklied o’er with the pale cast of thought.” It was traditional opinions and judgments that caused the dreamer to dash aside the doubtful and uninviting-looking offerings. But when he tries to ward off the sinister vision of the death’s-head it is transformed into a red ball, which we may take as an allusion to the rising sun, since it at once changes into the shining head of a woman, reminding us directly of vision 7 (par. 67). Evidently an enantiodromia, a play of opposites,[37] has occurred: after being rejected the unconscious insists on itself all the more strongly. First it produces the classical symbol for the unity and divinity of the self, the sun; then it passes to the motif of the unknown woman who personifies the unconscious. Naturally this motif includes not merely the archetype of the anima but also the dreamer’s relationship to a real woman, who is both a human personality and a vessel for psychic projections. (“Basin of the sister” in dream 15, par. 91.)

[109] In Neoplatonic philosophy the soul has definite affinities with the sphere. The soul substance is laid round the concentric spheres of the four elements above the fiery heaven.[38]

20. VISUAL IMPRESSION:

[110] *A globe. The unknown woman is standing on it and worshipping the sun.*

[111] This impression, too, is an amplification of vision 7 (par. 67). The rejection in dream 18 evidently amounted to the destruction of the whole development up to that point. Consequently the initial symbols reappear now, but in amplified form. Such enantiodromias are characteristic of dream-sequences in general. Unless the conscious mind intervened, the unconscious would go on sending out wave after wave without result, like the treasure that is said to take nine years, nine months, and nine nights to come to the surface and, if not found on the last night, sinks back to start all over again from the beginning.

[112] The globe probably comes from the idea of the red ball. But, whereas this is the sun, the globe is rather an image of the earth, upon which the

anima stands worshipping the sun (fig. 32). Anima and sun are thus distinct, which points to the fact that the sun represents a different principle from that of the anima. The latter is a personification of the unconscious, while the sun is a symbol of the source of life and the ultimate wholeness of man (as indicated in the *solificatio*). Now, the sun is an antique symbol that is still very close to us. We know also that the early Christians had some difficulty in distinguishing the ἥλιος ἀνατολῆς (the rising sun) from Christ.[39] The dreamer's anima still seems to be a sun-worshipper, that is to say, she belongs to the ancient world, and for the following reason: the conscious mind with its rationalistic attitude has taken little or no interest in her and therefore made it impossible for the anima to become modernized (or better, Christianized). It almost seems as if the differentiation of the intellect that began in the Christian Middle Ages, as a result of scholastic training, had driven the anima to regress to the ancient world. The Renaissance gives us evidence enough for this, the clearest of all being the *Hypnerotomachia* of Francesco Colonna, where Poliphilo meets his anima, the lady Polia, at the court of Queen Venus, quite untouched by Christianity and graced with all the "virtues" of antiquity. The book was rightly regarded as a mystery text.[40] With this anima, then, we plunge straight into the ancient world. So that I would not think anyone mistaken who interpreted the rejection of the gold in dream 18 *ex effectu* as an attempt to escape this regrettable and unseemly regression to antiquity. Certain vital doctrines of alchemical philosophy go back textually to late Greco-Roman syncretism, as Ruska, for instance, has sufficiently established in the case of the *Turba*. Hence any allusion to alchemy wafts one back to the ancient world and makes one suspect regression to pagan levels.

32. *Coniunctio solis el lunae*.—Trismosin, “Splendor solis” (MS., 1582)

[113] It may not be superfluous to point out here, with due emphasis, that consciously the dreamer had no inkling of all this. But in his unconscious he is immersed in this sea of historical associations, so that he behaves in his dreams as if he were fully cognizant of these curious excursions into the history of the human mind. He is in fact an unconscious exponent of an autonomous psychic development, just like the medieval alchemist or the classical Neoplatonist. Hence one could say—*cum grano salis*—that history could be constructed just as easily from one’s own unconscious as from the actual texts.

21. VISUAL IMPRESSION:

[114] *The dreamer is surrounded by nymphs. A voice says, "We were always there, only you did not notice us."* (fig. 33).

[115] Here the regression goes back even further, to an image that is unmistakably classical. At the same time the situation of dream 4 (par. 58) is taken up again and also the situation of dream 18, where the rejection led to the compensatory enantiodromia in vision 19. But here the image is amplified by the hallucinatory recognition that the drama has always existed although unnoticed until now. The realization of this fact joins the unconscious psyche to consciousness as a coexistent entity. The phenomenon of the "voice" in dreams always has for the dreamer the final and indisputable character of the αὐτὸς ἔφα,[41] i.e., the voice expresses some truth or condition that is beyond all doubt. The fact that a sense of the remote past has been established, that contact has been made with the deeper layers of the psyche, is accepted by the unconscious personality of the dreamer and communicates itself to his conscious mind as a feeling of comparative security.

33. Poliphilo surrounded by nymphs.—Béroalde de Verville, *Le Songe de Poliphile* (1600)

[116] Vision 20 represents the anima as a sun-worshipper. She has as it were stepped out of the globe or spherical form (cf. fig. 32). But the first

spherical form was the skull. According to tradition the head or brain is the seat of the *anima intellectualis*. For this reason too the alchemical vessel must be round like the head, so that what comes out of the vessel shall be equally "round," i.e., simple and perfect like the *anima mundi*.[42] The work is crowned by the production of the *rotundum*, which, as the *materia globosa*, stands at the beginning and also at the end, in the form of gold (fig. 34; cf. also figs. 115, 164, 165). Possibly the nymphs who "were always there" are an allusion to this. The regressive character of the vision is also apparent from the fact that there is a multiplicity of female forms, as in dream 4 (par. 58). But this time they are of a classical nature, which, like the sun-worship in vision 20, points to an historical regression. The splitting of the anima into many figures is equivalent to dissolution into an indefinite state, i.e., into the unconscious, from which we may conjecture that a relative dissolution of the conscious mind is running parallel with the historical regression (a process to be observed in its extreme form in schizophrenia). The dissolution of consciousness or, as Janet calls it, *abaissement du niveau mental*, comes very close to the primitive state of mind. A parallel to this scene with the nymphs is to be found in the Paracelsan *regio nymphididica*, mentioned in the treatise *De vita longa* as the initial stage of the individuation process.[43]

34. The *nigredo* standing on the *rotundum*, i.e., *sol niger*.—Mylius, *Philosophia reformata* (1622)

22. VISUAL IMPRESSION:

[117] *In a primeval forest. An elephant looms up menacingly. Then a large ape-man, bear, or cave-man threatens to attack the dreamer with a club* (fig. 35). *Suddenly the "man with the pointed beard" appears and stares at the aggressor, so that he is spellbound. But the dreamer is terrified. The voice says, "Everything must be ruled by the light."*

[118] The multiplicity of nymphs has broken down into still more primitive components; that is to say, the animation of the psychic atmosphere has very considerably increased, and from this we must conclude that the dreamer's isolation from his contemporaries has increased in proportion. This intensified isolation can be traced back to vision 21, where the union with the unconscious was realized and accepted as a fact. From the point of view of the conscious mind this is highly irrational; it constitutes a secret which must be anxiously guarded, since the justification for its existence could not possibly be explained to any so-called reasonable person. Anyone who tried to do so would be branded as a lunatic. The discharge of energy into the environment is therefore considerably impeded, the result being a surplus of energy on the side of the unconscious: hence the abnormal increase in the autonomy of the unconscious figures, culminating in aggression and real terror. The earlier entertaining variety performance is beginning to become uncomfortable. We find it easy enough to accept the classical figures of nymphs thanks to their aesthetic embellishments; but we have no idea that behind these gracious figures there lurks the Dionysian mystery of antiquity, the satyr play with its tragic implications: the bloody dismemberment of the god who has become an animal. It needed a Nietzsche to expose in all its feebleness Europe's schoolboy attitude to the ancient world. But what did Dionysus mean to Nietzsche? What he says about it must be taken seriously; what it did to him still more so. There can be no doubt that he knew, in the preliminary stages of his fatal illness, that the dismal fate of Zagreus was reserved for him. Dionysus is the abyss of impassioned dissolution, where all human distinctions are merged in the animal divinity of the primordial psyche—a blissful and terrible experience.

Humanity, huddling behind the walls of its culture, believes it has escaped this experience, until it succeeds in letting loose another orgy of bloodshed. All well-meaning people are amazed when this happens and blame high finance, the armaments industry, the Jews, or the Freemasons.[44]

35. A medieval version of the “wild man.”—Codex Urbanus Latinus 899 (15th cent.)

[119] At the last moment, friend “Pointed Beard” appears on the scene as an obliging *deus ex machina* and exorcizes the annihilation threatened by the formidable ape-man. Who knows how much Faust owed his imperturbable curiosity, as he gazed on the spooks and bogeys of the classical *Walpurgisnacht*, to the helpful presence of Mephisto and his matter-of-fact point of view! Would that more people could remember the scientific or philosophical reflections of the much-abused intellect at the right moment! Those who abuse it lay themselves open to the

suspicion of never having experienced anything that might have taught them its value and shown them why mankind has forged this weapon with such unprecedented effort. One has to be singularly out of touch with life not to notice such things. The intellect may be the devil (fig. 36), but the devil is the "strange son of chaos" who can most readily be trusted to deal effectively with his mother. The Dionysian experience will give this devil plenty to do should he be looking for work, since the resultant settlement with the unconscious far outweighs the labours of Hercules. In my opinion it presents a whole world of problems which the intellect could not settle even in a hundred years—the very reason why it so often goes off for a holiday to recuperate on lighter tasks. And this is also the reason why the psyche is forgotten so often and so long, and why the intellect makes such frequent use of magical apotropaic words like "occult" and "mystic," in the hope that even intelligent people will think that these mutterings really mean something.

[120] The voice finally declares, "Everything must be ruled by the light," which presumably means the light of the discerning, conscious mind, a genuine *illuminatio* honestly acquired. The dark depths of the unconscious are no longer to be denied by ignorance and sophistry—at best a poor disguise for common fear—nor are they to be explained away with pseudo-scientific rationalizations. On the contrary it must now be admitted that things exist in the psyche about which we know little or nothing at all, but which nevertheless affect our bodies in the most obstinate way, and that they possess at least as much reality as the things of the physical world which ultimately we do not understand either. No line of research which asserted that its subject was unreal or a "nothing but" has ever made any contribution to knowledge.

36. The devil as aerial spirit and ungodly intellect.—Illustration by Eugène Delacroix (1799–1863) for *Faust*, Part I

[121] With the active intervention of the intellect a new phase of the unconscious process begins: the conscious mind must now come to terms with the figures of the unknown woman (“anima”), the unknown man (“the shadow”), the wise old man (“mana personality”),[45] and the symbols of the self. The last named are dealt with in the following section.

37. The seven-petalled flower.—Boschius, *Symbolographia* (1702)

39. Shri-Yantra

3. THE SYMBOLISM OF THE MANDALA

I. CONCERNING THE MANDALA

[122] As I have already said, I have put together, out of a continuous series of some four hundred dreams and visions, all those that I regard as mandala dreams. The term “mandala” was chosen because this word denotes the ritual or magic circle used in Lamaism and also in Tantric yoga as a *yantra* or aid to contemplation (fig. 39). The Eastern mandalas used in ceremonial are figures fixed by tradition; they may be drawn or painted or, in certain special ceremonies, even represented plastically.[1]

[123] In 1938, I had the opportunity, in the monastery of Bhutia Busty, near Darjeeling, of talking with a Lamaic *rimpoche*, Lingdam Gomchen by name, about the *khilkor* or mandala. He explained it as a *dmigs-pa* (pronounced “migpa”), a mental image which can be built up only by a fully instructed lama through the power of imagination. He said that no mandala is like any other, they are all individually different. Also, he said, the mandalas to be found in monasteries and temples were of no particular significance because they were external representations only. The true mandala is always an inner image, which is gradually built up through (active) imagination, at such times when psychic equilibrium is disturbed or when a thought cannot be found and must be sought for, because it is not contained in holy doctrine. The aptness of this explanation will become apparent in the course of my exposition. The alleged free and individual formation of the mandala, however, should be taken with a considerable grain of salt, since in all Lamaic mandalas there predominates not only a certain unmistakable style but also a traditional structure. For instance they are all based on a quaternary system, a *quadratura circuli*, and their contents are invariably derived from Lamaic dogma. There are texts, such as the Shri-Chakra-Sambhara Tantra,[2] which contain directions for the construction of these “mental images.” The *khilkor* is strictly distinguished from the so-called *sidpe-korlo*, or World Wheel (fig. 40), which represents the course of human

existence in its various forms as conceived by the Buddhists. In contrast to the *khilkor*, the World Wheel is based on a ternary system in that the three world-principles are to be found in its centre: the cock, equalling concupiscence; the serpent, hatred or envy; and the pig, ignorance or unconsciousness (*avidya*). Here we come upon the dilemma of three and four, which also crops up in Buddhism. We shall meet this problem again in the further course of our dream-series.

[124] It seems to me beyond question that these Eastern symbols originated in dreams and visions, and were not invented by some Mahayana church father. On the contrary, they are among the oldest religious symbols of humanity (figs 41–44) and may even have existed in paleolithic times (cf. the Rhodesian rock-paintings). Moreover they are distributed all over the world, a point I need not insist on here. In this section I merely wish to show from the material at hand how mandalas come into existence.

40. Tibetan World Wheel (*sidpe-korlo*)

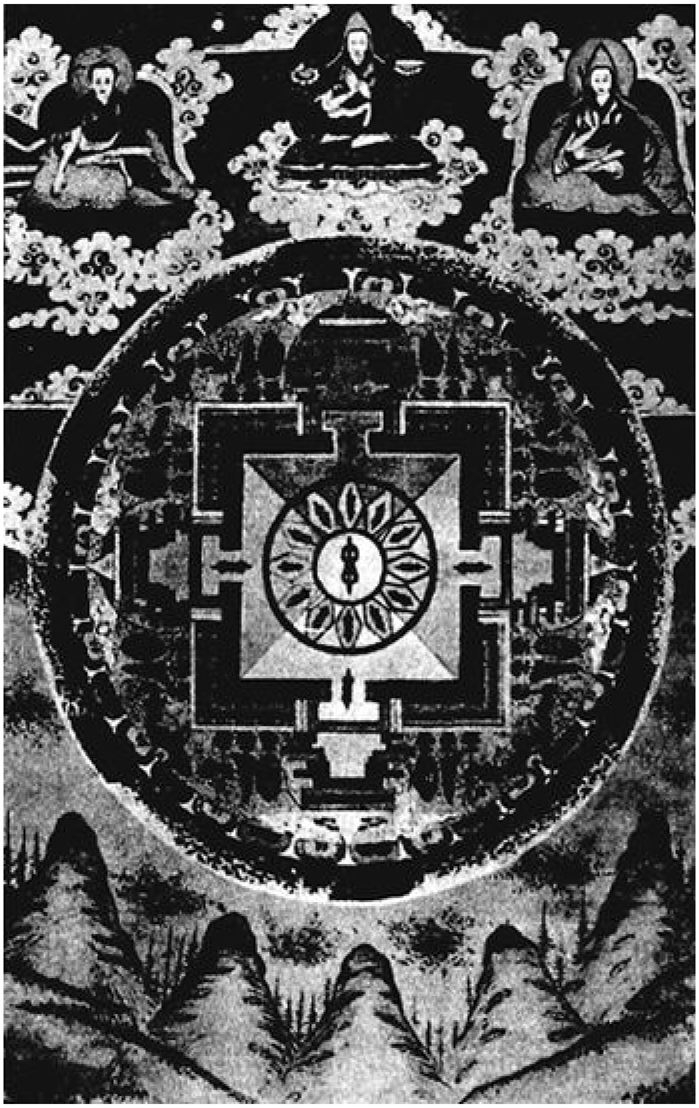
[125] The mandalas used in ceremonial are of great significance because their centres usually contain one of the highest religious figures: either Shiva himself—often in the embrace of Shakti—or the Buddha, Amitabha, Avalokiteshvara, or one of the great Mahayana teachers, or simply the *dorje*, symbol of all the divine forces together, whether creative or destructive (fig. 43). The text of the *Golden Flower*, a product of Taoist syncretism, specifies in addition certain “alchemical” properties of this centre after the manner of the *lapis* and the *elixir vitae*, so that it is in effect a Φάρμακον άθανασίας.[3]

41. The Aztec “Great Calendar Stone”

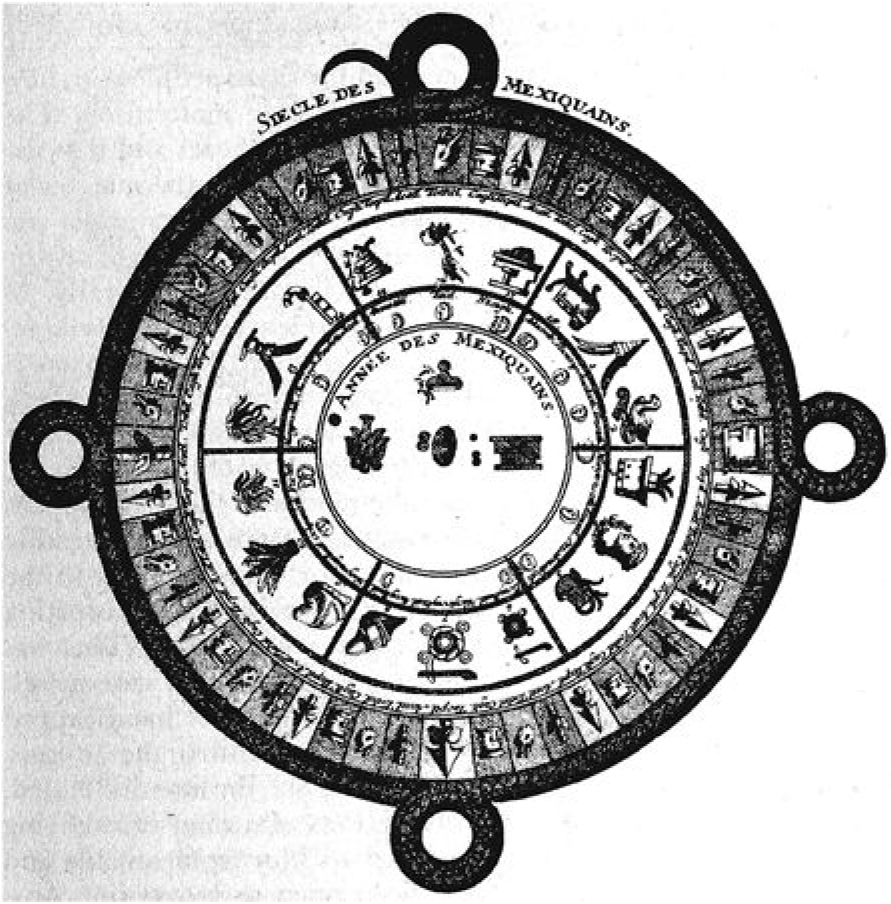
[126] It is not without importance for us to appreciate the high value set upon the mandala, for it accords very well with the paramount significance of individual mandala symbols which are characterized by the same qualities of a—so to speak—“metaphysical” nature.[4] Unless everything deceives us, they signify nothing less than a psychic centre of the personality not to be identified with the ego. I have observed these processes and their products for close on thirty years on the basis of very extensive material drawn from my own experience. For fourteen years I neither wrote nor lectured about them so as not to prejudice my observations. But when, in 1929, Richard Wilhelm laid the text of the *Golden Flower* before me, I decided to publish at least a foretaste of the results. One cannot be too cautious in these matters, for what with the imitative urge and a positively morbid avidity to possess themselves of outlandish feathers and deck themselves out in this exotic plumage, far too many people are misled into snatching at such “magical” ideas and applying them externally, like an ointment. People will do anything, no matter how absurd, in order to avoid facing their own souls. They will practise Indian yoga and all its exercises, observe a strict regimen of diet, learn theosophy by heart, or mechanically repeat mystic texts from the

literature of the whole world—all because they cannot get on with themselves and have not the slightest faith that anything useful could ever come out of their own souls. Thus the soul has gradually been turned into a Nazareth from which nothing good can come. Therefore let us fetch it from the four corners of the earth—the more far-fetched and bizarre it is the better! I have no wish to disturb such people at their pet pursuits, but when anybody who expects to be taken seriously is deluded enough to think that I use yoga methods and yoga doctrines or that I get my patients, whenever possible, to draw mandalas for the purpose of bringing them to the "right point"—then I really must protest and tax these people with having read my writings with the most horrible inattention. The doctrine that all evil thoughts come from the heart and that the human soul is a sink of iniquity must lie deep in the marrow of their bones. Were that so, then God had made a sorry job of creation, and it were high time for us to go over to Marcion the Gnostic and depose the incompetent demiurge. Ethically, of course, it is infinitely more convenient to leave God the sole responsibility for such a Home for Idiot Children, where no one is capable of putting a spoon into his own mouth. But it is worth man's while to take pains with himself, and he has something in his soul that can grow.[5] It is rewarding to watch patiently the silent happenings in the soul, and the most and the best happens when it is not regulated from outside and from above. I readily admit that I have such a great respect for what happens in the human soul that I would be afraid of disturbing and distorting the silent operation of nature by clumsy interference. That was why I even refrained from observing this particular case myself and entrusted the task to a beginner who was not handicapped by my knowledge—anything rather than disturb the process. The results which I now lay before you are the unadulterated, conscientious, and exact self-observations of a man of unerring intellect, who had nothing suggested to him from outside and who would in any case not have been open to suggestion. Anyone at all familiar with psychic material will have no difficulty in recognizing the authentic character of the results.

42. Mandala containing the Infant Christ carrying the Cross.—Mural painting by Albertus Pictor in the church of Harkeberga, Sweden (*c*. 1480)

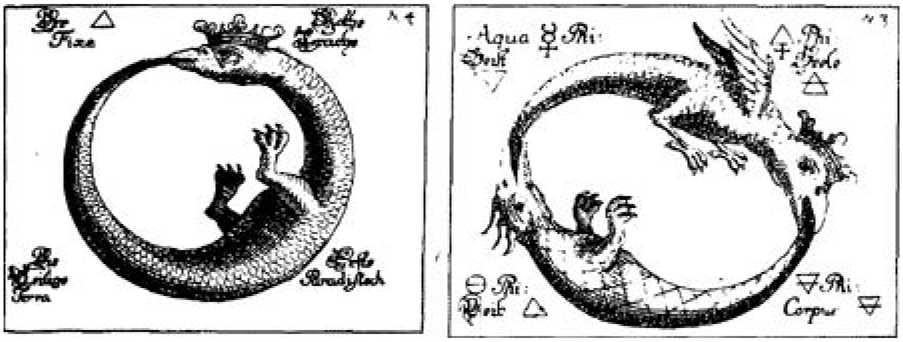


43. Lamaic Vajramandala.—Cf. Jung, “Concerning Mandala Symbolism,” fig. 1



44. Mexican calendar.—Herrliberger, *Heilige Ceremonien* (1748)

45. Hermes as psychopomp.—Gem in a Roman ring



46, 47. Crowned dragon as tail-eater; two dragons forming a circle and, in the four corners, signs of the four elements.—Eleazar, *Uraltes chymisches Werk* (1760)

II. THE MANDALAS IN THE DREAMS

[127] For the sake of completeness I will recapitulate the mandala symbols which occur in the initial dreams and visions already discussed:

1. The snake that described a circle round the dreamer (5).

2. The blue flower (17).

3. The man with the gold coins in his hand, and the enclosed space for a variety performance (18).

4. The red ball (19).

5. The globe (20).

[128] The next mandala symbol occurs in the first dream of the new series:[6]

6. Dream:

An unknown woman is pursuing the dreamer. He keeps running round in a circle.

[129] The snake in the first mandala dream was anticipatory, as is often the case when a figure personifying a certain aspect of the unconscious does or experiences something that the subject himself will experience later. The snake anticipates a circular movement in which the subject is going to be involved; i.e., something is taking place in the unconscious which is perceived as a circular movement, and this occurrence now presses into consciousness so forcefully that the subject himself is gripped by it. The unknown woman or anima representing the unconscious continues to harass the dreamer until he starts running round in circles. This clearly

indicates a potential centre which is not identical with the ego and round which the ego revolves.

7. DREAM:

[130] *The anima accuses the dreamer of paying too little attention to her. There is a clock that says five minutes to the hour*.

[131] The situation is much the same: the unconscious pesters him like an exacting woman. The situation also explains the clock, for a clock's hands go round in a circle. Five minutes to the hour implies a state of tension for anybody who lives by the clock: when the five minutes are up he must do something or other. He might even be pressed for time. (The symbol of circular movement—cf. fig. 13—is always connected with a feeling of tension, as we shall see later.)

8. DREAM:

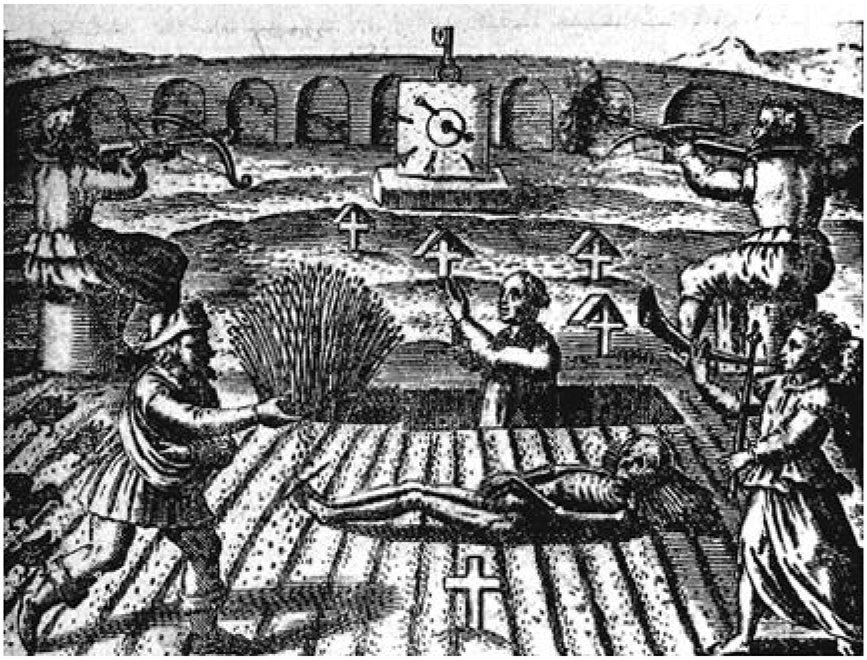
[132] *On board ship. The dreamer is occupied with a new method of taking his bearings. Sometimes he is too far away and sometimes too near: the right spot is in the middle. There is a chart on which is drawn a circle with its centre*.

[133] Obviously the task set here is to find the centre, the right spot, and this is the centre of a circle. While the dreamer was writing down this dream he remembered that he had dreamed shortly before of shooting at a target (fig. 48): sometimes he shot too high, sometimes too low. The right aim lay in the middle. Both dreams struck him as highly significant. The target is a circle with a centre. Bearings at sea are taken by the apparent rotation of the stars round the earth. Accordingly the dream describes an activity whose aim is to construct or locate an objective centre—a centre outside the subject.

9. DREAM:

[134] *A pendulum clock that goes forever without the weights running down*.

[135] This is a species of clock whose hands move unceasingly, and, since there is obviously no loss due to friction, it is a *perpetuum mobile*, an everlasting movement in a circle. Here we meet with a “metaphysical” attribute. As I have already said, I use this word in a psychological sense, hence figuratively. I mean by this that eternity is a quality predicated by the unconscious, and not a hypostasis. The statement made by the dream will obviously offend the dreamer’s scientific judgment, but this is just what gives the mandala its peculiar significance. Highly significant things are often rejected because they seem to contradict reason and thus set it too arduous a test. The movement without friction shows that the clock is cosmic, even transcendental; at any rate it raises the question of a quality which leaves us in some doubt whether the psychic phenomenon expressing itself in the mandala is under the laws of space and time. And this points to something so entirely different from the empirical ego that the gap between them is difficult to bridge; i.e., the other centre of personality lies on a different plane from the ego since, unlike this, it has the quality of “eternity” or relative timelessness.

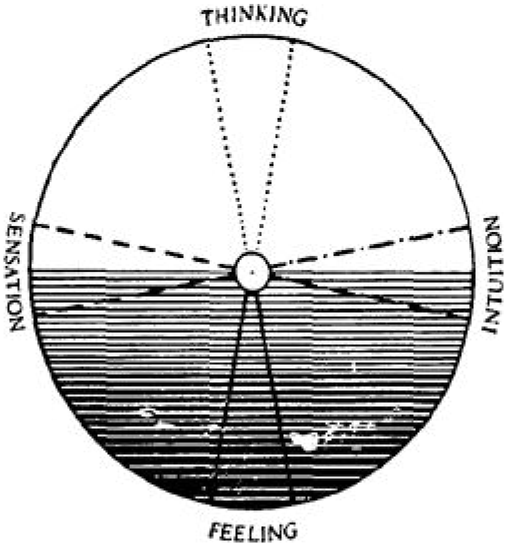


48. The *putrefactio* without which the “goal” of the *opus* cannot be reached (hence the target-shooting).—Stolcius de Stolcenberg, *Viridarium chymicum* (1624)

10. DREAM:

[136] *The dreamer is in the Peterhofstatt in Zurich with the doctor, the man with the pointed beard, and the "doll woman." The last is an unknown woman who neither speaks nor is spoken to. Question: To which of the three does the woman belong?*

[137] The tower of St. Peter's in Zurich has a clock with a strikingly large face. The Peterhofstatt is an enclosed space, a *temenos* in the truest sense of the word, a precinct of the church. The four of them find themselves in this enclosure. The circular dial of the clock is divided into four quarters, like the horizon. In the dream the dreamer represents his own ego, the man with the pointed beard the "employed" intellect (Mephisto), and the "doll woman" the anima. Since the doll is a childish object it is an excellent image for the non-ego nature of the anima, who is further characterized as an object by "not being spoken to." This negative element (also present in dreams 6 and 7 above) indicates an inadequate relationship between the conscious mind and the unconscious, as also does the question of whom the unknown woman belongs to. The "doctor," too, belongs to the non-ego; he probably contains a faint allusion to myself, although at that time I had no connections with the dreamer.[7] The man with the pointed beard, on the other hand, belongs to the ego. This whole situation is reminiscent of the relations depicted in the diagram of functions (fig. 49). If we think of the psychological functions[8] as arranged in a circle, then the most differentiated function is usually the carrier of the ego and, equally regularly, has an auxiliary function attached to it. The "inferior" function, on the other hand, is unconscious and for that reason is projected into a non-ego. It too has an auxiliary function. Hence it would not be impossible for the four persons in the dream to represent the four functions as components of the total personality (i.e., if we include the unconscious). But this totality is ego plus non-ego. Therefore the centre of the circle which expresses such a totality would correspond not to the ego but to the self as the summation of the total personality. (The centre with a circle is a very well-known allegory of the nature of God.) In the philosophy of the Upanishads the Self is in one aspect the *personal* atman, but at the same time it has a cosmic and metaphysical quality as the *suprapersonal* Atman.[9]



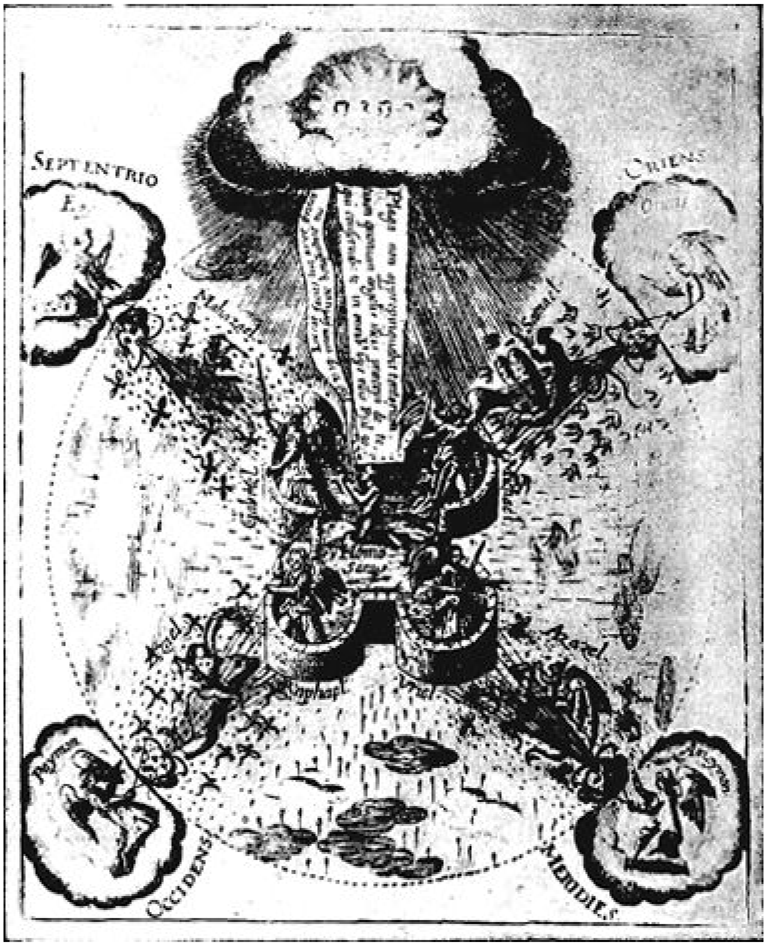
49. Diagram showing the four functions of consciousness. Thinking, the superior function in this case, occupies the centre of the light half of the circle, whereas feeling, the inferior function, occupies the dark half. The two auxiliary functions are partly in the light and partly in the dark

[138] We meet with similar ideas in Gnosticism: I would mention the idea of the Anthropos, the Pleroma, the Monad, and the spark of light (Spinther) in a treatise of the Codex Brucianus:

> This same is he [Monogenes] who dwelleth in the Monad, which is in the Setheus, and which came from the place of which none can say where it is.… From Him it is the Monad came, in the manner of a ship, laden with all good things, and in the manner of a field, filled or planted with every kind of tree, and in the manner of a city, filled with all races of mankind.… This is the fashion of the Monad, all these being in it: there are twelve Monads as a crown upon its head.… And to its veil which surroundeth it in the manner of a defence [πύργος = tower] there are twelve gates.… This same is the Mother-City [μητρόπολις] of the Only-begotten [μονογενής].[10]

[139] By way of explanation I should add that "Setheus" is a name for God, meaning "creator." The Monogenes is the Son of God. The comparison of the Monad with a field and a city corresponds to the idea of the *temenos* (fig. 50). Also, the Monad is crowned (cf. the hat which appears in dream 1 of the first series [par. 52] and dream 35 of this series [par. 254]). As "metropolis" (cf. fig. 51) the Monad is feminine, like the *padma* or lotus, the basic form of the Lamaic mandala (the Golden

Flower in China and the Rose or Golden Flower in the West). The Son of God, God made manifest, dwells in the flower.[11] In the Book of Revelation, we find the Lamb in the centre of the Heavenly Jerusalem. And in our Coptic text we are told that Setheus dwells in the innermost and holiest recesses of the Pleroma, a city with four gates (equivalent to the Hindu City of Brahma on the world-mountain Meru). In each gate there is a Monad.[12] The limbs of the Anthropos born of the Autogenes (= Monogenes) correspond to the four gates of the city. The Monad is a spark of light (Spinther) and an image of the Father, identical with the Monogenes. An invocation runs: “Thou art the House and the Dweller in the House.”[13] The Monogenes stands on a *tetrapeza,*[14] a table or platform with four pillars corresponding to the quaternion of the four evangelists.[15]



50. Baneful spirits attacking the Impregnable Castle.—Fludd, *Summum bonum*(1629)

51. The Lapis Sanctuary, also a labyrinth, surrounded by the planetary orbits.—Van Vreeswyck, *De Groene Leeuw* (1672)

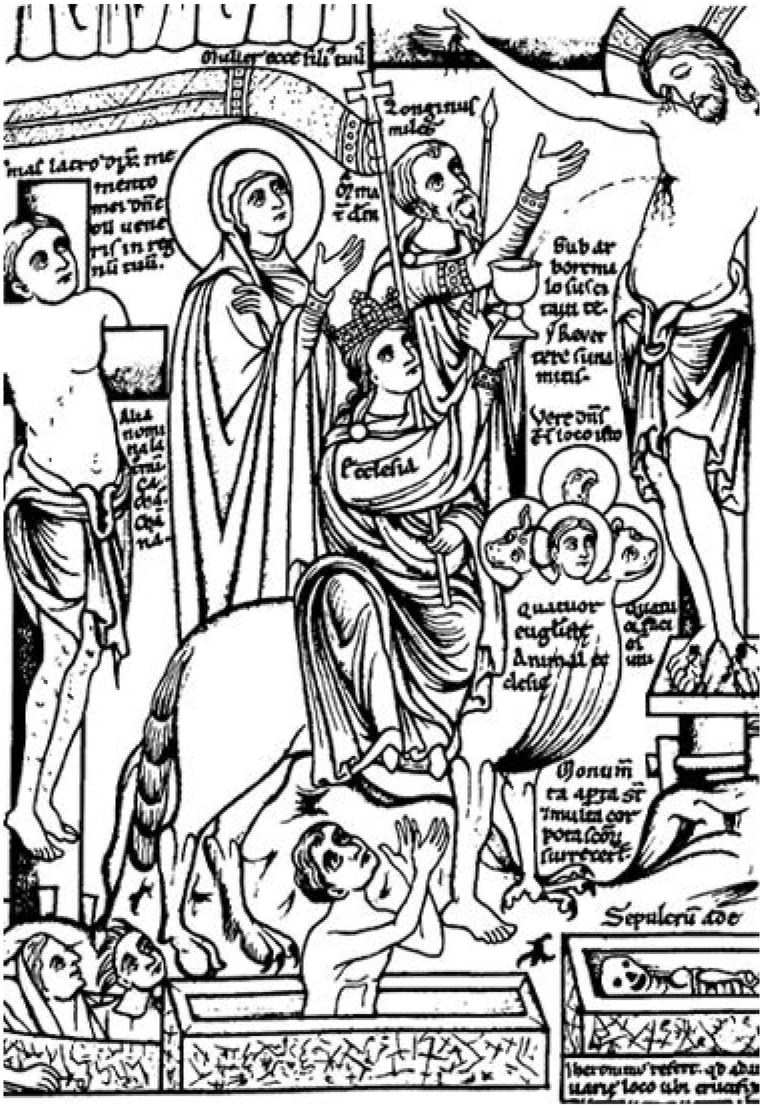
[140] The idea of the *lapis* has several points of contact with all this. In the *Rosarium* the *lapis* says, quoting Hermes:[16] “I beget the light, but the darkness too is of my nature … therefore nothing better or more worthy of veneration can come to pass in the world than the conjunction of myself and my son.”[17] Similarly, the Monogenes is called the “dark light,”[18] a reminder of the *sol niger*, the black sun of alchemy[19] (fig. 34).

[141] The following passage from chapter 4 of the “Tractatus aureus” provides an interesting parallel to the Monogenes who dwells in the bosom of the Mother-City and is identical with the crowned and veiled Monad:

> But the king reigns, as is witnessed by his brothers, [and] says: “I am crowned, and I am adorned with the diadem; I am clothed with the royal garment, and I bring joy to the heart; for, being chained to the arms and breast of my mother, and to her substance, I cause my substance to hold together and rest; and I compose the invisible from the visible, making the occult to appear; and everything that the philosophers have concealed will be generated from us. Hear then these words, and understand them;

keep them, and meditate upon them, and seek for nothing more. Man is generated from the principle of Nature whose inward parts are fleshy, and from no other substance.”

52. Harpokrates on the lotus.—Gnostic gem



53. The tetramorph, the steed of the Church.—Crucifixion in Herrad of Landsberg's *Hortus deliciarum* (12th cent.) detail

[142] The "king" refers to the *lapis*. That the *lapis* is the "master" is evident from the following Hermes quotation in the *Rosarium:*[20] "Et sic Philosophus non est Magister lapidis, sed potius minister" (And thus the philosopher is not the master of the stone but rather its minister). Similarly the final production of the *lapis* in the form of the crowned hermaphrodite is called the *aenigma regis.*[21] A German verse refers to the *aenigma* as follows (fig. 54):

Here now is born the emperor of all honour
Than whom there cannot be born any higher,
Neither by art nor by the work of nature
Out of the womb of any living creature.
Philosophers speak of him as their son
And everything they do by him is done.[22]

[143] The last two lines might easily be a direct reference to the above quotation from Hermes.

[144] It looks as if the idea had dawned on the alchemists that the Son who, according to classical (and Christian) tradition, dwells eternally in the Father and reveals himself as God's gift to mankind, was something that man could produce out of his own nature—with God's help, of course (*Deo concedente*). The heresy of this idea is obvious.

[145] The feminine nature of the inferior function derives from its contamination with the unconscious. Because of its feminine characteristics the unconscious is personified by the anima (that is to say, in men; in women it is masculine).[23]

[146] If we assume that this dream and its predecessors really do mean something that justly arouses a feeling of significance in the dreamer, and if we further assume that this significance is more or less in keeping with the views put forward in the commentary, then we would have reached here a high point of introspective intuition whose boldness leaves nothing to be desired. But even the everlasting pendulum clock is an indigestible morsel for a consciousness unprepared for it, and likely to hamper any too lofty flight of thought.

54. Hermaphrodite with three serpents and one serpent. Below, the three-headed Mercurial dragon.—*Rosarium philosophorum,* in *Artis auriferae* (1593)

11. DREAM:

[147] *The dreamer, the doctor, a pilot, and the unknown woman are travelling by airplane. A croquet ball suddenly smashes the mirror, an indispensable instrument of navigation, and the airplane crashes to the ground. Here again there is the same doubt: to whom does the unknown woman belong?*

[148] Doctor, pilot, and unknown woman are characterized as belonging to the non-ego by the fact that all three of them are strangers. Therefore the dreamer has retained possession only of the differentiated function, which carries the ego; that is, the unconscious has gained ground considerably. The croquet ball is part of a game where the ball is driven

under a hoop. Vision 8 of the first series (par. 69) said that people should not go over the rainbow (fly?), but must go *under* it. Those who go over it fall to the ground. It looks as though the flight had been too lofty after all. Croquet is played on the ground and not in the air. We should not rise above the earth with the aid of "spiritual" intuitions and run away from hard reality, as so often happens with people who have brilliant intuitions. We can never reach the level of our intuitions and should therefore not identify ourselves with them. Only the gods can pass over the rainbow bridge; mortal men must stick to the earth and are subject to its laws (cf. fig. 16). In the light of the possibilities revealed by intuition, man's earthliness is certainly a lamentable imperfection; but this very imperfection is part of his innate being, of his reality. He is compounded not only of his best intuitions, his highest ideals and aspirations, but also of the odious conditions of his existence, such as heredity and the indelible sequence of memories that shout after him: "You did it, and that's what you are!" Man may have lost his ancient saurian's tail, but in its stead he has a chain hanging on to his psyche which binds him to the earth—an anything-but-Homeric chain[24] of given conditions which weigh so heavy that it is better to remain bound to them, even at the risk of becoming neither a hero nor a saint. (History gives us some justification for not attaching any absolute value to these collective norms.) That we are bound to the earth does not mean that we cannot grow; on the contrary it is the *sine qua non* of growth. No noble, well-grown tree ever disowned its dark roots, for it grows not only upward but downward as well. The question of where we are going is of course extremely important; but equally important, it seems to me, is the question of *who* is going where. The "who" always implies a "whence." It takes a certain greatness to gain lasting possession of the heights, but anybody can overreach himself. The difficulty lies in striking the dead centre (cf. dream 8, par. 132). For this an awareness of the two sides of man's personality is essential, of their respective aims and origins. These two aspects must never be separated through arrogance or cowardice.

[149] The "mirror" as an "indispensable instrument of navigation" doubtless refers to the intellect, which is able to think and is constantly persuading us to identify ourselves with its insights ("reflections"). The

mirror is one of Schopenhauer’s favourite similes for the intellect. The term “instrument of navigation” is an apt expression for this, since it is indeed man’s indispensable guide on pathless seas. But when the ground slips from under his feet and he begins to speculate in the void, seduced by the soaring flights of intuition, the situation becomes dangerous (fig. 55).

[150] Here again the dreamer and the three dream figures form a quaternity. The unknown woman or anima always represents the “inferior,” i.e., the undifferentiated function, which in the case of our dreamer is feeling. The croquet ball is connected with the “round” motif and is therefore a symbol of wholeness, that is, of the self, here shown to be hostile to the intellect (the mirror). Evidently the dreamer “navigates” too much by the intellect and thus upsets the process of individuation. In *De vita longa*, Paracelsus describes the “four” as *Scaiolae*, but the self as Adech (from Adam=the first man). Both, as Paracelsus emphasizes, cause so many difficulties in the “work” that one can almost speak of Adech as hostile.[25]

12. DREAM:

[151] *The dreamer finds himself with his father, mother, and sister in a very dangerous situation on the platform of a tram-car*.

[152] Once more the dreamer forms a quaternity with the other dream figures. He has fallen right back into childhood, a time when we are still a long way from wholeness. Wholeness is represented by the family, and its components are still projected upon the members of the family and personified by them. But this state is dangerous for the adult because regressive: it denotes a splitting of personality which primitive man experiences as the perilous “loss of soul.” In the break-up the personal components that have been integrated with such pains are once more sucked into the outside world. The individual loses his guilt and exchanges it for infantile innocence; once more he can blame the wicked father for this and the unloving mother for that, and all the time he is caught in this inescapable causal nexus like a fly in a spider’s web, without noticing that he has lost his moral freedom.[26] But no matter how much parents and grandparents may have sinned against the child, the

man who is really adult will accept these sins as his own condition which has to be reckoned with. Only a fool is interested in other people’s guilt, since he cannot alter it. The wise man learns only from his own guilt. He will ask himself: Who am I that all this should happen to me? To find the answer to this fateful question he will look into his own heart.

55. Faust before the magic mirror.—Rembrandt, etching (*c*. 1652).

[153] As in the previous dream the vehicle was an airplane, so in this it is a tram. The type of vehicle in a dream illustrates the kind of movement or the manner in which the dreamer moves forward in time—in other words, how he lives his psychic life, whether individually or collectively, whether on his own or on borrowed means, whether spontaneously or mechanically. In the airplane he is flown by an unknown pilot; i.e., he is

borne along on intuitions emanating from the unconscious. (The mistake is that the "mirror" is used too much to steer by.) But in this dream he is in a collective vehicle, a tram, which anybody can ride in; i.e., he moves or behaves just like everybody else. All the same he is again one of four, which means that he is in both vehicles on account of his unconscious striving for wholeness.

13. DREAM:

[154] *In the sea there lies a treasure. To reach it, he has to dive through a narrow opening. This is dangerous, but down below he will find a companion. The dreamer takes the plunge into the dark and discovers a beautiful garden in the depths, symmetrically laid out, with a fountain in the centre* (fig. 56).

[155] The "treasure hard to attain" lies hidden in the ocean of the unconscious, and only the brave can reach it. I conjecture that the treasure is also the "companion," the one who goes through life at our side—in all probability a close analogy to the lonely ego who finds a mate in the self, for at first the self is the strange non-ego. This is the theme of the magical travelling companion, of whom I will give three famous examples: the disciples on the road to Emmaus, Krishna and Arjuna in the Bhagavad Gita, Moses and El-Khidr in Sura 18 of the Koran.[27] I conjecture further that the treasure in the sea, the companion, and the garden with the fountain are all one and the same thing: the self. For the garden is another *temenos*, and the fountain is the source of "living water" mentioned in John 7 : 38, which the Moses of the Koran also sought and found, and beside it El-Khidr,[28] "one of Our servants whom We had endowed with Our grace and wisdom" (Sura 18). And the legend has it that the ground round about El-Khidr blossomed with spring flowers, although it was desert. In Islam, the plan of the *temenos* with the fountain developed under the influence of early Christian architecture into the court of the mosque with the ritual wash-house in the centre (e.g., Ahmed ibn-Tulun in Cairo). We see much the same thing in our Western cloisters with the fountain in the garden. This is also the "rose garden of the philosophers," which we know from the treatises on alchemy and from many beautiful engravings. "The Dweller in the

House” (cf. commentary to dream 10, par. 139) is the “companion.” The centre and the circle, here represented by fountain and garden, are analogues of the *lapis*, which is among other things a living being (cf. figs. 25, 26). In the *Rosarium* the *lapis* says: “Protege me, protegam te. Largire mihi ius meum, ut te adiuvem” (Protect me and I will protect you. Give me my due that I may help you).[29] Here the *lapis* is nothing less than a good friend and helper who helps those that help him, and this points to a compensatory relationship. (I would call to mind what was said in the commentary to dream 10, pars. 138ff., more particularly the Monogenes-*lapis*-self parallel.)

[156] The crash to earth thus leads into the depths of the sea, into the unconscious, and the dreamer reaches the shelter of the *temenos* as a protection against the splintering of personality caused by his regression to childhood. The situation is rather like that of dream 4 and vision 5 in the first series (pars. 58 and 62) where the magic circle warded off the lure of the unconscious and its plurality of female forms. (The dangers of temptation approach Poliphilo in much the same way at the beginning of his *nekyia*.)

56. Fountain of youth.—Codex de Sphaera (Modena, 15th cent.)

[157] The source of life is, like El-Khidr, a good companion, though it is not without its dangers, as Moses of old found to his cost, according to the Koran. It is the symbol of the life force that eternally renews itself (fig. 57; cf. also figs. 25–27, 84) and of the clock that never runs down. An uncanonical saying of our Lord runs: “He who is near unto me is near unto the fire.”[30] Just as this esoteric Christ is a source of fire (fig. 58)—probably not without reference to the πῦρ ἀεὶ ζῶον of Heraclitus—so the alchemical philosophers conceive their *aqua nostra* to be *ignis* (fire).[31] The source means not only the flow of life but its warmth, indeed its heat, the secret of passion, whose synonyms are always fiery.[32] The all-dissolving *aqua nostra* is an essential ingredient in the production of the *lapis*. But the source is underground and therefore the way leads

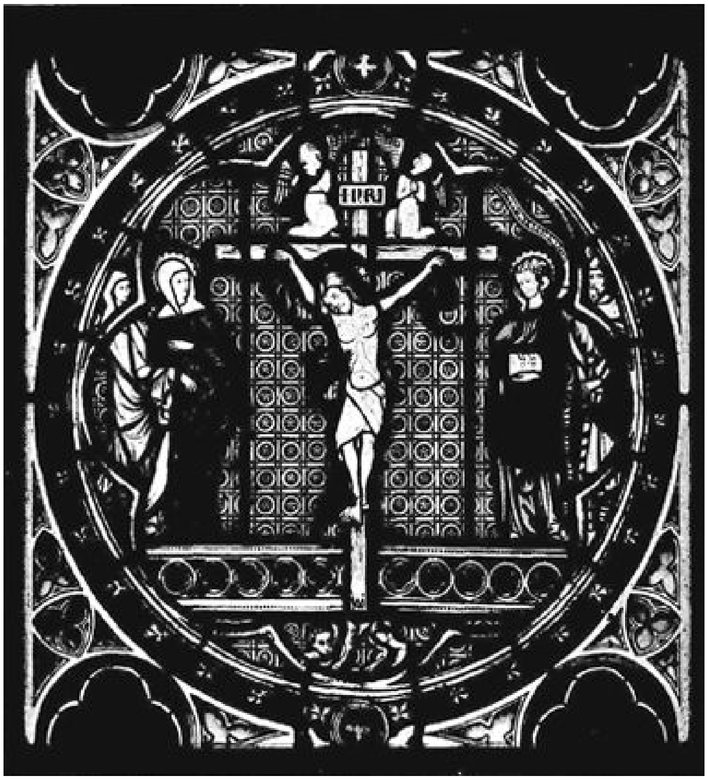
underneath: only down below can we find the fiery source of life. These depths constitute the natural history of man, his causal link with the world of instinct (cf. fig. 16). Unless this link be rediscovered no *lapis* and no self can come into being.

14. DREAM:

[158] *The dreamer goes into a chemist's shop with his father. Valuable things can be got there quite cheap, above all a special water. His father tells him about the country the water comes from. Afterwards he crosses the Rubicon by train.*

[159] The traditional apothecary's shop, with its carboys and gallipots, its waters, its *lapis divinus* and *infernalis* and its magisteries, is the last visible remnant of the kitchen paraphernalia of those alchemists who saw in the *donum spiritus sancti*—the precious gift—nothing beyond the chimera of goldmaking. The "special water" is literally the *aqua nostra non vulgi.*[33] It is easy to understand why it is his father who leads the dreamer to the source of life, since he is the natural source of the latter's life. We could say that the father represents the country or soil from which that life sprang. But figuratively speaking, he is the "informing spirit" who initiates the dreamer into the meaning of life and explains its secrets according to the teachings of old. He is a transmitter of the traditional wisdom. But nowadays the fatherly pedagogue fulfils this function only in the dreams of his son, where he appears as the archetypal father figure, the "wise old man."

57. Imperial bath with the miraculous spring of water, beneath the influence of sun and moon.—“De balneis Puteolanis” (MS., 14th cent.)



58. Christ as the source of fire, with the “flaming” stigmata.—14th-cent. stained-glass window, church at Königsfelden, Aargau, Switzerland

[160] The water of life is easily had: everybody possesses it, though without knowing its value. “Spernitur a stultis”—it is despised by the stupid, because they assume that every good thing is always outside and somewhere else, and that the source in their own souls is a “nothing but.” Like the *lapis*, it is “pretio quoque vilis,” of little price, and therefore, like the jewel in Spitteler’s *Prometheus*, it is rejected by everyone from the high priest and the academicians down to the very peasants, and “in viam eiectus,” flung out into the street, where Ahasuerus picks it up and puts it into his pocket. The treasure has sunk down again into the unconscious.

[161] But the dreamer has noticed something and with vigorous determination crosses the Rubicon. He has realized that the flux and fire of life are not to be underrated and are absolutely necessary for the achievement of wholeness. But there is no recrossing the Rubicon.

15. DREAM:

[162] *Four people are going down a river: the dreamer, his father, a certain friend, and the unknown woman.*

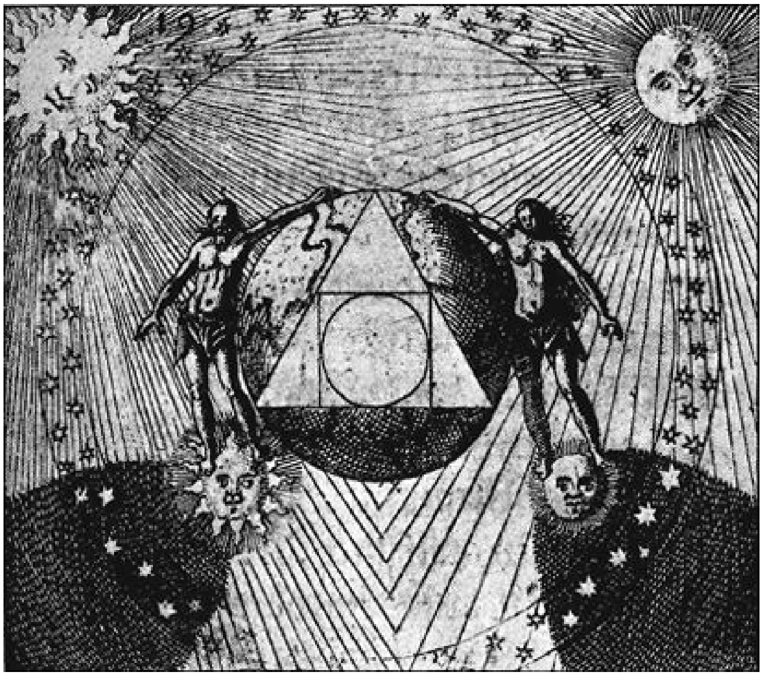
[163] In so far as the "friend" is a definite person well known to the dreamer, he belongs, like the father, to the conscious world of the ego. Hence something very important has happened: in dream 11 the unconscious was three against one, but now the situation is reversed and it is the dreamer who is three against one (the latter being the unknown woman). The unconscious has been depotentiated. The reason for this is that by "taking the plunge" the dreamer has connected the upper and the lower regions—that is to say, he has decided not to live only as a bodiless abstract being but to accept the body and the world of instinct, the reality of the problems posed by love and life, and to act accordingly.[34] This was the Rubicon that was crossed. Individuation, becoming a self, is not only a spiritual problem, it is the problem of all life.

16. DREAM:

[164] *Many people are present. They are all walking to the left around a square. The dreamer is not in the centre but to one side. They say that a gibbon is to be reconstructed*.

[165] Here the square appears for the first time. Presumably it arises from the circle with the help of the four people. (This will be confirmed later.) Like the *lapis*, the *tinctura rubea*, and the *aurum philosophicum*, the squaring of the circle was a problem that greatly exercised medieval minds. It is a symbol of the *opus alchymicum* (fig. 59), since it breaks down the original chaotic unity into the four elements and then combines them again in a higher unity. Unity is represented by a circle and the four elements by a square. The production of one from four is the result of a process of distillation and sublimation which takes the so-called "circular" form: the distillate is subjected to sundry distillations[35] so that the "soul" or "spirit" shall be extracted in its purest state. The product is generally called the "quintessence," though this is by no means the only name for the ever-hoped-for and never-to-be-discovered "One." It has, as the alchemists say, a "thousand names," like the *prima materia*. Heinrich Khunrath has this to say about the circular distillation: "Through Circumrotation or a Circular Philosophical revolving of the Quaternarius, it is brought back to the highest and purest Simplicity of the plusquamperfect Catholic Monad.… Out of the gross and impure One there cometh an exceeding pure and subtile One," and so forth.[36] Soul and spirit must be separated from the body, and this is equivalent to death: "Therefore Paul of Tarsus saith, Cupio dissolvi, et esse cum Christo.[37] Therefore, my dear Philosopher, must thou catch the Spirit and Soul of the Magnesia."[38] The spirit (or spirit and soul) is the *ternarius* or number

three which must first be separated from its body and, after the purification of the latter, infused back into it.[39] Evidently the body is the fourth. Hence Khunrath refers to a passage from Pseudo-Aristotle,[40] where the circle re-emerges from a triangle set in a square.[41] This circular figure, together with the Uroboros—the dragon devouring itself tail first—is the basic mandala of alchemy.



59. “All things do live in the three / But in the four they merry be.” (Squaring the circle.)—Jamsthaler, *Viatorium spagyricum* (1625)

60. Squaring of the circle to make the two sexes one whole.—Maier, *Scrutinium chymicum* (1687)

[166] The Eastern and more particularly the Lamaic mandala usually contains a square ground-plan of the stupa (fig. 43). We can see from the mandalas constructed in solid form that it is really the plan of a *building*. The square also conveys the idea of a house or temple, or of an inner walled-in space[42] (cf. below). According to the ritual, stupas must always be circumambulated to the right, because a leftward movement is evil. The left, the "sinister" side, is the unconscious side. Therefore a leftward movement is equivalent to a movement in the direction of the unconscious, whereas a movement to the right is "correct" and aims at consciousness. In the East these unconscious contents have gradually, through long practice, come to assume definite forms which have to be accepted as such and retained by the conscious mind. Yoga, so far as we know it as an established practice, proceeds in much the same way: it impresses fixed forms on consciousness. Its most important Western parallel is the *Exercitia spiritualia* of Ignatius Loyola, which likewise impress fixed concepts about salvation on the psyche. This procedure is "right" so long as the symbol is still a valid expression of the unconscious situation. The psychological rightness of both Eastern and Western yoga ceases only when the unconscious process—which anticipates future modifications of consciousness—has developed so far that it produces shades of meaning which are no longer

adequately expressed by, or are at variance with, the traditional symbol. Then and only then can one say that the symbol has lost its "rightness." Such a process signifies a gradual shift in man's unconscious view of the world over the centuries and has nothing whatever to do with intellectual criticisms of this view. Religious symbols are phenomena of *life, plain facts and not intellectual opinions*. If the Church clung for so long to the idea that the sun rotates round the earth, and then abandoned this contention in the nineteenth century, she can always appeal to the psychological truth that for millions of people the sun did revolve round the earth and that it was only in the nineteenth century that any major portion of mankind became sufficiently sure of the intellectual function to grasp the proofs of the earth's planetary nature. Unfortunately there is no "truth" unless there are people to understand it.

[167] Presumably the leftward circumambulation of the square indicates that the squaring of the circle is a stage on the way to the unconscious, a point of transition leading to a goal lying as yet unformulated beyond it. It is one of those paths to the centre of the non-ego which were also trodden by the medieval investigators when producing the *lapis*. The *Rosarium* says:[43] "Out of man and woman make a round circle and extract the quadrangle from this and from the quadrangle the triangle. Make a round circle and you will have the philosophers' stone"[44] (figs. 59, 60).

[168] The modern intellect naturally regards all this as poppycock. But this estimate fails to get rid of the fact that such concatenations of ideas do exist and that they even played an important part for many centuries. It is up to psychology to *understand* these things, leaving the layman to rant about poppycock and obscurantism. Many of my critics who call themselves "scientific" behave exactly like the bishop who excommunicated the cockchafers for their unseemly proliferation.

[169] Just as the stupas preserve relics of the Buddha in their innermost sanctuary, so in the interior of the Lamaic quadrangle, and again in the Chinese earth-square, there is a Holy of Holies with its magical agent, the cosmic source of energy, be it the god Shiva, the Buddha, a bodhisattva, or a great teacher. In China it is Ch'ien—heaven—with the four cosmic effluences radiating from it (fig. 61). And equally in the Western mandalas of medieval Christendom the deity is enthroned at the centre, often in the form of the triumphant Redeemer together with the four symbolical figures of the evangelists (fig. 62). The symbol in our dream presents the most violent contrast to these highly metaphysical ideas, for it is a gibbon, unquestionably an ape, that is to be

reconstructed in the centre. Here we meet again the ape who first turned up in vision 22 of the first series (par. 117). In that dream he caused a panic, but he also brought about the helpful intervention of the intellect. Now he is to be "reconstructed," and this can only mean that the anthropoid—man as an archaic fact—is to be put together again. Clearly the left-hand path does not lead upwards to the kingdom of the gods and eternal ideas, but down into natural history, into the bestial instinctive foundations of human existence. We are therefore dealing, to put it in classical language, with a Dionysian mystery.

61. The pearl as symbol of Ch'ien, surrounded by the four cosmic effluences (dragons).
—Chinese bronze mirror of the T'ang Period (7th to 9th cent.)

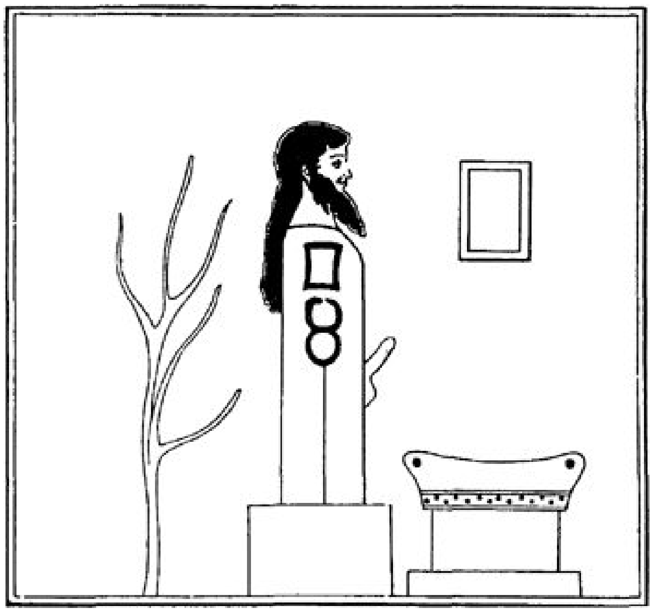
62. Rectangular mandala with cross, the Lamb in the centre, surrounded by the four evangelists and the four rivers of Paradise. In the medallions, the four cardinal virtues.
—Zwiefalten Abbey breviary (12th cent.)

[170] The square corresponds to the *temenos* (fig. 31), where a drama is taking place—in this case a play of apes instead of satyrs. The inside of the "golden flower" is a "seeding-place" where the "diamond body" is produced. The synonymous term "the ancestral land"[45] may actually be a hint that this product is the result of integrating the ancestral stages.

[171] The ancestral spirits play an important part in primitive rites of renewal. The aborigines of central Australia even identify themselves with their mythical ancestors of the *alcheringa* period, a sort of Homeric age. Similarly the Pueblo Indians of Taos, in preparation for their ritual dances, identify with the sun, whose sons they are. This atavistic identification with human and animal ancestors can be interpreted psychologically as an integration of the unconscious, a veritable bath of renewal in the life-source where one is once

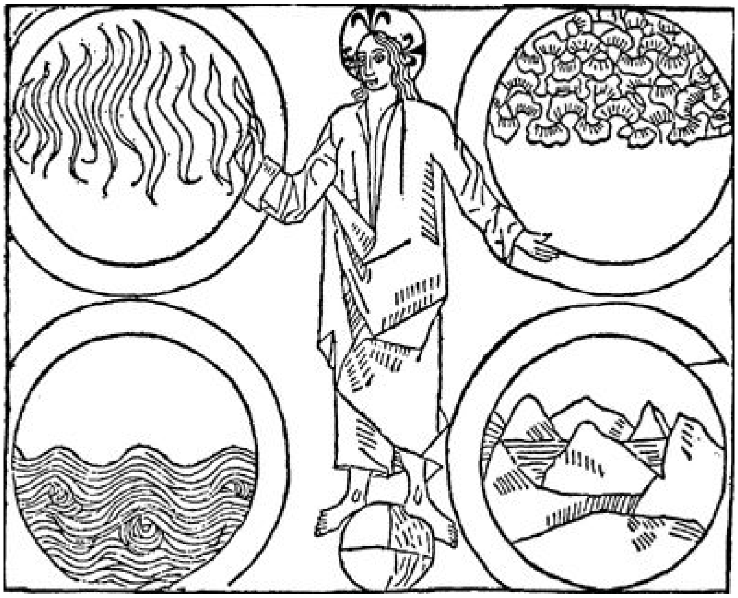
again a fish, unconscious as in sleep, intoxication, and death. Hence the sleep of incubation, the Dionysian orgy, and the ritual death in initiation. Naturally the proceedings always take place in some hallowed spot. We can easily translate these ideas into the concretism of Freudian theory: the *temenos* would then be the womb of the mother and the rite a regression to incest. But these are the neurotic misunderstandings of people who have remained partly infantile and who do not realize that such things have been practised since time immemorial by adults whose activities cannot possibly be explained as a mere regression to infantilism. Otherwise the highest and most important achievements of mankind would ultimately be nothing but the perverted wishes of children, and the word "childish" would have lost its *raison d'être*.

[172] Since the philosophical side of alchemy was concerned with problems that are very closely related to those which interest the most modern psychology, it might perhaps be worth while to probe a little deeper into the dream motif of the ape that is to be reconstructed in the square. In the overwhelming majority of cases alchemy identifies its transforming substance with the *argentum vivum* or Mercurius. Chemically this term denotes quicksilver, but philosophically it means the *spiritus vitae*, or even the world-soul (cf. fig. 91), so that Mercurius also takes on the significance of Hermes, god of revelation. (This question has been discussed in detail elsewhere.[46]) Hermes is associated with the idea of roundness and also of squareness, as can be seen particularly in Papyrus V (line 401) of the *Papyri Graecae Magicae*,[47] *where he is named* στρογγύλος καὶ τετράγωνος, "round and square." He is also called τετραγλώχιν, "quadrangular." He is in general connected with the number four; hence there is a Ἑρμῆς τετρακέφαλος, a "four-headed Hermes."[48] These attributes were known also in the Middle Ages, as the work of Cartari,[49] for instance, shows. He says:



63. Hermes.—Greek vase painting (Hamilton Collection)

Again, the square figures of Mercury [Hermes] [fig. 63], made up of nothing but a head and a virile member, signify that the Sun is the head of the world, and scatters the seed of all things; while the four sides of the square figure have the same significance as the four-stringed sistrum which was likewise attributed to Mercury, namely, the four quarters of the world or the four seasons of the year; or again, that the two equinoxes and the two solstices make up between them the four parts of the whole zodiac.

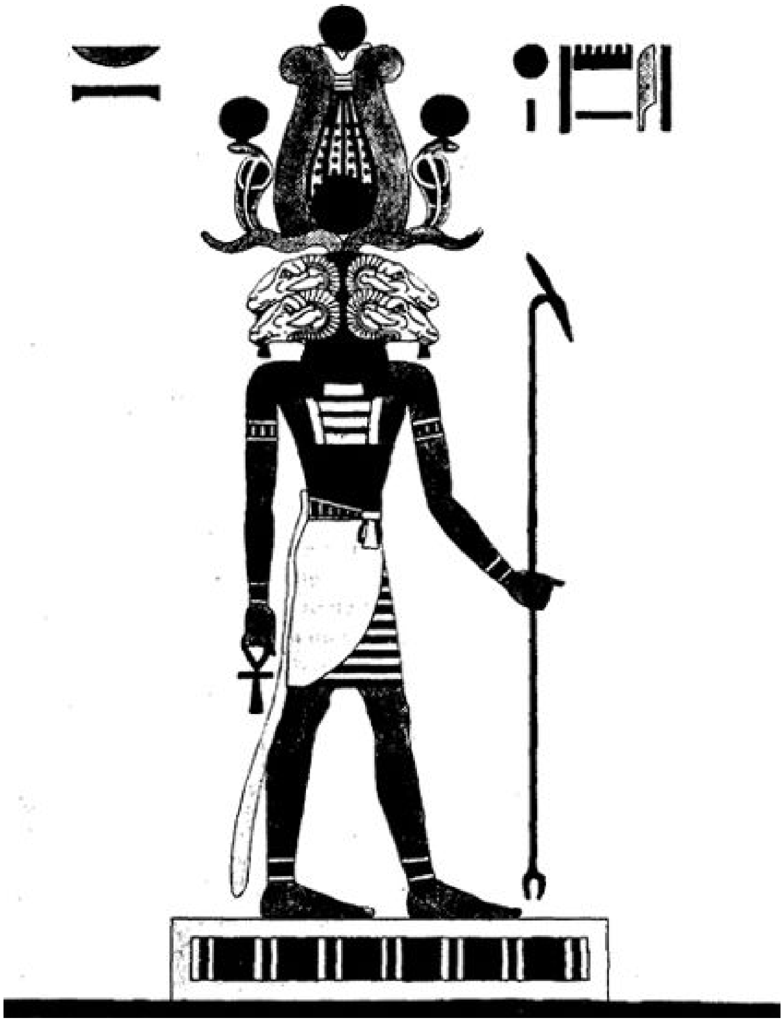


64. Christ as Anthropos, standing on the globe, flanked by the four elements.—Glanville, *Le Propriétaire des choses* (1482)

[173] It is easy to see why such qualities made Mercurius an eminently suitable symbol for the mysterious transforming substance of alchemy; for this is round and square, i.e., a totality consisting of four parts (four elements). Consequently the Gnostic quadripartite original man[50] (fig. 64) as well as Christ Pantokrator is an *imago lapidis* (fig. 65). Western alchemy is mainly of Egyptian origin, so let us first of all turn our attention to the Hellenistic figure of Hermes Trismegistus, who, while standing sponsor to the medieval Mercurius, derives ultimately from the ancient Egyptian Thoth (fig. 66). The attribute of Thoth was the baboon, or again he was represented outright as an ape.[51] This idea was visibly preserved all through the numberless editions of the Book of the Dead right down to the most recent times. It is true that in the existing alchemical texts—which with few exceptions belong to the Christian era—the ancient connection between Thoth-Hermes and the ape has disappeared, but it still existed at the time of the Roman Empire. Mercurius, however, had several things in common with the devil—which we will not enter upon here—and so the ape once more crops up in the vicinity of Mercurius as the *simia Dei* (fig. 67). It is of the essence of the transforming substance to be on the one hand extremely common, even contemptible (this is expressed in the series of attributes it shares with the devil, such as serpent, dragon, raven, lion, basilisk, and eagle), but on the other hand to mean something of great value, not to say divine. For the transformation leads from the depths to the heights, from the bestially archaic and infantile to the mystical *homo maximus*.

65. Tetramorph (Anthropos symbol) standing on two wheels, symbols of the Old and New Testaments.—Mosaic, Vatopedi Monastery, Mt. Athos (1213)

[174] The symbolism of the rites of renewal, if taken seriously, points far beyond the merely archaic and infantile to man’s innate psychic disposition, which is the result and deposit of all ancestral life right down to the animal level—hence the ancestor and animal symbolism. The rites are attempts to abolish the separation between the conscious mind and the unconscious, the real source of life, and to bring about a reunion of the individual with the native soil of his inherited, instinctive make-up. Had these rites of renewal not yielded definite results they would not only have died out in prehistoric times but would never have arisen in the first place. The case before us proves that even if the conscious mind is miles away from the ancient conceptions of the rites of renewal, the unconscious still strives to bring them closer in dreams. It is true that without the qualities of autonomy and autarky there would be no consciousness at all, yet these qualities also spell the danger of isolation and stagnation since, by splitting off the unconscious, they bring about an unbearable alienation of instinct. Loss of instinct is the source of endless error and confusion.



66. Ammon-Ra, the Egyptian spirit of the four elements.—Temple of Esneh, Ptolemaic, from Champollion, *Panthéon égyptien*

67. Demon in the shape of a monkey.—“Speculum humanae salvationis” (Cod. Lat. 511, Paris, 14th cent.)

[175] Finally the fact that the dreamer is “not in the centre but to one side” is a striking indication of what will happen to his ego: it will no longer be able to claim the central place but must presumably be satisfied with the position of a satellite, or at least of a planet revolving round the sun. Clearly the important place in the centre is reserved for the gibbon about to be reconstructed. The gibbon belongs to the anthropoids and, on account of its kinship with man, is an appropriate symbol for that part of the psyche which goes down into the subhuman. Further, we have seen from the cynocephalus or dog-headed baboon associated with Thoth-Hermes (fig. 68), the highest among the apes known to the Egyptians, that its godlike affinities make it an equally appropriate symbol for that part of the unconscious which transcends the conscious level. The assumption that the human psyche possesses layers that lie *below* consciousness is not likely to arouse serious opposition. But that there could just as well be layers lying *above* consciousness seems to be a surmise which borders on a

crimen laesae majestatis humanae. In my experience the conscious mind can claim only a relatively central position and must accept the fact that the unconscious psyche transcends and as it were surrounds it on all sides. Unconscious contents connect it *backwards* with physiological states on the one hand and archetypal data on the other. But it is extended *forwards* by intuitions which are determined partly by archetypes and partly by subliminal perceptions depending on the relativity of time and space in the unconscious. I must leave it to the reader, after thorough consideration of this dream-series and the problems it opens up, to form his own judgment as to the possibility of such an hypothesis.

[176] The following dream is given unabridged, in its original text:

17. DREAM:

All the houses have something theatrical about them, with stage scenery and decorations. The name of Bernard Shaw is mentioned. The play is supposed to take place in the distant future. There is a notice in English and German on one of the sets:

This is the universal Catholic Church.
It is the Church of the Lord.
All those who feel that they are the instruments of the Lord
may enter.

Under this is printed in smaller letters: "The Church was founded by Jesus and Paul"—like a firm advertising its long standing.

I say to my friend, "Come on, let's have a look at this." He replies, "I do not see why a lot of people have to get together when they're feeling religious." I answer, "As a Protestant you will never understand." A woman nods emphatic approval. Then I see a sort of proclamation on the wall of the church. It runs:

Soldiers!

When you feel you are under the power of the Lord, do not address him directly. The Lord cannot be reached by words. We also strongly advise you not to indulge in any discussions among yourselves concerning the attributes of the Lord. It is futile, for everything valuable and important is ineffable.

(Signed) *Pope* … (Name illegible)

Now we go in. The interior resembles a mosque, more particularly the Hagia Sophia: no seats—wonderful effect of space; no images, only framed *texts decorating the walls (like the Koran texts in the Hagia Sophia). One of the texts reads “Do not flatter your benefactor.” The woman who had agreed with me before bursts into tears and cries, “Then there’s nothing left!” I reply, “I find it quite right!” but she vanishes. At first I stand with a pillar in front of me and can see nothing. Then I change my position and see a crowd of people. I do not belong to them and stand alone. But they are quite distinct, so that I can see their faces. They all say in unison, “We confess that we are under the power of the Lord. The Kingdom of Heaven is within us.” They repeat this three times with great solemnity. Then the organ starts to play and they sing a Bach fugue with chorale. But the original text is omitted; sometimes there is only a sort of coloratura singing, then the words are repealed: “Everything else is paper” (meaning that it does not make a living impression on me). When the chorale has faded away the* gemütlich *part of the ceremony begins; it is almost like a students’ party. The people are all cheerful and equable. We move about, converse, and greet one another, and wine (from an episcopal seminary) is served with other refreshments. The health of the Church is drunk and, as if to express everybody’s pleasure at the increase in membership, a loudspeaker blares out a ragtime melody with the refrain, “Charles is also with us now.” A priest explains to me: “These somewhat trivial amusements are officially approved and permitted. We must adapt a little to American methods. With a large crowd such as we have here this is inevitable. But we differ in principle from the American churches by our decidedly anti-ascetic tendency.” Thereupon I awake with a feeling of great relief.*

68. Thoth as cynocephalus.—From tomb of Amen-her-khopshef, near Der el-Medina, Luxor (XXth dynasty, 12th cent. B.C.)

[177] Unfortunately I must refrain from commenting on this dream as a whole[52] and confine myself to our theme. The *temenos* has become a sacred building (in accordance with the hint given earlier). The proceedings are thus characterized as "religious." The grotesque-humorous side of the Dionysian mystery comes out in the so-called *gemütlich* part of the ceremony, where wine is served and a toast drunk to the health of the Church. An inscription on the floor of an Orphic-Dionysian shrine puts it very aptly: μόνον μὴ ὕδωρ (Only no water!).[53] The Dionysian relics in the Church, such as the fish and wine symbolism, the Damascus chalice, the seal-cylinder with the crucifix and the inscription ΟΡΦΕΟΣ ΒΑΚΚΙΚΟΣ,[54] and much else besides, can be mentioned only in passing.

[178] The "anti-ascetic" tendency clearly marks the point of difference from the Christian Church, here defined as "American" (cf. commentary to dream 14 of

the first series). America is the ideal home of the reasonable ideas of the practical intellect, which would like to put the world to rights by means of a "brain trust."[55] This view is in keeping with the modern formula "intellect = spirit," but it completely forgets the fact that "spirit" was never a human "activity," much less a "function." The movement to the left is thus confirmed as a withdrawal from the modern world of ideas and a regression to pre-Christian Dionysos worship, where "asceticism" in the Christian sense is unknown. At the same time the movement does not lead right out of the sacred spot but remains within it; in other words it does not lose its sacramental character. It does not simply fall into chaos and anarchy, it relates the Church directly to the Dionysian sanctuary just as the historical process did, though from the opposite direction. We could say that this regressive development faithfully retreads the path of history in order to reach the pre-Christian level. Hence it is not a relapse but a kind of systematic descent *ad inferos* (fig. 69), a psychological *nekyia*.[56]

[179] I encountered something very similar in the dream of a clergyman who had a rather problematical attitude to his faith: *Coming into his church at night, he found that the whole wall of the choir had collapsed. The altar and ruins were overgrown with vines hanging full of grapes, and the moon was shining in through the gap*.

[180] Again, a man who was much occupied with religious problems had the following dream: *An immense Gothic cathedral, almost completely dark. High Mass is being celebrated. Suddenly the whole wall of the aisle collapses. Blinding sunlight bursts into the interior together with a large herd of bulls and cows*. This setting is evidently more Mithraic, but Mithras is associated with the early Church in much the same way Dionysos is.

69. Dante and Virgil on their journey to the underworld.—Illumination for the *Inferno*, Canto XVII, Codex Urbanus Latinus 365 (15th cent.)

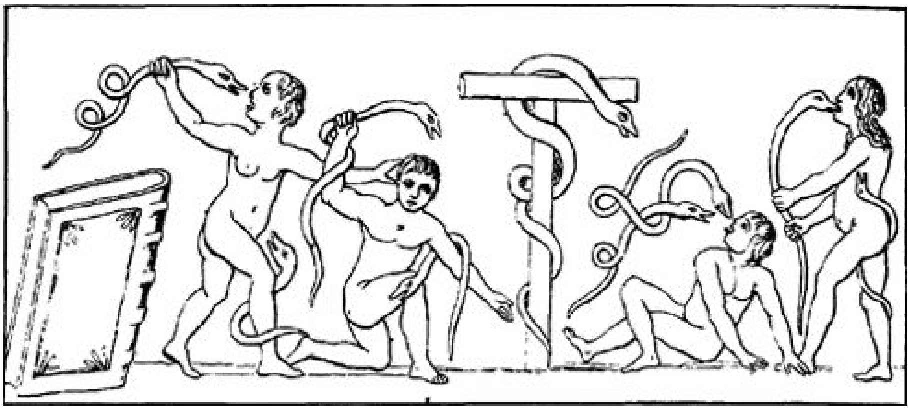
[181] Interestingly enough, the church in our dream is a syncretistic building, for the Hagia Sophia is a very ancient Christian church which, however, served as a mosque until quite recently. It therefore fits in very well with the purpose of the dream: to attempt a combination of Christian and Dionysian religious ideas. Evidently this is to come about without the one excluding the other, without any values being destroyed. This is extremely important, since the reconstruction of the "gibbon" is to take place in the sacred precincts. Such a sacrilege might easily lead to the dangerous supposition that the leftward movement is a *diabolica fraus* and the gibbon the devil—for the devil is in fact regarded as the "ape of God." The leftward movement would then be a perversion of divine truth for the purpose of setting up "His Black Majesty" in place of God. But the unconscious has no such blasphemous intentions; it is only trying to restore the lost Dionysos who is somehow lacking in modern man (*pace* Nietzsche!) to the world of religion. At the end of vision 22 (par. 117), where the ape first appears, it was said that "everything must be ruled by the light," and everything, we might add, includes the Lord of Darkness with his horns and cloven hoof—actually a Dionysian corybant who has rather unexpectedly risen to the rank of Prince.

[182] The Dionysian element has to do with emotions and affects which have found no suitable religious outlets in the predominantly Apollonian cult and ethos of Christianity. The medieval carnivals and *jeux de paume* in the Church

were abolished relatively early; consequently the carnival became secularized and with it divine intoxication vanished from the sacred precincts. Mourning, earnestness, severity, and well-tempered spiritual joy remained. But intoxication, that most direct and dangerous form of possession, turned away from the gods and enveloped the human world with its exuberance and pathos. The pagan religions met this danger by giving drunken ecstasy a place within their cult. Heraclitus doubtless saw what was at the back of it when he said, “But Hades is that same Dionysos in whose honour they go mad and keep the feast of the wine-vat.” For this very reason orgies were granted religious license, so as to exorcise the danger that threatened from Hades. Our solution, however, has served to throw the gates of hell wide open.

18. DREAM:

[183] *A square space with complicated ceremonies going on in it, the purpose of which is to transform animals into men. Two snakes, moving in opposite directions, have to be got rid of at once. Some animals are there, e.g., foxes and dogs. The people walk round the square and must let themselves be bitten in the calf by these animals at each of the four corners* (cf. fig. 118). *If they run away all is lost. Now the higher animals come on the scene—bulls and ibexes. Four snakes glide into the four corners. Then the congregation files out. Two sacrificial priests carry in a huge reptile and with this they touch the forehead of a shapeless animal lump or life-mass. Out of it there instantly rises a human head, transfigured. A voice proclaims: “These are attempts at being.”*



70. Pagan rites of transformation in the Middle Ages, with serpents.—Gnostic design

[184] One might almost say that the dream goes on with the “explanation” of what is happening in the square space. Animals are to be changed into men; a “shapeless life-mass” is to be turned into a transfigured (illuminated) human head by magic contact with a reptile. The animal lump or life-mass stands for

the mass of the inherited unconscious which is to be united with consciousness. This is brought about by the ceremonial use of a reptile, presumably a snake. The idea of transformation and renewal by means of a serpent is a well-substantiated archetype (fig. 70). It is the healing serpent, representing the god (cf. figs. 203, 204). It is reported of the mysteries of Sabazius: "Aureus coluber in sinum demittitur consecratis et eximitur rursus ab inferioribus partibus atque imis" (A golden snake is let down into the lap of the initiated and taken away again from the lower parts).[57] Among the Ophites, Christ was the serpent. Probably the most significant development of serpent symbolism as regards renewal of personality is to be found in Kundalini yoga.[58] The shepherd's experience with the snake in Nietzsche's *Zarathustra* would accordingly be a fatal omen (and not the only one of its kind—cf. the prophecy at the death of the rope-dancer).

[185] The "shapeless life-mass" immediately recalls the ideas of the alchemical "chaos,"[59] the *massa* or *materia informis* or *confusa* which has contained the divine seeds of life ever since the Creation. According to a midrashic view, Adam was created in much the same way: in the first hour God collected the dust, in the second made a shapeless mass out of it, in the third fashioned the limbs, and so on[60] (fig. 71).

71. Creation of Adam from the clay of the *prima materia*.—Schedel, *Das Buch der Chroniken* (1493)

[186] But if the life-mass is to be transformed a *circumambulatio* is necessary, i.e., exclusive concentration on the centre, the place of creative change. During this process one is "bitten" by animals; in other words, we have to expose ourselves to the animal impulses of the unconscious without identifying with them and without "running away"; for flight from the unconscious would defeat the purpose of the whole proceeding. We must hold our ground, which means here that the process initiated by the dreamer's self-observation must be experienced in all its ramifications and then articulated with consciousness to the best of his understanding. This often entails an almost unbearable tension because of the utter incommensurability between conscious life and the unconscious process, which can be experienced only in the innermost soul and cannot touch the visible surface of life at any point. The principle of conscious life is: "Nihil est in intellectu, quod non prius fuerit in sensu." But the principle of the unconscious is the autonomy of the psyche itself, reflecting in the play of its images not the world but *itself*, even though it utilizes the illustrative possibilities offered by the sensible world in order to make its images clear. The sensory datum, however, is not the *causa efficiens* of this; rather, it is autonomously selected and exploited by the psyche, with the result that the

rationality of the cosmos is constantly being violated in the most distressing manner. But the sensible world has an equally devastating effect on the deeper psychic processes when it breaks into them as a *causa efficiens*. If reason is not to be outraged on the one hand and the creative play of images not violently suppressed on the other, a circumspect and farsighted synthetic procedure is required in order to accomplish the paradoxical union of irreconcilables (fig. 72). Hence the alchemical parallels in our dreams.

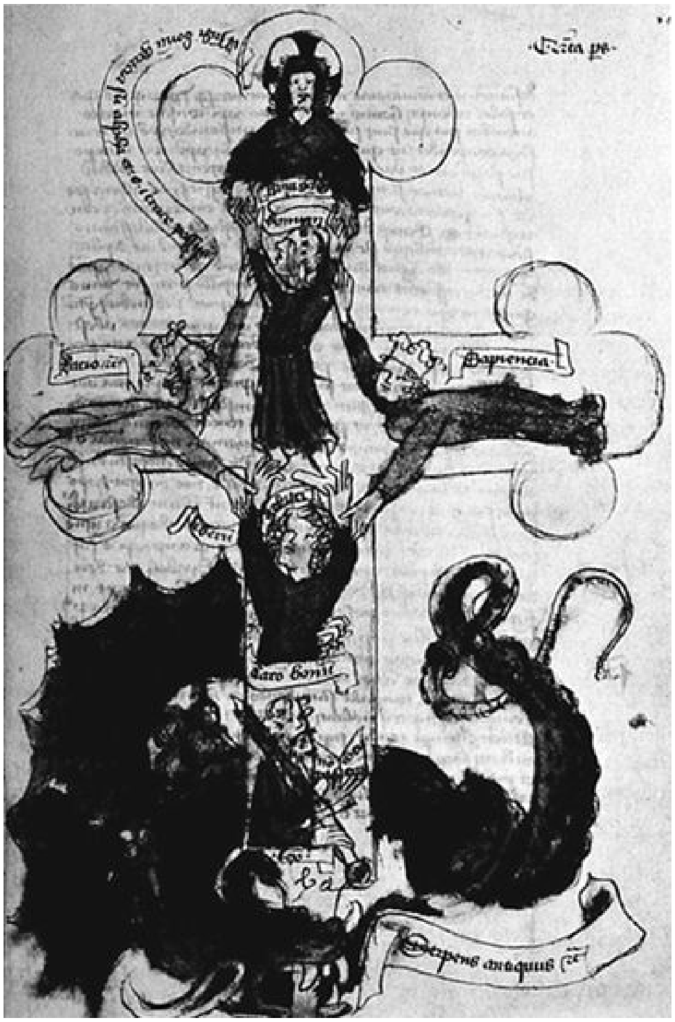
[187] The focusing of attention on the centre demanded in this dream and the warning about “running away” have clear parallels in the *opus alchymicum:* the need to concentrate on the work and to meditate upon it is stressed again and again. The tendency to run away, however, is attributed not to the operator but to the transforming substance. Mercurius is evasive and is labelled *servus* (servant) or *cervus fugitivus* (fugitive stag). The vessel must be well sealed so that what is within may not escape. Eirenaeus Philalethes[61] says of this *servus:* “You must be very wary how you lead him, for if he can find an opportunity he will give you the slip, and leave you to a world of misfortune.”[62] It did not occur to these philosophers that they were chasing a projection, and that the more they attributed to the substance the further away they were getting from the psychological source of their expectations. From the difference between the material in this dream and its medieval predecessors we can measure the psychological advance: the running away is now clearly apparent as a characteristic of the dreamer, i.e., it is no longer projected into the unknown substance. Running away thus becomes a moral question. This aspect was recognized by the alchemists in so far as they emphasized the need for a special religious devotion at their work, though one cannot altogether clear them of the suspicion of having used their prayers and pious exercises for the purpose of forcing a miracle—there are even some who aspired to have the Holy Ghost as their familiar![63] But, to do them justice, one should not overlook the fact that there is more than a little evidence in the literature that they realized it was a matter of their own transformation. For instance, Gerhard Dorn exclaims. “Transmutemini in vivos lapides philosophicos!” (Transform yourselves into living philosophical stones!)

72. The “union of irreconcilables”: marriage of water and fire. The two figures each have four hands to symbolize their many different capabilities.—After an Indian painting

[188] Hardly have conscious and unconscious touched when they fly asunder on account of their mutual antagonism. Hence, right at the beginning of the dream, the snakes that are making off in opposite directions have to be removed; i.e., the conflict between conscious and unconscious is at once resolutely stopped and the conscious mind is forced to stand the tension by means of the *circumambulatio*. The magic circle thus traced will also prevent the unconscious from breaking out again, for such an eruption would be equivalent to psychosis. “Nonnulli perierunt in opere nostro”: “Not a few have perished in our work,” we can say with the author of the *Rosarium*. The dream shows that the difficult operation of thinking in paradoxes—a feat possible only to the superior intellect—has succeeded. The snakes no longer run away but settle themselves in the four corners, and the process of transformation or integration sets to work. The “transfiguration” and illumination, the conscious recognition of the centre, has been attained, or at least anticipated, in the dream. This potential achievement—if it can be maintained, i.e., if the conscious mind does not lose touch with the centre again[64]—means a renewal of personality. Since it is a subjective state whose reality cannot be validated by any external criterion,

any further attempt to describe and explain it is doomed to failure, for only those who have had this experience are in a position to understand and attest its reality. “Happiness,” for example, is such a noteworthy reality that there is nobody who does not long for it, and yet there is not a single objective criterion which would prove beyond all doubt that this condition necessarily exists. As so often with the most important things, we have to make do with a subjective judgment.

[189] The arrangement of the snakes in the four corners is indicative of an order in the unconscious. It is as if we were confronted with a pre-existent ground plan, a kind of Pythagorean *tetraktys*. I have very frequently observed the number four in this connection. It probably explains the universal incidence and magical significance of the cross or of the circle divided into four. In the present case the point seems to be to capture and regulate the animal instincts so as to exorcise the danger of falling into unconsciousness. This may well be the empirical basis of the cross as that which vanquishes the powers of darkness (fig. 73).



73. The deliverance of man from the power of the dragon.—Codex Palatinus Latinus 412 (15th cent.)

[190] In this dream the unconscious has managed to stage a powerful advance by thrusting its contents dangerously near to the conscious sphere. The dreamer appears to be deeply entangled in the mysterious synthetic ceremony and will unfailingly carry a lasting memory of the dream into his conscious life. Experience shows that this results in a serious conflict for the conscious mind, because it is not always either willing or able to put forth the extraordinary intellectual and moral effort needed to take a paradox seriously. Nothing is so jealous as a truth.

[191] As a glance at the history of the medieval mind will show, our whole modern mentality has been moulded by Christianity. (This has nothing to do with whether we believe the truths of Christianity or not.) Consequently the reconstruction of the ape in the sacred precincts as proposed by the dream comes as such a shock that the majority of people will seek refuge in blank incomprehension. Others will heedlessly ignore the abysmal depths of the

Dionysian mystery and will welcome the rational Darwinian core of the dream as a safeguard against mystic exaltation. Only a very few will feel the collision of the two worlds and realize what it is all about. Yet the dream says plainly enough that in the place where, according to tradition, the deity dwells, the ape is to appear. This substitution is almost as bad as a Black Mass.

[192] In Eastern symbolism the square—signifying the earth in China, the *padma* or lotus in India—has the character of the *yoni:* femininity. A man's unconscious is likewise feminine and is personified by the anima.[65] The anima also stands for the "inferior" function[66] and for that reason frequently has a shady character; in fact she sometimes stands for evil itself. She is as a rule the *fourth* person (cf. dreams 10, 11, 15; pars. 136, 147, 162). She is the dark and dreaded maternal womb (fig. 74), which is of an essentially ambivalent nature. The Christian deity is one in three persons. The fourth person in the heavenly drama is undoubtedly the devil. In the more harmless psychological version he is merely the inferior function. On a moral valuation he is a man's sin, a function belonging to him and presumably masculine. The feminine element in the deity is kept very dark, the interpretation of the Holy Ghost as Sophia being considered heretical. Hence the Christian metaphysical drama, the "Prologue in Heaven," has only masculine actors, a point it shares with many of the ancient mysteries. But the feminine element must obviously be somewhere—so it is presumably to be found in the dark. At any rate that is where the ancient Chinese philosophers located it: in the *yin*.[67] Although man and woman unite they nevertheless represent irreconcilable opposites which, when activated, degenerate into deadly hostility. This primordial pair of opposites symbolizes every conceivable pair of opposites that may occur: hot and cold, light and dark, north and south, dry and damp, good and bad, conscious and unconscious. In the psychology of the functions there are two conscious and therefore masculine functions, the differentiated function and its auxiliary, which are represented in dreams by, say, father and son, whereas the unconscious functions appear as mother and daughter. Since the conflict between the two auxiliary functions is not nearly as great as that between the differentiated and the inferior function, it is possible for the third function—that is, the unconscious auxiliary one—to be raised to consciousness and thus made masculine. It will, however, bring with it traces of its contamination with the inferior function, thus acting as a kind of link with the darkness of the unconscious. It was in keeping with this psychological fact that the Holy Ghost should be heretically interpreted as Sophia, for he was the mediator of birth in the flesh, who enabled the deity to shine forth in the darkness of the world. No doubt it was this association that

caused the Holy Ghost to be suspected of femininity, for Mary was the dark earth of the field—“illa terra virgo nondum pluviis irrigata” (that virgin earth not yet watered by the rains), as Tertullian called her.[68]

74. Heaven fertilizing Earth and begetting mankind.—Thenaud, “Traité de la cabale” (MS., 16th cent.)

[193] The fourth function is contaminated with the unconscious and, on being made conscious, drags the whole of the unconscious with it. We must then come to terms with the unconscious and try to bring about a synthesis of opposites.[110] At first a violent conflict breaks out, such as any reasonable man would experience when it became evident that he had to swallow a lot of absurd superstitions. Everything in him would rise up in revolt and he would defend himself desperately against what looked to him like murderous nonsense. This situation explains the following dreams.

19. DREAM:

[194] *Ferocious war between two peoples.*

[195] This dream depicts the conflict. The conscious mind is defending its position and trying to suppress the unconscious. The first result of this is the expulsion of the fourth function, but, since it is contaminated with the third, there is a danger of the latter disappearing as well. Things would then return to

the state that preceded the present one, when only two functions were conscious and the other two unconscious.

20. DREAM:

[196] *There are two boys in a cave. A third falls in as if through a pipe.*

[197] The cave represents the darkness and seclusion of the unconscious; the two boys correspond to the two unconscious functions. Theoretically the third must be the auxiliary function, which would indicate that the conscious mind had become completely absorbed in the differentiated function. The odds now stand 1 : 3, greatly in favour of the unconscious. We may therefore expect a new advance on its part and a return to its former position. The "boys" are an allusion to the dwarf motif (fig. 77), of which more later.

21. DREAM:

[198] *A large transparent sphere containing many little spheres. A green plant is growing out of the top.*

[199] The sphere is a whole that embraces all its contents; life which has been brought to a standstill by useless struggle becomes possible again. In Kundalini yoga the "green womb" is a name for Ishvara (Shiva) emerging from his latent condition.

75. Trimurti picture. The triangle symbolizes the tendency of the universe to converge towards the point of unity. The tortoise represents Vishnu; the lotus growing out of the skull between two flames, Shiva. The shining sun of Brahma forms the background. The whole picture corresponds to the alchemical *opus*, the tortoise symbolizing the *massa confusa*, the skull the *vas* of transformation, and the flower the "self" or wholeness.—After an Indian painting

22. DREAM:

[200] *The dreamer is in an American hotel. He goes up in the lift to about the third or fourth floor. He has to wait there with a lot of other people. A friend (an*

actual person) is also there and says that the dreamer should not have kept the dark unknown woman waiting so long below, since he had put her in his (the dreamer's) charge. The friend now gives him an unsealed note for the dark woman, on which is written: "Salvation does not come from refusing to take part or from running away. Nor does it come from just drifting. Salvation comes from complete surrender, with one's eyes always turned to the centre." On the margin of the note there is a drawing: a wheel or wreath with eight spokes. Then a lift-boy appears and says that the dreamer's room is on the eighth floor. He goes on up in the lift, this time to the seventh or eighth floor. An unknown red-haired man, standing there, greets him in a friendly way. Then the scene changes. There is said to be a revolution in Switzerland: the military party is making propaganda for "completely throttling the left." The objection that the left is weak enough anyway is met by the answer that this is just why it ought to be throttled completely. Soldiers in old-fashioned uniforms now appear, who all resemble the red-haired man. They load their guns with ramrods, stand in a circle, and prepare to shoot at the centre. But in the end they do not shoot and seem to march away. The dreamer wakes up in terror.

[201] The tendency to re-establish a state of wholeness—already indicated in the foregoing dream—once more comes up against a consciousness with a totally different orientation. It is therefore appropriate that the dream should have an American background. The lift is going up, as is right and proper when something is coming "up" from the "sub-" conscious. What is coming up is the unconscious content, namely the mandala characterized by the number four (cf. figs. 61, 62). Therefore the lift should rise to the fourth floor; but, as the fourth function is taboo, it only rises to "about the third or fourth." This happens not to the dreamer alone but to many others as well, who must all wait like him until the fourth function can be accepted. A good friend then calls his attention to the fact that he should not have kept the dark woman, i.e., the anima who stands for the tabooed function, waiting "below," i.e., in the unconscious, which was just the reason why the dreamer himself had to wait upstairs with the others. It is in fact not merely an individual but a collective problem, for the animation of the unconscious which has become so noticeable in recent times has, as Schiller foresaw, raised questions which the nineteenth century never even dreamed of. Nietzsche in his *Zarathustra* decided to reject the "snake" and the "ugliest man," thus exposing himself to an heroic cramp of consciousness which led, logically enough, to the collapse foretold in the same book.

[202] The advice given in the note is as profound as it is to the point, so that there is really nothing to add. After it has been more or less accepted by the dreamer

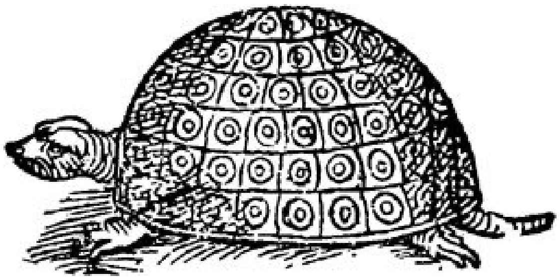
the ascent can be resumed. We must take it that the problem of the fourth function was accepted, at least broadly, for the dreamer now reaches the seventh or eighth floor, which means that the fourth function is no longer represented by a quarter but by an eighth, and is apparently reduced by a half.

[203] Curiously enough, this hesitation before the last step to wholeness seems also to play a part in *Faust II*, where, in the Cabiri scene, "resplendent mermaids" come from over the water:[70]

NEREIDS AND TRITONS:
Bear we, on the waters riding,
That which brings you all glad tiding.
In Chelone's giant shield
Gleams a form severe revealed:
These are gods that we are bringing;
Hail them, you high anthems singing.

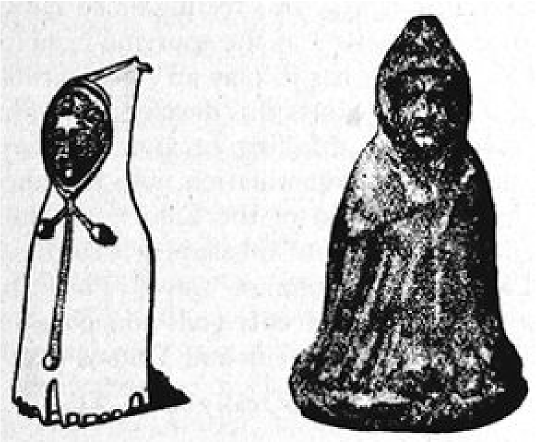
SIRENS:
Little in length,
Mighty in strength!
Time-honoured gods
Of shipwreck and floods.

NEREIDS AND TRITONS:
Great Cabiri do we bear,
That our feast be friendly fair:
Where their sacred powers preside
Neptune's rage is pacified.



76. The tortoise: an alchemical instrument.—Porta, *De distillationibus* (1609)

A "form severe" is brought by "mermaids," feminine figures (cf. figs. 10, 11, 12. 157) who represent as it were the sea and the waves of the unconscious. The word "severe" reminds us of "severe" architectural or geometrical forms which illustrate a definite idea without any romantic (feeling-toned) trimmings. It "gleams" from the shell of a tortoise[71] (fig. 76), which, primitive and cold-blooded like the snake, symbolizes the instinctual side of the unconscious. The "image" is somehow identical with the unseen, creative dwarf-gods (fig. 77), hooded and cloaked manikins who are kept hidden in the dark *cista*, but who also appear on the seashore as little figures about a foot high, where, as kinsmen of the unconscious, they protect navigation, i.e., the venture into darkness and uncertainty. In the form of the Dactyls they are also the gods of invention, small and apparently insignificant like the impulses of the unconscious but endowed with the same mighty power. (*El gabir* is “the great, the mighty one.”)



77. Telesphorus, one of the Cabiri, the *familiaris* of Aesculapius: (*a*) Bronze figure from Roman Gaul; (*b*) Marble statuette from Austria.

NEREIDS AND TRITONS:
Three have followed where we led,
But the fourth refused to call;
He the rightful seer, he said,
His to think for one and all.

SIRENS:
A god may count it sport
To set a god at naught.
Honour the grace they bring,
And fear their threatening.

[204] It is characteristic of Goethe’s feeling-toned nature that the fourth should be the thinker. If the supreme principle is “feeling is all,” then thinking has to play an unfavourable role and be submerged. *Faust I* portrays this development. Since Goethe acted as his own model, thinking became the fourth (taboo) function. Because of its contamination with the unconscious it takes on the grotesque form of the Cabiri, for the Cabiri, as dwarfs, are chthonic gods and misshapen accordingly. (“I call them pot-bellied freaks of common clay.”) They thus stand in grotesque contrast to the heavenly gods and poke fun at them (cf. the “ape of God”). The Nereids and Tritons sing:

Seven there should really be.

SIRENS:
Where, then, stay the other three?

NEREIDS AND TRITONS:
That we know not. You had best
On Olympus make your quest.

There an eighth may yet be sought
Though none other gave him thought.
Well inclined to us in grace,
Not all perfect yet their race.
Beings there beyond compare,
Yearning, unexplainable,
Press with hunger's pang to share
In the unattainable.

[205] We learn that there are "really" seven of them; but again there is some difficulty with the eighth as there was before with the fourth. Similarly, in contradiction to the previous emphasis placed on their lowly origin in the dark, it now appears that the Cabiri are actually to be found on Olympus; for they are eternally striving from the depths to the heights and are therefore always to be found both below *and* above. The "severe image" is obviously an unconscious content that struggles towards the light. It seeks, and itself is, what I have elsewhere called "the treasure hard to attain."[72] This hypothesis is immediately confirmed:

SIRENS: Fame is dimmed of ancient time,
Honour droops in men of old;
Though they have the Fleece of Gold,
Ye have the Cabiri.

[206] The Golden Fleece is the coveted goal of the argosy, the perilous quest that is one of the numerous synonyms for attaining the unattainable. Thales makes this wise remark about it:

That is indeed what men most seek on earth:
'Tis rust alone that gives the coin its worth!

[207] The unconscious is always the fly in the ointment, the skeleton in the cupboard of perfection, the painful lie given to all idealistic pronouncements, the earthliness that clings to our human nature and sadly clouds the crystal clarity we long for. In the alchemical view rust, like verdigris, is the metal's sickness. But at the same time this leprosy is the *vera prima materia*, the basis for the preparation of the philosophical gold. The *Rosarium* says:

> Our gold is not the common gold. But thou hast inquired concerning the greenness [*viriditas*, presumably verdigris], deeming the bronze to be a leprous body on account of the greenness it hath upon it. Therefore I say unto thee that whatever is perfect in the bronze is that greenness only, because that greenness is straightway changed by our magistery into our most true gold.[73]

[208] The paradoxical remark of Thales that the rust alone gives the coin its true value is a kind of alchemical quip, which at bottom only says that there is no light without shadow and no psychic wholeness without imperfection. To round itself out, life calls not for perfection but for completeness; and for this the "thorn in the flesh" is needed, the suffering of defects without which there is no progress and no ascent.

[209] The problem of three and four, seven and eight, which Goethe has tackled here was a great puzzle to alchemy and goes back historically to the texts ascribed to Christianos.[74] In the treatise on the production of the "mythical water" it is said: "Therefore the Hebrew prophetess cried without restraint, 'One becomes two, two becomes three, and out of the third comes the One as the fourth.'"[75] In alchemical literature this prophetess is taken to be Maria Prophetissa[76] (fig. 78), also called the Jewess, sister of Moses, or the Copt, and it is not unlikely that she is connected with the Maria of Gnostic tradition. Epiphanius testifies to the existence of writings by this Maria, namely the "Interrogationes magnae" and "Interrogationes parvae," said to describe a vision of how Christ, on a mountain, caused a woman to come forth from his side and how he mingled himself with her.[77] It is probably no accident that the treatise of Maria (see n. 76) deals with the theme of the *matrimonium alchymicum* in a dialogue with the philosopher Aros,[78] from which comes the saying, often repeated later: "Marry gum with gum in true marriage."[79] Originally it was "gum arabic," and it is used here as a secret name for the transforming substance, on account of its adhesive quality. Thus Khunrath[80] declares that the "red" gum is the "resin of the wise"—a synonym for the transforming substance. This substance, as the life force (*vis animans*), is likened by another commentator to the "glue of the world" (*glutinum mundi*), which is the medium between mind and body and the union of both.[81] The old treatise "Consilium coniugii" explains that the "philosophical man" consists of the "four natures of the stone." Of these three are earthy or in the earth, but "the fourth nature is the water of the stone, namely the viscous gold which is called red gum and with which the three earthy natures are tinted."[82] We learn here that gum is the critical fourth nature: it is duplex, i.e., masculine and feminine, and at the same time the one and only *aqua mercurialis*. So the union of the two is a kind of self-fertilization, a characteristic always ascribed to the mercurial dragon.[83] From these hints it can easily be seen who the philosophical man is: he is the androgynous original man or Anthropos of Gnosticism[84] (cf. figs. 64, 82, 117, 195), whose parallel in India is *purusha*. Of him the Brihadaranyaka

Upanishad says: “He was as large as a man and woman embracing. He divided his self [Atman] in two, and thence arose husband and wife. He united himself with her and men were born,” etc.[85] The common origin of these ideas lies in the primitive notion of the bisexual original man.

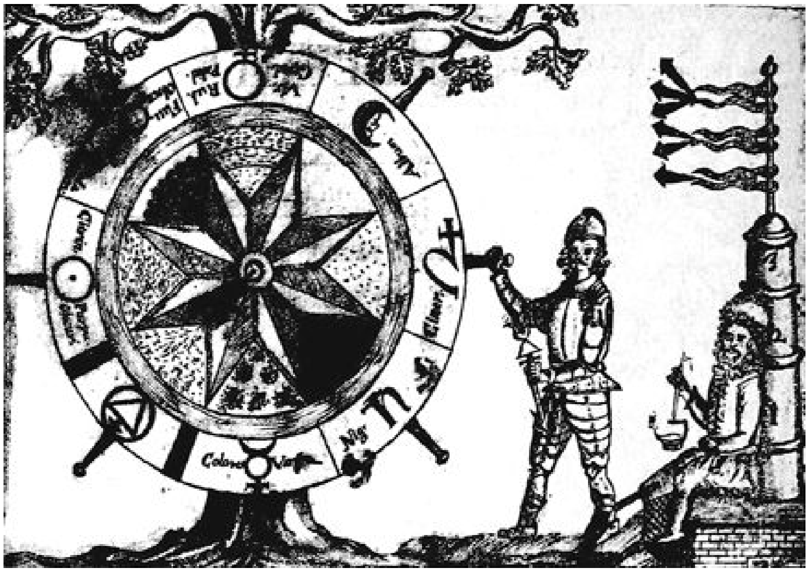
78. Maria Prophetissa. In the background, the union (*coniunctio*) of upper and lower.
—Maier, *Symbola aureae mensae* (1617)

[210] The fourth nature—to return to the text of the “Consilium coniugii”—leads straight to the Anthropos idea that stands for man’s wholeness, that is, the conception of a unitary being who existed before man and at the same time represents man’s goal. The one joins the three as the fourth and thus produces the synthesis of the four in a unity[86] (fig. 196). We seem to be dealing with much the same thing in the case of seven and eight, though this motif occurs much less frequently in the literature. It is, however, to be found in Paracelsus’ *Ein ander Erklärung der gantzen Astronomie*,[87] to which Goethe had access. “One is powerful, Six are subjects, the Eighth is also powerful”—and somewhat more so than the first. One is the king, the six are his servants and his son; so here we have King Sol and the six planets or metallic homunculi as depicted in the *Pretiosa margarita novella* of Petrus Bonus (Lacinius edition, 1546)[88] (fig. 79). As a matter of fact the eighth does not appear in this text; Paracelsus seems to have invented it himself. But since the eighth is even more “powerful” than the first, the crown is presumably bestowed on him. In *Faust II*, the eighth who dwells on Olympus is a direct reference to the Paracelsan text in so far as this

describes the “astrology of Olympus” (that is, the structure of the *corpus astrale*).[89]

[211] Returning now to our dream, we find at the critical point—the seventh or eighth floor—the red-haired man, a synonym for the “man with the pointed beard” and hence for the shrewd Mephisto, who magically changes the scene because he is concerned with something that Faust himself never saw: the “severe image,” symbolizing the supreme treasure, the immortal self.[90] He changes himself into the soldiers, representatives of uniformity, of collective opinion, which is naturally dead against tolerating anything “unsuitable.” For collective opinion the numbers three and seven are, on the highest authority, sacred; but four and eight are the very devil, something inferior,—“common clay”—that in the stern judgment of bonzes of every hue has no right to exist. The “left” is to be “completely throttled,” meaning the unconscious and all the “sinister” things that come from it. An antiquated view, no doubt, and one that uses antiquated methods; but even muzzle-loaders can hit the mark. For reasons unknown, i.e., not stated in the dream, the destructive attack on the “centre”—to which, according to the advice in the note, “one’s eyes must always be turned”—peters out. In the drawing on the margin of the note this centre is portrayed as a wheel with eight spokes (cf. fig. 80).

79. King Sol with his six planet-sons.—Bonus, *Pretiosa margarita novella* (1546)



80. Mercurius turning the eight-spoked wheel which symbolizes the process. In one hand he holds the *telum passionis*.—“Speculum veritatis” (MS., 17th cent.)

23. DREAM:

[212] *In the square space. The dreamer is sitting opposite the unknown woman whose portrait he is supposed to be drawing. What he draws, however, is not a face but three-leaved clovers or distorted crosses in four different colours: red, yellow, green, and blue.*

[213] In connection with this dream the dreamer spontaneously drew a circle with quarters tinted in the above colours. It was a wheel with eight spokes. In the middle there was a four-petalled blue flower. A great many drawings now followed at short intervals, all dealing with the curious structure of the “centre,” and arising from the dreamer’s need to discover a configuration that adequately expresses the nature of this centre. The drawings were based partly on visual impressions, partly on intuitive perceptions, and partly on dreams.

[214] It is to be noted that the wheel is a favourite symbol in alchemy for the circulating process, the *circulatio*. By this is meant firstly the *ascensus* and *descensus*, for instance the ascending and descending birds symbolizing the precipitation of vapours,[91] and secondly the rotation of the universe as a model for the work, and hence the cycling of the year in which the work takes place. The alchemist was not unaware of the connection between the *rotatio* and his drawings of circles. The contemporary moral allegories of the wheel emphasize that the *ascensus* and *descensus* are, among other things, God’s descent to man and man’s ascent to God. (On the authority of one of St. Bernard’s sermons: “By his descent he established for us a joyful and wholesome ascent.”[92])

Further, the wheel expresses virtues that are important for the work: *constantia, obedientia, moderatio, aequalitas*, and *humilitas*.[93] The mystical associations of the wheel play no small part in Jakob Böhme. Like the alchemists he too operates with the wheels of Ezekiel, saying: “Thus we see that the spiritual life stands turned in upon itself, and that the natural life stands turned out of and facing itself. We can then liken it to a round spherical wheel that goes on all its sides, as the wheel in Ezekiel shows.”[94] He goes on to explain: “The wheel of nature turns in upon itself from without; for God dwells within himself and has such a figure, not that it can be painted, it being only a natural likeness, the same as when God paints himself in the figure of this world; for God is everywhere entire, and so dwells in himself. Mark: the outer wheel is the zodiac with the stars, and after it come the seven planets,” etc.[95] “Albeit this figure is not fashioned sufficiently, it is nevertheless a meditation: and we could make a fine drawing of it on a great circle for the meditation of those of less understanding. Mark therefore, desire goes in upon itself to the heart, which is God,” etc. But Böhme’s wheel is also the “impression” (in alchemical terms, the *informatio*) of the eternal will. It is Mother Nature, or the “mind [*Gemüth*] of the mother, from whence she continually creates and works; and these are the stars with the planetary orb [after the model] of the eternal *astrum*, which is only a spirit, and the eternal mind in the wisdom of God, viz., the Eternal Nature, from whence the eternal spirits proceeded and entered into a creaturely being.”[96] The “property” of the wheel is *life* in the form of “four bailiffs” who “manage the dominion in the life-giving mother.” These bailiffs are the four elements “to which the wheel of the mind, viz., the *astrum*, affords will and desire; so that this whole essence is but one thing only, like the mind of a man. Even as he is in soul and body, so also is this whole essence”; for he is created in the likeness of this “whole essence.” But nature in her four elements is also a whole essence with a soul.[97] This “sulphurean wheel” is the origin of good and evil, or rather it leads into them and out of them.[98]

[215] Böhme’s mysticism is influenced by alchemy in the highest degree. Thus he says: “The form of the birth is as a turning wheel, which Mercurius causes in the sulphur.”[99] The “birth” is the “golden child” (*filius philosophorum* = archetype of the divine child[100]) whose “master-workman” is Mercurius.[101] Mercurius himself is the “fiery wheel of the essence” in the form of a serpent. Similarly the (unenlightened) soul is just “such a fiery Mercurius.” Vulcan kindles the fiery wheel of the essence in the soul when it “breaks off” from

God; whence come desire and sin, which are the "wrath of God." The soul is then a "worm" like the "fiery serpent," a "larva" and a "monster."[102]

[216] The interpretation of the wheel in Böhme reveals something of the mystical secret of alchemy and is thus of considerable importance in this respect as well as from the psychological point of view: the wheel appears here as a concept for wholeness which represents the essence of mandala symbolism and therefore includes the *mysterium iniquitatis*.

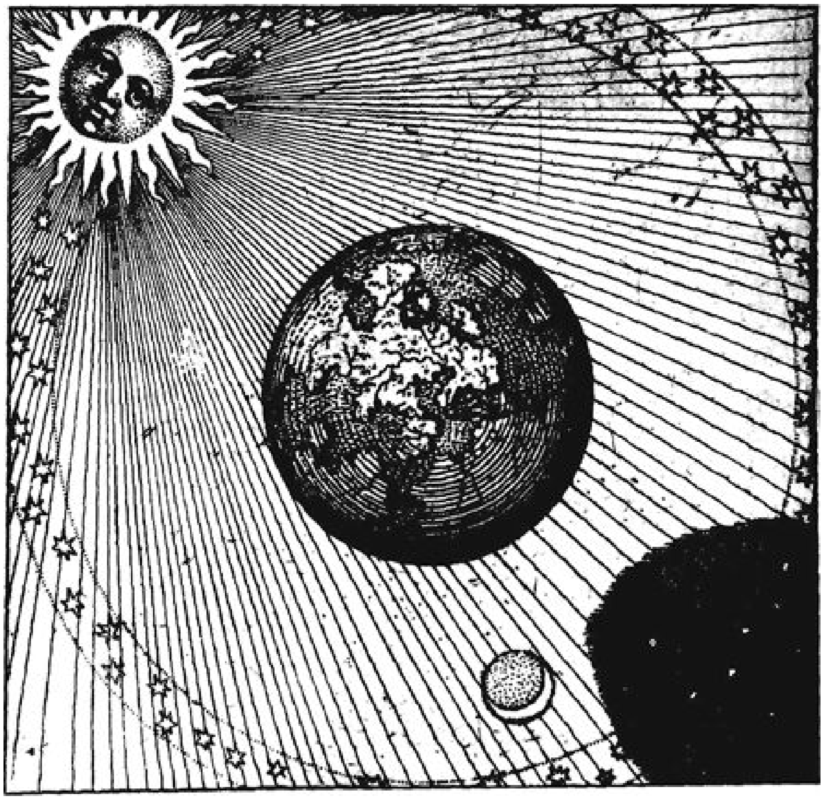
[217] The idea of the "centre," which the unconscious has been repeatedly thrusting upon the conscious mind of the dreamer, is beginning to gain foothold there and to exercise a peculiar fascination. The next drawing is again of the blue flower (cf. fig. 85), but this time subdivided into eight; then follow pictures of four mountains round a lake in a crater, also of a red ring lying on the ground with a withered tree standing in it, round which a green snake (cf. fig. 13) creeps up with a leftward movement.

[218] The layman may be rather puzzled by the serious attention devoted to this problem. But a little knowledge of yoga and of the medieval philosophy of the *lapis* would help him to understand. As we have already said, the squaring of the circle was one of the methods for producing the *lapis;* another was the use of *imaginatio*, as the following text unmistakably proves:

> And take care that thy door be well and firmly closed, so that he who is within cannot escape, and—God willing—thou wilt reach the goal. Nature performeth her operations gradually; and indeed I would have thee do the same: let thy imagination be guided wholly by nature. And observe according to nature, through whom the substances regenerate themselves in the bowels of the earth. And imagine this with true and not with fantastic imagination.[103]

[219] The *vas bene clausum* (well-sealed vessel) is a precautionary measure very frequently mentioned in alchemy, and is the equivalent of the magic circle. In both cases the idea is to protect what is within from the intrusion and admixture of what is without, as well as to prevent it from escaping.[104] The *imaginatio* is to be understood here as the real and literal power to create images (*Einbildungskraft* = imagination)—the classical use of the word in contrast to *phantasia*, which means a mere "conceit" in the sense of insubstantial thought. In the *Satyricon* this connotation is more pointed still: *phantasia* means something ridiculous.[105] *Imaginatio* is the active evocation of (inner) images *secundum naturam*, an authentic feat of thought or ideation, which does not spin aimless and groundless fantasies "into the blue"—does not, that is to say, just

play with its objects, but tries to grasp the inner facts and portray them in images true to their nature. This activity is an *opus*, a work. And we cannot call the manner in which the dreamer handles the objects of his inner experience anything but true work, considering how conscientiously, accurately, and carefully he records and elaborates the content now pushing its way into consciousness. The resemblance to the *opus* is obvious enough to anyone familiar with alchemy. Moreover the analogy is borne out by the dreams themselves, as dream 24 will show.

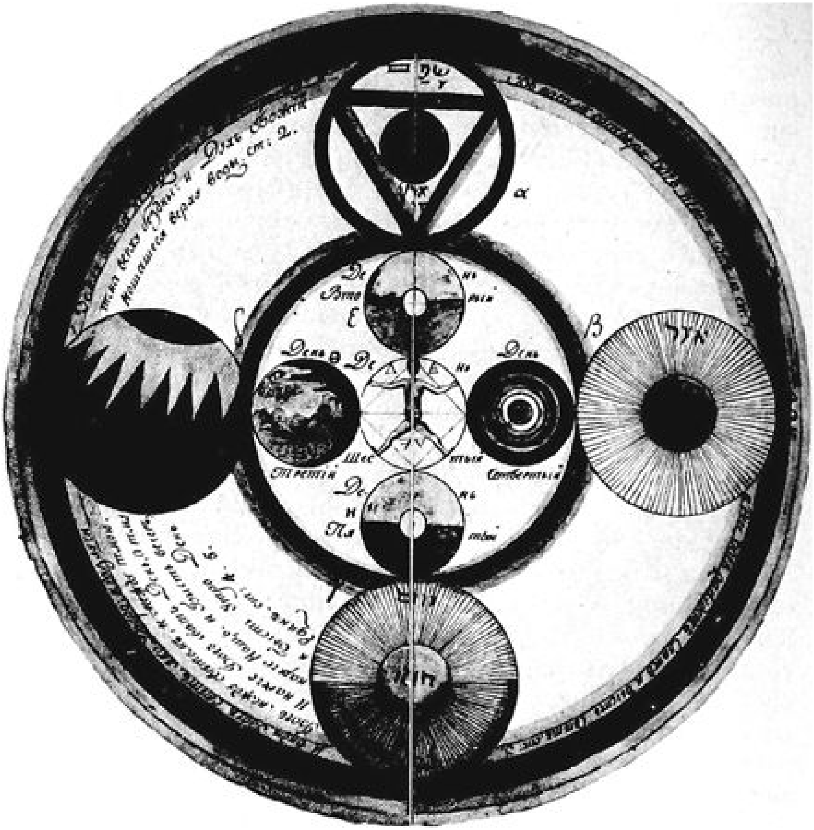


81. "Sol et eius umbra." The earth is midway between light and darkness.—Maier, *Scrutinium chymicum* (1687)

[220] The present dream, from which the above-mentioned drawings originated, shows no signs of the "left" having been in any way "throttled." On the contrary, the dreamer finds himself once more in the *temenos* facing the unknown woman who personifies the fourth or "inferior" function.[106] His drawing of the wheel with a four-petalled blue flower in the middle was anticipated by the dream: what the dream represents in personified form the dreamer reproduces as an abstract ideogram. This might well be a hint that the *meaning* of the personification could also be represented in quite another form. This "other form" (three-leaved clover, distorted cross) refers back to the ace of clubs in dream 16 of the first series (par. 97), where we pointed out its analogy

with the irregular cross. The analogy is confirmed here. In this dream, however, the symbol of the Christian Trinity has been overshadowed or “coloured” by the alchemical quaternity. The colours appear as a concretization of the *tetraktys*. The *Rosarium* quotes a similar statement from the “Tractatus aureus”: “Vultur[107] … clamat voce magna, inquiens: Ego sum albus niger et rubeus citrinus”[108] (The vulture … exclaims in a loud voice: I am the white black and the red yellow). On the other hand it is stressed that the *lapis* unites *omnes colores* in itself. We can thus take it that the quaternity represented by the colours is a kind of preliminary stage of the *lapis*. This is confirmed by the *Rosarium:* “Our stone is from the four elements.”[109] (Cf. figs. 64, 82, 117.) The same applies to the *aurum philosophicum:* “In the gold the four elements are contained in equal proportions.”[110] The fact is that the four colours in the dream represent the transition from trinity to quaternity and thus to the squared circle (figs. 59, 60), which, according to the alchemists, comes nearest to the *lapis* on account of its roundness or perfect simplicity. For this reason a recipe for the preparation of the *lapis*, attributed to Raymundus, says:

> Take of the body that is most simple and round, and do not take of the triangle or quadrangle but of the round, for the round is nearer to simplicity than the triangle. Hence it is to be noted that a simple body has no corners, for it is the first and last among the planets, like the sun among the stars.[111]



82. The Anthropos with the four elements.—Russian MS. (18th cent.)

24. DREAM:

[221] *Two people are talking about crystals, particularly about a diamond*.

[222] Here one can hardly avoid thinking of the *lapis*. In fact this dream discloses the historical background and indicates that we really are dealing with the coveted *lapis*, the “treasure hard to attain.” The dreamer’s *opus* amounts to an unconscious recapitulation of the efforts of Hermetic philosophy. (More about the diamond in dreams 37, 39, 50 below.)

25. DREAM:

[223] *It is a question of constructing a central point and making the figure symmetrical by reflection at this point*.

[224] The word “constructing” points to the synthetic character of the *opus* and also to the laborious building process that taxes the dreamer’s energy. The “symmetry” is an answer to the conflict in dream 22 (“completely throttling the left”). Each side must perfectly balance the other as its mirror-image, and this image is to fall at the “central point,” which evidently possesses the property of

reflection—it is a *vitrum*,[112] a crystal or sheet of water (cf. fig. 209). This power of reflection seems to be another allusion to the underlying idea of the *lapis*, the *aurum philosophicum*, the elixir, the *aqua nostra*, etc. (cf. fig. 265).

[225] Just as the "right" denotes the world of consciousness and its principles, so by "reflection" the picture of the world is to be turned round to the left, thus producing a corresponding world in reverse. We could equally well say: through reflection the right appears as the reverse of the left. Therefore the left seems to have as much validity as the right; in other words, the unconscious and its—for the most part unintelligible—order becomes the symmetrical counterpart of the conscious mind and its contents, although it is still not clear which of them is reflected and which reflecting (cf. fig. 55). To carry our reasoning a step further, we could regard the centre as the point of intersection of two worlds that correspond but are inverted by reflection.[113]

[226] The idea of creating a symmetry would thus indicate some kind of climax in the task of accepting the unconscious and incorporating it in a general picture of the world. The unconscious here displays a "cosmic" character.

26. DREAM:

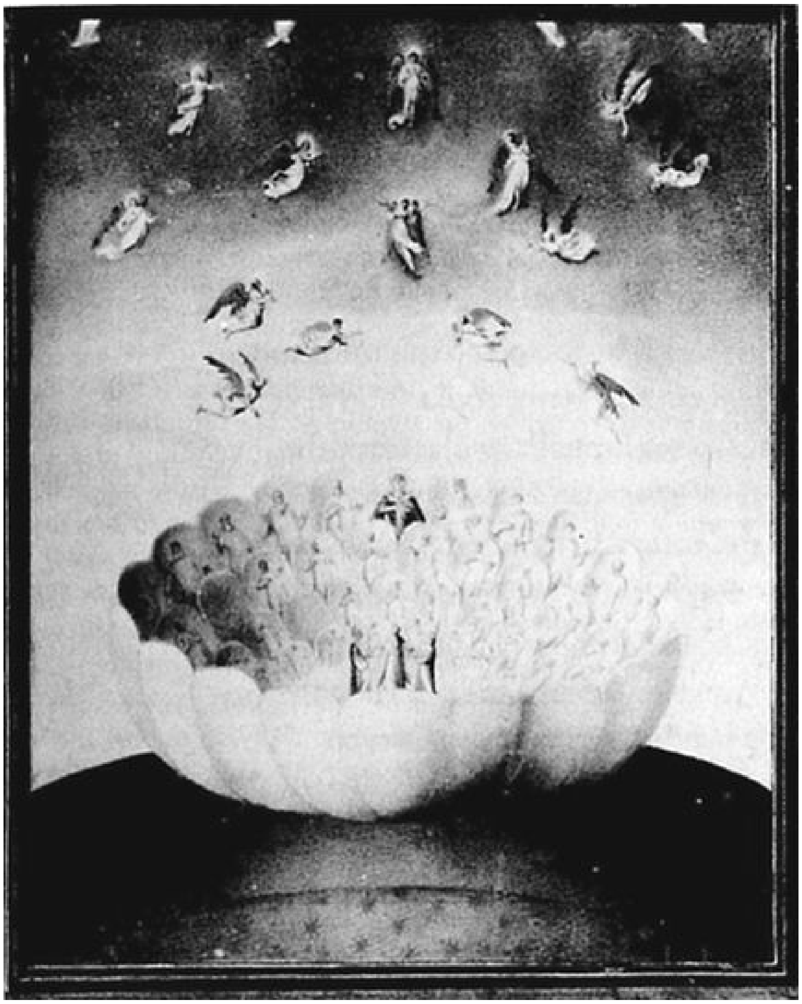
[227] *It is night, with stars in the sky. A voice says, "Now it will begin." The dreamer asks, "What will begin?" Whereupon the voice answers, "The circulation can begin." Then a shooting star falls in a curious leftward curve. The scene changes, and the dreamer is in a rather squalid night club. The proprietor, who appears to be an unscrupulous crook, is there with some bedraggled-looking girls. A quarrel starts about left and right. The dreamer then leaves and drives round the perimeter of a square in a taxi. Then he is in the bar again. The proprietor says, "What they said about left and right did not satisfy my feelings. Is there really such a thing as a left and a right side of human society?" The dreamer answers, "The existence of the left does not contradict that of the right. They both exist in everyone. The left is the mirror-image of the right. Whenever I feel it like that, as a mirror-image, I am at one with myself. There is no right and no left side to human society, but there are symmetrical and lopsided people. The lopsided are those who can fulfil only one side of themselves, either left or right. They are still in the childhood state." The proprietor says meditatively, "Now that's much better," and goes about his business.*

[228] I have given this dream in full because it is an excellent illustration of how the ideas hinted at in the last dream have been taken up by the dreamer. The

idea of symmetrical proportion has been stripped of its cosmic character and translated into psychological terms, expressed in social symbols. “Right” and “left” are used almost like political slogans.

[229] The beginning of the dream, however, is still under the cosmic aspect. The dreamer noted that the curious curve of the shooting star corresponded exactly to the line he drew when sketching the picture of the eightfold flower (cf. par. 217). The curve formed the edge of the petals. Thus the shooting star traces the outline, so to speak, of a flower that spreads over the whole starry heaven. What is now beginning is the circulation of the light.[114] This cosmic flower corresponds roughly to the rose in Dante’s *Paradiso* (fig. 83).

[230] The “cosmic” nature of an experience—as an aspect of some inner occurrence that can only be understood psychologically—is offensive and at once provokes a reaction “from below.” Evidently the cosmic aspect was too high and is compensated “downward,” so that the symmetry is no longer that of two world pictures but merely of human society, in fact of the dreamer himself. When the proprietor remarks that the latter’s psychological understanding is “much better,” he is making an estimate whose conclusion should run: “but still not good enough.”



83. Dante being led before God in the heavenly rose.—Illumination for the *Paradiso*, Canto XXXI. Codex Urbanus Latinus 365 (15th cent.)

[231] The quarrel about right and left that starts in the bar is the conflict which breaks out in the dreamer himself when he is called upon to recognize the symmetry. He cannot do this because the other side looks so suspicious that he would rather not investigate it too closely. That is the reason for the magical *circumambulatio* (driving round the square): he has to stay inside and learn to face his mirror-image without running away. He does this as best he can, though not quite as the other side would wish. Hence the somewhat chill recognition of his merits.

27. VISUAL IMPRESSION:

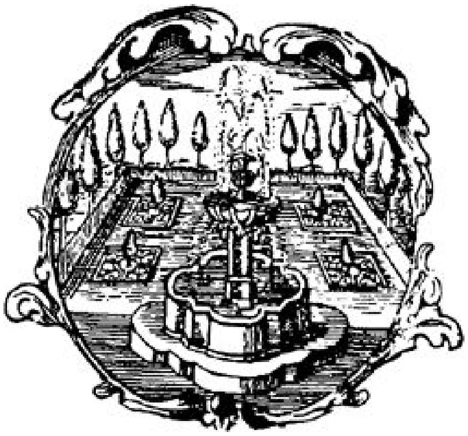
[232] *A circle with a green tree in the middle. In the circle a fierce battle is raging between savages. They do not see the tree.*

[233] Evidently the conflict between right and left has not yet ended. It continues because the savages are still in the "childhood state" and therefore, being "lopsided," only know either the left or the right but not a third that stands above the conflict.

28. Visual impression:

[234] *A circle: within it, steps lead up to a basin with a fountain inside*.

[235] When a condition is unsatisfactory because some essential aspect of the unconscious content is lacking, the unconscious process reverts to earlier symbols, as is the case here. The symbolism goes back to dream 13 (par. 154), where we met the mandala garden of the philosophers with its fountain of *aqua nostra* (fig. 84; cf. also figs. 25, 26, 56). Circle and basin emphasize the mandala, the rose of medieval symbolism.[115] The "rose garden of the philosophers" is one of alchemy's favourite symbols.[116]



84. The fountain in the walled garden, symbolizing *constantia in adversis*—a situation particularly characteristic of alchemy.—Boschius, *Symbolographia* (1702)

29. Visual impression:

[236] *A bunch of roses, then the sign* *, but it should be*. .

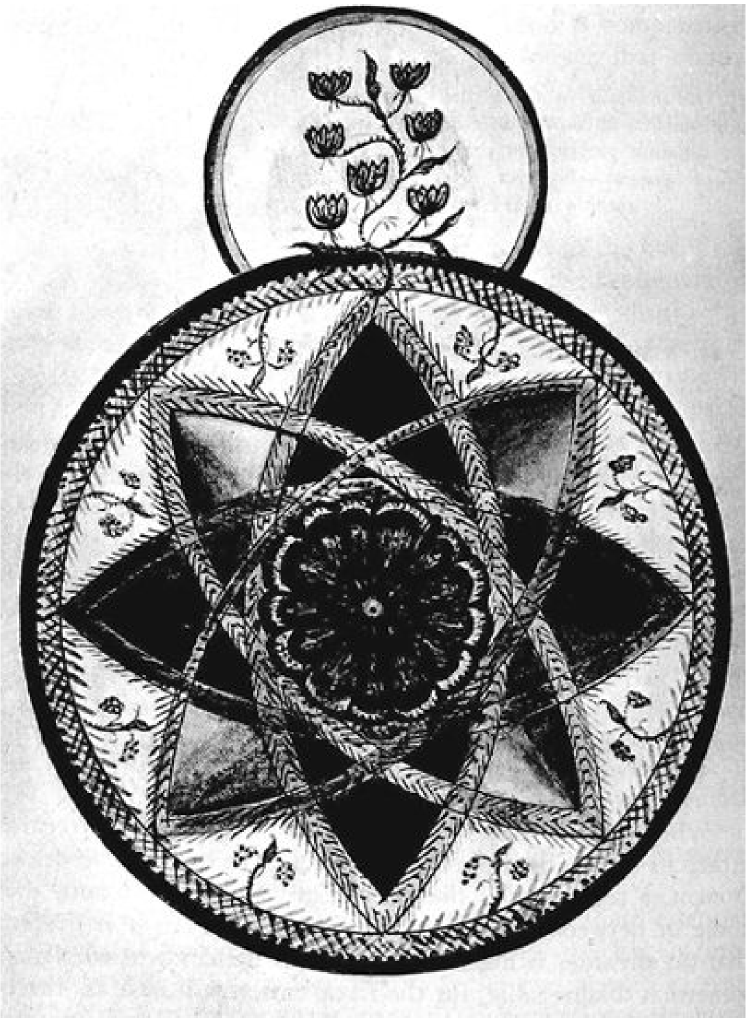
[237] A rose bouquet is like a fountain fanning out. The meaning of the first sign—possibly a tree—is not clear, whereas the correction represents the eightfold flower (fig. 85). Evidently a mistake is being corrected which somehow impaired the wholeness of the rose. The aim of the reconstruction is to bring the problem of the mandala—the correct valuation and interpretation of the "centre"—once more into the field of consciousness.

30. DREAM:

[238] *The dreamer is sitting at a round table with the dark unknown woman*.

[239] Whenever a process has reached a culmination as regards either its clarity or the wealth of inferences that can be drawn from it, a regression is likely to ensue. From the dreams that come in between the ones we have quoted here it is evident that the dreamer is finding the insistent demands of wholeness somewhat disagreeable; for their realization will have far-reaching practical consequences, whose personal nature, however, lies outside the scope of our study.

[240] The round table again points to the circle of wholeness, and the anima comes in as representative of the fourth function, especially in her "dark" aspect, which always makes itself felt when something is becoming concrete, i.e., when it has to be translated, or threatens to translate itself, into reality. "Dark" means chthonic, i.e., concrete and earthy. This is also the source of the fear that causes the regression.[117]



85. The eight-petalled flower as the eighth or the first of seven.—“Recueil de figures astrologiques” (MS., 18th cent.)

31. DREAM:

[241] *The dreamer is sitting with a certain man of unpleasant aspect at a round table. On it stands a glass filled with a gelatinous mass*.

[242] This dream is an advance on the last in that the dreamer has accepted the “dark” as his own darkness, to the extent of producing a real “shadow” belonging to him personally.[118] The anima is thus relieved of the moral inferiority projected upon her and can take up the living and creative function[119] which is properly her own. This is represented by the glass with its peculiar contents which we, like the dreamer, may compare with the undifferentiated “life-mass” in dream 18 (par. 183). It was then a question of the gradual transformation of primitive animality into something human. So we may expect

something of the sort here, for it seems as if the spiral of inner development had come round to the same point again, though higher up.

86. The alchemical apparatus for distillation, the *unum vas*, with the serpents of the (double) Mercurius.—Kelley, *Tractatus de Lapide philosophorum* (1676)

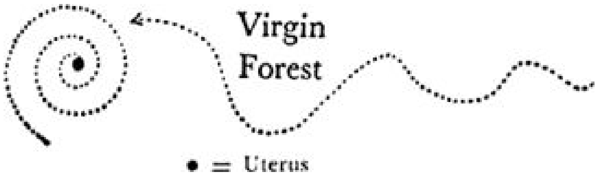
[243] The glass corresponds to the *unum vas* of alchemy (fig. 86) and its contents to the living, semi-organic mixture from which the body of the *lapis*, endowed with spirit and life, will emerge—or possibly that strange Faustian figure who bursts into flame three times: the Boy Charioteer, the Homunculus who is dashed against the throne of Galatea, and Euphorion (all symbolizing a dissolution of the "centre" into its unconscious elements). We know that the *lapis* is not just a "stone" since it is expressly stated to be composed "de re animali, vegetabili et minerali," and to consist of body, soul, and spirit;[120] moreover, it grows from flesh and blood.[121] For which reason the philosopher (Hermes in the "Tabula smaragdina") says: "The wind hath carried it in his belly" (fig. 210). Therefore "wind is air, air is life, and life is soul." "The stone is that thing midway between perfect and imperfect bodies, and that which nature herself begins is brought to perfection through the art."[122] The stone "is named the stone of invisibility" (*lapis invisibilitatis*).[123]

[244] The dream takes up the question of giving the centre life and reality—giving birth to it, so to speak. That this birth can issue from an amorphous mass has its parallel in the alchemical idea of the *prima materia* as a chaotic *massa informis* impregnated by the seeds of life (figs. 162, 163). As we have seen, the qualities of gum arabic and glue are attributed to it, or again it is called *viscosa* and *unctuosa*. (In Paracelsus the "Nostoc" is the arcane substance.) Although modern conceptions of nutrient soil, jelly-like growths, etc., underlie the dreamer's "gelatinous mass," the atavistic associations with far older alchemical ideas still persist, and these, although not consciously present, nevertheless exert a powerful unconscious influence on the choice of symbols.

87. The Virgin as the *vas* of the divine child.—From a Venetian *Rosario dela gloriosa vergine Maria* (1524)

32. DREAM:

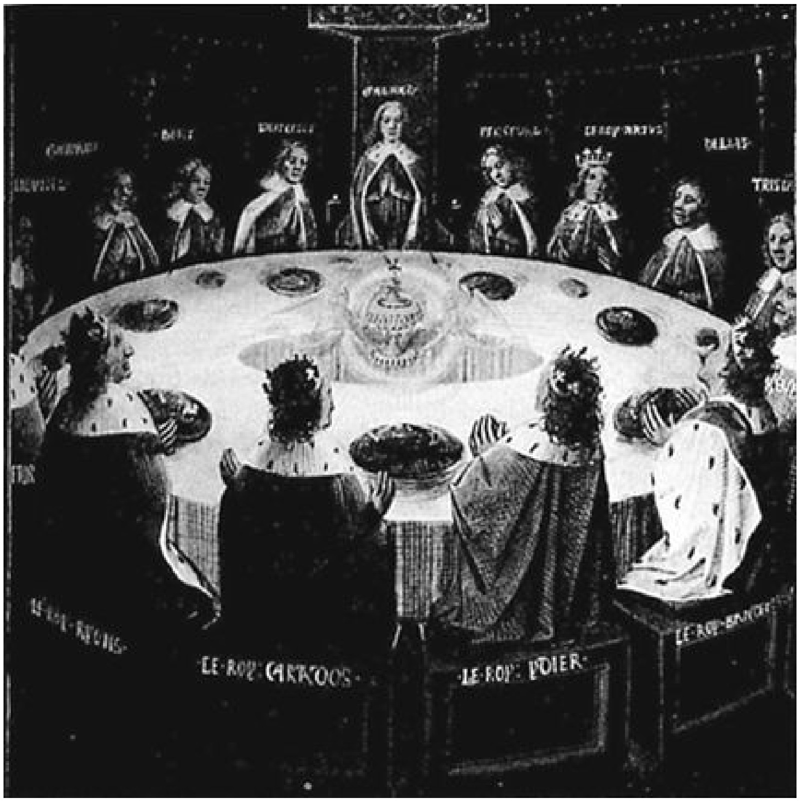
[245] *The dreamer receives a letter from an unknown woman. She writes that she has pains in the uterus. A drawing is attached to the letter, looking roughly like this:*[124]



In the primeval forest there are swarms of monkeys. Then a panorama of white glaciers opens out.

[246] The anima reports that there are painful processes going on in the life-creating centre, which in this case is no longer the "glass" containing the life-mass but a point designated as a "uterus," to be reached—so the spiral suggests—by means of a *circumambulatio*. At all events the spiral emphasizes the centre and hence the uterus, which is a synonym frequently employed for the alchemical vessel, just as it is one of the basic meanings of the Eastern mandala.[125] The serpentine line leading to the vessel is analogous to the healing serpent of Aesculapius (figs. 203, 204) and also to the Tantric symbol of *Shiva*

bindu the creative, latent god without extension in space who, in the form of a point or *lingam*, is encircled three and a half times by the Kundalini serpent.[126] With the primeval forest we meet the animal or ape motif again, which appeared before in vision 22 of the first series (par. 117) and in dreams 16 and 18 of this (pars. 164, 183). In vision 22 it led to the announcement that “everything must be ruled by the light” and, in dream 18, to the “transfigured” head. Similarly the present dream ends with a panorama of white “glaciers,” reminding the dreamer of an earlier dream (not included here) in which he beheld the Milky Way and was having a conversation about immortality. Thus the glacier symbol is a bridge leading back again to the cosmic aspect that caused the regression. But, as is nearly always the case, the earlier content does not return in its first simple guise—it brings a new complication with it, which, though it might have been expected logically, is no less repugnant to the intellectual consciousness than the cosmic aspect was. The complication is the memory of the conversation about immortality. This theme was already hinted at in dream 9 (par. 134), with its pendulum clock, a *perpetuum mobile*. Immortality is a clock that never runs down, a mandala that revolves eternally like the heavens. Thus the cosmic aspect returns with interest and compound interest. This might easily prove too much for the dreamer, for the “scientific” stomach has very limited powers of digestion.



88. Vision of the Holy Grail.—“Roman de Lancelot du lac” (MS., Paris, 15th cent.)

[247] The unconscious does indeed put forth a bewildering profusion of semblances for that obscure thing we call the mandala or “self.” It almost seems as if we were ready to go on dreaming in the unconscious the age-old dream of alchemy, and to continue to pile new synonyms on top of the old, only to know as much or as little about it in the end as the ancients themselves. I will not enlarge upon what the *lapis* meant to our forefathers, and what the mandala still means to the Lamaist and Tantrist, Aztec and Pueblo Indian, the “golden pill”[127] to the Taoist, and the “golden seed” to the Hindu. We know the texts that give us a vivid idea of all this. But what does it mean when the unconscious stubbornly persists in presenting such abstruse symbolisms to a cultured European? The only point of view I can apply here is a psychological one. (There may be others with which I am not familiar.) From this point of view, as it seems to me, everything that can be grouped together under the general concept “mandala” expresses the essence of a certain kind of *attitude*. The known attitudes of the conscious mind have definable aims and purposes. But a man’s attitude towards the self is the only one that has no definable aim and no visible purpose. It is easy enough to say “self,” but exactly what have we said? That remains shrouded in “metaphysical” darkness. I may define “self” as the totality of the conscious and unconscious psyche, but this totality transcends our vision; it is a veritable *lapis invisibilitatis*. In so far as the unconscious exists it is not definable; its existence is a mere postulate and nothing whatever can be predicated as to its possible contents. The totality can only be experienced in its parts and then only in so far as these are contents of consciousness; but *qua* totality it necessarily transcends consciousness. Consequently the “self” is a pure borderline concept similar to Kant’s *Ding an sich*. True, it is a concept that grows steadily clearer with experience—as our dreams show—without, however, losing anything of its transcendence. Since we cannot possibly know the boundaries of something unknown to us, it follows that we are not in a position to set any bounds to the self. It would be wildly arbitrary and therefore unscientific to restrict the self to the limits of the individual psyche, quite apart from the fundamental fact that we have not the least knowledge of these limits, seeing that they also lie in the unconscious. We may be able to indicate the limits of consciousness, but the unconscious is simply the unknown psyche and for that very reason illimitable because indeterminable. Such being the case, we should not be in the least surprised if the empirical manifestations of unconscious contents bear all the marks of something illimitable, something not determined by space and time. This quality is numinous and therefore alarming,

above all to a cautious mind that knows the value of precisely delimited concepts. One is glad not to be a philosopher or theologian and so under no obligation to meet such numina professionally. It is all the worse when it becomes increasingly clear that numina are psychic *entia* that force themselves upon consciousness, since night after night our dreams practise philosophy on their own account. What is more, when we attempt to give these numina the slip and angrily reject the alchemical gold which the unconscious offers, things do in fact go badly with us, we may even develop symptoms in defiance of all reason, but the moment we face up to the stumbling-block and make it—if only hypothetically—the cornerstone, the symptoms vanish and we feel "unaccountably" well. In this dilemma we can at least comfort ourselves with the reflection that the unconscious is a necessary evil which must be reckoned with, and that it would therefore be wiser to accompany it on some of its strange symbolic wanderings, even though their meaning be exceedingly questionable. It might perhaps be conducive to good health to relearn Nietzsche's "lesson of earlier humanity."

[248] The only objection I could make to such rationalistic explanations is that very often they do not stand the test of events. We can observe in these and similar cases how, over the years, the entelechy of the self becomes so insistent that consciousness has to rise to still greater feats if it is to keep pace with the unconscious.

[249] All that can be ascertained at present about the symbolism of the mandala is that it portrays an autonomous psychic fact, characterized by a phenomenology which is always repeating itself and is everywhere the same. It seems to be a sort of atomic nucleus about whose innermost structure and ultimate meaning we know nothing. We can also regard it as the actual—i.e., effective—reflection of a conscious attitude that can state neither its aim nor its purpose and, because of this failure, projects its activity entirely upon the virtual centre of the mandala.[128] The compelling force necessary for this projection always lies in some situation where the individual no longer knows how to help himself in any other way. That the mandala is merely a psychological reflex is, however, contradicted firstly by the autonomous nature of this symbol, which sometimes manifests itself with overwhelming spontaneity in dreams and visions, and secondly by the autonomous nature of the unconscious as such, which is not only the original form of everything psychic but also the condition we pass through in early childhood and to which we return every night. There is no evidence for the assertion that the activity of the psyche is merely reactive or reflex. This is at best a biological working hypothesis of limited validity. When

raised to a universal truth it is nothing but a materialistic myth, for it overlooks the creative capacity of the psyche, which—whether we like it or not—exists, and in face of which all so-called “causes” become mere occasions.

89. The pelican nourishing its young with its own blood, an allegory of Christ.—Boschius, *Symbolographia* (1702)

33. DREAM:

[250] *A battle among savages, in which bestial cruelties are perpetrated.*

[251] As was to be foreseen, the new complication (“immortality”) has started a furious conflict, which makes use of the same symbols as the analogous situation in dream 27 (par. 232).

34. DREAM:

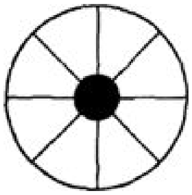
[252] *A conversation with a friend. The dreamer says, “I must carry on with the figure of the bleeding Christ before me and persevere in the work of self-redemption.”*

[253] This, like the previous dream, points to an extraordinary, subtle kind of suffering (fig. 89) caused by the breaking through of an alien spiritual world which we find very hard to accept—hence the analogy with the tragedy of Christ: “My kingdom is not of this world.” But it also shows that the dreamer is now continuing his task in deadly earnest. The reference to Christ may well have a deeper meaning than that of a mere moral reminder: we are concerned here with the process of individuation, a process which has constantly been held up to Western man in the dogmatic and religious model of the life of Christ. The accent has always fallen on the “historicity” of the Saviour’s life, and because of this its symbolical nature has remained in the dark, although the Incarnation formed a very essential part of the *symbolon* (creed). The efficacy of dogma, however, by no means rests on Christ’s unique historical reality but on its own symbolic nature, by virtue of which it expresses a more or less ubiquitous

psychological assumption quite independent of the existence of any dogma. There is thus a "pre-Christian" as well as a "non-Christian" Christ, in so far as he is an autonomous psychological fact. At any rate the doctrine of prefiguration is founded on this idea. In the case of the modern man, who has no religious assumptions at all, it is therefore only logical that the Anthropos or Poimen figure should emerge, since it is present in his own psyche (figs. 117, 195).

35. DREAM:

[254] *An actor smashes his hat against the wall, where it looks like this:*



[255] As certain material not included here shows, the "actor" refers to a definite fact in the dreamer's personal life. Up to now he had maintained a certain fiction about himself which prevented him from taking himself seriously. This fiction has become incompatible with the serious attitude he has now attained. He must give up the actor, for it was the actor in him who rejected the self. The hat refers to the first dream of all, where he put on a *stranger's* hat. The actor throws the hat against the wall, and the hat proves to be a mandala. So the "strange" hat was the self, which at that time—while he was still playing a fictitious role—seemed like a stranger to him.

36. DREAM:

[256] *The dreamer drives in a taxi to the Rathausplatz, but it is called the "Marienhof."*

[257] I mention this dream only in passing because it shows the feminine nature of the *temenos*, just as *hortus conclusus* (enclosed garden) is often used as an image for the Virgin Mary in medieval hymns, and *rosa mystica* is one of her attributes in the Litany of Loreto (cf. fig. 26).

37. DREAM:

[258] *There are curves outlined in light around a dark centre. Then the dreamer is wandering about in a dark cave, where a battle is going on between good and*

evil. But there is also a prince who knows everything. He gives the dreamer a ring set with a diamond and places it on the fourth finger of his left hand.

[259] The circulation of light that started in dream 26 reappears more clearly. Light always refers to consciousness, which at present runs only along the periphery. The centre is still dark. It is the dark cave, and to enter it is obviously to set the conflict going again. At the same time it is like the prince who stands aloof, who knows everything and is the possessor of the precious stone. The gift means nothing less than the dreamer's vow to the self—for as a rule the wedding ring is worn on the fourth finger of the left hand. True, the left is the unconscious, from which it is to be inferred that the situation is still largely shrouded in unconsciousness. The prince seems to be the representative of the *aenigma regis* (fig. 54; cf. commentary to dream 10, par. 142). The dark cave corresponds to the vessel containing the warring opposites. The self is made manifest in the opposites and in the conflict between them; it is a *coincidentia oppositorum*. Hence the way to the self begins with conflict.

38. DREAM:

[260] *A circular table with four chairs round it. Table and chairs are empty*.

[261] This dream confirms the above conjecture. The mandala is not yet "in use."

90. The bear representing the dangerous aspect of the *prima materia*.—Thomas Aquinas (pseud.), "De alchimia" (MS., 16th cent.)

39. VISUAL IMPRESSION:

[262] *The dreamer is falling into the abyss. At the bottom there is a bear whose eyes gleam alternately in four colours: red, yellow, green, and blue. Actually it has four eyes that change into four lights. The bear disappears and the dreamer goes through a long dark tunnel. Light is shimmering at the far end. A treasure is there, and on top of it the ring with the diamond. It is said that this ring will lead him on a long journey to the east*.

[263] This waking dream shows that the dreamer is still preoccupied with the dark centre. The bear stands for the chthonic element that might seize him. But then it becomes clear that the animal is only leading up to the four colours (cf. dream 23, par. 212), which in their turn lead to the *lapis*, i.e., the diamond whose prism contains all the hues of the rainbow. The way to the east probably points to the unconscious as an antipode. According to the legend the Grail-stone comes from the east and must return there again. In alchemy the bear corresponds to the *nigredo* of the *prima materia* (fig. 90), whence comes the colourful *cauda pavonis*.

40. DREAM:

[264] *Under the guidance of the unknown woman the dreamer has to discover the Pole at the risk of his life*.

[265] The Pole is the point round which everything turns—hence another symbol of the self. Alchemy also took up this analogy: "In the Pole is the heart of Mercurius, who is the true fire, wherein his master rests. When navigating over this great sea … he sets his course by the aspect of the North star."[129] Mercurius is the world-soul, and the Pole is its heart (fig. 149). The idea of the *anima mundi* (fig. 91; cf. fig. 8) coincides with that of the collective unconscious whose centre is the self. The symbol of the sea is another synonym for the unconscious.

41. VISUAL IMPRESSION:

[266] *Yellow balls rolling round to the left in a circle*.

[267] Rotation about a centre, recalling dream 21 (par. 198).

42. DREAM:

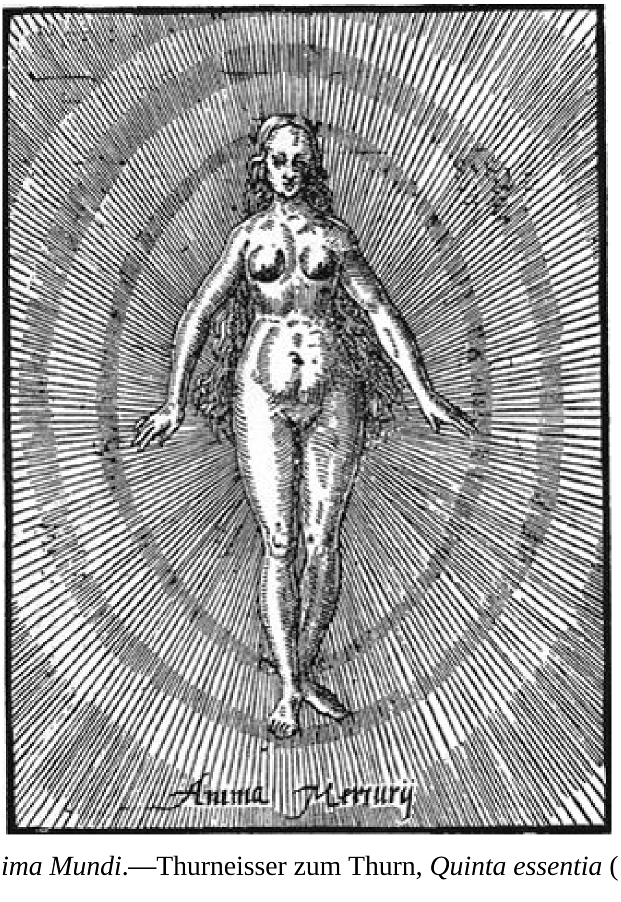
[268] *An old master points to a spot on the ground illuminated in red*.

[269] The *philosophus* shows him the “centre.” The redness may mean the dawn, like the *rubedo* in alchemy, which as a rule immediately preceded the completion of the work.

43. DREAM:

[270] *A yellow light like the sun looms through the fog, but it is murky. Eight rays go out from the centre. This is the point of penetration: the light ought to pierce through, but has not quite succeeded.*

[271] The dreamer himself observed that the point of penetration was identical with the Pole in dream 40. So it is, as we surmised, a question of the sun’s appearing, which now turns yellow. But the light is still murky, which probably means insufficient understanding. The “penetration” alludes to the need for effort in coming to a decision. In alchemy yellow (*citrinitas*) often coincides with the *rubedo*. The “gold” is yellow or reddish yellow.



91. *Anima Mundi*.—Thurneisser zum Thurn, *Quinta essentia* (1574)

44. DREAM:

[272] *The dreamer is in a square enclosure where he must keep still. It is a prison for Lilliputians (or children?). A wicked woman is in charge of them. The children start moving and begin to circulate round the periphery. The dreamer would like to run away but may not do so. One of the children turns into an animal and bites him in the calf* (fig. 118).

[273] The lack of clarity demands further efforts of concentration; hence the dreamer finds himself still in the childhood state (figs. 95, 96), hence "lopsided" (cf. dream 26, par. 227), and imprisoned in the *temenos* in the charge of a wicked mother anima. The animal appears as in dream 18 (par. 183) and he is bitten, i.e., he must expose himself and pay the price. The *circumambulatio* means, as always, concentration on the centre. He finds this state of tension almost unendurable. But he wakes up with an intense and pleasant feeling of having solved something, "as if he held the diamond in his hand." The children point to the dwarf motif, which may express Cabiric elements, i.e., it may represent unconscious formative powers (see dreams 56ff., below), or it may at the same time allude to his still childish condition.

45. DREAM:

[274] *A parade ground with troops. They are not equipping themselves for war but form an eight-rayed star rotating to the left.*

[275] The essential point here is that the conflict seems to be overcome. The star is not in the sky and not a diamond, but a configuration on the earth formed by human beings.

46. DREAM:

[276] *The dreamer is imprisoned in the square enclosure. Lions and a wicked sorceress appear*.

[277] He cannot get out of the chthonic prison because he is not yet ready to do something that he should. (This is an important personal matter, a duty even, and the cause of much misgiving.) Lions, like all wild animals, indicate latent affects. The lion plays an important part in alchemy and has much the same meaning. It is a "fiery" animal, an emblem of the devil, and stands for the danger of being swallowed by the unconscious.

47. DREAM:

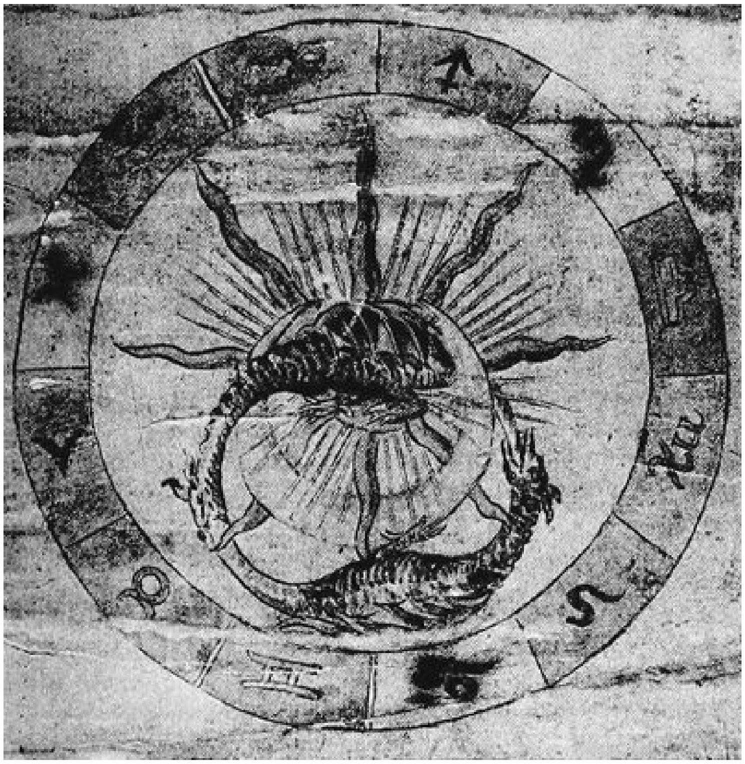
[278] *The wise old man shows the dreamer a place on the ground marked in a peculiar way*.

[279] This is probably the place on earth where the dreamer belongs if he is to realize the self (similar to dream 42).

48. DREAM:

[280] *An acquaintance wins a prize for digging up a potter's wheel*.

[281] The potter's wheel rotates on the ground (cf. dream 45) and produces earthenware ("earthly") vessels which may figuratively be called "human bodies." Being round, the wheel refers to the self and the creative activity in which it is manifest. The potter's wheel also symbolizes the recurrent theme of circulation.



92. The alchemical process in the zodiac.—"Ripley Scrowle" (MS., 1588)

49. DREAM:

[282] *A starry figure rotating. At the cardinal points of the circle there are pictures representing the seasons*.

[283] Just as the place was defined before, so now the time. Place and time are the most general and necessary elements in any definition. The determination of time and place was stressed right at the beginning (cf. dreams 7, 8, 9; pars. 130–34). A definite location in place and time is part of a man's reality. The seasons refer to the quartering of the circle which corresponds to the cycle of the year

(fig. 92). The year is a symbol of the original man[130] (figs. 99, 100, 104). The rotation motif indicates that the symbol of the circle is to be thought of not as static but as dynamic.

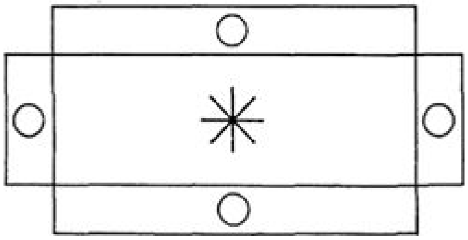
50. DREAM:

[284] *An unknown man gives the dreamer a precious stone. But he is attacked by a gang of apaches. He runs away (nightmare) and is able to escape. The unknown woman tells him afterwards that it will not always be so: sometime he will have to stand his ground and not run away.*

[285] When a definite time is added to a definite place one is rapidly approaching reality. That is the reason for the gift of the jewel, but also for the fear of decision, which robs the dreamer of the power to make up his mind.

51. DREAM:

[286] *There is a feeling of great tension. Many people are circulating round a large central oblong with four smaller oblongs on its sides. The circulation in the large oblong goes to the left and in the smaller oblongs io the right. In the middle there is the eight-rayed star. A bowl is placed in the centre of each of the smaller oblongs, containing red, yellow, green, and colourless water. The water rotates to the left. The disquieting question arises: Is there enough water?*



[287] The colours point once more to the preliminary stage. The "disquieting" question is whether there is enough water of life—*aqua nostra*, energy, libido—to reach the central star (i.e., the "core" or "kernel"; cf. next dream). The circulation in the central oblong is still going to the left, i.e., consciousness is moving towards the unconscious. The centre is therefore not yet sufficiently illuminated. The rightward circulation in the smaller oblongs, which represent the quaternity, seems to suggest that the four functions are becoming conscious. The four are generally characterized by the four colours of the rainbow. The striking fact here is that the blue is missing, and also that the square ground-plan has suddenly been abandoned. The horizontal has extended itself at the cost of the vertical. So we are dealing with a "disturbed" mandala.[131] We might

add by way of criticism that the antithetical arrangement of the functions has not yet become sufficiently conscious for their characteristic polarity to be recognized.[132] The predominance of the horizontal over the vertical indicates that the ego-consciousness is uppermost, thus entailing a loss of height and depth.

52. DREAM:

[288] *A rectangular dance hall. Everybody is going round the periphery to the left. Suddenly the order is heard: "To the kernels!" But the dreamer has first to go into the adjoining room to crack some nuts. Then the people climb down rope ladders to the water.*

[289] The time has come to press on to the "kernel" or core of the matter, but the dreamer still has a few more "hard nuts" to crack in the little rectangle (the "adjoining room"), i.e., in one of the four functions. Meanwhile the process goes on and descends to the "water." The vertical is thus lengthened, and from the incorrect oblong we again get the square which expresses the complete symmetry of conscious and unconscious with all its psychological implications.

53. DREAM:

[290] *The dreamer finds himself in an empty square room which is rotating. A voice cries, "Don't let him out. He won't pay the tax!"*

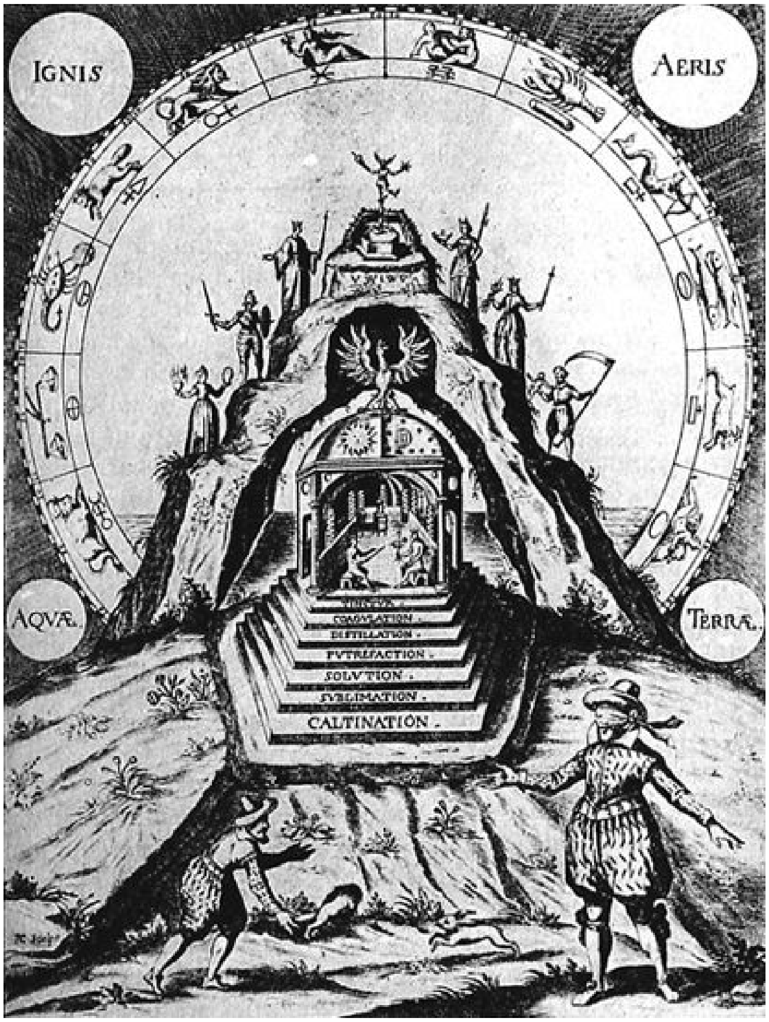
[291] This refers to the dreamer's inadequate self-realization in the personal matter already alluded to, which in this case was one of the essential conditions of individuation and therefore could not be circumvented. As was to be expected, after the preparatory emphasis on the vertical in the preceding dream, the square is now re-established. The cause of the disturbance was an underestimation of the demands of the unconscious (the vertical), which led to a flattening of the personality (recumbent oblong).

[292] After this dream the dreamer worked out six mandalas in which he tried to determine the right length of the vertical, the form of "circulation," and the distribution of colour. At the end of this work came the following dream (given unabridged):

54. DREAM:

[293] *I come to a strange, solemn house—the "House of the Gathering." Many candles are burning in the background, arranged in a peculiar pattern with four*

points running upward. Outside, at the door of the house, an old man is posted. People are going in. They say nothing and stand motionless in order to collect themselves inwardly. The man at the door says of the visitors to the house, “When they come out again they are cleansed.” I go into the house myself and find I can concentrate perfectly. Then a voice says: “What you are doing is dangerous. Religion is not a tax to be paid so that you can rid yourself of the woman’s image, for this image cannot be got rid of. Woe unto them who use religion as a substitute for another side of the soul’s life; they are in error and will be accursed. Religion is no substitute; it is to be added to the other activities of the soul as the ultimate completion. Out of the fulness of life shall you bring forth your religion; only then shall you be blessed!” While the last sentence is being spoken in ringing tones I hear distant music, simple chords on an organ. Something about it reminds me of Wagner’s Fire Music. As I leave the house I see a burning mountain and I feel: “The fire that is not put out is a holy fire” (Shaw, *St. Joan*).



93. The Mountain of the Adepts. The temple of the wise (“House of the Gathering” or of “Self-Collection”), lit by the sun and moon, stands on the seven stages, surmounted by the phoenix. The temple is hidden in the mountain—a hint that the philosophers’ stone lies buried in the earth and must be extracted and cleansed. The zodiac in the background symbolizes the duration of the *opus*, while the four elements indicate wholeness. In foreground, blindfolded man and the investigator who follows his natural instinct.—Michelspacher, *Cabala* (1654)

[294] The dreamer notes that this dream was a “powerful experience.” Indeed it has a numinous quality and we shall therefore not be far wrong if we assume that it represents a new climax of insight and understanding. The “voice” has as a rule an absolutely authoritative character and generally comes at decisive moments.

[295] The house probably corresponds to the square, which is a “gathering place” (fig. 93). The four shining points in the background again indicate the quaternity. The remark about cleansing refers to the transformative function of the taboo area. The production of wholeness, which is prevented by the “tax evasion,” naturally requires the “image of the woman,” since as anima she represents the fourth, “inferior” function, feminine because contaminated with the unconscious. In what sense the “tax” is to be paid depends on the nature of the inferior function and its auxiliary, and also on the attitude type.[133] The payment can be either concrete or symbolic, but the conscious mind is not qualified to decide which form is valid.

[296] The dream’s view that religion may not be a substitute for “another side of the soul’s life” will certainly strike many people as a radical innovation. According to it, religion is equated with wholeness; it even appears as the expression of the integration of the self in the “fulness of life.”

[297] The faint echo of the Fire Music—the Loki motif—is not out of key, for what does “fulness of life” mean? What does “wholeness” mean? I feel that there is every reason here for some anxiety, since man as a whole being casts a shadow. The fourth was not separated from the three and banished to the kingdom of everlasting fire for nothing. Does not an uncanonical saying of our Lord declare: “Whoso is near unto me is near unto the fire”?[134] (Cf. fig. 58.) Such dire ambiguities are not meant for grown-up children—which is why Heraclitus of old was named “the dark,” because he spoke too plainly and called life itself an “ever-living fire.” And that is why there are uncanonical sayings for those that have ears to hear.

94. Etna: “gelat et ardet,”.—Boschius, *Symbolographia* (1702)

[298] The theme of the Fire Mountain (fig. 94) is to be met with in the Book of Enoch.[135] Enoch sees the seven stars chained “like great mountains and burning with fire” at the angels’ place of punishment. Originally the seven stars were the seven great Babylonian gods, but at the time of Enoch’s revelation they had become the seven Archons, rulers of “this world,” fallen angels condemned to punishment. In contrast to this menacing theme there is an allusion to the miracles of Jehovah on Mount Sinai, while according to other sources the number seven is by no means sinister, since it is on the seventh mountain of the western land that the tree with the life-giving fruit is to be found, i.e., the *arbor sapientiae* (cf. fig. 188).[136]

55. DREAM:

[299] *A silver bowl with four cracked nuts at the cardinal points*.

[300] This dream shows that some of the problems in dream 52 have been settled, though the settlement is not complete. The dreamer pictured the goal that has now been attained as a circle divided into four, with the quadrants painted in the four colours. The circulation is to the left. Though this satisfies the demands of symmetry, the polarity of the functions is still unrecognized—despite the last, very illuminating dream—because, in the painting, red and blue, green and yellow, are side by side instead of opposite one another. From this we must conclude that the “realization” is meeting with strong inner resistances, partly of a philosophical and partly of an ethical nature, the justification for which cannot lightly be set aside. That the dreamer has an inadequate understanding of the polarity is shown by the fact that the nuts have still to be cracked in reality, and also that they are all alike, i.e., not yet differentiated.

95. *Ludus puerorum*—Trismosin, “Splendor solis” (MS., 1582)

96. Pygmies (helpful child-gods).—Fragments of an Egyptian mechanical toy

56. DREAM:

[301] *Four children are carrying a large dark ring. They move in a circle. The dark unknown woman appears and says she will come again, for it is the festival of the solstice*.

[302] In this dream the elements of dream 44 come together again: the children and the dark woman, who was a wicked witch before. The "solstice" indicates the turning-point. In alchemy the work is completed in the autumn (*Vindemia Hermetis*). Children (fig. 95), dwarf-gods, bring the ring—i.e., the symbol of wholeness is still under the sway of childlike creative powers. Note that children also play a part in the *opus alchymicum:* a certain portion of the work is called *ludus puerorum*. Save for the remark that the work is as easy as "child's play," I have found no explanation for this. Seeing that the work is, in the unanimous testimony of all the adepts, exceedingly difficult, it must be a euphemistic and probably also a symbolical definition. It would thus point to a co-operation on the part of "infantile" or unconscious forces represented as Cabiri and hobgoblins (homunculi: fig. 96).

97. The “Grand Peregrination” by ship. Two eagles fly round the earth in opposite directions, indicating that it is an odyssey in search of wholeness.—Maier, *Viatorium* (1651)

98. The philosophical egg, whence the double eagle is hatched, wearing the spiritual and temporal crowns.—Codex Palatinus Latinus 412 (15th cent.)

57. VISUAL IMPRESSION:

[303] *The dark ring, with an egg in the middle.*

58. VISUAL IMPRESSION:

[304] *A black eagle comes out of the egg and seizes in its beak the ring, now turned to gold. Then the dreamer is on a ship and the bird flies ahead.*

[305] The eagle signifies height. (Previously the stress was on depth: people descending to the water.) It seizes the whole mandala and, with it, control of the dreamer, who, carried along on a ship, sails after the bird (fig. 97). Birds are thoughts and the flight of thought. Generally it is fantasies and intuitive ideas that are represented thus (the winged Mercurius, Morpheus, genii, angels). The ship is the vehicle that bears the dreamer over the sea and the depths of the

unconscious. As a man-made thing it has the significance of a system or method (or a way: cf. Hinayana and Mahayana = the Lesser and Greater Vehicle, the two schools of Buddhism). The flight of thought goes ahead and methodical elaboration follows after. Man cannot walk the rainbow bridge like a god but must go underneath with whatever reflective afterthoughts he may have. The eagle—synonymous with phoenix, vulture, raven—is a well-known alchemical symbol. Even the *lapis*, the *rebis* (compounded of two parts and therefore frequently hermaphroditic as an amalgam of Sol and Luna), is often represented with wings (figs. 22, 54, 208), denoting intuition or spiritual (winged) potentiality. In the last resort all these symbols depict the consciousness-transcending fact we call the self. This visual impression is rather like a snapshot of an evolving process as it leads on to the next stage.

[306] In alchemy the egg stands for the chaos apprehended by the artifex, the *prima materia* containing the captive world-soul. Out of the egg—symbolized by the round cooking-vessel—will rise the eagle or phoenix, the liberated soul, which is ultimately identical with the Anthropos who was imprisoned in the embrace of Physis (fig. 98).

99. Time-symbol of the *lapis:* the cross and the evangelical emblems mark its analogy with Christ.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

III. THE VISION OF THE WORLD CLOCK

59. The “Great Vision”:[137]

[307] *There is a vertical and a horizontal circle, having a common centre. This is the world clock. It is supported by the black bird.*

The vertical circle is a blue disc with a white border divided into 4 × 8 = 32 partitions. A pointer rotates upon it.

The horizontal circle consists of four colours. On it stand four little men with pendulums, and round about it is laid the ring that was once dark and is now golden (*formerly carried by the children*).

The “clock” has three rhythms or pulses:

1. The small pulse:	*the pointer on the blue vertical disc advances by 1/32.*
2. The middle pulse:	*one complete revolution of the pointer. At the same time the horizontal cir advances by 1/32.*
3. *The great pulse:*	32 *middle pulses are equal to one revolution of the golden ring.*

[308] This remarkable vision made a deep and lasting impression on the dreamer, an impression of “the most sublime harmony,” as he himself puts it. The world clock may well be the “severe image” which is identical with the Cabiri, i.e., the four children or four little men with the pendulums. It is a three-dimensional mandala—a mandala in bodily form signifying realization. (Unfortunately medical discretion prevents my giving the biographical details. It must suffice to say that this realization did actually take place.) Whatever a man does in reality he himself becomes.

[309] Just why the vision of this curious figure should produce an impression of “the most sublime harmony” is, in one sense, very difficult to understand; but it becomes comprehensible enough as soon as we consider the comparative historical material. It is difficult to feel our way into the matter because the meaning of the image is exceedingly obscure. If the meaning is impenetrable and the form and colour take no account of aesthetic requirements, then neither our understanding nor our sense of beauty is satisfied, and we are at a loss to see why it should give rise to the impression of “the most sublime harmony.” We can only venture the hypothesis that disparate and incongruous elements have combined here in the most fortunate way, simultaneously producing an image which realizes the “intentions” of the unconscious in the highest degree. We

must therefore assume that the image is a singularly happy expression for an otherwise unknowable psychic fact which has so far only been able to manifest apparently disconnected aspects of itself.

[310] The impression is indeed extremely abstract. One of the underlying ideas seems to be the intersection of two heterogeneous systems by the sharing of a common centre. Hence if we start as before from the assumption that the centre and its periphery represent the totality of the psyche and consequently the self, then the figure tells us that two heterogeneous systems intersect in the self, standing to one another in a functional relationship that is governed by law and regulated by “three rhythms.” The self is by definition the centre and the circumference of the conscious and unconscious systems. But the regulation of their functions by three rhythms is something that I cannot substantiate. I do not know what the three rhythms allude to. But I do not doubt for a moment that the allusion is amply justified. The only analogy I could adduce would be the three *regimina* mentioned in the Introduction (par. 31), by which the four elements are converted into one another or synthesized in the quintessence:

1st	*regimen:*” :	earth to water.
2nd	” :	water to air.
3rd		air to fire.

[311] We shall hardly be mistaken if we assume that our mandala aspires to the most complete union of opposites that is possible, including that of the masculine trinity and the feminine quaternity on the analogy of the alchemical hermaphrodite.

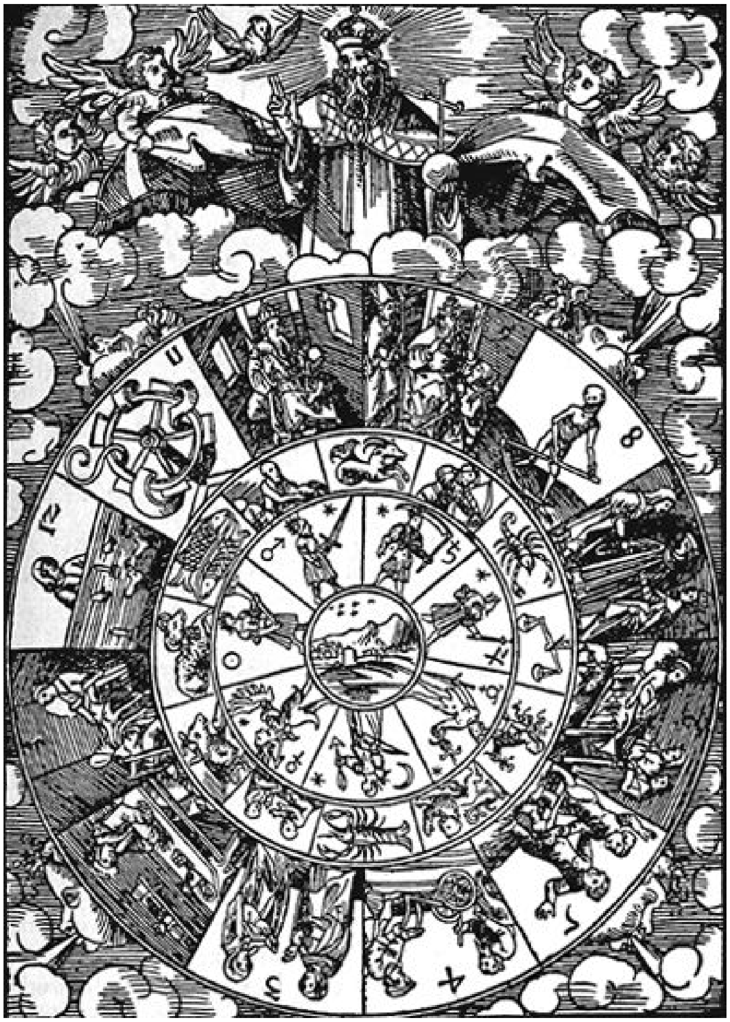
[312] Since the figure has a cosmic aspect—world clock—we must suppose it to be a small-scale model or perhaps even a source of space-time, or at any rate an embodiment of it and therefore, mathematically speaking, four-dimensional in nature although only visible in a three-dimensional projection. I do not wish to labour this argument, for such an interpretation lies beyond my powers of proof.

[313] The thirty-two pulses may conceivably derive from the multiplication of 4 × 8, as we know from experience that the quaternity found at the centre of a mandala often becomes 8, 16, 32, or more when extended to the periphery. The number 32 plays an important role in the Cabala. Thus we read in the *Sepher Yetsirah* (1 : 1): “Jehovah, the Lord of Hosts, the God of Israel, the living God and King of the world … has graven his name in thirty-two mysterious paths of wisdom.” These consist of “ten self-contained numbers [*Sephiroth*] and twenty-two basic letters” (1 : 2). The meaning of the ten numbers is as follows: “1: the

spirit of the Living God; 2: spirit from spirit; 3: water from spirit; 4: fire from water; 5–10: height, depth, East, West, South, North."[138] Cornelius Agrippa mentions that "the learned Jews attribute the number 32 to Wisdom, for so many are the ways of Wisdom described by Abram."[139] Franck establishes a connection between 32 and the cabalistic trinity, Kether, Binah, and Hokhmah: "These three persons contain and unite in themselves everything that exists, and they in turn are united in the White Head, the Ancient of Days, for he is everything and everything is he. Sometimes he is represented with three heads which make but a single head, and sometimes he is likened to the brain which, without impairing its unity, divides into three parts and spreads through the whole body by means of thirty-two pairs of nerves, just as God spreads through the universe along thirty-two miraculous paths."[140] These thirty-two "canales occulti" are also mentioned by Knorr von Rosenroth,[141] who calls Hokhmah "the supreme path of all, embracing all," on the authority of Job 28 : 7 (A.V.): "There is a path which no fowl knoweth, and which the vulture's eye hath not seen." Allendy, in his very valuable account of number symbolism, writes: "32 … is the differentiation which appears in the organic world; not creative generation, but rather the plan and arrangement of the various forms of created things which the creator has modelled—as the product of 8 × 4. …"[142] Whether the cabalistic number 32 can be equated with the thirty-two fortunate signs (*mahavyanjana*) of the Buddha-child is doubtful.

[314] As to the interpretation based on comparative historical material, we are in a more favourable position, at least as regards the general aspects of the figure. We have at our disposal, firstly, the whole mandala symbolism of three continents, and secondly, the specific time symbolism of the mandala as this developed under the influence of astrology, particularly in the West. The horoscope (fig. 100) is itself a mandala (a clock) with a dark centre, and a leftward *circumambulatio* with "houses" and planetary phases. The mandalas of ecclesiastical art, particularly those on the floor before the high altar or beneath the transept, make frequent use of the zodiacal beasts or the yearly seasons. A related idea is the identity of Christ with the Church calendar, of which he is the fixed pole and the life. The Son of Man is an anticipation of the idea of the self (fig. 99): hence the Gnostic adulteration of Christ with the other synonyms for the self among the Naassenes, recorded by Hippolytus. There is also a connection with the symbolism of Horus: on the one hand, Christ enthroned with the four emblems of the evangelists—three animals and an angel (fig. 101); on the other, Father Horus with his four sons, or Osiris with the four sons

of Horus[143] (fig. 102). Horus is also the ἣλιος ἀνατολῆς (rising sun),[144] and Christ was still worshipped as such by the early Christians.



100. Horoscope, showing the houses, zodiac, and planets.—Woodcut by Erhard Schoen for the nativity calendar of Leonhard Reymann (1515)

101. Christ in the mandorla, surrounded by the symbols of the four evangelists.—Mural painting, church of Saint-Jacques-des-Guérets, Loir-et-Cher, France

102. Osiris, with the four sons of Horus on the lotus.—*The Book of the Dead*

[315] We find a remarkable parallel in the writings of Guillaume de Digulleville, prior of the Cistercian monastery at Châlis, a Norman poet who, independently of Dante, composed three "pélerinages" between 1330 and 1355: *Les Pélerinages de la vie humaine, de l'âme,* and *de Jésus Christ.*[145] The last canto of the *Pélerinage de l'âme* contains a vision of Paradise, which consists of seven large spheres each containing seven smaller spheres.[146] All the spheres rotate, and this movement is called a *siècle* (*saeculum*). The heavenly *siècles* are the prototypes of the earthly centuries. The angel who guides the poet explains: "When holy Church ends her prayers with *in saecula saeculorum* [for ever and ever], she has in mind, not earthly time, but eternity." At the same time the *siècles* are spherical spaces in which the blessed dwell. *Siècles* and *cieux* are identical. In the highest heaven of pure gold the King sits on a round

throne which shines more brightly than the sun. A *couronne* of precious stones surrounds him. Beside him, on a circular throne that is made of brown crystal, sits the Queen, who intercedes for the sinners (fig. 103).

[316] "Raising his eyes to the golden heaven, the pilgrim perceived a marvellous circle which appeared to be three feet across. It came out of the golden heaven at one point and re-entered it at another, and it made the whole tour of the golden heaven." This circle is sapphire-coloured. It is a small circle, three feet in diameter, and evidently it moves over a great horizontal circle like a rolling disc. This great circle intersects the golden circle of heaven.

[317] While Guillaume is absorbed in this sight, three spirits suddenly appear clad in purple, with golden crowns and girdles, and enter the golden heaven. This moment, so the angel tells him, is *une fête*, like a church festival on earth:

Ce cercle que tu vois est le calendrier
Qui en faisant son tour entier,
Montre des Saints les journées
Quand elles doivent être fêtées.
Chacun en fait le cercle un tour,
Chacune étoile y est pour jour,
Chacun soleil pour l'espace
De jours trente ou zodiaque.

(This circle is the calendar
Which spinning round the course entire
Shows the feast day of each saint
And when it should be celebrate.
Each saint goes once round all the way,
Each star you see stands for a day,
And every sun denotes a spell
Of thirty days zodiacal.)

103. *Sponsus et sponsa*.—Detail from *Polittico con l’Incoronazione*, by Stefano da Sant’Agnese (15th cent.)

104. God as Father and Logos creating the zodiac.—Peter Lombard, “De sacramentis” (MS., 14th cent.)

[318] The three figures are saints whose feast day is even now being celebrated. The small circle that enters the golden heaven is *three* feet in width, and likewise there are *three* figures who make their sudden entry. They signify the moment of time in eternity, as does the circle of the calendar (fig. 104). But why this should be exactly three feet in diameter and why there are three figures remains a mystery. We naturally think of the three rhythms in our vision which are started off by the pointer moving over the blue disc, and which enter the system just as inexplicably as the calendar-circle enters the golden heaven.

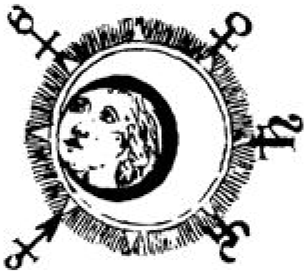
[319] The guide continues to instruct Guillaume on the significance of the signs of the zodiac with particular reference to sacred history, and ends with the remark that the feast of the twelve fishermen will be celebrated in the sign of Pisces, when the twelve will appear before the Trinity. Then it suddenly occurs to Guillaume that he has never really understood the nature of the Trinity, and he begs the angel for an explanation. The angel answers, “Now, there are three principal colours, namely green, red, and gold. These three colours are seen united in divers works of watered silk and in the feathers of many birds, such as the peacock. The almighty King who puts three colours in one, cannot he also make one substance to be three?” Gold, the royal colour, is attributed to God the Father; red to God the Son, because he shed his blood; and to the Holy Ghost green, “la couleur qui verdoye et qui réconforte.” Thereupon the angel warns Guillaume not to ask any more questions, and disappears. The poet wakes up to find himself safely in his bed, and so ends the *Pélerinage de l’âme*.

105. The Virgin, personifying the starry heaven.—“Speculum humanae saluacionis”
(MS., Vatican, 15th cent.)

[320] There is, however, one thing more to be asked: “Three there are—but where is the fourth?” Why is blue missing? This colour was also missing in the “disturbed” mandala of our dreamer (see par. 287). Curiously enough, the *calendrier* that intersects the golden circle is blue, and so is the vertical disc in the three-dimensional mandala. We would conjecture that blue, standing for the vertical, means height and depth (the blue sky above, the blue sea below), and that any shrinkage of the vertical reduces the square to an oblong, thus producing something like an inflation of consciousness.[147] Hence the vertical would correspond to the unconscious. But the unconscious in a man has feminine characteristics, and blue is the traditional colour of the Virgin’s celestial cloak (fig. 105). Guillaume was so absorbed in the Trinity and in the threefold aspect of the *roy* that he quite forgot the *reyne*. Faust prays to her in these words: “Supreme Mistress of the world! Let me behold thy secret in the outstretched azure canopy of heaven.”

[321] It was inevitable that blue should be missing for Guillaume in the tetrad of rainbow colours, because of its feminine nature. But, like woman herself, the anima means the height and depth of a man. Without the blue vertical circle the golden mandala remains bodiless and two-dimensional, a mere abstraction. It is only the intervention of time and space here and now that makes reality. Wholeness is realized for a moment only—the moment that Faust was seeking all his life.

[322] The poet in Guillaume must have had an inkling of the heretical truth when he gave the King a Queen sitting on a throne made of earth-brown crystal. For what is heaven without Mother Earth? And how can man reach fulfilment if the Queen does not intercede for his black soul? She understands the darkness, for she has taken her throne—the earth itself—to heaven with her, if only by the subtlest of suggestions. She adds the missing blue to the gold, red, and green, and thus completes the harmonious whole.



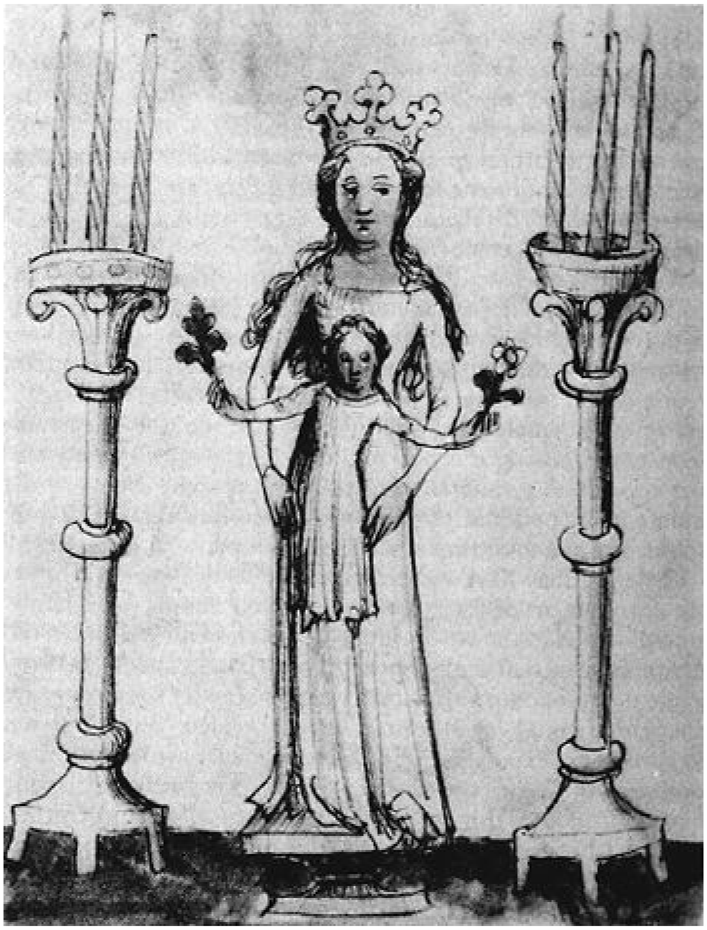
106. “Elixir of the moon.”—Codex Reginensis Latinus 1458 (17th cent.)

IV. THE SYMBOLS OF THE SELF

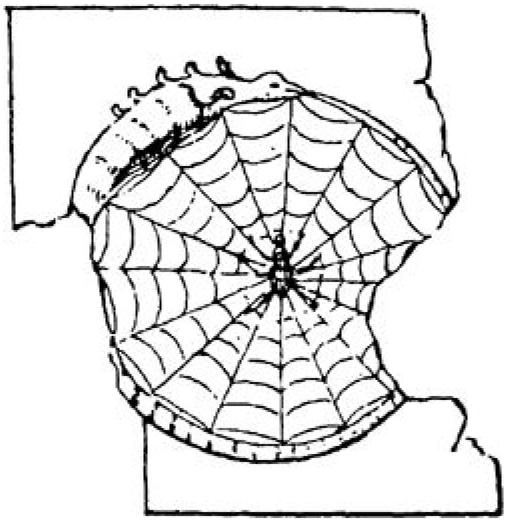
[323] The vision of the “world clock” is neither the last nor the highest point in the development of the symbols of the objective psyche. But it brings to an end the first third of the material, consisting in all of some four hundred dreams and visions. This series is noteworthy because it gives an unusually complete description of a psychic fact that I had observed long before in many individual cases.[148] We have to thank not only the completeness of the objective material but the care and discernment of the dreamer for having placed us in a position to follow, step by step, the synthetic work of the unconscious. The troubled course of this synthesis would doubtless have been depicted in even greater

completeness had I taken account of the 340 dreams interspersed among the 59 examined here. Unfortunately this was impossible, because the dreams touch to some extent on the intimacies of personal life and must therefore remain unpublished. So I had to confine myself to the impersonal material.

[324] I hope I may have succeeded in throwing some light upon the development of the symbols of the self and in overcoming, partially at least, the serious difficulties inherent in all material drawn from actual experience. At the same time I am fully aware that the comparative material so necessary for a complete elucidation could have been greatly increased. But, so as not to burden the exposition unduly, I have exercised the greatest reserve in this respect. Consequently there is much that is only hinted at, though this should not be taken as a sign of superficiality. I believe myself to be in a position to offer ample evidence for my views, but I do not wish to give the impression that I imagine I have said anything final on this highly complicated subject. It is true that this is not the first time I have dealt with a series of spontaneous manifestations of the unconscious. I did so once before, in my book *Psychology of the Unconscious*,[149] but there it was more a problem of neurosis in puberty, whereas this is the broader problem of individuation.



107. Virgin carrying the Saviour.—“Speculum humanae saluacionis” (MS., Vatican)



108. Maya, eternal weaver of the illusory world of the senses, encircled by the Uroboros. —Damaged vignette from a collection of Brahminic sayings

Moreover, there is a very considerable difference between the two personalities in question. The earlier case, which I never saw at first hand, ended in psychic catastrophe—a psychosis; but the present case shows a normal development such as I have often observed in highly intelligent persons.

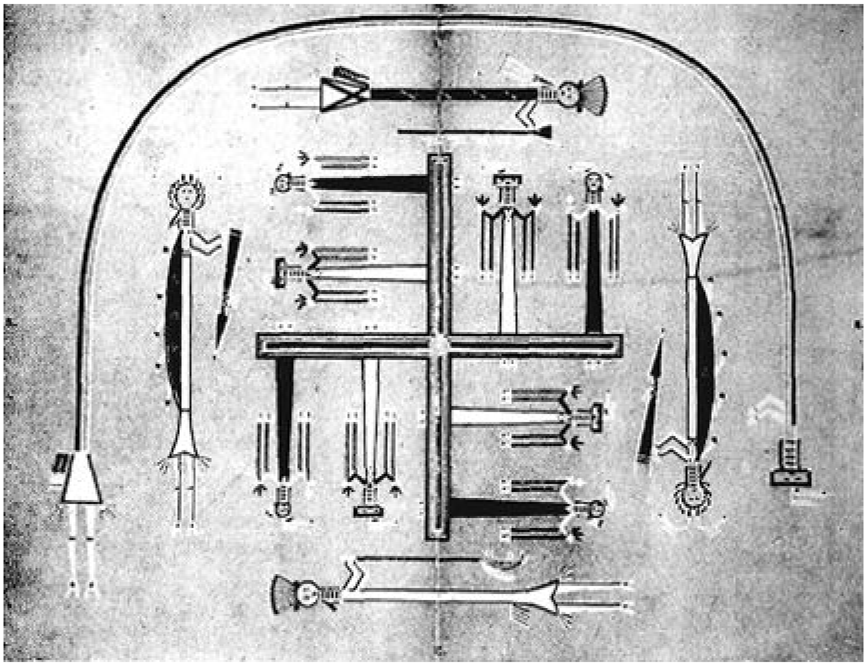
[325] What is particularly noteworthy here is the consistent development of the central symbol. We can hardly escape the feeling that the unconscious process moves spiral-wise round a centre, gradually getting closer, while the characteristics of the centre grow more and more distinct. Or perhaps we could put it the other way round and say that the centre—itself virtually unknowable—acts like a magnet on the disparate materials and processes of the unconscious and gradually captures them as in a crystal lattice. For this reason the centre is (in other cases) often pictured as a spider in its web (fig. 108), especially when the conscious attitude is still dominated by fear of unconscious processes. But if the process is allowed to take its course, as it was in our case, then the central symbol, constantly renewing itself, will steadily and consistently force its way through the apparent chaos of the personal psyche and its dramatic entanglements, just as the great Bernoulli's epitaph[150] says of the spiral: "Eadem mutata resurgo." Accordingly we often find spiral representations of the centre, as for instance the serpent coiled round the creative point, the egg.

[326] Indeed, it seems as if all the personal entanglements and dramatic changes of fortune that make up the intensity of life were nothing but hesitations, timid shrinkings, almost like petty complications and meticulous excuses for not facing the finality of this strange and uncanny process of crystallization. Often one has the impression that the personal psyche is running round this central point like a shy animal, at once fascinated and frightened, always in flight, and yet steadily drawing nearer.

[327] I trust I have given no cause for the misunderstanding that I know anything about the nature of the "centre"—for it is simply unknowable and can only be expressed symbolically through its own phenomenology, as is the case, incidentally, with every object of experience. Among the

various characteristics of the centre the one that struck me from the beginning was the phenomenon of the quaternity (fig. 109). That it is not simply a question of, shall we say, the “four” points of the compass or something of that kind is proved by the fact that there is often a competition between four and three.[151] There is also, but more rarely, a competition between four and five, though five-rayed mandalas must be characterized as abnormal on account of their lack of symmetry.[152] It would seem, therefore, that there is normally a clear insistence on four, or as if there were a greater statistical probability of four. Now it is—as I can hardly refrain from remarking—a curious “sport of nature” that the chief chemical constituent of the physical organism is carbon, which is characterized by four valencies; also it is well known that the diamond is a carbon crystal. Carbon is black—coal, graphite—but the diamond is “purest water.” To draw such an analogy would be a lamentable piece of intellectual bad taste were the phenomenon of four merely a poetic conceit on the part of the conscious mind and not a spontaneous product of the objective psyche. Even if we supposed that dreams could be influenced to any appreciable extent by auto-suggestion—in which case it would naturally be more a matter of their meaning than of their form—it would still have to be proved that the conscious mind of the dreamer had made a serious effort to impress the idea of the quaternity on the unconscious. But in this case as in many other cases I have observed, such a possibility is absolutely out of the question, quite apart from the numerous historical and ethnological parallels[153] (fig. 110; cf. also figs. 50, 61–66, 82, 109). Surveying these facts as a whole, we come, at least in my opinion, to the inescapable conclusion that there is some psychic element present which expresses itself through the quaternity. No daring speculation or extravagant fancy is needed for this. If I have called the centre the “self,” I did so after mature consideration and a careful appraisal of the empirical and historical data. A materialistic interpretation could easily maintain that the “centre” is “nothing but” the point at which the psyche ceases to be knowable because it there coalesces with the body. And a spiritualistic interpretation might retort that this “self” is nothing but “spirit,” which animates both soul and body and irrupts into time and space at that creative point. I purposely refrain from all such physical and metaphysical speculations and content myself with establishing the empirical facts, and this seems to me infinitely more important for the advance of human knowledge than running after fashionable intellectual crazes or jumped-up “religious” creeds.

109. The four evangelists with their symbols and the four rivers of paradise. Centre, the wheels of Ezekiel with the *spiritus vitae* that “was in the wheels” (Ezek. 1 : 21).—Miniature in an Evangeliary, Aschaffenburg (13th cent.)



110. Sand-painting of the Navajo Indians.—Ethnological drawing

[328] To the best of my experience we are dealing here with very important "nuclear processes" in the objective psyche—"images of the goal," as it were, which the psychic process, being goal-directed, apparently sets up of its own accord, without any external stimulus.[154] Externally, of course, there is always a certain condition of psychic need, a sort of hunger, but it seeks for familiar and favourite dishes and never imagines as its goal some outlandish food unknown to consciousness. The goal which beckons to this psychic need, the image which promises to heal, to make whole, is at first strange beyond all measure to the conscious mind, so that it can find entry only with the very greatest difficulty. Of course it is quite different for people who live in a time and environment when such images of the goal have dogmatic validity. These images are then *eo ipso* held up to consciousness, and the unconscious is thus shown its own secret reflection, in which it recognizes itself and so joins forces with the conscious mind.

[329] As to the question of the origin of the mandala motif, from a superficial point of view it looks as if it had gradually come into being in the course of the dream-series. The fact is, however, that it only *appeared* more and more distinctly and in increasingly differentiated form; in reality it was always present and even occurred in the first dream—as the

nymphs say later: “We were always there, only you did not notice us.” It is therefore more probable that we are dealing with an *a priori* “type,” an archetype which is inherent in the collective unconscious and thus beyond individual birth and death. The archetype is, so to speak, an “eternal” presence, and the only question is whether it is perceived by the conscious mind or not. I think we are forming a more probable hypothesis, and one that better explains the observed facts, if we assume that the increase in the clarity and frequency of the mandala motif is due to a more accurate perception of an already existing “type,” rather than that it is generated in the course of the dream-series.[155] The latter assumption is contradicted by the fact, for instance, that such fundamental ideas as the hat which epitomizes the personality, the encircling serpent, and the *perpetuum mobile* appear right at the beginning (first series: dream 1, par. 52, and vision 5, par. 62; second series: dream 9, par. 134).

[330] If the motif of the mandala is an archetype it ought to be a collective phenomenon, i.e., theoretically it should appear in everyone. In practice, however, it is to be met with in distinct form in relatively few cases, though this does not prevent it from functioning as a concealed pole round which everything ultimately revolves. In the last analysis every life is the realization of a whole, that is, of a self, for which reason this realization can also be called “individuation.” All life is bound to individual carriers who realize it, and it is simply inconceivable without them. But every carrier is charged with an individual destiny and destination, and the realization of these alone makes sense of life. True, the “sense” is often something that could just as well be called “nonsense,” for there is a certain incommensurability between the mystery of existence and human understanding. “Sense” and “nonsense” are merely man-made labels which serve to give us a reasonably valid sense of direction.

[331] As the historical parallels show, the symbolism of the mandala is not just a unique curiosity; we can well say that it is a regular occurrence. Were it not so there would be no comparative material, and it is precisely the possibility of comparing the mental products of all times from every quarter of the globe that shows us most clearly what immense importance

the *consensus gentium* has always attached to the processes of the objective psyche. This is reason enough not to make light of them, and my medical experience has only confirmed this estimate. There are people, of course, who think it unscientific to take anything seriously; they do not want their intellectual playground disturbed by graver considerations. But the doctor who fails to take account of man's feelings for values commits a serious blunder, and if he tries to correct the mysterious and well-nigh inscrutable workings of nature with his so-called scientific attitude, he is merely putting his shallow sophistry in place of nature's healing processes. Let us take the wisdom of the old alchemists to heart: "Naturalissimum et perfectissimum opus est generare tale quale ipsum est."[156]

1. BASIC CONCEPTS OF ALCHEMY

I. INTRODUCTION

[332] Slowly, in the course of the eighteenth century, alchemy perished in its own obscurity. Its method of explanation—“obscurum per obscurius, ignotum per ignotius” (the obscure by the more obscure, the unknown by the more unknown)—was incompatible with the spirit of enlightenment and particularly with the dawning science of chemistry towards the end of the century. But these two new intellectual forces only gave the *coup de grâce* to alchemy. Its inner decay had begun at least a century earlier, at the time of Jakob Böhme, when many alchemists deserted their alembics and melting-pots and devoted themselves entirely to (Hermetic) philosophy. It was then that the chemist and the Hermetic philosopher parted company. Chemistry became natural science, whereas Hermetic philosophy lost the empirical ground from under its feet and aspired to bombastic allegories and inane speculations which were kept alive only by memories of a better time.[1] This was a time when the mind of the alchemist was still grappling with the problems of matter, when the exploring consciousness was confronted by the dark void of the unknown, in which figures and laws were dimly perceived and attributed to matter although they really belonged to the psyche. Everything unknown and empty is filled with psychological projection; it is as if the investigator’s own psychic background were mirrored in the darkness. What he sees in matter, or thinks he can see, is chiefly the data of his own unconscious which he is projecting into it. In other words, he encounters in matter, as apparently belonging to it, certain qualities and potential meanings of whose psychic nature he is entirely unconscious. This is particularly true of classical alchemy, when empirical science and mystical philosophy were more or less undifferentiated. The process of fission which separated the φνσικά from the μνστικά set in at the end of the sixteenth century and produced a quite fantastic species of literature whose authors were, at least to some extent, conscious of the psychic

nature of their “alchemystical” transmutations. On this aspect of alchemy, especially as regards its psychological significance, Herbert Silberer’s book *Problems of Mysticism and Its Symbolism* gives us abundant information. The fantastic symbolism bound up with it is graphically described in a paper by R. Bernoulli,[2] and a detailed account of Hermetic philosophy is to be found in a study by J. Evola.[3] But a comprehensive study of the ideas contained in the texts, and of their history, is still lacking, although we are indebted to Reitzenstein for important preparatory work in this field.

II. THE ALCHEMICAL PROCESS AND ITS STAGES

[333] Alchemy, as is well known, describes a process of chemical transformation and gives numberless directions for its accomplishment. Although hardly two authors are of the same opinion regarding the exact course of the process and the sequence of its stages, the majority are agreed on the principal points at issue, and have been so from the earliest times, i.e., since the beginning of the Christian era. Four stages are distinguished (fig. 114), characterized by the original colours mentioned in Heraclitus: *melanosis* (blackening), *leukosis* (whitening), *xanthosis* (yellowing), and *iosis* (reddening).[4] This division of the process into four was called the τετραμερεῖν τὴν φιλοσοφίαν, the quartering of the philosophy. Later, about the fifteenth or sixteenth century, the colours were reduced to three, and the *xanthosis*, otherwise called the *citrinitas*, gradually fell into disuse or was but seldom mentioned. Instead, the *viriditas* sometimes appears after the *melanosis* or *nigredo* in exceptional cases, though it was never generally recognized. Whereas the original tetrameria corresponded exactly to the quaternity of elements, it was now frequently stressed that although there were four elements (earth, water, fire, and air) and four qualities (hot, cold, dry, and moist), there were only three colours: black, white, and red. Since the process never led to the desired goal and since the individual parts of it were never carried out in any standardized manner, the change in the classification of its stages cannot be due to extraneous reasons but has more to do with the symbolical significance of the quaternity and the trinity; in other words, it is due to inner psychological reasons.[5]

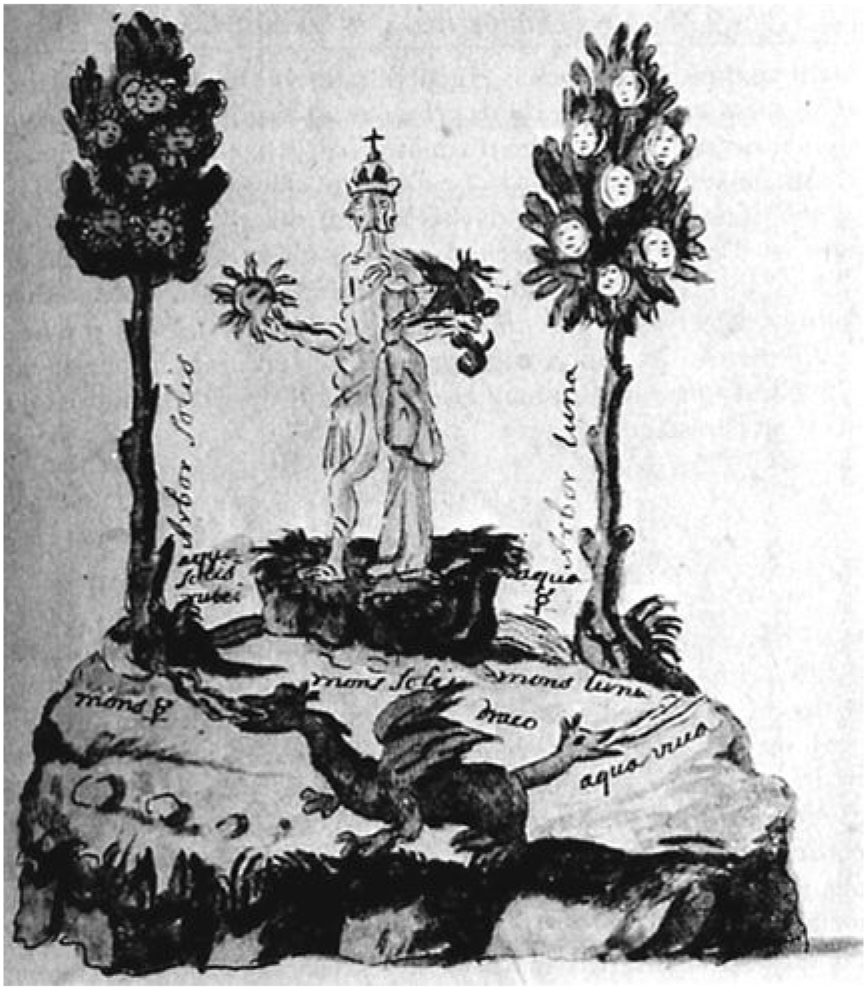
Images

114. The four stages of the alchemical process. The four elements are indicated on the balls.
—Mylius, *Philosophia reformata* (1622)

115. The *nigredo:* eclipse of *Mercurius senex,* exhaling the *spiritus* and *anima*. The raven is a *nigredo* symbol.—Jamsthaler, *Viatorium spagyricum* (1625)

[334] The *nigredo* or blackness (fig. 115) is the initial state, either present from the beginning as a quality of the *prima materia*, the chaos or *massa confusa*, or else produced by the separation (*solutio, separatio, divisio, putrefactio*) of the elements. If the separated condition is assumed at the start, as sometimes happens, then a union of opposites is performed under the likeness of a union of male and female (called the *coniugium, matrimonium, coniunctio, coitus*), followed by the death of the product of the union (*mortificatio, calcinatio, putrefactio*) and a corresponding *nigredo*. From this the washing (*ablutio, baptisma*) either leads direct to the whitening (*albedo*), or else the soul (*anima*) released at the “death” is reunited with the dead body and brings about its resurrection, or again the “many colours” (*omnes colores*), or “peacock’s tail” (*cauda pavonis*),

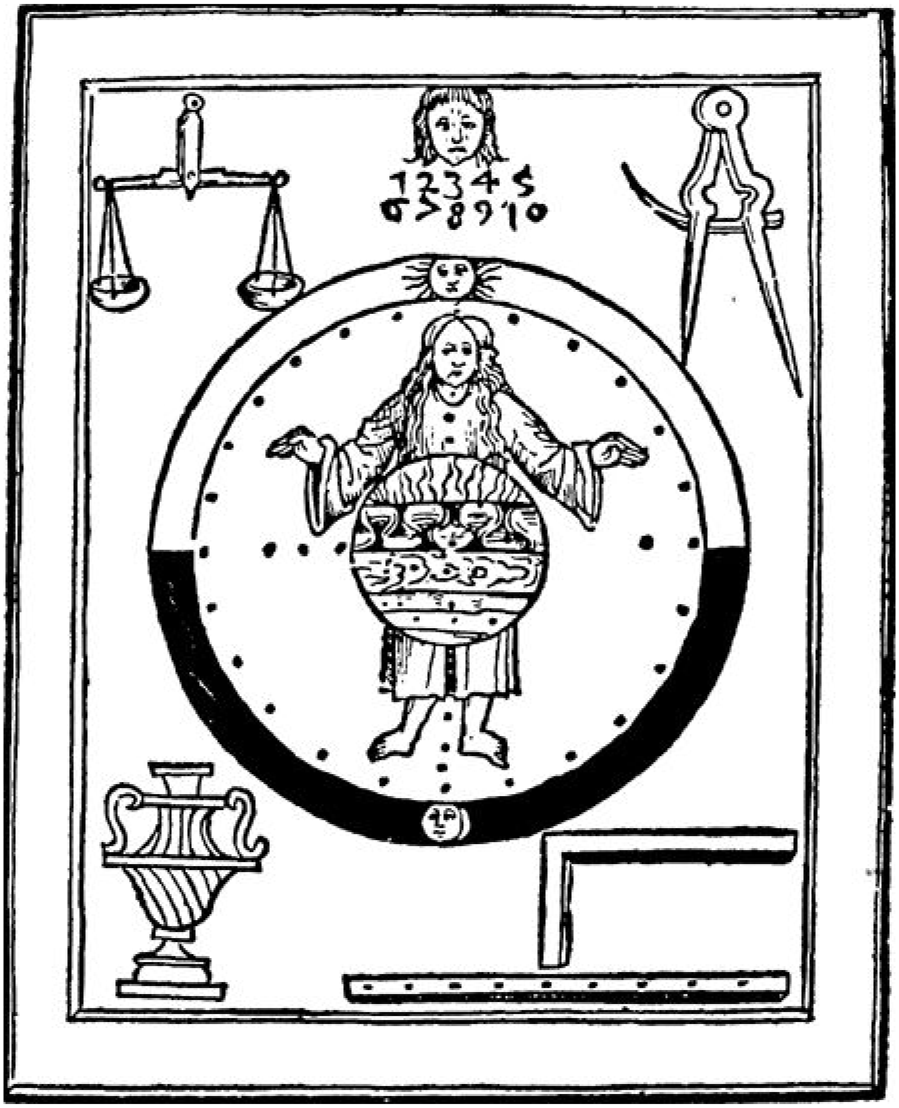
lead to the one white colour that contains all colours. At this point the first main goal of the process is reached, namely the *albedo, tinctura alba, terra alba foliata, lapis albus*, etc., highly prized by many alchemists as if it were the ultimate goal. It is the silver or moon condition, which still has to be raised to the sun condition. The *albedo* is, so to speak, the daybreak, but not till the *rubedo* is it sunrise. The transition to the *rubedo* is formed by the *citrinitas*, though this, as we have said, was omitted later. The *rubedo* then follows direct from the *albedo* as the result of raising the heat of the fire to its highest intensity. The red and the white are King and Queen, who may also celebrate their "chymical wedding" at this stage (fig. 116).



116. Crowned hermaphrodite representing the union of king and queen, between the sun and moon trees.—"Traité d'alchimie" (MS., Paris, 17th cent.)

[335] The arrangement of the stages in individual authors depends primarily on their conception of the goal: sometimes this is the white or red tincture (*aqua permanens);* sometimes the philosophers' stone, which, as hermaphrodite, contains both; or again it is the panacea (*aurum potabile, elixir vitae*), philosophical gold, golden glass (*vitrum aureum*), malleable glass (*vitrum malleabile*). The conceptions of the goal are as vague and various as the individual processes. The *lapis philosophorum*, for instance, is often the *prima materia*, or the means of producing the gold; or again it is an altogether mystical being that is sometimes called *Deus terrestris*, *Salvator*, or *filius macrocosmi*, a figure we can only compare with the Gnostic Anthropos, the divine original man[6] (fig. 117).

[336] Besides the idea of the *prima materia*, that of water (*aqua permanens*) and that of fire (*ignis noster*) play an important part. Although these two elements are antagonistic and even constitute a typical pair of opposites, they are yet one and the same according to the testimony of the authors.[7] Like the *prima materia* the water has a thousand names;[8] it is even said to be the original material of the stone.[9] In spite of this we are on the other hand assured that the water is extracted from the stone or *prima materia* as its life-giving soul (*anima*).[10] This perplexity comes out very clearly in the following passage from the "VIII Exercitatio in Turbam":



117. Anthropos as *anima mundi*, containing the four elements and characterized by the number 10, which represents perfection (1 + 2 + 3 + 4).—Albertus Magnus, *Philosophia naturalis* (1650)

Many dispute in long controversies whether the stone, under different names, consists of several substances, or of two, or only of one. But this philosopher [Scites][11] and Bonellus[12] say that the whole work and the substance of the whole work are nothing but the water; and that the treatment [*regimen*] of the same also takes place in nothing but the water. And there is in fact one substance in which everything is contained and that is the *sulphur philosophorum*,[which] is water and soul, oil, Mercurius and Sol, the fire of nature, the eagle, the *lachryma*, the first *hyle* of the wise, the *materia prima* of the perfect body. And by whatever names the philosophers have called their stone they always mean and refer to this one substance, i.e., to the water from which everything [originates] and in which everything [is contained], which rules everything, in which errors are made and in which the error is itself corrected. I call it "philosophical" water, not ordinary [*vulgi*] water but *aqua mercurialis*, whether it be simple or composite. For both are the philosophical water, although the vulgar mercury is different from the philosophical. That [water] is simple [and] unmixed, this [water] is composed of two substances: namely of our mineral and of simple water. These composite waters form the philosophical Mercurius. from which it must be assumed that the substance, or the *prima materia* itself, consists of composite water. Some [alchemists] put three together, others, only two. For myself two species are sufficient: male and female or brother and sister [fig. 118]. But they also call the simple water poison, quicksilver [*argentum vivum*], cambar, *aqua permanens*, gum, vinegar, urine, sea-water, dragon, and serpent.[13]

118. Brother-sister pair in the "bath of life," being bitten in the calf by dragons while the lunar water, fertilized by the divine breath, is poured over their heads.—*Theatrum chemicum Britannicum* (1652)

[337] This account makes one thing very evident: the philosophical water is the stone or the *prima materia* itself; but at the same time, it is also its solvent, as is proved by the prescription immediately following:

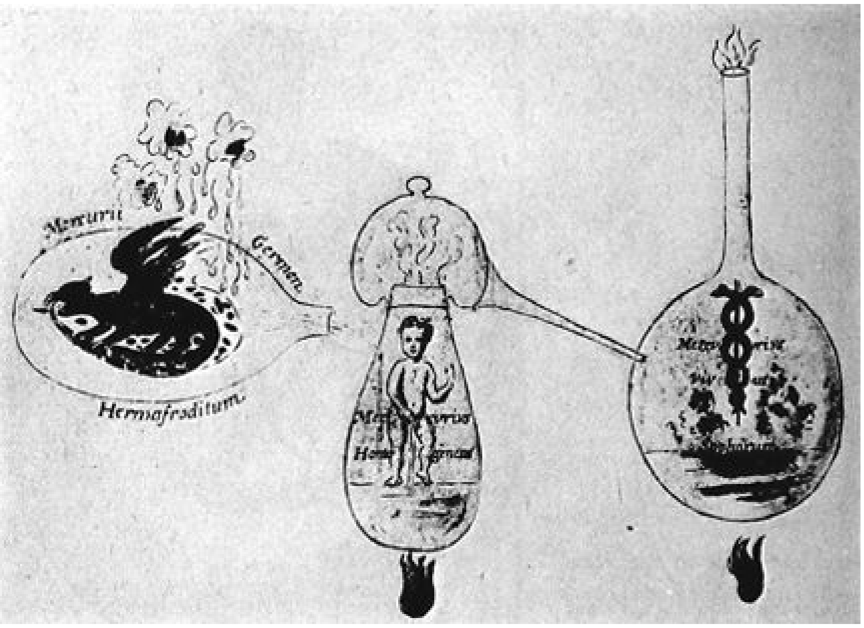
> Grind the stone to a very fine powder and put it into the sharpest celestial [*coelestino*] vinegar, and it will at once be dissolved into the philosophical water.

119. Alchemical furnace.—Geber, *De alchimia* (1529)

[338] It can also be shown that fire played the same role as water. Another, no less important, idea is that of the Hermetic vessel (*vas Hermetis*), typified by the retorts or melting-furnaces that contained the substances to be transformed (fig. 119). Although an instrument, it nevertheless has peculiar connections with the *prima materia* as well as with the *lapis*, so it is no mere piece of apparatus. For the alchemists the vessel is something truly marvellous: a *vas mirabile*. Maria Prophetissa (fig. 78) says that the whole secret lies in knowing about the Hermetic vessel. "Unum est vas" (the vessel is one) is emphasized again and again.[14] It must be completely round,[15] in imitation of the spherical cosmos,[16] so that the influence of the stars may contribute to the success of the operation.[17] It is a kind of matrix or uterus from which the *filius philosophorum*, the miraculous stone, is to be born[18] (fig. 120). Hence it is required that the vessel be not only round but egg-shaped[19] (fig. 121; cf. fig. 22). One naturally thinks of this vessel as a sort of retort or flask; but one soon learns that this is an inadequate conception since the vessel is more a mystical idea, a true symbol like all the central ideas of alchemy. Thus we hear that the *vas* is the water or *aqua permanens*,

which is none other than the Mercurius of the philosophers.[20] But not only is it the water, it is also its opposite: fire.[21]

120. Mercurius in the vessel.—Barchusen, *Elementa chemiae* (1718)



121. The transformations of Mercurius in the Hermetic vessel. The homunculus shown as a “pissing manikin” is an allusion to the *urina puerorum* (= *aqua permanens*).—“Cabala mineralis” (MS., British Museum, Add. 5245)

[339] I will not enter further into all the innumerable synonyms for the vessel. The few I have mentioned will suffice to demonstrate its undoubted symbolical significance.

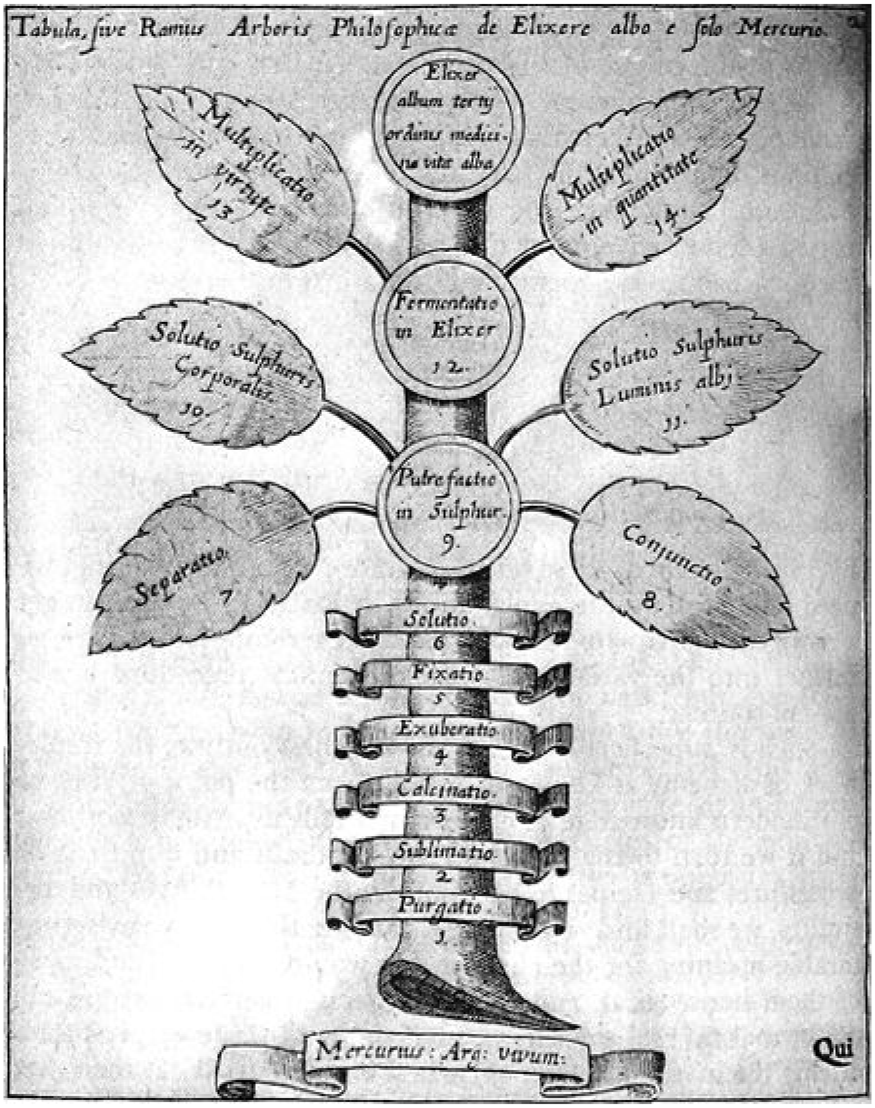
[340] As to the course of the process as a whole, the authors are vague and contradictory. Many content themselves with a few summary hints, others make an elaborate list of the various operations. Thus in 1576, Josephus Quercetanus, alchemist, physician, and diplomat, who in France and French Switzerland played a somewhat similar role to that of Paracelsus, established a sequence of twelve operations[22] as follows (fig. 122):

1. *Calcinatio*
2. *Solutio*
3. *Elementorum separatio*
4. *Coniunctio*
5. *Putrefactio*
6. *Coagulatio*
7. *Cibatio*
8. *Sublimatio*
9. *Fermentatio*
10. *Exaltatio*
11. *Augmentatio*
12. *Proiectio*

Every single one of these terms has more than one meaning; we need only look up the explanations in Ruland’s *Lexicon* to get a more than adequate idea of this. It is therefore pointless to go further into the variations of the alchemical procedure in the present context.

[341] Such is, superficially and in the roughest outline, the framework of alchemy as known to us all. From the point of view of our modern knowledge of chemistry it tells us little or nothing, and if we turn to the texts and the hundreds and hundreds of procedures and recipes left behind by the Middle Ages and antiquity, we shall find relatively few among them with any recognizable meaning for the chemist. He would probably find most of them nonsensical, and furthermore it is certain beyond all doubt that no real tincture or artificial gold was ever produced during the many centuries of earnest endeavour. What then, we may

fairly ask, induced the old alchemists to go on labouring—or, as they said, “operating”—so steadfastly and to write all those treatises on the “divine” art if their whole undertaking was so portentously futile? To do them justice we must add that all knowledge of the nature of chemistry and its limitations was still completely closed to them, so that they were as much entitled to hope as those who dreamed of flying and whose successors made the dream come true after all. Nor should we underestimate the sense of satisfaction born of the enterprise, the excitement of the adventure, of the *quaerere* (seeking) and the *invenire* (finding). This always lasts as long as the methods employed seem sensible. There was nothing at that time to convince the alchemist of the senselessness of his chemical operations; what is more, he could look back on a long tradition which contained not a few testimonies of such as had achieved the marvellous result.[23] Finally the matter was not entirely without promise, since a number of useful discoveries did occasionally emerge as byproducts of his labours in the laboratory. As the forerunner of chemistry alchemy had a sufficient *raison d’être*. Hence, even if alchemy had consisted in—if you like—an unending series of futile and barren chemical experiments, it would be no more astonishing than the venturesome endeavours of medieval medicine and pharmacology.



122. The twelve alchemical operations in the form of the *arbor philosophica*.
—Samuel Norton, *Mercurius redivivus* (1630)

123. Hermaphrodite.—*Hermaphroditisches Sonn- und Mondskind* (1752)

2. THE PSYCHIC NATURE OF THE ALCHEMICAL WORK

I. THE PROJECTION OF PSYCHIC CONTENTS

[342] The alchemical *opus* deals in the main not just with chemical experiments as such, but with something resembling psychic processes expressed in pseudochemical language.[1] The ancients knew more or less what chemical processes were; therefore they must have known that the thing they practised was, to say the least of it, no ordinary chemistry. That they realized the difference is shown even in the title of a treatise by (Pseudo-)Democritus, ascribed to the first century, *τά φνσικίά καὶ τά μνστικά*. And soon afterwards a wealth of evidence accumulates to show that in alchemy there are two—in our eyes—heterogeneous currents flowing side by side, which we simply cannot conceive as being compatible. Alchemy’s “tam ethice quam physice” (as much ethical—i.e., psychological—as physical) is impenetrable to our *logic*. If the alchemist is admittedly using the chemical process only symbolically, then why does he work in a laboratory with crucibles and alembics? And if, as he constantly asserts, he is describing chemical processes, why distort them past recognition with his mythological symbolisms?

[343] This puzzle has proved something of a headache to many an honest and well-meaning student of alchemy. On the one hand the alchemist declares that he is concealing the truth intentionally, so as to prevent wicked or stupid people from gaining possession of the gold and thus precipitating a catastrophe. But, on the other hand, the same author will assure us that the gold he is seeking is not—as the stupid suppose—the ordinary gold (*aurum vulgi*), it is the philosophical gold or even the marvellous stone, the *lapis invisibilitatis* (the stone of invisibility),[2] or the *lapis aethereus* (the ethereal stone),[3] or finally the unimaginable hermaphroditic *rebis* (fig. 125), and he will end up by saying that all recipes whatsoever are to be despised.[4] For psychological reasons, however, it is highly unlikely that the motive prompting the alchemist to secrecy and mystification was consideration for mankind. Whenever

anything real is discovered it is usually announced with a flourish of trumpets. The fact is that the alchemists had little or nothing to divulge in the way of chemistry, least of all the secret of goldmaking.

[344] Mystification can be pure bluff for the obvious purpose of exploiting the credulous. But any attempt to explain alchemy as a whole from this angle is, in my opinion, contradicted by the fact that a fair number of detailed, scholarly, and conscientious treatises were written and published anonymously, and therefore could not be of unlawful advantage to anyone. At the same time there are undoubtedly a great many fraudulent productions written by charlatans.

125. Mercurius as the sun-moon hermaphrodite (*rebis*), standing on the (round) chaos.—Mylius, *Philosophia reformata* (1622)

[345] But mystification can also arise from another source. The real mystery does not behave mysteriously or secretively; it speaks a secret language, it adumbrates itself by a variety of images which all indicate its true nature. I am not speaking of a secret personally guarded by someone, with a content known to its possessor, but of a mystery, a matter or circumstance which is "secret," i.e., known only through vague hints but essentially unknown. The real nature of matter was unknown to the

alchemist: he knew it only in hints. In seeking to explore it he projected the unconscious into the darkness of matter in order to illuminate it. In order to explain the mystery of matter he projected yet another mystery—his own unknown psychic background—into what was to be explained: *Obscurum per obscurius, ignotum per ignotius!* This procedure was not, of course, intentional; it was an involuntary occurrence.

[346] Strictly speaking, projection is never made; it happens, it is simply there. In the darkness of anything external to me I find, without recognizing it as such, an interior or psychic life that is my own. It would therefore be a mistake in my opinion to explain the formula "tam ethice quam physice" by the theory of correspondences, and to say that this is its "cause." On the contrary, this theory is more likely to be a rationalization of the experience of projection. The alchemist did not practise his art because he believed on theoretical grounds in correspondence; the point is that he had a theory of correspondence because he experienced the presence of pre-existing ideas in physical matter. I am therefore inclined to assume that the real root of alchemy is to be sought less in philosophical doctrines than in the projections of individual investigators. I mean by this that while working on his chemical experiments the operator had certain psychic experiences which appeared to him as the particular behaviour of the chemical process. Since it was a question of projection, he was naturally unconscious of the fact that the experience had nothing to do with matter itself (that is, with matter as we know it today). He experienced his projection as a property of matter; but what he was in reality experiencing was his own unconscious. In this way he recapitulated the whole history of man's knowledge of nature. As we all know, science began with the stars, and mankind discovered in them the dominants of the unconscious, the "gods," as well as the curious psychological qualities of the zodiac: a complete projected theory of human character. Astrology is a primordial experience similar to alchemy. Such projections repeat themselves whenever man tries to explore an empty darkness and involuntarily fills it with living form.

[347] This being so, I turned my attention to the question of whether the alchemists themselves had reported any such experiences in the course of

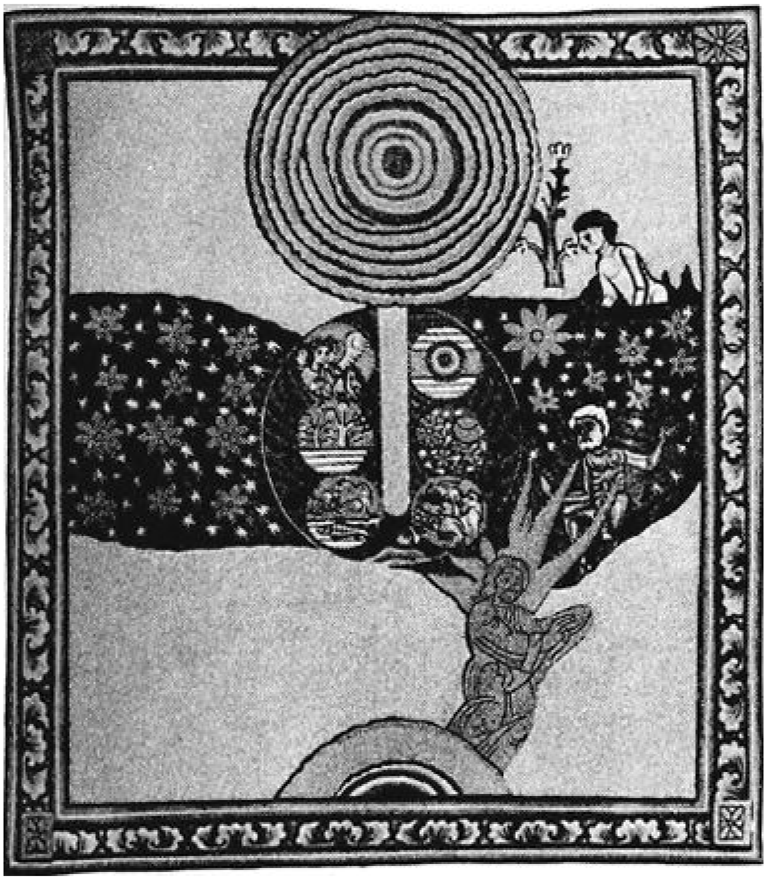
their work. I had no reason to hope for a very rich find, since they would be “unconscious” experiences which would escape record for precisely that reason. But in point of fact there are one or two unmistakable accounts in the literature. Characteristically enough, the later accounts are more detailed and specific than the earlier ones. The most recent account comes from a treatise[5] alleged to have been translated from Ethiopian into Latin and from Latin into German, of which Chapter VIII, “The Creation,” reads:

> Take of common rainwater a good quantity, at least ten quarts, preserve it well sealed in glass vessels for at least ten days, then it will deposit matter and faeces on the bottom. Pour off the clear liquid and place in a wooden vessel that is fashioned round like a ball, cut it through the middle and fill the vessel a third full, and set it in the sun about midday in a secret or secluded spot.
>
> When this has been done, take a drop of the consecrated red wine and let it fall into the water, and you will instantly perceive a fog and thick darkness on top of the water, such as also was at the first creation. Then put in two drops, and you will see the light coming forth from the darkness; whereupon little by little put in every half of each quarter hour first three, then four, then five, then six drops, and then no more, and you will see with your own eyes one thing after another appearing by and by on top of the water, how God created all things in six days [fig. 126], and how it all came to pass, and such secrets as are not to be spoken aloud and I also have not the power to reveal. Fall on your knees before you undertake this operation. Let your eyes judge of it; for thus was the world created. Let all stand as it is, and in half an hour after it began it will disappear.
>
> By this you will see clearly the secrets of God, that are at present hidden from you as from a child. You will understand what Moses has written concerning the creation; you will see what manner of body Adam and Eve had before and after the Fall, what the serpent was, what the tree, and what manner of fruits they ate: where and what Paradise is, and in what bodies the righteous shall be resurrected; not in this body that we

have received from Adam, but in that which we attain through the Holy Ghost, namely in such a body as our Saviour brought from heaven.

[348] In Chapter IX, "The Heavens," we read:

> You shall take seven pieces of metal, of each and every metal as they are named after the planets, and shall stamp on each the character of the planet in the house of the same planet, and every piece shall be as large and thick as a rose noble.[6] But of Mercury only the fourth part of an ounce by weight and nothing stamped upon it.



126. The six days of creation, culminating in the seventh day.—St. Hildegarde of Bingen, "Scivias" (MS., 12th cent.)

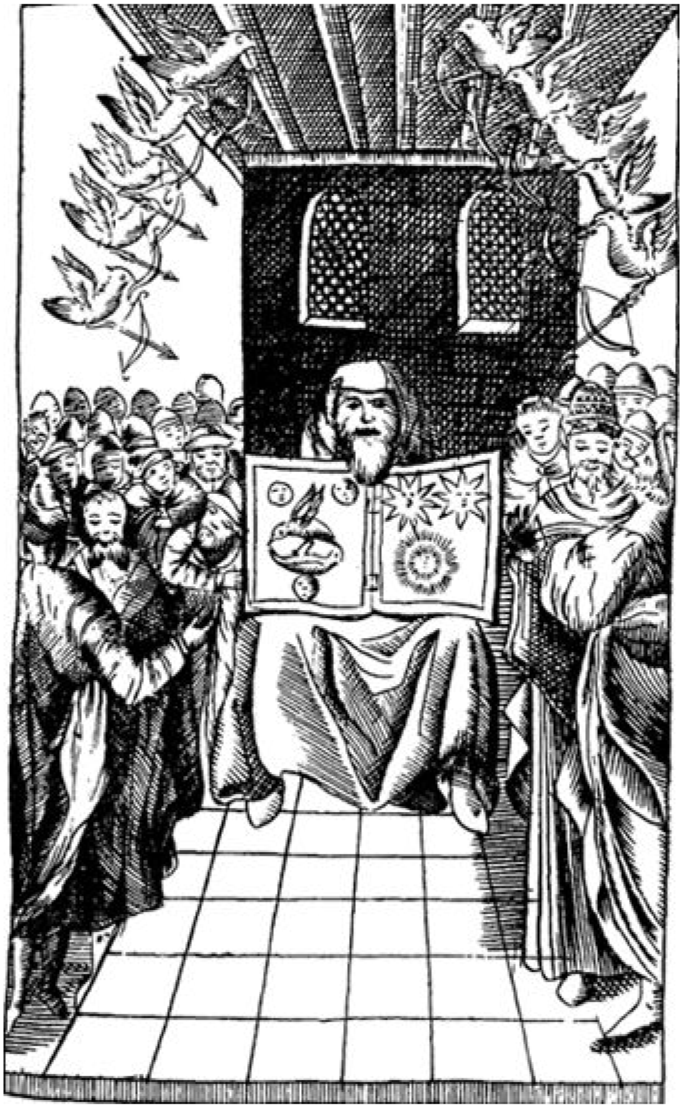
> Then put them after the order in which they stand in the heavens into a crucible, and make all windows fast in the chamber that it may be quite dark within, then melt them all together in the midst of the chamber and drop in seven drops of the blessed Stone, and forthwith a flame of fire will come out of the crucible [fig. 127] and spread itself over the whole chamber (fear no harm), and will light up the whole chamber more

> brightly than sun and moon, and over your heads you shall behold the whole firmament as it is in the starry heavens above, and the planets shall hold to their appointed courses as in the sky. Let it cease of itself, in a quarter of an hour everything will be in its own place.

127. The transformation of Mercurius in the fire.—Barchusen, *Elementa chemiae* (1718)

[349] Let us take another example from a treatise by Theobald de Hoghelande (sixteenth century):

> They say also that different names are given to the stone on account of the wonderful variety of figures that appear in the course of the work, inasmuch as colours often come forth at the same time, just as we sometimes imagine in the clouds or in the fire strange shapes of animals, reptiles, or trees. I found similar things in a fragment of a book ascribed to Moses: when the body is dissolved, it is there written, then will appear sometimes two branches, sometimes three or more, sometimes also the shapes of reptiles; on occasion it also seems as if a man with a head and all his limbs were seated upon a cathedra.[7]



128. Hermes Trismegistus.—Senior, *De chemia*, in Mangetus, *Bibliotheca chemica curiosa* (1702)

[350] Like the two preceding texts, Hoghelande’s remarks prove that during the practical work certain events of an hallucinatory or visionary nature were perceived, which cannot be anything but projections of unconscious contents. Hoghelande quotes Senior as saying that the “vision” of the Hermetic vessel “is more to be sought than the scripture.”[8] The authors speak of seeing with the eyes of the spirit, but it is not always clear whether they mean vision in a real or a figurative sense. Thus the “Novum lumen” says:

> To cause things hidden in the shadow to appear, and to take away the shadow from them, this is permitted to the intelligent philosopher by God through nature.… All these things happen, and the eyes of the common

> men do not see them, but the eyes of the understanding [*intellectus*] and of the imagination perceive them [*percipiunt*] with true and truest vision [*visu*].[9]

[351] Raymond Lully writes:

> You should know, dear son, that the course of nature is turned about, so that without invocation [e.g., of the *familiaris]* and without spiritual exaltation you can see certain fugitive spirits condensed in the air in the shape of divers monsters, beasts and men, which move like the clouds hither and thither [fig. 129].[10]

129. Personified *spiritus* escaping from the heated *prima materia*.— Thomas Aquinas (pseud.), "De alchimia" (MS., 16th cent.)

[352] Dorn says much the same:

> Thus he will come to see with his mental eyes [*oculis mentalibus*] an indefinite number of sparks shining through day by day and more and more and growing into a great light.[11]

[353] The psychologist will find nothing strange in a figure of speech becoming concretized and turning into an hallucination. Thus in his biographical notes (1594), Hoghelande describes how, on the third day of the *decoctio*, he saw the surface of the substance cover itself with colours, "chiefly green, red, grey, and for the rest iridescent." Whenever he remembered that day a verse of Virgil's came into his mind: "Ut vidi, ut perii, ut me malus abstulit error" (When I saw, how utterly I perished and evil delusion took me off). This error or optical illusion ("ludibrium oculis oblatum"), he said, was the cause of much subsequent trouble and expense, for he had believed that he was on the point of attaining the

nigredo. But a few days later his fire went out in the night, which led to an *irreparabile damnum;* in other words, he never succeeded in repeating the phenomenon.[12] Not that the iridescent skin on molten metal is necessarily an hallucination; but the text shows a remarkable willingness on the part of the author to suspect something of the sort.

[354] The "Tractatus Aristotelis" contains a passage that is noteworthy from the point of view of the alchemist's psychology:

> The serpent is more cunning than all the beasts of the earth; under the beauty of her skin she shows a harmless face, and she forms herself in the manner of a *materia hypostatica*, through illusion, when immersed in water.[13] There she gathers together the virtues from the earth, which is her body. Because she is very thirsty she drinks immoderately and becomes drunken, and she causes the nature wherewith she is united to vanish [*decipere*].[14]

[355] The serpent is Mercurius, who as the fundamental substance (*hypostatica*) forms himself in the water and swallows the nature to which he is joined (fig. 130). (Cf. sun drowning in the Fountain of Mercurius, lion devouring the sun [fig. 169], Beya dissolving Gabricus in her own body.) Matter is thus formed through illusion, which is necessarily that of the alchemist. This illusion might well be the *vera imaginatio* possessed of "informing" power.

[356] The fact that visions allied themselves to the alchemical work may also explain why dreams and dream-visions are often mentioned as important intermezzi or as sources of revelation. Thus Nazari, for instance, puts his doctrine of transmutation in the form of three dreams,[15] a fairly plain analogy to *Poliphilo*. The classical "Visio Arislei" has a similar dream form.[16] Ostanes likewise communicates his doctrine dressed up as a revelation in a dream.[17] While the dreams and visions in these texts (as also in Senior and Krates) are mainly a literary convention, the dream-vision of Zosimos has a much more authentic character.[18] It is repeatedly stressed in the literature that the much-sought-after *aqua permanens* would be revealed in a dream.[19] Generally speaking the *prima materia*, indeed the stone itself—or the secret of its production—is

revealed to the operator by God. Thus Laurentius Ventura says: “But one cannot know the procedure unless it be a gift of God, or through the instruction of a most experienced Master: and the source of it all is the Divine Will.”[20] Khunrath[21] is of the opinion that one could “perfectly prepare our Chaos Naturae [= *prima materia]* in the highest simplicity and perfection” from a “special Secret Divine Vision and revelation, without further probing and pondering of the causes.”[22] Hoghelande explains the necessity for divine illumination by saying that the production of the stone transcends reason[23] and that only a supernatural and divine knowledge knows the exact time for the birth of the stone.[24] This means that God alone knows the *prima materia*.[25] After the time of Paracelsus the source of enlightenment was the *lumen naturae:*

130. The Mercurial serpent devouring itself in water or fire.—Barchusen, *Elementa chemiae* (1718)

> This Light is the true Light of nature, which illuminates all the God-loving Philosophers who come into this World. It is in the World and the whole edifice of the World is beautifully adorned and will be naturally preserved by it until the last and great day of the Lord, but the World knows it not. Above all it is the Subject of the Catholic and Great Stone of the Philosophers, which the whole World has before its eyes yet knows not.[26]

II. THE MENTAL ATTITUDE TOWARDS THE OPUS

[357] A somewhat different aspect of the psyche's relations to the chemical work is apparent in the following quotation from the text of an anonymous author:[27] "I pray you, look with the eyes of the mind at this little tree of the grain of wheat, regarding all its circumstances, that you may be able to plant the tree of the philosophers."[28] (Fig. 131; cf. also figs. 135, 188, 189, 221.) This seems to point to active imagination as the thing that sets the process really going.

[358] Dorn says in his "Philosophia meditativa": "Thou wilt never make from others the One that thou seekest, except there first be made one thing of thyself."[29] Whatever he may have meant by the "One"[30] it must refer to the "artifex," whose unity is postulated as the absolute condition for the completion of the work. We can hardly doubt that the *psychological* condition for the *opus* is meant, and that this is of fundamental importance.

131. Adam as *prima materia*, pierced by the arrow of Mercurius. The *arbor philosophica* is growing out of him.—“Miscellanea d’alchimia” (MS., 14th cent.)

[359] The *Rosarium* says:[31]

> Who therefore knows the salt and its solution knows the hidden secret of the wise men of old. Therefore turn your mind upon the salt and think not of other things; for in it alone [i.e., the mind] is the science concealed and the most excellent and most hidden secret of all the ancient philosophers.[32]

[360] The Latin text has “in ips*a* sol*a*,” referring therefore to “mens.” One would have to assume a double misprint were the secret after all concealed in the *salt*. But as a matter of fact “mind” and “salt” are close

cousins—*cum grano salis!*[33] Hence, according to Khunrath, the salt is not only the physical centre of the earth but at the same time the *sal sapientiae*,[34] of which he says: “Therefore direct your feelings, senses, reason and thoughts upon this salt alone.”[35] The anonymous author of the *Rosarium* says in another place that the work must be performed “with the true and not with the fantastic imagination,”[36] and again that the stone will be found “when the search lies heavy on the searcher.”[37] This remark can only be understood as meaning that a certain psychological condition is indispensable for the discovery of the miraculous stone.

[361] Both these remarks, therefore, make it seem very possible that the author was in fact of the opinion that the essential secret of the art lies hidden in the human mind—or, to put it in modern terms, in the unconscious (fig. 132).

[362] If it really did dawn on the alchemists that their work was somehow connected with the human psyche and its functions, then it seems to me probable that the passage from the *Rosarium* is no mere misprint. It agrees too well with the statements of other authors. They insist throughout upon careful study and meditation of the books. Thus Richardus Anglicus[38] says in his so-called “Correctorium alchymiae”:

> Therefore all those who desire to attain the blessing of this art should apply themselves to study, should gather the truth from the books and not from invented fables and untruthful works. There is no way by which this art can truly be found (although men meet with many deceptions), except by completing their studies and understanding the words of the philosophers.…[39]

[363] Bernard of Treviso tells us how he struggled in vain for many years till at last he was “directed into the straight path” through a *sermo* of Parmenides in the *Turba*.[40]

[364] Hoghelande says:

> He should collect the books of different authors, because otherwise it is impossible to understand them, and he should not throw aside a book which he has read once, twice, or even three times, although he has not

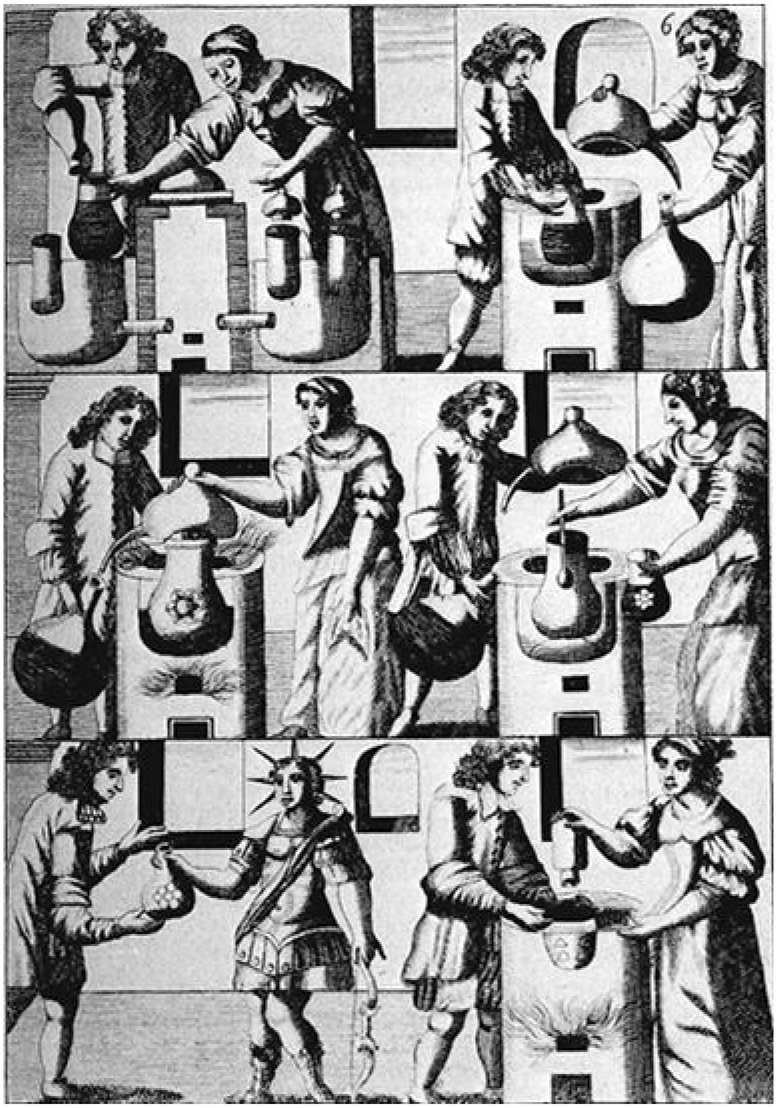
understood it, but should read it again ten, twenty, fifty times or even more. At last he will see wherein the authors are mainly agreed: there the truth lies hidden.…[41]

[365] Quoting Raymond Lully as his authority, the same author says that owing to their ignorance men are not able to accomplish the work until they have studied universal philosophy, which will show them things that are unknown and hidden from others. “Therefore our stone belongs not to the vulgar but to the very heart of our philosophy.”[42] Dionysius Zacharius relates that a certain “religiosus Doctor excellentissimus” advised him to refrain from useless expense in “sophisticationibus diabolicis” and to devote himself rather to the study of the books of the old philosophers, so as to acquaint himself with the *vera materia*. After a fit of despair he revived with the help of the Holy Spirit and, applying himself to a serious study of the literature, read diligently, and meditated day and night until his finances were exhausted. Then he worked in his laboratory, saw the three colours appear, and on Easter Day of the following year the wonder happened: “Vidi perfectionem”—“I saw the perfect fulfilment”: the quicksilver was “conversum in purum aurum prae meis oculis.” This happened, so it was said, in 1550.[43] There is an unmistakable hint here that the work and its goal depended very largely on a mental condition. Richardus Anglicus rejects all the assorted filth the alchemists worked with, such as eggshells, hair, the blood of a red-haired man, basilisks, worms, herbs, and human faeces. “Whatsoever a man soweth that also shall he reap. Therefore if he soweth filth, he shall find filth.”[44] “Turn back, brethren, to the way of truth of which you are ignorant; I counsel you for your own sake to study and to labour with steadfast meditation on the words of the philosophers, whence the truth can be summoned forth.”[45]

132. The “secret” contents of the work. Centre, the *soror mystica*, with the artifex, fishing for Neptune (animus); below, artifex, with *soror*, fishing for Melusina (anima).—*Mutus liber* (1702)

[366] The importance or necessity of understanding and intelligence is insisted upon all through the literature, not only because intelligence above the ordinary is needed in the performance of so difficult a work, but because it is assumed that a species of magical power capable of transforming even brute matter dwells in the human mind. Dorn, who devoted a series of interesting treatises[46] to the problem of the relationship between the work and the man (fig. 133), says: “In truth the form, which is the intellect of man, is the beginning, middle and end of the procedure: and this form is made clear by the saffron colour, which indicates that man is the greater and principal form in the spagyric

opus.”[47] Dorn draws a complete parallel between the alchemical work and the moral-intellectual transformation of man. His thought, however, is often anticipated in the Harranite “Treatise of Platonic Tetralogies,” the Latin title of which is “Liber Platonis quartorum.”[48] Its author establishes four series of correspondences, each containing four “books,” “for the help of the investigator”:[49]



133. Alchemists at work: various stages of the process. Sol appears below, bringing the golden flower.—*Mutus liber* (1702)

I	II[53]	III	IV
1. De opere	1. Elementum	1. Naturae	1. Sensus

naturalium (Concerning the work of natural things)	aquae	composite (Composite natures)	(Senses)
2. Exaltatio divisionis naturae (Emphasis on—or exaltation of—the division of nature)[50]	2. Elementum terrae	2. Naturae discretae (Discriminated natures)	2. Discretio intellectualis (Intellectual discrimination)
3. Exaltatio animae (Emphasis on—or exaltation of—the soul)[51]	3. Elementum aèris	3. Simplicia (Simple things)	3. Ratio (Reason)[54]
4. Exaltatio intellectus (Emphasis on—or exaltation of—the intellect)[52]	4. Elementum ignis	4. Aetheris simplicioris (Things pertaining to yet simpler ether)	4. Res quam concludunt hi effectus praecedentes (The thing included in the foregoing effects)[55]

[367] The four series show four aspects of the *opus*. The first horizontal series begins with natural things, the *prima materia* as represented by water. These things are composite, i.e., mixed. Their "correspondence" in column IV is sense perception. The second horizontal series represents a higher stage in the process: in column I, the composite natures are decomposed or changed back into their initial elements; in column II, the earth is separated from the (primal) water as in the Book of Genesis, a favourite theme in alchemy; in column III, there is a separation into categories; and column IV is concerned with the psychological act of discrimination.

[368] The third horizontal series shows the upward advance still more clearly: in column I, the soul emerges from nature; in column II, there is an elevation into the realm of air; in column III, the process reaches the "simple" things which, because of their unalloyed quality, are incorruptible, eternal, and akin to Platonis ideas; and in column IV, there

is the final ascent from *mens* to *ratio*, to the *anima rationalis*, i.e., the highest form of the soul. The fourth horizontal series illustrates the perfection or completion of each of the vertical columns.

[369] *First vertical series:* This column has a "phenomenological" character, if such a modern term is permissible here. The psychic element emerges from the sum of natural phenomena and culminates in the *exaltatio intellectus*, the phenomenon of clear insight and understanding. We can, without doing violence to the text, take this *intellectus* as the highest lucidity of which consciousness is capable.

[370] *Second vertical series:* The earth emerges from the chaotic waters of the beginning, from the *massa confusa*, in accordance with the ancient alchemical view; above it lies air, the volatile element rising from the earth. Highest of all comes fire[56] as the "finest" substance, i.e., the fiery pneuma[57] which reaches up to the seat of the gods"[58] (fig. 134; cf. figs. 166, 178, 200).

[371] *Third vertical series:* This column has a categorical or ideal character; hence it contains intellectual judgments. All composites are dissolved into their "discriminated" components, which in their turn are reduced to the "simple" substance. From this there finally emerge the quintessences, the simple primordial ideas. Ether is the quintessence.[59]

[372] *Fourth vertical series:* This column is exclusively "psychological." The senses mediate perception, while the *discretio intellectualis* corresponds to apperception. This activity is subject to the *ratio* or *anima rationalis*, the highest faculty bestowed by God on man. Above the *anima rationalis* there is only the *res*, which is the product of all the preceding effects. The "Liber Platonis quartorum" interprets this *res* as the

> invisible and immovable God[60] whose will created the intelligence; from the will and intelligence [to be understood here as *intellectus]* is produced the simple soul;[61] but the soul gives rise to the discriminated natures from which the composite natures are produced, and these show that a thing cannot be comprehended save by something superior to it. The soul is above nature and through it nature is comprehended, but the

> intelligence is above the soul and through it the soul is comprehended, and the intelligence is comprehended by that which is above itself, and is surrounded by the One God whose nature is not to be comprehended.[62]

134. Saturn, or *Mercurius senex,* being cooked in the bath until the spirit or white dove (*pneuma*) ascends.—Trismosin, “Splendor solis” (MS., 1582)

[373] The original text runs:

> … scias quod scientia antiquorum quibus appraeparatae sunt scientiae et virtutes, est quod res ex qua sunt res, est Deus invisibilis et immobilis, cuius voluntate intelligentia condita est; et voluntate et intelligentia[63] est anima simplex; per animam sunt naturae discretae, ex quibus generatae sunt compositae, et indicant quod res non cognoscitur, nisi per suam

> superius. Anima vero est super naturam, et per earn cognoscitur natura, sed intelligentia est superior anima et per earn cognoscitur anima, et intelligentia[m][64] noscit, qui[65] superior ea est, et circundat earn Deus unus, cuius qualitas apprehendi non potest.

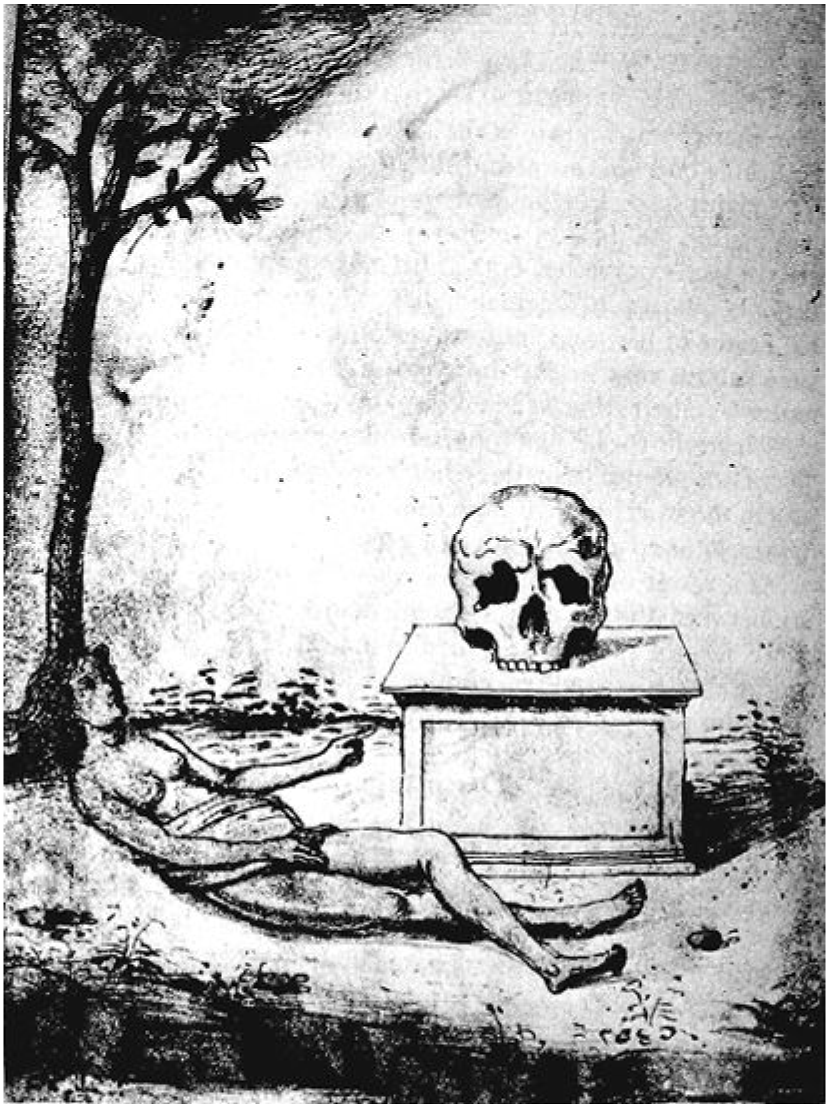
[374] The author adds a quotation whose origin I have not been able to trace. It runs:

> The philosopher said in the Book of Dialogues: I went about the three heavens, namely the heaven of composite nature, the heaven of discriminated nature, and the heaven of the soul. But when I sought to go about the heaven of intelligence, the soul said to me: That way is not for thee. Then nature attracted me, and I was attracted. This saying of the philosopher was not intended by him to specify this science, but because he wished that his words should not fail to make clear the power which liberates the creature, and that by their means the lower process in this kind of work should be made known through the higher.[66]

[375] In this very ancient text—which in its Arabic form cannot be much later than the tenth century, many of its components being still older—we find a systematic classification of the correspondences between the *opus alchemicum* and the philosophical and psychological processes running parallel with it. The text makes it abundantly clear just how much the chemical processes coincided with spiritual or psychic factors for these thinkers. Indeed the connection went so far that the product to be extracted from matter was known as the *cogitatio*.[67] This strange idea is explicable only on the assumption that the old philosophers did have a faint suspicion that psychic contents were being projected into matter. Because of the intimate connection between man and the secret of matter, both Dorn and the much earlier “Liber Platonis Quartorum” demand that the operator should rise to the height of his task: he must accomplish in his own self the same process that he attributes to matter, “for things are perfected by their like.” Therefore the operator must himself participate in the work (“oportet operatorem interesse operi”), “for if the investigator does not remotely possess the likeness [i.e., to the work] he will not climb the height I have described, nor reach the road that leads to the goal.”[68]

[376] As a result of the projection there is an unconscious identity between the psyche of the alchemist and the arcane substance, i.e., the spirit imprisoned in matter. The "Liber Platonis quartorum" accordingly recommends the use of the *occiput* (fig. 75) as the vessel of transformation,[69] because it is the container of thought and intellect[70] (fig. 135). For we need the brain as the seat of the "divine part." The text continues:

> Through time and exact definition things are converted into intellect, inasmuch as the parts are assimilated [to one another] in composition and in form. But on account of its proximity to the *anima rationalis* the brain had to be assimilated to the amalgam, and the *anima rationalis* is simple, as we have said.[71]



135. The skull, symbol of the *mortificatio* of Eve, the feminine aspect of the *prima materia*. Whereas in the case of Adam the tree corresponds to the phallus (see fig. 131), here the tree grows out of Eve's head.—"Miscellanea d'alchimia' (MS., 14th cent.)

[377] The assumption underlying this train of thought is the causative effect of analogy. In other words, just as in the psyche the multiplicity of sense perceptions produces the unity and simplicity of an idea, so the primal water finally produces fire, i.e., the ethereal substance—not (and this is the decisive point) as a mere analogy but as the result of the mind's working on matter. Consequently Dorn says: "Within the human body is concealed a certain metaphysical substance, known to very few, which needs no medicament, being itself an incorrupt medicament." This medicine is "of threefold nature: metaphysical, physical, and moral" ("moral" is what we would call "psychological"). "From this," Dorn goes on, "the attentive reader will conclude that one must pass from the metaphysical to the physical by a philosophic procedure."[72] This medicine is clearly the arcane substance which he defines elsewhere as *veritas:*

> There is in natural things a certain truth which cannot be seen with the outward eye, but is perceived by the mind alone [*sola mente*], and of this the Philosophers have had experience, and have ascertained that its virtue is such as to work miracles.[73]
>
> In this [truth] lies the whole art of freeing the spirit [*spiritus*] from its fetters, in the same way that, as we have said, the mind [*mens*] can be freed [i.e., morally] from the body.[74]
>
> As faith works miracles in man, so this power, the *veritas efficaciae*, brings them about in matter. This truth is the highest power and an impregnable fortress wherein the stone of the philosophers lies hid.[75]

[378] By studying the philosophers man acquires the skill to attain this stone. But again, the stone is man. Thus Dorn exclaims: "Transform yourselves from dead stones into living philosophical stones!"[76] Here he is expressing in the clearest possible way the identity of something in man with something concealed in matter.

[379] In his "Recueil stéganographique"[77] Béroalde de Verville says:

> If any man wish at times to change the drop of mastic, and by pressing it to cause a clear tear to issue from it, let him take care, and he will see in a fixed time, under the gentle pressure of the fire, a like substance issue from the philosophic matter; for as soon as its violet darkness is excited for the second time, it will stir up from it as it were a drop or flower or flame or pearl, or other likeness of a precious stone, which will be diversified until it runs out in very clear whiteness, which thereafter will be capable of clothing itself with the honour of beauteous rubies, or ethereal stones, which are the true fire of the soul and light of the philosophers.

[380] It should now be sufficiently clear that from its earliest days alchemy had a double face: on the one hand the practical chemical work in the laboratory, on the other a psychological process, in part consciously psychic, in part unconsciously projected and seen in the various transformations of matter.

[381] Not much effort is needed at the beginning of the work; it is sufficient to approach it with "a free and empty mind," as one text says.[78] But one important rule must be observed: "the mind [*mens*] must be in harmony with the work"[79] and the work must be above all else. Another text says that in order to acquire the "golden understanding" (*aurea apprehensio*) one must keep the eyes of the mind and soul well open, observing and contemplating by means of that inner light which God has lit in nature and in our hearts from the beginning.[80]

[382] Since the investigator's psyche was so closely bound up with the work—not only as its necessary medium but also as its cause and point of departure—it is easy to understand why so much emphasis was laid on the psychic condition and mental attitude of the laboratory worker. Alphidius says: "Know that thou canst not have this science unless thou shalt purify thy mind before God, that is, wipe away all corruption from thy heart."[81] According to *Aurora*, the treasure-house of Hermetic wisdom rests on a firm foundation of fourteen principal virtues: health, humility, holiness, chastity, virtue,[82] victory, faith, hope, charity, goodness (*benignitas*), patience, temperance, a spiritual discipline or understanding,[83] and obedience.

[383] The Pseudo-Thomas who is author of this same treatise quotes the saying "Purge the horrible darknesses of our mind,"[84] and gives as a parallel Senior's "he maketh all that is black white …"[85] Here the "darknesses of our mind" coincide unmistakably with the *nigredo* (figs. 34, 48, 115, 137); i.e., the author feels or experiences the initial stage of the alchemical process as identical with his own psychic condition.

[384] Another old authority is Geber. The *Rosarium* says that in his *Liber perfecti magisterii* Geber requires the following psychological and characterological qualities of the artifex: He must have a most subtle mind and an adequate knowledge of metals and minerals. But he must not have a coarse or rigid mind, nor should he be greedy and avaricious, nor irresolute and vacillating. Further, he must not be hasty or vain. On the contrary, he must be firm in purpose, persevering, patient, mild, long-suffering, and good-tempered.[86]

[385] The author of the *Rosarium* goes on to say that he who wishes to be initiated into this art and wisdom must not be arrogant, but devout, upright, of profound understanding, humane, of a cheerful countenance and a happy nature. He continues: "My son, above all I admonish thee to fear God, who knoweth what manner of man thou art and in whom is help for the solitary, whosoever he may be."[87]

[386] Particularly instructive is the introduction to the art given by Morienus to Kalid:[88]

> This thing for which you have sought so long is not to be acquired or accomplished by force or passion. It is to be won only by patience and humility and by a determined and most perfect love. For God bestows this divine and immaculate science on his faithful servants, namely those on whom he resolved to bestow it from the original nature of things.[89] … [Some remarks follow concerning the handing down of the art to pupils.] Nor were they [the elect] able to hold anything back save through the strength granted to them by God, and they themselves could no longer direct their minds save towards the goal[90] appointed for them by God. For God charges those of his servants whom he has purposely chosen [fig. 136] that they seek this divine science which is hidden from men,

and that they keep it to themselves. This is the science that draws its master away from the suffering of this world and leads to the knowledge of future good.

When Morienus was asked by the king why he lived in mountains and deserts rather than in hermitages, he answered: “I do not doubt that in hermitages and brotherhoods I would find greater repose, and fatiguing work in the deserts and in the mountains; but no one reaps who does not sow.… Exceeding narrow is the gateway to peace, and none may enter save through affliction of the soul.”[91]

136. God enlightening the artifex.—Barchusen, *Elementa chemiae* (1718)

[387] We must not forget, in considering this last sentence, that Morienus is not speaking for the general edification but is referring to the divine art and its work. Michael Maier expresses himself in similar vein when he says:

> There is in our chemistry a certain noble substance, in the beginning whereof is wretchedness with vinegar, but in its ending joy with gladness. Therefore I have supposed that the same will happen to me, namely that I shall suffer difficulty, grief, and weariness at first, but in the end shall come to glimpse pleasanter and easier things.[92]

[388] The same author also affirms that “our chemistry stirs up the artifex to a meditation of the heavenly good,”[93] and that whoso is initiated by God into these mysteries “casts aside all insignificant cares like food and clothing, and feels himself as it were new-born.”[94]

[389] The difficulty and grief to be encountered at the beginning of the work once more coincide with the *nigredo*, like the “horrible darknesses of our mind” of which *Aurora* speaks; and these in their turn are surely the same as the “affliction of soul” mentioned by Morienus. The term he uses for the attitude of the adept—*amor perfectissimus*—expresses an extraordinary devotion to the work. If this “serious meditation” is not mere bragging—and we have no reason to assume any such thing—then we must imagine the old adepts carrying out their work with an unusual concentration, indeed with religious fervour (cf. below). Such devotion would naturally serve to project values and meanings into the object of all this passionate research and to fill it with forms and figures that have their origin primarily in the unconscious of the investigator.

III. MEDITATION AND IMAGINATION

[390] The point of view described above is supported by the alchemist’s remarkable use of the terms *meditatio* and *imaginatio*. Ruland’s *Lexicon alchemiae* defines *meditatio* as follows: “The word *meditatio* is used when a man has an inner dialogue with someone unseen. It may be with God, when He is invoked, or with himself, or with his good angel”[95] (fig. 137). The psychologist is familiar with this “inner dialogue”; it is an essential part of the technique for coming to terms with the unconscious.[96] Ruland’s definition proves beyond all doubt that when the alchemists speak of *meditari* they do not mean mere cogitation, but explicitly an inner dialogue and hence a living relationship to the answering voice of the “other” in ourselves, i.e., of the unconscious. The use of the term “meditation” in the Hermetic dictum “And as all things proceed from the One through the meditation of the One” must therefore be understood in this alchemical sense as a creative dialogue, by means of which things pass from an unconscious potential state to a manifest one. Thus we read in a treatise of Philalethes:[97] “Above all it is

marvellous that our stone, although already perfect and able to impart a perfect tincture, does voluntarily humble itself again and will meditate a new volatility, apart from all manipulation."[98] What is meant by a "meditated volatility" we discover a few lines lower down, where it says: "Of its own accord it will liquefy … and by God's command become endowed with spirit, which will fly up and take the stone with it."[99] Again, therefore, to "meditate" means that through a dialogue with God yet more spirit will be infused into the stone, i.e., it will become still more spiritualized, volatilized, or sublimated (cf. fig. 178). Khunrath says much the same thing:

137. Alchemist in the initial *nigredo* state, meditating.—Jamsthaler, *Viatorium spagyricum* (1625)

> Therefore study, meditate, sweat, work, cook … so will a healthful flood be opened to you which comes from the Heart of the Son of the great World, a Water which the Son of the Great World pours forth from his Body and Heart, to be for us a True and Natural Aqua Vitae…[100]

[391] Likewise the "meditation of the heavenly good," mentioned earlier, must be taken in the sense of a living dialectical relationship to certain dominants of the unconscious. We have excellent confirmation of this in

a treatise by a French alchemist living in the seventeenth and eighteenth centuries.[101] He says:

> How often did I see them [the *Sacerdotes Aegyptiorum]* overcome with joy at my understanding, how affectionately they kissed me, for the true grasp of the ambiguities of their paradoxical teaching came easily to my mind. How often did their pleasure in the wonderful discoveries I made concerning the abstruse doctrines of the ancients move them to reveal unto my eyes and fingers the Hermetic vessel, the salamander [fig. 138; cf. figs. 129, 130], the full moon and the rising sun.

[392] This treatise, although it is not so much a personal confession as a description of the golden age of alchemy, nevertheless tells us how the alchemist imagined the psychological structure of his *opus*. Its association with the invisible forces of the psyche was the real secret of the *magisterium*. In order to express this secret the old masters readily resorted to allegory. One of the oldest records of this kind, which had a considerable influence on the later literature, is the “Visio Arislei,”[102] and its whole character relates it very closely to those visions known to us from the psychology of the unconscious.

[393] As I have already said, the term *imaginatio*, like *meditatio*, is of particular importance in the alchemical opus. Earlier on we came across that remarkable passage in the *Rosarium* telling us that the work must be done with the true *imaginatio*, and we saw elsewhere [par. 357] how the philosophical tree can be made to grow through contemplation (figs. 131, 135). Ruland’s *Lexicon* once more helps us to understand what the alchemist meant by *imaginatio*.

138. The Mercurial spirit of the *prima materia*, in the shape of a salamander, frolicking in the fire.—Maier, *Scrutinium chymicum* (1687)

[394] Ruland says, "Imagination is the star in man, the celestial or supercelestial body."[103] This astounding definition throws a quite special light on the fantasy processes connected with the *opus*. We have to conceive of these processes not as the immaterial phantoms we readily take fantasy-pictures to be, but as something corporeal, a "subtle body" (fig. 139), semi-spiritual in nature. In an age when there was as yet no empirical psychology such a concretization was bound to be made, because everything unconscious, once it was activated, was projected into matter—that is to say, it approached people from outside. It was a hybrid phenomenon, as it were, half spiritual, half physical; a concretization such as we frequently encounter in the psychology of primitives. The *imaginatio*, or the act of imagining, was thus a physical activity that could be fitted into the cycle of material changes, that brought these about and was brought about by them in turn. In this way the alchemist related himself not only to the unconscious but directly to the very substance which he hoped to transform through the power of imagination. The singular expression "astrum" (star) is a Paracelsan term, which in this context means something like "quintessence."[104]

Imagination is therefore a concentrated extract of the life forces, both physical and psychic. So the demand that the artifex must have a sound physical constitution is quite intelligible, since he works with and through his own quintessence and is himself the indispensable condition of his own experiment. But, just because of this intermingling of the physical and the psychic, it always remains an obscure point whether the ultimate transformations in the alchemical process are to be sought more in the material or more in the spiritual realm. Actually, however, the question is wrongly put: there was no "either-or" for that age, but there did exist an intermediate realm between mind and matter, i.e., a psychic realm of subtle bodies[105] whose characteristic it is to manifest themselves in a mental as well as a material form. This is the only view that makes sense of alchemical ways of thought, which must otherwise appear nonsensical. Obviously, the existence of this intermediate realm comes to a sudden stop the moment we try to investigate matter in and for itself, apart from all projection; and it remains non-existent so long as we believe we know anything conclusive about matter or the psyche. But the moment when physics touches on the "untrodden, untreadable regions," and when psychology has at the same time to admit that there are other forms of psychic life besides the acquisitions of personal consciousness—in other words, when psychology too touches on an impenetrable darkness—then the intermediate realm of subtle bodies comes to life again, and the physical and the psychic are once more blended in an indissoluble unity. We have come very near to this turning-point today.

139. Hermes conjuring the winged soul out of an urn.—Attic funeral lekythos

[395] Such reflections are unavoidable if we want to gain any understanding of alchemy's peculiar terminology. The earlier talk of the "aberration" of alchemy sounds rather old-fashioned today when the psychological aspects of it have faced science with new tasks. There are very modern problems in alchemy, though they lie outside the province of chemistry.

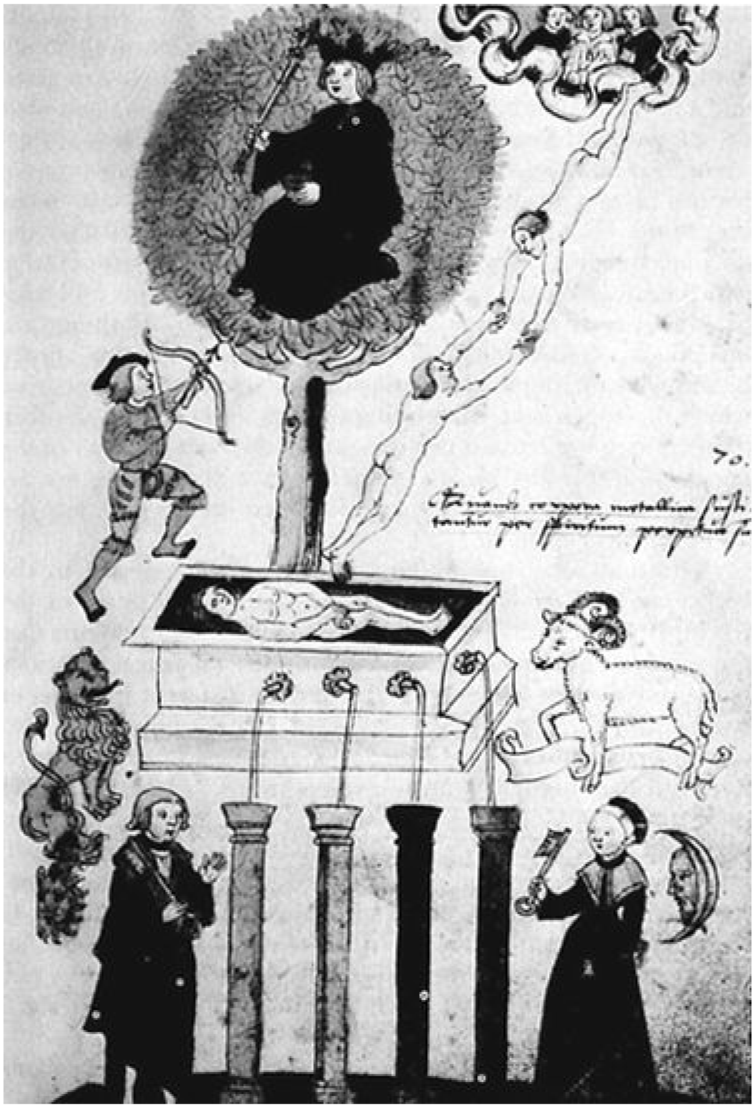
[396] The concept of *imaginatio* is perhaps the most important key to the understanding of the *opus*. The author of the treatise "De sulphure"[106] speaks of the "imaginative faculty" of the soul in that passage where he is trying to do just what the ancients had failed to do, that is, give a clear indication of the secret of the art. The soul, he says, is the vice-regent of God (*sui locum tenens seu vice Rex est*) and dwells in the life-spirit of the pure blood. It rules the mind (*illa gubernat mentem*) and this rules the body. The soul functions (*operatur*) in the body, but has the greater part of its function (*operatio*) outside the body (or, we might add by way of explanation, in projection). This peculiarity is divine, since divine wisdom is only partly enclosed in the body of the world: the greater part of it is *outside, and it imagines far higher things than the body of the world can conceive* (*concipere*). And these things are outside nature: God's own secrets. The soul is an example of this: it too imagines many things of the utmost profundity (*profundissima*) outside the body, just as God does. True, what the soul imagines happens only in the mind (*non exequitur nisi in mente*), but what God imagines happens in reality. "The soul, however, has absolute and independent power [*absolutam et separatam potestatem*] to do other things [*alia facere*] than those the body can grasp. But, when it so desires, it has the greatest power over the body [*potestatem in corpus*], for otherwise our philosophy would be in vain. Thou canst conceive the greater, for we have opened the gates unto thee."[107]

IV. SOUL AND BODY

[397] The passage just quoted affords us valuable insight into the alchemical way of thinking. The soul in this text is evidently an *anima*

corporalis (figs. 91, 208) that dwells in the blood. It would therefore correspond to the unconscious, if this is understood as the psychic phenomenon that mediates between consciousness and the physiological functions of the body. In the Tantric *chakra* system[108] this *anima* would be located below the diaphragm. On the other hand it is God's lieutenant or viceroy, the analogue of the *Deus Creator*. There are people who can never understand the unconscious as anything but a *sub*conscious, and who therefore feel impelled to put a superconscious alongside or possibly above it. Such hypotheses do not trouble our philosophers, for according to their teaching every form of life, however elementary, contains its own inner antithesis, thus anticipating the problem of opposites in modern psychology. What our author has to say about the element of air is significant in this respect:

> The air is a pure uncorrupted element, in its kind the most worthy, being uncommonly light and invisible, but inside heavy, visible, and solid. Enclosed within it [*inclusus*] is the spirit of the Highest that moved over the waters before the Creation, according to the testimony of the Holy Scripture: "And … he did fly upon the wings of the wind."[109] All things are integrated [*integrae*] in this element by the imagination of the fire.[110]



140. The artifex with his *soror mystica*, holding the keys to the work.—Thomas Aquinas (pseud.), “De alchimia” (16th cent.)

[398] In order to understand such a statement we must obviously empty our minds of all modern ideas about the nature of gases, and take it as purely psychological. In this sense, it deals with the projection of pairs of opposites such as light-heavy, visible-invisible, and so on. Now, identity of opposites is a characteristic feature of every psychic event in the unconscious state. Thus the *anima corporalis* is at the same time *spiritualis,* and the air’s heavy, solid kernel is at the same time the *spiritus creator* which moves over the waters. And just as “the images of all creatures” are contained in the creative spirit, so all things are imagined or “pictured” in air “through the power of fire”; firstly because

fire surrounds the throne of God and is the source from which the angels and, descending in rank and quality, all other living beings are created or "imagined" through infusion of the fiery *anima* into the breath of life;[111] secondly because fire destroys all composite things and infuses their images back into the air in the form of smoke.

[399] The soul, says our author, is only partly confined to the body, just as God is only partly enclosed in the body of the world. If we strip this statement of its metaphysics it asserts that the psyche is only partly identical with our empirical conscious being; for the rest it is projected and in this state it imagines or realizes those greater things which the body cannot grasp, i.e., cannot bring into reality. The "greater things" (*majora*) correspond to the "higher" (*altiora*), referring to the world-creating imagination of God; but because these higher things are imagined by God they at once become substantial instead of lingering in a state of potential reality, like the contents of the unconscious. That this activity of the soul "outside the body" refers to the alchemical *opus* is evident from the remark that the soul has the greatest power over the body, otherwise the royal art or philosophy would be in vain. "Thou canst conceive the greater," says our author; therefore your body can bring it into reality—with the help of the art and with God's permission (*Deo concedente*), this being a fixed formula in alchemy.

[400] The *imaginatio*, as the alchemists understand it, is in truth a key that opens the door to the secret of the *opus* (fig. 140). We now know that it was a question of representing and realizing those "greater" things which the soul, on God's behalf, imagines creatively and *extra naturam*—or, to put it in modern language, a question of actualizing those contents of the unconscious[112] which are outside nature, i.e., not a datum of our empirical world, and therefore an *a priori* of archetypal character. The place or the medium of realization is neither mind nor matter, but that intermediate realm of subtle reality which can be adequately expressed only by the symbol. The symbol is neither abstract nor concrete, neither rational nor irrational, neither real nor unreal. It is always both: it is *non vulgi*, the aristocratic preoccupation of one who is set apart (*cuiuslibet sequestrati*), chosen and predestined by God from the very beginning.

141. The artifex with book and altar. In the background, a cornfield (allegory of the *opus*) and the quickening *coniunctio* of *sol* and luna.—Kelley, *Tractatus de Lapide philosophorum* (1676)

142. The sequence of stages in the alchemical process.—Libavius, *Alchymia* (1606) (For explanation, see following pages)

In an *explicatio locorum signatorum*, Libavius gives the following "explanation" of this picture (fig. 142):

A	Pedestal or base = earth.
BB	Two giants or Atlases kneeling on the base and supporting a sphere with their hands.
C	Four-headed dragon from whose breath the sphere takes shape. The four grades of fire: the first mouth emits a kind of air, the second a subtle smoke, the third smoke and fire, and the fourth pure fire.
D	Mercurius with a silver chain, to which two recumbent animals are attached.
E	The green lion.
F	One-headed dragon. E and F both mean the same thing: the Mercurial fluid which is the *materia prima* of the stone.
G	A three-headed silver eagle, two of whose heads droop while the third spits white water or the Mercurial fluid into the sea, which is marked H.
I	Picture of the wind, sending forth the breath of the spirit (*spiritus*) into the sea below.
K	Picture of the red lion, with red blood flowing from his breast into the sea below, because the sea must be coloured as if it were a mixture of silver and gold or white and red. The picture is applied to body, soul, and spirit by those who have sought three [principles] from the beginning, or to the blood of the lion and the lime of the eagle. For, because they accept three, they have a double Mercurius. Those who accept two have one only, which comes from a crystal or from the unripe metal of the philosophers.
L	A stream of black water, as in the chaos, representing the *putrefactio*. From it there rises a mountain, which is black at the bottom and white at the top, so that a silver stream flows down from the summit. For it is the picture of the first dissolution and coagulation and of the resultant second dissolution.
M	The above-mentioned mountain.
NN	The heads of black ravens that are looking out of the sea.
O	Silver rain falling from the clouds on to the summit of the mountain. Sometimes this represents the nourishment and cleansing of the Lato by Azoch, sometimes the second dissolution, whereby the element of air is extracted from the earth and water. (The earth is a form of the mountain, and the water is the liquid of the sea aforementioned.)

PP	The clouds from which [come] the dew or rain and the nourishing moisture.
Q	A vision of heaven, where a dragon lies on his back and devours his own tail: he is an image of the second coagulation.
RR	An Ethiopian man and woman, supporting two higher spheres. They sit on the big sphere and accordingly represent the *nigredo* of the second operation in the second putrefaction.
SS	A sea of pure silver, which represents the Mercurial fluid whereby the tinctures are united.
T	A swan swimming on the sea, spitting out a milky liquid from his beak. This swan is the white elixir, the white chalk, the arsenic of the philosophers, the thing common to both ferments. He has to support the upper sphere with his back and wings.
V	Eclipse of the sun.
XX	The sun diving into the sea, i.e., into the Mercurial water into which the elixir also must flow. This leads to the true eclipse of the sun and one should put a rainbow on either side to suggest the peacock’s tail that then appears in the coagulation.
YY	Eclipse of the moon, which likewise has a rainbow on either side and [also] in the lowest part of the sea, into which the moon must dive. This is the picture of the white fermentation. But both seas should be fairly dark.
ZZ	The moon gliding into the sea.
a	The king, clad in purple, with a golden crown, has a golden lion beside him. He has a red lily in his hand, whereas the queen has a white lily.
b	The queen, crowned with a silver crown, strokes a white or silver eagle standing beside her.
c	The phoenix on the sphere, cremating itself; many gold and silver birds fly out of the ashes. It is the sign of multiplication and increase.

143. Alchemists at work—*Mutus liber* (1702)

3. THE WORK

I. THE METHOD

[401] The basis of alchemy is the work (*opus*). Part of this work is practical, the *operatio* itself, which is to be thought of as a series of experiments with chemical substances. In my opinion it is quite hopeless to try to establish any kind of order in the infinite chaos of substances and procedures. Seldom do we get even an approximate idea of how the work was done, what materials were used, and what results were achieved. The reader usually finds himself in the most impenetrable darkness when it comes to the names of the substances—they could mean almost anything. And it is precisely the most commonly used substances, like quicksilver, salt, and sulphur, whose alchemical meaning is one of the secrets of the art. Moreover, one must not imagine for a moment that the alchemists always understood one another. They themselves complain about the obscurity of the texts, and occasionally betray their inability to understand even their own symbols and symbolic figures. For instance, the learned Michael Maier accuses the classical authority Geber of being the obscurest of all, saying that it would require an Oedipus to solve the riddle of the "Gebrina Sphinx."[1] Bernard of Treviso, another famous alchemist, goes so far as to call Geber an obscurantist and a Proteus who promises kernels and gives husks.

[402] The alchemist is quite aware that he writes obscurely. He admits that he veils his meaning on purpose, but nowhere—so far as I know—does he say that he cannot write in any other way. He makes a virtue of necessity by maintaining either that mystification is forced on him for one reason or another, or that he really wants to make the truth as plain as possible, but cannot proclaim aloud just what the *prima materia* or the *lapis* is.

[403] The profound darkness that shrouds the alchemical procedure comes from the fact that although the alchemist was interested in the chemical

part of the work he also used it to devise a nomenclature for the psychic transformations that really fascinated him. Every original alchemist built himself, as it were, a more or less individual edifice of ideas, consisting of the dicta of the philosophers and of miscellaneous analogies to the fundamental concepts of alchemy. Generally these analogies are taken from all over the place. Treatises were even written for the purpose of supplying the artist with analogy-making material.[2] The method of alchemy, psychologically speaking, is one of boundless amplification. The *amplificatio* is always appropriate when dealing with some obscure experience which is so vaguely adumbrated that it must be enlarged and expanded by being set in a psychological context in order to be understood at all. That is why, in analytical psychology, we resort to amplification in the interpretation of dreams, for a dream is too slender a hint to be understood until it is enriched by the stuff of association and analogy and thus amplified to the point of intelligibility. This *amplificatio* forms the second part of the *opus*, and is understood by the alchemist as *theoria*.[3] Originally the theory was the so-called "Hermetic philosophy," but quite early on it was broadened by the assimilation of ideas taken over from Christian dogma. In the oldest alchemy known to the West the Hermetic fragments were handed down mostly through Arabic originals. Direct contact with the *Corpus Hermeticum* was only established in the second half of the fifteenth century, when the Greek manuscript reached Italy from Macedonia and was translated into Latin by Marsilio Ficino.

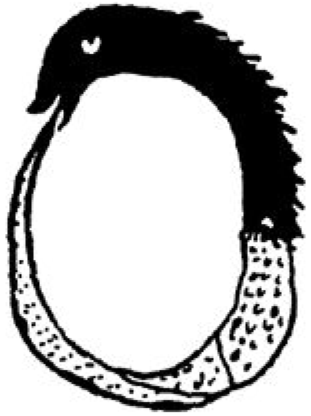
144. Left, three artists in the library. Right, the artist, or his assistant, working in the laboratory.—Maier, *Tripus aureus* (1618)

[404] The vignette (fig. 144) that is on the title-page to the *Tripus aureus* (1618) is a graphic illustration of the double face of alchemy. The picture is divided into two parts.[4] On the right is a laboratory where a man, clothed only in trunks, is busy at the fire; on the left a library, where an abbot,[5] a monk,[6] and a layman[7] are conferring together. In the middle, on top of the furnace, stands the tripod with a round flask on it containing a winged dragon. The dragon symbolizes the visionary experience of the alchemist as he works in his laboratory and "theorizes."[8]

145. Laboratory and oratory.—Khunrath, *Amphitheatrum sapientiae* (1604)

146. Mercurius as “uniting symbol.”—Valentinus, “Duodecim claves.” in *Musaeum hermeticum* (1678)

The dragon in itself is a *monstrum*—a symbol combining the chthonic principle of the serpent and the aerial principle of the bird. It is, as Ruland says,’[9] a variant of Mercurius. But Mercurius is the divine winged Hermes (fig. 146) manifest in matter, the god of revelation, lord of thought and sovereign psychopomp. The liquid metal, *argentum vivum*—“living silver,” quicksilver—was the wonderful substance that perfectly expressed the nature of the *στίλβων*: that which glistens and animates within. When the alchemist speaks of Mercurius, on the face of it he means quicksilver, but inwardly he means the world-creating spirit concealed or imprisoned in matter. The dragon is probably the oldest pictorial symbol in alchemy of which we have documentary evidence. It appears as the *ούρο βόρος*, the tail-eater, in the Codex Marcianus (fig. 147), which dates from the tenth or eleventh century,[10] together with the legend: *νἓ τὸ πάν* (the One, the All).[11] Time and again the alchemists reiterate that the *opus* proceeds from the one and leads back to the one,[12] that it is a sort of circle like a dragon biting its own tail (cf. figs. 20, 44, 46, 47). For this reason the *opus* was often called *circulare* (circular) or else *rota* (the wheel) (fig. 80). Mercurius stands at the beginning and end of the work: he is the *prima materia*, the *caput corvi*, the *nigredo;* as dragon he devours himself and as dragon he dies, to rise again as the *lapis*. He is the play of colours in the *cauda pavonis* and the division into four elements. He is the hermaphrodite that was in the beginning, that splits into the classical brother-sister duality and is reunited in the *coniunctio*, to appear once again at the end in the radiant form of the *lumen novum*, the stone. He is metallic yet liquid, matter yet spirit, cold yet fiery,[13] poison and yet healing draught—a symbol uniting all opposites (fig. 148).[14]



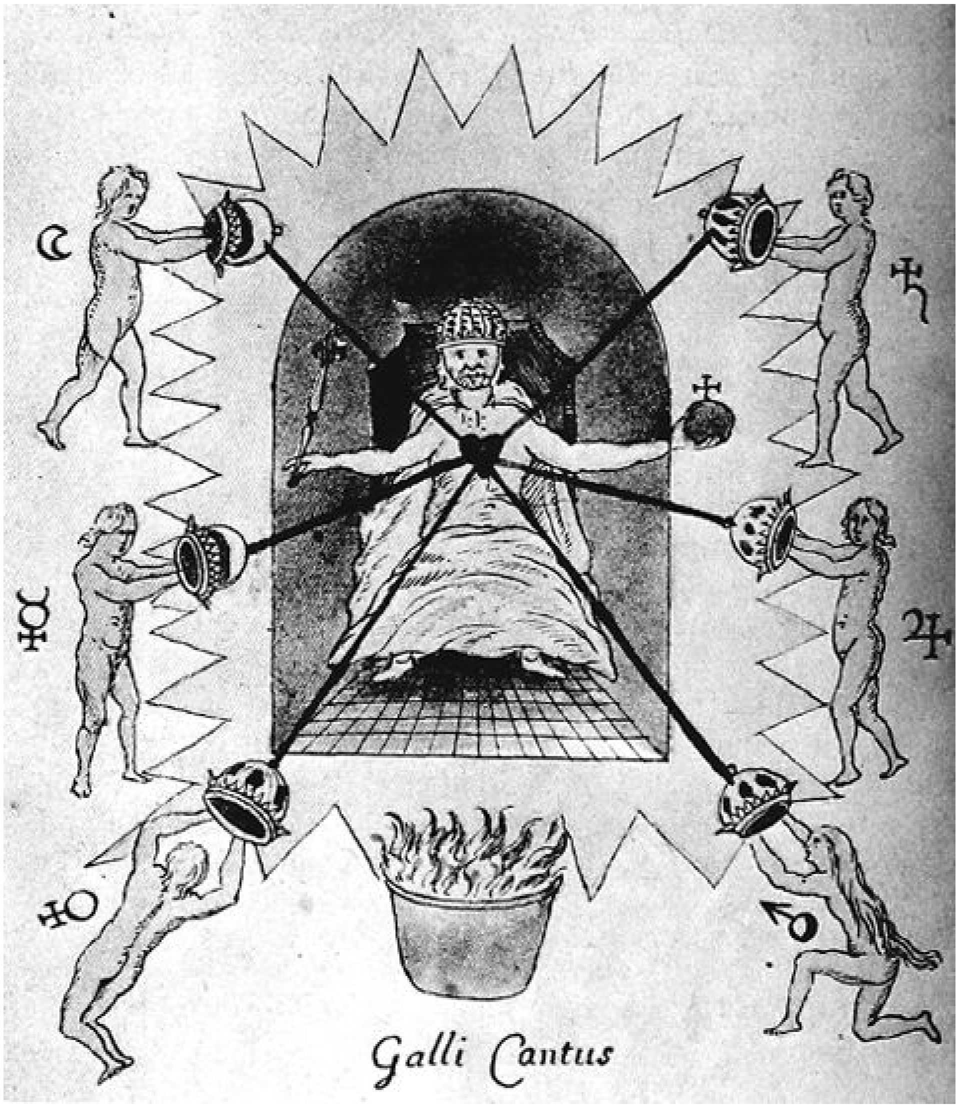
147. Uroboros.—Codex Marcianus (11th cent.)

148. Mercurius as caduceus, uniting the paired opposites.—“Figurarum Aegyptiorum secretarum” (MS., 18th cent.)

II. THE SPIRIT IN MATTER

[405] All these ideas were the common property of alchemy from earliest times. Zosimos, writing in the third century A.D., quotes one of the very oldest authorities on alchemy in his treatise “Concerning the Art and Its Interpretation,”[15] namely Ostanes,[16] who belongs to the dawn of history and was known even to Pliny. His connection with Democritus, another of the earliest alchemical writers, probably dates from the first century B.C.[17] This Ostanes is reported to have said:

> Go to the waters of the Nile and there you will find a stone that has a spirit [*πνεῦμα*]. Take this, divide it, thrust in your hand and draw out its heart: for its soul [*ψνχή*] is in its heart[18] [fig. 149]. [An interpolator adds:] There, he says, you will find this stone that has a spirit, which refers to the expulsion of the quicksilver [*ἒἐνδραργύρωσις*].[19]



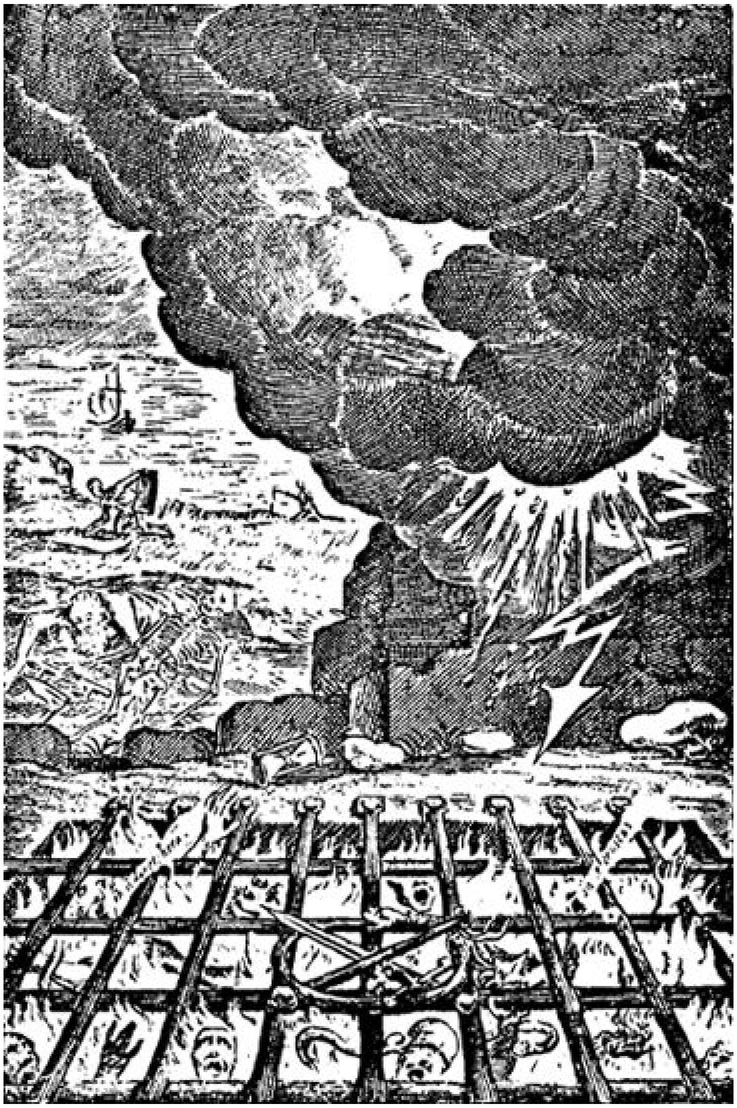
149. The sick king (*prima materia*), from whose heart the planet-children receive their crowns.—"La Sagesse des anciens" (MS., 18th cent.)

[406] Nietzsche's metaphor in *Zarathustra*, "an image slumbers for me in the stone," says much the same thing, but the other way round. In antiquity the material world was filled with the projection of a psychic secret, which from then on appeared as the secret of matter and remained so until the decay of alchemy in the eighteenth century. Nietzsche, with his ecstatic intuition, tried to wrest the secret of the superman from the stone in which it had long been slumbering. It was in the likeness of this slumbering image that he wished to create the superman, whom, in the language of antiquity, we may well call the divine man. But it is the other way about with the alchemists: they were looking for the marvellous

stone that harboured a pneumatic essence in order to win from it the substance that penetrates all substances—since it is itself the stone-penetrating "spirit"—and transforms all base metals into noble ones by a process of coloration. This "spirit-substance" is like quicksilver, which lurks unseen in the ore and must first be expelled if it is to be recovered *in substantia*. The possessor of this penetrating Mercurius (fig. 150) can "project" it into other substances and transform them from the imperfect into the perfect state.[20] The imperfect state is like the sleeping state; substances lie in it like the "sleepers chained in Hades" (fig. 151)[21] and are awakened as from death to a new and more beautiful life by the divine tincture extracted from the inspired stone. It is quite clear that we have here a tendency not only to locate the mystery of psychic transformation in matter, but at the same time to use it as a *theoria* for effecting chemical changes.

150. The penetrating Mercurius.—"Speculum veritatis" (MS., 17th cent.)

[407] Just as Nietzsche made absolutely sure that nobody could mistake the superman for a sort of spiritual or moral ideal, so it is emphasized that the tincture or divine water is far from being merely curative and ennobling in its effects, but that it may also act as a deadly poison which penetrates other bodies as pervasively as the pneuma penetrates its stone.[22]



151. Prisoners in the underworld.—Izquierdo, *Praxis exercitiorum spiritualium* (1695)

[408] Zosimos was a Gnostic who was influenced by Hermes. In his missive to Theosebeia he recommends the “krater” as a vessel of transformation: she should, he says, hasten to the Poimandres in order to be baptized in the krater.[23]

[409] This krater refers to the divine vessel of which Hermes tells Thoth in the treatise entitled *ὁ κρατήρ*.[24] After the creation of the world, God filled this vessel with nous (*νοῦς* = pneuma) and sent it down to earth as a kind of baptismal font. By so doing God gave man, who wished to free himself from his natural, imperfect, sleeping state of *ἄνοια* (or, as we should say, insufficient consciousness), an opportunity to dip himself in the nous and thus partake of the higher state of *ἔννοια*, i.e.,

enlightenment or higher consciousness (fig. 159). The nous is thus a kind of *βαφεῖον*, dyestuff or tincture, that ennobles base substances. Its function is the exact equivalent of the tincturing stone-extract, which is also a pneuma and, as Mercurius, possesses the Hermetic dual significance of redeeming psychopomp[25] and quicksilver (fig. 152).

[410] Clearly enough, then, Zosimos had a mystic or Gnostic philosophy of sorts whose basic ideas he projected into matter. When we speak of psychological projection we must, as I have already pointed out, always remember that it is an unconscious process that works only so long as it stays unconscious. Since Zosimos, like all the other alchemists, is convinced not only that his philosophy can be applied to matter but that processes also take place in it which corroborate his philosophical assumptions, it follows that he must have experienced, in matter itself, at the very least an identity between the behaviour of matter and the events in his own psyche. But, as this identity is unconscious, Zosimos is no more able than the rest of them to make any pronouncement about it. For him it is simply there, and it not only serves as a bridge, it actually *is* the bridge that unites psychic and material events in one, so that "what is within is also without." Nevertheless an unconscious event which eludes the conscious mind will portray itself somehow and somewhere, it may be in dreams, visions, or fantasies. The idea of the pneuma as the Son of God, who descends into matter[26] and then frees himself from it in order to bring healing and salvation to all souls, bears the traits of a projected unconscious content (fig. 153). Such a content is an autonomous complex divorced from consciousness, leading a life of its own in the psychic non-ego and instantly projecting itself whenever it is constellated in any way—that is, whenever attracted by something analogous to it in the outside world. The psychic autonomy of the pneuma[27] is attested by the Neopythagoreans: in their view the soul was swallowed by matter and only mind—nous—was left. But the nous is outside man: it is his daemon. One could hardly formulate its autonomy more aptly. Nous seems to be identical with the god Anthropos: he appears alongside the demiurge and is the adversary of the planetary spheres. He rends the circle of the spheres and leans down to earth and water (i.e., he is about to project himself into the elements). His shadow falls upon the earth, but

his image is reflected in the water. This kindles the love of the elements, and he himself is so charmed with the reflected image of divine beauty that he would fain take up his abode within it. But scarcely has he set foot upon the earth when Physis locks him in a passionate embrace. From this embrace are born the seven first hermaphroditic beings.[28] The seven are an obvious allusion to the seven planets and hence to the metals (figs. 154, 155; cf. figs. 21, 79) which in the alchemical view spring from the hermaphrodite Mercurius.

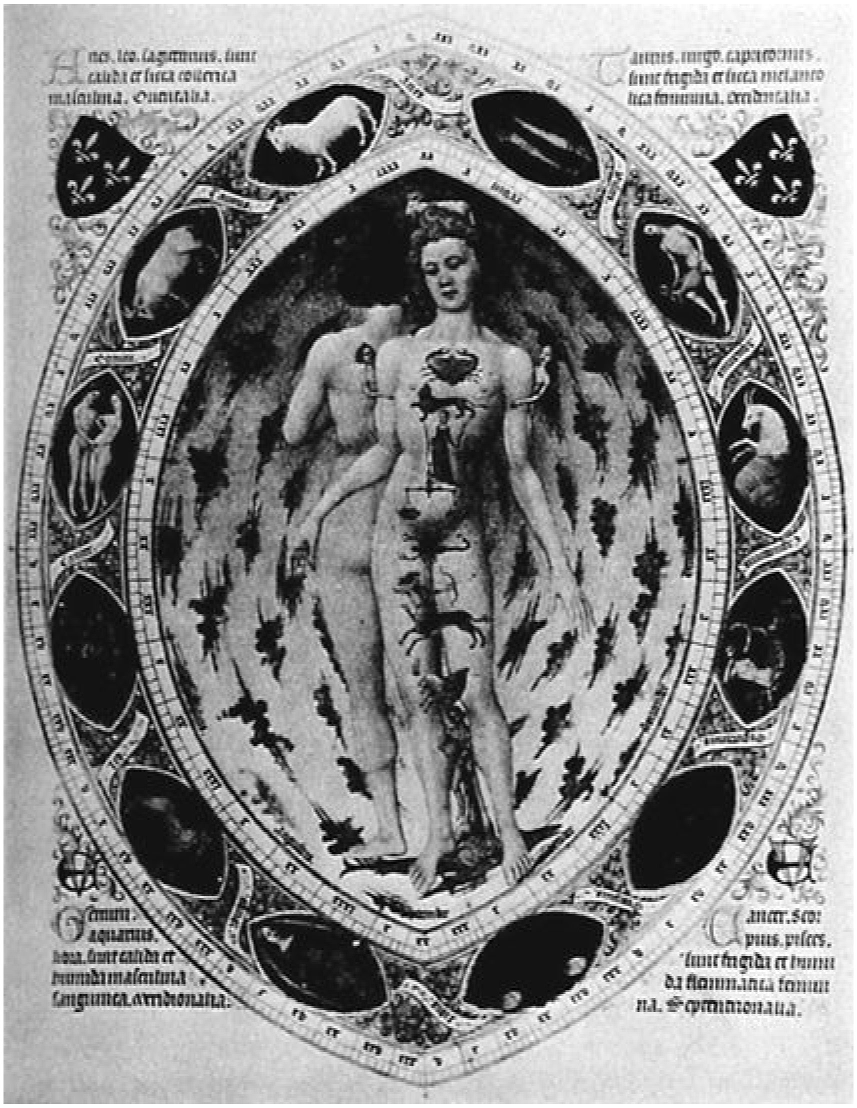
152. Above, Saturn eating his children and being sprinkled with Mercurial water (*lac virginis*, *vinum ardens*). Below, the regeneration in the bath.—Thomas Aquinas (pseud.), “De alchimia” (M.S., l6th cent.)

153. The artist lifting the homunculus, the "son of the philosophers," out of the Hermetic vessel.—Kelley, *Tractatus de Lapide philosophorum* (1676)

154, 155. The king with the six planets or metals; the renewed king (*filius philosophorum*) worshipped by the six planets.—Kelley, *Tractatus de Lapide philosophorum* (1676)

[411] In such visionary images as the Anthropos glimpsing his own reflection there is expressed the whole phenomenon of the unconscious projection of autonomous contents. These myth-pictures are like dreams, telling us that a projection has taken place and also what has been projected. This, as the contemporary evidence shows, was nous, the divine daemon, the god-man, pneuma, etc. In so far as the standpoint of analytical psychology is realistic, i.e., based on the assumption that the contents of the psyche are realities, all these figures stand for an unconscious component of the personality which might well be endowed with a higher form of consciousness transcending that of the ordinary human being. Experience shows that such figures always express superior insight or qualities that are not yet conscious; indeed, it is extremely doubtful whether they can be attributed to the ego at all in the

proper sense of the word. This problem of attribution may appear a captious one to the layman, but in practical work it is of great importance. A wrong attribution may bring about dangerous inflations which seem unimportant to the layman only because he has no idea of the inward and outward disasters that may result.[29]



156. The Dyad (day and night): symbolical representation of the correspondence between zodiac and man.—“Très Riches Heures du duc de Berry” (MS., Chantilly, 15th cent.)

[412] As a matter of fact, we are dealing here with a content that up to the present has only very rarely been attributed to any human personality. The one great exception is Christ. As *νἱός τοῡ ἀνθρώπον* the Son of Man, and as *θεοῡ νἱός*, the Son of God, he embodies the God-man; and as an

incarnation of the Logos by “pneumatic” impregnation, he is an avatar of the divine *νοῡς*.

[413] Thus the Christian projection acts upon the unknown in man, or upon the unknown man, who becomes the bearer of the “terrible and unheard-of secret.”[30] The pagan projection, on the other hand, goes beyond man and acts upon the unknown in the material world, the unknown substance which, like the chosen man, is somehow filled with God. And just as, in Christianity, the Godhead conceals itself in the man of low degree, so in the “philosophy” it hides in the uncomely stone. In the Christian projection the *descensus spiritus sancti* stops at the *living body* of the Chosen One, who is at once very man and very God, whereas in alchemy the descent goes right down into the darkness of inanimate matter whose nether regions, according to the Neopythagoreans, are ruled by evil.[31] Evil and matter together form the Dyad, the duality (fig. 156). This is feminine in nature, an *anima mundi*, the feminine Physis who longs for the embrace of the One, the Monad, the good and perfect.[32] The Justinian Gnosis depicts her as Edem, virgin above, serpent below[33] (fig. 157). Vengefully she strives against the pneuma because, in the shape of the demiurge, the second form of God, he faithlessly abandoned her. She is “the divine soul imprisoned in the elements,” whom it is the task of alchemy to redeem.[34]

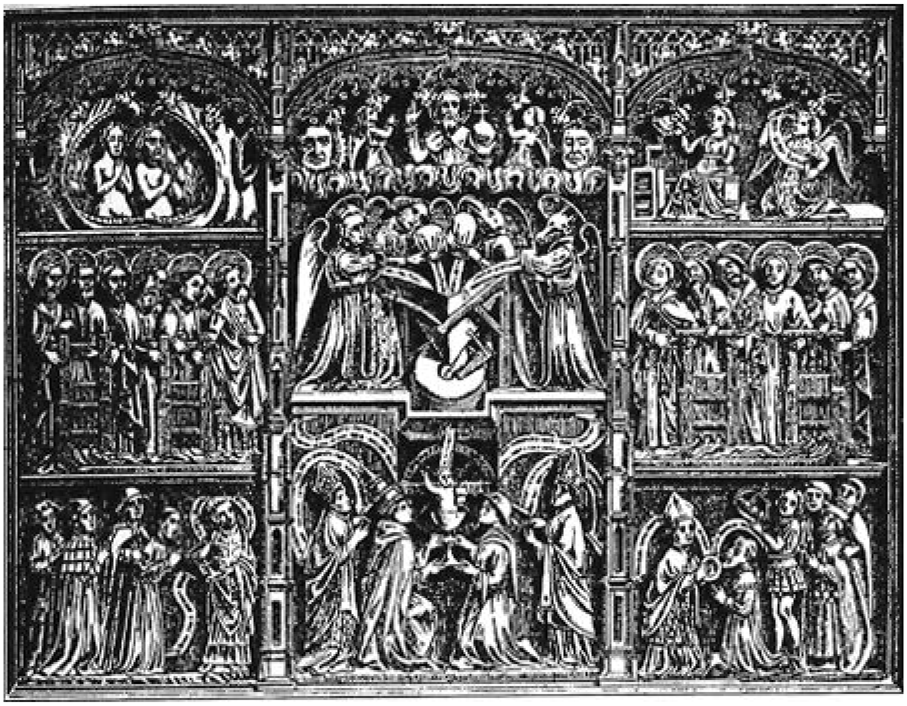
157. *Anima Mercurii*.—“Figurarum Aegyptiorum secretarum” (MS., 18th cent.)

III. THE WORK OF REDEMPTION

[414] Now, all these myth-pictures represent a drama of the human psyche on the further side of consciousness, showing *man as both the one to be redeemed and the redeemer*. The first formulation is Christian, the second alchemical. In the first case man attributes the need of redemption to himself and leaves the work of redemption, the actual *ἆθλον* or *opus,* to the autonomous divine figure; in the latter case man takes upon himself the duty of carrying out the redeeming *opus,* and attributes the state of suffering and consequent need of redemption to the *anima mundi* imprisoned in matter.[35]

[415] In both cases redemption is a *work* (fig. 158). In Christianity it is the life and death of the God-man which, by a unique sacrifice, bring about the reconciliation of man, who craves redemption and is sunk in materiality, with God. The mystical effect of the God-man's self-sacrifice extends, broadly speaking, to all men, though it is efficacious only for those who submit through faith or are chosen by divine grace; but in the Pauline acceptance it acts as an apocatastasis and extends also to non-human creation in general, which, in its imperfect state, awaits redemption like the merely natural man. By a certain "synchronicity" of events, man, the bearer of a soul submerged in the world and the flesh, is potentially related to God at the moment when he, as Mary's Son, enters into her, the *virgo terrae* and representative of matter in its highest form; and, potentially at least, man is fully redeemed at the moment when the eternal Son of God returns again to the Father after undergoing the sacrificial death.

[416] The ideology of this *mysterium* is anticipated in the myths of Osiris, Orpheus, Dionysus, and Hercules, and in the conception of the Messiah among the Hebrew prophets.[36] These anticipations go back to the primitive hero myths where the conquest of death is already an important factor.[37] The projections upon Attis and Mithras, more or less contemporary with the Christian one, are also worth mentioning. The Christian projection differs from all these manifestations of the mystery of redemption and transformation by reason of the historical and personal figure of Jesus. The mythical event incarnates itself in him and so enters the realm of world history as a unique historical and mystical phenomenon.

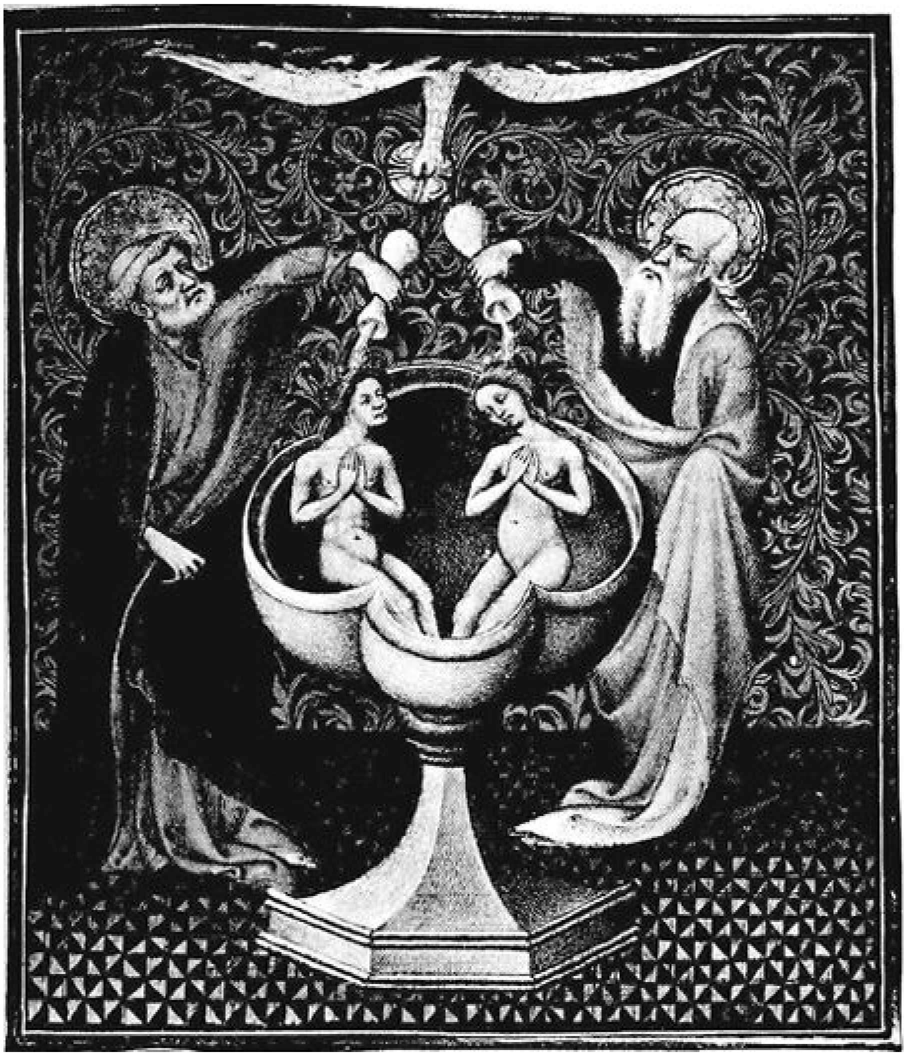


158. The “Mill of the Host.” The Word, in the form of scrolls, is poured into a mill by the four evangelists, to reappear as the Infant Christ in the chalice. (Cf. John 1 : 14: “And the word was made flesh.…”)—High altar of church at Tribsees, Pomerania (15th cent.)

[417] In the figure of the divine hero, God himself wrestles with his own imperfect, suffering, living creation; he even takes its suffering condition upon himself and, by this sacrificial act, accomplishes the *opus magnum*, the *ἆθλον* of salvation and victory over death. As regards the actual performance of this entirely metaphysical work, man is powerless to do anything really decisive. He looks to his Redeemer, full of faith and confidence, and does what he can in the way of “imitation”; but this never reaches the point where man himself becomes the Redeemer—or at least his own redeemer. Yet a complete imitation and reestablishment of Christ in the believer would necessarily lead to such a conclusion. But this is out of the question. Were such an approximation to occur, then Christ would have re-established himself in the believer and replaced the latter’s personality. We should have to be satisfied with this statement were it not for the existence of the Church. The institution of the Church means nothing less than the everlasting continuation of the life of Christ and its sacrificial function. In the *officium divinum* or, in Benedictine parlance, the *opus divinum*, Christ’s sacrifice, the redeeming act, constantly repeats itself anew while still remaining the unique sacrifice

that was accomplished, and is accomplished ever again, by Christ himself inside time and outside all time. This *opus supernaturale* is represented in the sacrifice of the Mass. In the ritual act the priest as it were shows forth the mystical event, but the real agent is Christ, who sacrifices himself everywhere always. Though his sacrificial death occurred in time it is an essentially timeless occurrence. In the Thomist view the Mass is not a real *immolatio* (sacrifice) of the body of Christ but a "re-presentation" of his sacrificial death.[38] Such an interpretation would be sufficient and consistent were it not for the transubstantiation of the offered substances, the bread and wine. This offering is meant as a *sacrificium*, literally a "making sacred." The etymology of the German word for sacrifice, *Opfer*, is obscure, it being a moot point whether it comes from *offerre*, "to offer," or from *operari*, "to effect, to be active." In its ancient usage *operari Deo* meant to serve the god or to sacrifice to him. But if the *Opfer* is an *opus*, then it is far more than an *oblatio*, the offering of such a modest gift as bread and wine. It must be an effectual act, giving the ritual words spoken by the priest a causal significance. The words of the consecration (*qui pridie quam pateretur*, etc.) are therefore to be taken not merely as representative, but as the *causa efficiens* of the transubstantiation. That is why the Jesuit Lessius (d. 1623) called the words of the consecration the "sword" with which the sacrificial lamb is slaughtered.[39] The so-called theory of mactation (slaughtering) occupies an important place in the literature of the Mass, though it has not been generally accepted in its more objectionable outgrowths. Perhaps the clearest of all is the Greek ritual as described by the Archbishop Nikolaus Kabasilas of Thessalonika (d. *circa* 1363).[40] In the first (preparatory) part of the Mass the bread and wine are placed not on the main altar but on the *πρόθεσις*, a sort of sideboard. There the priest cuts a piece off the loaf and repeats the text, "He is led as a lamb to the slaughter." Then he lays it on the table and repeats, "The lamb of God is sacrificed." The sign of the cross is then imprinted on the bread and a small lance stabbed into its side, to the text, "But one of the soldiers with a spear pierced his side and forthwith came there out blood and water." At these words water and wine are mixed in the chalice. Then comes the *oblatio* in solemn procession, with the priest carrying the offering. (Here the δῶρον, the gift, represents the giver: Christ the sacrificiant is also the sacrificed.) Thus the priest re-enacts the traditional event, and in so far as Christ, in the sacramental state, possesses a *vita corporea actualis,*[41] an actual bodily life, one could say that a physical slaying[42] (*mortificatio*) of his body has taken place. This happens as a result of the consecrating words spoken by the priest, and the destruction of the offering, the *oblalio occisi ad cultum Dei* (the offering up of the slain to the service of God), brings about the transubstantiation. The latter is a transmutation of the elements, which pass from a natural, soiled, imperfect material state into a subtle body. The bread, which must be wheaten, signifies the body, and the wine, representing blood, the soul. After the transubstantiation a piece of the host is mingled with the wine, thus producing the *coniunctio* of the soul with the body (fig. 159) and establishing the living body of Christ, namely the unity of the Church.

[418] St. Ambrose called the transformed bread *medicina*. It is the *φάρμακον άθανασίας*, the drug of immortality, which, in the act of communion, displays its characteristic effect in and on the believer—the effect of uniting the body with the soul. This takes the form of a healing of the soul and a *reformatio* of the body. The text of the Missal shows us how this is meant:



159. The *coniunctio* of soul and body: an ecclesiastical version of the alchemical marriage bath. —“Grandes heures du duc de Berry” (MS., 1413)

> Da nobis per huius aquae et vini mysterium, eius divinitatis esse consortes, qui humanitatis nostrae fieri dignatus est particeps, Jesus Christus … (Grant that through the mystery of this water and wine, we may have fellowship in the divine nature of Him who vouchsafed to become partaker of our humanity …).

[419] Perhaps I may be allowed to introduce a personal remark here. It was a real revelation for me, as a Protestant, to read the words of the Offertory for the first time: “Deus, qui humanae substantiae dignitatem mirabiliter condidisti” (O God, who didst marvellously create the dignity of human nature) and “qui humanitatis nostrae fieri dignatus est particeps” (who vouchsafed to become partaker of our humanity). What

respect for the dignity of human nature! *Deus et homo!* There is no sign of that unworthy sinful man whom Protestantism has so often slandered in the past and is only too ready to slander again. Moreover, there seems to be still something else hidden in this almost "transcendental" estimate of man. For if God "dignatus est" to become partaker of our human nature, then man may also deem himself worthy to become partaker of the divine nature. In a certain sense this is just what the priest does in the performance of the sacrificial mystery, when he offers himself as the victim in place of Christ; and the congregation does likewise when it eats the consecrated body and thus shares in the substance of Deity.

[420] By pronouncing the consecrating words that bring about the transformation, the priest redeems the bread and wine from their elemental imperfection as created things. This idea is quite unchristian—it is alchemical. Whereas Catholicism emphasizes the effectual presence of Christ, alchemy is interested in the fate and manifest redemption of the substances, for in them the divine soul lies captive and awaits the redemption that is granted to it at the moment of release. The captive soul then appears in the form of the "Son of God." For the alchemist, the one primarily in need of redemption is not man, but the deity who is lost and sleeping in matter. Only as a secondary consideration does he hope that some benefit may accrue to himself from the transformed substance as the panacea, the *medicina catholica*, just as it may to the imperfect bodies, the base or "sick" metals, etc. His attention is not directed to his own salvation through God's grace, but to the liberation of God from the darkness of matter. By applying himself to this miraculous work he benefits from its salutary effect, but only incidentally. He may approach the work as one in need of salvation, but he knows that his salvation depends on the success of the work, on whether he can free the divine soul. To this end he needs meditation, fasting, and prayer; more, he needs the help of the Holy Ghost as his *πάρεδρος*.[43] Since it is not man but matter that must be redeemed, the spirit that manifests itself in the transformation is not the "Son of Man" but, as Khunrath very properly puts it,[44] the *filius macrocosmi*. Therefore, what comes out of the transformation is not Christ but an ineffable material being named the "stone," which displays the most paradoxical qualities apart from

possessing *corpus, anima, spiritus*, and supernatural powers (fig. 214). One might be tempted to explain the symbolism of alchemical transformation as a parody of the Mass were it not pagan in origin and much older than the latter.

[421] The substance that harbours the divine secret is everywhere, including the human body.[45] It can be had for the asking and can be found anywhere, even in the most loathsome filth[46] (fig. 256). In these circumstances the *opus* is no longer a ritualistic *officium*, but the same work of redemption which God himself accomplished upon mankind through the example of Christ, and which is now recognized by the philosopher who has received the *donum spiritus sancti*, the divine art, as his own individual *opus*. The alchemists emphasize this point: "He who works through the spirit of another and by a hired hand will behold results that are far from the truth; and conversely he who gives his services to another as assistant in the laboratory will never be admitted to the Queen's mysteries."[47] One might quote the words of Kabasilas: "As kings, when they bring a gift to God, bear it themselves and do not permit it to be borne by others."

[422] Alchemists are, in fact, decided solitaries;[48] each has his say in his own way.[49] They rarely have pupils, and of direct tradition there seems to have been very little, nor is there much evidence of any secret societies or the like.[50] Each worked in the laboratory for himself and suffered from loneliness. On the other hand, quarrels were rare. Their writings are relatively free of polemic, and the way they quote each other shows a remarkable agreement on first principles, even if one cannot understand what they are really agreeing about.[51] There is little of that disputatiousness and splitting of hairs that so often mar theology and philosophy. The reason for this is probably the fact that "true" alchemy was never a business or a career, but a genuine *opus* to be achieved by quiet, self-sacrificing work. One has the impression that each individual tried to express his own particular experiences, quoting the dicta of the masters only when they seemed to offer analogies.

[423] All, from the very earliest times, are agreed that their art is sacred and divine,[52] and likewise that their work can be completed only with the

help of God. This science of theirs is given only to the few, and none understands it unless God or a master has opened his understanding.[53] The knowledge acquired may not be passed on to others unless they are worthy of it.[54] Since all the essentials are expressed in metaphors they can be communicated only to the intelligent, who possess the gift of comprehension.[55] The foolish allow themselves to be infatuated by literal interpretations and recipes, and fall into error.[56] When reading the literature, one must not be content with just *one* book but must possess many books,[57] for "one book opens another."[58] Moreover one must read carefully, paragraph by paragraph; then one will make discoveries.[59] The terminology is admitted to be quite unreliable.[60] Sometimes the nature of the coveted substance will be revealed in a dream.[61] The *materia lapidis* may be found by divine inspiration.[62] The practice of the art is a hard road[63] and the longest road.[64] The art has no enemies except the ignorant.[65]

[424] It goes without saying that there are good and bad authors in alchemical literature as elsewhere. There are productions by charlatans, simpletons, and swindlers. Such inferior writings are easily recognized by their endless recipes, their careless and uneducated composition, their studied mystification, their excruciating dulness, and their shameless insistence on the making of gold. Good books can always be recognized by the industry, care, and visible mental struggles of the author.

160. Symbol of the art as union of water and fire.—Eleazar, *Uraltes chymisches Werk* (1760)

161. The *prima materia* as Saturn devouring his children.—*Mutus liber* (1702)

4. THE PRIMA MATERIA

I. SYNONYMS FOR THE MATERIA

[425] The basis of the *opus*, the *prima materia*, is one of the most famous secrets of alchemy. This is hardly surprising, since it represents the unknown substance that carries the projection of the autonomous psychic content. It was of course impossible to specify such a substance, because the projection emanates from the individual and is consequently different in each case. For this reason it is incorrect to maintain that the alchemists never said what the *prima materia* was; on the contrary, they gave all too many definitions and so were everlastingly contradicting themselves. For one alchemist the *prima materia* was quicksilver, for others it was ore, iron, gold, lead, salt, sulphur, vinegar, water, air, fire, earth, blood, water of life, *lapis*, poison, spirit, cloud, sky, dew, shadow, sea, mother, moon, dragon, Venus, chaos, microcosm (fig. 162). Ruland's *Lexicon* gives no less than fifty synonyms, and a great many more could be added.

[426] Besides these half chemical, half mythological definitions there are also some "philosophical" ones which have a deeper meaning. Thus in the treatise of Komarios[1] we find the definition "Hades." In Olympiodorus the black earth contains the "accursed of God" (θεοκατάρατος). The "Consilium coniugii" says that the father of gold and silver—i.e., their *prima materia*—is "the animal of earth and sea," or "man," or a "part of man," e.g., his hair, blood, etc. Dorn calls the *prima materia* "Adamica" and—basing himself on Paracelsus—*limbus microcosmicus*. The material of the stone is "no other than the fiery and perfect Mercurius" and the true hermaphroditic "Adam and Microcosm" (= man)[2] (see fig. 163). Hermes Trismegistus is said to have called the stone the "orphan." Since Dorn was a pupil of Paracelsus his views are probably connected with the Anthropos doctrine of his master. For this I must refer the reader to my essay "Paracelsus as a Spiritual Phenomenon." Further connections between man and the *prima materia* are mentioned in other authors, but I cannot quote them all here.

162. The unfettered opposites in chaos. “Chaos” is one of the names for the *prima materia*. —Marolles, *Tableaux du temple des muses* (1655)

[427] The mercurial dragon of Greek alchemy, surnamed ἕν τὸ πᾶν gave rise to descriptions of the *prima materia* as *Unum*, *Unica Res*,[3] and Monad[4] and to the statement in the “Liber Platonis quartorum” that man is well qualified to complete the work because he possesses that which is *simple*, i.e., the soul.[5] Mylius describes the *prima materia* as the *elementum primordiale*. It is the “pure subject and the unity of forms,” and in it any form whatsoever may be assumed (*in quo retinetur quaelibet forma cum possibilitate*).[6]

[428] In the second version of the *Turba*, Eximindus says:[7]

> I make known to you, ye sons of the doctrine, that the beginning of all creatures is a certain primary everlasting and infinite nature which cooks and rules everything, and whose active and passive [aspects] are known and recognized only by those on whom the knowledge of the sacred art has been bestowed.

[429] In Sermo IX of the *Turba*[8] “Eximenus” puts forward a theory of creation that corresponds to the Biblical one (creation through the “Word”) but stands in flagrant contradiction to the above, according to which the beginning is a *natura perpetua et infinita*. In the *Rosarium* the *prima materia* is called *radix ipsius* (root of itself). Because it roots in itself it is autonomous and dependent on nothing.

II. THE INCREATUM

[430] Being a *radix ipsius*, the *prima materia* is a true *principium*, and from this it is but a step to the Paracelsan view that it is something *increatum*, uncreated. In his “Philosophia ad Athenienses,” Paracelsus says that this unique (*unica) materia* is a great secret having nothing in common with the elements. It fills the entire *regio aetherea*, and is the mother of the elements and of all created things (fig. 163). Nothing can express this mystery, nor has it been created (*nec etiam creatum fuit*). This uncreated mystery was prepared (*praeparatum*) by God in such a way that nothing will ever be like it in the future nor will it ever return to what it was.[9] For it was so corrupted as to be beyond reparation (which presumably refers to the Fall). Dorn’s rendering gives the sense of the original text.[10]

163. Earth as *prima materia*, suckling the son of the philosophers.—Mylius, *Philosophia reformata* (1622)

[431] The autonomy and everlastingness of the *prima materia* in Paracelsus suggest a principle equal to the Deity, corresponding to a *dea mater*. Just how Paracelsus managed to reconcile such a view with his professions of Christianity is his own private concern; nor is it by any means an isolated instance. The interpretations contained in "Aquarium sapientum"[11]—interesting on account of their truly preposterous character and hardly to be outdone even by *Aurora*—carry Paracelsan speculation still further, though without mentioning the author. The following texts, for example, are applied to the *prima materia:* "and his going forth is from the beginning, from the days of eternity" (Micah 5 : 2, D.V.), and "before Abraham was made, I am" (John 8 : 58, D.V.). This is supposed to show that the stone is without beginning and has its *primum Ens* from all eternity, and that it too is without end and will exist in all eternity. To understand this properly, one must open wide the eyes of the soul and the spirit and observe and discern accurately by means of the inner light. God has lit this light in nature and in our hearts from the beginning.[12] And in the same way, continues the author, that the stone together with its material has a thousand names and is therefore called "miraculous," all

these names can in eminent degree be predicated of God,[13] and the author thereupon proceeds to this application. A Christian can hardly believe his ears, but this conclusion only repeats what has already been said quite plainly in the “Liber Platonis quartorum”: “Res ex qua sunt res, est Deus invisibilis et immobilis”[14] (That from which things arise is the invisible and immovable God). The first “res” is the subject matter of the divine art. It is true that very few of the philosophers pressed forward to this conclusion *expressis verbis*, but it is an aspect that makes their hints and veiled allusions decidedly more transparent. Moreover such a conclusion was inevitable psychologically, because the unconscious, being unknown, is bound to coincide with itself everywhere: lacking all recognizable qualities, no unconscious content can be distinguished from any other. This is not a logical sophistry but a very real phenomenon of great practical importance, for it affects the problems of identity and identification in social life, which are based on the collective (and indiscriminable) nature of unconscious contents. These, once they have taken possession of certain individuals, irresistibly draw them together by mutual attraction and knit them into smaller or larger groups which may easily swell into an avalanche.

[432] The above quotations clearly show that the alchemists came to project even the highest value—God—into matter. With the highest value thus safely embedded in matter, a starting-point was given for the development of genuine chemistry on the one hand and of the more recent philosophical materialism on the other, with all the psychological consequences that necessarily ensue when the picture of the world is shifted 180 degrees. However remote alchemy may seem to us today, we should not underestimate its cultural importance for the Middle Ages. Today is the child of the Middle Ages and it cannot disown its parents.

III. UBIQUITY AND PERFECTION

[433] The *prima materia* has the quality of ubiquity: it can be found always and everywhere, which is to say that projection can take place always and everywhere. The English alchemist Sir George Ripley (*c*. 1415–90) writes: “The philosophers tell the inquirer that birds and fishes bring us

the *lapis*,[15] every man has it, it is in every place, in you, in me, in everything, in time and space."[16] "It offers itself in lowly form [*vili figura*]. From it there springs our eternal water [*aqua permanens*]."[17] According to Ripley the *prima materia* is water; it is the material principle of all bodies,[18] including mercury.[19] It is the *hyle* which the divine act of creation brought forth from the chaos as a dark sphere[20] (*sphaericum opus:* cf. fig. 34).[21] The chaos is a *massa confusa* that gives birth to the stone (figs. 125, 164). The hylical water contains a hidden elemental fire.[22] In the treatise "De sulphure" hell-fire (*ignis gehennalis*) is attributed to the element earth as its inner opposite.[23] According to Hortulanus, the stone arises from a *massa confusa* containing in itself all the elements[24] (fig. 162). Just as the world came forth from a *chaos confusum*,[25] so does the stone.[26] The idea of the rotating aquasphere reminds us of the Neopythagoreans: in Archytas the world-soul is a circle or sphere;[27] in Philolaos it draws the world round with it in its rotation.[28] The original idea is to be found in Anaxagoras, where the nous gives rise to a whirlpool in chaos.[29] The cosmogony of Empedokles is also relevant: here the σφαῖρος (spherical being) springs from the union of dissimilars, owing to the influence of φιλία. The definition of this spherical being as εἰδαιμονέστατος Θεός, "the most serene God," sheds a special light on the perfect, "round" nature of the *lapis*,[30] which arises from, and constitutes, the primal sphere; hence the *prima materia* is often called *lapis* (figs. 164, 165). The initial state is the hidden state, but by the art and the grace of God it can be transmuted into the second, manifest state. That is why the *prima materia* sometimes coincides with the idea of the initial stage of the process, the *nigredo*. It is then the black earth in which the gold or the *lapis* is sown like the grain of wheat (cf. fig. 48). It is the black, magically fecund earth that Adam took with him from Paradise, also called antimony and described as a "black blacker than black" (*nigrum nigrius nigro*).[31]

164. Mercurius, standing on the round chaos, holding the scales which signify the *pondus et mensura*. The *rotundum* is a prefiguration of the gold.—“Figurarum Aegyptiorum secretarum” (MS., 18th cent.)

165. “L’occasione”: Mercurius standing on the globe (the *rotundum*). The caduceus and horns of plenty nearby symbolize the richness of his gifts.—Cartari, *Le imagini de i dei* (1581)

IV. THE KING AND THE KING’S SON

[434] As the grain of fire lies concealed in the *hyle*, so the King’s Son lies in the dark depths of the sea as though dead, but yet lives and calls from the deep[32] (fig. 166): “Whosoever will free me from the waters and lead me to dry land, him will I prosper with everlasting riches.”[33]

[435] The connection with the *Rex marinus* of the “Visio Arislei”[34] is obvious. Arisleus[35] tells of his adventure with the *Rex marinus*, in whose kingdom nothing prospers and nothing is begotten. Moreover there are no

philosophers there. Only like mates with like,[36] consequently there is no procreation. The King must seek the counsel of the philosophers and mate Thabritius with Beya,[37] his two children whom he has hatched in his brain[38] (fig. 167).

166. Background, the *Rex marinus* calling for help; foreground, his renewed form with the *rotundum* and the *columba spiritus sancti*.—Trismosin, "Splendor solis" (MS., 1582)

[436] When we are told that the King is *exanimis*, inanimate, or that his land is unfruitful, it is equivalent to saying that the hidden state is one of latency and potentiality. The darkness and depths of the sea symbolize the unconscious state of an invisible content that is projected. Inasmuch as such a content belongs to the total personality[39] and is only apparently severed from its context by projection, there is always an attraction

between conscious mind and projected content. Generally it takes the form of a fascination. This, in the alchemical allegory, is expressed by the King’s cry for help from the depths of his unconscious, dissociated state. The conscious mind should respond to this call: one should *operari regi*, render service to the King, for this would be not only wisdom but salvation as well.[40] Yet this brings with it the necessity of a descent into the dark world of the unconscious, the ritual κατάβασις εἰς ἄντρον, the perilous adventure of the night sea journey (figs. 69, 170, 171), whose end and aim is the restoration of life, resurrection, and the triumph over death (figs. 172, 174, 177). Arisleus and his companions brave the quest, which ends in catastrophe, the death of Thabritius. His death is a punishment for the incestuous *coniunctio oppositorum* (figs. 223, 226). The brother-sister pair stands allegorically for the whole conception of opposites. These have a wide range of variation: dry-moist, hot-cold, male-female, sun-moon, gold-silver, mercury-sulphur, round-square, water-fire, volatile-solid, physical-spiritual, and so on.[41] The *regius filius* is a rejuvenated form of the Father-King. The youth is frequently shown with a sword and represents the spirit, while the father represents the body. In the *Rosarium* version of the “Visio” the death of the son is the result of his complete disappearance into the body of Beya during coitus. In another version he is eaten by his father (fig. 168), or the Sun is drowned in Mercurius or swallowed by the lion (fig. 169). Thabritius is the masculine, spiritual principle of light and Logos which, like the Gnostic Nous, sinks into the embrace of physical nature (Physis). Death therefore represents the completion of the spirit’s descent into matter. The alchemists depicted the sinful nature of this occurrence in various ways but, because they do not appear to have quite understood it, they rationalize or minimize the incest, in itself so repellent.[42]

CONIVNCTIO SIVE
Coitus.

O Luna durch meyn vmbgeben/ vnd ſuſſe mynne/
Wirſtu ſchön/ ſtarck/ vnd gewaltig als ich byn.

O Sol/ du biſt vber alle liecht zu erkennen/
So bedarffſtu doch mein als der han der hennen.

167. Allegory of the psychic union of opposites. [Verses: “O Luna, folded by my embrace, / Be you as strong as I, as fair of face. / O Sol, brightest of all lights known to men, / And yet you need me, as the cock the hen.”]—*Rosarium philosophorum* (1550)

168. The king as *prima materia*, devouring his son.—Lambspringk, "Figurae et emblemata," in *Musaeum hermeticum* (1678)

169. The “green lion” devouring the sun.—*Rosarium philosophorum* (1550)

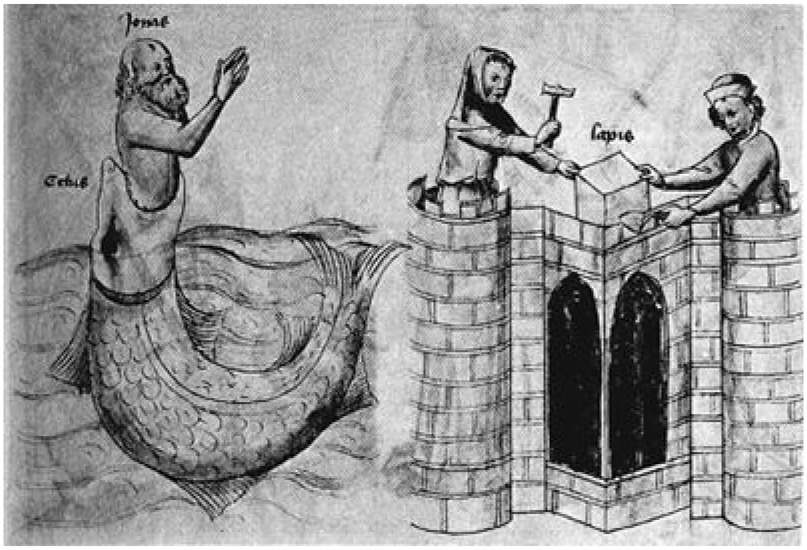
170. The night sea journey. Joseph in the cistern, Christ in the sepulchre, Jonah swallowed by the whale.—*Biblia pauperum* (1471)

V. THE MYTH OF THE HERO

[437] Resulting as it did from the advice of the philosophers, the death of the King’s Son is naturally a delicate and dangerous matter. By descending into the unconscious, the conscious mind puts itself in a perilous position, for it is apparently extinguishing itself. It is in the situation of the primitive hero who is devoured by the dragon. Since all this means a diminution or extinction of consciousness, an *abaissement du niveau mental* equivalent to that “peril of the soul” which is primitive man’s greatest dread (i.e., the fear of ghosts[43]), the deliberate and indeed wanton provocation of this state is a sacrilege or breach of taboo attended by the severest punishments. Accordingly the King imprisons Arisleus and his companions in a triple glass house together with the corpse of the King’s Son. The heroes are held captive in the underworld at the bottom of the sea, where, exposed to every kind of terror, they languish for eighty days in an intense heat. At the request of Arisleus, Beya is imprisoned with them. (The *Rosarium* version of the “Visio” interprets the prison as Beya’s womb.[44]) Clearly, they have been overpowered by the unconscious and are helplessly abandoned, which means that they have volunteered to die in order to beget a new and fruitful life in that region of the psyche which has hitherto lain fallow in darkest unconsciousness, and under the shadow of death (fig. 171).

171. Hercules on the night sea journey in the vessel of the sun.—Base of an Attic vase (5th cent. B.C.)

[438] Although the possibility of life is hinted at by the brother-sister pair, these unconscious opposites must be activated by the intervention of the conscious mind, otherwise they will merely remain dormant. But this is a dangerous undertaking. We can understand the anxious plea in *Aurora consurgens:* “Horridas nostrae mentis purga tenebras, accende lumen sensibus!”[45] We can also understand why Michael Maier found few that were willing to plunge into the sea.[46] Arisleus is in danger of succumbing to the fate of Theseus and Peirithous, who descended into Hades and grew fast to the rocks of the underworld, which is to say that the conscious mind, advancing into the unknown regions of the psyche, is overpowered by the archaic forces of the unconscious: a repetition of the cosmic embrace of Nous and Physis. The purpose of the descent as universally exemplified in the myth of the hero is to show that only in the region of danger (watery abyss, cavern, forest, island, castle, etc.) can one find the “treasure hard to attain” (jewel, virgin, life-potion, victory over death) (fig. 172).



172. Jonah emerging from the belly of the whale. The goal of the night sea journey is equivalent to the *lapis angularis* or cornerstone.—“Speculum humanae salvationis” (Cod. Lat. 512, Paris, 15th cent.)

173. The slaying of the king (*mortificatio*).—Stolcius de Stolcenberg, *Viridarium chymicum* (1624)

[439] The dread and resistance which every natural human being experiences when it comes to delving too deeply into himself is, at

bottom, the fear of the journey to Hades. If it were only resistance that he felt, it would not be so bad. In actual fact, however, the psychic substratum, that dark realm of the unknown,[47] exercises a fascinating attraction that threatens to become the more overpowering the further he penetrates into it.[48] The psychological danger that arises here is the disintegration of personality into its functional components, i.e., the separate functions of consciousness, the complexes, hereditary units, etc. Disintegration—which may be functional or occasionally a real schizophrenia—is the fate which overtakes Gabricus (in the *Rosarium* version): he is dissolved into atoms in the body of Beya,[49] this being equivalent to a form of *mortificatio* (fig. 173).

174. Jonah in the whale.—Early Christian earthenware lamp

175. The wolf as *prima materia*, devouring the dead king. In the background, sublimation of the *prima materia* and rebirth of the king.—Maier, *Scrutinium chymicum* (1687)

[440] Here again we have a repetition of the *coniunctio* of Nous and Physis.[50] But the latter is a cosmogonic event, whereas this is a catastrophe brought about by the intervention of the philosophers. So long as consciousness refrains from acting, the opposites will remain dormant in the unconscious. Once they have been activated, the *regius filius*—spirit, Logos, Nous—is swallowed up by Physis; that is to say, the body and the psychic representatives of the organs gain mastery over the conscious mind. In the hero myth[51] this state is known as being swallowed up in the belly of the whale or dragon[52] (fig. 174). The heat there is usually so intense that the hero loses his hair,[53] i.e., he is reborn bald as a babe (fig. 176). This heat is the *ignis gehennalis*, the hell into which Christ descended in order to conquer death as part of his *opus*.

[441] The philosopher makes the journey to hell as a "redeemer." The "hidden fire" forms the inner antithesis to the cold wetness of the sea.[54] In the "Visio" this heat is undoubtedly the warmth of incubation,[55] equivalent to the self-incubating or "brooding" state of meditation. In Indian yoga we find the kindred idea of *tapas*, self-incubation.[56] The aim

of *tapas* is the same as in the “Visio”: transformation and resurrection (cf. fig. 177).

176. Jonah in the belly of the whale.—Khludov Psalter (Byzantine, 9th cent.)

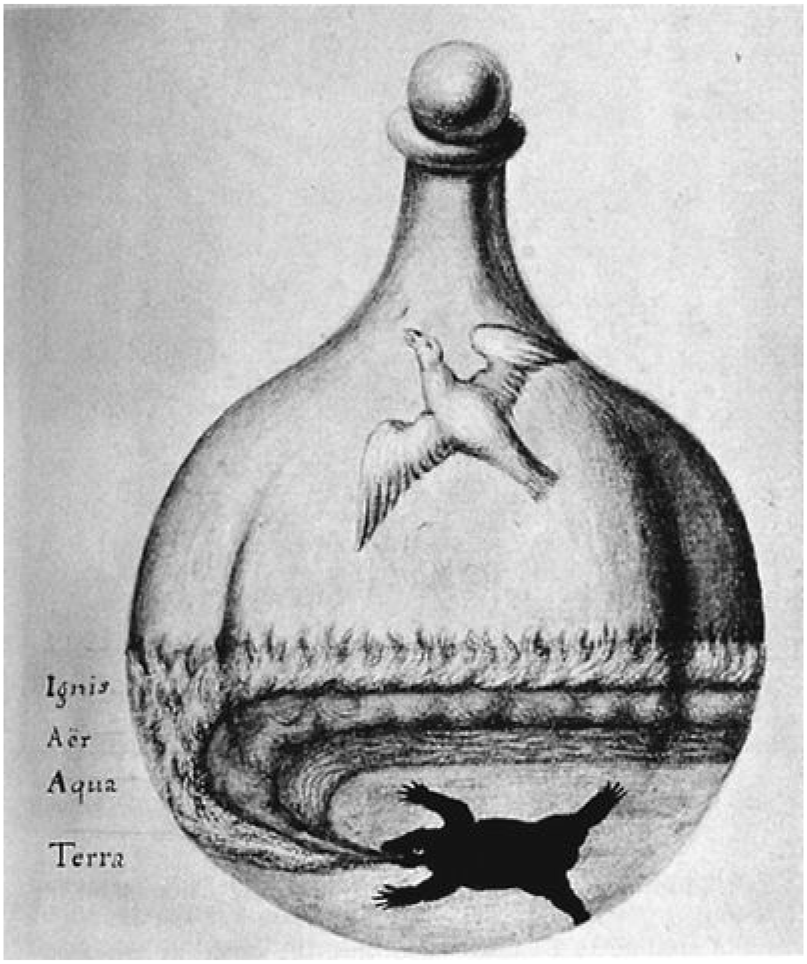
177. The Resurrection: Samson with the city gates of the Philistines, Christ rising from the grave, Jonah being spewed forth by the whale.—*Biblia pauperum* (1470)

VI. THE HIDDEN TREASURE

[442] The “treasure hard to attain,” whose presence was suspected in the dark *prima materia*, is symbolized by the alchemists in various ways. Christopher of Paris, for instance, says that the chaos (as *prima materia*) is the work of all-wise nature. Our understanding (*intellectus*), aided by the “celestial and glowing spirit,” must transform this natural work of art—chaos—into the celestial nature of the quintessence, and into the life-giving (*vegetabilis*) essence of heaven. The precious substance is potentially contained in this chaos as a *massa confusa* of all the elements rolled into one, and man must diligently apply his mind to it so that “our heaven” may come into reality (*ad actum*).[57]

[443] Johannes Grasseus quotes the view that the *prima materia* is the lead (*plumbum*) of the philosophers, also called the “lead of the air”[58] (an allusion to the inner opposite). This lead contains the radiant white dove

(fig. 178), called the “salt of the metals.” The dove is the “chaste, wise, and rich Queen of Sheba, veiled in white, who was willing to give herself to none but King Solomon.”[59]



178. The dove (*avis Hermetis*) rising from the four elements as symbol of the spirit freed from the embrace of Physis.—“De summa et universalis medicinae sapientiae veterum philosophorum” (M.S., 18th cent.)

179. The alchemical trinity: the king and his son with Hermes between them (Hermes = *Spiritus Mercurii*).—Lambspringk, “Figurae et emblemata,” in *Musaeum hermeticum* (1678)

[444] According to Basilius Valentinus, the earth (as *prima materia*) is not a dead body, but is inhabited by a spirit that is its life and soul. All created things, minerals included, draw their strength from the earth-spirit. This spirit is life, it is nourished by the stars, and it gives nourishment to all the living things it shelters in its womb. Through the spirit received from on high, the earth hatches the minerals in her womb (cf. fig. 163) as the mother her unborn child. This invisible spirit is like the reflection in a mirror, intangible, yet it is at the same time the root of all the substances necessary to the alchemical process or arising therefrom (*radix nostrorum corporum*).[60]

180. The Christian Trinity with the Holy Ghost as a winged man.—Engraving (15th cent.) by the Master of the Berlin Passion

[445] A similar idea is to be found in Michael Maier:[61] The sun, by its many millions of revolutions, spins the gold into the earth. Little by little the sun has imprinted its image on the earth, and that image is the gold. The sun is the image of God, the heart[62] is the sun's image in man, just as gold is the sun's image in the earth (also called *Deus terrenus*), and God is known in the gold. This golden image of God is the *anima aurea*, which, when breathed into common quicksilver, changes it into gold.

[446] Ripley is of the opinion that the fire must be extracted from the chaos and made visible.[63] This fire is the Holy Ghost, who unites father and son.[64] He is often represented as a winged old man,[65] i.e., Mercurius in the form of the god of revelation, who is identical with Hermes Trismegistus[66] and, together with the King and the King's Son, forms the alchemical trinity (figs. 179, 180). God wrought this fire in the bowels of the earth, just as he wrought the purging flames of hell, and in this fire[67] God himself glows with divine love.[68]

181. Sun as symbol of God.—Boschius, *Symbolographia* (1702)

182. Christ as the Saviour of souls.—Mural painting (12th cent.) church of the Braunweiler monastery, Rhineland

5. THE LAPIS-CHRIST PARALLEL

I. THE RENEWAL OF LIFE

[447] The examples given in the last chapter show that there is a spirit hidden in the *prima materia*, just as there was in the Nile stone of Ostanes. This spirit was eventually interpreted as the Holy Ghost in accordance with the ancient tradition of the Nous swallowed up by the darkness while in the embrace of Physis—with this difference, however, that it is not the supreme feminine principle, earth, who is the devourer, but Nous in the form of Mercurius or the tail-eating Uroboros (fig. 147). In other words, the devourer is a sort of material earth-spirit, an hermaphrodite possessing a masculine-spiritual and feminine-corporeal aspect (fig. 183; cf. figs. 54, 125). The original Gnostic myth has undergone a strange transformation: Nous and Physis are indistinguishably one in the *prima materia* and have become a *natura abscondita*.

[448] The psychological equivalent of this theme is the projection of a highly fascinating unconscious content which, like all such contents, exhibits a numinous—"divine" or "sacred"—quality. Alchemy set itself the task of acquiring this "treasure hard to attain" and of producing it in visible form, as the physical gold or the panacea or the transforming tincture—in so far as the art still busied itself in the laboratory. But since the practical, chemical work was never quite free from the unconscious contents of the operator which found expression in it, it was at the same time a psychic activity which can best be compared with what we call active imagination.[1] This method enables us to get a grasp of contents that also find expression in dream life. The process is in both cases an irrigation of the conscious mind by the unconscious, and it is related so closely to the world of alchemical ideas that we are probably justified in assuming that alchemy deals with the same, or very similar, processes as those involved in active imagination and in dreams, i.e., ultimately with the process of individuation.

183. Androgynous deity standing between male serpent with sun and female serpent with moon.—Late Babylonian gem

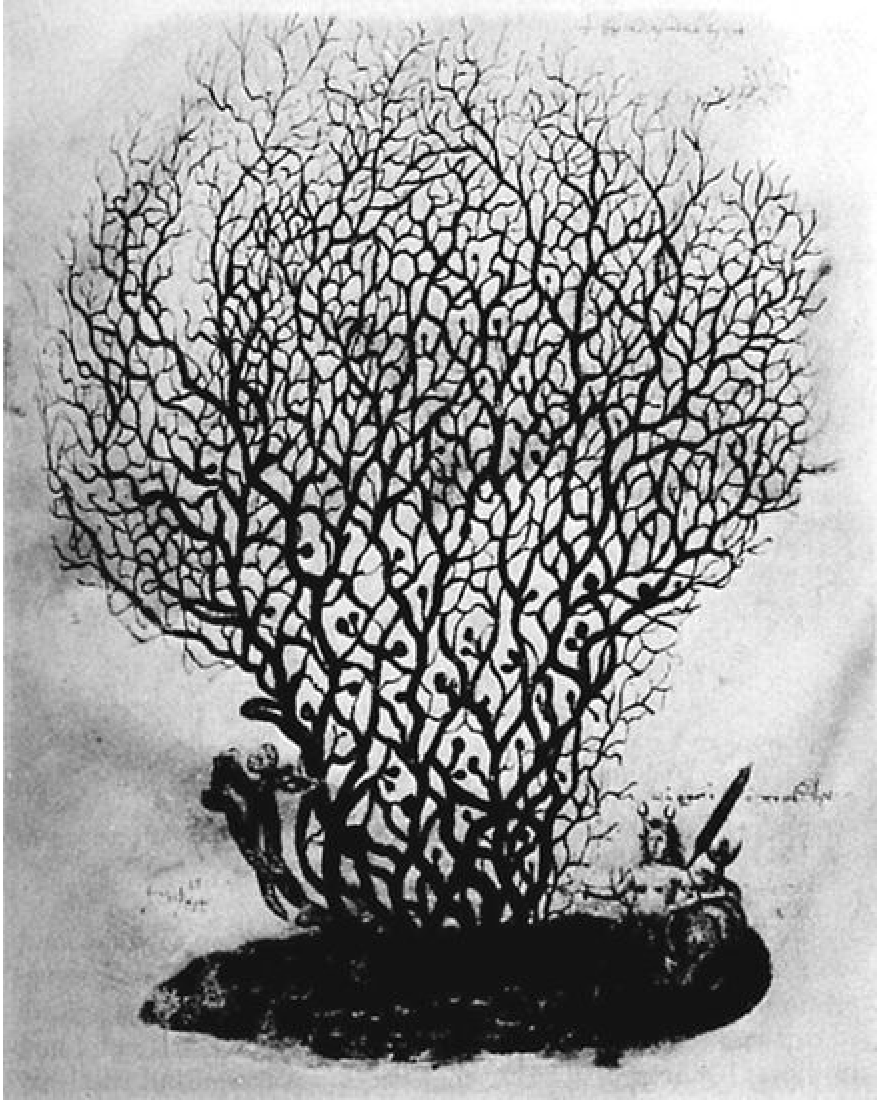
[449] Earlier on, we left Arisleus and his companions, together with Beya and the dead Thabritius, in the triple glass house where they had been imprisoned by the *Rex marinus*. They suffer from the intense heat, like the three whom Nebuchadnezzar cast into the fiery furnace (fig. 184). King Nebuchadnezzar had a vision of a fourth, "like the Son of God," as we are told in Daniel 3 : 25. This vision is not without bearing on alchemy, since there are numerous passages in the literature stating that the stone is *trinus et unus* (fig. 185; cf. fig. 1). It consists of the four elements, with fire representing the spirit concealed in matter. This is the fourth, absent and yet present, who always appears in the fiery agony of the furnace and symbolizes the divine presence—succour and the completion of the work. And, in their hour of need, Arisleus and his companions see their master Pythagoras in a dream and beg him for help. He sends them his disciple Harforetus, the "author of nourishment."[2] So the work is completed and Thabritius comes to life again.[3] We may suppose that Harforetus brought them the miraculous food, though this only becomes clear through a discovery of Ruska's, who gave us access to the text of the Codex Berolinensis. There, in an introduction that is missing from the printed versions of the "Visio,"[4] we read: "Pythagoras says, 'Ye write and have written down for posterity how this most precious tree is planted, and how he that eats of its fruits shall hunger no more.'"[5] Since the "Visio" was written for the express purpose of leaving an example of the alchemical process to posterity, it naturally deals with the planting of trees, and the end of the legend is designed to show the

miraculous regenerating effects of the fruit. While Arisleus was in such dire straits, and Thabritius lay in the sleep of death, the tree[6] was evidently growing and bearing fruit. The part played by Arisleus in the glass house is entirely passive. The decisive action comes from the master, who sends his messenger with the food of life.

184. The three youths in the fiery furnace.—Early Christian ornament on sarcophagus from Villa Carpegna, Rome

185. Below, the triad as unity; above, the quaternity standing on the binarius.—Valentinus, “Duodecim claves,” in *Mus. herm*. (1678)

[450] We are told that a man can receive the secret knowledge only through divine inspiration or from the lips of a master, and also that no one can complete the work except with the help of God.[7] In the “Visio” it is the legendary master, the divine Pythagoras,[8] who takes the place of God[9] and completes the work of regeneration (fig. 187). This divine intervention, as we may venture to call it, occurs in a dream, when Arisleus sees the master and implores his help. If the union of the opposites—mind and body—portrayed by Thabritius and Beya, the putting to death, and the cremation in the furnace are, according to one alchemist,[10] the equivalent of the offertory in the Mass, we find an analogy to the petition for help in the *memento vivorum*—the intercession for the living—and in the commemoration of martyrs, both of which precede the transubstantiation in the *ordo missae*. The invocation is made “pro redemptione animarum suarum, pro spe salutis et incolumnitatis suae” (for the redemption of their souls, for the hope of their health and welfare), and the saints are remembered in order that God, for the sake of their merits and prayers, may grant “that we be defended in all things with the help of Thy protection.” The petition ends with the *epiclesis*, which ushers in the transubstantiation: “ut nobis corpus et sanguis fiat” (that it may become for us the Body and the Blood), i.e., the miraculous food,[11] the *φάρμακον ζωῆς*. In the “Visio” it is the fruit of the immortal tree that brings salvation (figs. 188–90). But when the Church speaks of the “fructus sacrificii missae”—the fruits of the sacrifice of the Mass—it is not quite the same thing, since moral and other effects are meant, not the consecrated substances themselves which are likewise produced *ex opere operato* (“from the performed work”).



186. The tree of coral in the sea.—Dioscorides, “De materia medica” (MS., Vienna, 16th cent.)

187. The dragon spewing forth Jason, after drinking the potion prepared by Athene.—Attic vase (5th cent. B.C.)

188. The tree of the philosophers, surrounded by symbols of the *opus*.—Mylius, *Philosophia reformata* (1622)

189. Dragon with tree of the Hesperides.—Boschius, *Symbolographia* (1702)

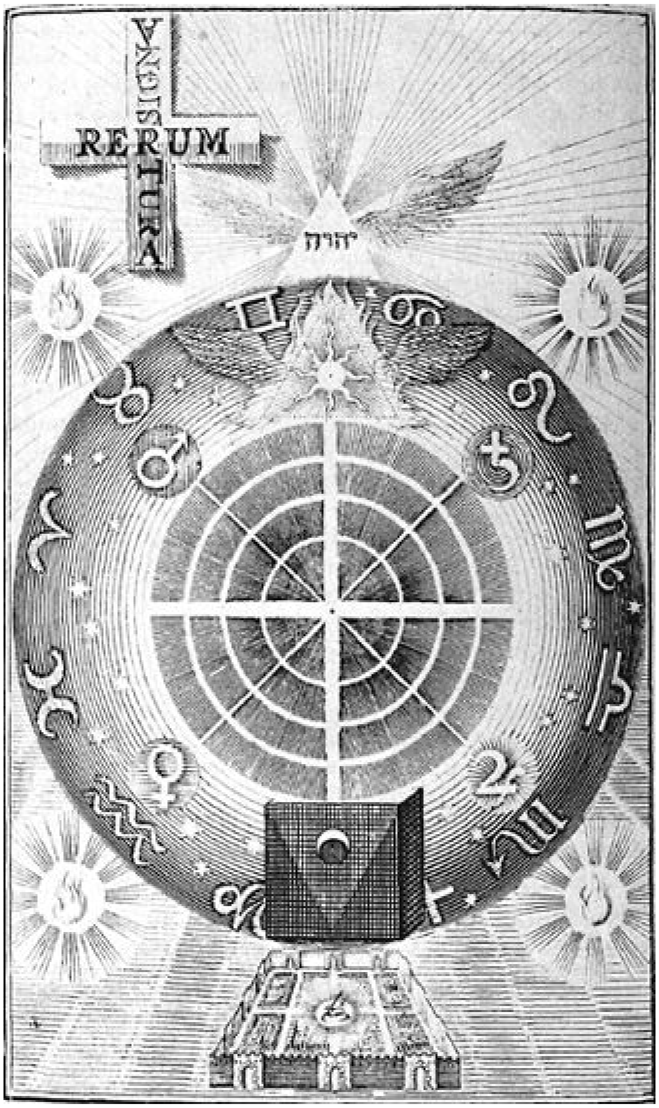
[451] Here we come to a parting of the ways. The Christian receives the fruits of the Mass for himself personally and for the circumstances of his own life in the widest sense. The alchemist, on the other hand, receives the *fructus arboris immortalis* not merely for himself but first and foremost for the King or the King's Son, for the perfecting of the coveted substance. He may play a part in the *perfectio*, which brings him health, riches, illumination, and salvation; but since he is the redeemer of God and not the one to be redeemed, he is more concerned to perfect the substance than himself. Moral qualities he takes for granted and considers them only in so far as they help or hinder the *opus*. We could say that he lays the whole emphasis on the effect *ex opere operantis* ("of the work of the operator"), naturally to a much higher degree than the Church, since he takes the place of the Christ who sacrifices himself in the Mass. One should not for a moment suppose that he presumes to the role of redeemer from religious megalomania. He does so even less than the officiating priest who figuratively sacrifices Christ. The alchemist always stresses his humility and begins his treatises with invocations to God. He does not dream of identifying himself with Christ; on the contrary, it is the coveted substance, the *lapis*, that he likens to Christ. It is not really a question of identification at all, but of the hermeneutic *sicut*—"as" or "like"—which characterizes the analogy. For medieval man, however, analogy was not so much a logical figure as a secret identity, a remnant of primitive thinking which is still very much alive. An instructive example of this is the rite of hallowing the fire on the Saturday before Easter (fig. 191).[12] The fire is "like unto" Christ, an *imago Christi*. The stone from which the spark is struck is the "cornerstone"—another *imago;* and the spark that leaps from the stone is yet again an *imago Christi*. The analogy with the extraction of the pneuma from the stone in the saying of Ostanes forces itself upon us. We are already familiar with the idea of pneuma as fire, and with Christ as fire, and fire as the earth's inner counter-element; but the "firestone" from which the spark is struck is also analogous to the rocky sepulchre, or the stone before it. Here Christ lay as one asleep or in the fetters of death during the three days of his descent into hell, when he went down

to the *ignis gehennalis*, from which he rises again as the New Fire (fig. 234).

190. Mayan ritual tree with serpent.—Dresden Codex

191. Descent of the Holy Ghost in the form of cloven tongues.—Munich Lectionary or *Perikopenbuch* (12th cent.)

[452] Without knowing it, the alchemist carries the idea of the *imitatio* a stage further and reaches the conclusion we mentioned earlier, that complete assimilation to the Redeemer would enable him, the assimilated, to continue the work of redemption in the depths of his own psyche. This conclusion is unconscious, and consequently the alchemist never feels impelled to assume that Christ is doing the work in him. It is by virtue of the wisdom and art which he himself has acquired, or which God has bestowed upon him, that he can liberate the world-creating Nous or Logos, lost in the world's materiality, for the benefit of mankind. The artifex himself bears no correspondence to Christ; rather he sees this correspondence to the Redeemer in his wonderful stone. From this point of view, alchemy seems like a continuation of Christian mysticism carried on in the subterranean darkness of the unconscious—indeed some mystics pressed the materialization of the Christ figure even to the appearance of the stigmata. But this unconscious continuation never reached the surface, where the conscious mind could have dealt with it. All that appeared in consciousness were the symbolic symptoms of the unconscious process. Had the alchemist succeeded in forming any concrete idea of his unconscious contents, he would have been obliged to recognize that he had taken the place of Christ—or, to be more exact, that he, regarded not as ego but as self,[13] had taken over the work of redeeming not man but God. He would then have had to recognize not only himself as the equivalent of Christ, but Christ as a symbol of the self. This tremendous conclusion failed to dawn on the medieval mind. What seems like a monstrous presumption to the Christian European would have been self-evident to the spirit of the Upanishads. Modern man must therefore consider himself fortunate not to have come up against Eastern ideas until his own spiritual impoverishment was so far gone that he did not even notice what he was coming up against. He can now deal with the East on the quite inadequate and therefore innocuous level of the intellect, or else leave the whole matter to Sanskrit specialists.



192. The quaternity of the cross in the zodiac, surrounded by the six planets. Mercurius corresponds to the cross between sun and moon: a paraphrase of ☿ .—Böhme, *Signatura rerum* (1682)

II. EVIDENCE FOR THE RELIGIOUS INTERPRETATION OF THE LAPIS

a. Raymond Lully

[453] It is not surprising that the *lapis*-Christ parallel came to the fore among the medieval Latin authors at a comparatively early date, since alchemical symbolism is steeped in ecclesiastical allegory. Although there is no doubt that the allegories of the Church Fathers enriched the language of alchemy, it remains in my opinion exceedingly doubtful just

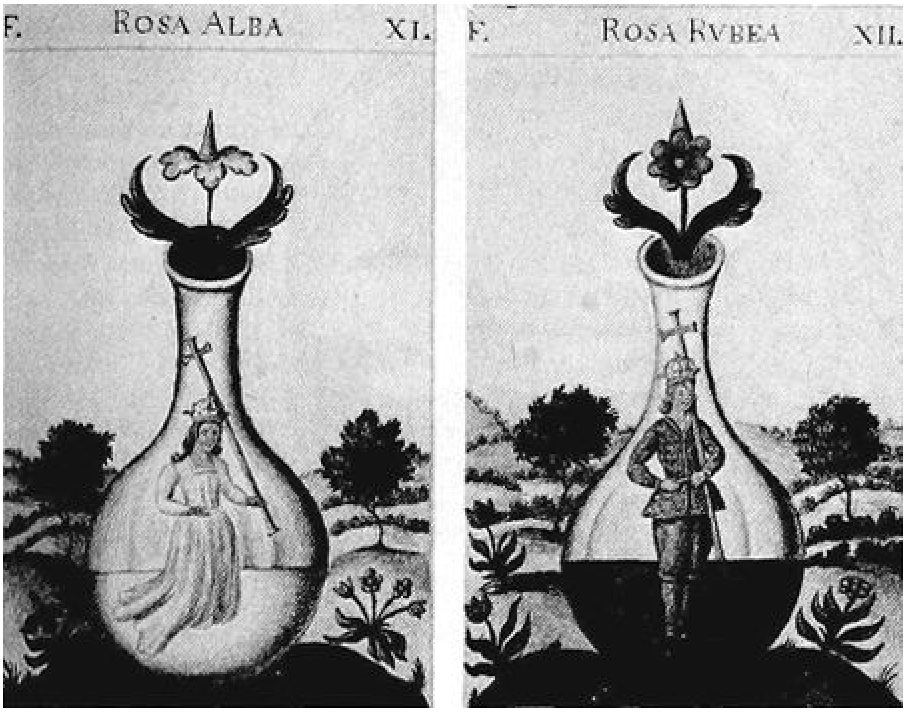
how far the *opus alchemicum*, in its various forms, can be regarded as a transmogrification of ecclesiastical rites (baptism, Mass) and dogmas (Christ's conception, birth, passion, death, and resurrection). Undeniably, borrowings were made over and over again from the Church, but when we come to the original basic ideas of alchemy we find elements that derive from pagan, and more particularly from Gnostic, sources. The roots of Gnosticism do not lie in Christianity at all—it is far truer to say that Christianity was assimilated through Gnosticism.[14] Apart from this we have a Chinese text,[15] dating from the middle of the second century, which displays fundamental similarities with Western alchemy. Whatever the connection between China and the West may have been, there is absolutely no doubt that parallel ideas exist outside the sphere of Christianity, in places where Christian influence is simply out of the question. A. E. Waite[16] has expressed the opinion that the first author to identify the stone with Christ was the Paracelsist, Heinrich Khunrath (1560–1605), whose *Amphitheatrum* appeared in 1598. In the writings of the somewhat later Jakob Böhme, who frequently uses alchemical terms, the stone has already become a metaphor for Christ (fig. 192). Waite's assumption is undoubtedly erroneous, for we have much earlier testimonies to the connection between Christ and the *lapis*, the oldest that I have so far been able to discover being contained in the *Codicillus* (Ch. IX) of Raymond Lully (1235–1315). Even if many of the treatises ascribed to him were written by his Spanish and Provençal disciples, that does not alter the approximate date of his main works, to which the *Codicillus* belongs. At any rate I know of no authoritative opinion that puts this treatise later than the fourteenth century. There it is said:

> And as Jesus Christ, of the house of David, took on human nature for the deliverance and redemption of mankind, who were in the bonds of sin on account of Adam's disobedience, so likewise in our art that which has been wrongfully defiled by one thing is absolved by its opposite; cleansed, and delivered from that stain.[17]

b. Tractatus aureus

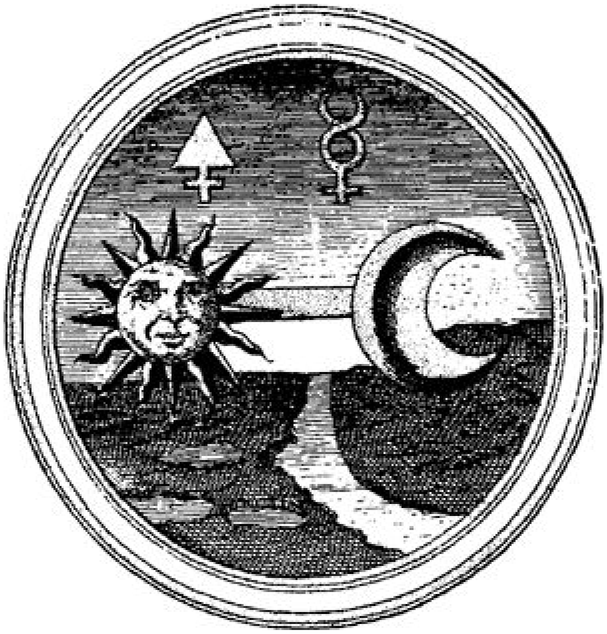
[454] A still older source would assuredly be the “Tractatus aureus”—ascribed to Hermes and regarded as of Arabic origin even in the Middle Ages—were Christ mentioned directly by name. The reason why I nevertheless quote it is that it describes things which bear a remarkable resemblance to the mysterious happenings at Eastertide, and yet are clothed in quite another language. The passage runs as follows:

> Our precious stone, that was cast upon the dung-heap, is altogether vile. … But when we marry the crowned king with the red daughter, she will conceive a son in the gentle fire, and shall nourish him through our fire. … Then is he transformed, and his tincture remains red as flesh. Our son of royal birth takes his tincture from the fire, and death, darkness, and the waters flee away. The dragon shuns the light of the sun, and our dead son shall live. The king shall come forth from the fire and rejoice in the marriage. The hidden things shall be disclosed, and the virgin’s milk be whitened. The son is become a warrior fire and surpasses the tincture, for he himself is the treasure and himself is attired in the philosophic matter. Come hither, ye sons of wisdom, and rejoice, for the dominion of death is over, and the son reigns; he wears the red garment [fig. 193],[18] and the purple is put on.[19]



193. The white and the red rose as end-product of the transformation of king and queen.—“Trésor des trésors” (MS., 17th cent.)

[455] We can take this text as a variant of the mythical God-man and his triumph over death, and thus as an analogy of the Christian drama. Since the age and origin of this Hermetic text are still unknown, we cannot decide with any certainty whether Christian influence is at work here. Probably not. There is no reason to suspect Christian influence in the very early texts, such as that of Komarios.[20] (The Christian prefaces, etc., to these manuscripts are interpolations by Byzantine monastic copyists.) And yet it is just the Komarios text that has all the characteristics of a regeneration mystery, although here the resurrection of the dead is effected not by a redeemer but by the *ὕδωρ θεῖον* (the *aqua permanens* of the Latinists; cf. fig. 194), to which the Christian water symbolism (*aqua* = *spiritus veritatis*, baptism, and Eucharist) forms an unmistakable parallel.



194. Sulphur as sun and Mercurius as moon bridging the river of “eternal water.” — Barchusen, *Elementa chemiae* (1718)

c. Zosimos and the Doctrine of the Anthropos

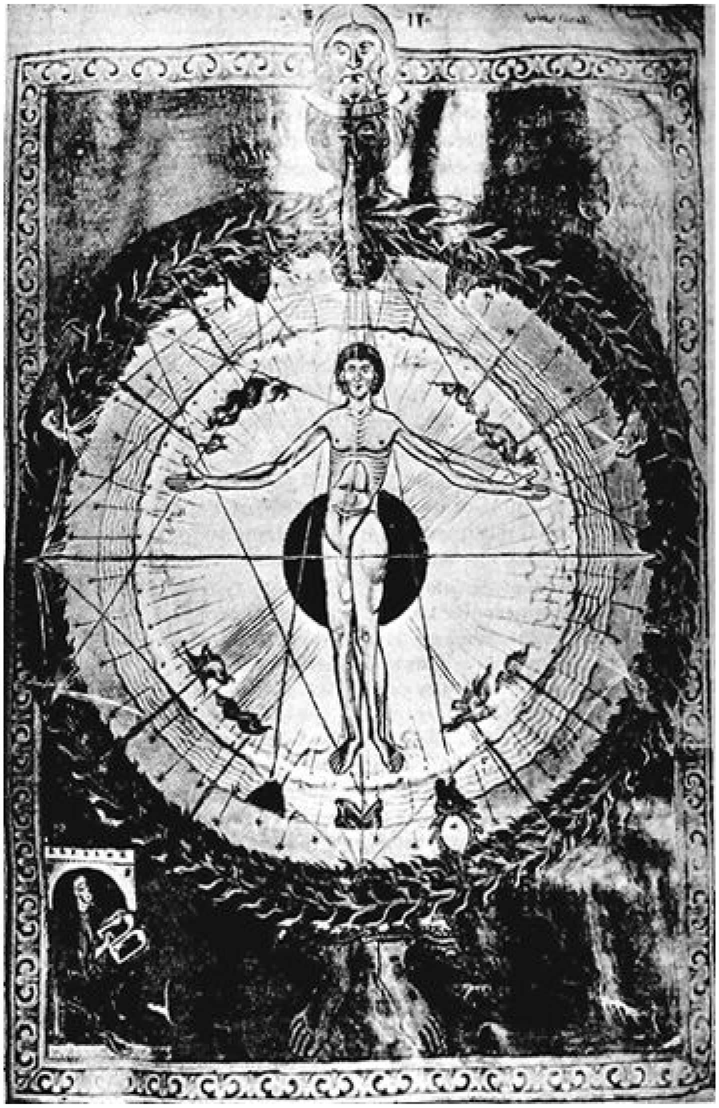
[456] In the later texts, however, which are ascribed to Zosimos, we find the Son of God in unmistakable association with the priestly art (*ἱερατικῇ*

τέχνη). I give the relevant passages in a literal translation:[21]

> 4: … If you have meditated and have dwelt in human community, you will see that the Son of God has become all things for the sake of devout souls: in order to draw the soul forth from the dominion of Heimarmene[22] into the [realm of the] incorporeal, behold how he has become all—God, angel, and man capable of suffering.[23] For having power in all, he can become all as he wills; and he obeys the Father inasmuch as he penetrates[24] all bodies and illuminates the mind of each soul,[25] spurring[26] it on to follow him up to the blessed region where it[27] was before the beginning of corporeal things,[28] yearning and led by him into the light.[29]
>
> 5: And consider the tablet which Bitos[30] also wrote, and the thrice-great Plato[31] and the infinitely great Hermes, saying that[32] the first man is designated with the first hieratic word Thoyth,[33] who is the interpreter of all things that are and the giver of names to all corporeal things. The Chaldeans, Parthians, Medes, and Hebrews call him Adam, which is, being interpreted, virgin earth, blood-red [or bloody] earth, fiery[34] or carnal earth. This is to be found in the libraries of the Ptolemies. They put it[35] in every sanctuary, and especially in the Serapeum, at the time when Asenas[36] went to the High Priest of Jerusalem,[37] who sent Hermes, who translated the whole of the Hebrew into Greek and Egyptian.
>
> 6: So the first man is called by us Thoyth and by them Adam, which is a name in the language of the angels; but with reference to his body[38] they named him symbolically after the four elements[39] of the whole heavenly sphere [fig. 195]. For his letter A stands for ascent [*ἀνατολή*: the East] or the air; D for descent [*δύσις*: the West] …[40] because it [the earth] is heavy; A for arctic [*ἄρκτος*: the North]; and M for meridian [*μεγημβρία*: the South], the midmost of these bodies, the fire that burns in the midst of the fourth region.[41] Thus the fleshly Adam according to his outward and visible form is called Thoyth, but the spiritual man in him has a proper name as well as the name by which he is called. His proper name as yet[42] I know not: for Nikotheus alone knows this, and he is not

to be found. But his common name is Man [ϕώς], which is Light [ϕώς]; wherefore it came that men are called ϕῶτας.

7: Now when the Man of Light[43] abode in Paradise, pervaded[44] by the breath of Heimarmene, they [the elements][45] persuaded him, who was without evil and free from their activity, to put on the Adam that was with him,[46] namely the Adam wrought of the four elements of Heimarmene[47] [cf. figs. 82, 117]. And he in his innocence did not turn aside; but they boasted that he was their slave. [Wherefore] Hesiod[48] called the outer man the bond with which[49] Zeus bound Prometheus. But after this fetter Zeus sent him yet another: Pandora, whom the Hebrews call Eve. For, in the allegorical language, Prometheus and Epimetheus are but one man, namely soul and body. And sometimes he[50] bears the likeness of the soul, sometimes that of the spirit, and sometimes the likeness of the flesh [fig. 196], because of the disobedience of Epimetheus, who heeded not the counsel of Prometheus, his own mind.[51] For our mind[52] says: “The Son of God, having power in all things and becoming all things when[53] he wills, appears[54] as he wills to each. Jesus Christ made himself one with Adam and bore him up to that place where the Men of Light dwelt before.”[55]

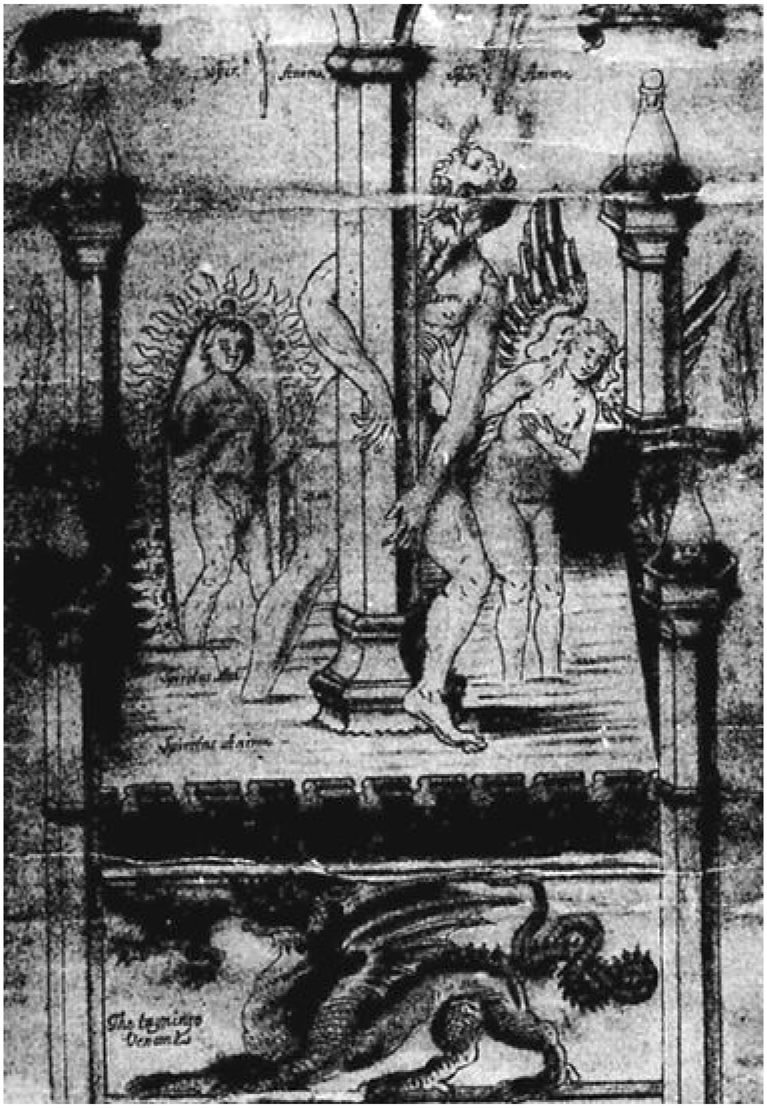


195. Creator, macrocosm, and microcosm in human form, the microcosm surrounded by the elements.—St. Hildegarde of Bingen, “Liber divinorum operum” (MS., 12th cent.)

8: But he appeared to the very feeble as a man capable of suffering and like one scourged. And after he had privily stolen away the Men of Light that were his own,[56] he made known that in truth he did not suffer, and that death was trampled down and cast out. And to this day and to the end of the world[57] he is present in many places,[58] both secretly and openly consorting with his own,[59] counselling them secretly, yea through their own minds,[60] to suffer confusion[61] with the Adam who was with them, that he might be beaten away from them[62] and slain, this blind chatterer who is envious of the spiritual Man of Light. [Thus] they kill their Adam.

9: And these things are so until the coming of the daemon Antimimos, the jealous one,[63] who seeks to lead them astray as before,[64] declaring that he is the Son of God, although he is formless in both body and soul. But they, having become wiser since the true Son of God has taken possession of them, deliver up to him their own Adam to be put to death, and bring their shining spirits safely back to the place where they were before the beginning of the world. Yet before Antimimos, the jealous one, does this,[65] he sends his forerunner from Persia, who circulates false fables and leads men astray through the power of Heimarmene. The letters of his name are nine, if you keep the diphthong,[66] corresponding to Heimarmene. Later, at the end of about seven periods,[67] he will appear in his own[68] shape.

10: And only the Hebrews and the sacred books of Hermes [tell of] these things concerning the Man of Light and his guide the Son of God, and concerning the earthly Adam and his guide Antimimos, who blasphemously calls himself the Son of God to lead men astray. But the Greeks call the earthly Adam Epimetheus, who was counselled by his own mind, his brother, not to accept the gifts of Zeus. Yet, inasmuch as he erred and afterwards repented, seeking the abode of bliss, he[69] makes everything plain and fully advises them that have spiritual hearing. But those that have only bodily hearing are slaves of Heimarmene, for they neither understand nor admit anything else.



196. The three manifestations of the Anthropos during his transformation: body, soul, spirit. Below, dragon and toad as preliminary forms.—“Ripley Scrowle” (MS., 1588)

11: And all who meet with success in the matter of colourings at the propitious moment, consider nothing but the great book about furnaces, for they do not esteem the art; nor do they understand the poet when he says: “But the gods have not given to men equally.”[70] Neither do they observe and see the manner of men’s lives: how, even in the same art, men may reach the goal in different ways and practise the same art in different ways, according to their different characters and the constellations of the stars in the exercise of the same art; how one worker is inactive,[71] another alone,[72] one blasphemously desiring too much, another too timid and therefore without progress—this is so in all the arts

—and how those who practise the same art use different implements and procedures, having also different attitudes to the spiritual conception of it and its practical realization.

12: And this is more to be considered in the sacred art than in all the other arts.…

[457] To all appearances, Zosimos’ Son of God is a Gnostic Christ who has more affinity with the Iranian conception of Gayomart than with the Jesus of the Gospels. The author’s connections with Christianity are by no means clear, since he undoubtedly belonged to the Hermetic Poimandres sect, as is evident from the passage about the Krater.[73] As in later Christian alchemy, the Son of God is a sort of paradigm of sublimation, i.e., of the freeing of the soul from the grip of Heimarmene. In both cases he is identical with Adam, who is a quaternity compounded of four different earths. He is the Anthropos, the first man, symbolized by the four elements, just like the *lapis* which has the same structure. He is also symbolized by the cross, whose ends correspond to the four cardinal points (fig. 197; cf. figs. 82, 192). This motif is often replaced by corresponding journeys, such as those of Osiris,[74] the labours of Herakles,[75] the travels of Enoch,[76] and the symbolic *peregrinatio* to the four quarters in Michael Maier[77] (1568–1622) (cf. fig. 97). Journeys are also related of Hermes Trismegistus,[78] and this may have inspired Maier’s *peregrinatio*, although it is more probable that Maier imagined the *opus* as a wandering or odyssey, rather like the voyage of the Argonauts in quest of the *aureum vellus* (Golden Fleece), so beloved of the alchemists, a theme that figures in the title of more than one treatise. Alexander’s campaign is mentioned in a treatise ascribed to Albertus Magnus, the journey ending in the discovery of Hermes’ grave, where a stork is perched on the tree instead of a phoenix.[79]

197. Christ in the midst of the four rivers of paradise, evangelists, Fathers of the Church, virtues, etc.
—Peregrinus, “Speculum virginum” (MS., 13th cent.)

198. *Anser* or *cygnus Hermelis.—Hermaphroditisches Sonn- und Mondskind* (1752)

[458] Adam corresponds to Thoth (*Θωΰς*), the Egyptian Hermes (fig. 68). Adam's inner, spiritual man is named *φώς* (light). Nikotheos, who knows the Man of Light's secret name, occurs twice in Zosimos as a mysterious personage,[80] and he is also mentioned in a Coptic Gnostic text as one who has beheld the Monogenes (*unigenitus*). Porphyry, in his life of Plotinus, speaks of him as the author of an Apocalypse.[81] The Manichees reckon him among the prophets, along with Shēm, Sēm, Enōš, and Enoch.[82]

[459] Prometheus and Epimetheus represent the inner and outer man, like Christ and Adam. The ability to "become all," attributed to the Son of God, is an attribute not only of the pneuma but of the alchemical Mercurius, whose boundless powers of transformation are praised[83] in accordance with the versatility of the astrological Mercury (fig. 24). He is the *materia lapidis*, the transforming substance par excellence, and is said to penetrate all bodies[84] like a poison[85] (fig. 150).

[460] Antimimos, the imitator and evil principle, appears as the antagonist of the Son of God: he too considers himself to be God's son. Here the opposites inherent in the deity are clearly divided. We meet this daemon in many other places as the ἀντίμιμον πνεῦμα: he is the spirit of darkness in a man's body, compelling his soul to fulfil all his sinful tendencies.[86] The alchemical parallel to this polarity is the double nature of Mercurius, which shows itself most clearly in the Uroboros, the dragon that devours, fertilizes, begets, slays, and brings itself to life again. Being hermaphroditic, it is compounded of opposites and is at the same time their uniting symbol (fig. 148): at once deadly poison, basilisk, scorpion, panacea, and saviour (fig. 199).

199. Hermaphrodite on the winged globe of chaos, with the seven planets and the dragon.
—Jamsthaler, *Viatorium spagyricum* (1625)

[461] Zosimos discloses practically the whole of the recondite and highly peculiar theology of alchemy, by drawing a parallel between the esoteric meaning of the *opus* and the Gnostic mystery of redemption. This is only one indication that the lapis-Christ parallel of the scholastic alchemists had a pagan Gnostic precursor and was by no means a mere speculation of the Middle Ages.

200. Eagle and swan as symbols of the sublimated *spiritus*. In the foreground, Saturn.
—Mylius, *Philosophia reformata* (1622)

d. Petrus Bonus

[462] The oldest source to treat specifically of the stone’s connection with Christ would appear to be a text, *Pretiosa margarita novella*, written by Petrus Bonus of Ferrara between 1330 and 1339,[87] from which I give the following extract:[88]

> This art is partly natural and partly divine or supernatural. At the end of the sublimation [fig. 200] there germinates, through the mediation of the spirit, a shining white soul [*anima candida*] which flies up to heaven with the spirit [cf. fig. 134]. This is clearly and manifestly the stone. So far the procedure is indeed somewhat marvellous, yet still within the framework of nature. But as regards the fixation and permanence of the soul and spirit at the end of the sublimation, this takes place when the secret stone is added, which cannot be grasped by the senses, but only by the intellect, through inspiration or divine revelation, or through the teaching of an

initiate. Alexander says that there are two categories: seeing through the eye and understanding through the heart.[89] This secret stone is a gift of God. There could be no alchemy without this stone. It is the heart and tincture of the gold, regarding which Hermes says: “It is needful that at the end of the world heaven and earth be united: which is the philosophic Word.”[90] Pythagoras also said in the *Turba:* “God concealed this from Apollo, so that the world should not be destroyed.” Thus alchemy stands above nature and is divine. The whole difficulty of the art lies in this stone. The intellect cannot comprehend it, so must believe it, like the divine miracles and the foundation of the Christian creed. Therefore God alone is the operator, while nature remains passive. It was through their knowledge of the art that the old philosophers knew of the coming of the end of the world and the resurrection of the dead. Then the soul will be united with its original body for ever and ever. The body will become wholly transfigured [*glorificatum*], incorruptible, and almost unbelievably subtilized,[91] and it will penetrate all solids. Its nature will be as much spiritual as corporeal. When the stone decomposes to a powder like a man in his grave, God restores to it soul and spirit, and takes away all imperfection; then is that substance [*illa res*] strengthened and improved, as after the resurrection a man becomes stronger and younger than he was before. The old philosophers discerned the Last Judgment in this art, namely in the germination and birth of this stone, for in it the soul to be beatified [*beatificandae*] unites with its original body, to eternal glory. So also the ancients knew that a virgin must conceive and bring forth, for in their art the stone begets, conceives, and brings itself forth.[92] Such a thing can happen only by the grace of God. Therefore Alphidius[93] says of the stone that its mother was a virgin and that its father had never known woman. They knew besides that God would become man on the Last Day of this art[94] [*in novissima die huius artis*], when the work is perfected; and that begetter and begotten, old man and boy, father and son, all become one. Now, since no creature except man can unite with God, on account of their dissimilarity, God must needs become one with man. And this came to pass in Christ Jesus and his virgin mother.[95] Therefore Balgus says in the *Turba:* “O what miracles of nature, that have changed the soul of the old man into a youthful body, and the father has become the son" [cf. figs. 166, 167]. In like manner Plato, writing of alchemical matters, wrote a gospel which was completed long after by John the Evangelist. Plato wrote the opening verses from "In the beginning was the Word" to "There was a man sent from God."[96] God has shown the philosopher this wonderful example that he might perform supernatural works. Morienus says that God has entrusted this *magisterium* to his philosophers or prophets, for whose souls he has prepared a dwelling in his paradise.[97]

[463] This text, which is at least a century older than Khunrath, shows beyond all doubt that the connection between the mystery of Christ and the mystery of the *lapis* was even then so obvious that the philosophical *opus* seemed like a parallel and imitation—perhaps even a continuation—of the divine work of redemption.

e. "Aurora consurgens" and the Doctrine of Sapientia

[464] The next source is *Aurora consurgens*,[98] of which a manuscript copy of the fifteenth century, the Codex Rhenoviensis, from the monastery at Rheinau, is to be found in Zurich. Unfortunately the manuscript is mutilated and begins only at the fourth parable. I was made aware of it through the fact that the printer of *Artis auriferae* (1593) published only Part II of *Aurora*. He prefixed to it a short notice to the reader in which he says that he has purposely omitted the entire treatise consisting of parables or allegories because the author, in the ancient manner of obscurantists (*antiquo more tenebrionum*), treated almost the whole Bible—particularly Proverbs, Psalms, but above all the Song of Songs—in such a way as to suggest that the Holy Scriptures had been written solely in honour of alchemy. The author, he says, has even profaned the most holy mystery of the incarnation and death of Christ by turning it into the mystery of the *lapis*—not, of course, with any evil intent, as he, the typographer Conrad Waldkirch, readily admits, but as was only to be expected in that benighted epoch (*seculum illud tenebrarum*). By this Waldkirch meant the pre-Reformation epoch, whose conception of man and the world, and experience of the divine presence in the mystery of

matter, had entirely vanished from the purview of the Protestants of his own day.

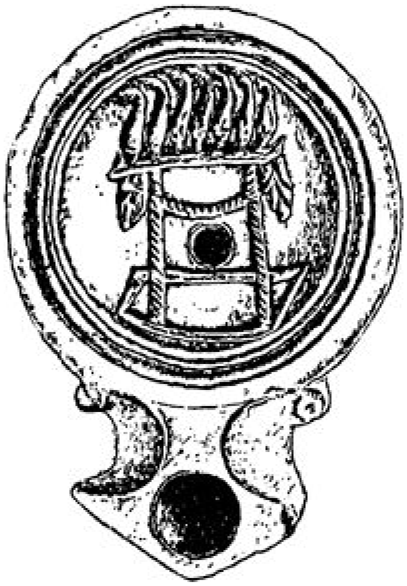
[465] The treatise is preserved entire in the Codex Parisinus Latinus 14006. There is also a printing of it in the compilation edited by Johannes Rhenanus, *Harmoniae inperscrutabilis chymico-philosophicae Decades duae* (Frankfort, 1625).[99] The age of the text, which is attributed to St. Thomas Aquinas (d. 1274), may be gauged more or less from the fact that the most recent author quoted in it is Albertus Magnus (1193–1280). The other authors who are everywhere quoted in the fifteenth century—Arnold of Villanova (d. 1313) and Raymond Lully (d. 1315)—are not mentioned. Since Thomas was canonized in 1323 and was thus at the height of his fame, it was worth while ascribing texts to him from that time on. We shall probably not be far out if we put the date in the first half of the fourteenth century. The author is evidently a cleric who knows his Vulgate by heart. His whole idiom is steeped in Biblical quotation, just as his mind is full of alchemical philosophy. Alchemy is for him absolutely identical with the *Sapientia Dei*. He begins his treatise with words taken from the Wisdom of Solomon (7 : 11) and Proverbs (1 : 20–21):

> Venerunt mihi omni bona pariter cum illa[100] sapientia austri, quae foris praedicat, in plateis dat vocem suam, in capite turbarum clamitat, in foribus portarum urbis profert verba sua dicens:[101] Accedite ad me et illuminamini et operationes vestrae non confundentur;[102] omnes qui concupiscitis me[103] divitiis meis adimplemini. Venite ergo filii, audite me, scientiam Dei docebo vos. Quis sapiens et intelligit hanc, quam Alphidius dicit homines et pueros in viis et plateis praeterire et cottidie a iumentis et pecoribus in sterquilinio conculcari.…
>
> (All good things come to me together with her,[100] that Wisdom of the south, who preacheth abroad, who uttereth her voice in the streets,[101] crieth out at the head of the multitudes, and in the entrance of the gates of the city uttereth her words, saying: “Come ye to me and be enlightened, and your operations shall not be confounded;[102] all ye that desire me shall be filled with my riches.[103] Come, children, hearken to me, I will

teach you the science of God. Who is wise, and understandeth this, of which Alphidius saith, that men and children pass her by daily in the streets and public places, and she is trodden into the mire by beasts of burden and by cattle …”)

201. Sapientia as mother of the wise.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

[466] The *sapientia austri* is, in patristic usage,[104] the wisdom of the Holy Ghost. For our author Sapientia is the “regina Austri, quae ab oriente dicitur venisse, ut aurora consurgens”—Queen of the South,[105] who is said to have come from the east, like unto the morning rising[106] (fig. 201).



202. Communion table with seven fish.—Christian earthenware lamp, Carthage

[467] Without mentioning our text, the *Rosarium* quotes it as follows:[107]

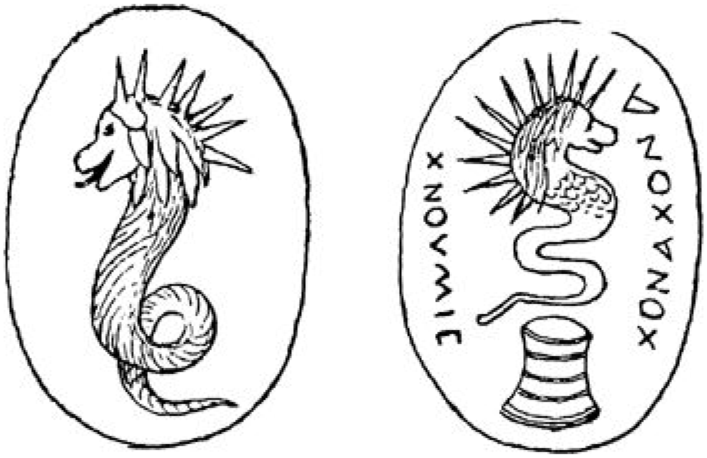
> This [Sapientia] is my daughter, for whose sake men say that the Queen of the South came out of the east, like the rising dawn, in order to hear, understand, and behold the wisdom of Solomon; power, honour, strength, and dominion are given into her hand; she wears the royal crown of seven glittering stars, like a bride adorned for her husband, and on her robe is written in golden lettering, in Greek, Arabic, and Latin: I am the only daughter of the wise, utterly unknown to the foolish.

[468] This is without doubt a citation from *Aurora*. The original text has twelve instead of seven stars, the latter evidently referring to the seven stars in the hand of the apocalyptic “one like unto the Son of Man” (Rev. 1 : 13; 2 : 1). These represent the seven angels of the seven Churches and the seven spirits of God (fig. 202). The historical *sous-entendu* of the seven is the antique company of seven gods who later took up their abode in the seven metals of alchemy (figs. 21, 79, 154). They were deposed by science only during the last one hundred and fifty years. For Paracelsus the gods were still enthroned as archons in the *mysterium magnum* of the *prima materia*, “to their own undoing and ours.”[108]

[469] The twelve stars of the original text refer to the twelve disciples and the twelve signs of the zodiac (figs. 92, 100). The Agathodaimon serpent

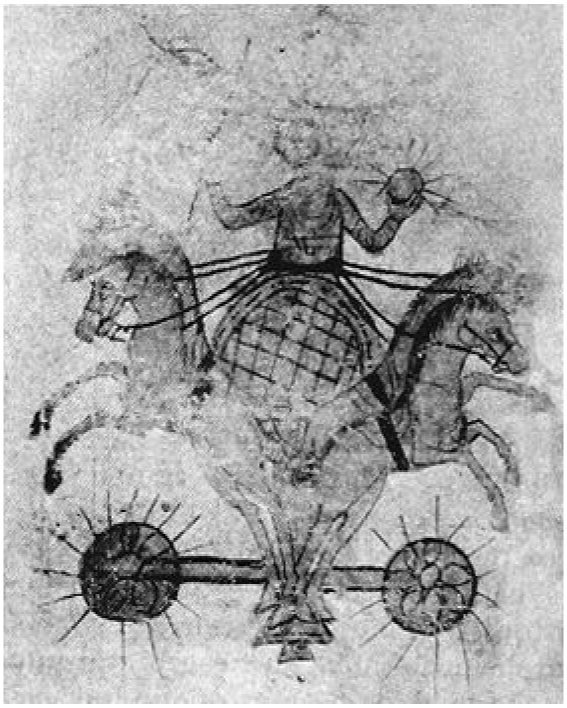
on Gnostic gems also has seven or twelve rays about its head (figs 203–5). In Clement's second homily it is observed that the number of apostles corresponds to the twelve months.[109] In the Manichean system the saviour constructs a cosmic wheel with twelve buckets—the zodiac—for the raising of souls.[110] This wheel has a significant connection[111] with the *rota* or *opus circulatorium* of alchemy,[112] which serves the same purpose of sublimation. As Dorn says: "The wheel of creation takes its rise from the *prima materia*, whence it passes to the simple elements."[113] Enlarging on the idea of the *rota philosophica* (cf. figs. 80, 104), Ripley says that the wheel must be turned by the four seasons and the four quarters, thus connecting this symbol with the *peregrinatio* and the quaternity. The wheel turns into the wheel of the sun rolling round the heavens, and so becomes identical with the sun-god or -hero who submits to arduous labours and to the passion of self-cremation, like Herakles, or to captivity and dismemberment at the hands of the evil principle, like Osiris. A well-known parallel to the chariot of the sun is the fiery chariot in which Elijah ascended to heaven (figs. 206, 207).[114] Accordingly Pseudo-Aristotle says:[115] "Take the serpent, and place it on the chariot with four wheels, and let it be turned about on the earth until it is immersed in the depths of the sea, and nothing more is visible but the blackest dead sea." The image used here is surely that of the sun sinking into the sea, save that the sun has been replaced by the mercurial serpent, i.e., the substance to be transformed. Michael Maier actually takes the *opus circulatorium* as an image of the sun's course:

> For while the hero, like a joyful giant,[116] rises in the east and hastens to his sinking in the west, that he may forever return out of the east, he sets in motion these circulations, depositing in the shining substance of the quicksilver, as in a mirror, forms [wherein] by human diligence the gold may be sought, cleansed from impurities, tested by fire and water, and put to a use pleasing to God the Creator.[117]



203, 204. The Chnuphis serpent with seven-rayed crown; the lion-headed, twelve-rayed **XNOYMIC**-serpent, over an altar-stone.—Gnostic gem and amulet

205. Goddess of fate as serpent with seven heads.—Seal of St. Servatius, from Maastricht Cathedral

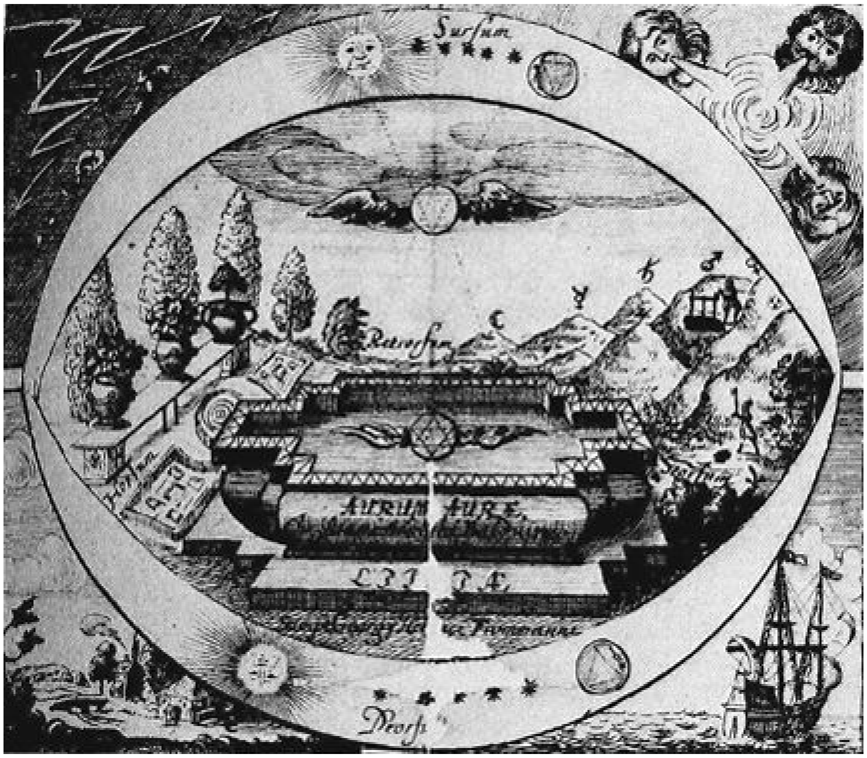


206. Helios riding a chariot with four horses.—Theodore Psalter (1066)

[470] The circle described by the sun is the "line that runs back on itself, like the snake that with its head bites its own tail, wherein God may be discerned." Maier calls it the "shining clay moulded by the wheel [*rota*] and hand of the Most High and Almighty Potter" into that earthly substance wherein the sun's rays are collected and caught. This substance is the gold.[118] In "Introitus apertus,"[119] Philalethes elaborates Maier's views: there is in "our" mercury, he says, a fiery sulphur or sulphureous fire. This fire is the "spiritual seed" which our Virgin[120] has gathered in herself, because unspotted virginity can admit of "spiritual love," according to the author of the Hermetic mystery and as experience itself shows. It is to be noted that this virgin, who being "unspotted" (*intemerata*) is obviously analogous to the Virgin Mary, is made pregnant by a seed deriving not from any Holy Ghost but from a "sulphureous fire," i.e., an *ignis gehennalis*.[121] The virgin is Mercurius[122] (fig. 208). who, owing to the presence of sulphur, the active masculine principle, is hermaphroditic.[123] Sulphur is the *aurum volatile* (fig. 209), a "spiritual" gold, the *aurum non vulgi* of the *Rosarium* and at the same time the "primum movens, quod rotam vertit axemque vertit in gyrum" (prime mover that turns wheel and axle in a circle).

207. The ascension of Elijah.—Early Christian mural painting, crypt of Lucina, Rome

208. Mercurius as *anima mundi*.—“Turba philosophorum” (MS., Paris, 16th cent.)



209. The winged sphere (*aurum aurae*) as the end-product of the *opus*, and its reflection in the fountain of life. Symbolic representation of the *opus* with attributes (trees, planetary mountains, etc.).
—Balduinus, *Aurum hermeticum* (1675)

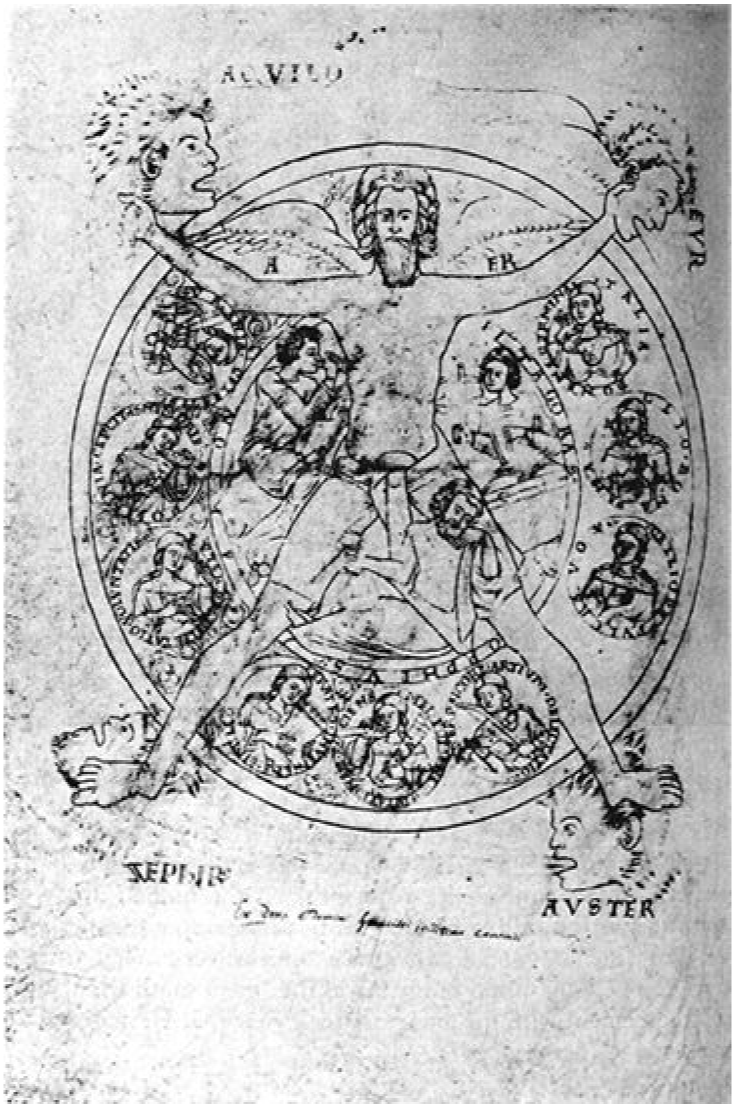
[471] Laurentius Ventura[124] cannot resist connecting the wheel with the vision of Ezekiel. Thus, speaking of the *lapis*, he says that Ezekiel saw "in its shape the wheel within the wheel and the spirit of the living creature that was in the midst of the wheels"[125] (figs. 109, 207). "Wherefore," he says, "this *mysterium* has been called by some the *Deus terrestris.*"[126] It appears that this last thought is not a conceit of Ventura's but, as he says, a quotation from "Lilium," a source I have been unable to trace, though it must go back to the fourteenth century or even earlier.[127]

[472] The idea of the circulatory *opus*, or rotating arcane substance, finds expression as early as Komarios, who speaks of the "mystery of the whirlwind in the manner of a wheel" (*μυστήριον τῆς λαίλαπος τροχοῦ δίκην*).[128] Compare Zach. 9 : 14 (D.V.): "… and the Lord God will sound the trumpet and go in the whirlwind of the south." The mystic logion of Zosimos probably has some bearing here:[129] "And what meaneth this: 'the nature that conquers the natures,' and 'it is perfected and becometh like a whirl'?" [*καί γίνεται ἰλιγγιῶσα*]. The transforming substance is an

analogy of the revolving universe, of the macrocosm, or a reflection of it imprinted in the heart of matter. Psychologically, it is a question of the revolving heavens being reflected in the unconscious, an *imago mundi* that was projected by the alchemist into his own *prima materia*. But such an interpretation is somewhat one-sided, since the idea of the arcane substance is itself an archetype, expressed most simply in the idea of the soul-spark (*scintilla, Spinther*) and the Monad.

[473] The personification of Sapientia in the Wisdom of Solomon evidently caused the author of *Aurora* to identify her with the "Queen of the South." In alchemy she always appears as *Sapientia Dei*, and in the writings of the Church Fathers the south wind is an allegory of the Holy Ghost, presumably because it is hot and dry. For the same reason the process of sublimation is known in Arabic alchemy as the "great south wind," referring to the heating of the retort.[130] The Holy Ghost, too, is fiery and causes an exaltation. His equivalent, so to speak, is the hidden fire, the *spiritus igneus* dwelling in Mercurius, whose opposite poles are an *agens* (i.e., fire) and a *patiens* (i.e., quicksilver). When therefore Abu'l Qāsim speaks of the fire as the "great south wind," he is in agreement with the ancient Greek view that Hermes was a wind-god[131] (figs. 210, 211).

210. “The wind hath carried it in his belly” (“Tabula smaragdina”). The *foetus spagyricus* is the renewed Mercurius.—Maier, *Scrutinium chymicum* (1687)



211. The god Aër as procreator of all harmony. In the inner circle, Arion, Pythagoras, Orpheus; in the outer, the nine muses; in the corners, the four winds.—“Recueil des fausses décrétales” (MS., 13th cent.)

212. The Trinity as *tricephalus.—Speculum humanne salvationis* (Augsburg, 1480)

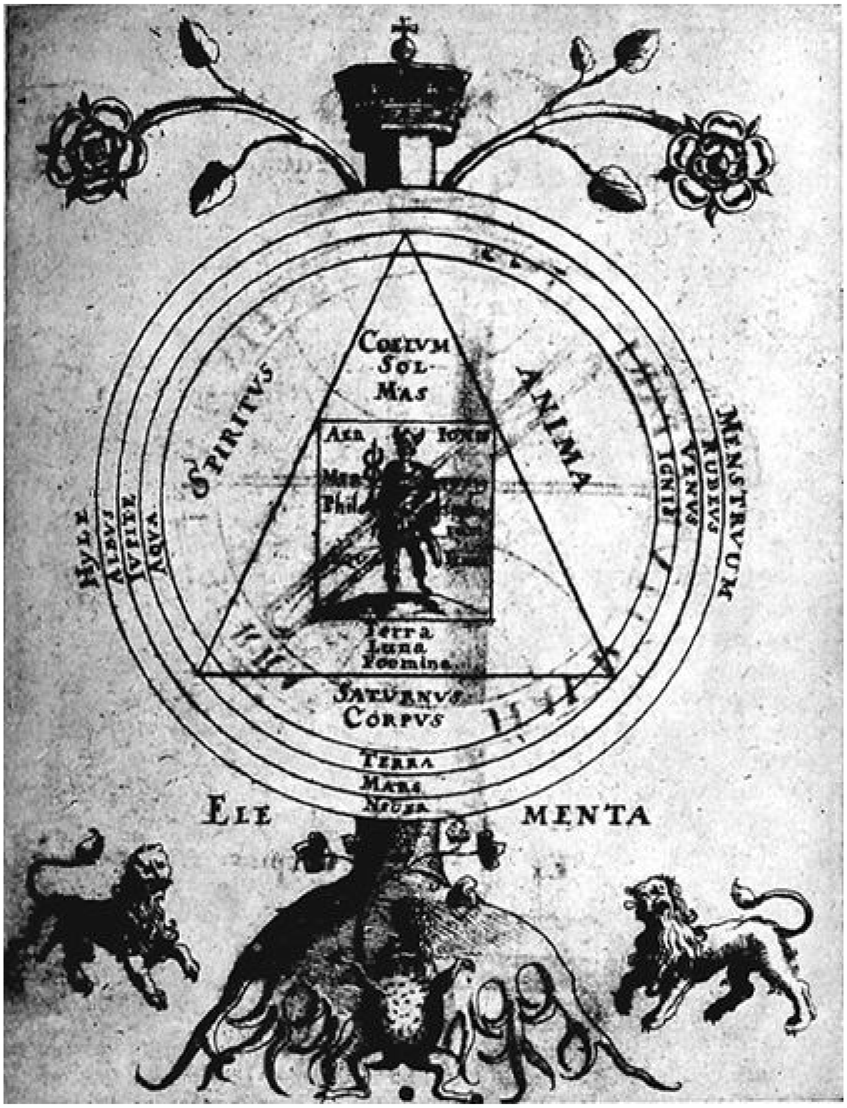
[474] I have dwelt at some length on the opening passages of *Aurora* because they are an excellent illustration of the composition as a whole as regards both language and subject matter. Here I will mention only a few of the *lapis*-Christ parallels. In ch. II the author calls “the science” (i.e., alchemy) a gift and a sacrament of God, a divine matter that the wise have veiled in images. From this it appears that the *opus alchemicum* is deemed the equal of the *opus divinum* or Mass.[132] In ch. VI the stone is described in the words of the Song of Songs 5 : 16, “Such is my beloved,” and Ps. 44 : 3 (D.V.), “Behold ye him, beautiful above the sons of men, at whose beauty the sun and moon wonder.”[133] The *filius philosophorum* is here identified with the “bridegroom” who, as we know, is interpreted as Christ. In the second parable, “Of the Flood of Waters and of Death,” we read: “Then the fulness of the time shall come, when God shall send his son,[134] as he hath said, whom he hath appointed heir of all things, by whom also he made the world,[135] to whom he said of old time: “Thou art my Son, today have I begotten thee,[136] to whom the Wise Men from the East brought three precious gifts …” Here again Christ is a parallel of the *lapis*. In the fourth parable, “Of the Philosophic Faith,” a parallel is drawn with the Holy Trinity (cf. figs. 179, 180): “… like as the Father is, so is the Son, and so also is the Holy Spirit, and these three are One: body, spirit, and soul; for all perfection consisteth in the number three, that is, in measure, number, and weight.”

[475] The sixth parable, “Of Heaven and Earth and the Arrangement of the Elements,” says:

> In the *Turba philosophorum* it is written: The earth, since it is heavy, beareth all things,[137] for it is the foundation of the whole heaven, because it appeared dry[138] at the separation of the elements.[139] Therefore in the Red Sea there was a way without hindrance, since this great and wide sea[140] smote the rock[141] and the metallic waters[142] flowed forth [fig. 213]. Then the rivers[143] disappeared in dry land, which make the city of God joyful;[144] when this mortal shall put on immortality, and the corruption of the living shall put on incorruption, then indeed shall that word come to pass which is written, Death is swallowed up in victory. O death, where is thy victory?[145] Where thy sin abounded, there now grace doth more abound. For as in Adam all die, so also in Christ all shall be made alive. For by a man indeed came death, and by himself the resurrection of the dead. For the first Adam and his sons took their beginning from the corruptible elements, and therefore it was needful that the composed should be corrupted, but the second Adam, who is called the philosophic man, from pure elements entered into eternity. Therefore what is composed of simple and pure essence, remaineth for ever.[146] As Senior saith: There is One thing, that never dieth,[147] for it continueth by perpetual increase, when the body shall be glorified in the final resurrection of the dead, wherefore the Creed beareth witness to the resurrection of the flesh and eternal life after death. Then saith the second Adam to the first and to his sons:[148] Come, ye blessed of my Father, possess you the eternal kingdom prepared for you from the beginning of the Work,[149] and eat my bread and drink the wine which I have mingled for you, for all things are made ready for you. He that hath ears to hear, let him hear what the spirit of the doctrine saith to the sons of the discipline concerning the earthly and the heavenly Adam, which the philosophers treat of in these words: When thou hast water from earth, air from water, fire from air, earth from fire,[150] then shalt thou fully and perfectly possess our art.

213. Moses striking water from the rock.—Bible Moralisée (MS., 13th cent.)

[476] What is particularly interesting in this passage is the parallel between the *lapis* or the *aqua sapientum* and the second Adam, which connects Christ—through the quotation in Senior (n. 147)—with the alchemical doctrine of the Anthropos: Christ is identified with the *homo philosophicus*, the Microcosm (fig. 214), the "One that dieth not, and bringeth alive anything dead." The *homo philosophicus* appears to have two meanings: he is the "One," i.e., the tincture or elixir of life, but he is also the everlasting inner man, identical or at least connected with the Anthropos (cf. figs. 117, 195). (This doctrine is elaborated by Paracelsus.[151])



214. Symbol of Hermetic transformation: the *homo philosophicus* Mercurius.—Samuel Norton, *Mercurius redivivus* (1630)

[477] *Aurora* continues in the same vein and gives us in the seventh and last parable a "Confabulation of the Lover with the Beloved" (which Luther's Bible interprets as "the mutual love of Christ and his Church"), closing with the words: "Behold, how good and pleasant it is for two to dwell together in unity. Let us make therefore three tabernacles, one for thee, a second for me, and a third for our sons, for a threefold cord is not easily broken." These three tabernacles the author connects with the "Liber trium verborum" of Kalid.[152] The Three Words "wherein is hidden all the science" are to be "given to the pious, that is to the poor,[153] from the first man even unto the last." The Three Words are: "For three

months water preserveth the foetus in the womb; air nourisheth it for the second three; fire guardeth it for the third three." "And this word," adds Kalid, "and this teaching and the dark goal, stand open so that all may see the truth."

[478] Although the three tabernacles, according to the preceding text, are intended for the *sponsus Christus* and, we may suppose, for Sapientia as the *sponsa*, yet in the end Sapientia herself speaks and offers two of the tabernacles to the adept and the philosophers, the sons of wisdom. The "threefold cord" (fig. 215) refers primarily to the bond between Sapientia and her adepts, but, as the reference to Kalid's Three Words shows, it also means the threefold process which holds the body, soul, and spirit of the transforming substance together in imperishable union[154] (cf. figs. 185, 196). The chemical compound thus produced is the end-result of the *opus*, i.e., the *filius philosophorum* or *lapis* in a sense comparable with the "mystical body" of the Church (fig. 234): Christ the vine, the whole; the disciples the branches, the parts. One does indeed have the impression that the anonymous author of this treatise has hitched the Holy Scriptures to the triumphal car of alchemy, as was not unjustly alleged against him. It is astonishing to see how, with a perfectly clear conscience, he launches forth into the most hair-raising interpretations without the least awareness of what he is doing. As I have shown in "Paracelsus as a Spiritual Phenomenon," we find a similar attitude in Paracelsus some two hundred years later, and also in the author of "Aquarium sapientum." Our author betrays such a ready acquaintance with the Vulgate that we might suspect him of being in holy orders. Moreover we have the testimony of the humanist Patrizi that Hermetic philosophy was not felt to be in any way inimical to the Christianity of the Church. On the contrary, people regarded it as a mainstay of the Christian faith. For which reason Patrizi addressed a plea to Pope Gregory XIV requesting him to let Hermes take the place of Aristotle.[155]

215. The completion of the process. Inscription: “oculatus abis” (provided with eyes, thou goest thy way). Hermes as Anthropos, united with the artifex and *soror* through the threefold cord. Below, Hercules, a favourite symbol because of his *opera*. Background, the ladder which is no longer needed.—*Mutus liber* (1702)

[479] The text of *Aurora* is of historical importance in that it must be more than two hundred years older than Khunrath (1598) and Böhme (1610). Curiously enough, Böhme’s first work bears the title “Aurora, oder die Morgenröte im Aufgang” (Aurora, or the Rising Dawn). Can it be that Böhme knew *Aurora consurgens*, at least by name?

f. Melchior Cibinensis and the Alchemical Paraphrase of the Mass

[480] The next source for the *lapis*-Christ identity is an interesting document from the beginning of the sixteenth century, addressed, as its title shows,[156] to Ladislaus, King of Hungary and Bohemia. The author's name was Nicholas Melchior of Hermannstadt.[157] He expounded the alchemical process in the form of a Mass (fig. 216), which he arranged as follows:

216. The artifex as priest. Left, Earth suckling the Mercurius-child: "matrix eius terra est" ("Tabula smaragdina").—Melchior Cibinensis, *Symbolum*, from Maier, *Symbola aureae mensae* (1617)

INTROITUS MISSAE: Fundamentum vero artis est corporum solutio. (The basis of the Art is the dissolution of the bodies.)

KYRIE, FONS BONITATIS, inspirator sacrae artis, a quo bona cuncta tuis fidelibus procedunt, Eleison. (Our Lord, fount of goodness, inspirer of the sacred art, from whom all good things come to your faithful, have mercy.)

CHRISTE, Hagie, lapis benedicte artis scientiae qui pro mundi salute inspirasti lumen scientiae, ad exstirpandum Turcam, Eleison. (Christ, Holy one, blessed stone of the art of the science who for the salvation of the world hast inspired the light of the science, for the extirpation of the Turk, have mercy.)

KYRIE, IGNIS DIVINE, pectora nostra juva, ut pro tua laude pariter sacramenta artis expandere possimus, Eleison. (Our Lord, divine fire, help our hearts, that we may be able, to your praise, to expand the sacraments of the art, have mercy.)

GLORIA IN EXCELSIS [merely an invocation].

COLLECTA [Prayer before the epistle is read. The main idea is that "thy servant N.N." may practise the "sacred art of alchemy" to the glory of God and the propagation of the Christian faith].

EPISTOLA [merely an invocation].

GRADUALE [usually a chorale consisting of verses from the Psalms; in the old days it was sung on the steps, *gradus*, of the ambo]: Surge aquilo et veni auster:[158] perfla hortum meum et fluant aromata illius. (Arise, O north wind, and come, O south wind; blow through my garden, and let the aromatical spices thereof flow).

VERSUS: Descendit sicut pluvia in vellus, et sicut stillicidia, stillantia super terram. Alleluja. O felix conditor terrae, nive albior, suavitate dulcior, f[r]agrans in fundo vasis instar balsami. O salutaris medicina hominum, quae curas … omnem corporis languorem.… O fons sublimis ex quo vere scaturit vera aqua vitae, in praedium tuorum fidelium. (He descends like rain upon the fleece, and as showers falling gently upon the earth. Alleluja. O blest creator of the earth, whiter than snow, sweeter than sweetness, fragrant at the bottom of the vessel like balsam. O salutary medicine for men, that curest every weakness of the body: O sublime fount whence gushes forth truly the true water of life into the garden of thy faithful.)

An Ave Praeclara follows the Gospel.

[481] Here I will stress only a few of the most important points. After the reading of Gospel and Creed, Melchior introduces an Ave—not an Ave Maria, but an “Ave Praeclara,”[159]—of which he mentions only these two words, without the continuation. “Ave Praeclara” is the opening of a hymn to the Virgin Mary, which has been attributed to various authors, including Albertus Magnus, whose putative authorship must have been particularly interesting to an alchemist. Rémy de Gourmont, in his *Le Latin mystique*,[160] quotes the following legend taken from the so-called Osnabrück Register of Santa Maria: A virgin in royal raiment appeared to Albertus in a dream and reproached him for not having shown himself sufficiently grateful to the Virgin Mary for the blessing she had bestowed. It was on account of this dream that Albertus composed the Ave Praeclara. An alchemist would find it full of alluring allusions:

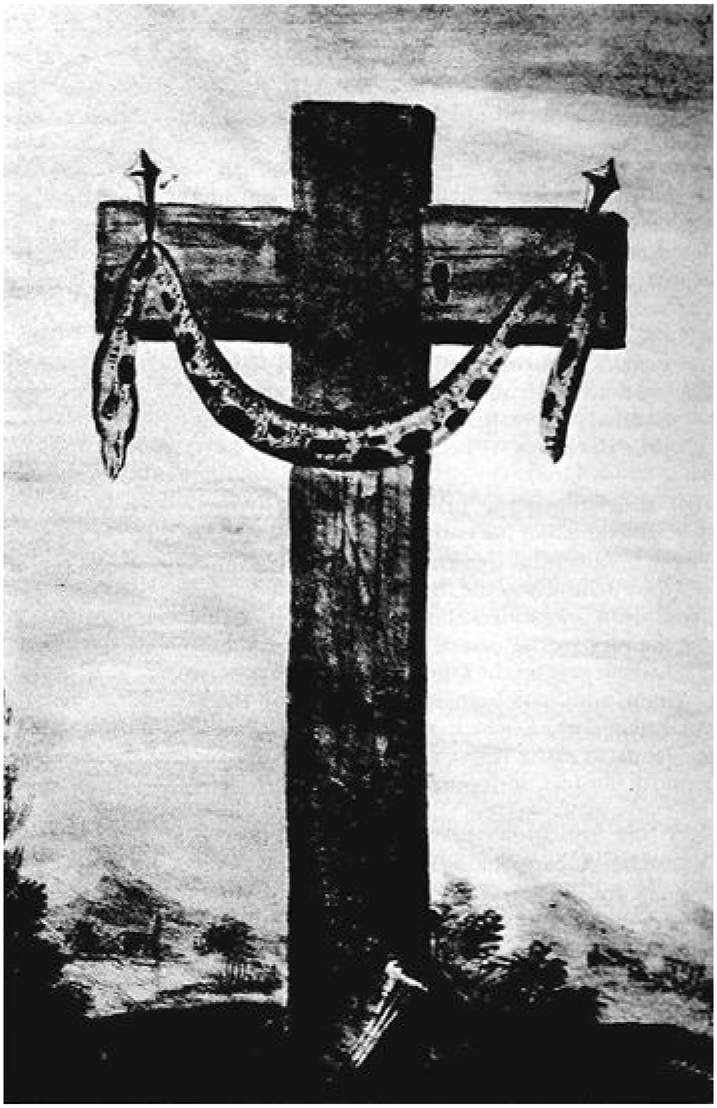
Ave praeclara maris stella, in lucem gentium Maria divinitus orta…
Virgo, decus mundi, regina coeli, praeelecta ut sol, pulchra lunaris ut fulgor…
Fac fontem dulcem, quem in deserto petra demonstravit,
degustare cum sincera fide, renesque constringi lotos
in mari, anguem aeneum in cruce speculari [fig. 217].
Fac igni sancto patrisque verbo, quod, rubus ut
flamma, tu portasti, virgo mater facta, pecuali
pelle distinctos,[161] pede, mundis labiis, cordeque propinquare.

Hail, clear-shining star of the sea, Mary, divinely born for the enlightenment of the nations…

> Virgin, ornament of the world, queen of heaven, elect above all like the sun, lovely as the light of the moon…
>
> Let us drink in steadfast faith of the sweet stream that flowed from the rock in the desert, and, girding our loins that the sea has bathed, gaze on the crucified brazen serpent [fig. 217].
>
> O Virgin, who hast been made mother by the sacred fire and the Father’s word, which thou didst bear like the Burning Bush, let us, as cattle ringstraked, speckled and spotted,[161] draw near with our feet, with pure lips and heart.

[482] While Melchior’s text leaves it an open question whether “praeclara” means the *aqua vitae*, he leaves us in no doubt that it refers not only to the Virgin but to a hymn in her praise, for he goes on to say: “The Ave Praeclara must be sung; it shall be called the ‘testament of the art,’ since the whole chemical art is figuratively concealed therein,[162] and blessed is he that understands this sequence.”

[483] By “this sequence” he means a hymn to Mary, in all probability the one we have quoted above, as is clear from Melchior’s next words. In any case the Virgin is identified with the arcanum of the art, possibly on the authority—then at its height—of Raymond Lully.[163] We come across a similar idea in the treatise of Komarios: “Ostanes and his companions said to Cleopatra: ‘The whole awful and marvellous secret is hidden in thee.’”[164]

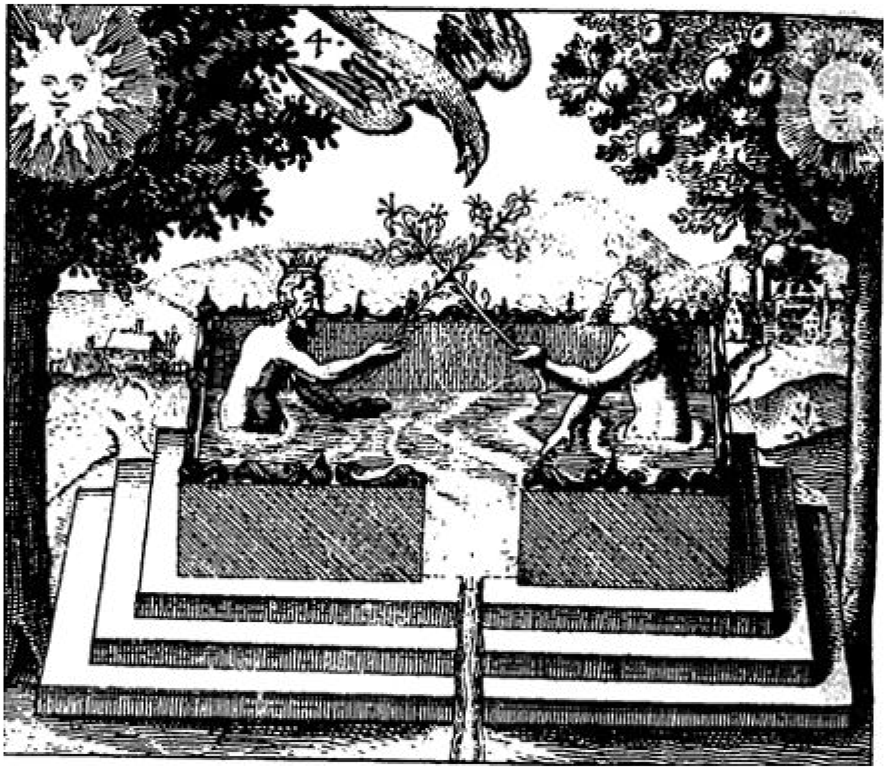


217. The crucified *serpens mercurialis,* the brazen serpent of Moses.—Abraham le Juif, “Livre des figures hiéroglifiques” (MS., 18th cent.)

[484] Melchior now gives his alchemical paraphrase of the hymn to Mary:

> Hail beautiful lamp of heaven, shining light[165] of the world! Here art thou united with the moon, here is made the band of Mars[166] [*copula martialis*] and the conjunction of Mercury.[167] From these three is born through the magistery of the art, in the river bed, the strong giant[168] whom a thousand times a thousand seek, when these three shall have dissolved, not into rain water … but into mercurial water, into this our blessed gum[169] which dissolves of itself and is named the Sperm of the Philosophers. Now he[170] makes haste to bind and betroth himself to the

virgin bride, and to get her with child in the bath over a moderate fire [fig. 218]. But the virgin will not become pregnant at once unless she be kissed in repeated embraces. Then she conceives in her body, and thus is begotten the child of good omen, in accordance with the order of nature. Then will appear in the bottom of the vessel the mighty Ethiopian, burned, calcined, discoloured, altogether dead and lifeless[171] [fig. 219]. He asks to be buried, to be sprinkled with his own moisture and slowly calcined[172] till he shall arise in glowing form from the fierce fire.… Behold a wondrous restoration and renewal of the Ethiopian! Because of the bath of rebirth he takes a new name, which the philosophers call the natural sulphur and their son, this being the stone of the philosophers. And behold it is *one* thing, *one* root, *one* essence with nothing extraneous added and from which much that was superfluous is taken away by the magistery of the art.… It is the treasure of treasures, the supreme philosophical potion, the divine secret of the ancients. Blessed is he that finds such a thing. One that has seen this thing writes and speaks openly, and I know that his testimony is true. Praise be to God for evermore!



218. The “bath of the philosophers.”—Mylius, *Philosophia reformata* (1622)

219. The “Ethiopian” as the *nigredo*.—Trismosin, “Splendor solis” (MS., 1582)

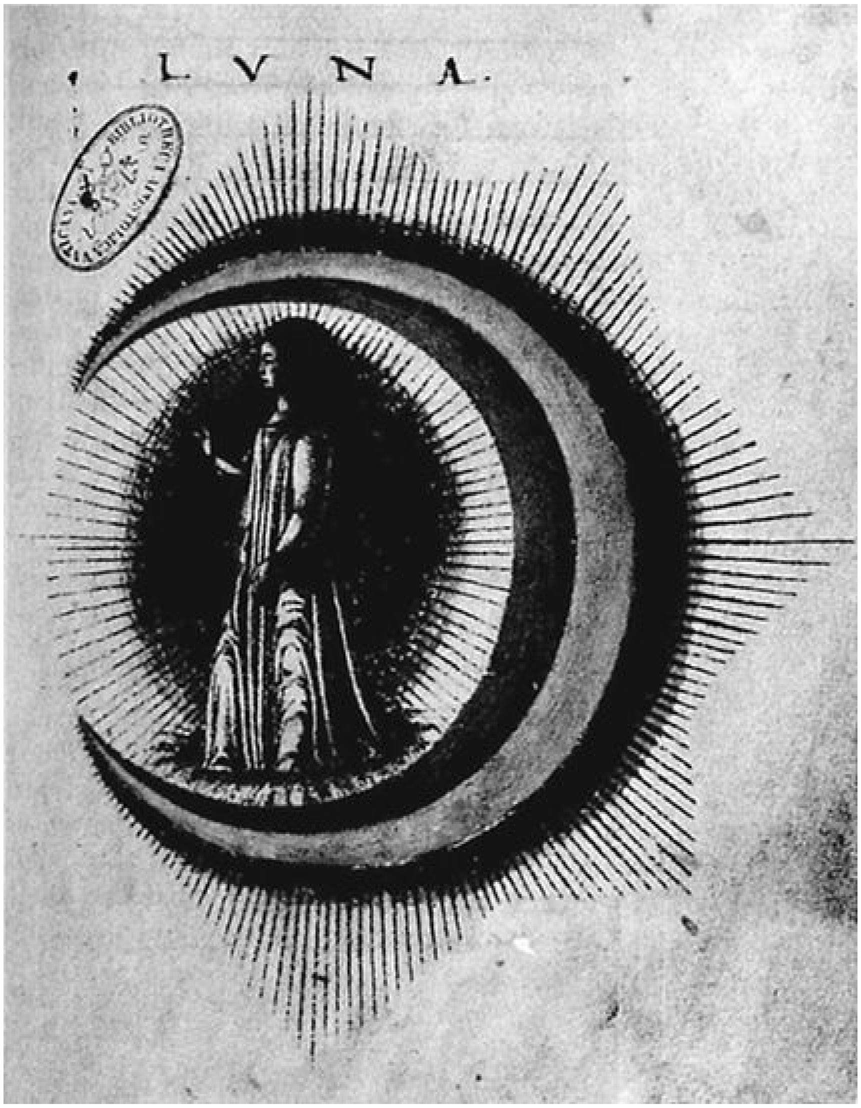
[485] The liturgy proper ends here. What now follows is a sort of recapitulation of the main parts. Melchior associates the Offertory with the stone that the builders rejected and that became the head of the corner. “This is the Lord’s doing, and it is marvellous in our eyes.” Then comes the Secret, leading over to the alchemical oblation. The offering is the *opus,* i.e., “our work of the blessed art of alchemy,” which “shall ever be dedicated to the glorious name of God and to the saving reformation of the Church, through our Lord Jesus Christ, Amen.”

[486] The regeneration of the Ethiopian is actually the equivalent of the transubstantiation, but the Consecration is missing. Melchior takes the Ave Praeclara sequence to include the transubstantiation as a mystery *in*

gremio virginis. This view is supported by tradition, as is shown by the following passage from Senior: “The full moon is the philosophical water and the root of the science, for she is the mistress of moisture, the perfect round stone and the sea, wherefore I know that the moon is the root of this hidden science.”[173]

[487] Being the mistress of moisture, the moon, like Isis, is the *prima materia* in the form of water and thus the mother of the “Hydrolith,” the water-stone—another name for the *lapis* and hence for Christ. Since the terms *scientia* and *prima materia* are often used as though they were identical, *scientia* or *sapientia* is here identical with the moon, the feminine principle (fig. 220); hence the Gnostic doctrine of Sophia as the mother or bride of Christ.

[488] Last of all comes the “Post-communion”: “Glory be to our King who comes out of the fire,[174] who is illumined and crowned with the diadem, for ever and ever, Amen.” In conclusion there is a form of compline for the strengthening of the Christian faith and the extermination of the Turk.



220. Figure of the moon.—Codex Urbanus Latinus 899 (15th cent.)

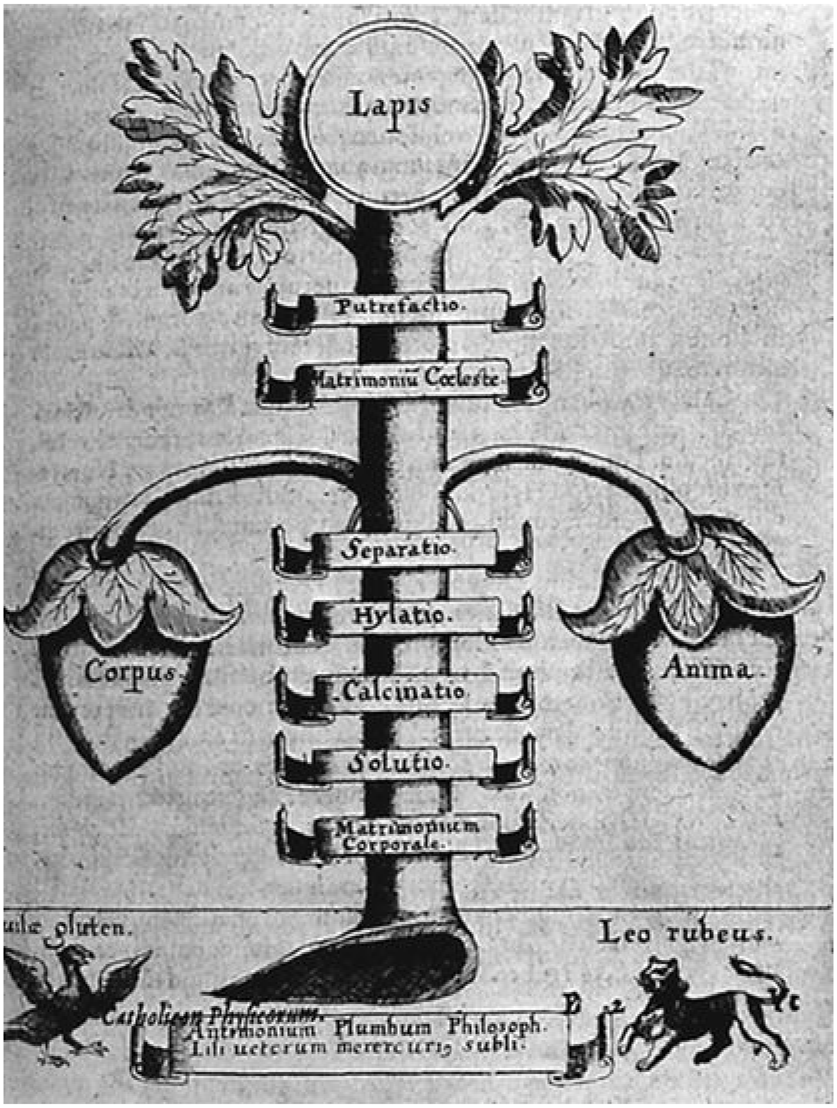
[489] Apart from its bad taste the text is highly illuminating for our theme. Melchior obviously recognized the analogy between the two *opera* and naïvely substituted the individual *opus,* in all its poverty, for the time-honoured words of the Mass. He lived at the time of the Reformation, and not so long afterwards the Mass was replaced, over a wide area of Europe, by the far from sacrosanct words of various preachers all declaring the word of God in their own way. Melchior was doing something of this kind. If we grant him the right to a subjective credo he becomes more acceptable. It is clear enough from the text that he felt the alchemical process to be the equivalent of the transubstantiation in the Mass, and that he had the need to express his experience[175] in precisely

that form. It is to be noted, however, that he puts the alchemical transmutation not in the place of the transubstantiation but somewhere in the vicinity of the Credo, so that the action breaks off before the Consecration. In the second version of the recapitulation the climax of the rite is again missing, and the sequence jumps straight from the Secret at the Offertory to the Post-communion. This peculiarity may be explained by the holy awe of the most solemn and moving part of the Mass, namely the Consecration. One could therefore take it as at least an indirect sign of a conflict of conscience—a conscience torn between the experience of a rite acting from without and an individual experience acting from within. Although Christ is nowhere mentioned as the *lapis* or *medicina*, their identity is overpoweringly evident from the whole drift of the text.

g. Sir George Ripley

[490] Additional evidence, which ought to have been known to Waite, is furnished (cf. figs. 30, 92, 196, 228, 251, 257) by his countryman Sir George Ripley (1415–90), canon of Bridlington, whose main work, "Liber duodecim portarum,"[176] is prefaced by a table of philosophical correspondences, compiled by B. à Portu, Aquitanus. The table sets forth the correspondences between the seven metals and chemical substances and what are called "types," by which are meant the alchemical symbols, e.g., tinctures, the ages of man, signs of the zodiac, and so forth. These correspondences include seven mysteries, the *Mysterium Altaris* (i.e., the Mass) being attributed to gold, whereas the alchemical equivalent is the *transmutatio* (fig. 221). The kind of grain that belongs to this mystery is *triticum* (wheat). B. à Portu is probably to be identified with Bernhardus Georgius Penotus, the Paracelsist, who was born between 1520 and 1530 at Port-Ste-Marie in Guienne (part of the old Aquitaine) and who died in 1620 in the poorhouse at Yverdon (Vaud, Switzerland), hoary with age and disillusioned with the Paracelsan optimism that had fired his student days in Basel. He shared the inevitable fate of those who lacked sufficient humour to understand the testy old master and who found that the secret teaching about the *aurum non vulgi* remained all too secret. But his table shows that the analogy between the *opus* and the Mass was also

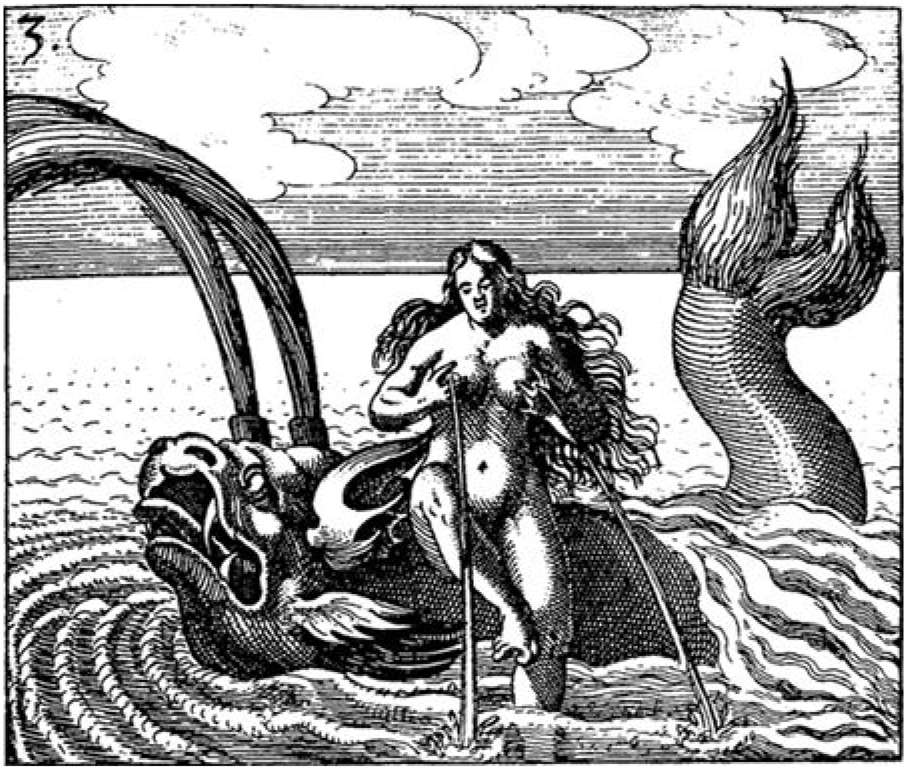
valid in Paracelsist circles. Paracelsus was a contemporary of Melchior's, but may well have reached similar conclusions independently, for such ideas were then in the air. Michael Maier was sufficiently impressed by Melchior's analogy to use it as Symbol XI (fig. 216) in his *Symbola aureae mensae* (1617), with the motto: "Lapis, ut infans, lacte nutriendus est virginali" (The stone, like to an infant, is to be fed with virgin's milk) [cf. fig. 222].



221. *Arbor philosophica*: the tree as symbol of the stages in the transformation process.
—Samuel Norton, *Catholicon physicorum* (1630)

[491] We find the following legend in the "Cantilena Riplaei":[177]

There was once a noble king [the *caput corporum*] who had no descendants. He lamented his sterility and concluded that a *defect us originalis* must have arisen in him, although he was “nurtured under the wings of the sun” without any natural bodily defects. He says, in his own words: “Alas, I fear and know for a certainty that unless I can obtain the help of the species at once, I shall never beget a child. But I have heard with astonishment, by the mouth of Christ above, that I shall be born anew.” He then wished to return to his mother’s womb and to dissolve himself in the *prima materia*. His mother encouraged him in this venture, and forthwith concealed him under her robe, until she had incarnated him again in herself. She then became pregnant. During her pregnancy she ate peacock’s flesh and drank the blood of the green lion. At length she brought forth the child, who resembled the moon and then changed into the splendour of the sun. The son once more became king. The text says: “God gave thee the glorious, glittering armoury of the four elements, and the Crowned Maid [*Virgo redimita*] was in their midst.” A wonderful balsam flowed from her [cf. fig. 222] and she shone with a radiant face, adorned with the precious stone. But in her lap lay the green lion,[178] with blood flowing from his side [cf. fig. 242]. She was crowned with a diadem and was set as a star in the highest heaven. The king became a supreme victor triumphant, a great healer of the sick and a redeemer [*reformator*] of all sins.



222. The sea of renewal arising from virgin’s milk. Symbolic representation of the life. —giving power of the unconscious (= whale).—Stolcius de Stolcenberg, *Viridarium chymicum* (1624)

223. *Mortificatio*, or *nigredo* and *putrefactio*: Sol and Luna overcome by death after the *coniunctio*. —Mylius, *Philosophia reformata* (1622)

[492] So far the "Cantilena." Elsewhere Ripley writes:[179]

> Christ said: "I, if I be lifted up, will draw all men unto me."[180] From that time forward, when both parts, having been crucified and exanimated, are betrothed to one another, man and wife shall be buried together [fig. 223] and afterward quickened again by the spirit of life. Then must they be raised to heaven, so that body and soul may be there transfigured and enthroned on the clouds; then they will draw all bodies to their own high estate [fig. 224].

[493] If we realize that the author was no layman but a learned canon, we can hardly suppose him to have been unaware of the parallels with certain fundamental ideas of Christian dogma. It is never said outright that the stone is Christ, but the sacred figures can easily be recognized in the guise of the King and the Virgin-Mother. Ripley must have made a deliberate choice of these parallels without being conscious of any blasphemy. The Basel typographer, Conrad Waldkirch, would have rained fire and brimstone on his head. Ripley belonged to an age when God and his mysteries still dwelt in nature, when the mystery of redemption was at work on every level of existence, because unconscious happenings still lived in untroubled, paradisal participation with matter and could be experienced there.

224. Transfiguration of the body portrayed as the coronation of the Virgin Mary.
—Codex Germanicus 598 (1420)

[494] I came across a last outcropping of this medieval view of the world in my youth, in the form of the following tale. We had at that time a cook from the Swabian part of the Black Forest, on whom fell the duty of executing the victims from the poultry yard destined for the kitchen. We kept bantams, and bantam cocks are renowned for their singular quarrelsomeness and malice. One of these exceeded all others in savagery, and my mother commissioned the cook to dispatch the malefactor for the Sunday roast. I happened to come in just as she was bringing back the decapitated cock and saying to my mother: “He died like a Christian, although he was so wicked. He cried out, ‘Forgive me,

forgive me!’ before I cut off his head, so now he’ll go to heaven.” My mother answered indignantly: “What nonsense! Only human beings go to heaven.” The cook retorted in astonishment: “But of course there’s a chicken heaven for chickens just as there’s a human heaven for humans.” “But only people have an immortal soul and a religion,” said my mother, equally astonished. “No, that’s not so,” replied the cook. “Animals have souls too, and they all have their special heaven, dogs, cats, and horses, because when the Saviour of men came down to earth, the chicken saviour also came to the chickens, and that’s why they must repent of their sins before they die if they want to go to heaven.”

[495] The theology of our cook is a remnant of that folklore mentality which saw the drama of redemption going on at all levels and could therefore discover it even in the mysterious and incomprehensible transformations of matter.

[496] As to the details of the “Cantilena,” the sick king who was nevertheless born perfect is the man who suffers from spiritual sterility. In the vision of Arisleus the land is unfruitful because only like mates with like, instead of the opposites being united. The philosophers advise the king to join his son and daughter together and make the land fruitful again by means of a brother-sister incest (fig. 225). With Ripley it is a mother-son incest. Both forms are familiar to alchemy and constitute the prototype of the royal marriage (fig. 32). This endogamous mating is simply a variant of the Uroboros, which, because it is by nature hermaphroditic, completes the circle in itself. The king in Arisleus remarks that he is king because he has a son and a daughter, while his subjects have none on account of their sterility. The “gestation in the brain”[181] points to a psychic content, or more accurately to a psychic pair of opposites that can become creative of their own accord (fig. 226). But evidently the king has so far not allowed his children to propagate, by repressing or ignoring the manifestations of their vitality. It looks as though he had been unconscious of their existence and had only become aware of their significance on the advice of the philosophers. The blame for his sterility is to be sought in the projection of unconscious contents, which can neither develop nor find “redemption” until they are integrated with consciousness. The brother-sister pair stands for the unconscious or

for some essential content (fig. 227). A modern psychologist would therefore have advised the king to remember the existence of his unconscious and so put an end to his stagnation. As generally happens in such cases, an opposition, a painful conflict, thereupon comes to the surface, and it is easy to understand why the king preferred to remain unconscious of it. Since the conflict is never lacking in moral complications, it is, from this point of view, appropriately expressed in the morally obnoxious form of incest. In Ripley the mother-incest is disguised under the classical rite of adoption, but the mother becomes pregnant all the same. The vanishing of the king under his mother's robes corresponds to the total dissolution of Gabricus in the body of Beya in the second version of the "Visio Arislei."[182] The king represents the domineering conscious mind which, in the course of coming to terms with the unconscious, is swallowed up by it. This brings about the *nigredo* (cf. figs. 34, 137, 219), a state of darkness that eventually leads to the renewal and rebirth of the king.

225. The love-potion being handed to the brother-sister pair.—Maier, *Scrutinium chymicum* (1687)

226. *Coniunctio* of opposites in the Hermetic vessel or in water (= unconscious).—“Trésor des trésors” (MS., 17th cent.)

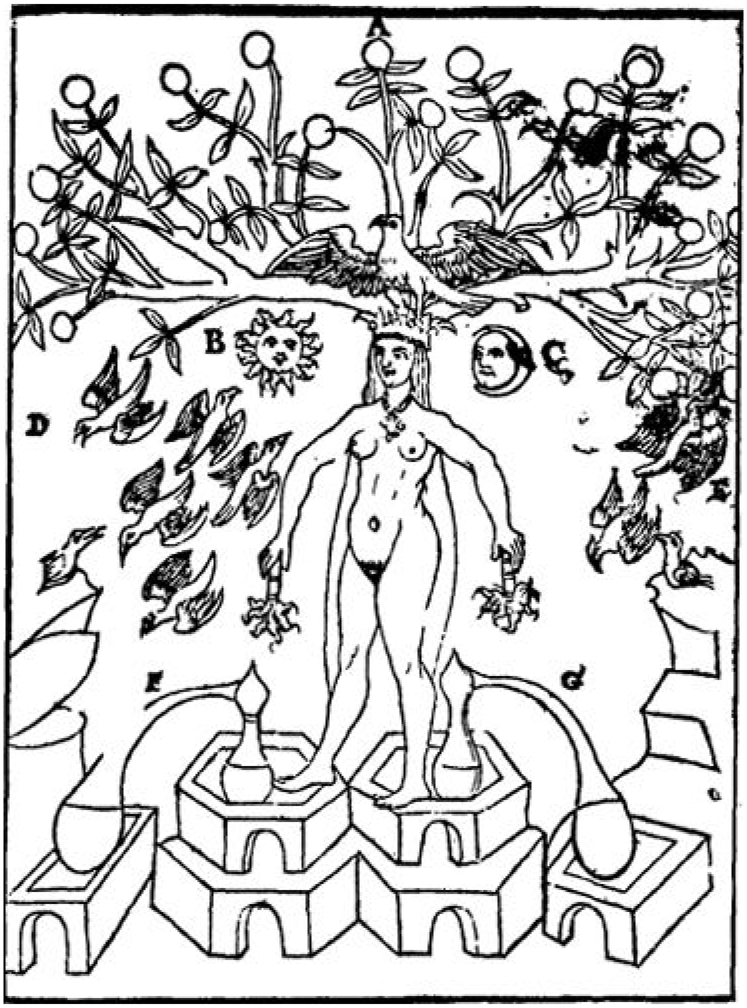
227. *Coniunctio* as a fantastic monstrosity.—Brant, *Hexastichon* (1503)

228. The plumed king who plucks out his feathers for food.—“Ripley Scrowle” (MS., 1588)

229. Eagle as symbol of the spirit ascending from the *prima materia.—Hermaphroditisches Sonn- und Mondskind* (1752)

[497] The strange idea of the king "nurtured under the wings of the sun" (fig. 228) may refer to the passage in Malachi (D.V., 4 : 2) which helped to put the early worship of Christ as Helios or Sol on a rational basis—a tendency that St. Augustine still had to combat: "But unto you that fear my name the Sun of justice shall arise, and health in his wings; and you shall go forth and shall leap like calves of the herd." The passage has always been understood as a Messianic prophecy, and was obviously known to Ripley. The "wings of the sun"[183] is a very ancient image, and one which must have touched the Hebrew Malachi very closely: for it is the Egyptian sun-symbol. He who is nourished by this sun is the son of God, i.e., the king.[184]

230. The peacock rising from the retort.—18th cent. MS.

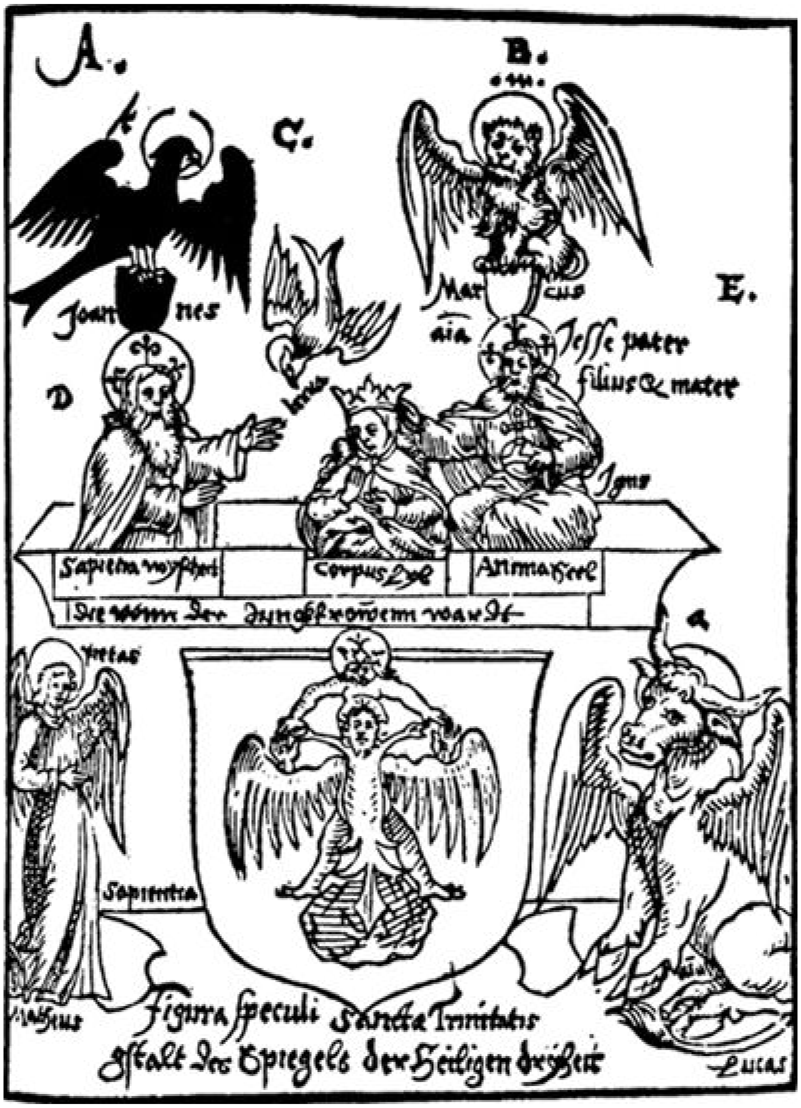


231. Mercurius as virgin (Pandora) and *arbor philosophica*.—Reusner, *Pandora* (1588)

[498] Just as in the vision of Arisleus the king’s dead son is brought back to life by the fruit of the philosophical tree, so in Ripley the sick king is to be healed by the “species”—obviously a *φάρμακον ζωῆς* or *elixir vitae*. The mother’s food during her pregnancy is blood and peacock’s flesh. The peacock is an early Christian symbol for the Redeemer, though it is doubtful whether Ripley knew this. But the peacock (figs. 111, 230) is second cousin to the phoenix,[185] a Christ symbol he must surely have known (see the figures in the “Ripley Scrowle”). The blood comes from the green lion that lies in the lap of the virgin, bleeding from a wound in his side;[186] these are clearly communion and Pietà symbols. The green lion is also one of the forms of Mercurius.[187]

[499] As the giver of new birth, the mother is identical with the tree. In the 1588 edition of *Pandora* the tree is shown as a naked virgin[188] wearing a crown (fig. 231). The *arbor philosophica* is a favourite symbol for the alchemical process, and when Ripley speaks of the “Crowned Maid” (*virgo redimita*) we at once recognize the *anima mundi*, the feminine half of Mercurius (fig. 208).

[500] The “Cantilena” ends with the apotheosis of the virgin-mother. This the above-mentioned *Pandora* depicts as a glorification of Mary, the *assumptio Beatae Mariae Virginis* (fig. 232). After her death, by a divine miracle her body was again united with her soul and both together were taken up to heaven. This has long been the view of the Church, although it has only recently been promulgated as a dogma. In fig. 232 she is marked with the words “terra” and “corpus Lyb” (body) and “die wonn der jung-frowenn wardt” (who became the joy of virgins); the dove descends upon her, and God the Father touches her with his right hand in benison. She is crowned. The figure of God holding the orb is inscribed “Anima Seel” and “Jesse pater, filius et mater.” “Mater” refers to the Queen of Heaven enthroned beside him, the King; for in her the earth substance, becoming transfigured in her resurrected body, is absorbed into the Godhead.[189] On the left is a bearded figure equal in rank to God the Father, inscribed “Sapientia Wyssheit.” In the shield below there is a picture of the rebis being freed from the *prima materia*. The whole has the form of a mandala, framed by the emblems of the evangelists. The inscription at the bottom of the picture reads: “Figura speculi Sanctae Trinitatis. Gstalt des Spiegels der Heiligen Dryheit” (Figure of the Mirror of the Holy Trinity).[190]



232. Glorification of the body portrayed as coronation of the Virgin Mary. Sapientia (*Hermes senex*) takes the place of the Son, and the Holy Ghost has a quite separate entity. Together they form a quaternity. Below, extraction of the spirit of Mercurius from the *prima materia.*
—*Speculum Trinitatis* from Reusner, *Pandora* (1588)

233. Christian quaternity: the Three and the One (Trinity and Mary).—French School (1457), detail

[501] Ripley portrays his king as victor, healer of the sick, and redeemer from sin. At the end of the *Rosarium* there is a picture of the Risen Christ with the inscription (fig. 234):

> After my many sufferings and great martyry
> I rise again transfigured, of all blemish free.

234. The Risen Christ as symbol of the *filius philosophorum.—Rosarium philosophorum* (1550)

h. The Epigoni

[502] By “Epigoni” I mean the authors of the seventeenth century, an age which saw the full flowering of alchemy but which also inaugurated its downfall by separating the *mystica* more and more clearly from the *physica*. The mystical and philosophical trend became ever more pronounced, while on the other hand chemistry proper began to mark itself off more distinctly. The age of science and technology was dawning, and the introspective attitude of the Middle Ages was fast approaching its decline. Religious and metaphysical values became less and less able to give adequate expression to the psychic experiences brought to light by the *opus alchymicum*. Only after the lapse of several

centuries did it fall to empirical psychology to throw new light on the obscure psychic content of Hermetic experiences.

[503] In the literature written at the close of the sixteenth and the beginning of the seventeenth centuries, mystical speculation, no doubt encouraged by humanism and the schism of the Church, began to emerge from behind the veil of the earlier esotericism, in so far as it was possible for the authors to express the inexpressible at all in words and images. But the pictorial symbolism they produced, much of it quite grotesque, not only made no contribution towards elucidating the arcanum but was largely responsible for devaluing it in the eyes of the profane, thus accelerating the decay of Hermetic wisdom. How much was lost to the spiritual heritage of Europe in this way we, with our sharpened psychological understanding, are just beginning to realize, as we contemplate the unparalleled disorganization of our continent. Happily the loss is not irreparable: *natura tamen usque recurret*.

[504] In what follows I should like to mention a few more *lapis*-Christ parallels drawn from this literature.

[505] In the treatise entitled "Liber de arte chymica,"[191] by an anonymous author,[192] there is a Mercurius-*lapis* parallel which I cannot pass over without mention, since it is an *aequiparatio* of Mercurius with the Virgin Mary:

> Give ear[193] to this profound parable: The ethereal heaven was closed to all men, so that they descended into hell and remained imprisoned there forever. But Christ Jesus unlocked the gate of the ethereal Olympus, and threw open the realm of Pluto, that the souls might be freed, when the Virgin Mary, with the cooperation of the Holy Ghost in an unutterable mystery and most profound sacrament, conceived in her virginal womb that which was most sublime in heaven and on earth, and finally bore for us the Saviour of the whole world, who by his overflowing goodness shall save all those who are lost in their sins, if only the sinner will often turn to him. But the Virgin remained incorrupt and inviolate; wherefore it is not without good reason that Mercurius is made equal [*non immerito … aequiparatur*] to the most glorious and worshipful Virgin Mary. For

> Mercurius is virginal, because he has never increased any kind of metallic body in the bowels of the earth, and yet has generated the stone for us by means of the solution of “heaven”; that is to say, he opens the gold and leads out the soul, which you must understand as a divinity [*divinitatem*]; and for a little while he carries it in his belly and in his own time he changes it into a purified body, whence there shall come to us the boy [*puer*], the *lapis*, by whose blood the lower bodies are tinctured [*tincta*], and taken back whole to the golden heaven.[194]

[506] As the *anima mundi*, Mercurius can in fact be compared with the Gnostic *παρθένος τοῡ φωός* (virgin of light) and with the Christian Virgin Mary (figs. 8, 105, 107, 164, 165, 208)—or even, as the text asserts, made her “equal,” though note that I am only giving the opinion of our anonymous author. The “puer” would then be the *filius macrocosmi* (figs. 64, 192, 214, 234) and as such an analogy of Christ. The author too draws this conclusion, for he compares the corporeal nature of Christ with the effects of the stone:

> In Christ’s body, because he committed no sin, and on account also of the miraculous union of the divine essence, there was such a great affinity [*affinitas*] of the elements and such an alliance thereof [*colligatio*] that he would never have died, had he not sought death of his own free will, in order to redeem mankind for whose sake he was born.[195]

[507] In the stone, as we know, the chaotic antagonism of the elements is replaced by the most intense mutual alliance, which is what makes the stone incorruptible, this being the reason why, in our author’s opinion, it has the same effect as the blood of the Saviour: “sanitas atque vita diuturna in foelicitate, propter quam praecipue lapis noster est petendus” (health and long life in felicity, on account of which our stone is chiefly to be sought).[196]

[508] To the doubtful authors also belongs the much-quoted Basilius Valentinus, a pseudonymous writer who is supposed to have lived at the beginning of the fifteenth century.[197] Johann Thölde (*c*. 1600), of Frankenhausen in Thuringia, is sometimes considered as the possible author of the so-called Valentinus texts, which began to appear in 1602.

One of the earliest references to them is to be found in Michael Maier's *Symbola aureae mensae* (1617). Maier is exceedingly uncertain as to the authorship of these writings: "Obscurus omnibus manere quam innotescere maluit" (Rather than become notorious he preferred to remain unknown to everyone). Stylistically, the writings undoubtedly belong to the end of the sixteenth century at the earliest. The author is strongly influenced by Paracelsus and has taken over his idea of the Archaeus as well as his doctrines about astral and elemental spirits.[198] In the complete edition of 1700, now lying before me, there is an "Allegoria sanctissimae trinitatis et lapidis philosophici," from which I extract the following:

> Therefore *Mercurius philosophorum* is to be considered a spiritual body, as the philosophers call him. From God the Father was born his own Son Jesus Christ, who is God and man, and is without sin, and who also had no need to die. But he died of his own free will, and rose again for the sake of his brothers and sisters, that they might live with him without sin for ever. So, too, is the gold without flaw, and is fixed, potent to withstand all examinations, and glorious; yet, for the sake of its imperfect and sick brothers and sisters, it dies and rises again, glorious and redeemed, and tinctures them to eternal life, making them perfect like to pure gold.
>
> The third person of the Trinity is God the Holy Ghost, a comforter sent by our Lord Jesus Christ to his faithful Christians to strengthen and console them in the faith until eternal life. Therefor the *Spiritus Solis* is likewise *materialis* or *Mercurius corporis*. When they come together, he is called *Mercurius duplicatus;* that is, the two spirits, God the Father and God the Holy Ghost: but God the Son is the *homo glorificatus,* like our glorified and fixed gold, the *lapis philosophorum;* wherefore this *lapis* is also called *trinus:* namely *ex duabus aquis vel spiritibus, minerali & vegetabili*, and from the animal *sulphure Solis*.[199]

[509] In the year 1619, there appeared an alchemical book of devotions entitled *Wasserstein der Weysen*. On page 67, the anonymous author says that he will now set forth how the rejected cornerstone (*lapis angularis* = Christ) "accords and is in exceeding subtle and artful agreement with the

terrestrial and corporeal Philosophical Stone," from which it will be seen "how that the terrestrial Philosophical Stone is a veritable Harmonia, Contrafactur, and Prototype of the true spiritual and heavenly Stone Jesu Christ." The demonstration occupies close on fifty pages. The book made a great stir, and even Jakob Böhme is to be counted among its admirers. Kopp, who mentions the book,[200] is scandalized by the blasphemous mixture of alchemical ideas—which make use of highly obnoxious symbols—and religion. We should not, however, judge medieval naïveté too severely, but must try to understand what such an unwieldy language was intended to convey.

[510] The *lapis*-Christ parallel plays an important role in Jakob Böhme (1575–1624), but I do not want to go into this here. A characteristic passage is to be found in *De signatura rerum.*[201]

[511] It is clear enough from this material what the ultimate aim of alchemy really was: it was trying to produce a *corpus subtile*, a transfigured and resurrected body, i.e., a body that was at the same time spirit.[202] In this it finds common ground with Chinese alchemy, as we have learned from *The Secret of the Golden Flower*. There the main concern is the "diamond body," in other words, the attainment of immortality through the transformation of the body. The diamond is an excellent symbol because it is hard, fiery, and translucent. Orthelius[203] tells us that the philosophers have never found a better medicament than that which they called the noble and blessed stone of the philosophers, on account of its hardness, transparency, and rubeous hue.

[512] This same Orthelius also wrote at length on the "theology" of the *lapis*. Since he is later than Böhme I mention him here only because of his preoccupation with the spirit embedded in matter:

> There are said to be two treasures: one is the written word and the other is the word become fact [*verbum factum*]. In the *verbum scriptum* Christ is still in swaddling clothes in his cradle [*in cunis suis involutus];* but in the *verbum dictum et factum* the word is incarnate in God's creatures, and there, in a manner of speaking, we may touch it with our hands. From them we must raise up our treasure, for the word is nothing

other than the fire, the life, and the spirit which the Holy Trinity did scatter abroad from the beginning of creation, and which brooded [*incubavit*] on the face of the waters, and which was breathed into [*inspiratus*] all things by the word of God, and embodied in them, as it is written: “The spirit of God filled the whole world.” Some have expressed the opinion that this world spirit [*spiritus mundi*] was the third person of the Godhead; but they have not considered the word “Elohim,” which, being plural, extends to *all* persons of the Trinity. They say this spirit proceeded from thence and was by it created, that it became corporeal, and is the chief constituent of the Saviour [*salvatoris*] or Philosophical Stone, and is the true medium whereby body and soul are held united during our life [fig. 235].

235. Alchemical quaternity: the Three and the One (body and female principle).—*Rosarium philosophorum* (1550)

The *spiritus mundi*, that lay upon the waters of old, impregnated them and hatched a seed within them, like a hen upon the egg. It is the virtue that dwells in the inward parts of the earth, and especially in the metals; and it is the task of the art to separate the Archaeus,[204] the *spiritus mundi*, from matter, and to produce a quintessence whose action may be compared with that of Christ upon mankind.

[513] Once more the Gnostic vision of Nous entangled in the embrace of Physis flashes forth in the work of this latecomer to alchemy. But the philosopher who once descended like a Hercules into the darkness of Acheron to fulfil a divine *opus* has become a laboratory worker with a taste for speculation; having lost sight of the lofty goal of Hermetic mysticism, he now labours to discover a tonic potion that will “keep body and soul together,” as our grandfathers used to say of a good wine. This change of direction in alchemy was due to the all-powerful influence of Paracelsus, the father of modern medicine. Orthelius is already tending towards natural science, leaving mystical experience to the Church.

[514] Paracelsus and Böhme between them split alchemy into natural science and Protestant mysticism. The stone returned to its former condition: *vilis vilissimus*, the vilest of the vile, *in via eiectus*, thrown out into the street, like Spitteler’s jewel. Morienus[205] could say again today: “Take that which is trodden underfoot in the dunghill, for if thou dost not, thou wilt fall on thine head when thou wouldst climb without steps”—meaning that if a man refuses to accept what he has spurned, it will recoil upon him the moment he wants to go higher.

[515] The *lapis*-Christ parallel recurs all through the last days of alchemy in the seventeenth century, but only in epigonic form. This was the age that saw the rise of the secret societies, above all the Rosicrucians—the best proof that the secret of alchemy had worn itself out. For the whole *raison d’être* of a secret society is to guard a secret that has lost its vitality and can only be kept alive as an outward form. Michael Maier allows us a glimpse into this tragedy: at the end of his chef-d’œuvre he confesses that in the course of his grand *peregrinatio* he found neither

Mercurius nor the phoenix, but only a feather—his pen! This is a delicate hint at his realization that the great adventure had led to nothing beyond his copious literary achievements, whose merits would no doubt have gone unremembered had it depended solely on the spirit of the next three centuries. But, although the growing materialism of the age dismissed alchemy as a huge disappointment and an absurd aberration, there is yet "quaedam substantia in Mercurio quae nunquam moritur"—a fascination that never entirely disappeared, even when wrapped in the fool's garb of goldmaking.

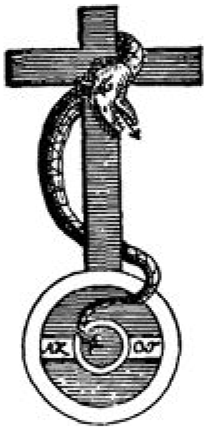
6. ALCHEMICAL SYMBOLISM IN THE HISTORY OF RELIGION

I. THE UNCONSCIOUS AS THE MATRIX OF SYMBOLS

[516] After chemistry in the real sense had broken away from the groping experiments and speculations of the royal art, only the symbolism was left as a sort of phantasmal mist, seemingly devoid of all substance. Yet it never lost a certain fascinating quality, and there was always somebody who felt its enchantment in greater or lesser degree. A symbolism as rich as that of alchemy invariably owes its existence to some adequate cause, never to mere whim or play of fancy. At the very least it is the expression of an essential part of the psyche. This psyche, however, was unknown, for it is rightly called the unconscious. Although there is, materialistically speaking, no *prima materia* at the root of everything that exists, yet nothing that exists could be discerned were there no discerning psyche. Only by virtue of psychic existence do we have any "being" at all. Consciousness grasps only a fraction of its own nature, because it is the product of a preconscious psychic life which made the development of consciousness possible in the first place. Consciousness always succumbs to the delusion that it developed out of itself, but scientific knowledge is well aware that all consciousness rests on unconscious premises, in other words on a sort of unknown *prima materia;* and of this the alchemists said everything that we could possibly say about the unconscious. For instance, the *prima materia* comes from the mountain in which there are no differences,[1] or as Abu'l Qāsim says, it is "derived from one thing, and not from separate things, nor from things distinguishing or distinguished."[2] And in the *mysterium magnum* of Paracelsus, which is the same as the *prima materia*, "there is no kind of gender."[3] Or the *prima materia* is found in the mountain where, as Abu'l Qãsim also says, everything is upside down: "And the top of this rock is confused with its base, and its nearest part reaches to its farthest, and its head is in the place of its back, and vice versa."[4]

[517] Such statements are intuitions about the paradoxical nature of the unconscious, and the only place where intuitions of this kind could be lodged was in the unknown aspect of things, be it of matter or of man. There was a feeling, often expressed in the literature, that the secret was to be found either in some strange creature or in man’s brain.[5] The *prima materia* was thought of as an ever-changing substance, or else as the essence or soul of that substance. It was designated with the name “Mercurius,” and was conceived as a paradoxical double being called *monstrum, hermaphroditus,* or *rebis* (cf. figs. 125, 199). The lapis-Christ parallel establishes an analogy between the transforming substance and Christ (fig. 192), in the Middle Ages doubtless under the influence of the doctrine of transubstantiation, though in earlier times the Gnostic tradition of older pagan ideas was the dominant factor. Mercurius is likened to the serpent hung on the cross (John 3 : 14) (figs. 217, 238), to mention only one of the numerous parallels.



238. The brazen serpent of Moses on the cross: *serpens mercurialis* (cf. fig. 217).—Eleazar, *Uraltes chymisches Werk* (1760)

II. THE PARADIGM OF THE UNICORN

a. The Unicorn in Alchemy

[518] I have chosen the example of the unicorn in order to show how the symbolism of Mercurius is intermingled with the traditions of pagan Gnosticism and of the Church. The unicorn is not a single, clearly defined entity but a fabulous being with a great many variations: there are, for instance, one-horned horses, asses, fish, dragons, scarabs, etc. Therefore, strictly speaking, we are more concerned with the theme of the single horn (the alicorn). In the *Chymical Wedding* of Rosencreutz, a snow-white unicorn appears and makes his obeisance before the lion. Lion and unicorn are both symbols of Mercurius. A little further on in the book the unicorn gives place to a white dove,[6] another symbol of Mercurius, who, in his volatile form of *spiritus*, is a parallel of the Holy Ghost. At least ten out of the fifteen figures in Lambspringk's symbols[7] are representations of the dual nature of Mercurius. Figure III shows the

unicorn facing a stag (fig. 240). The latter, as *cervus fugitivus*, is also a symbol of Mercurius.[8] Mylius[9] illustrates the *opus* by a series of seven symbols, of which the sixth is the unicorn couched under a tree, symbolizing the spirit of life that leads the way to resurrection (cf. fig. 188). Penotus[10] gives a table of symbols where the unicorn, together with the lion, the eagle, and the dragon, is the co-ordinate of gold. The *aurum non vulgi*, like the lion,[11] eagle, and dragon,[12] is a synonym for Mercurius. The poem entitled “Von der Materi und Prattick des Steins”[13] says:

240. Stag and unicorn, symbolizing soul and spirit.—Lambspringk, “Figurae et emblemata,” in *Musaeum hermeticum* (1625 edn.)

> I am the right true Unicorn.
> What man can cleave me hoof from horn
> And join my body up again
> So that it no more falls in twain?

[519] Here I must refer once again to Ripley, where we meet the "green lion lying in the queen's lap with blood flowing from his side." This image is an allusion on the one hand to the Pieta, on the other to the unicorn wounded by the hunter and caught in the lap of a virgin (figs. 241, 242), a frequent theme in medieval pictures. True, the green lion has replaced the unicorn here, but that did not present any difficulty to the alchemist since the lion is likewise a symbol of Mercurius. The virgin represents his passive, feminine aspect, while the unicorn or the lion illustrates the wild, rampant, masculine, penetrating force of the *spiritus mercurialis*. Since the symbol of the unicorn as an allegory of Christ and of the Holy Ghost was current all through the Middle Ages, the connection between them was certainly known to the alchemists, so that there can be no question that Ripley had in his mind, when he used this symbol, the affinity, indeed the identity, of Mercurius with Christ.

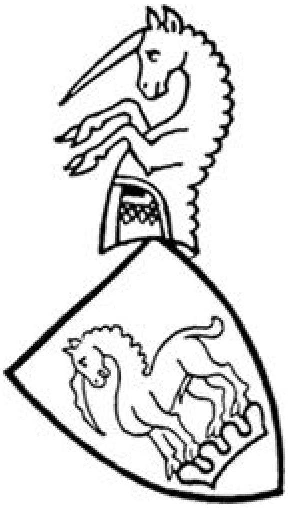
242. Slaying the unicorn in the Virgin’s lap. (Note the significance of the “wound in his side.”)—Initial from MS. Harley 4751, London

b. The Unicorn in Ecclesiastical Allegory

[520] The language of the Church borrows its unicorn allegories from the Psalms, where the unicorn stands in the first place for the might of the Lord, as in Psalm 29 : 6: “He maketh them also to skip like a calf; Lebanon and Sirion like a young unicorn”[14]; and in the second place for the vitality of man (figs. 243, 244), as in Psalm 92 : 10: “But my horn shalt thou exalt like the horn of an unicorn. …”[15] The power of evil is also compared to the strength of the unicorn, as in Psalm 22 : 21: “Save me from the lion’s mouth: for thou hast heard me from the horns of the unicorns.”[16] On these metaphors is based Tertullian’s allusion to Christ: “His glory is that of a bull, his horn is that of a unicorn.”[17] This refers to the blessing of Moses (Deut. 33 : 13, 14, 17):



243. Unicorn crest of the von Gachnang family (Thurgau, Switzerland).—From the Zurich Roll of Arms (1340)

> … Blessed of the Lord be his land, for the precious things of heaven, for the dew, and for the deep that coucheth beneath,
>
> And for the precious fruits brought forth by the sun, and for the precious things put forth by the moon, …
>
> His glory is like the firstling of his bullock, and his horns are like the horns of unicorns: with them he shall push the people together to the ends of the earth.…

[521] From this it is clear that the horn of the unicorn signifies the health, strength, and happiness of the blessed. “Thus,” says Tertullian, “Christ was named the bull on account of two qualities: the one hard [*ferus*, ‘wild, untamed’] as a judge, the other gentle [*mansuetus*, ‘tame’] as a saviour. His horns are the ends of the cross. …” Justin Martyr[18] interprets the same passage in a similar way: “*Cornua unicornis cornu eius*. For no one can say or prove that the horns of the unicorn could be found in any other object or in any other shape than in that represented by the cross.” For the might of God is manifest in Christ. Accordingly Priscillian calls God one-horned: “One-horned is God, Christ a rock to us, Jesus a cornerstone, Christ the man of men.”[19] Just as the unicorn symbolizes the uniqueness of the Unigenitus, so St. Nilus uses it to express the fearless independence of the καλόγηρος the monk: Μονόκερώς ἐστιν οὗτος, ζῶον αὐτόνομον (he is a unicorn, a creature on his own).[20]

244. The glorification of Ariosto. (The horse’s forelock is twisted into a stiff plait to make it look like the horn of the unicorn.)—Drawing by Giovanni Battista Benvenuti, called Ortolano (1488–?1525)

245. The Virgin Mary with the loving unicorn in the “enclosed garden.”—Swiss tapestry (1480)

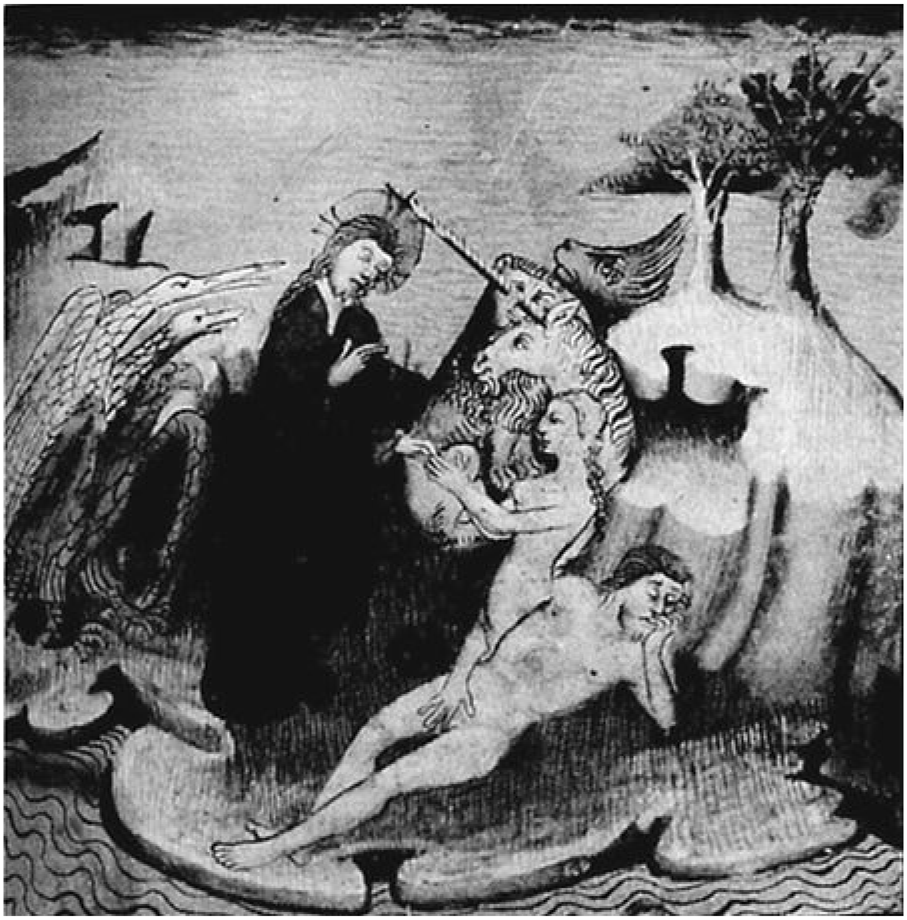
[522] St. Basil takes the *filius unicornium* to be Christ. The origin of the unicorn is a mystery, says St. Ambrose, like Christ’s procreation. Nicolas Caussin, from whom I have culled these extracts, observes that the unicorn is a fitting symbol for the God of the Old Testament, because in his wrath he reduced the world to confusion like an angry rhinoceros (unicorn) until, made captive by love, he was soothed in the lap of a virgin.[21] This ecclesiastical train of thought has its parallel in the alchemical taming of the lion and the dragon (fig. 246). Concerning the conversion of the Old Testament Jehovah into the God of Love in the New Testament, Picinelli says: “Of a truth God, terrible beyond measure, appeared before the world peaceful and wholly tamed after dwelling in the womb of the most blessed Virgin. St. Bonaventure said: Christ was tamed and pacified by the most kindly Mary, so that he should not punish the sinner with eternal death.”[22]

246. Mandala with four ornamental medallions containing a stag, lion, griffin, and unicorn.—Pavement from St. Urban’s Monastery, Lucerne

247. Virgin with unicorn.—Khludov Psalter (Byzantine, 9th cent.)

[523] In his *Speculum de mysteriis ecclesiae,* Honorius of Autun says:

> The very fierce animal with only one horn is called unicorn. In order to catch it, a virgin is put in a field; the animal then comes to her and is caught, because it lies down in her lap. Christ is represented by this animal, and his insuperable strength[23] by its horn. He, who lay down in the womb of the Virgin, has been caught by the hunters; that is to say, he was found in human shape by those who loved him[24] [fig. 247].



248. The creation of Eve, prefiguring the story of salvation: hence the presence of the unicorn. —“Trésor de sapience” (MS., 15th cent.)

[524] St. Rupert[25] compares Christ to the rhinoceros, and Bruno of Würzburg[26] simply calls him *cornu* (horn). Caussin writes that Albertus Magnus, in his “Hypotyposes,” mentions the Virgin in connection with the monoceros. Albertus was an expert on alchemy and drew his quotations from the Hermetic treatises. In the “Tabula smaragdina” there is a “son” of immense strength who comes down to earth and penetrates everything solid. It is not only in astrology that Virgo is an earth-sign: in Tertullian and Augustine the Virgin actually signifies earth (fig. 248). Isidore of Seville emphasizes the “perforating” effects of the unicorn.[27] In the “Tabula” the mother-son incest is very thinly disguised,[28] a fact of which the alchemist Albertus was possibly aware.

249. Wild unicorn.—From Bock, *Kräuterbuch* (1595)

[525] As I said before, the unicorn has more than one meaning. It can also mean evil. The *Physiologus Graecus,*[29] for instance, says of the unicorn that “it is a swift-running animal, having one horn, and evilly disposed towards man” (μνησίκακον δέ ὑπάρχει ἐν ἀνθρώποις). And St. Basil says: “And take heed unto thyself, 0 man, and beware of the unicorn, who is the Demon [fig. 249]. For he plotteth evil against man, and he is cunning in evil-doing.”

[526] These examples should suffice to show how close is the connection between alchemical symbolism and the language of the Church. It is to be noted in the ecclesiastical quotations that the unicorn also contains the element of evil (fig. 250). Originally a monstrous and fabulous beast, it

harbours in itself an inner contradiction, a *complexio oppositorum*, which makes it a singularly appropriate symbol for the *monstrum hermaphroditum* of alchemy.[30]

250. Wild man riding the unicorn.—Engraving from the sequence of the *Grösseres Kartenspiel*, by the monogrammist E.S. (*c*. 1463)

c. The Unicorn in Gnosticism

[527] There is also a connection between the language of the Church and pagan Gnostic symbolism. Hippolytus, giving an account of the doctrine of the Naassenes, says that the serpent dwells in all things and creatures, and that all temples were named after her (ναόὐς ἀπὸ τοῡ νάας: a play on the words νάας = serpent, ναός = temple). Every shrine, he says, every

initiation (ηελετή), and every mystery is dedicated to the serpent. This immediately recalls the passage in the “Tabula smaragdina”: “Pater omnis telesmi totius mundi est hic” (This is the father of the perfection of the whole world). Τέλος, τελετή, and τελεσμός all mean the same: perfection and maturation of the *corpora imperfecta*, and of the alchemist himself.[31]

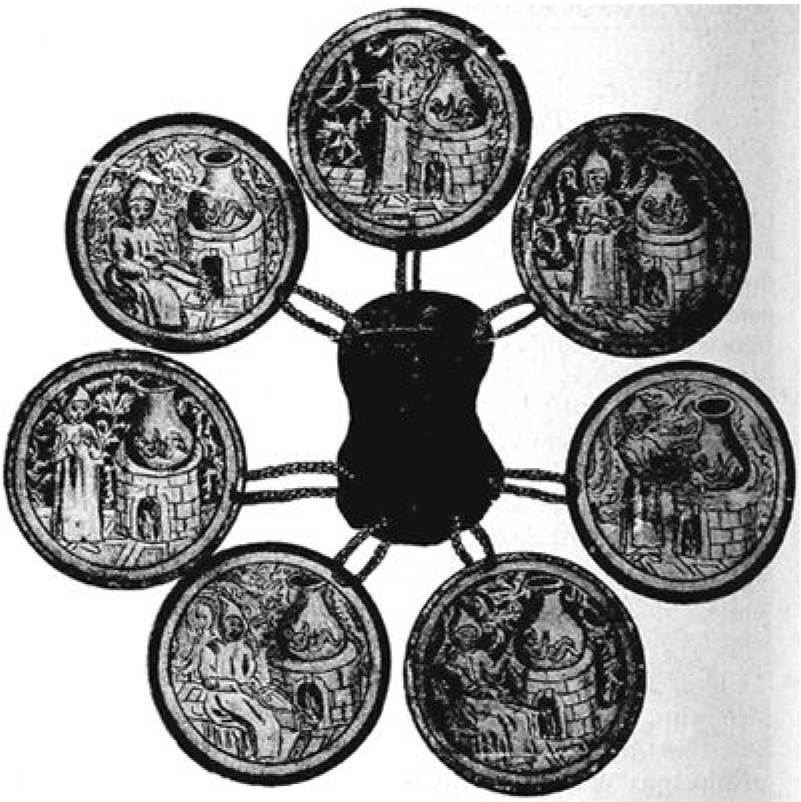
> These [Naassenes] say that the serpent is the moist element, as Thales of Miletus also said,[32] and that nothing which exists, whether immortal or mortal, animate or inanimate, could exist without it.

[528] This definition of the serpent agrees with the alchemical Mercurius, who is likewise a kind of water: the “divine water” (ὕδωρ θεῖον), the wet, the *humidum radicale* (radical moisture), and the spirit of life, not only indwelling in all living things, but immanent in everything that exists, as the world-soul. Hippolytus continues:

> They say, too, that all things are subject to her [the serpent], that she is good and has something of everything in herself as in the horn of the one-horned bull [ἐν κέρατι ταύρου μονοκέρωτος]. She imparts beauty and ripeness to all things.…

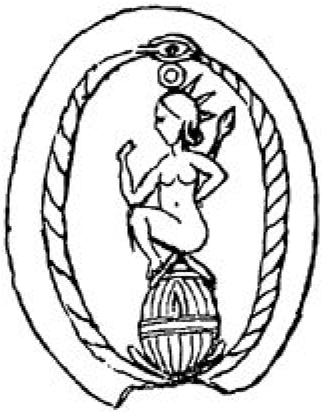
[529] Like the alicorn, therefore, the serpent is an alexipharmic and the principle that brings all things to maturity and perfection. We are already familiar with the unicorn as a symbol of Mercurius, the transforming substance par excellence which also ripens and perfects unripe or imperfect bodies and is consequently acclaimed in alchemy as the *salvator* and *servator*. “The serpent,” says Hippolytus, “penetrates everything, as if coming forth from Edem and dividing herself into the four first principles.”[33] That everything proceeds from the One is a fundamental tenet of alchemy (fig. 251): “As all things proceed from the One … so all things are born of this one thing,” says the “Tabula smaragdina”; and also that the One divides into the four elements (fig. 252) and then recombines into unity. The *prima materia* is called among other things the “paradisal earth” which Adam took with him on his expulsion from Paradise. *Mercurius philosophorum* consists of the four elements (cf. fig. 214). In one of the Mystery hymns quoted by

Hippolytus, Osiris is named the “heavenly horn of the moon” (ἐπουράνιον μηνὸς κέρας), and the same primal being is also called Sophia and Adam.[34] These analogies we already know in their alchemical aspect. Another one mentioned by Hippolytus is the “many-formed Attis.” The changeability and multiformity of Mercurius is a key idea in alchemy. It is hardly necessary to enter into the ideas which this pagan system took over from Christianity; comparison with the Christian quotations should suffice.



251. The seven stages of the alchemical process shown as a unity.—“Ripley Scrowle” (MS., 1588)

252. Chastity.—“Les Triomphes du Pétrarche” (MS., 16th cent.)



253. Harpokrates encircled by the Uroboros.—Gnostic gem

d. The One-Horned Scarabaeus

[530] An important source of information concerning the unicorn symbolism of Mercurius is the *Hieroglyphica* of Horapollo (ch. 10). This author says that the third genus of the scarab is unicorned (μονόκερως) and, on account of this peculiarity, sacred to Mercurius, like the ibis. Moreover the scarab is a μονογενής (only-begotten, *unigena*) in so far as it is an αὐτογενὲς ζῶον (a creature born of itself). In Paracelsus the *prima materia* is an *increatum*, and throughout alchemy, as Mercurius, *serpens*, or *draco*, it is bisexual, capable of self-fertilization and self-parturition (fig. 253). The *unicus filius* is the *filius philosophorum*, i.e., the stone. The scarab undergoes the same dismemberment as the dragon, the "separation of the elements," in a papyrus text: "The sun-beetle, the winged ruler standing at heaven's meridian, was beheaded and dismembered."[35] I would also mention the "sixth parable" in "Splendor solis,"[36] where the *separatio* is portrayed as a dismembered corpse, accompanied by the text: "Rosinus[37] says that he would like to make plain a vision that he has seen of a man who was dead, whose body was yet all white like a salt, and whose limbs were divided, and his head was of fine gold but separated from the body. …"[38] The golden head referred originally to the head of Osiris who is described in a Greek papyrus as "headless."[39] The Greek alchemists styled themselves "Children of the Golden Head."[40]

[531] The scarab is seldom mentioned in alchemical literature, but among the old texts it can be found in the "Consilium coniugii": "Nulla aqua fit quelles, nisi illa que fit de scarabaeis aquae nostrae"[41] (No water will become the elixir save that which comes from the scarabs of our water). The *aqua nostra* is nothing other than the *aqua divina*, i.e., Mercurius.

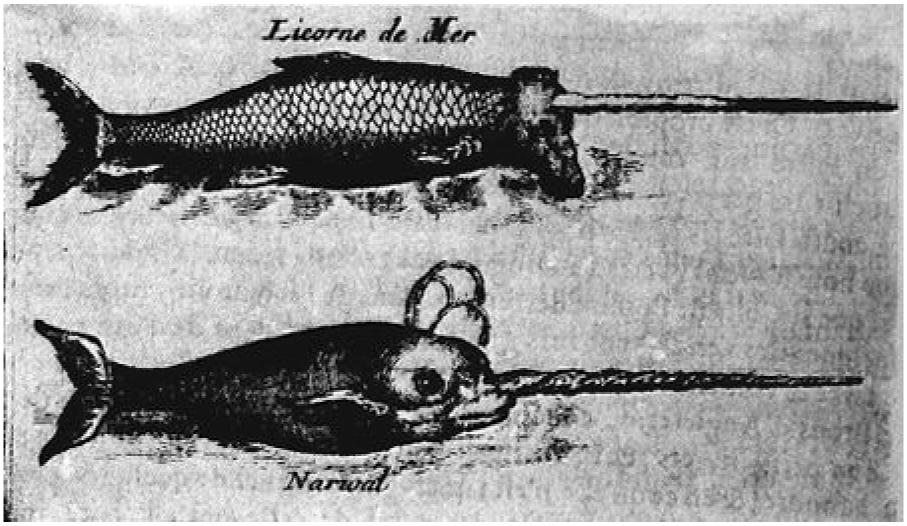
e. The Unicorn in the Vedas

[532] The track of the unicorn in pre-Christian days leads us to the East.[42] We meet it as early as the hymns of the Atharva-Veda (III, 7) in a "charm against *kshetriya*, hereditary disease":[43]

1. Upon the head of the nimble antelope a remedy grows! He has driven the *kshetriya* in all directions by means of the horn.

2. The antelope has gone after thee with his four feet. O horn, loosen the *kshetriya* that is knitted into his heart!

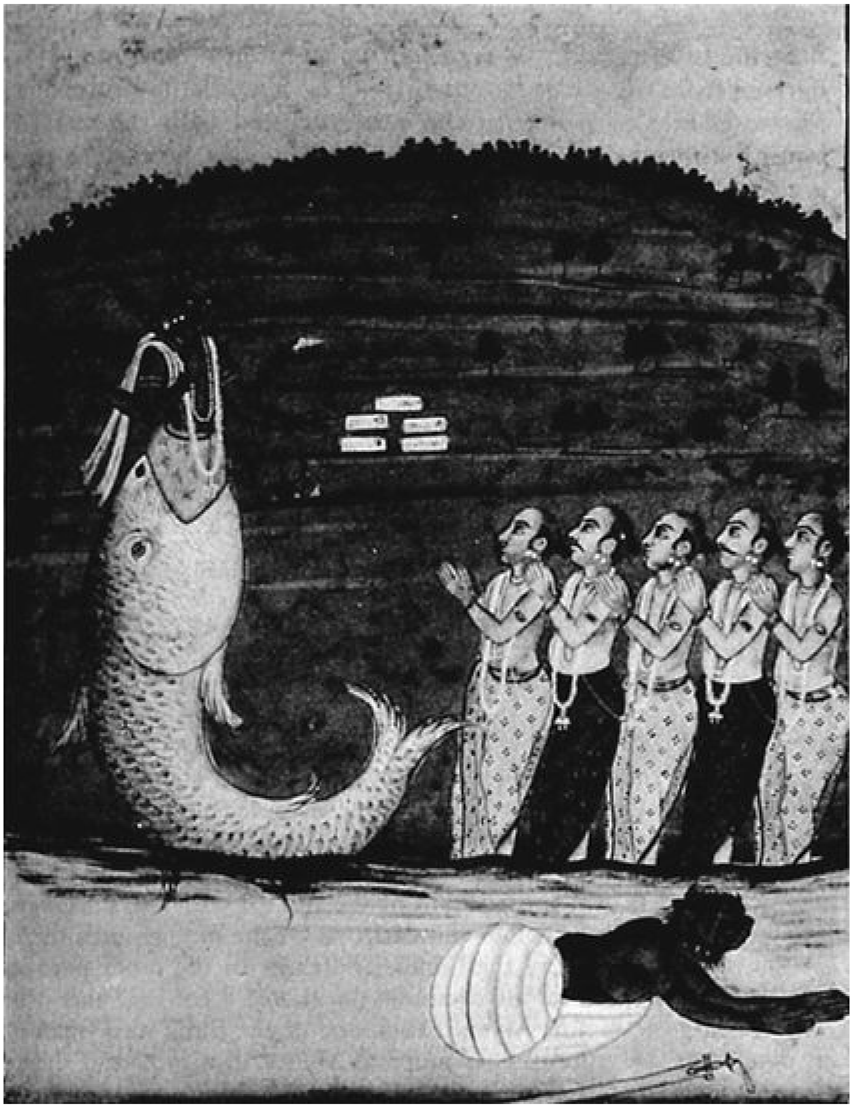
3. (The horn) that glistens yonder like a roof with four wings (sides), with that do we drive out every *kshetriya* from thy limbs.



254. The so-called sea-unicorn (*monodon, monoceros*). Its tusk was used as a model in old pictures of the unicorn.—Pommet, *Histoire gènèrale des drogues* (1694)

[533] The fish of Manu (cf. fig. 254) seems to have been unicorned, although this is not specifically stated: but always its horn is mentioned, never its horns. According to the legend recounted in the Shatapatha-Brahmana,[44] Manu hooked a fish which grew larger and larger and eventually towed him over the flood to dry land. Manu tied his ship to its horn.[45] The fish is an incarnation of Vishnu (fig. 255), and Manu means "man."[46] In many respects he corresponds to the Greek Anthropos: he is the father of humanity and is descended direct from God, here called Svayambhu, the "Self-So," i.e., Brahma. He is a God-man, identified with Prajapati, Lord of created things, and even with Brahman itself, the highest soul. In the Rig-Veda he is named Father Manu, and is said to have begotten mankind on his daughter. He is the founder of the social and moral order,[47] the first sacrificiant and priest.[48] He transmitted the Upanishadic doctrine to mankind.[49] It is of particular interest that he is also derived from the androgynous Viraj. The Shatapatha-Brahmana associates him with a bull who was entrusted with the task of annihilating the Asuras and Rakshas (demons hostile to the gods).[50] Lastly, Manu is

the father of medicine,[51] and, in Buddhist tradition, Lord of the Golden Age.[52] The horn, then, is connected with a figure which, in both name and character, has close affinities with the Anthropos.



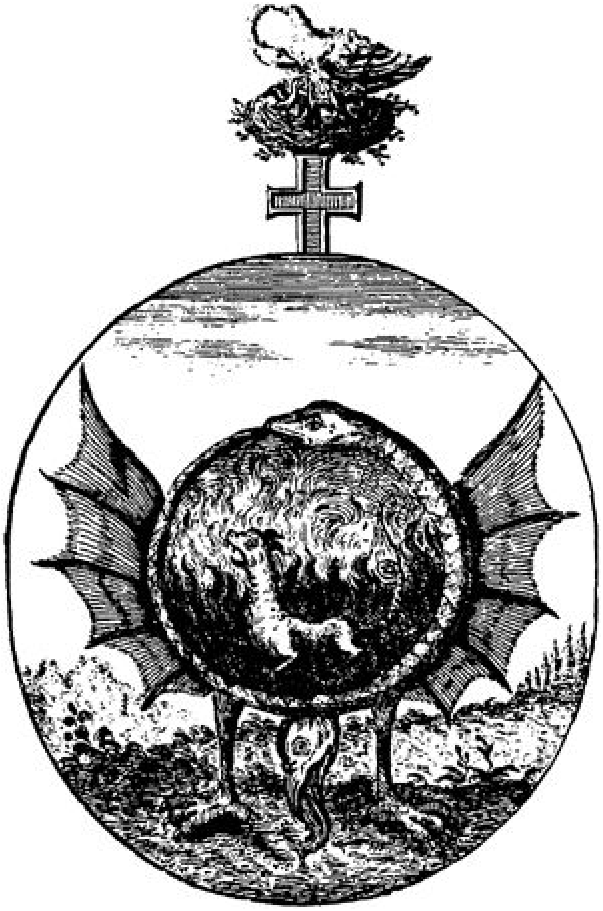
255. Vishnu in his fish incarnation.—18th-cent. Indian miniature

[534] The virgin and unicorn motif is to be found in the Ramayana and in the Mahabharata (III, 110–113). A hermit by name of Rishyashringa (gazelle's horn), son of Vibhandaka or Ekasringa (one-horn), is fetched out of his solitary retreat by the king's daughter Shanta, who marries him; or, in another version, he is seduced by a courtesan. Only by this means can the terrible drought that is scourging the land be broken.[53]

f. The Unicorn in Persia

[535] There is an impressive account of the unicorn in the Bundahish (Ch. XIX):

> Regarding the three-legged ass, they say that it stands amid the wide-formed ocean, and its feet are three, eyes six, mouths nine, ears two, and horn one, body white, food spiritual, and it is righteous. And two of its six eyes are in the position of eyes, two on the top of the head, and two in the position of the hump; with the sharpness of those six eyes it overcomes and destroys. Of the nine mouths three are in the head, three in the hump, and three in the inner part of the flanks; and each mouth is about the size of a cottage, and it is itself as large as Mount Alvand. Each one of the three feet, when it is placed on the ground, is as much as a flock of a thousand sheep comes under when they repose together; and each pastern is so great in its circuit that a thousand men with a thousand horses may pass inside. As for the two ears, it is Mazendaran which they will encompass. The one horn is as it were of gold and hollow, and a thousand branch horns have grown upon it, some befitting a camel, some befitting a horse, some befitting an ox, some befitting an ass, both great and small. With that horn it will vanquish and dissipate all the vile corruption due to the efforts of noxious creatures.



256. Fabulous monster containing the *massa confusa*, from which rises the pelican (symbol of Christ and the *lapis*).—*Hermaphroditisches Sonn- und Mondskind* (1752)

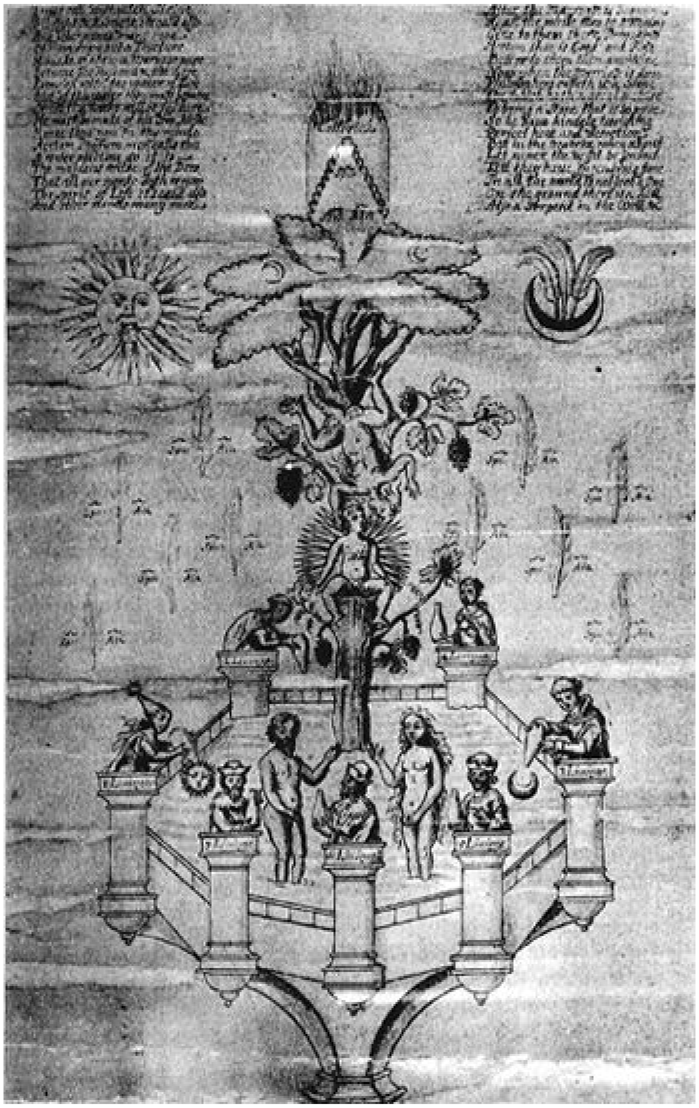
When that ass shall hold its neck in the ocean its ears will terrify, and all the water of the wide-formed ocean will shake with agitation, and the side of Ganavad will tremble. When it utters a cry all the female water-creatures, of the creatures of Auharmazd, will become pregnant; and all pregnant noxious water-creatures, when they hear that cry, will cast their young. When it stales in the ocean all the sea-water will become purified, which is in the seven regions of the earth—it is even on that account when all asses which come into water stale in the water—as it says thus: “If, O three-legged ass! you were not created for the water, all the water in the sea would have perished from the contamination which the poison of the evil spirit has brought into its water, through the death of the creatures of Auharmazd.”

Tiŝtar seizes the water more completely from the ocean with the assistance of the three-legged ass. Of ambergris also (ambar-ik) it is declared, that it is the dung of the three-legged ass; for if it has much spirit food, then also the moisture of the liquid nourishment goes through the veins pertaining to the body into the urine, and the dung is cast away.[54]

[536] The monster is evidently based on the number three. Its ass aspect is reminiscent of the Indian wild onager in Ctesias, but, as a cosmological being, it recalls the monstrous personifications of the *prima materia* (fig. 256) in Arabic alchemy. In the "Book of Ostanes," for instance, one such monster (with the wings of a vulture, the head of an elephant, and the tail of a dragon) gives the adept the key to the treasure-house.[55] The ass stands in the ocean, like the tree Gokard that grows from the deep mud of the sea.[56] The Bundahish says of this tree:

> … it is necessary as a producer of the renovation of the universe, for they prepare its immortality therefrom.… Some say it is the proper-curing, some the energetic-curing, some the all-curing.[57]

[537] The ass and the tree[58] are evidently related, because they both represent the power of life, procreation, and healing. This is a truly primitive equation: both are or have mana. The Arabic alchemists likewise obtain their *prima materia* from the tree in the western land. We read in the book of Abu'l Qāsim:[59]



257. The transformations of Mercurius. The Melusina (Lilith) on the tree is Sapientia.—“Ripley Scrowle” (MS., 1588)

> This prime matter which is proper for the form of the Elixir is taken from a single tree which grows in the lands of the West.… And this tree grows on the surface of the ocean as plants grow on the surface of the earth. This is the tree of which whosoever eats, man and jinn obey him; it is also the tree of which Adam (peace be upon him!) was forbidden to eat, and when he ate thereof he was transformed from his angelic form to human form. And this tree may be changed into every animal shape.

[538] The monster and the tree both stand for the φάρμακον ἀθανασιας, the elixir, the alexipharmic, and the panacea. The tree’s peculiar power to

change into any animal shape is also attributed to *Mercurius versipellis* (fig. 257).

[539] The ass is a *daemon triunus*, a chthonic trinity, which is portrayed in Latin alchemy as a three-headed monster and identified with Mercurius, salt, and sulphur.[60] The classical rumour about the worship of an ass in the Temple of Jerusalem, and the graffito on the Palatine showing a mock crucifixion,[61] I will mention only in passing; likewise the saturnine aspect of Jehovah and Ialdabaoth as demiurges, which brings these figures into conjunction with the equally saturnine *prima materia*.

g. The Unicorn in Jewish Tradition

[540] The Talmud[62] tells the story of how the unicorn (*re'em*) escaped the flood: it was tied to the outside of the ark because, owing to its gigantic size, it could not go inside. Og, the King of Bashan, survived the flood in the same way. The passage runs:

> The preservation of the unicorn is easily explained by those who say that the flood did not descend on the Land of Israel; but how was it preserved in the opinion of those who say that the flood did descend? R. Jannai answered: They took young unicorns into the ark.—But Rabba b. Bar Hana reported that he had seen a young unicorn as large as Mount Tabor, which measures forty parasangs, and that the girth of its neck was three parasangs, and its head one and a half parasangs, and that the Jordan was choked with the dirt it voided.[63] R. Johanan answered: They took [only] its head into the ark.—But the master said that its head measured one and a half parasangs.—Peradventure they took the tip of its nose into the ark. — … But when the ark rose on the water?—Reš Laqiš answered: They tied its horns to the ark.—But R. Hisda said that they had sinned with heat and were punished with hot water.[64]—How was the ark preserved[65] in your opinion? And moreover where was Og, the King of Bashan?[66]—Peradventure a miracle happened to them and [the water] remained cold at the sides of the ark.

[541] There is a corresponding version of this story in the midrash collection entitled *Pirkê R. Eliezer*, according to which Og "sat down on

a piece of wood under the gutter of the ark.”[67]

[542] The “Targum Pseudo-Jonathan,” commenting on Genesis 14 : 13, says that Og stayed on the roof of the ark.[68]

[543] According to one Talmud legend,[69] Og was descended from one of the fallen angels mentioned in Genesis 6 who “came in unto” the daughters of men: “Take note, Sihon and Og were brothers, for the master said: ‘Sihon and Og were the sons of Ahijah the son of Samhazai.’”[70] The commentary of Rashi says that Sihon and Og were the sons of Ahijah “who was descended from Shemhazai and Azael, the two angels who came down to earth in the days of Enoch.”

[544] Og’s gigantic size is described in several passages of the Talmud—probably at its most gigantic in “Tractate Nidda”:[71]

> Abba Saul, according to others R. Johanan, said: “I was a digger of graves. One day I was chasing a deer, and I found myself inside the thigh-bone of a dead man; I chased the deer for three parasangs, yet I did not catch up with him, nor had the thigh-bone come to an end. When I turned back they told me: ‘It belonged to Og, the King of Bashan.’”

[545] It is conceivable that there is an inner connection between Og and the unicorn: both escaped the flood by being somehow attached to the outside of the ark, and both are gigantic. Moreover we saw that the unicorn was compared to Mount Tabor, and Og also is connected with a mountain: he uprooted a mountain and hurled it on the camp of the Israelites.[72] The parallel is carried still further in one midrash:[73] the unicorn is a mountain and is threatened by a lion, and, in the continuation of the story, Og is killed by Moses, “the servant of Jahweh,” who is so often compared to a lion in the Old Testament. The midrash runs:

> R. Huna bar Idi said: At the time when David was still tending the sheep, he went and found the unicorn [*re’em*] asleep in the desert, and thinking it was a mountain he climbed to the top and pastured his flock there. Then the unicorn shook himself and stood up. And David rode on his back and reached up to heaven. And in that hour David spoke to God: If thou wilt take me down from this unicorn I will build thee a temple, one

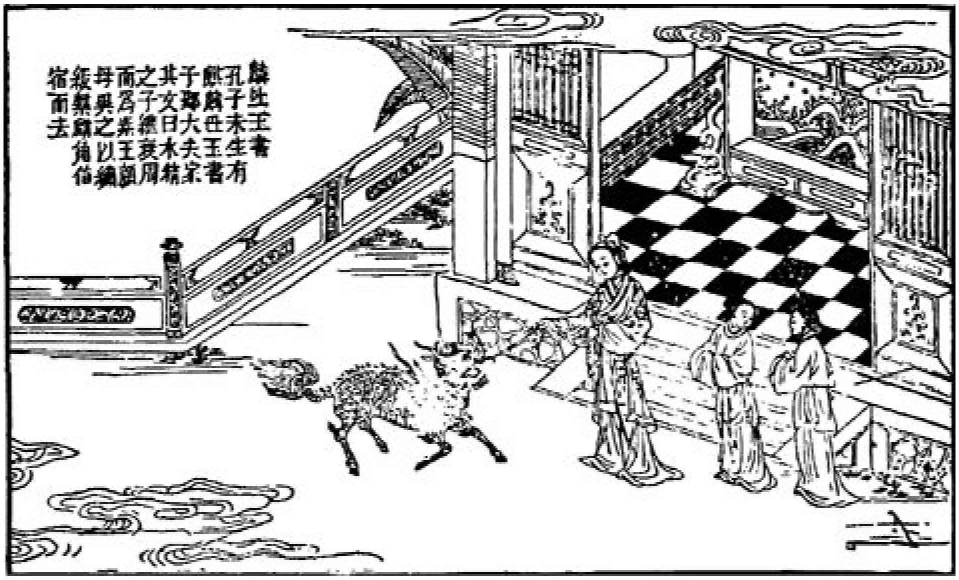
hundred cubits in size, like the horn of this unicorn.… What did the Holy One, blessed be He, do for him? He ordained that a lion should come, and when the unicorn saw the lion, he was afraid and crouched down before him, because the lion is his king, and David descended on to the earth. But when David saw the lion, he was afraid. Therefore it is said: "Save me from the lion's mouth, for thou hast heard [freed] me from the horns of the unicorns."

[546] Another midrash[74] shows the unicorn fighting with the lion. Here it is explicitly called the unicorn (*ha-unicorius*) and not *re'em*. The passage runs:

258. Unicorn and lion.—From the tapestry *La Dame à la Licorne* (16th cent.)

And in our land there is also the unicorn [*ha-unicorius*], which has a great horn on his forehead. And there are also many lions. And when the unicorn sees a lion, he drives him against a tree, and the unicorn wants to slay the lion. But the lion moves from his place and the unicorn butts his horn against the tree, and the horn pierces so deep into the tree that he cannot pull it out again, and then the lion comes and kills the unicorn, but sometimes the matter is reversed.

[547] In the *Chymical Wedding*, as in the royal arms of England, lion and unicorn are combined (fig. 258); both are symbols of Mercurius in alchemy, just as they are allegories of Christ in the Church. Lion and unicorn stand for the inner tension of opposites in Mercurius. The lion, being a dangerous animal, is akin to the dragon; the dragon must be slain and the lion at least have his paws cut off. The unicorn too must be tamed; as a monster he has a higher symbolical significance and is of a more spiritual nature than the lion, but as Ripley shows, the lion can sometimes take the place of the unicorn. The two gigantic beings, Og and the unicorn, are reminiscent of Behemoth and Leviathan, the two manifestations of Jehovah. All four of them, as also the unicorned ass of the Bundahish, are personifications of the daemonic forces of nature. The power of God reveals itself not only in the realm of the spirit, but in the fierce animality of nature both within man and outside him. God is ambivalent so long as man remains bound to nature. The uncompromising Christian interpretation of God as the *summum bonum* obviously goes against nature; hence the secret paganism of alchemy comes out in the ambivalent figure of Mercurius. By contrast, the androgyny of Christ is conceived as exclusively spiritual and symbolic, and therefore outside the natural context. On the other hand the very existence of an adversary, “the prince of this world,” betrays the polarity of God as shown in the androgynous nature of the Son in whom he is manifest.



259. The ch’i-lin announcing the birth of Confucius. “Before K’ung-tse was born, a ch’i-lin came to the governor’s house in Tsou and spat out a jade tablet, bearing the inscription: ‘The son of the mountain crystal [lit. water-essence] will perpetuate the fallen kingdom of Chou and be a king without a crown.’ His mother was astonished and tied an embroidered bow to the unicorn’s horn. The beast stayed for two nights and then departed.”—From a Chinese illustrated work (*c*. 18th cent.), *Shèng Chi-t’u*

260. The ch’i-lin announcing the death of Confucius. “In the 14th year of the reign of the Duke Ai [of Lu—481 B.C.] a ch’i-lin was caught on a winter hunt in the West. This gave K’ung-tse a severe shock and he stopped writing the *Ch’un-ts’in*. The *K’ung-ts’ung-tse* [collection of stories about Confucius] says: While the clan of Shu-sun [aristocratic family in Lu] were firing some undergrowth they caught a ch’i-lin. No one recognized it. They threw it away at Wu-fu crossroads. [The disciple] Jan-yu reported it and said: ‘The body of a stag with a horn of flesh, is that not the heavenly monster of ill omen?’ K’ung-tse went to look at it. He wept and said: ‘It is a ch’i-lin! The ch’i-lin, benevolent beast, appears and dies. My Tao is exhausted.’ ”—From *Shèng Chi-t’u*

h. The Unicorn in China

[548] The unicorn also appears in China. According to the *Li Chi*, or *Book of Rites*, there are four beneficent or spiritual animals: the unicorn (*ch'i-lin*), the phoenix, the tortoise, and the dragon. The *ch'i-lin* is chief among four-footed beasts. "It resembles the stag, but is larger, with the tail of an ox and the hoofs of a horse: it has a single horn of flesh, there are five colours in the hair of its back, and the hair of its belly is yellow (or brown), it does not tread any living grass underfoot nor eat any living creature; it shows itself when perfect rulers [*chen-jen*] appear and the *Tao* of the king is accomplished." If it is wounded, this is an evil omen. Its first appearance was in the garden of the Yellow Emperor (2697 B.C.). Later two unicorns sojourned in P'ing-yang, Emperor Yao's capital. A unicorn appeared to the mother of Confucius when she was pregnant (fig. 259), and, as an omen before the death of the sage, it chanced that a charioteer wounded a unicorn (fig. 260).[75] It is worth noting that the male unicorn is called *ch'i* and the female *lin*, so that the generic term is formed by the union of both characters (*ch'i-lin*).[76] The unicorn is thus endowed with an androgynous quality. Its connection with the phoenix and the dragon also occurs in alchemy, where the dragon stands for the lowest form of Mercurius and the phoenix for the highest.

[549] As mentioned before, the horn of the rhinoceros is an alexipharmic and for this reason is, even today, a favourite article of commerce between the African east coast and China, where it is made into poison-proof drinking cups. The *Physiologus Graecus* tells us that when a snake has poisoned their drinking water, the animals, noticing the poison, will wait for the unicorn to come down to the water; "for his horn is a symbol of the cross" (σταυρὸν ἐκτυπώσας τῷ κέρατι αὐτοῦ), and by drinking he dissipates the virulence of the poison.[77]

i. The Unicorn Cup

[550] The healing cup is not unconnected with the "cup of salvation," the Eucharistic Chalice, and with the vessel used in divination. Migne[78] says that Cardinal Torquemada always kept a unicorn cup at table: "La corne

de licorne préserve des sortilèges” (fig. 261). Hippolytus, in his summing up of the teachings of the Naassenes, says that the Greeks called “Geryon of the threefold body” the “heavenly horn of the moon.” But Geryon was the “Jordan,”[79] the “masculo-feminine Man in all things, by whom all things were made.” In this connection Hippolytus mentions the cup of Joseph and Anacreon:

261. Pope with the unicorn as the symbol of the Holy Ghost.—From Scaliger, *Explanatio imaginum* (1570); antithesis to Paracelsus, *Auslegung der Figuren* (1569)

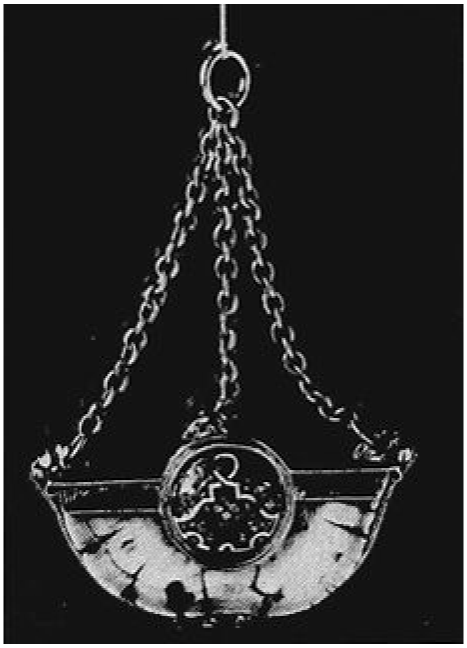
The words “without him was not any thing made”[80] refer to the world of forms, because this was created without his help through the third and fourth [members of the quaternity]. For this is … the cup from which the king, when he drinks, draws his omens.[81] The Greeks likewise alluded to this secret in the Anacreontic verses:

> My tankard tells me
> Speaking in mute silence
> What I must become.

This alone sufficed for it to be known among men, namely the cup of Anacreon which mutely declares the ineffable secret. For they say Anacreon’s cup is dumb; yet Anacreon affirms that it tells him in mute language what he must become, that is, spiritual and not carnal, if he will hear the secret hidden in silence. And this secret is the water which Jesus, at that fair marriage, changed into wine. That was the great and true beginning of the miracles which Jesus wrought in Cana in Galilee, and thus he showed forth the kingdom of heaven. This [beginning] is the kingdom of heaven that lies within us as a treasure, like the “leaven hidden in three measures of meal.”[82]

262. The lunar unicorn.—Reverse of a medal (1447) by Antonio Pisano

[551] We have seen that the “heavenly horn of the moon” is closely connected with the unicorn. Here it means not only “Geryon of the threefold body”[83] and the Jordan, but the hermaphroditic Man as well, who is identical with the Johannine Logos. The “third and fourth” are water and earth; these two elements are thought of as forming the lower half of the world in the alchemical retort, and Hippolytus likens them to a cup (κόνδυ). This is the divining-vessel of Joseph and Anacreon: the water stands for the content and the earth for the container, i.e., the cup itself. The content is the water that Jesus changed into wine, and the water is also represented by the Jordan, which signifies the Logos, thus bringing out the analogy with the Chalice. Its content gives life and healing, like the cup in IV Ezra (14 : 39–40):

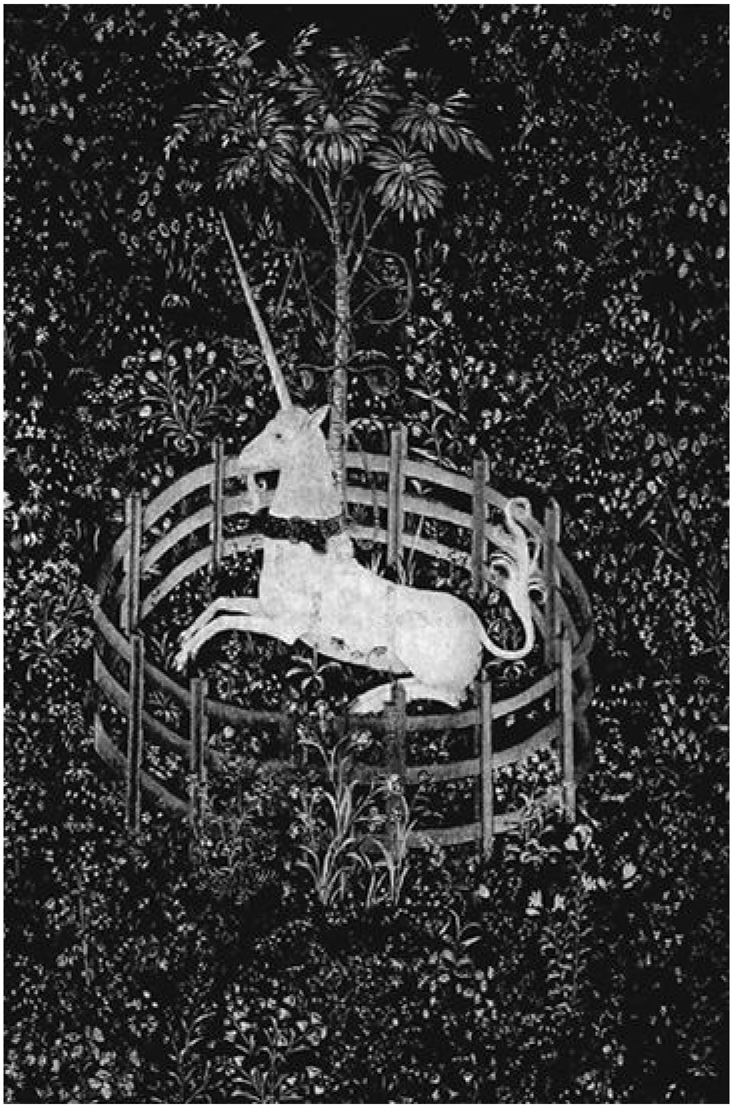


263. The Campion Pendant (front view), made from the horn of a narwhal set in enamelled gold. On the back, bits of the horn have been scraped off for medicinal purposes (16th cent.?)

> Then I opened my mouth, and Io! there was reached unto me a full cup, which was full as it were with water, but the colour of it was like fire.[84]

> And I took it and drank; and when I had drunk,
> My heart poured forth understanding,
> wisdom grew in my breast,
> and my spirit retained its memory.[85]

[552] The secret of the cup is also the secret of the horn, which in its turn contains the essence of the unicorn as bestower of strength, health, and life (fig. 263). The alchemists attribute the same qualities to their stone, calling it the "carbuncle."[86] According to legend, this stone may be found under the horn of the unicorn, as Wolfram von Eschenbach says:



264. Mandala of the unicorn and the tree of life.—Verteuil tapestry (15th cent.), “The Hunt of the Unicorn”

We caught the beast called Unicorn
That knows and loves a maiden best
And falls asleep upon her breast;
We took from underneath his horn
The splendid male carbuncle stone
Sparkling against the white skull-bone.[87]

[553] The horn as an emblem of vigour and strength has a masculine character, but at the same time it is a cup, which, as a receptacle, is feminine.[88] So we are dealing here with a “uniting symbol”[89] that expresses the bipolarity of the archetype (fig. 264).

[554] These assorted unicorn symbolisms aim at giving no more than a sample of the extremely intricate and tangled connections between pagan and natural philosophy, Gnosticism, alchemy, and ecclesiastical tradition, which, in its turn, had a deep and lasting influence on the world of medieval alchemy. I hope that these examples have made clear to the reader just how far alchemy was a religious-philosophical or “mystical” movement. It may well have reached its peak in Goethe’s religious *Weltanschauung*, as this is presented to us in *Faust*.

265. The unicorn and his reflection, depicting the motto “De moy je m’èpouvante.”
—Boschius, *Symbolographia* (1702)

266. Double-headed eagle with crowns of Pope and Emperor, symbolizing the kingdoms of both worlds. The eagle is covered with eyes (enlightenment!).—Codex Palatinus Latinus 412 (15th cent.)

EPILOGUE

267. The *prima materia* as the dragon, being fertilized by the Holy Ghost (the *avis Hermetis*).
—“Hermes Bird,” *Theatrum chemicum Britannicum* (1652)

[555] What the old philosophers meant by the *lapis* has never become quite clear. This question can be answered satisfactorily only when we know exactly what the unconscious content was that they were projecting. The psychology of the unconscious alone is in a position to solve this riddle. It teaches us that so long as a content remains in the projected state it is inaccessible, which is the reason why the labours of those authors have revealed so little to us of the alchemical secret. But the yield in symbolic material is all the greater, and this material is closely related to the process of individuation.

[556] In dealing with alchemy we must always consider what an important part this philosophy played in the Middle Ages, what a vast literature it left behind, and what a far-reaching effect it had on the spiritual life of the time. How far the claims of alchemy itself went in this direction is best shown by the *lapis*-Christ parallel, a fact which may explain, or excuse, my excursions into fields that seem to have nothing to do with alchemy. For the moment we embark upon the psychology of alchemical thought we must take account of connections that seem, on the face of it, very remote from the historical material. But if we try to understand the phenomenon from inside, i.e., from the standpoint of the psyche, we can start from a central position where many lines converge, however far apart they may be in the external world. We are then confronted with the underlying human psyche which, unlike consciousness, hardly changes at

all in the course of many centuries. Here, a truth that is two thousand years old is still the truth today—in other words, it is still alive and active. Here too we find those fundamental psychic facts that remain unchanged for thousands of years and will still be unchanged thousands of years hence. From this point of view, the recent past and the present seem like episodes in a drama that began in the grey mists of antiquity and continues through the centuries into a remote future. This drama is an “Aurora consurgens”—the dawning of consciousness in mankind.

[557] The alchemy of the classical epoch (from antiquity to about the middle of the seventeenth century) was, in essence, chemical research work into which there entered, by way of projection, an admixture of unconscious psychic material. For this reason the psychological conditions necessary for the work are frequently stressed in the texts. The contents under consideration were those that lent themselves to projection upon the unknown chemical substance. Owing to the impersonal, purely objective nature of matter, it was the impersonal, collective archetypes that were projected: first and foremost, as a parallel to the collective spiritual life of the times, the image of the spirit imprisoned in the darkness of the world. In other words, the state of relative unconsciousness in which man found himself, and which he felt to be painful and in need of redemption, was reflected in matter and accordingly dealt with in matter. Since the psychological condition of any unconscious content is one of potential reality, characterized by the polar opposites “being” and “not-being,” it follows that the union of opposites must play a decisive role in the alchemical process. The result is something in the nature of a “uniting symbol,” and this usually has a numinous character.[1] The projection of the redeemer-image, i.e., the correspondence between Christ and the *lapis*, is therefore almost a psychological necessity, as is the parallelism between the redeeming *opus* or *officium divinum* and the magistery—with the essential difference that the Christian *opus* is an *operari* in honour of God the Redeemer undertaken by man who stands in need of redemption, while the alchemical *opus* is the labour of Man the Redeemer in the cause of the divine world-soul slumbering and awaiting redemption in matter. The Christian earns the fruits of grace *ex opere operato,* but the alchemist

creates for himself—*ex opere operantis* in the most literal sense—a "panacea of life" which he regards either as a substitute for the Church's means of grace or as the complement and parallel of the divine work of redemption that is continued in man. The two opposed points of view meet in the ecclesiastical formula of the *opus operatum* and the *opus operantis*[2]—but in the last analysis they are irreconcilable. Fundamentally it is a question of polar opposites: the collective or the individual, society or personality. This is a modern problem in so far as it needed the hypertrophy of collective life and the herding together of incredible masses of people in our own day to make the individual aware that he was being suffocated in the toils of the organized mob. The collectivism of the medieval Church seldom or never exerted sufficient pressure on the individual to turn his relations with society into a general problem. So this question, too, remained on the level of projection, and it was reserved for our own day to tackle it with at least an embryonic degree of consciousness under the mask of neurotic individualism.

[558] Some time previous to this latest development, however, alchemy had reached its final summit, and with it the historical turning-point, in Goethe's *Faust*, which is steeped in alchemical forms of thought from beginning to end. The essential Faustian drama is expressed most graphically in the scene between Paris and Helen. To the medieval alchemist this episode would have represented the mysterious *coniunctio* of Sol and Luna in the retort (fig. 268); but modern man, disguised in the figure of Faust, recognizes the projection and, putting himself in the place of Paris or Sol, takes possession of Helen or Luna, his own inner, feminine counterpart. The objective process of the union thus becomes the subjective experience of the artifex: instead of watching the drama, he has become one of the actors. Faust's personal intervention has the disadvantage that the real goal of the entire process—the production of the incorruptible substance—is missed. Instead Euphorion, who is supposed to be the *filius philosophorum*, imperishable and "incombustible," goes up in flames and disappears—a calamity for the alchemist and an occasion for the psychologist to criticize Faust, although the phenomenon is by no means uncommon. For every archetype, at its first appearance and so long as it remains unconscious,

takes possession of the whole man and impels him to play a corresponding role. Consequently Faust cannot resist supplanting Paris in Helen’s affections, and the other “births” and rejuvenations, such as the Boy Charioteer and the Homunculus, are destroyed by the same greed. This is probably the deeper reason why Faust’s final rejuvenation takes place only in the post-mortal state, i.e., is projected into the future. Is it a mere coincidence that the perfected figure of Faust bears the name (which we have already met) of one of the most famous of the early alchemists: “Marianus” or, in its more usual spelling, Morienus?

268. *Fermentatio*, symbolic representation of the *coniunctio spirituum*. [Verses: “But here King Sol is tight shut in / And *Mercurius philosophorum* pours over him.”] —*Rosarium philosophorum* (1550)

[559] By identifying with Paris, Faust brings the *coniunctio* back from its projected state into the sphere of personal psychological experience and thus into consciousness. This crucial step means nothing less than the solution of the alchemical riddle, and at the same time the redemption of a previously unconscious part of the personality. But every increase in consciousness harbours the danger of inflation, as is shown very clearly in Faust's superhuman powers. His death, although necessary in his day and generation, is hardly a satisfactory answer. The rebirth and transformation that follow the *coniunctio* take place in the hereafter, i.e., in the unconscious—which leaves the problem hanging in the air. We all know that Nietzsche took it up again in *Zarathustra*, as the transformation into the superman; but he brought the superman into dangerously close proximity with the man-in-the-street. By so doing he inevitably called up all the latter's reserves of anti-Christian resentment, for his superman is the overweening pride, the hybris, of individual consciousness, which must necessarily collide with the collective power of Christianity and lead to the catastrophic destruction of the individual. We know just how, and in what an exceedingly characteristic form, this fate overtook Nietzsche, *tam ethice quam physice*. And what kind of an answer did the next generation give to the individualism of Nietzsche's superman? It answered with a collectivism, a mass organization, a herding together of the mob, *tam ethice quam physice*, that made everything that went before look like a bad joke. Suffocation of the personality and an impotent Christianity that may well have received its death-wound—such is the unadorned balance sheet of our time.

[560] Faust's sin was that he identified with the thing to be transformed and that had been transformed. Nietzsche overreached himself by identifying his ego with the superman Zarathustra, the part of the personality that was struggling into consciousness. But can we speak of Zarathustra as a part of the personality? Was he not rather something superhuman—something which man is not, though he has his share in it? Is God really dead, because Nietzsche declared that he had not been heard of for a long time? May he not have come back in the guise of the superman?

[561] In his blind urge for superhuman power, Faust brought about the murder of Philemon and Baucis. Who are these two humble old people?

When the world had become godless and no longer offered a hospitable retreat to the divine strangers Jupiter and Mercury, it was Philemon and Baucis who received the superhuman guests. And when Baucis was about to sacrifice her last goose for them, the metamorphosis came to pass: the gods made themselves known, the humble cottage was changed into a temple, and the old couple became immortal servitors at the shrine.

[562] In a sense, the old alchemists were nearer to the central truth of the psyche than Faust when they strove to deliver the fiery spirit from the chemical elements, and treated the mystery as though it lay in the dark and silent womb of nature. It was still outside them. The upward thrust of evolving consciousness was bound sooner or later to put an end to the projection, and to restore to the psyche that which had been psychic from the beginning. Yet, ever since the Age of Enlightenment and in the era of scientific rationalism, what indeed was the psyche? It had become synonymous with consciousness. The psyche was "what I know." There was no psyche outside the ego. Inevitably, then, the ego identified with the contents accruing from the withdrawal of projections. Gone were the days when the psyche was still for the most part "outside the body" and imagined "those greater things" which the body could not grasp. The contents that were formerly projected were now bound to appear as personal possessions, as chimerical phantasms of the ego-consciousness. The fire chilled to air, and the air became the great wind of Zarathustra and caused an inflation of consciousness which, it seems, can be damped down only by the most terrible catastrophe to civilization, another deluge let loose by the gods upon inhospitable humanity.

[563] An inflated consciousness is always egocentric and conscious of nothing but its own existence. It is incapable of learning from the past, incapable of understanding contemporary events, and incapable of drawing right conclusions about the future. It is hypnotized by itself and therefore cannot be argued with. It inevitably dooms itself to calamities that must strike it dead. Paradoxically enough, inflation is a regression of consciousness into unconsciousness. This always happens when consciousness takes too many unconscious contents upon itself and loses the faculty of discrimination, the *sine qua non* of all consciousness. When fate, for four whole years, played out a war of monumental

frightfulness on the stage of Europe—a war that *nobody* wanted—nobody dreamed of asking exactly who or what had caused the war and its continuation. Nobody realized that European man was possessed by something that robbed him of all free will. And this state of unconscious possession will continue undeterred until we Europeans become scared of our "god-almightiness." Such a change can begin only with individuals, for the masses are blind brutes, as we know to our cost. It seems to me of some importance, therefore, that a few individuals, or people individually, should begin to understand that there are contents which do not belong to the ego-personality, but must be ascribed to a psychic non-ego. This mental operation has to be undertaken if we want to avoid a threatening inflation. To help us, we have the useful and edifying models held up to us by poets and philosophers—models or *archetypi* that we may well call remedies for both men and the times. Of course, what we discover there is nothing that can be held up to the masses—only some hidden thing that we can hold up to ourselves in solitude and in silence. Very few people care to know anything about this; it is so much easier to preach the universal panacea to everybody else than to take it oneself, and, as we all know, things are never so bad when everybody is in the same boat. No doubts can exist in the herd; the bigger the crowd the better the truth—and the greater the catastrophe.

[564] What we may learn from the models of the past is above all this: that the psyche harbours contents, or is exposed to influences, the assimilation of which is attended by the greatest dangers. If the old alchemists ascribed their secret to matter, and if neither Faust nor Zarathustra is a very encouraging example of what happens when we embody this secret in ourselves, then the only course left to us is to repudiate the arrogant claim of the conscious mind to be the whole of the psyche, and to admit that the psyche is a reality which we cannot grasp with our present means of understanding. I do not call the man who admits his ignorance an obscurantist; I think it is much rather the man whose consciousness is not sufficiently developed for him to be aware of his ignorance. I hold the view that the alchemist's hope of conjuring out of matter the philosophical gold, or the panacea, or the wonderful stone, was only in part an illusion, an effect of projection; for the rest it

corresponded to certain psychic facts that are of great importance in the psychology of the unconscious. As is shown by the texts and their symbolism, the alchemist projected what I have called the process of individuation into the phenomena of chemical change. A scientific term like "individuation" does not mean that we are dealing with something known and finally cleared up, on which there is no more to be said.[3] It merely indicates an as yet very obscure field of research much in need of exploration: the centralizing processes in the unconscious that go to form the personality. We are dealing with life-processes which, on account of their numinous character, have from time immemorial provided the strongest incentive for the formation of symbols. These processes are steeped in mystery; they pose riddles with which the human mind will long wrestle for a solution, and perhaps in vain. For, in the last analysis, it is exceedingly doubtful whether human reason is a suitable instrument for this purpose. Not for nothing did alchemy style itself an "art," feeling —and rightly so—that it was concerned with creative processes that can be truly grasped only by experience, though intellect may give them a name. The alchemists themselves warned us: "Rumpite libros, ne corda vestra rumpantur" (Rend the books, lest your hearts be rent asunder), and this despite their insistence on study. Experience, not books, is what leads to understanding (fig. 269).

[565] In the foregoing study of dream-symbols I have shown how such an experience looks in reality. From this we can see more or less what happens when an earnest inquiry is turned upon the unknown regions of the soul. The forms which the experience takes in each individual may be infinite in their variations, but, like the alchemical symbols, they are all variants of certain central types, and these occur universally. They are the primordial images, from which the religions each draw their absolute truth.

269. The artifex and his *soror mystica* making the gesture of the secret at the end of the work.—*Mutus liber* (1702)

270. The phoenix as symbol of resurrection.—Boschius, *Symbolographia* (1702)

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A*. Ancient volumes containing collections of alchemical tracts by various authors; *B*. General bibliography, including cross-references to the material in *A*. Short titles of the ancient volumes are printed in capital letters.

BIBLIOGRAPHY

A. VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL WORKS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum … Argentorati [Strasbourg], 1566. *Contents quoted in this volume:*

- i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tr aureus”]
- ii Tabula smaragdina [pp. 32–33]
- iii Studium Consilii coniugii de massa solis et lunae [pp. 48–263; usually referred to as “Consili coniugii”]

ARTIS AURIFERAE quam chemiam vocant … Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Turba philosophorum [two versions: pp. 1–64, 65–139]
- ii Allegoriae super librum Turbae [pp. 139–45]
- iii Aenigmata ex visione Arislei et allegoriis sapientum [pp. 146–54; usually referred to as “Vis Arislei”]
- iv In Turbam philosophorum exercitationes [pp. 154–82]
- v Aurora consurgens, quae dicitur Aurea hora [pp. 185–246; Part II only]
- vi Rosinus ad Sarratantam episcopum [pp. 277–319]
- vii Maria Prophetissa: Practica … in artem alchemicam [pp. 319–24]
- viii Kalid: Liber trium verborum [pp. 352–61]
- ix Merlinus: Allegoria de arcano lapidis [pp. 392–96]
- x Liber de arte chimica [pp. 575–631]

VOLUME II

- xi Morienus Romanus: Sermo de transmutatione metallorum [pp. 7–54]
- xii Rosarium philosophorum [pp. 204–384; contains a second version of “Visio Arislei” at pp. 2

AUREUM VELLUS, oder Güldin Schatz und Kunstkammer … von dem … bewehrten Philosopho Salomone Trismosino, Rorschach, 1598.

Contents quoted in this volume:

i [Trismosin:] Splendor solis [Tract. III, pp. 3–59]

ii Melchior, Cardinal Bishop of Brixen: Von dem gelben und rotten Mann [Tract. III, pp. 177–9

For translations of this volume, see: *La Toyson d'or, ou La Fleur des thresors* … Translated from German into French by L. I. Paris, 1612. / "The Golden Fleece, or The Flower of Treasures." Translated by William Backhouse, 1718. / In MS. Bodleian 7597, Oxford.

MANGETUS, JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus* … Geneva, 1702. 2 vols.

Contents quoted in this volume:

VOLUME I

i Hoghelande: De alchemiae difficultatibus [pp. 336–68]

ii Hermes Trismegistus: Tractatus aureus de lapidis physici secreto [pp. 400–445]

iii Turba philosophorum [pp. 445–65; another version, pp. 480–94]

iv Allegoriae sapientum supra librum Turbae philosophorum XXIX distinctiones [pp. 467–7

v Geber. Summa perfectionis magisterii [pp. 519–57]

vi Lully: Compendium artis alchemiae et naturalis philosophiae secundum naturalem cursum 875–78]

vii Lully: Codicillus, seu vade mecum aut Cantilena [pp. 880–911]

vii-a Mutus liber, in quo tamen tota philosophia hermetica, figuris hieroglyphicis depingitur [u bound into Mellon Alchemical Library copy]

VOLUME II

viii Bonus: Margarita pretiosa novella correctissima [pp. 1–80]

ix Rosarium philosophorum [pp. 87–119]

x Ficinus [Marsilio Ficino]: Liber de arte chimica [pp. 172–83]

xi [Zadith] Senior: De chymia [pp. 198–235] xii Ripley: Liber duodecim portarum [pp. 275–85]

xiii Sendivogius: Parabola, seu Aenigma philosophicum [pp. 474–75]

xiv Orthelius: Epilogus et recapitulatio in Novum lumen Sendivogii [pp. 526–30]

xv [Siebmacher:] Hydrolithus sophicus, seu Aquarium sapientum [pp. 537–58]

xvi Grasseus: Lilium inter spinas [pp. 596–600]

xvii [Espagnet:] Arcanum hermeticae philosophiae [pp. 649–61]

In hoc volumine DE ALCHEMIA continentur hace. Gebri Arabis … De investigatione perfectionis metallorum … Norimbergae [Nuremberg], 1541.

Contents quoted in this volume:

i Rosarius minor [pp. 309–37]

ii Tabula smaragdina Hermetis Trismegisti [p. 363]

iii Hortulanus: Super Tabulam smaragdinam commentarius [pp. 364–73]

MUSAEUM HERMETICUM reformatum et amplification … continens tractatus chimicos XXI praestantissimos … Francofurti [Frankfort], 1678. (For translation, see (*B*) WAITE, ARTHUR EDWARD.) (Also an edn. of 1625. See fig. 240.)

Contents quoted in this volume:

i [Hermes Trismegistus:] Tractatus aureus de lapide philosophorum [pp. 1–52]

ii Madathanus Aureum saeculum redivivum [pp. 53–72]

iii [Siebmacher:] Hydrolithus sophicus, seu Aquarium sapientum [pp. 73–144]

iv Mehung: Demonstratio naturae [pp. 145–71]

v Flamel: Tractatus brevis sive Summarium philosophicum [pp. 172–79]

INDEX

The following subjects are indexed under collective entries: ANIMALS (including birds, insects, reptiles, etc., and fabulous beasts), BIBLE, CODICES & MSS., COLOURS (including alchemical terms), and NUMBERS. The references to illustrations, by *"fig.,"* indicate data included in the List of Illustrations (pp. xvff) as well as in the text captions. For references to "names of individual authors and treatises" in alchemical collections, see the Bibliography, part *A* (pp. 487*ff*), where these are listed. Italic type is used for all literary titles, whether MS. or printed, except in the case of papers under the entry for Jung, whose titles appear in quotation marks.

INDEX

THE COLLECTED WORKS OF
C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

•1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

•3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler’s Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud’s Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, “The Mechanism and Interpretation of Dreams”: A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to “Collected Papers on Analytical Psychology” (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt’s “Secret Ways of the Mind” (1930)

Freud and Jung: Contrasts (1929)

‡ 5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

•6. PSYCHOLOGICAL TYPES (1921)
Introduction
The Problem of Types in the History of Classical and Medieval Thought
Schiller’s Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry
The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY
On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)

Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)

The Transcendent Function ([1916]/1957)

A Review of the Complex Theory (1934)

The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)

On the Nature of the Psyche (1947/1954)

General Aspects of Dream Psychology (1916/1948)

On the Nature of Dreams (1945/1948)

The Psychological Foundations of Belief in Spirits (1920/1948)

Spirit and Life (1926)

Basic Postulates of Analytical Psychology (1931)

Analytical Psychology and *Weltanschauung* (1928/1931)

The Real and the Surreal (1933)

The Stages of Life (1930–1931)

The Soul and Death (1934)

Synchronicity: An Acausal Connecting Principle (1952)

Appendix: On Synchronicity (1951)

•9. PART 1. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)

The Concept of the Collective Unconscious (1936)

Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)

Psychological Aspects of the Mother Archetype (1938/1954)

Concerning Rebirth (1940/1950)

The Psychology of the Child Archetype (1940)

The Psychological Aspects of the Kore (1941)

The Phenomenology of the Spirit in Fairytales (1945/1948)

On the Psychology of the Trickster-Figure (1954)

Conscious, Unconscious, and Individuation (1939)

A Study in the Process of Individuation (1934/1950)

Concerning Mandala Symbolism (1950)

Appendix: Mandalas (1955)

•9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego

The Shadow

The Syzygy: Anima and Animus

The Self

Christ, a Symbol of the Self

The Sign of the Fishes

The Prophecies of Nostradamus

The Historical Significance of the Fish

The Ambivalence of the Fish Symbol

The Fish in Alchemy

The Alchemical Interpretation of the Fish
Background to the Psychology of Christian Alchemical Symbolism
Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White’s “God and the Unconscious” and Werblowsky’s “Lucifer and Prometheus” (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on “The Tibetan Book of the Great Liberation” (1939/1954) and “The Tibetan Book of the Dead” (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki’s “Introduction to Zen Buddhism” (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer’s “Der Weg zum

Selbst” (1944)

Foreword to the “I Ching” (1950)

•12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

†13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND
SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio

The Paradoxa

The Personification of the Opposites

Rex and Regina

Adam and Eve

The Conjunction

•15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)

Paracelsus the Physician (1941)

Sigmund Freud in His Historical Setting (1932)

In Memory of Sigmund Freud (1939)

Richard Wilhelm: In Memoriam (1930)

On the Relation of Analytical Psychology to Poetry (1922)

Psychology and Literature (1930/1950)

“Ulysses”: A Monologue (1932)

Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)

The Practical Use of Dream-Analysis (1934)

The Psychology of the Transference (1946)

Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)

Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)

Child Development and Education (1928)

Analytical Psychology and Education: Three Lectures (1926/1946)

The Gifted Child (1943)

The Significance of the Unconscious in Individual Education (1928)

The Development of Personality (1934)

Marriage as a Psychological Relationship (1925)

•18. THE SYMBOLIC LIFE

Miscellaneous Writings

†19. GENERAL BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

†20. GENERAL INDEX TO THE COLLECTED WORKS

See also:
C. G. JUNG: LETTERS
Selected and edited by Gerhard Adler, in collaboration with Aniela Jaffé. Translations from the German by R.F.C. Hull.

VOL. 1: 1906–1950
VOL. 2: 1951–1961

THE FREUD/JUNG LETTERS
Edited by William McGuire, translated by
Ralph Manheim and R.F.C. Hull

C. G. JUNG SPEAKING: Interviews and Encounters
Edited by William McGuire and R.F.C. Hull

C. G. JUNG: Word and Image
Edited by Aniela Jaffé

[1] It is worth noting that a Protestant theologian, writing on homiletics, had the courage to demand wholeness of the preacher from the ethical point of view. He substantiates his argument by referring to my psychology. See Händler, *Die Predigt*.

[2] [The translation of the German word *Seele* presents almost insuperable difficulties on account of the lack of a single English equivalent and because it combines the two words "psyche" and "soul" in a way not altogether familiar to the English reader. For this reason some comment by the Editors will not be out of place.

[In previous translations, and in this one as well, "psyche"—for which Jung in the German original uses either *Psyche* or *Seele*—has been used with reference to the totality of *all* psychic processes (cf. Jung, *Psychological Types*, Def. 48); i.e., it is a comprehensive term. "Soul," on the other hand, as used in the technical terminology of analytical psychology, is more restricted in meaning and refers to a "function complex" or partial personality and never to the whole psyche. It is often applied specifically to "anima" and "animus"; e.g., in this connection it is used in the composite word "soul-image" (*Seelenbild*). This conception of the soul is more primitive than the Christian one with which the reader is likely to be more familiar. In its Christian context it refers to "the transcendental energy in man" and "the spiritual part of man considered in its moral aspect or in relation to God." (Cf. definition in *The Shorter Oxford English Dictionary*.)

[In the above passage in the text (and in similar passages), "soul" is used in a non-technical sense (i.e., it does not refer to "animus" or "anima"), nor does it refer to the transcendental conception, but to a psychic (phenomenological) fact of a highly numinous character. This usage is adhered to except when the context shows clearly that the term is used in the Christian or Neoplatonic sense.—EDITORS.]

[3] [The term "nothing but" (*nichts als*), which occurs frequently in Jung to denote the habit of explaining something unknown by reducing it to something apparently known and thereby devaluing it, is borrowed from William James, *Pragmatism*, p. 16: "What is higher is explained by what is lower and treated for ever as a case of 'nothing but'—nothing but something else of a quite inferior sort."]

[4] The dogma that man is formed in the likeness of God weighs heavily in the scales in any assessment of man—not to mention the Incarnation.

[5] The fact that the devil too can take possession of the soul does not diminish its significance in the least.

[6] It is therefore psychologically quite unthinkable for God to be simply the "wholly other," for a "wholly other" could never be one of the soul's deepest and closest intimacies—which is precisely what God is. The only statements that have psychological validity concerning the God-image are either paradoxes or antinomies.

[7] Tertullian, *Apologeticus*, xvii: "Anima naturaliter christiana."

[8] Since it is a question here of human effort, I leave aside acts of grace which are beyond man's control.

[9] Tertullian, *De carne Christi*, 5 (Migne, *P.L.*, vol. 2, col. 751).

[10] Zöckler ("Probabilismus," p. 67) defines it as follows: "Probabilism is the name generally given to that way of thinking which is content to answer scientific questions with a greater or lesser degree of probability. The moral probabilism with which alone we are concerned here consists in the

principle that acts of ethical self-determination are to be guided not by conscience but according to what is probably right, i.e., according to whatever has been recommended by any representative or doctrinal authority." The Jesuit probabilist Escobar (d. 1669) was, for instance, of the opinion that if the penitent should plead a probable opinion as the motive of his action, the father-confessor would be obliged to absolve him even if he were not of the same opinion. Escobar quotes a number of Jesuit authorities on the question of how often one is bound to love God in a lifetime. According to one opinion, loving God once shortly before death is sufficient; another says once a year or once every three or four years. He himself comes to the conclusion that it is sufficient to love God once at the first awakening of reason, then once every five years, and finally once in the hour of death. In his opinion the large number of different moral doctrines forms one of the main proofs of God's kindly providence, "because they make the yoke of Christ so light" (Zöckler, p. 68). Cf. also Harnack, *History of Dogma*, VII, pp. 101ff.

[11] Cf. Genesis 1 : 2.

[12] The reader will find a collection of these myth motifs in Lang, *Hat ein Gott die Welt erschaffen?* Unfortunately philological criticism will have much to take exception to in this book, interesting though it is for its Gnostic trend.

[13] In alchemical writings the word "Mercurius" is used with a very wide range of meaning, to denote not only the chemical element mercury or quicksilver, Mercury (Hermes) the god, and Mercury the planet, but also—and primarily—the secret "transforming substance" which is at the same time the "spirit" indwelling in all living creatures. These different connotations will become apparent in the course of the book. It would be misleading to use the English "Mercury" and "mercury," because there are innumerable passages where neither word does justice to the wealth of implications. It has therefore been decided to retain the Latin "Mercurius" as in the German text, and to use the personal pronoun (since "Mercurius" is personified), the word "quicksilver" being employed only where the chemical element (Hg) is plainly meant. [*Author's note for the English edn.*]

[14] Przywara, *Deus semper maior*, I, pp. 71ff.

[15] See the illustrations in Jung, "Concerning Mandala Symbolism."

[16] *Contritio* is "perfect" repentance; *attritio* "imperfect" repentance (*contritio imperfecta*, to which category *contritio naturalis* belongs). The former regards sin as the opposite of the highest good; the latter reprehends it not only on account of its wicked and hideous nature but also from fear of punishment.

[17] A religious terminology comes naturally, as the only adequate one in the circumstances, when we are faced with the tragic fate that is the unavoidable concomitant of wholeness. "My fate" means a daemonic will to precisely that fate—a will not necessarily coincident with my own (the ego will). When it is opposed to the ego, it is difficult not to feel a certain "power" in it, whether divine or infernal. The man who submits to his fate calls it the will of God; the man who puts up a hopeless and exhausting fight is more apt to see the devil in it. In either event this terminology is not only universally understood but meaningful as well.

[18] Paracelsus still speaks of the "gods" enthroned in the *mysterium magnum (Philosophia ad Athenienses*, p. 403), and so does the 18th-cent. treatise of Abraham Eleazar, *Uraltes chymisches Werk*, which was influenced by Paracelsus.

[19] Cf. Sanchez, *Opus morale*, Decalog. 2, 49n., 51; and Pignatelli, *Consultationes canonicae*, canon ix.

[1] I must emphasize that this education was not historical, philological, archaeological, or ethnological. Any references to material derived from these fields came unconsciously to the dreamer.

[2] “Mandala” (Sanskrit) means “circle,” also “magic circle.” Its symbolism includes—to mention only the most important forms—all concentrically arranged figures, round or square patterns with a centre, and radial or spherical arrangements.

[3] For this concept see Jung, “Basic Postulates of Analytical Psychology,” and Wolff, “Einführung in die Grundlagen der komplexen Psychologie,” pp. 34ff.

[4] I intentionally omit an analysis of the words “complementary” and “compensatory,” as it would lead us too far afield.

[1] The sea is a favourite place for the birth of visions (i.e., invasions by unconscious contents). Thus the great vision of the eagle in II Esdras 11 : 1 rises out of the sea, and the vision of "Man"—ἄνθρωπος—in 13: 3, 25, and 51 comes up "from the midst of the sea." Cf. also 13 : 52: "Like as thou canst neither seek out nor know the things that are in the deep of the sea: even so can no man upon earth see my Son. …"

[2] Νεκυία from νέκυς (corpse), the title of the eleventh book of the Odyssey, is the sacrifice to the dead for conjuring up the departed from Hades. *Nekyia* is therefore an apt designation for the "journey to Hades," the descent into the land of the dead, and was used by Dieterich in this sense in his commentary on the Codex of Akhmim, which contains an apocalyptic fragment from the Gospel of Peter (*Nekyia: Beiträge zur Erklärung der neuentdeckten Petrusapokalypse*). Typical examples are the *Divine Comedy*, the classical *Walpurgisnacht* in *Faust*, the apocryphal accounts of Christ's descent into hell, etc.

[3] Cf. the French edition of *Hypnerotomachia*, called *Le Tableau des riches inventions* or *Songe de Poliphile* (1600), trans. Béroalde de Verville. (See fig. 4.) [The original Italian edn. appeared in 1499.]

[4] For details see Jung, "Paracelsus as a Spiritual Phenomenon," pars. 179f., 214ff.

[5] Knuchel, *Die Umwandlung in Kult, Magie und Rechtsbrauch*.

[6] A piece of land, often a grove, set apart and dedicated to a god.

[7] For the concept of the "anima," see Jung, "The Relations between the Ego and the Unconscious," pars. 296ff.

[8] Zosimos lived *c*. A.D. 300. Cf. Reitzenstein, *Poimandres*, pp. 9ff.; Berthelot, *Collection des anciens alchimistes grecs*, III, i, 2.

[9] The ladder motif is confirmed in dreams 12 and 13 (pars. 78 and 82). Cf. also Jacob's ladder (fig. 14).

[10] *De errore profanarum religionum:* "Animo descensus per orbem solis tribuitur" (It is said [by the pagans] that the soul descends through the circle of the sun).

[11] *The Golden Ass*.

[12] Cf. Ruska, *Turba*.

[13] Cf. "collective unconscious" in Jung, *Psychological Types*, Def. 56.

[14] The direct source of the Christian sheep symbolism is to be found in the visions of the Book of Enoch 89 : 10ff. (Charles, *Apocrypha and Pseudepigrapha*, II, p. 252). The Apocalypse of Enoch was written about the beginning of the 1st cent. B.C.

[15] In the vision of Enoch, the leader and prince appears first as a sheep or ram: Book of Enoch 89 : 48 (Charles, II, p. 254).

[16] Berthelot, *Collection des anciens alchimistes grecs*, III, i, 2. Cf. also Jung, "The Visions of Zosimos."

[17] Budge, in *Gods of the Egyptians*, I, p. 87, uses this expression.

[18] *Études de mythologie*, II, p. 245.

[19] Cf. the entertaining dialogue between the alchemist and Mercurius in Sendivogius, “Dialogus,” *Theatr. chem*., IV.

[20] Goethe, *Dichtung und Wahrheit*.

[21] Printed in *Geheime Figuren der Rosenkreuzer*.

[22] *Problems of Mysticism and Its Symbolism*.

[23] For water as origin, cf. Egyptian cosmogony, among others.

[24] Wirth, *Aus orientalischen Chroniken*, p. 199.

[25] “A fountain sealed”: Song of Songs 4 : 12.

[26] This is really a normal life-process, but it usually takes place quite unconsciously. The anima is an archetype that is always present. (Cf. Jung, *Psychological Types*, Defs. 48, 49, and “The Relations between the Ego and the Unconscious,” pars. 296ff.) The mother is the first carrier of the anima-image, which gives her a fascinating quality in the eyes of the son. It is then transferred, via the sister and similar figures, to the beloved.

[27] Cf. dream 23 of second series (par. 212, also par. 220).

[28] Concerning the “golden flower” of medieval alchemy (cf. fig. 30), see Adolphus Senior, *Azoth*. The golden flower comes from the Greek *χρνσάνθιον* (Berthelot, *Alch. grecs*, III, xlix. 19) and *χρνσάνθεμον* = ‘golden flower’, a magical plant like the Homeric *μῶλυ*, which is often mentioned by the alchemists. The golden flower is the noblest and purest essence of gold. The same name is sometimes given to pyrites. (Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, p. 70.) The strength of the *aqua permanens* is also called *flos*, ‘flower’ (*Turba*, ed. Ruska, p. 214, 20). *Flos* is used by later alchemists to express the mystical transforming substance. (Cf. “flos citrinus” in *Aurora consurgens;* “flos aeris aureus” in “Consil. coniug., *Ars chemica*,” p. 167; “flos est aqua nummosa [Mercurius]” in “Allegoriae sapientum,” p. 81; “flos operis est lapis” in Mylius, *Philosophia reformata*, p. 30.)

[29] Reprinted in *Artis auriferae*, II, pp. 204ff. (1593) and *Bibliotheca chemica curiosa*, II, pp. 87ff. (1702). My quotations are usually taken from the 1593 version.

[30] As the *Rosarium* says: “Aurum nostrum non est aurum vulgi” (Our gold is not the common gold). *Art. aurif*., II, p. 220.

[31] “Quia lapis noster scilicet argentum vivum occidentale, quod praetulit se auro et vicit illud, est illud quod occidit et vivere facit.”—Ibid., p. 223.

[32] “Intelligite, filii sapientum, quod hic lapis preciosissimus clamat, … et lumen meum omne lumen superat ac mea bona omnibus bonis sunt sublimiora.… Ego gigno lumen, tenebrae autem naturae meae sunt. …” Ibid., p. 239. Concerning the Hermes quotations in *Rosarium*, see infra, par. 140, n. 17.

[33] “Epistola ad Hermannum,” *Theatr. chem*., V, p. 899.

[34] This does not mean that the self is created, so to speak, only during the course of life; it is rather a question of its becoming conscious. The self exists from the very beginning, but is latent, that is, unconscious. Cf. my later explanations.

[35] Foucart, *Les Mystères d’Eleusis*.

[36] [*Histories*, II, 58; trans. Powell, I, p. 137.]

[37] See *Psychological Types*, Def. 18.

[38] Cf. Fleischer, *Hermes Trismegistus*, p. 6; also the spherical form of Plato’s Original Man and the *σφαῖρος* of Empedocles. As in the *Timaeus*, the alchemical *anima mundi*, like the “soul of the substances,” is spherical, and so is the gold (cf. fig. 209). (See Maier, *De circulo physico*, pp. 11f.) For the connection between the *rotundum* and the skull or head, see Jung, “Transformation Symbolism in the Mass,” pp. 239ff.

[39] Cf. St. Augustine’s argument that God is not this sun but he who made the sun (*In Joannis Evang. Tract*., XXXIV, 2) and the evidence of Eusebius, who actually witnessed “Christian” sun-worship (*Constantini Oratio ad Sanctorum Coelum*, VI; Migne, *P.G*., vol. 20, cols. 1245–50).

[40] Béroalde de Verville, in his introduction [“Recueil stéganographique”] to the French translation (1600) of *Hypnerotomachia*, plainly adopts this view.

[41] “He said [it] himself.” The phrase originally alluded to the authority of Pythagoras.

[42] Cf. “Liber Platonis quartorum,” *Theatr. chem*., V, pp. 149ff., 174. This treatise is a Harranite text of great importance for the history of alchemy. It exists in Arabic and Latin, but the latter version is unfortunately very corrupt. The original was probably written in the 10th cent. Cf. Steinschneider, *Die europäischen Übersetzungen aus dem Arabischen*.

[43] Cf. “Paracelsus as a Spiritual Phenomenon,” par. 214.

[44] I wrote this passage in spring, 1935.

[45] For these concepts see Jung, “The Relations between the Ego and the Unconscious.”

[1] Cf. Wilhelm and Jung, *Secret of the Golden Flower*, and Zimmer, *Myths and Symbols in Indian Art and Civilization*.

[2] Avalon, *The Serpent Power*, VII.

[3] Cf. Reitzenstein, *Die hellenistischen Mysterienreligionen*.

[4] The quotation marks indicate that I am not positing anything by the term “metaphysical”: I am only using it figuratively, in the psychological sense, to characterize the peculiar statements made by dreams.

[5] As Meister Eckhart says, “It is not outside, it is inside: wholly within.”—Trans. Evans, p. 8.

[6] [Inasmuch as the five mandala dreams and visions listed in par. 127 necessarily figure in this new series (though actually part of the first dream-series), the author initiated the number sequence of the new—i.e., the mandala—series with them.—EDITORS.]

[7] As the dream at most alludes to me and does not name me, the unconscious evidently has no intention of emphasizing my personal role.

[8] Cf. Jung, *Psychological Types*, ch. X.

[9] Deussen, *Allgemeine Geschichte der Philosophie*, I.

[10] Baynes, *A Coptic Gnostic Treatise*, p. 89.

[11] The Buddha, Shiva, etc., in the lotus (fig. 52); Christ in the rose, in the womb of Mary (ample material on this theme in Salzer, *Die Sinnbilder und Beiworte Mariens);* the seeding-place of the diamond body in the golden flower. Cf. the circumambulation of the square in dream 16, par. 164.

[12] Baynes, *A Coptic Gnostic Treatise*, p. 58. Cf. the Vajramandala (fig. 43), where the great *dorje* is found in the centre surrounded by the twelve smaller *dorjes*, like the one Monad with the “twelve Monads as a crown upon its head.” Moreover there is a *dorje* in each of the four gates.

[13] Baynes. p. 94.

[14] Ibid., p. 70. Similar to the tetramorph, the steed of the Church (fig. 53).

[15] Cf. Irenaeus, *Adversus haereses*, III, xi, and Clement of Alexandria, *Stromata*, V, vi.

[16] *Art. aurif.*, II, pp. 239f. The Hermes quotations come from the fourth chapter of “Tractatus aureus” (*Ars chemica*, pp. 23f., or *Bibl. chem.*, I, pp. 427f).

[17] “Ego gigno lumen, tenebrae autem naturae meae sunt … me igitur et filio meo conjuncto, nihil melius ac venerabilius in mundo fieri potest.” The Hermes sayings as quoted by the anonymous author of the *Rosarium* contain deliberate alterations that have far more significance than mere faulty readings. They are authentic recastings, to which he lends higher authority by attributing them to Hermes. I have compared the three printed editions of the “Tractatus aureus,” 1566, 1610, and 1702, and found that they all agree. The *Rosarium* quotation runs as follows in the “Tractatus aureus”: “Iam Venus ait: Ego genero lumen, nec tenebrae meae naturae sunt … me igitur et fratri meo iunctis nihil melius ac venerabilius” (Venus says: I beget the light, and the darkness is not of my nature … therefore nothing is better or more worthy of veneration than the conjunction of myself and my brother).

[18] Baynes, p. 87.

[19] Cf. Mylius, *Philosophia reformata*, p. 19.

[20] *Art. aurif.*, II, p. 356.

[21] Ibid., p. 359.

[22] Ibid.

[23] Cf. Jung, “The Relations between the Ego and the Unconscious,” pars. 296ff.

[24] The Homeric chain in alchemy is the series of great wise men, beginning with Hermes Trismegistus, which links earth with heaven. At the same time it is the chain of substances and different chemical states that appear in the course of the alchemical process. Cf. *Aurea catena Homeri*.

[25] Jung, “Paracelsus as a Spiritual Phenomenon,” pars. 209ff.

[26] Meister Eckhart says: “‘I came not upon earth to bring peace but a sword; to cut away all things, to part thee from brother, child, mother and friend, which are really thy foes.’ For verily thy comforts are thy foes. Doth thine eye see all things and thine ear hear all things and thy heart remember them all, then in these things thy soul is destroyed.”—Trans. Evans, I, pp. 12–13.

[27] Cf. Jung, “Concerning Rebirth,” pp. 135ff.

[28] Vollers, “Chidher,” p. 235.

[29] *Art. aurif.*, II, p. 239. This is a Hermes quotation from the “Tractatus aureus,” but in the edition of 1566 (*Ars chemica*) it runs: “Largiri vis mihi meum ut adiuvem te” (You want to give me freely what is mine, that I may help you).

[30] A quotation from Aristotle in the *Rosarium*, *Art. aurif.*, II, p. 317, says: “Elige tibi pro lapide, per quem reges venerantur in Diadematibus suis … quia ille est propinquus igni” (Choose for your stone that through which kings are venerated in their crowns … because that [stone] is near to the fire).

[31] Cf. the treatise of Komarios, in which Cleopatra explains the meaning of the water (Berthelot, *Collection des anciens alchimistes grecs*, IV, xx).

[32] *Rosarium, Art. aurif.*, II, p. 378: “Lapis noster hic est ignis ex igne creatus et in ignem vertitur, et anima eius in igne moratur” (This our stone is fire, created of fire, and turns into fire; its soul dwells in fire). This may have been based on the following: “Item lapis noster, hoc est ignis ampulla, ex igne creatus est, et in eum vertitur” (Likewise this our stone, i.e., the flask of fire, is created out of fire and turns back into it).—“Allegoriae sapientum,” *Bibl. chem. curiosa*, I. p. 468a.

[33] *Aqua nostra* is also called *aqua permanens*, corresponding to the *ὕδωρ θεῖον* of the Greeks: “aqua permanens, ex qua quidem aqua lapis noster pretiosissimus generatur,” we read in the “Turba philosophorum,” *Art. aurif.*, I, p. 14. “Lapis enim est haec ipsa permanens aqua et dum aqua est, lapis non est” (For the stone is this selfsame permanent water; and while it is water it is not the stone).—Ibid., p. 16. The commonness of the “water” is very often emphasized, as for instance in ibid., p. 30. “Quod quaerimus publice minimo pretio venditur, et si nosceretur, ne tantillum venderent mercatores” (What we are seeking is sold publicly for a very small price, and if it were recognized, the merchants would not sell it for so little).

[34] The alchemists give only obscure hints on this subject, e.g., the quotation from Aristotle in *Rosarium (Art. aurif.*, II, p. 318): “Fili, accipere debes de pinguiori carne” (Son, you must take of the fatter flesh). And in the “Tractatus aureus,” ch. IV, we read: “Homo a principio naturae generatur,

cuius viscera carnea sunt” (Man is generated from the principle of Nature whose inward parts are fleshy).

[35] Cf. “Paracelsus as a Spiritual Phenomenon,” pars. 185ff.

[36] *Von hylealischen Chaos*, p. 204.

[37] “… having a desire to be dissolved and to be with Christ” (Phil. (D.V.) 1 : 23).

[38] The “magnesia” of the alchemists has nothing to do with magnesia (MgO). In Khunrath (ibid., p. 161) it is the “materia coelestis et divina,” i.e., the “materia lapidis Philosophorum,” the arcane or transforming substance.

[39] Ibid., p. 203.

[40] Ibid., p. 207.

[41] There is a figurative representation of this idea in Maier, *Scrutinium chymicum:* Emblema XXI. But Maier interprets the *ternarius* differently (cf. fig. 60). He says (p. 63): “Similiter volunt Philosophi quadrangulum in triangulum ducendum esse, hoc est, in corpus, spiritum et animam, quae tria in trinis coloribus ante rubedinem praeviis apparent, utpote corpus seu terra in Saturni nigredine, spiritus in lunari albedine, tanquam aqua, anima sive aer in solari citrinitate. Tum triangulus perfectus erit, sed hic vicissim in circulum mutari debet, hoc est in rubedinem invariabilem.” (Similarly the philosophers maintain that the quadrangle is to be reduced to a triangle, that is, to body, spirit, and soul. These three appear in three colours which precede the redness: the body, or earth, in Saturnine blackness; the spirit in lunar whiteness, like water; and the soul, or air, in solar yellow. Then the triangle will be perfect, but in its turn it must change into a circle, that is into unchangeable redness.) Here the fourth is fire, and an *everlasting* fire.

[42] Cf. “city” and “castle” in commentary to dream 10, pars. 137ff. (See figs. 31, 50, 51.) The alchemists similarly understand the *rotundum* arising out of the square as the *oppidum* (city). See Aegidius de Vadis, “Dialogus inter naturam et filium Philosophiae,” *Theatr. chem*., II, p. 115.

[43] A quotation attributed to Pseudo-Aristotle (“Tractatus Aristotelis,” *Theatr. chem*., V, pp. 880ff.), but not traceable.

[44] In the *Tractatus aureus … cum Scholiis Dominici Gnosii* (1610), p. 43, there is a drawing of the “secret square of the sages.” In the centre of the square is a circle surrounded by rays of light. The scholium gives the following explanation: “Divide lapidem tuum in quatuor elementa … et coniunge in unum et totum habebis magisterium” (Reduce your stone to the four elements … and unite them into one and you will have the whole magistery)—a quotation from Pseudo-Aristotle. The circle in the centre is called “mediator, pacem faciens inter inimicos sive elementa imo hic solus efficit quadraturam circuli” (the mediator, making peace between enemies, or [the four] elements; nay rather he alone effects the squaring of the circle).—Ibid., p. 44. The circumambulation has its parallel in the “circulatio spirituum sive distillatio circularis, hoc est exterius intro, interius foras: item inferius et superius, simul in uno circulo conveniant, neque amplius cognoscas. quid vel exterius, vel interius, inferius vel superius fuerit: sed omnia sint unum in uno circulo sive vase. Hoc enim vas est Pelecanus verus Philosophicus, nec alius est in toto mundo quaerendus.” (… circulation of spirits or circular distillation, that is, the outside to the inside, the inside to the outside, likewise the lower and the upper; and when they meet together in one circle, you could no longer recognize what was outside or inside, or lower or upper; but all would be one thing in one circle or vessel. For this vessel is the true philosophical Pelican, and there is no other to be sought for in all the world.) This process

is elucidated by the accompanying drawing. The little circle is the “inside,” and the circle divided into four is the “outside”: four rivers flowing in and out of the inner “ocean.”—Ibid., pp. 262f.

[52] It was considered at length in my “Psychology and Religion.” pp. 24ff.

[53] Orphic mosaic from Tramithia (Eisler, *Orpheus—the Fisher*, pp. 271f.). We can take this inscription as a joke without offending against the spirit of the ancient mysteries. (Cf. the frescoes in the Villa dei Misteri in Pompeii—Maiuri, *La Villa dei Misteri*—where drunkenness and ecstasy are not only closely related but actually one and the same thing.) But, since initiations have been connected with healing since their earliest days, the advice may possibly be a warning against water drinking, for it is well known that the drinking water in southern regions is the mother of dysentery and typhoid fever.

[54] Eisler, *Orpheus—the Fisher*.

[55] This is roughly the opinion of the dreamer.

[56] Cf. figs. 170, 171, 172, 174, 176, 177.

[57] Arnobius, *Adversus gentes*, V, 21 (Migne. *P.L.*, vol. 5, col. 1125). For similar practices during the Middle Ages, cf. Hammer-Purgstall, *Mémoire sur deux coffrets gnostiques du moyen age*. See fig. 70.

[58] Avalon, *The Serpent Power;* Woodroffe, *Shakti and Shakta*.

[59] The alchemists refer to Lactantius, *Opera*, I, p. 14, 20: “a chao, quod est rudis inordinataeque materiae confusa congeries” (from the chaos, which is a confused assortment of crude disordered matter).

[60] Dreyfuss, *Adam und Eva*, quoted by Reitzenstein, *Poimandres*, p. 258.

[61] Pseudonymous author (“peaceable lover of truth”) who lived in England at the beginning of the 17th century.

[62] Philalethes, *Ripley Reviv’d*, p. 100.

[63] [Cf. *Mysterium Coniunctionis*, p. 288, n. 116.—EDITORS.]

[64] Cf. the commentary to dream 10, second series, par. 141: “And, being chained to the arms and breast of my mother, and to her substance, I cause my substance to hold together and rest.” (“Tractatus aureus,” ch. IV.)

[65] The idea of the anima as I define it is by no means a novelty but an archetype which we meet in the most diverse places. It was also known in alchemy, as the following scholium proves (“Tractatus aureus,” in *Bibl. chem. curiosa*, I, p. 417): “Quemadmodum in sole ambulantis corpus continuo sequitur umbra … sic hermaphroditus noster Adamicus, quamvis in forma masculi appareat semper tamen in corpore occultatam Evam sive foeminam suam secum circumfert” (As the shadow continually follows the body of one who walks in the sun, so our hermaphroditic Adam, though he appears in the form of a male, nevertheless always carries about with him Eve, or his wife, hidden in his body).

[66] Cf. Jung, *Psychological Types*, Def. 30.

[67] “Tractatus aureus,” *Ars chemica*, p. 12: “Verum masculus est coelum foeminae et foemina terra masculi” (The male is the heaven of the female, and the female is the earth of the male).

[68] *Adversus Judaeos*, 13 (Migne, *P.L.*, vol. 2, col. 655).

[69] Alchemy regarded this synthesis as one of its chief tasks. The *Turba philosophorum* (ed. Ruska, p. 26) says: “Coniungite ergo masculinum servi rubei filium suae odoriferae uxori et iuncti artem gignunt” (Join therefore the male son of the red slave to his sweet-scented wife, and joined together they will generate the Art). This synthesis of opposites was often represented as a brother-and-sister incest, which version undoubtedly goes back to the “Visio Arislei,” *Art. aurif.*, I (see fig. 167), where the cohabitation of Thabritius and Beya, the children of the *Rex marinus*, is described (see infra, pars. 434ff.).

[70] [Based on the translation by Philip Wayne (*Faust, Part Two*, pp. 145f.). Slight modifications have been necessary to accommodate his version to Jung’s commentary.—TRANS.]

[71] The *testudo* (tortoise) is an alchemical instrument, a shallow bowl with which the cooking-vessel was covered on the fire. See Rhenanus, *Solis e puteo emergentis*, p. 40.

[72] Jung, *Symbols of Transformation*, index, s.v.

[73] *Art. aurif.*, II, p. 220: a quotation from Senior. *Viriditas* is occasionally called *azoth*, which is one of the numerous synonyms for the stone.

[74] According to Berthelot (*Origines de I’alchimie*, p. 100), the anonymous author called Christianos was a contemporary of Stephanos of Alexandria, and must therefore have lived about the beginning of the 7th century.

[75] Berthelot, *Alchimistes grecs*, VI, v, 6. The almost bestial κραυγάζειν (shriek) points to an ecstatic condition.

[76] A treatise (of Arabic origin?) is ascribed to her under the title “Practica Mariae Prophetissae in artem alchemicam,” *Art. aurif.*, I, pp. 319ff.

[77] *Panarium*, XXVI. Concerning further possible connections with Mariamne and with the Mary Magdalene of the *Pistis Sophia*, cf. Leisegang, *Die Gnosis*, pp. 113f., and Schmidt, “Gnostische Schriften,” pp. 596ff. [On *Panarium*, cf. *Aion*, pars. 314ff.]

[78] Aros = Horos. Ισις προφῆτις τῷ υἱῷ αὐτῆς (Berthelot, *Alchimistes grecs*, I, xiii) may be an earlier version of the Maria dialogue. Isis and Maria were easy to confuse.

[79] “Matrimonifica gummi cum gummi vero matrimonio.”—*Art. aurif.*, I, p. 320.

[82] *Ars chemica*, pp. 247, 255.

[83] Arnaldus de Villanova (“Carmen,” *Theatr. chem.*, IV, p. 614) has summed up the quintessence of Maria’s treatise very aptly in the following verses:

> “Maria mira sonat breviter, quod talia tonat.
> Gummis cum binis fugitivum figit in imis.…
> Filia Plutonis consortia iungit amoris,
> Gaudet in assata sata per tria sociata.”

(Maria utters brief wonders because such are the things that she thunders. She fixes what runs to the bottom with double-strong gums.… This daughter of Pluto unites love’s affinities, Delighting in everything sown, roasted, assembled by threes.)

[84] Cf. my remarks on Paracelsus’ “Adech” in “Paracelsus as a Spiritual Phenomenon,” pars. 168, 203ff.

[85] 1. 4. 3. (Cf. Max Müller, *The Upanishads*, II, pp. 85–86.)

[86] There is a rather different formulation in Distinction XIV of the “Allegoriae sapientum” (*Theatr. chem.*, V, p. 86): “Unum et est duo, et duo et sunt tria, et tria et sunt quatuor, et quatuor et sunt tria, et tria et sunt duo, et duo et sunt unum” (One, and it is two; and two, and it is three; and three, and it is four; and four, and it is three; and three, and it is two; and two, and it is one). This evidently represents the quartering (tetrameria) of the one and the synthesis of the four in one.

[87] In Sudhoff/Matthiessen, XII.

[88] Folio VIII^{V}. The *aqua mercurialis* is characterized here as the “bright and clear fluid of Bacchus.” The king and the son are united in the operation, so that at the end only the renewed king and his five servants are left. The *senarius* (sixth) plays a modest role only in later alchemy.

[89] Paracelsus, *Opera*, ed. Huser, I, p. 503.

[90] The angels bear Faust’s “immortal part” to heaven, after cheating the devil of it. This, in the original version, is “Faust’s entelechy.”

[91] Cf. the movements of the transforming substance in the “Tabula smaragdina” (*De alchemia*, p. 363).

[92] “Suo nobis descensu suavem ac salubrem dedicavit ascensum.” *Sermo IV de Ascensione Domini* (Migne, *P.L.*, vol. 183, col. 312).

[95] *Von dem dreyfachen Leben*, ch. IX, 58f.

[96] *De signatura rerum*, ch. XIV, 15 (trans. Bax, p. 179).

[97] Ibid., 16 (p 179).

[98] Ibid.

[99] Ibid., IV, 28 (Bax, p. 37).

[100] Cf. Jung, “The Psychology of the Child Archetype.”

[101] Böhme, *De signatura rerum*, ch. IV, 27 (Bax, p. 37).

[102] Böhme, *Gespräch einer erleuchteten und unerleuchteten Seele*, 11–24.

[103] *Rosarium, Art. aurif.*, II, p. 214.

[104] Ibid., p. 213: “Nec intrat in eum [lapidem], quod non sit ortum ex eo, quoniam si aliquid extranei sibi apponatur, statim corrumpitur” (Nothing enters into it [the stone] that did not come from it; since, if anything extraneous were to be added to it, it would at once be spoilt).

[105] Petronius, *Satyricon*, par. 38: “Phantasia non homo” (He’s a fantasy, not a man).

[106] Prescription for preparation of the *lapis* (Hermes quotation in *Rosarium, Art. aurif.*, II, p. 317): “Fili, extrahe a radio suam umbram: accipe ergo quartam partem sui, hoc est, unam partem de fermento et tres partes de corpore imperfecto,” etc. (Son, extract from the ray its shadow: then take a fourth part of it, i.e., one part of the ferment and three parts of the imperfect body, etc.). For *umbra*, see ibid., p. 233: “Fundamentum artis est sol et eius umbra” (The basis of the art is the sun and its shadow) (fig. 81). The above quotation gives only the sense of the “Tractatus aureus” and is not literal.

[107] Cf. dream 58, par. 304. The alchemical vulture, eagle, and crow are all essentially synonymous.

[108] This quotation from Hermes is likewise an arbitrary reading. The passage runs literally: “Ego sum albus nigri et rubeus albi et citrinus rubei et certe veridicus sum” (I am the white of the black, and the red of the white, and the yellow of the red, and I speak very truth). In this way three meanings are expressed by four colours, in contrast to the formula of Hortulanus which attributes four natures and three colours to the *lapis.—De alchemia*, p. 372.

[109] *Art. aurif.*, II, p. 207: “Lapis noster est ex quatuor elementis.”

[110] Ibid., p. 208: “In auro sunt quatuor elementa in aequali proportione aptata.”

[111] Ibid., p. 317: “Recipe de simplicissimo et de rotundo corpore, et noli recipere de triangulo vel quadrangulo sed de rotundo: quia rotundum est propinquius simplicitati quam triangulus. Notandum est ergo, quod corpus simplex nullum habens angulum, quia ipsum est primum et posterius in planetis, sicut Sol in stellis.”

[112] A quotation from Ademarus (ibid., p. 353): “[Lapis] nihilominus non funditur, nec ingreditur, nec permiscetur, sed vitrificatur” (But [the stone] can neither be melted nor penetrated nor mixed but is made as hard as glass).

[113] There are very interesting parapsychological parallels to this, but I cannot enter upon them here.

[114] See pars. 245f., 258f.; and my commentary on *The Secret of the Golden Flower*, ch. I, sec. 2.

[115] Valli, “Die Geheimsprache Dantes.”

[116] Cf. “Rosarius minor,” *De alchemia*, p. 309.

[117] “Symbola Pythagore phylosophi” in Ficino, *Auctores platonici*, Fol. X, III, says: “Ab eo, quod nigram caudam habet abstine, terrestrium enim deorum est” (Keep your hands from that which has a black tail, for it belongs to the gods of the earth).

[118] Although the theme of this study does not permit a full discussion of the psychology of dreams, I must make a few explanatory remarks at this point. Sitting together at one table means relationship, being connected or “put together.” The round table indicates that the figures have been brought together for the purpose of wholeness. If the anima figure (the personified unconscious) is separated from ego-consciousness and therefore unconscious, it means that there is an isolating layer of personal unconscious embedded between the ego and the anima. The existence of a personal unconscious proves that contents of a personal nature which could really be made conscious are being kept unconscious for no good reason. There is thus an inadequate or even non-existent consciousness of the shadow. The shadow corresponds to a negative ego-personality and includes all those qualities we find painful or regrettable. Shadow and anima, being unconscious, are then contaminated with each other, a state that is represented in dreams by “marriage” or the like. But if the existence of the anima (or the shadow) is accepted and understood, a separation of these figures ensues, as has happened in the case of our dreamer. The shadow is thus recognized as belonging, and the anima as not belonging, to the ego.

[119] Cf. what I have said about the anima in “The Archetypes of the Collective Unconscious.” pars. 53ff. In Hermes’ treatise, *An die menschliche Seele*, she is called “the highest interpreter and nearest custodian (of the eternal),” which aptly characterizes her function as mediator between conscious and unconscious.

[120] *Rosarium, Art. aurif.*, II, p. 237.

[121] Ibid., p. 238.

[122] P. 236.

[123] P. 231.

[124] The uterus is the centre, the life-giving vessel (fig. 87). The stone, like the grail, is itself the creative vessel, the *elixir vitae*. It is surrounded by the spiral, the symbol of indirect approach by means of the *circumambulatio*.

[125] The centre of the mandala corresponds to the calyx of the Indian lotus, seat and birthplace of the gods. This is called the *padma*, and has a feminine significance. In alchemy the *vas* is often understood as the uterus where the “child” is gestated. In the Litany of Loreto, Mary is spoken of three times as the “vas” (“vas spirituale.” “honorabile,” and “insigne devotionis”) and in medieval poetry she is called the “flower of the sea” which shelters the Christ (cf. dream 36). The grail (fig. 88) is closely related to the Hermetic vessel: Wolfram von Eschenbach calls the stone of the grail “lapsit exillis.” Arnold of Villanova (d. ?1312) calls the *lapis* “lapis exilis,” the uncomely stone (*Rosarium, Art. aurif.*, II, p. 210), which may be of importance for the interpretation of Wolfram’s term.

[126] See Avalon, *The Serpent Power*.

[127] Synonymous with the “golden flower.”

[128] Projection is considered here a spontaneous phenomenon, and not the deliberate extrapolation of anything. It is not a phenomenon of the will.

[129] “In polo est cor Mercurii, qui verus est ignis, in quo requies est Domini sui, navigans per mare hoc magnum … cursum dirigat per aspectum astri septentrionalis”—Philalethes, “Introitus apertus,” *Musaeum hermeticum*, p. 655.

[130] See “Paracelsus as a Spiritual Phenomenon,” pars. 229, 237.

[131] “Disturbed” mandalas occur from time to time. They consist of all forms that deviate from the circle, square, or regular cross, and also of those based not on the number four but on three or five. The numbers six and twelve are something of an exception. Twelve can be based on either four or three. The twelve months and the twelve signs of the zodiac are definite symbolic circles in daily use. And six is likewise a well-known symbol for the circle. Three suggests the predominance of ideation and will (trinity), and five that of the physical man (materialism).

[132] Cf. the psychological functions in *Psychological Types*, ch. X.

[133] *Psychological Types*, pars. 556ff.

[134] “Ait autem ipse salvator: Qui iuxta me est, iuxta ignem est, qui longe est a me, longe est a regno” (The Saviour himself says: He that is near me is near the fire. He that is far from me is far from the kingdom).—Origen, *Homiliae in Jeremiam*, XX, 3; cited in James, *Apocryphal New Testament*, p. 35.

[135] Book of Enoch 18 13 and ch. 21 (Charles, *Apocrypha and Pseudepigrapha*, II, pp. 200, 201).

[136] A more detailed commentary on this dream is to be found in Jung, “Psychology and Religion,” pars. 59ff.

[137] This vision is treated in greater detail in Jung, “Psychology and Religion,” pars. 112ff.

[138] Bischoff, *Die Elemente der Kabbalah*, I, pp. 63ff. Further associations with “32” on pp. 175ff.

[139] Agrippa, *De incertitudine*, II, ch. XV.

[140] Franck, *Die Kabbala*, p. 137.

[141] Knorr von Rosenroth, *Kabbala denudata*, I, p. 602.

[142] Allendy, *Le Symbolisme des nombres*, p. 378.

[143] Bas-relief at Philae (Budge, *Osiris and the Egyptian Resurrection*, I, p. 3); and *The Book of the Dead* (1899), Papyrus of Hunefer, pl. 5. Sometimes there are three with animal heads and one with a human head, as in the Papyrus of Kerasher (ibid.). In a 7th-century manuscript (Gellone) the evangelists actually wear their animal heads, as in several other Romanesque monuments.

[144] So called by Melito of Sardis, *De baptismo*, in Pitra, *Analecta sacra*, II, p. 5.

[145] Delacotte, *Guillaume de Digulleville*.

[146] An idea which corresponds to dream 21 (par. 198), of the large sphere containing many little spheres.

[147] Cf. my remarks on “inflation” in “The Relations between the Ego and the Unconscious,” pars. 227ff.

[148] Cf. my commentary on *The Secret of the Golden Flower*, pars. 31ff. Cf. also “Concerning Mandala Symbolism.”

[149] Revised edition: *Symbols of Transformation*.

[150] In the cloisters of Basel Cathedral.

[151] This was observed chiefly in men, but whether it was mere chance I am unable to say.

[152] Observed mainly in women. But it occurs so rarely that it is impossible to draw any further conclusions.

[153] I have mentioned only a few of these parallels here.

[154] The image that presents itself in this material as a goal may also serve as the origin when viewed from the historical standpoint. By way of example I would cite the conception of paradise in the Old Testament, and especially the creation of Adam in the Slavonic Book of Enoch. Charles, *Apocrypha and Pseudepigrapha*, II, 425ff.; Förster, “Adams Erschaffung und Namengebung.”

[155] If we divide the four hundred dreams into eight groups of fifty each, we come to the following results:

I	. . . .	6	mandalas
II	. . . .	4	”
III	. . . .	2	”
IV	. . . .	9	”
V	. . . .	11	”
VI	. . . .	11	”
VII	. . . .	11	”
VIII	. . . .	17	”

So a considerable increase in the occurrence of the mandala motif takes place in the course of the whole series.

[156] “The most natural and perfect work is to generate its like.”

[1] An alarming example of this kind of “alchemy” is to be found in the illustrated work *Geheime Figuren der Rosenkreuzer*, belonging to the 16th and 17th centuries. The so-called Sachse Codex, belonging to the first half of the 18th century, also gives an excellent idea of this amazing literature. (Cf. Hall, *Codex Rosae Crucis*.)

[2] “Spiritual Development as Reflected in Alchemy and Related Disciplines.”

[3] *La tradizione ermetica*.

[4] This word comes from *íós* (poison). But since it has about the same meaning as the red tincture of later alchemy I have translated *iosis* as “reddening.”

[5] This is particularly evident in the writings of Dorn, who violently attacked the quaternity from the trinitarian standpoint, calling it the “quadricornutus serpens” (four-horned serpent). See Jung, “Psychology and Religion,” pars. 103f.

[6] Cf. Jung, “Paracelsus as a Spiritual Phenomenon,” pars. 165ff., 203ff.

[7] *Rosarium*, *Art. aurif*., II, p. 264: the *aqua permanens* is the “fiery form of the true water.” Ripley, *Opera omnia chemica*, p. 62: “Anima aerea est secretus ignis nostrae philosophiae, oleum nostrum, nostra aqua mystice” (The aerial soul is the secret fire of our philosophy, our oil, our mystic water). “Figurarum Aegyptiorum secretarum” (MS. in author’s coll.), p. 6: “The water of the philosophers is fire.” Philalethes, “Introitus apertus,” *Mus. herm*., p. 653: “Est nempe in Aqua nostra requisitus … Ignis” etc. (For in our water fire … is sought). *Aurora* I, ch. XI, parab. VI: Senior saith: “And when they desire to extract this divine water, which is fire, they warm it with their fire, which is water, which they have measured unto the end and have hidden on account of the unwisdom of fools.” *Aurora* II, *Art. aurif*., I, p. 212 (quotation from Senior): “Ignis noster est aqua.” Ibid., p. 227: “Philosophus autem per aquam, vulgus vero per ignem” (The philosopher through water, ordinary people through fire).

[8] Zosimos, in Berthelot, *Alch. grecs*, III, lii, 2.

[9] “Turba philosophorum,” *Art. aurif*., I, p. 14: “… aqua permanens, ex qua quidem aqua lapis noster preciosissimus generatur” (… the permanent water, out of which water our most precious stone is generated). “Con., coniug.” *Ars chem*., p. 128: “Lapidem esse aquam fontis vivi” (That stone is water of a living fountain).

[10] Ibid., p. 66: “Vita uniuscuiusque rei … est vivum quod non moritur, quamdiu mundus est, quia est caput mundi” etc. ([Water is] the life of everything; it is alive because it does not die as long as the world exists, for it is the head [i.e., principle] of the world).

[11] Scites, Frictes, Feritis = Socrates (*Turba* [ed. Ruska], p. 25).

[12] Bonellus, Balinus, Belinus = Apollonius of Tyana (Steinschneider and Berthelot, cited in Ruska, ibid., p. 26).

[13] “In Turbam philosophorum exercitationes,” *Art. aurif*., I, p. 167.

[14] For instance, “Unum in uno circulo sive vase” (One in one circle or vessel).—Scholia to the Hermetic “Tractatus aureus,” *Bibl. chem. curiosa*, I, p. 442.

[15] Therefore it is called “domus vitrea sphaeratilis sive circularis” (the spherical or circular house of glass).—“Epistola ad Hermannum,” *Theatr. chem*., V, p. 896. The *vas* is a “sphaera, quam cribrum vocamus” (sphere, which we call a sieve).—“Allegoriae super librum Turbae,” *Art. aurif*., I, p. 144.

This idea appears as early as Greek alchemy, for instance in Olympiodorus (Berthelot, *Alch. grecs*, II, iv, 44, 11. 17–18). The *vas* is an ὄργανον κυκλικόν, a φιάλη σφαιροειδής (a circular instrument, a phial of spherical shape).

[16] "Vas spagiricum ad similitudinem vasis naturalis construendum. Videmus enim totum caelum et elementa similitudinem habere sphaerici corporis, in cuius centro viget ignis calor inferioris … necessarium igitur fuit nostrum ignem poni extra nostrum vas, et sub eius rotundi fundi centro, instar solis naturalis." (The spagyric vessel is to be constructed after the model of the natural vessel. For we see that the whole sky and the elements resemble a spherical body, in the centre of which lives the heat of the lower fire.… It was therefore necessary to put our fire outside our vessel, beneath the centre of its rounded base, like the natural sun.)—Dorn, "Physica Trismegisti," *Theatr. chem*., I, p. 430. "Vas est sicut opus Dei in vase germinis divi" (The vessel is like the work of God in the vessel of divine germination). "Vas autem factum est rotundum ad imitationem superi[oris] et inferi[oris]" (The vessel is made round, in imitation of the upper and the lower).—"Liber Platonis quartorum," *Theatr. chem*., V, pp. 148, 152. Reitzenstein (*Poimandres*, p. 141) is therefore justified in comparing the *vas mirabile* on the head of the angel (in the treatise "Isis to Horus" in Berthelot, *Alch. grecs*, I, xiii, 1) to the κύκλος δισκοειδής on the head of Chnuphis in Porphyry. (Cf. fig. 203.)

[17] Dorn, "Congeries," *Theatr. chem*., I, p. 574: "Vas nostrum ad hunc modum esse debet, ut in eo materia regi valeat a caelestibus corporibus. Influentiae namque caelestes invisibiles et astrorum impressiones apprime necessariae sunt ad opus." (Our vessel must be such that in it matter can be influenced by the heavenly bodies. For the invisible celestial influences and the impressions of the stars are necessary to the work.)

[18] *Vas* as *matrix:* Ripley, *Opera omnia*, p. 23; "In Turbam philosophorum exercitationes," *Art. aurif*., I, p. 159; *Aurora* II, *Art. aurif*., I, p. 203; "Consil. coniug.," *Ars chem*., p. 204.

[19] Ripley, *Opera omnia*, p. 30: "In uno vitro debent omnia fieri, quod sit forma ovi" (Everything must be done in one glass, which must be egg-shaped).

[20] Philalethes, "Fons chymicae veritatis," *Mus. herm*., p. 803: "Quum igitur de vase nostro loquimur, intellige aquam nostram, quum de igne, itidem aquam intellige, et quum de furno disputamus, nihil ab aqua diversum aut divisum volumus" (When, therefore, we speak of "our vessel," understand "our water"; when we speak of fire, again understand water; and when we discuss the furnace, we mean nothing that is different or distinct from water). Mercurius, i.e., the *aqua permanens*, is "vas nostrum verum occultum, hortus item Philosophicus, in quo Sol noster orietur et surgit" (our true hidden vessel, and also the Philosophical Garden in which our sun rises and ascends). (Philalethes, "Metallorum metamorphosis," *Mus. herm*., p. 770.) Other names are *mater, ovum, furnus secretus*, etc. (Ibid., p. 770; also *Aurora* II, *Art. aurif*., I, p. 203). "The vessel of the Philosophers is their water" (Hermes quotation in Hoghelande, "De alchimiae difficultatibus," *Theatr. chem*., I, p. 199).

[21] *Vas = ignis verus* (Philalethes, "Metallorum metamorphosis," *Mus. herm*., p. 770) and *vinum ardens, ignis* (Mylius, *Philosophia reformata*, p. 245). "[Vas Hermetis] est mensura ignis tui" (The vessel of Hermes is the measure of your fire). "Practica Mariae," *Art. aurif*., I, p. 323. In the alchemical commentary ("Recueil stéganographique") to Béroalde de Verville's *Songe de Poliphile*, fire and water are interpreted morally as "flames and tears."

[22] Quercetanus, "De ortu et causis metallorum," *Theatr. chem*., II, pp. 198ff.

[23] Even Meyrink (in the 20th century) still believed in the possibility of the alchemical procedure. We find a remarkable report of his own experiments in his introduction to *Aquinas: Abhandlung über*

den Stein, pp. xxixff.

[1] Evola (*La tradizione ermetica*, pp. 28f.) says: "The spiritual constitution of man in the premodern cycles of culture was such that each physical perception had simultaneously a psychic component which 'animated' it, adding a 'significance' to the bare image, and at the same time a special and potent emotional tone. Thus ancient physics was both a theology and a transcendental psychology, by reason of the illuminating flashes from metaphysical essences which penetrated through the matter of the bodily senses. Natural science was at once a spiritual science, and the many meanings of the symbols united the various aspects of a single knowledge."

[2] *Rosarium, Art. aurif.*, II, p. 231: "Et ille dicitur lapis invisibilitatis, lapis sanctus, res benedicta" (And it is called the stone of invisibility, the sacred stone, the blessed thing).

[3] Maier, *Symbola aureae mensae*, p. 386: "… non parvis sumptibus illam invenere artem,/Qua non ars dignior ulla est,/Tingendi lapidem Aetherium …" (… not with small expense did they find that art, than which there is no more worthy art; the art of tincturing the ethereal stone). This is a reference to Marcellus Palingenius, "poeta et sacerdos," and his group.

[4] "Omnes receptae spernendae sunt in arte" (*Rosarium, Art. aurif.*, II, p. 223).

[5] Jurain, *Hyle und Coahyl; aus dem Aethiopischen ins Lateinische, und aus dem Lateinischen in das Teutsche translatiret und übergesetzt durch D. Johann Elias Müller* (Hamburg, 1732). The text is by no means old, and bears all the traits of the decadent period (18th century). I am indebted to Prof. Th. Reichstein (Basel) for introducing me to this little book.

[6] Rose noble = English gold coin of the 15th and 16th centuries.

[7] "De alchimiae difficultatibus," *Theatr. chem.*, I, p. 164. Likewise Philalethes, "Introitus apertus," *Mus. herm.*, p. 687: "Terra enim germinandi avida aliquid semper fabricat, interdum aves aut bestias reptiliaque in vitro conspicere imaginabere …" (The earth, being eager to germinate, always produces something; sometimes you will imagine that you see birds or beasts or reptiles in the glass). The man on the cathedra undoubtedly refers to a vision of Hermes such as can be found in the old treatise *Senioris Zadith filii Hamuelis Tabula chymica*, pp. 1ff. (see fig. 128). Senior was an Arabic author of the 10th century. The figure as depicted in the treatise, of a wise old man holding the book of secrets on his knees, was taken over in the frontispiece of Béroalde de Verville, *Le Songe de Poliphile* (see fig. 4). The oldest vision extant of this kind is perhaps that of Krates. The "Book of Krates" was handed down in Arabic and—in its present form—would appear to belong to the 9th century, but the greater part of it is of Greek origin and therefore considerably older. Berthelot gives the following passage: "Then I saw an old man, the handsomest of men, sitting in a chair. He was dressed in white, and was holding in his hand a board from the chair, on which rested a book.… When I asked who this old man was, I was told: He is Hermes Trismegistus, and the book he has in front of him is one of those which contain the explanation of the secret things he has hidden from men." (*La Chimie au moyen âge*, III, pp. 46ff.)

[8] "De alch. diff.," *Theatr. chem.*, I, p. 199. It is not clear whether by "scripture" he means the traditional description of the vessel in the treatises of the masters, or the Holy Scripture.

[9] Sendivogius, "Novum lumen," *Mus. herm.*, p. 574.

[10] "Compendium," *Bibl. chem. curiosa*, I, p. 875.

[11] "Speculativa philosophia," *Theatr. chem.*, I, p. 275.

[12] Hoghelande, "De alch. diff.," *Theatr. chem.*, I, p. 150.

[13] Text of the operative passage: “… quasi Materia Hypostatica fingit se in aquam demersum per illusionem. …” The illusion could refer to *demergere* or to *fingere*. Since the former makes no sense I have chosen the latter possibility.

[14] *Theatr. chem*., V, p. 884.

[15] *Della tramutatione metallica*. A song by Josephus Avantius about Nazari runs: “Somnia credentur vix; non tamen omnia falsa, / Quae tali fuerint praemeditata viro” (The dreams will hardly be believed; they are not, however, all false that were meditated by such a man).

[16] *Art. aurif*., I, pp. 146ff.

[21] *Von hylealischen Chaos*, p. 185.

[22] Similar views in Hoghelande, “De alch. diff.,” *Theatr. chem*., I, p. 154; *Turba*, ed. Ruska, p. 155, 8; and Dorn, “Physica Trismegisti,” *Theatr. chem*., I, p. 413; and these tracts in *Musaeum hermeticum:* “Tractatus aureus,” p. 8; Madathanus, “Aureum saeculum,” p. 55; “Aquarium sapientum,” p. 75; “Gloria mundi,” p. 212.

[23] “De alch. diff.,” *Theatr. chem*., I, p. 194. He refers there to *Turba* XXXIX (ed. Ruska, p. 147, 2): “Maius est, quam quod ratione percipiatur [nisi] divina inspiratione” (It is too great to be conceived by reason without divine inspiration).

[24] “De alch. diff.,” p. 205.

[25] Sendivogius, “Novum lumen,” *Mus. herm*., p. 577: “Materia prima, quam solus Deus scit.”

[26] Khunrath, *Von hyleal. Chaos*, pp. 71f. Note the implied reference to the Logos (John 1 : 9–11).

[27] “Instructio de arbore,” *Theatr. chem*., VI, p. 168. [Though Espagnet is held on good authority to be the author of this work and it is listed under his name in the bibliography for purposes of reference, his authorship is controversial.—EDITORS.]

[28] “Quaeso, oculis mentis hanc grani tritici arbusculam secundum omnes suas circumstantias aspice, ut arborem Philosophorum plantare … queas.”

[29] *Theatr. chem*., I, p. 472: “Ex aliis nunquam unum facies quod quaeris, nisi prius ex te ipso fiat unum.”

[30] Probably a reference to the “Tabula smaragdina” (ed. Ruska, p. 2): “Et sicut omnes res fuerunt ab uno, meditatione unius: sic omnes res natae,” etc. (And as all things proceed from the One, through the meditation of the One, so all things are born … etc.). Hence the rule that the alchemist must not have any serious physical defects, mutilated limbs, etc. See Geber, *Summa perfectionis,* Lib. I: “Si vero fuerit artificis corpus debile et aegrotum, sicut febrientium, vel leprosorum corpora, quibus membra cadunt, et in extremis vitae laborantium, et iam aetatis decrepitae senum ad artis

complementum non perveniet. His igitur naturalibus corporis impotentiis impeditur artifex in intentione sua.” (But if the body of the artifex is weak and sick, like bodies of people with fever or leprosy, whose limbs fall off, or like the bodies of people labouring at the end of their life, or of old men of decrepit age, he will not achieve the completion of the Art. By these natural disabilities of the body the artifex is hindered in his intention.) Another old text, the “Septem tractatus seu capitula Hermetis Trismegisti aurei,” *Ars chemica*, ch. I, gives similar advice: “Ecce vobis exposui, quod celatum fuerat, quoniam opus vobiscum, et apud vos est, quod intus arripiens et permanens in terra vel in mari habere potes” (I have expounded to you what had been hidden; the work is with you and among you, and grasping it steadfastly you can have it on land or sea).

[31] *Art. aurif.*, II, p. 244. Ruska (*Turba*, p. 342) dates the *Rosarium* to the middle of the 15th century.

[32] “Pone ergo mentem tuam super salem, nec cogites de aliis. Nam in *ipsa sola* occultatur scientia et arcanum praecipuum, et secretissimum omnium antiquorum Philosophorum.” The *Bibliotheca chemica* version, p. 95, has “ipsa sola”; likewise the *Rosarium philosophorum* of 1550. Unfortunately I have no access to the manuscripts.

[33] Cf. the *sal sapientiae* which, according to the ancient rite of baptism, was and still is given to the baptized.

[34] Khunrath, *Von hyleal. Chaos*, pp. 257, 260, 262.

[35] Ibid., p. 258.

[36] Art, *aurif.*, II, p. 214: “Et vide secundum naturam, de qua regenerantur corpora in visceribus terrae. Et hoc imaginare per veram imaginationem et non phantasticam.” (And look according to nature, by which the bodies are regenerated in the bowels of the earth. And imagine this with the true and not with the fantastic imagination.)

[37] Ibid., p. 243: “Et invenitur in omni loco et in quolibet tempore et apud omnem rem, cum inquisitio aggravat inquirentem” (And it is found in every place and at any time and in every circumstance, when the search lies heavy on the searcher).

[38] Canon of St. Paul’s, London, physician in chief to Pope Gregory XII, died *c*. 1252 (Ferguson, *Bibliotheca chemica*, II, p. 271).

[39] *Theatr. chem.*, II, p. 444.

[40] “Liber de alchemia,” *Theatr. chem.*, I, p. 793: “Parmenides … qui me primum retraxit ab erroribus, et in rectam viam direxit” (Parmenides … who first pulled me back from errors, and directed me into the straight path).

[41] “De alch. diff.,” *Theatr. chem.*, I, pp. 213f.

[42] Ibid., p. 206.

[44] Richardus, “Correctorium alchymiae,” *Theatr. chem.*, II, p. 451.

[45] Ibid., p. 459.

[46] In *Theatr. chem.*, I.

[47] “Philosophia chemica,” *Theatr. chem.*, I, p. 485: “Verum forma quae hominis est intellectus, initium est, medium, et finis in praeparationibus: et ista denotatur a croceo colore, quo quidem

indicatur hominem esse maiorem formam et principalem in opere spagirico.” The *forma* works through *informatio* (also described as *fermentatio). Forma* is identical with *idea*. Gold, silver, and so on are forms of matter, therefore one can make gold if one succeeds in impressing the form of gold (*impressio formae*) on the *informis massa* or chaos, i.e., the *prima materia*.

[48] *Theatr. chem*., V.

[49] Ibid., p. 137.

[50] This “book” explains “quid separetur et praeparetur.” The *separatio* or *solutio* refers to the decomposition of the original matter into elements.

[51] The text says: “... liber in exaltatione animae, cum sit separatio naturae, et ingenium in conversione sua a materia sua” (… the book [treating of] the exaltation of the soul, its separation from nature, its intrinsic spirituality and its conversion from its own materiality). The *anima* is separated from its body (*separatio*). As an *ingenium*, it is the body’s essential quality or “soul,” whose material nature has to be transformed into something higher.

[52] “Est sicut praeparatio totius, et conversio naturae ad simplex … et necesse est in eo elevari ab animalitate, plus quam natura, ut assimuletur praeparation[e] ipsis intelligentiis, altissimis, veris” (It is like the preparation of the whole, and the conversion of nature to the simple … and it is necessary to rise above animality more than does nature, in order to be assimilated by means of this preparation to the highest, truest intelligences). So the chief work falls to the intellect, namely sublimation up to the highest stage, where nature is transformed into the *res simplex*, which, in accordance with its own nature, is akin to the spirits, angels, and eternal ideas. In the second column this highest stage is fire, “qui est super omnia elementa, et agit in eis”; in the third column it is the ethereal (highest) form of transformed nature, and in the fourth it is the goal of the whole process.

[53] There is an introductory remark to this series: “Vel si vis potes illas [*scil*. exaltationes] comparare elementis” (If you wish you can compare those [exaltations] to the elements).

[54] “… rationis vere dirigentis ad veritatem” (… [of] reason that truly leads to truth).

[55] The *effectus* refer to the preceding stages in the process of transformation.

[56] *‘Ανωτάτω μὲν οὖν εἶναι τό πῦρ* (Fire has the uppermost place).—Diogenes Laertius, *Lives of Eminent Philosophers*, VII, i (on Zeno), 137.

[57] Stoic doctrine

[58] The soul still has a luminous or fiery nature in Lactantius.

[59] Aristotle, *De Coelo* (trans. Guthrie, I, p. 3), and *Meteorologica* (ed. Bekker), I, p. 3.

[60] Ibid., XII, p. 7: God is *οὐ̓σία τιs άιδιοs καί άκίνητοs* (an eternal and immovable being).

[61] Fechner (*Elemente der Psychophyik*, II, p. 526) thinks in the same way: “That which is psychically homogeneous and simple is associated with physical multiplicity, whereas physical multiplicity contracts psychically into the homogeneous, the simple, and yet simpler.”

[62] *Theatr. chem*., V, p. 145.

[63] Instead of “intelligentiae.”

[64] Instead of “intelligentia.”

[65] Instead of “et quid.”

[66] “Et dixit philosophus in libro Dialogorum: Circuivi tres coelos, scilicet coelum naturae compositae, coelum naturae discretae et coelum animae. Cum autem volui circumire coelum intelligentiae, dixit mihi anima, non habes illuc iter, et attraxit me natura et attractus sum. Hoc autem dictum principale, non posuit philosophus ad significandam hanc scientiam, sed quia voluit ut sermones sui non vacarent manifestatione, virtutis liberantis creaturam, et voluit per eos in hac specie operis, ut cognoscatur praeparatio deterior, per praeparationem superiorem.”—“Liber Platonis Quartorum,” *Theatr. chem*., V, p. 145.

[67] Ibid., p. 144: “Sedentes super flumina Eufrates sunt Caldaei … priores, qui adinvenerunt extrahere cogitationem” (The Chaldaeans dwelling on the river Euphrates were … the first to find out how to extract the cogitation).

[68] Ibid., p. 137.

[69] Ibid., p. 124: “Si utaris opere exteriori, non utaris nisi occipitio capitis et invenies” (If you use an exterior operation you should use only the occiput and then you will find [the goal]). The conjecture “goal” is subject to the reservation that I have not yet been able to obtain the Arabic text.

[70] Ibid., p. 124: “Os capitis est mundum et est … minus os, quod sit in [h]omine [text: nomine], et vas mansionis cogitationis et intellectus …” (The skull is pure and … moreover it is a comparatively small bone in [man], and it is the vessel of cogitation and intellect …).

[71] “Res convertuntur per tempus ad intellectum per certitudinem, quantum partes assimulantur in compositione et in forma. Cerebrum vero propter vicinitatem cum anima rationali [the “et” here should be deleted] permixtioni oportuit assimulari, et anima rationalis est simplex sicut diximus.”

[72] “Speculativa philosophia,” *Theatr. chem*., I. p. 265.

[73] Ibid., p. 298.

[74] Ibid., p. 264.

[81] *Aurora consurgens* I, ch. X, parab. V: “Alfidius: Scito quod hanc scientiam habere non poteris, quousque mentem tuam deo purifices, hoc est in corde omnem corruptionem deleas.”

[82] The text has “… virtus, de qua dicitur: virtus ornat animam. Et Hermes: et recipit virtutem superiorum et inferiorum planetarum et sua virtute penetrat omnem rem solidam.” (… virtue of which it is said: virtue adorneth the soul. And Hermes: and it receiveth the virtue of the upper and lower planets and by its virtue penetrateth every solid thing.) Cf. “Tabula smaragdina,” ed. Ruska, p. 2: “et recipit vim superiorum et inferiorum.”

[83] The text explains by quoting the Vulgate, Eph. 4 : 23, 24: “Renovamini [autem] spiritu mentis vestrae, et induite novum hominem …” (D.V.: “And be renewed in the spirit of your mind: and put

on the new man …”) and adds: “hoc est intellectum subtilem.”

[84] *Aurora* I, ch. IV, parab. IV: “… horridas nostrae mentis purga tenebras.”

[85] Ibid.: “Senior: et facit omne nigrum album …”

[86] *Art. aurif.*, II, p. 228. The text in Geber’s *Summa perfectionis* is much more detailed. It occupies the whole of ch. V of Lib. I, under the title “De impedimentis ex parte animae artificis.” See Darmstaedter, *Die Alchemie des Geber*, pp. 20ff.

[87] *Art. airif.*, II, p. 227: “Deum timere, in quo dispositionis tuae visus est, et adjuvatio cujuslibet sequestrati.” This quotation derives from the “Tractatus aureus” in what was probably the first edition (*Ars chemica*). But there the passage (which comes at the beginning of ch. II) runs: “Fili mi, ante omnia moneo te Deum timere, in quo est nisus tuae dispositionis et adunatio cuiuslibet sequestrati” (My son, above all I admonish thee to fear God in whom is the strength of thy disposition, and companionship for the solitary, whosoever he may be). Concerning the alteration of the Hermes quotations in *Rosarium*, see par. 140, n. 17.

[88] Cf. Reitzenstein. “Alchemistische Lehrschriften.” Morienus (Morienes or Marianus) is said to have been the teacher of the Omayyad prince, Kalid or Khalid ibn-Jazid ibn-Muawiyah (635–704). Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, p. 357. The passage is to be found in Morienus, “De transmutatione metallorum,” *Art. aurif.*, II, pp. 22f.

[89] “Quibus eam a primaeva rerum natura conferre disposuit” (ibid., p. 22).

[90] “Animos suos etiam ipsi regere non possunt diutius, nisi usque ad terminum,” etc. (ibid., p. 23).

[91] “… nisi per animae afflictionem” (ibid., pp. 17f.).

[92] Maier, *Symbola aureae mensae*, p. 568.

[93] Ibid., p. 144.

[94] Ibid., p. 143.

[95] P. 327: “Meditatio (s.v.) dicitur, quoties cum aliquo alio colloquium habetur internum, qui tamen non videtur. Ut cum Deo ipsum invocando, vel cum se ipso, vel proprio angelo bono.” This description is very similar to the *colloquium* in the *Exercitia spiritualia* of Ignatius of Loyola. All the authors are unanimous in emphasizing the importance of meditation. Examples are unnecessary.

[96] Cf. Jung. “The Relations between the Ego and the Unconscious,” pars. 341ff.

[97] “Introitus apertus,” *Mus. herm.*, p. 693.

[98] “… novam volatilitatem citra ullam manuum impositionem meditabitur.”

[99] Cf. the Mohammedan legend of the rock in the mosque of Omar, at Jerusalem, which wanted to fly up with Mohammed when he ascended to heaven.

[100] *Von hyleal, Chaos*, pp. 274f.

[101] I take this text from a manuscript in my possession entitled “Figurarum Aegyptiorum secretarum …” *Incipit:* “Ab omni aevo aegyptiorum sacerdotes.” Colophon: “laus jesu in saecula.” (Fol. 47, parchment, 18th cent.) The pictures in this manuscript are identical with those in MS. No. 973 (18th cent.), Bibliothèque de l’Arsenal, Paris. They come from the “Pratique” of Nicolas Flamel (1330–1418). The origin of the Latin text in my manuscript is at present unknown. (See figs. 23, 148, 157, 164.) [See also *Mysterium Coniunctionis*, par. 720.]

[102] *Art. aurif.*, I. Cf. Ruska's version in *Historische Studien und Skizzen* (ed. Sudhoff), pp. 22ff. A still older series of visions is that of Zosimos in ∏*ερὶ ἀρετῆs* (Berthelot, *Alch. grecs*, III) and also of Krates (Berthelot, *Chimie au moyen âge*, III).

[103] "Astrum in homine, coeleste sive supracoeleste corpus." Since Ruland joins forces with Paracelsus here, I refer the reader to my "Paracelsus as a Spiritual Phenomenon" [especially par. 173].

[104] Ruland, *Lexicon*, s.v. "astrum": "virtus et potentia rerum, ex praeparationibus acquisita" (the virtue and power of things, that is acquired through the preparations). Hence also extract or Quinta Essentia.

[105] Figulus (*Rosarium novum olympicum*, p. 109) says: "[*Anima*] is a subtle imperceptible smoke."

[106] Sendivogius, in *Mus. herm.*, pp. 601ff.

[107] Ibid., p. 618.

[108] Avalon, *The Serpent Power*.

[109] "Et … volavit super pennas ventorum."—Vulgate, Ps. 17: 11 (A.V., Ps. 18 : 10).

[110] Sendivogius, "De sulphure," *Mus. herm.*, p. 612.

[111] Ibid., p. 615. Christ is similarly "imagined" in us—"Aquarium sapientum," *Mus. herm.*, p. 113: "Deus, antequam Christus filius eius in nobis formatus imaginatusque fuit, nobis potius terribilis Deus" (Before Christ his son was formed and imagined in us, God was more terrible to us).

[112] All "our secrets" are formed from an "image" (*imago*), says Ripley (*Opera omnia chemica*, p. 9).

[1] Maier, *Symbola aureae mensae*, p. 202: "Sunt enim plerique libri adeo obscure scripti, ut a solis auctoribus suis percipiantur" (For many of the books are written so obscurely that they are understood only by their authors). Cf. also Maier, *Scrutinium chymicum*, p. 33.

[2] For instance, the second part of the *Aurora*, in *Art. aurif.*, I.

[3] Philalethes ("Introitus apertus," *Mus. herm.*, p. 660): "Sunt enim in principiis nostris multae heterogenae superfluitates, quae in puritatem nunquam reduci possunt, ea propter penitus expurgare illas expedit, quod factu impossibile erit absque arcanorum nostrorum theoria, qua medium docemus, quo cum ex meretricis menstruo excernatur Diadema Regale" (For there are in our initial material many superfluities of various kinds which can never be reduced to purity. Therefore it is advantageous to wash them all out thoroughly, but this cannot be done without the *theoria* of our secrets, in which we give instructions for extracting the Royal Diadem from the menstruum of a whore). The *Rosarium philosophorum*, subtitled *secunda pars alchemiae*, is such a *theoria* in the true sense of a *visio* (spectacle, watching scenes in a theatre, etc.). Cf. the *theorica* of Paracelsus, in Jung, "Paracelsus the Physician," par. 41.

[4] There is a similar illustration in Khunrath's *Amphitheatrum* (cf. fig. 145).

[5] John Cremer, Abbot of Westminster, who lived at the beginning of the 14th century. His "Testamentum" is printed in the *Musaeum Hermeticum*.

[6] Basilius Valentinus, a legendary or fictitious personality.

[7] Thomas Norton, putative author of the famous "Ordinall of Alchimy." On the question of his personality, cf. Nierenstein and Chapman, "Enquiry into the Authorship of the *Ordinall of Alchimy.*"

[8] The vision of the father of Benvenuto Cellini—described in Cellini's autobiography, I, iv, p. 6—gives us a good idea of such visions: "When I was about five years old my father happened to be in a basement chamber of our house, where they had been washing, and where a good fire of oak logs was still burning; he had a viol in his hand, and was playing and singing alone beside the fire. The weather was very cold. Happening to look into the fire, he spied in the middle of those most burning flames a little creature like a lizard, which was sporting in the core of the intensest coals. Becoming instantly aware of what the thing was, he had my sister and me called, and pointing it out to us children, gave me a great box on the ears, which caused me to howl and weep with all my might. Then he pacified me good-humouredly, and spoke as follows: 'My dear little boy, I am not striking you for any wrong that you have done, but only to make you remember that that lizard which you see in the fire is a salamander, a creature which has never been seen before by anyone of whom we have credible information.' So saying, he kissed me and gave me some pieces of money."

[9] *Lexicon alchemiae*, s.v. "draco."

[10] Cf. Taylor, "A Survey of Greek Alchemy."

[11] Reproduced in Berthelot, *Alch. grecs*. Introduction, p. 132.

[12] *Rosarium*, *Art. aurif.*, II, p. 206: "Unius ergo esto voluntatis in opere naturae, nec modo hoc, modo illud attentare praesumas quia in rerum multitudine ars nostra non perficitur. Quantumcunque enim diversificentur eius nomina, tamen semper una sola res est, et de eadem re. …" (Therefore you must be single-minded in the work of nature, and you must not try now this, now that, because our art is not perfected in a multiplicity of things. For however much its names may differ, yet it is ever one thing alone, and from the *same* thing. …) "Unus est lapis, una medicina, unum vas, unum regimen, unaque dispositio" (One is the stone, one the medicine, one the vessel, one the method, and one the

disposition). Cf. Reitzenstein, “Alchemistische Lehrschriften,” p. 71. Morienus (“De transmutatione metall.,” *Art. aurif.*, II, pp. 25f.) quotes the Emperor Heraclius (610–41): “Hercules dixit: Hoc autem magisterium ex una primum radice procedit quae postmodum in plures res expanditur et iterum ad unam revertitur. …” (Hercules [Heraclius] said: This magistery proceeds first from one root, which afterwards expands into several things, and returns again to the one.)

[13] *Rosarium, Art. aurif.*, II, p. 210: “Scitote ergo, quod argentum vivum est ignis, corpora comburens magis quam ignis” (Know therefore that the quicksilver is a fire which burns bodies more than fire [itself]).

[14] Cf. the meaning of the uniting symbol in Jung, *Psychological Types*, pars. 318ff.

[15] Berthelot, *Alch. grecs*, III, vi, 5.

[16] A text ascribed to Ostanes, and transmitted in Arabic, is to be found in Berthelot, *Chimie au moyen âge*, III, pp. 116ff.; also a Greek text in Berthelot, *Alch. grecs*, IV, ii.

[17] Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, p. 334.

[18] Cf. Maier, *Symbola aureae mensae*, p. 19: “[ol]eum extrahere a cordibus statuarum” (extract the oil from the hearts of statues), referring to Raymond Lully. “Codicillus” (*Bibl. chem. curiosa*, I, p. 894). Cf. also the “extraction of the cogitation” mentioned above (par. 375, n. 67).

[19] Berthelot, *Alch. grecs*, III, vi. 5.

[20] It is indeed remarkable that the alchemists should have picked on the term *proiectio* in order to express the application of the philosophical Mercurius to base metals.

[21] Berthelot, *Alch. grecs*, IV, xx, 8.

[22] Ibid., III, vi, 8.

[23] Ibid., III, li, 8.

[24] Scott, *Hermetica*, I, pp. 149ff.

[25] Here we probably enter the realm of Neopythagorean ideas. The penetrating quality of the soul-pneuma is mentioned in Aenesidemus (Zeller, *Die Philosophie der Griechen*, III, p. 26). He also speaks of aer as the original substance, corresponding to the pneuma of the Stoics (p. 23). Hermes, whose pneumatic (wind-) quality (see figs. 210, 211) is indicated by his wings, leads the souls to the Highest, according to Alexander Polyhistor (p. 75), but the impure souls are fettered in the underworld by the Erinyes with unbreakable bonds, like the imperfect ones who in the treatise of Komarios are “chained in Hades” (see fig. 151).

[26] The cabalistic idea of God pervading the world in the form of soul-sparks (*scintillae*) and the Gnostic idea of the Spinther (spark) are similar.

[27] The concepts of nous and pneuma are used promiscuously in syncretism. The older meaning of pneuma is wind, which is an aerial phenomenon: hence the equivalence of aer and pneuma (Zeller, *Die Philosophie der Griechen*, III, p. 23). Whereas in Anaximenes the original substance is aer (ibid., I, pp. 713ff.), in Archelaus of Miletus, the pupil of Anaxagoras, God is aer and nous. In Anaxogoras the world-creator is Nous, who produces a whirlpool in chaos and thus brings about the separation of ether and air (ibid., I. pp. 687ff.). Concerning the idea of pneuma in syncretism, cf. Leisegang, *Der heilige Geist*, pp. 26ff.

[28] Schultz, *Dokumente der Gnosis*, p. 64; Reitzenstein, Poimandres, p. 50. In the Neopythagorean view, hermaphroditism is also an attribute of the deity. Cf. Nicomachus, in Zeller, *Philosophie der Griechem*, III, p. 107.

[29] The effect of inflation is that one is not only “puffed up” but too “high up.” This may lead to attacks of giddiness, or to a tendency to fall downstairs, to twist one’s ankle, to stumble over steps and chairs, and so on.

[30] Berthelot, *Alch. grecs*, IV, xx, 8: *τὸ μνστήριον τὸ φρικτὸν καὶ παράδοξον*.

[31] Zeller, *Philosophie der Griechen*, II, p. 152.

[32] Ibid., III, pp. 99, 151.

[33] Hippolytus, *Elenchos*, V, 26, 1.—Alchemy transferred the Edem-motif to Mercurius, who was likewise represented as virgin above, serpent below. This is the origin of the Melusina in Paracelsus (see “Paracelsus as a Spiritual Phenomenon,” pars. 179f.).

[34] Cf. the salvation and purification of the *ἐ̓ν τοίς στοιχείοις συνδεθῑσα θεία ψνχή* in the Book of Sophe (Berthelot, *Alch. grecs*, III, xlii, 1).

[35] Late Jewish (cabalistic) Gnosis developed a very similar attitude to that of alchemy. Cf. the excellent description by Gaugler, “Das Spätjudentum,” pp. 279ff.

[36] The main points of resemblance are: in Osiris, his God-man nature, which guarantees human immortality, his corn characteristics, his dismemberment and resurrection; in Orpheus, the taming of the passions, the fisherman, the good shepherd, the teacher of wisdom, the dismemberment; in Dionysus, his wine characteristics, the ecstatic revelations, the fish symbolism, the dismemberment and resurrection; in Hercules, his subjection to Eurystheus and Omphale, his labours (mainly to redeem suffering humanity from various evils), the cross formed by his journeys (labours 7–10 lead South-North-East-West, while labours 11–12 lead upwards; cf. St. Paul: Eph. 3 : 18), his self-cremation and *sublimatio* culminating in divinity.

[37] Cf. for instance, the Polynesian myth of Maui (Hambruch, *Südseemärchen*, p. 289). Further material in Frobenius, *Das Zeitalter des Sonnengottes*.

[38] Hauck, *Realencyklopädie*, XII, p. 689, 35: “Celebratio huius sacramenti est imago quaedam repraesentativa passionis Christi, quae est vera eius immolatio” (The celebration of this sacrament is a kind of image that represents Christ’s passion, which is his true immolation).

[39] This point of view finds acceptance in the Beuron edition of the Missal (p. x).

[40] Kramp, *Die Opferanschauungen der römischen Messliturgie*, p. 114.

[41] “Vita corporea actualis sensitiva aut a sensibus pendens” (A real bodily life, apprehended by the senses or dependent on the senses).—Cardinal Álvarez Cienfuegos, S.J. (d. 1739), in Hauck, *Realencyklopädie*, XII, p. 693, 59.

[42] Cf. sacrifice of the lamb in the “Vita S. Brendani,” from *La Légende latine de S. Brandaines* (based on 11th–13th century MSS.), p. 12: “Dixitque sanctus Brendanus fratribus: ‘Faciamus hic *opus divinum*, et sacrificemus Deo agnum immaculatum, quia hodie cena Domini est.’ Et ibi manserunt usque in Sabbatum sanctum Pasche. Invenerunt eciam ibi multos greges ovium unius coloris, id est albi, ita ut non possent terram videre pre multitudine ovium. Convocatis autem fratribus, vir sanctus dixit eis: ‘Accipite que sunt necessaria at diem festum de grege.’ Illi autem

acceperunt unam ovem et cum illam ligassent per cornua, sequebatur quasi domestica, sequens illorum vestigia. At ille: ‘Accipite, inquit, unum agnum immaculatum.’ Qui cum viri Dei mandata complessent, paraverunt omnia ad opus diei crastine. …” (And St. Brendan said to the brothers: “Let us perform here the divine work and sacrifice to God an immaculate lamb, for today is the supper of the Lord.” And they remained there until Holy Saturday. They also found there many flocks of sheep of one colour, i.e., white, so that they could not see the ground because of the great number of sheep. The holy man called the brothers together and said to them: “Take from the flock what you need for the feast day.” And they took one sheep, and when they had bound it by the horns, it followed as if it were a domestic animal, following in their footsteps. And he said: “Take an immaculate lamb.” And when they had done the bidding of the man of God, they prepared everything for the work of the following day.)

Ibid., p. 34: “Confestim tunc cantaverunt tres psalmos: ‘Miserere mei, Deus, et Domine refugium, et Deus, deus meus.’ Ad terciam vero alios tres: ‘Omnes gentes, Deus in nomine, Dilexi quoniam,’ cum alleluya. Deinde immolaverunt agnum immaculatum, et omnes venerunt ad communionem dicentes: ‘Hoc sacrum corpus Domini, et Salvatoris nostri, sanguinem sumite vobis in vitam aeternam.’” (At once they sang three psalms: “Have mercy on me, O God,” and “Lord, thou hast been our refuge,” and “O God, my God”; and at terce three others: “O clap your hands, all ye nations,” “Save me, O God, by thy name,” and “I have loved, because,” with alleluia. Then they sacrificed an immaculate lamb, and they all came to communion, saying: “This is the sacred body of the Lord our Saviour, take the blood unto you for life eternal.”)

[43] Πάρεδρος = ministering spirit. So Khunrath and others.

[44] *Von hyleal. Chaos*, p. 59 *et passim*. The much earlier Morienus (“De transmutatione metall.,” *Art. aurif.*, II. p. 37) says: “In hoc enim lapide quattuor continentur elementa, assimilaturque Mundo et Mundi composition!” (For in this stone the four elements are contained, and it is made similar to the World and the composition of the World).

[45] Morienus says to King Kalid (ibid., p. 37): “Haec enim res a te extrahitur: cuius etiam minera tu existis, apud te namque illam inveniunt, et ut verius confitear, a te accipiunt: quod cum probaveris, amor eius et dilectio in te augebitur. Et scias hoc verum et indubitabile permanere.” (For this thing is extracted from thee, and thou art its ore [raw material]; in thee they find it, and that I may speak more plainly, from thee they take it; and when thou hast experienced this, the love and desire for it will be increased in thee. And know that this remains true and indubitable.)

[46] “In stercore invenitur.”

[47] Maier, *Symbola aureae mensae*, p. 336.

[48] Khunrath (*Von hyleal, Chaos*, p. 410), for instance, says: “So work even in the laboratory by thyself alone, without collaborators or assistants, in order that God, the Jealous, may not withdraw the art from thee, on account of thy assistants to whom He may not wish to impart it.”

[49] Geber, “Summa perfectionis,” *Bibl. chem.*, I, p. 557b: “Quia nobis solis artem per nos solos investigatam tradimus et non aliis …” (Because we hand down the art which we alone have investigated, to ourselves alone and to no one else …).

[50] I am setting aside the later Rosicrucians and the early “Poimandres” community, of which Zosimos speaks [infra, par. 456]. Between these two widely separated epochs I have found only one questionable passage, in the “Practica Mariae Prophetissae” (*Art. aurif.*, I, p. 323) (see fig. 78), where the “interlocutor” Aros (Horus) asks Maria: “O domina, obedisti in societate Scoyari: O prophetissa,

an invenisti in secretis Philosophorum …” (O lady, did you obey in the society of Scoyarus: O Prophetess, did you find the secrets of the philosophers …?). The name *Scoyaris* or *Scoyarus* recalls the mysterious *Scayolus* in the writings of Paracelsus (*De vita longa*), where it means the adept. (*Scayolae* are the higher spiritual forces or principles. See “Paracelsus as a Spiritual Phenomenon,” pars. 206ff.) Is there perhaps a connection here? At any rate there seems to be an allusion to a *societas*. The treatise of Maria may go back to very early times and thus to the Gnostic societies. Agrippa (*De incertitudine scientiarum*, ch. XC) mentions an alchemical initiation vow which may possibly refer to the existence of secret societies. Waite (*The Secret Tradition in Alchemy*) comes to a negative conclusion in this respect.

[51] The *Turba philosophorum* is an instructive example in this respect.

[52] Morienus, “De transmut. metall.,” *Art. aurif.*, II, p. 37: “Magisterium est arcanum Dei gloriosi.” “Consil. coniug.,” *Ars chemica*, p. 56: “Donum et secretorum secretum Dei.” *Rosarium, Art. aurif.*, II, p. 280; “Divinum mysterium a Deo datum et in mundo non est res sublimior post animam rationalem” (The divine mystery was given by God and there is in the world no thing more sublime except the rational soul).

[53] Ibid., pp. 212, 228.

[54] Ibid., pp. 219, 269.

[55] Ibid., p. 230. Alchemy is superior to all other sciences in the opinion of Djabir or Geber (8th cent.): “Indeed, any man who is learned in any science whatever, who has not given part of his time to the study of one of the principles of the Work, in theory or in practice, his intellectual culture is utterly insufficient” (Berthelot, *Chimie au moyen âge*, III, p. 214). Djabir is said to have been a Christian or Sabaean. (See also Ruska, “Die siebzig Bücher des Gabir ibn Hajjan,” p. 38.) Synesius also appeals to the intelligence (Berthelot, *Alch. grecs*, II, iii, 16). Olympiodorus even compares the art to the divine intelligence (ibid., II, iv, 45) and appeals to the intelligence of his public (ibid., II, iv, 55). Christianos too lays stress on intelligence (ibid., VI, i, 4, and iii, 2). Likewise *Aurora* II, in *Art. aurif.*, I, “Prologus”: “oportet intellectum valde subtiliter et ingeniose acuere” (one must sharpen the intellect very subtly and ingeniously).

[56] *Rosarium, Art. aurif.*, II, p. 210.

[58] “Rhasis dixit: liber enim librum aperit.” (Quoted by Bonus, “Pret. marg. nov.,” *Bibl. chem.*, II, ch. VIII.)

[59] *Rosarium, Art. aurif.*, II, p. 230.

[60] Ibid., pp. 211, 243, 269.

[61] Sendivogius, “Parabola,” *Bibl. chem. curiosa*, II, p. 475: “Aqua Philosophica tibi in somno aliquoties manifestata” (The philosophic water that was shown to you a number of times in a dream).

[62] Figulus, *Rosarium novum olympicum*, ch. XI.

[63] Figulus, “Tractatulus rhythmicus,” in ibid., part I, p. 58.

[64] *Rosarium, Art. aurif.*, II, p. 230.

[65] Arnold of Villanova, in ibid., p. 210.

[1] Berthelot, *Alch. grecs*, IV, xx, 8.

[2] Dorn, "Congeries Paracelsicae chemicae," *Theatr. chem.*, I, p. 578. In the same place Dorn explains: "Mercurium istum componi corpore, spiritu et anima, eumque naturam elementorum omnium et proprietatem assumpsisse. Qua prop ter ingenio et intellectu validissimis adseverarunt suum lapidem esse animalem, quem etiam vocaverunt suum Adamum, qui suam invisibilem Evam occultam in suo corpore gestaret. …" (This Mercurius is composed of body, spirit, and soul, and has assumed the nature and quality of all the elements. Wherefore they affirmed with most powerful genius and understanding that their stone was a living thing, which they also called their Adam, who bore his invisible Eve hidden in his body. …) Hoghelande ("De alch. diff.," *Theatr. chem.*, I, pp. 178f.) says: "They have compared the *prima materia* to everything, to male and female, to the hermaphroditic monster, to heaven and earth, to body and spirit, chaos, microcosm, and the confused mass [*massa confusa*]; it contains in itself all colours and potentially all metals; there is nothing more wonderful in the world, for it begets itself, conceives itself and gives birth to itself."

[3] "Tractatus aureus," *Mus. herm.*, p. 10, and many other passages.

[4] Dee, "Monas hieroglyphica," *Theatr. chem.*, II, p. 218. In Aegidius de Vadis ("Dialogus," *Theatr. chem.*, II, p. 110) the monad is the effective *forma* in matter. Khunrath (*Amphitheatrum*, p. 203) writes: "In Cabala est hominis ad monadis simplicitatem reducti, cum Deo, Unio: id in Physico-Chemia ad Lapidis nostri … cum Macrocosmo Fermentatio." (In the Cabala it is the Union of man, reduced to the simplicity of the monad, with God; in Physio-Chemistry it is the Fermentation [of] man reduced to [the simplicity of] our stone, with the Macrocosm.) There is a similar passage in his *Von hyleal. Chaos* (pp. 33, 204), where the monad is more a symbol of the perfected *lapis*. Dorn ("De spagirico artificio Trithemii sententia," *Theatr. chem.*, I, p. 441) says: "In uno est enim unum et non est unum, est simplex et in quaternario componitur" (For in the One there is and there is not the One; it is simple and it is composed in the quaternity). In his doctrine of the *res simplex* Dorn is very much influenced by the "Liber Platonis quartorum." (On one occasion he even mentions magic.) In the same passage he also uses the term *monad* for the goal: "A ternario et quaternario fit ad monadem progressus" (The progression is from the ternary and the quaternary to the Monad). The term *lapis* is used all through the literature for the beginning and the goal.

[5] *Theatr. chem.*, V, p. 130.

[6] Mylius, *Philosophia reformata*, p. 174.

[7] *Art. aurif.*, I, p. 66. Eximindus (Eximidius or Eximenus in the first version) is a corruption of Anaximenes or Anaximander.

[8] *Turba* (ed. Ruska), p. 116.

[9] Sudhoff/Matthiessen edn., XIII, p. 390: "Thus the supreme artist has prepared a great uncreated mystery and no mystery will ever be the same nor will it ever return, for, just as cheese will never again become milk, so generation will never return to its first state." Dorn ("Physica genesis." *Theatr. chem.*, I, p. 380) translates: "Increatum igitur mysterium hoc fuit ab altissimo opifice Deo praeparatum, ut ei simile nunquam futurum sit, nec ipsum unquam rediturum, ut fuit."

[10] Paracelsus continues (XIII, pp. 390f.): "This *mysterium magnum* was a mother to all the elements, and in them likewise a grandmother to all stars, trees, and creatures of the flesh; for all sentient and insentient creatures, and all others of a like form, are born from the *mysterium magnum*, just as children are born from a mother. And it is a *mysterium magnum*, one unique mother of all mortal things, and they have all originated in her" and so on. "Now, whereas all other mortal beings grew

out of and originated in the *mysterium increatum*, it is to be understood that no creature was created earlier, later, or in particular, but all were created together. For the highest arcanum and great treasure of the creator has fashioned all things in the *increatum*, not in form, not in essence, not in quality, but they were in the *increatum*, as an image is in the wood, although this same is not to be seen until the other wood is cut away: thus is the image recognized. Nor is the *mysterium increatum* to be understood in any other manner, save that through its separation the corporeal and the insentient severally took on the form and shape that are their own."

[11] *Mus. herm.*, pp. 73ff. Here I must correct a mistake which crept into my *Paracelsica*. Not only the author referred to there (pp. 173f.) but the "Aquarium" as well is concerned with heresies, and in an equally negative way. [See "Paracelsus as a Spiritual Phenomenon," par. 231.—EDITORS.]

[12] Ibid., pp. 106f.

[13] Ibid., p. 111.

[14] *Theatr. chem.*, V, p. 145.

[15] Cf. Grenfell et al., *New Sayings of Jesus*, pp. 15f.: "Jesus saith, (Ye ask? who are those) that draw us (to the kingdom, if) the kingdom is in Heaven? … the fowls of the air, and all beasts that are under the earth or upon the earth, and the fishes of the sea. …"

[16] Ripley, *Opera omnia chemica*, p. 10.

[17] Ibid., p. 130.

[18] Ibid., p. 369.

[19] Ibid., p. 427.

[20] Ibid., p. 9.

[21] In the "Ripley Scrowle" (British Museum, MS. Add. 5025), the sphere of water is represented with dragon's wings (cf. fig. 228). In the "Verses belonging to an emblematicall scrowle" (*Theatr. chem. Brit.*, p. 376) the "spiritus Mercurii" says:

"Of my blood and water I wis,
Plenty in all the world there is.
It runneth in every place;
Who it findeth he hath grace:
In the world it runneth over all,
And goeth round as a ball."

[22] Ripley, *Opera omnia chemica*, p. 197.

[23] Mus. *herm.*, p. 606.

[24] "Hortulani commentarius" in *De alchemia*, p. 366.

[25] Cf. Aegidius de Vadis ("Dialogus," *Theatr. chem.*, II. p. 101): "The chaos is the *materia confusa*. This *materia prima* is necessary to the art. Four elements are mixed in a state of disorder in the *materia prima*, because earth and water, which are heavier than the other elements, reached the sphere of the moon, while fire and air, which are lighter than the others, descended as far as the centre of the earth; for which reason such a *materia* is rightly called disordered. Only a part of this disordered material remained in the world, and this is known to everyone and is sold publicly."

[26] Hortulanus, "Commentarius," *De alchemia*, p. 371.

[27] Zeller, *Die Philosophie der Griechen*, III, p. 120.

[28] Ibid., p. 102; also p. 154.

[29] Ibid., p. 687.

[30] Also defined as “the round fish in the sea” (“Allegoriae super librum Turbae,” *Art. aurif.*, I, p. 141).

[31] Maier, *Symbola aureae mensae*, pp. 379f.

[32] Ibid., p. 380.

[33] Cf. the beginning of Parable VII in *Aurora* I, ch. XII: “Be turned to me with all your heart and do not cast me aside because I am black and swarthy, because the sun hath changed my colour [Cant. 1 : 5f.] and the waters have covered my face [Jonas 2 : 6] and the earth hath been polluted and defiled [Psalm 105 : 38] in my works, for there was darkness over it [Luc. 23 : 44] because I stick fast in the mire of the deep [Psalm 68 : 3] and my substance is not disclosed. Wherefore out of the depths have I cried [Psalm 129 : 1] and from the abyss of the earth with my voice to all you that pass by the way. Attend and see me, if any shall find one like unto me [Lam. 1 : 12], I will give into his hand the morning star [Apoc. 2 : 28].”

[34] *Art. aurif.*, I, pp. 146ff.

[35] Cf. Ruska, *Turba*, p. 23. Arisleus is a corruption of Archelaos, owing to Arabic transcription. This Archelaos may be a Byzantine alchemist of the 8th or 9th century. He has left us a poem on the sacred art. But since the *Turba*, which is ascribed to Arisleus, goes back to Arabic tradition—as Ruska points out—we must assume that Archelaos lived much earlier. Ruska, therefore, identifies him with the pupil of Anaxagoras (ibid., p. 23). The alchemists would have been particularly interested in his idea that the νοῦς is mixed with air: ἀέρα καὶ νοῦν τὸν θεόν (Stobaeus, *Eclogarum*, I, p. 56).

[36] The pairing of like with like is to be found as early as Heraclitus (Diels, *Fragmente der Vorsokratiker*, I, p. 79^{10}).

[37] Also Gabricus, Cabricus, Cabritis, Kybric: Arabic *kibrit* = sulphur. Beja, Beya, Beua: Arabic *al-baida* = the white one. (Ruska, *Turba*, p. 324.)

[38] “Ego tamen filium et filiam meo in cerebro gestavi” (“Visio Arislei,” *Art. aurif.*, I, p. 147). In Maier, *Symbola aureae mensae*, pp. 343f. (see n. 42 infra), it is a question of mother-incest, for there Gabritius is married to his mother Isis because they were the only pair of this kind. Evidently a chthonic pair of gods (symbolizing the opposites latent in the *prima materia*) is celebrating the *hierosgamos*.

[39] The “whole” or “self” comprises both conscious and unconscious contents.

[40] There is ample evidence in the literature to show that *divitiae* and *salus* are spiritual *bona futura*, and refer as much to the salvation of the soul as to the well-being of the body. We must not forget that the alchemist is not in the least concerned to torment himself with moral scruples, on the assumption that man is a sinful nonentity who complies with God’s work of redemption by his irreproachable ethical behaviour. The alchemist finds himself in the role of a “redeemer” whose *opus divinum* is more a continuation of the divine work of redemption than a precautionary measure calculated to guard against possible damnation at the Last Judgment.

[41] The antithetical nature of the *ens primum* is an almost universal idea. In China the opposites are *yang* and *yin*, odd and even numbers, heaven and earth, etc.; there is also a union of them in the hermaphrodite. (Cf. Hastings, *Encyclopaedia*, IV, p. 140.) Empedokles: *νεῖκος* and *φιλία* of the elements (Zeus-fire, Hera-air). The second period of creation saw the birth of hybrids, similar to the northern Ymir and Buri (Herrmann, *Nordische Mythologie*, p. 574). Neopythagoreans: Monad = masculine, Dyad = feminine (Zeller, *Die Philosophie der Griechen*, III, p. 98). In Nicomachus, the Deity is the odd and even number, therefore male-female (ibid., p. 107). Hermes Trismegistus: The Nous is hermaphroditic. Bardesanes (A.D. 154–223?): Crucified hermaphrodite (Schultz, *Dokumente der Gnosis*, p. lv). Valentinus: The creator of the world is the mother-father, and in Marcion the Gnostic, the Primordial Father is hermaphroditic. Among the Ophites, the Pneuma is male-female (ibid., p. 171).

[42] Maier, *Symbola aureae mensae*, p. 344: "Delphinas, anonymus philosophus in Secreti Maximi tractatu De Matre cum filio ex necessitate naturae conjungenda clarissime loquitur: si enim unus sit masculus et una foemina, eius mater, in mundo, annon hi duo conjungendi sint, ut genus humanum inde multiplicetur? … eodem modo cum saltem in arte Chymica sint duo subjecta, quorum unus alterius mater est. haec copulanda. …" (Delphinas, an anonymous philosopher in the treatise "The Greatest Secret," speaks very clearly about the Mother who must by natural necessity be united with the son. For, if there were in the world only one male and only one female, and she his mother, would they not have to be united, in order that mankind might be multiplied? In the same way, at any rate in the Chemical Art, since there are two subjects of which one is the mother of the other, they must be united. …)

On p. 515 of the same book there is an "Epithalamium honori nuptiarum Matris Beiae et filii Gabrici," which begins as follows:

> "Ipsa maritali dum nato foedere mater
> Jungitur, incestum ne videatur opus.
> Sic etenim Natura iubet, sic alma requirit
> Lex Fati, nec ea est res male grata Deo."

(When the mother is joined with the son in the covenant of marriage, count it not as incest. For so doth nature ordain, so doth the holy law of fate require, and the thing is not unpleasing to God.)

[43] The fear of ghosts means, psychologically speaking, the overpowering of consciousness by the autonomous contents of the unconscious. This is equivalent to mental derangement.

[44] *Art. aurif.*, II, pp. 246ff.

[45] I, ch. IX, par. IV. [Originally from a sequence of Notker Balbulus (*c*. 840–912).—EDITORS.] The passage is apparently derived from the first *oratio* of the third Sunday in Advent: "et mentis nostrae tenebras gratia tuae visitationis illustra."

[46] "Nonnulli perierunt in opere nostro" (Not a few have perished in our work), the *Rosarium* says. The element of torture is also emphasized in "Allegoriae super librum Turbae," *Art. aurif.*, I, pp. 139ff.: "Accipe hominem, tonde eum, et trahe super lapidem … donec corpus eius moriatur …" (Take a man, shave him, and drag him over a stone … until his body dies …).

[47] For the quadratic enclosure as the domain of the psyche, cf. the motif of the square in Part II, supra. According to Pythagoras the soul is a square (Zeller, *Die Philosophie der Griechen*, III, p. 120).

[48] Symbolized by a sorceress or by wanton girls, as in *Poliphilo*. Cf. fig. 33, and Béroalde de Verville, *Le Songe de Poliphile*. Similar themes in Part II of this volume.

[49] *Art. aurif.*, II, p. 246: "Nam Beya ascendit super Gabricum, et includit eum in suo utero. quod nil penitus videri potest de eo. Tantoque amore amplexata est Gabricum, quod ipsum totum in sui naturam concepit, et in partes indivisibiles divisit. Unde Merculinus ait: …

> "Per se solvuntur, per se quoque conficiuntur,
> Ut duo qui fuerant, unum quasi corpore fiant."

(Then Beya mounted upon Gabricus and enclosed him in her womb, so that nothing at all could be seen of him any more. And she embraced Gabricus with so much love that she absorbed him completely into her own nature, and divided him into indivisible parts. Wherefore Merculinus says: Through themselves they are dissolved, through themselves they are put together, so that they who were two are made one, as though of one body.) (NOTE: "Merculinus" is a correction of the text's "Masculinus.") The King, like the King's Son, is killed in a variety of ways. He may be struck down, or else he drinks so much water that he sickens and dissolves in it (Merlinus, "Allegoria de arcano lapidis," *Art. aurif.*, I, pp. 392ff.).

[50] Valentinus, "Practica," *Mus. herm.*, p. 394. In another version of the incorporation motif, Mars feeds the body of the King to the famished wolf (*fame acerrima occupatus*), the son of Saturn (lead). The wolf symbolizes the *prima materia's* appetite for the King, who often takes the place of the Son (fig. 175; cf. also figs. 166, 168, 169).

[51] Cf. *Symbols of Transformation*, passim.

[52] Espagnet, "Arcanum hermeticae philosophiae," *Bibl. chem. curiosa*, II, p. 655, §LXVI1I: "This first digestion takes place as if in a belly."

[53] Frobenius, *Das Zeitalter des Sonnengottes*.

[54] *Turba philosophorum* (Sermo LXVIII): "Our work … results from a generation in the sea."

[55] Cf. the king's sweat-bath, fig. XIV of the Lambspringk "Figurae," *Mus. herm.*, p. 369, among others. We find exactly the same idea in the hatching of the egg in goldmaking, as described by Nikephorus Blemmides: περὶ τῆς ᾠοχρυσοποιίας (Berthelot, *Alch. grecs*, VI, xx).

[56] Cf. Jung, *Symbols of Transformation*, p. 380.

[57] Christopher, "Elucidarius," *Theatr. chem.*, VI, p. 228. Cf. Mithras' birth from a stone "solo aestu libidinis" (through the sole heat of libido).

[58] Cf. Sendivogius, "De sulphure." *Mus. herm.*, p. 612: "extra leve et invisible, intus vero grave, visibile et fixum" (outside it [the element air] is light and invisible, but inside heavy, visible, and solid).

[59] Grasseus, "Area arcani," *Theatr. chem.*, VI, p. 314. He mentions the Augustinian monk Degenhardus as the author of this image, which, as in *Aurora* (ch. V), is an obvious allusion to Sapientia.

[60] "Practica," *Mus. herm.*, pp. 403f.

[61] *De circulo physico quadrato*. There is a parallel idea in Emerson, *Essays*, I, pp. 301ff. [In Jung's copy, "Circles"; but cf. also "Intellect."—EDITORS.]

[62] Heart and blood as seat of the soul.

[63] *Opera omnia*, p. 146.

[64] For instance, in Lambspringk's "Figurae et emblemata," *Mus. herm.*, p. 371. See fig. 179.

[65] A similar idea is to be found in the Indian *hamsa* (swan).

[66] Scott, *Hermetica*, I and II.

[67] Also defined as *calx viva* (quicklime).

[68] "Gloria mundi," *Mus. herm.*, pp. 246f.

[1] For a discussion of this method see Jung, “The Transcendent Function,” and *Mysterium Coniunctionis*, pp. 494ff., 528ff.—EDITORS.]

[2] Harforetus = Horfoltus of the Codex Berolinensis (Ruska, *Turba*, p. 324). In Ruska’s opinion, he is identical with the Emperor Heraclius (610–641), but the mystical role he plays in the “Visio” points rather to some connection with Harpokrates.

[3] The “Visio Arislei” (*Art. aurif*., I, p. 149) has: “ad Regem dicentes: quod filius tuus vivit, qui morti fuerat deputatus” (they said to the king: your son is alive, who was accounted dead). The Codex Berolinensis (in Ruska, *Turba*) has: “et misimus ad regem, quod filius tuus commotus est” (and we sent [word] to the king: Your son has been moved). (NOTE: “Commotus” is evidently intended to mean that he “moves” again or is “quick,” alive.)

[4] I use the edition of 1593 in *Artis auriferae*, I, pp. 146ff.

[5] Ruska, *Turba*, p. 324. In the *Art. aurif*., I, this passage is changed to “how to gather the fruits of that immortal tree.”

[6] The tree is often a *coralium* or *coralius*, coral, therefore, a “sea-tree” (fig. 186) (“the living coral growing in the sea”—“Allegoriae super librum Turbae,” *Art. aurif*., I, p. 141). Cf. the tree of paradise in the sea in Paracelsus, *Das Buch Azoth*, p. 529.

[7] Hence the recurrent formulae, “Deo adiuvante,” “Deo concedente,” etc.

[8] The Neopythagoreans regarded Pythagoras as God incarnate. Cf. Zeller, *Die Philosophie der Griechen*, III, p. 130.

[9] As Hermes takes the place of Poimandres. Cf. Scott, *Hermetica*, I and II.

[10] Melchior Cibinensis. (See pars. 480ff.)

[11] Cf. the quotation from Alphidius in Maier, *Symbola aureae mensae*, p. 65, and also in *Aurora consurgens* I, ch. I: “Qui hanc scientiam invenerit, cibus eius legitimus erit et sempiternus” (He who hath found this science, it shall be his rightful food for ever). Parable VII of *Aurora* says: “Ex his enim grani huius fructibus cibus vitae conficitur, qui de coelo descendit. Si quis ex eo manducaverit, vivet sine fame. De illo namque pane edent pauperes et saturabuntur et laudabunt Dominum, qui requirunt eum, et vivent corda eorum in saeculum.” (For from the fruits of this grain is made the food of life which cometh down from heaven. If any man shall eat of it, he shall live without hunger. For of that bread the poor shall eat and shall be filled, and they shall praise the Lord that seek him, and their hearts shall live for ever.)

[12] The rite of blessing the New Fire seems to have originated in France; at any rate it was already known there in the 8th century, although it was not yet practised in Rome, as is proved by a letter from Pope Zacharias to St. Boniface. It appears to have reached Rome only in the 9th century. (See “Feuerweihe” in Braun, *Liturgisches Handlexikon*.)

[13] Although I take every available opportunity to point out that the concept of the self, as I have defined it, is not identical with the conscious, empirical personality, I am always meeting with the misunderstanding which equates the self with the ego. Owing to the fundamentally indefinable nature of human personality, the self must remain a borderline concept, expressing a reality to which no limits can be set.

[14] Cf. for example Simon Magus, who belonged to the apostolic era and already possessed a richly developed system.

[15] Wei Po-yang, “An Ancient Chinese Treatise on Alchemy.”

[16] *The Secret Tradition in Alchemy*.

[17] “Et ut Jesus Christus de stirpe Davidica pro liberatione et dissolutione generis humani, peccato captivati, ex transgressione Adae, naturam assumpsit humanam, sic etiam in arte nostra quod per unum nequiter maculatur, per aliud suum contrarium a turpitudine illa absolvitur, lavatur et resolvitur.”—*Bibl. chem*., I, p. 884, 2.

[18] Cf. the *lectio* for Wednesday in Holy Week (Isa. 62 : 11; 63 : 1–7). “Wherefore art thou red in thine apparel, and thy garments like him that treadeth in the wine-fat?” and … “their blood shall be sprinkled upon my garments …” (A.V., Isa. 63 : 2, 3). Cf. the *pallium sanguineum* of other authors.

[19] *Ars chemica* (1566), pp. 21f.

[20] Berthelot, *Alch. grecs*, IV, xx. The text probably belongs to the 1st century.

[21] From the Greek text in Berthelot. *Alch. grecs*, III, xlix, 4–12, translated there into French by Ruelle. Ruska (“Tabula smaragdina,” pp. 24–31) also gives a translation of pars. 2–19. Scott (*Hermetica*, IV, pp. 104ff.) gives this part of the text in Greek with a commentary. Cf. further Bousset, *Hauptprobleme der Gnosis*, pp. 190ff. The translation given here [i.e., the German version —TRANS.] was made by myself with the help of Dr. Marie-Louise von Franz and differs in several points from the Ruelle and Ruska versions.

[22] Heimarmene = fate, natural necessity.

[23] The passage beginning with “behold” is omitted by Reitzenstein as a Christian interpolation. Cf. Reitzenstein, *Poimandres*, p. 103; also Ruska, “Tab. smarag.,” p. 25.

[24] Ibid., p. 25: “dwelling in every body.” *διήκειν* has more the meaning of “penetrate.” Cf. Bousset, *Hauptprobleme der Gnosis*, p. 191.

[25] *ὲκάστης* Codd. The conjecture *ὲκάστου* is superfluous.

[26] *ὰνορμάω* can only be meant transitively. Ruelle and Ruska translate: “So he (i.e., the son of God) has ascended. …” But this interpretation takes all sense from the following accusatives which refer to the object *νοῦν*

[27] The *νοῦς*. Cf. Reitzenstein, *Poimandres*, p. 103, note 11.

[28] Ruska: “before it put on the flesh.” But *τὸ σωματικὸν* as predicate to *γενὲσθαι* could not have an article. The sense is rather “before the creation.” Cf. par. 9, where the men of light rescue their spiritual part by taking it *ὅπου καὶπρὸ τοῦ κόσμου ἦσαν*.

[29] *ἀκολουθοῦντα*, *ὀρεγόμενον* and *ὀδηγούμενον* refer to *νοῦν* which is also the object of ἀνώρμησεν. Scott (*Hermetica*, IV, p. 119) transfers this whole paragraph to the end of par. 8, because, in his opinion, it is not suitable to a Hermetic doctrine. But it constitutes the proof of the preceding idea that man should not struggle outwardly against his destiny, but should only strive inwardly for self-knowledge, the outward submission of the Son of God to suffering being an example of this.

[30] Cf. Reitzenstein, *Poimandres*, pp. 107–8. Iamblichus (*De mysteriis Aegyptiorum*, VIII, 4) mentions a prophet Bitys as an interpreter of Hermes at the court of King Ammon. He is said to have found the writings of Hermes at Saïs. Cf. ibid., X, 7: αὐτὸ δὲ τὸ ἀγαθὸν τὸ μὲν θεῖον ἡγοῦνται τὸν πρὸς αὐτὸν ἕνωσιν. ὅπερ Βίτυς ἐκ τῶν

πρὸς αὐτὸν ἕνωσιν. ὅπερ Βίτυς ἐκ τῶν Ἑρμαϊκῶν βίβλων μεθηρμήνευσεν. According to Dieterich (“Papyrus magica musei Lugdunensis Batavi,” p. 753) he is identical with the Thessalonian Pitys of the Magic Papyri (Wessely, “Griechische Zauberpapyrus,” pp. 95, 92, 98: ΠίΤυος ἀγωγή—βασιλεῖ ’Οστάνη Πίτυς χαίρειν—ἀγωγή Πίτυος βασιλέως—Πίτυος θεσσαλοῦ.). He may also be identical, again, according to Dieterich, with Bithus of Dyrrhachium mentioned by Pliny (Book XXVIII). Scott (*Hermetica*, IV, pp. 129–30) suggests inserting “Nikotheos” or “which I wrote,” and has a drawing in mind.

[31] Cf. *Philebus* (18b), *Phaedrus* (274c).

[32] Scott’s splitting up of this sentence is inadmissible. In *Philebus* (18), Thoth is not represented as the “first man” but actually as the “divine man” and the giver of names to all things.

[33] Ruska: “what Thoythos interprets is in the holy language.” But Thoythos must be gen. explicat. to *φωνή*. for in other places the nominative is “Thoyth.” Cf. Bousset, *Hauptprobleme der Gnosis*, p. 191.

[34] *πνρά* Codd.: probably *πνρρά* = “fire-coloured.” Cf. Scott, *Hermetica*, IV, p. 121: “The interpretation of Adam as *γῆ παρθένος* is clearly a combination of the derivation from the Hebrew ‘adamah’ = γῆ (Philo, i. 62) and from the Greek *ἀδμής* = *παρθένος*. Hesychius gives άδάμα παρθενική γῆ. The sense is doubtless Josephus, *Ant.*, I, i. 2: *σημαίνει δὲ τοῦτο* (*Ἄδάμος*) *πνρρὸς ἐπειδήπερ ἀπὸ γῆς πνρρᾶς γῆς ἐγεγόνει, τοιαύτη γάρ ἐστιν ἤ παρθένος γῆ.* Compare Olympiodorus (Berthelot, p. 89 [*Alch. grecs*, II, iv, 32]): *οὗτος* (*’Αδάμ*) *γάρ πάντων άνθρώπων πρῶτος ἐγένετο ἐκ τῶν τεσσάρων στοιχείων, καλεῖται δὲ καὶ παρθένος γῆ, και πνρ*[*ρ*]*ά γῆ, και σαρκίνη γῆ, καἰ γῆ αἱματώδης*. Cf. Eusebius, *Evangelica praeparatio*, 11, 6, 10, sq. …”

[35] *δν* Codd.; Reitzenstein and Ruska: *ὧν*. It is also possible that *δν* refers to the first man: namely that they exhibited him as Osiris in every sanctuary. We find evidence for this in Lydus, *De mensibus*, IV, 53: “For there are many conflicting opinions among the theologians regarding the God who is worshipped by the Hebrews. For the Egyptians, and above all Hermes, maintain that he is Osiris, the one who exists, of whom Plato in the *Timaeus* says: ‘which is the being that has no origin.’” Cf. Reitzenstein, *Poimandres*, p. 185, concerning the alleged transmission of the Jewish ideas to Egypt.

[36] *παρεκάλεσεν*: ‘A … Codd.; Reitzenstein and Ruska: *παρεκάλεσαν ’Ασενᾶν* “When they [the Ptolemies] sent for Asenas” (masc. or fem.). Ruelle, on the other hand, takes Asenas as subject of *παρεκάλεσεν*. Nothing is known concerning a high priest named Asenas. It is very probable—as Scott (*Hermetica*, IV, p. 122) remarks—that Asenath, the beautiful daughter of the Egyptian priest Potipherah of On (Heliopolis), is meant. She bore Joseph two sons during his Egyptian imprisonment, according to Gen. 41 : 50. In a midrash which has undergone a Christian revision, we find a legend of this Asenath falling in love with Joseph when he appeared as Pharaoh’s steward; he rejected her, however, on account of her being an unbeliever. She then became a convert and did penance, whereupon a male messenger from heaven (in the recension: Michael)—whom she received as a *δαίμων πάρεδρος, spiritus familiaris*, in truly pagan fashion—gave her a honeycomb of paradise to eat and thus endowed her with immortality. He announces that Joseph will come to court her, and that from now on she will be called the “place of refuge.”—Cf. also Batiffol, “Le Livre de la Prière d’Asenath,” and Reitzenstein. *Die hellenistischen Mysterienreligionen*, pp. 248f.; further, Oppenheim, *Fabula Josephi et Asenathae;* Wilken, *Urkunden der Ptolemäerzeit;* and Kerényi, *Die griechisch-orientalische Romanliteratur in religionsgeschichtlicher Beleuchtung*, pp. 104f. It is possible that the messenger from heaven was originally Hermes. Hence our text might read as follows: “At the time when Asenath went to the High Priest of Jerusalem for help, who sent Hermes,

who translated. …” W. Scott suggests replacing Asenath by “Eleazar,” who, according to the Aristeas Letter, put the translation of the LXX (Septuagint) in hand; in this case one would also have to change the messenger Hermes into *ἑρμηνέα*, “interpreter.” But it is more likely that we are dealing with an altogether different legend.

[37] *τῶν ἀρχιεροσολύμων* Codd. Conjecture *τὸν ἀρχιερέα* ‘Ι*εροσολύμων*. Cf. Reitzenstein, Ruska, and Scott.

[38] Κ*ατά τὸ σῶμα* might also be understood as “in the corporeal language” in contrast to the “angel language” mentioned before. Elsewhere Zosimos contrasts the spiritual language with an *ἔνσωμος φρῖσις*.

[39] Also letters (*στοιχεῖα*)

[40] Here we can probably assume a lacuna containing the element earth, or possibly the elements earth and water. Anyhow the text is corrupt here. Ruska suggests putting *τὸ δεύτερον α τὸν ἀρέρα* instead of *τὸν ἀέρα*, to indicate the North. Scott is probably right to leave *τὸν ἀέρα* (the air), for the object was to combine the points of the compass with the elements; Scott therefore adds *γῆ* (earth) after the word *δύσις* (descent). As justification for inserting *ἄρκτος* Scott quotes the Sibylline Oracles, III, 24: *αὐτὸς δὴ θεός, ἔσθ’ ὁ πλάσας τετραγράμματον* ’Α*δάμ τὸν πρῶτον πλασθέντα καὶ οὔνομα πληρώσαντα ἀνατολίην* **τε δύσιν τε μεσημβρίην τε** *τε καὶ ἄρκτον*, and the Slavonic Book of Enoch, ch. 30.

[41] Ruska: “The midmost of these bodies is the ripening fire which points to the midst of the fourth region.” Reitzenstein omits all this part.

[42] *ἀγνοῶν* Codd.; Reitzenstein conjectures *ἀγνοῶ. διὰ τὸ τέως* Codd., literally “with regard to the foregoing.”

[43] This is a pun on *τὸ φῶς* (light) and the Homeric *ὁ φώς* (man). See Ruska.

[44] Reitzenstein: *διαπνεομένῳ*, referring to Paradise: “in Paradise where blew the breath of Fate.”

[45] Reitzenstein adds “the archons” in explanation. But it is more likely to be the elements (*στοιχεῑα*) mentioned above. Cf. Gal. 4 : 9, for instance.

[46] *παρ’ αὐτοῦ* Codd.; Reitzenstein, Scott, and Ruska *παρ’ αύτῶν* “the Adam that was with them.”

[47] Cf. in particular Bousset, *Hauptprobleme*, p. 193.

[48] *Theogony*, 614.

[49] *δν* Codd. Reitzenstein conjectures *ᾧ*.

[50] “Prometheus” Codd. is omitted by Reitzenstein, because it probably refers to the whole man.

[51] Reitzenstein conj.: *νοῦ*.

[52] Personified in Reitzenstein: Nous (as Poimandrcs).

[53] *ὅτε* Codd.; Reitzenstein has *ὅτι* (whatever he wills).

[54] *Φαίνει* Codd.; Ruska and Scott have *Φαίνεται* (appears). Possibly the next sentence sets forth the essential meaning of the Son of Man?

[55] Reitzenstein deletes this whole sentence as a Christian interpolation. According to Photius (*Bibliotheca*, 170: ed. Bekker. I, p. 11) Zosimos was later interpreted in a Christian sense. Scott

deletes the words “Jesus Christ” and simply takes “the Son of God” as the subject.

[56] *συλλήσας* Codd.; Reitzenstein and Scott have *συλήσας*. Ruska translates: “laying aside his own humanity.” Concerning the stealing, cf. Hegemonius, *Acta Archelai*, XII, where it is said of God: “Hac de causa … furatur eis [the “principes”] animam suam” (For this reason … he steals from them [i.e., the princes] their soul [or “his soul”]).

[57] Reitzenstein, too, relates this to what follows.

[58] *τόποισι* Codd.; Reitzenstein has *ἒπεισι* (“he goes to …”).

[59] Conj.: *συνῶν;* Reitzenstein, Bousset, and Scott have *συλῶν* Codd.; *συλλαλῶν:* “he converses” (Ruelle).

[60] Ruelle: “He counselled his own to exchange secretly their spirit with that of Adam which they had within them. …” But this makes *διά* superfluous. Cf. also the passage Φησὶ γὰρ ό νοῦς ήμῶν … and the beginning of our text, where the Redeemer leads the soul back by enlightening the Nous of each soul.

[61] *ἒχειν* can mean “to have to suffer.” The adversaries evidently mean to injure the Men of Light.

[62] Reitzenstein eliminates the second *παρ’ αὐτῶν*. But *παρά* can also mean “away from someone’s side.”

[63] *δι’ οὗ ζηλούμενος* Codd.; Reitzenstein has *διαζηλούμενος*.

[64] Omitted by Reitzenstein. But the meaning is “before the coming of the Redeemer.”

[65] *πρὶν ἢ* can be construed with accusative and infinitive, and then Antimimos is subject of *τολμῆσαι* and not object of άποστέλλει. Ruska inserts *υἱὸς Θεοῦ* as subject of *τολμῆσαι* But he has not been spoken of for a long time, because he has already appeared. It is more likely that Antimimos himself has a forerunner.

[66] Reitzenstein and Scott suggest Μανιχαῖος (Manichaeus).

[67] *περίοδον* Codd.; Reitzenstein has *περιόδους*.

[68] *έαντῷ* Codd.; Reitzenstein has *έαντοῦ*.

[69] Reitzenstein and Ruska conjecture a lacuna after “seeking the abode of bliss,” and connect “he” with Prometheus. This is unnecessary, since Epimetheus through his own fate “interprets”—*ἐρμηνεύει*—to those of spiritual understanding what is to be done.

[70] As Scott remarks, this is probably an inexact quotation of the Odyssey, VIII, 167—οὕτως οὐ πάντεσσι θεοὶ χαριέντα δίδουσι ἄνδρασιν” from a context showing how different individuals are differently gifted by the gods. Zosimos goes on to explain how in all arts men have an individual method of working.

[71] *ἂγων* Codd.; Ruska conjectures *άργὸν*, Scott *ἂκρον*.

[72] Ruska has Φιλόπονος instead of *μόνος*, but it is drawbacks that are enumerated here.

[73] Berthelot, *Alch. grecs*, III, li, 8.

[74] Diodorus, *Bibliotheca*, I, p. 27.

[75] The Cretan bull led him to the south; the man-eating mares of Diomedes to the north (Thrace); Hippolytus to the east (Scythia); and the oxen of Geryon to the west (Spain). The Garden of the

Hesperides (the western land of the dead) leads on to the twelfth labour, the journey to Hades (Cerberus).

[76] Book of Enoch 17–36 (Charles, *Apocrypha and Pseudepigrapha*, II, pp. 199ff.). The journeys lead to the four quarters of the earth. In the west he finds a fourfold underworld of which three parts are dark and one is light.

[77] The journey begins in Europe and leads to America, to Asia, and finally to Africa in search of Mercurius and the phoenix (*Symbola aureae mensae*, pp. 572ff.).

[78] In Marius Victorinus (Halm, *Rhetores Latini minores*, p. 223; quoted by Reitzenstein, *Poimandres*, p. 2653).

[79] “Super arborem Aristotelis,” *Theatr. chem*., II, p. 527: “Alexander invenit sepulcrum Hermetis et quandam arborem sitam ab extra intus tenentem viriditatem gloriosam: super eam ciconia ibi sedebat, quasi se appellans circulum Lunarem: et ibi ipse aedificavit sedes aureas et posuit terminum itineribus suis idoneum.” (Alexander found the tomb of Hermes and outside it a certain tree with a glorious greenness inside. And on it there sat a stork, as it were calling itself the circle of the Moon. And there he built golden seats and put a fitting end to his travels.) The stork is an *avis Hermetis*, like the goose (fig. 198) and pelican.

[80] In the same treatise: Berthelot, *Alch. grecs*, III, xlix, 1.

[81] Baynes, *A Coptic Gnostic Treatise*, pp. 84ff. Cf. also Bousset, *Hauptprobleme der Gnosis*, p. 189; Schmidt, “Gnostische Schriften,” pp. 135ff.; also Turfan Frag., sig. M 299a, in Henning, “Ein Manichäisches Henochbuch,” pp. 27f.

[82] Puëch, “The Concept of Redemption in Manichaeism,” p. 257.

[83] Philalethes, “Metallorum metamorphosis,” p. 771: “Se pro libitu suo transformat, ut varias larvas induat” (He transforms himself as he pleases, assuming various shapes [masks]). Aegidius de Vadis, “Dialogus,” *Theatr. chem*., II, p. 118: “Dicitur enim Mercurius propter suam mirabilem convertibilitatis adhaerentiam” (For he is called Mercurius because of his wonderful ability to transform himself).

[84] “Tab. smarag.”: “Omnem rem solidam penetrabit” (He will penetrate every solid thing). *Rosarium*, *Art. aurif*., II, p. 259: “Est oleum mundissimum penetrativum in corporibus” (He is a most pure oil penetrating the bodies). “Rosinus ad Sarratantam,” *Art. aurif*., I, p. 302: “… spiritus vivus, et in mundo talis non est, qualis ipse est: et ipse penetrat omne corpus …” (A living spirit such as there is none other in the world, as he is; and he penetrates all bodies).

[85] Geber, “Livre de la misericorde,” in Berthelot, *Chimie au moyen âge*, p. 181. “Then he spreads his poison” (Lambspringk, “Figurae,” *Mus. herm*., p. 352); “Venenosus vapor” (Flamel, “Summarium philosophicum,” *Mus. herm*., p. 173); “Spiritus venenum” (Ripley, *Opera omnia*, p. 24); “Mercurius lethalis est” (“Gloria mundi,” *Mus. herm*., p. 250).

[86] *Pistis Sophia:* trans. Schmidt, pp. 46, 207.

[87] Printed in *Bibliotheca chemica curiosa*, II. Gessner mentions Bonus as a contemporary of Raymond Lully (1235–1315), but Mazzuchelli (1762) maintains that Pietro Antonio Boni lived about 1494. Ferguson (*Bibliotheca chemica*, I, p. 115) leaves the question undecided. Hence the above dates are given with reserve. The first edition of the *Pret. marg. nov*. is that of Lacinius (1546). fol. i ff.: “Quia consuevit non solum. …” The introduction in *Bibliotheca chemica curiosa* is missing here.

All the authors quoted in the text lived before the 14th century. Nor does the material supply any reasons for dating the text later than the first half of the 14th century.

[88] *Bibl. chem.*, II, ch. VI, pp. 29ff.

[89] The psychological equivalents of these two categories are conscious cognition based on sense-perception, and the projection of unconscious contents. For these latter *cor* is an apt designation, since the heart region (fig. 149) represents a more primitive localization of consciousness, and, even at a higher level, still harbours emotive thoughts, i.e., contents that are very much under the influence of the unconscious.

[90] “Quod verbum est philosophicum.” I feel impelled to translate this phrase as above, because of the later alchemical distinction between Christ as the “verbum scriptum” and the *lapis* as “verbum dictum et factum” (“Orthelii Epilogus,” *Bibl. chem.*, II, p. 526).

[91] “subtilitatem fere incredibilem.”

[92] As an analogy of God.

[93] Reputed to be an Arab philosopher of the 12th century.

[94] Presumably in the alchemical work, whose procedure resembles the creation and end of the world.

[95] Cf. the detailed later account in “Liber de arte chimica,” *Art. aurif.*, I, pp. 581, 613.

[96] Bonus is referring to an older Pseudo-Platonic text which I have not yet been able to trace. Evidently it contained a *lapis*-Christ parallel. Possibly—as in the case of the “Tractatus aureus”—the original source was Arabic (Sabaean?).

[97] These are the *electi*. Manichean influences are not inconceivable in Morienus.

[98] Part I of the text has been translated and edited, with a commentary, by Marie-Louise von Franz. [Published in English under the title *Aurora Consurgens: A Document Attributed to Thomas Aquinas on the Problem of Opposites in Alchemy*.] *Aurora consurgens* is an extremely characteristic example of the mystical side of alchemy, affording deep insight into this extraordinary state of mind, which is sufficient justification for a separate publication of the whole of Part I.

[99] Decas II, pp. 175ff. Cf. Kopp, *Die Alchemie*, II, p. 343.

[100] Vulgate, Sap. 7 : 11: “Venerunt autem mihi omnia bona pariter cum illa [sapientia], et innumerabilis honestas per manus illius” (D.V.: “Now all good things came to me together with her, and innumerable riches through her hands”).

[101] Vulgate, Prov. 1 : 20–21 verbatim (D.V.: “Wisdom preacheth abroad: she uttereth her voice in the streets, at the head of the multitudes she crieth out, in the entrance of the gates of the city she uttereth her words, saying …”).

[102] Vulgate, Ps. 33: 6: “Accedite ad eum [Dominum], et illuminamini: et facies vestrae non confundentur” (D.V.: “Come ye to him and be enlightened: and your faces shall not be confounded”). Also Vulgate, Ecclus. 24 : 30: “Qui audit me non confundetur, et qui operantur in me non peccabunt” (D.V.: “He that hearkeneth to me shall not be confounded: and they that work by me shall not sin”).

[103] Vulgate, Ecclus. 24 : 26: “Transite ad me, omnes qui concupiscitis me, et a generationibus meis implemini” (D.V.: “Come over to me, all ye that desire me: and be filled with my fruits”).

[104] Eucherius, *Formularium spiritalis intelligentiae*, and Rabanus, *Allegoriae*, among others. Cf. Vulgate, Hab. 3 : 3: “Deus ab austro veniet, et Sanctus de monte Pharan” (D.V.: “God will come from the south: and the holy one from Mount Pharan”).

[105] Vulgate, Matt. 12 : 42 (Luke 11 : 31 is almost identical): “Regina austri surget in iudicio cum generatione ista, et condemnabit eam: quia venit a finibus terrae audire sapientiam Salomonis, et ecce plus quam Salomon hic” (D.V.: “The queen of the south shall rise in judgment with this generation and shall condemn it: because she came from the ends of the earth to hear the wisdom of Solomon. And behold a greater than Solomon here”).

[106] Ch. V. Cf. Vulgate, Cant. 6 : 9: “Quae est ista quae progreditur quasi aurora consurgens, pulchra ut luna, electa ut sol …” (D.V.: “Who is she that cometh forth as the morning rising, fair as the moon, bright as the sun …”).

[107] *Art. aurif.*, II, p. 294.

[108] Sudhoff, XIII, p. 403.

[109] Cumont, *Textes et monuments*, I. p. 356.

[110] Hegemonius, *Acta Archelai*, pp. 12f.: “Cum autem vidisset pater vivens adfligi animam in corpore, quia est miserator et misericors, misit filium suum dilectum ad salutem animae; haec enim causa et propter Homoforum misit eum. Et veniens filius transformavit se in speciem hominis; et adparebat quidem hominibus ut homo, cum non esset homo, et homines putabant eum natum esse. Cum ergo venisset, machinam quandam concinnatam ad salutem animarum, id est rotam, statuit, habentem duodecim urceos; quae per hanc spheram vertitur, hauriens animas morientium quasque luminare maius, id est sol, radiis suis adimens purgat et lunae tradit, et ita adimpletur lunae discus, qui a nobis ita appellatur.”

(But when the living father saw that the soul was tormented in the body, he sent—because he is charitable and compassionate—his beloved son for the salvation of the soul. For this cause he sent him, and on account of Homoforus. And the son came and changed into human form, and showed himself to men as a man, although he was no man, and the people thought that he had been born. And when he came he made a device for the redemption of souls, and set up a wheel with twelve buckets, which is turned by the rotation of the sphere and raises the souls of the dying; these are caught by the rays of the greater light, which is the sun, and purified and passed on to the moon, and thus is the disc of the moon filled, as we say.) The same passage is to be found in the *Panarium* of Epiphanius, Haer. LXVI.

[111] There are secret connections, or at least striking parallels, between alchemy and Manicheism which still need investigating.

[112] Ripley (d. 1490) describing the transformation of earth into water, water into air, and air into fire, says (*Opera omnia*, p. 23): “sic rotam elementorum circumrotasti” (Thus did you revolve the wheel of the elements).

[113] “Philosophia chemica,” *Theatr. chem.*, I, p. 492: “A materia prima generationis rota sumit exordium, ad elementa simplicia transiens.” Cf. also Mylius. *Phil, ref.*, p. 104: “Toties ergo reiterandum est coelum super terram, donee terra fiat coelestis et spiritualis, et coelum fiat terrestre, et iungetur cum terra, tunc completum est opus” (So many times must the heaven above the earth be reproduced, until the earth becomes heavenly and spiritual, and heaven becomes earthly, and is joined to the earth: then the work will be finished).

[114] Cumont, *Textes et monuments*, I, p. 178.

[115] “Tractatus Aristotelis,” *Theatr. chem.*, V, p. 885.

[116] Reference to the Vulgate. Ps. 18 : 6–7 (D.V.): “He hath set his tabernacle in the sun: and he, as a bridegroom coming out of his bride chamber, hath rejoiced as a giant to run the way. His going out is from the end of heaven.”

[117] “Dum Heroes ille, tanquam gigas exultans, ab ortu exurgit, et in occasum properans demergitur, ut iterum ab ortu redeat continue, has circulationes causatur, inque materia splendida argenti vivi, velut in speculo, ideas relinquit, ut humana industria aurum inquiratur, ab adhaerentibus segregetur, igne, aqua examinetur, et in usum Deo Creatori placentem transferatur.” (*De circulo quadrato*, p. 15.)

[118] Maier, ibid., pp. 15f.

[119] *Mus. herm.*, p. 661.

[120] “Nihilominus intemerata remanens” (nevertheless remaining undefiled). Cf. “mater amata, intemerata” (beloved mother, undefiled) of Latin hymnology; also the “virgo pulchra, ornata, ad persuadendum valde apta” (virgin beautiful, adorned, well suited for persuading), who appears sometimes as male and sometimes as female in the Manichean *Acta Archelai*.

[121] Such parallels show, in spite of all assurances to the contrary, how much the alchemical work is a *mysterium iniquitatis* from the Christian point of view. On an objective view, however, it is simply a chthonic mystery which, as Part II of this volume shows, has its roots in the transformative processes of the unconscious.

[122] The feminine nature of Mercurius is connected with the moon.

[123] The “male virgin” is also a Manichean idea in the writings of Theodoret.

[124] His work *De ratione conficiendi lapidis philosophici* was printed at Basel in 1571.

[125] Ezech. 1 : 15 (D.V.): “Now as I beheld the living creatures, there appeared upon the earth by the living creatures one wheel with four faces. And the appearance of the wheels and the work of them was like the appearance of the sea: and the four had all one likeness. And their appearance and their work was as it were a wheel in the midst of a wheel … for the spirit of life was in the wheels.”

[126] *Theatr. chem.*, II, p. 259.

[127] As a matter of fact, there are two treatises known to me that are entitled “Lilium”: the “Lilium inter spinas” of Grasseus (*Bibl. chem.*, II), which belongs to the 17th century, and the “Lilium de spinis evulsum” of Guilhelmus Tecenensis (*Theatr. chem.*, IV), who lived at the end of the 16th and beginning of the 17th century. The date puts the former “Lilium” out of court; but the latter might be considered because it is highly probable that the treatise is wrongly ascribed to Guilhelmus. To judge by its contents and the authors quoted (there are numerous quotations from the *Turba*, “Tractatus Micreris” [*Theatr. chem.*, V], Geber, and so on, but Albertus, Lully, and Arnaldus are missing), it appears to be an old text which might perhaps belong to the time of the “Cons, coniug.” But the above passage is not to be found. “Lilium” or “Lilius” is also quoted in the *Rosarium*.

[128] Berthelot, *Alch. grecs*, IV, xx, 17.

[129] Ibid., III, i.

[130] Holmyard, *Kitāb al-’ilm al-muktasab*, p. 43: “… but what of the speech of *Hermes* in which he says: ‘The great South wind when it acts makes the clouds to rise and raises the cloud of the sea’? He said, If the powdering is not successful the compound will not ascend into the top of the retort, and even if it does ascend it will not pour into the receiver. It is necessary to mix with it the first and second waters before it will ascend to the top of the retort. ‘That,’ he said, ‘is the Great South Wind?’ He said: ‘Yea, O King’” etc.

[131] Roscher, *Hermes der Windgott*.

[132] See next section.

[133] Psalm 44 (in A.V., Psalm 45) is defined as an *Epithalamium Christianum*—a Christian bridal song.

[134] Gal. (D.V.) 4 : 4.

[135] Heb. (D.V.) 1 : 2.

[136] Heb. (D.V.) 1 : 5; 5 : 5.

[137] Ruska, *Turba*, p. 178.

[138] Espagnet, “Arcanum,” *Bibl. chem.*, II, p. 656, §LXXIII: “Lapidis generatio fit ad exemplum generationis mundi, suum enim chaos et materiam suam primam habeat necesse est, in qua confusa fluctuant elementa donec spiritu igneo separentur.… Congregantur aquae in unum, et apparet Arida.” (The generation of the stone takes place on the model of the creation of the world. For it is necessary that it have its own chaos and its own prima materia, in which the elements are to float about in confusion until they are separated by the fiery spirit. The waters are gathered into one [place] and the dry land [Arida] appears.)

[139] Ibid.: “[in nigredine] denique separatur lapis in quatuor elementa confusa, quod contingit per retrogradationem luminarium” (Lastly [in the blackness] the stone is separated into the four elements mingled together, which is brought about by the retrograde movement of the stars). This refers to the *coniunctio* of Sol and Luna, who *post coitum* are overcome by death (see fig. 223). Cf. the illustrations in the *Rosarium*, reproduced in my “Psychology of the Transference.” Espagnet (*Bibl. chem.*, II, p. 655, §LXIVf.): “Nigro colori succedit albus” (on the black follows the white). This white sulphur is the *lapis*.

[140] The “Sea” of the philosophers. “Mare sapientiae” was one of the titles of Hermes (Senior, *Tabula chymica*, p. 31)—evidently an allusion to Moses.

[141] The healing water also flows from the stone whence the pneumatic spark is struck. In later alchemical literature this stone is often likened to Christ (as also in Church hermeneutics), from whom the miraculous water flows. Thus Justin Martyr says (“Dialogus cum Tryphone Judaeo,” Migne, *P.G.*, vol. 6, col. 639): “As a spring of living water from God, in the land of the heathen barren of all knowledge of God, has this Christ gushed forth [see fig. 213], who appeared also to your people, and healed them that from their birth and in the flesh were blind, dumb, and lame.… Also he awoke the dead.… This he did in order to convince those who are ready to believe in him that, even if a man be afflicted with any bodily infirmity and yet keeps the commandments given by Christ, he shall be awakened at the second coming with an uncrippled body, after Christ has made him immortal and incorruptible and without sorrow.”

[142] A frequent image: Mercurial water (*rivuli aurei*), etc.

[143] Like the “pluviae et imbres” that drench and fertilize the thirsty earth. The king in alchemy is thirsty and drinks water until he dissolves. Cf. Merlinus, “Allegoria,” *Art. aurif.*, I, p. 392.

[144] Ps. 45 : 5 (D.V.): “The stream of the river maketh the city of God joyful.”

[145] I Cor. (D.V.) 15 : 53f.: “For this corruptible must put on incorruption: and this mortal must put on immortality. And when this mortal hath put on immortality, then shall come to pass the saying that is written: *Death is swallowed up in victory. O death, where is thy victory? O death, where is thy sting?”*

[146] Cf. Ruska, *Turba*, pp. 182f., 115f.

[147] A Hermes quotation in Senior. *De chemia*, p. 71 (see also *Bibl. chem.*, II, p. 227a): “Est mundus minor. Item est unum quod non moritur, quamdiu fuerit mundus, et vivificat quodlibet mortuum” etc. (It is the smaller world [i.e., the Microcosm = Man]. One thing there is that dieth not, so long as the world shall endure, and it bringeth alive anything dead.) The passage refers to the *aqua philosophica*. Senior is the Latin name for Mohammed ibn Umail (10th cent.), whose work was published by Stapleton in *Three Arabic Treatises on Alchemy*.

[148] The philosophers.

[149] Matt. 25 : 34, with “beginning of the Work” substituted for “foundation of the world.”

[150] A quotation from Pseudo-Aristotle; cf. *Rosarium, Art. aurif.*, II. p. 286.

[151] Jung, “Paracelsus as a Spiritual Phenomenon,” pars. 165ff., 203ff.

[152] *Art. aurif.*, I, pp. 352ff. Kalid refers to the Omayyad prince Khalid ibn-Yazid (end of the 7th century), though there is good reason for believing that this treatise was not written by him at all. (Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, II, p. 122, for the literature on this question.)

[153] Another name for the alchemists. Cf. “Les poures hommes évangélisans” in Rupescissa, *La Vertu et la propriété de la quinte essence*, p. 31.

[154] Here the process has three parts, in contrast to the four parts in Greek alchemy. But this may be due only to the analogy with the nine months of pregnancy. Cf. Kalid, *Art. aurif.*, I, pp. 358ff.

[155] Patrizi, *Nova de universis philosophia*.

[156] “Addam et processum sub forma missae, a Nicolao Cibinensi, Transilvano, ad Ladislaum Ungariae et Bohemiae regem olim missum,” *Theatr. chem.*, III, pp. 853ff.

[157] Not identical with Melchior, Cardinal Bishop of Brixen, to whom the treatise “Von dem gelben und rotten Mann,” in *Aureum vellus*, is attributed. Our author was the chaplain Nicolaus Melchior Szebeni, at the king’s court as astrologer from 1490. He remained there after the death of Ladislaus II in 1516, under Louis II (1506–26). Following the defeat of Mohács (1526) and the death of Louis II, Melchior fled to the court of Ferdinand I in Vienna. He was executed by the latter in 1531. Our document must therefore have been written before 1516. Ladislaus II became King of Bohemia in 1471 and of Hungary in 1490. We find the remark “ad exstirpandum Turcam” in the text. It is true that Buda was conquered by the Turks only in 1541, but the land had long suffered from Turkish invasions. [Hermannstadt is the German name of the Romanian (formerly Hungarian) city of Sibiu or Cibiu (whence “Cibinensis”).—EDITORS.]

[158] *Aquilo* (north wind) is an allegory of the devil, *auster* an allegory of the Holy Ghost. Cf. Migne, *P.L.*, vol. 219: “Index de allegoriis.” Among the authorities quoted we meet Alain of Lille (Alanus de

Insulis), who was well known to the alchemists (Maier, *Symbola aureae mensae*, p. 259).

[159] Perhaps he is enlarging on the “water of life” that has just been mentioned, or more probably the “salutary medicine” a little earlier, which is really the main theme.

[160] Pp. 129f.

[161] See Gen. 30 : 32ff.

[162] “Sequentia sancti evangelii, sub tono, Ave praeclara, cantetur; quam testamentum artis volo nuncupari, quoniam tota ars chemica, tropicis in ea verbis occultatur, et beatus,” etc.

[163] Cf. his “Codicillus,” *Bibl, chem.*, I, pp. 880ff.

[164] “El σοι κέκρυπται ὅλον τὸ μυστήριον τὸ Φρικτὸ καὶ παράδοξον (Berthelot, *Alch. grecs*, IV, xx, 8).

[165] Sun.

[166] Reference to Venus and Mars, caught in the net of Vulcan.

[167] *Coniunctio* of Mercurius, but with whom? Or it is a *coniunctio* of two Mercurii, one male and one female? It seems to be a union of Sol with Luna, Mars, and Mercury.

[168] Ruska, “Tab. smarag.,” p. 2: “Hic est totius fortitudinis fortitudo fortis” (He is the strong strength of all strength).

[169] This is the substance which was the special concern of Maria, the “Prophetissa” and “sister of Moses.” *Art. aurif.*, I, p. 320: “Recipe alumen de Hispania, gummi album et gummi rubeum, quod est kibric Philosophorum … et matrimonifica gummi cum gummi vero matrimonio” (Take alum from Spain, white gum and red gum, which is the kibric of the philosophers … and join in true marriage gum with gum).

[170] Presumably Sol, perhaps in the form of “gum.” The coitus of Sol and Luna in the bath is a central mythologem in alchemy, and is celebrated in numerous illustrations (cf. figs. 159, 167, 218).

[171] Namely the *caput mortuum*, the head of Osiris in the *nigredo* state. The Ethiopian comes from a treatise attributed to Albertus: “Super arborem Aristotelis,” *Theatr. chem.*, II. The passage runs (p. 526): “…quousque caput nigrum aethiopis portans similitudinem, fuerit bene lavatum et inceperit albescere. …” (… until the black head bearing the resemblance of the Ethiopian is well washed and begins to turn white. …). In Rosencreutz’s *Chymical Wedding* the presumptive queen of the drama is the temporary concubine of a Moor. Cf. also *Aurora consurgens*, ch. VI, parable 1.

[172] The calcination probably corresponds to incineration, while the incandescent ash tends towards vitrification. This operation may likewise come from Maria Prophetissa: “Vitrifica super illud Kibrich et Zuboch [alias Zibeic] et ipsa sunt duo fumi complectentes duo lumina” (Vitrify over it Kibrich and Zuboch [alias Zibeic] and they are two vapours enveloping two lights). “Practica,” *Art. aurif.*, I, p. 321. “Zaibac, Zeida, Zaibar, Zibatum … id est argentum vivum.” Zaibar = Mercurius. Ruland’s *Lexicon: zibag* (Arabic) = quicksilver. Lippmann, *Entstehung*, p. 409. *Kibric* = *kibrit* (Arabic) = sulphur. Cf. also Ruska, *Turba*, p. 348: “Arabisches Register.”

[173] *De chemia*, pp. 35f.

[174] Quotation from the “Tractatus aureus,” *Ars chemica*, p. 22. It should be mentioned that Melchior recommends reading the 10th chapter of Luke before the Creed. This chapter would appear to have

no connection with his theme except for the fact that it ends with the significant words: “But *one thing* is necessary. *Mary* hath chosen the best part, which shall not be taken away from her” (D.V.).

[175] The subjective character of the experience comes out in the incidental remark of the author: “et *scio* quod verum est testimonium eius” (and I *know* that his testimony is true).

[176] *Bibl. chem. curiosa*, II, pp. 275ff., and *Theatr. chem.*, II, pp. 123ff.

[177] Ripley, *Opera omnia chemica*, pp. 421ff. [Professor Jung gives the “Cantilena” in prose paraphrase. For a complete translation in verse form, with commentary, see Jung, *Mysterium Coniunctionis*, pars. 370ff. In lines 7–8 of the paraphrase, the present reading replaces a reference to the “tree of Christ,” as the consequence of an emendation authorized by Professor Jung; cf. ibid., par. 380, n. 88. Accordingly, a representation of “Christ on the tree of life” in fig. 222 has been replaced by another subject.—EDITORS.]

[178] The green lion is also a synonym for the unicorn. See fig. 242.

[179] *Opera omnia*, p. 81.

[180] John 12 : 32.

[181] “Meo in cerebro gestavi”: “Visio Arislei,” *Art. aurif.*, I, p. 147.

[182] *Art. aurif.*, II, p. 246: “Et includit eum in suo utero, quod nil penitus videri potest de eo. Tantoque amore amplexata est Gabricum, quod ipsum totum in sui naturam concepit et in partes indivisibiles divisit.” (And she enclosed him in her womb so that nothing at all could be seen of him any more. And she embraced Gabricus with so much love that she absorbed him completely in her own nature, and divided him into indivisible parts.)

[183] The feathers of the phoenix, and of other birds, play a great role in alchemy, particularly in the writings of Ripley. Cf. “Scrowle,” *Theatr. chem. Brit.* (See also figs. 229, 266, 270.)

[184] “Gloria mundi,” *Mus. herm.*, p. 221: “Lapis … per Solem et Lunam generatus … primum … suum partum in terra accepit et tamen frangitur, destruitur, et mortificatur … per vaporem generatur, et denuo nascitur, cum vento in mare venit … atque cum vento ex mari in terram venit … et cito iterum evanescit.… Et quamvis cottidie denuo nascatur, nihilominus tamen ab initio mundi ille fuit. …” (The stone … begotten by the sun and the moon … was first born … on the earth, and yet it is broken, destroyed and mortified.… It is generated through vapour, and is born anew, with the wind it comes to the sea … and with the wind it comes from the sea to the earth, … and quickly evaporates again.… And though it is daily born anew, yet nevertheless it existed from the beginning of the world. …) (Cf. John 1 : 1 and 14.)

[185] Cf. Caussin, *De symbolica Aegyptiorum sapientia*, p. 71: s.v. “phoenix.”

[186] The wounding of the lion refers to his sacrifice and mortification during the process. He is sometimes shown maimed, with his paws cut off. Cf. for instance Reusner, *Pandora*, p. 227. Note the wounded unicorn lying in the lap of the virgin. (Cf. fig. 242.)

[187] Ruland, *Lexicon:* “Leo viridis, quorundam opinione aurum” (The green lion; according to some people’s opinion, gold).

[188] P. 225.

[189] Cf. the vision of Guillaume de Digulleville (pars. 315ff.).

[190] This picture goes back to the Codex Germanicus (see fig. 224; cf. also figs. 233, 235).

[191] In *Art. aurif.*, I, pp. 575ff.

[192] The author is supposed to be no less a person than Marsilio Ficino (1433–99). Manget (*Bibl. chem. curiosa*, II, p. 172) is of this opinion. The treatise is said (Schmieder, *Geschichte der Alchemie*, p. 235) to be contained in the collected edition (Basel, 1561 and 1576) of Ficino's works. (See also Ferguson, *Bibliotheca chemica*, I, p. 268, and Kopp, *Die Alchemie*, I, p. 212.) But it happens that the treatise (*Art. aurif.*, I, p. 596) mentions the murder of Pico della Mirandola—"Quis non intempestivam Pici Mirandulani necem lachrymis non madefaceret?" (Who would not shed tears over the untimely killing of Pico della Mirandola?)—which can only refer to the nephew of the great Pico, Gianfrancesco Pico della Mirandola, who was murdered in 1533. This *terminus a quo* occurred 34 years after the death of Ficino. The reference (*Art. aurif.*, I, p. 625) to the Minorite Father, Ulmannus, and his illustrated treatise makes it more probable that the author was a German writing in the middle of the 16th century. It is possible that the treatise of Ulmannus is connected with the *Dreifaltigkeitsbuch*. Schmieder's statement is anyway incorrect, for I have ascertained that the treatise is *not* contained in the Basel edition.

[193] The text has a misprint: "auri" instead of "audi." Cf. *Art. aurif.*, I, p. 608: "audi similitudinem arduam."

[194] Ibid., p. 582.

[195] Ibid., p. 686.

[196] Ibid., p. 627.

[197] According to Schmieder (*Geschichte der Alchemie*), the Emperor Maximilian ordered a search of the Benedictine monasteries in 1515 to find out whether a monk of this name was mentioned in their registers, but no such name was found. There does not seem to be any truth in this report. Nor do there seem to be any manuscripts that could be dated before the 17th century. (See Kopp, *Die Alchemie*, I, p. 31.)

[198] He also mentions the *lues Gallica*, which it appears was first described as the *morbus Gallicus* (French sickness) by the Italian physician, Fracastoro, in a didactic poem published in 1530.

[199] Valentinus, *Chymische Schriften*, p. 364.

[200] *Die Alchemie*, I, p. 254.

[201] X, 76f., and XII, 10 (Bax, pp. 126f., 154).

[202] *Aurora consurgens* II, *Art. aurif.*, I, pp. 228f.: "… Et notandum quod duplex est sublimatio: una corporalis, alia spiritualis: corporalis quantum ad terreitatem, spiritualis quantum ad igneitatem.… Facite corpus spirituale et fixum volatile.… Senior dicit: Egrediatur spiritus a corpore qui est ignis.… Unde dicitur, quod tinctura fit a natura volantium: Et illud quod firmat et fixat ipsum spiritum, est fixum et perpetuum et incremabile et nominatur sulphur Philosophorum." (… And it is to be noted that the sublimation is twofold: one corporeal, the other spiritual; corporeal as regards earthliness, spiritual as regards fieriness.… Make the body spiritual, and the fixed volatile.… Senior says: Let the spirit which is fire go out of the body.… Whence it is said that the tincture arises from the nature of flying things. And that which makes the spirit itself firm and fixed, is fixed and eternal and cannot be burned and is called the sulphur of the Philosophers.)

[203] "Epilogus et recapitulatio Orthelii," *Bibl. chem. curiosa*, II, p. 527. We know of Orthelius only as a commentator on Michael Sendivogius, who lived in the second half of the 16th century.

[204] “Archaeus est summus, exaltatus et invisibilis spiritus, qui separatur a corporibus, occulta naturae virtus” (The Archaeus is the highest exalted and invisible spirit, which is separated from the bodies, the hidden virtue [or quality] of nature). Cf. Ruland’s *Lexicon alchemiae*, which is strongly influenced by Paracelsus.

[205] Cf. Maier, *Symbola aureae mensae*, p. 141. The words quoted do not come in this form from Morienus himself, but Maier uses them as a characteristic motto for Morienus in that section of his book dealing with this author. The original passage is to be found in Morienus, “De transmut. metall.,” *Art. aurif*., II, pp. 35f.

[1] Abu’l Qāsim, in Holmyard, *Kitāb al-’ilm*, p. 24: “And this prime matter is found in a mountain containing an immense collection of created things. In this mountain is every sort of knowledge that is found in the world. There does not exist knowledge or understanding or dream or thought or sagacity or opinion or deliberation or wisdom or philosophy or geometry or government or power or courage or excellence or contentment or patience or discipline or beauty or ingenuity or journeying or orthodoxy or guidance or precision or growth or command or dominion or kingdom or vizierate or rule of a councillor or commerce that is not present there. And there does not exist hatred or malevolence or fraud or villainy or deceit or tyranny or oppression or perverseness or ignorance or stupidity or baseness or violence or cheerfulness or song or sport or flute or lyre or marriage or jesting or weapons or wars or blood or killing that is not present there.”

[2] Ibid., p. 22.

[3] Sudhoff, XIII, p. 402.

[4] *Kitāb al-’ilm*, p. 23.

[5] “Cum igitur spiritus ille aquarum supracoelestium in cerebro sedem et locum acquisierit,” etc. (When therefore that spirit of the supra-celestial waters has taken up his abode and sea: in the brain … etc.) (Steeb, *Coelum sephiroticum*, p. 117). The “stone that is no stone” is the λίθος ἐγκέφαλος, ‘brain-stone’ (Berthelot, *Alch. grecs*, I, iii, 1) and the άλαβάστρινος ἐγκέφαλος, ‘alabaster brain’ (ibid., I, iv, 1); Zosimos defines the despised, and at the same time precious, material as άδώρητον καὶ θεοδώρητον: “not given and given by God” (ibid., III, ii, 1). “Accipe cerebrum eius”: Hermes in the *Rosarium, Art. aurif.*, II, p. 264. The “os occiput” is used in the work because “cerebrum est mansio partis divinae” (the brain is the seat of the divine part) (“Liber Platonis quartorum,” *Theatr. chem*., V, p. 124). The “occiput” is the “vas cerebri” (ibid., p. 148) (cf. figs. 75, 135). The brain is “… sedes animae rationalis. Nam est triangulus compositione et est propinquius omnibus membris corporis ad similitudinem simplicis …” (… the seat of the rational soul. For it is triangular in composition [shape] and is nearer to simplicity than all other parts of the body …) (ibid., p. 127). It is the organ which is nearest to the simplicity of the soul, and is therefore the bridge to spiritual transformation (ibid., p. 187).

[5a] [The following translation, in verse 2, line 8, cites Job 39 : 9, where the passage actually is. The German versifier may have had in mind the references in Chapter 37 to the devastating power of God, signified allegorically by the unicorn.—EDITORS.

This is the Unicorn you see/
He is not found in our country.
Arlunnus says these animals
Lust greatly after pretty girls.
This way to catch him is the best/
A youth in women’s clothes is dressed
And then with mincing steps he flaunts
About the Unicorn’s bright haunts.
For when this creature spies a maid
Straight in her lap he lays his head.

Here is another Unicorn/
Churning the ground up with his horn.
No one can tame this animal/
He is so fierce/ so full of guile.
You have just heard how he is caught
Through his desire with maids to sport.
Even the patient Job observes/
In Chapter Thirty-Nine/ ninth verse:
That man hath never yet been born
Who’ll bind and break the Unicorn/

The huntsman/ doffing his disguise/
Saws off the horn and wins the prize.

Or fix the harness to his rib/
And make him bide beside the crib.]

[6] Rosencreutz, *Chymical Wedding*, p. 73. Concerning the dove, cf. *Aurora* I, Ch. VI: “Nive dealbabuntur in Selmon, et pennae columbae deargenteatae et posteriora dorsi eius in pallore auri: talis erit mihi filius dilectus. …” (They shall be whited with snow in Selmon, and shall be as the wings of a dove covered with silver, and the hinder parts of her back with the paleness of gold. Such shall be to me a beloved son.) Grasseus, “Area arcani,” *Theatr. chem*., VI, p. 314: “Plumbum philosophorum … in quo splendida columba alba inest, quae sal metallorum vocatur, in quo magisterium operis consistit. Haec est casta sapiens et dives illa regina ex Saba velo albo induta. …” (The lead of the philosophers in which is the shining white dove, which is called the salt of metals, in which consists the magistery of the work. This is that chaste, wise, and rich queen of Sheba clothed in a white veil.) *Aurora* I, Ch. XII: “Et dabit mihi pennas sicut columbae [Vulg., Ps. 54 : 7] et volabo cum ea in coelo et dicam tune: Vivo ego in aeternum [Deut. 32 : 40]. …” ([And she will] give me wings like a dove, and I will fly with her to heaven, and then say: I live for ever.)

[7] *Mus. herm*., pp. 338ff.; originally in Barnaud, *Triga chemica*.

[8] The fourth illustration in *Musaeum Hermeticum*, placed before the first treatise.

[9] *Philosophia reformata*, p. 316.

[10] *Theatr. chem*., II, p. 123.

[11] Medieval tradition associates the unicorn with the lion “because this animal is as strong, wild, and cruel as the lions.” “This,” says Andreas Baccius, “is the reason why they called this animal *lycornu* in France and Italy.” Here *lycornu* is evidently derived from “lion.” Cf. Catelanus, *Ein schöner newer historischer Discurs, von der Natur, Tugenden, Eigenschafften, und Gebrauch dess Einhorns*, p. 22.

[12] Much the same is said of the unicorn as of the dragon, which as a denizen of the underworld lives in gorges and caverns. Thus unicorns “hide themselves and dwell in barren places on the high mountains, in the deepest, darkest, and most out-of-the-way caves and dens of wild beasts, amid toads and other noxious, loathly reptiles.” Ibid., p. 23.

[13] *Theatr. chem*., IV, p. 286.

[14] Vulgate: “… et comminuet eas tamquam vitulum Libani: et dilectus quemadmodum filius unicornium.” (D.V., Ps. 28 : 6: “And [he] shall reduce them to pieces; as a calf of Libanus, and as the beloved son of unicorns.”)

[15] Vulgate: “Et exaltabitur sicut unicornis cornu meum. …” (D.V., Ps. 91 : 11: “But my horn shall be exalted like that of the unicorn. …”)

[16] Vulgate: “Salva me ex ore leonis, et a cornibus unicornium humilitatem meam.” (D.V., Ps. 21 : 22: “Save me from the lion’s mouth; and my lowness from the horns of the unicorns.”)

[17] “Tauri decor eius, cornua unicornis, cornua eius.” (Tertullian, *Adversus Judaeos*, Ch. X; Migne, *P.L*., vol. 2, col. 626.)

[18] “Dialogus cum Tryphone Judaeo,” ch. 91 (Migne, *P.G*., vol. 6, col. 691).

[19] “Unicornis est Deus, nobis petra Christus, nobis lapis angularis Jesus, nobis hominum homo Christus.” Priscillian, *Opera*, p. 24.

[20] *Vita*, Migne, *P.G.*, vol. 120, col. 69, ch. XCI. The hermit-nature of the unicorn is mentioned in Aelian, *De natura animalium*, xvi, 20.

[21] De *symbolica Aegyptiorum sapientia*, p. 401. Cf. also p. 348: “[Dei] fortitudo similis est Rhinoceroti, Exod. 15. Unicornis non admittit in antro cohabitatorem: filius Dei aedificavit in saecula, hoc est in utero B[eatae] V[irginis].” (The strength of God is similar to [that of] the Rhinoceros, Exod. 15. The Unicorn does not admit of a fellow-dweller in his cave. The son of God has built for the centuries, i.e., in the womb of the Blessed Virgin.) Cf. Ps. 77 : 69: “Et aedificavit sicut unicornium sanctificium suum, in terra quam fundavit in saecula” (D.V.: “And he built his sanctuary as of unicorns, in the land which he founded for ever”; A.V., Ps. 78: 69: “And he built his sanctuary like high palaces, like the earth which he hath established for ever”). Pp. 348f.: “The horn of the unicorn acts as an alexipharmic, because it expels the poison from the water, and this refers allegorically to the baptism of Christ [i.e., the consecration of the baptismal water]: rightly is it applied to Christ baptized, who, like the chosen son of unicorns, sanctified the streams of water to wash away the filth of all our sins, as Bede says.” The wildness of the unicorn is emphasized in Job (A.V.) 39 : 9–10: “Will the unicorn be willing to serve thee, or abide by thy crib? Canst thou bind the unicorn with his band in the furrow? or will he harrow the valleys after thee?”

[22] *Mundus symbolicus*, I, 419, b: “S. Bonaventura: Christus, inquit, per mansuetissimam Mariam mansuescit et placatur, ne se de peccatore per mortem aeternam ulciscatur.” The myth of the virgin and the unicorn is handed down by Isidore of Seville (*Etymologiarum*, xii, 62). The source book is the *Physiologus Graecus:* IIῶς δἐ ἀγρεὔεται; παρθένον ἔμπροσθεν αὐτοῦ. Καὶ ἅλλεται εἰς τὸν κόλπον τῆς παρθένου καὶ ἥ παρθένον θάλπει τὸ ζῶον καὶ αἰρει εἰς τὸ παλάτιον τῶν βασιλέων. (How is it hunted? They cast a sacred virgin before it. And it leaps into the lap of the virgin, and the virgin warms the animal with love and bears it to the palace of the kings.)—Pitra, *Spicilegium solesmense*, III, p. 355 (“Veterum Gnosticorum in Physiologum allegoricae interpretationes”). The *Physiologus* may go back to Didymus of Alexandria, a Christian hermeneutic of the 4th cent.

[23] “Insuperabilis fortitudo,” cf. “Tab. smarag.,” “Totius fortitudinis fortitudo fortis” (Strong strength of all strength). Honorius, *Speculum*, Migne, *P.L.*, vol. 172, col. 847: “[Christus] … cuius virtus ut unicornis fuit, quia omnia obstantia cornu supprimit, quia Christus principatus et potestates mundi cornibus crucis perdomuit” ([Christ] … whose strength [virtue] was like that of the unicorn, because he crushed all that was in his way with his horn, for Christ subjugated the principalities and powers of the world with the horns of the cross).

[24] “Qui in uterum Virginis se reclinans captus est a venatoribus id est in humana forma inventus est a suis amatoribus.”

[25] *De Trinitate* (Migne, *P.L.*, vol. 167, col. 1739).

[26] *Expositio psalmorum* (Migne, *P.L.*, vol. 142, col. 182): “In te inimicos nostros ventilabimus cornu. Et in nomine tuo spernemus insurgentes in nobis … cornu vero nostrum Christus est, idem et nomen Patris in quo adversarii nostri vel ventilantur vel spernuntur.” (In thee we shall crush our enemies with the horn. In thy name we shall scorn those that rise up against us … but our horn is Christ, and also the name of the Father through whom our adversaries are crushed or scorned.)

[27] *Etymologiarum* (Migne, *P.L.*, vol. 82), xii, 62: “… aut ventilet aut perforet.”

[28] It is true that the son’s mother is the moon, but “nutrix eius terra est” (the earth is his nurse) (cf. fig. 163). “Ascendit a terra in coelum”: therefore he is of earthly origin, ascends to heaven and returns again to permeate the earth.

[29] Sbordone, *Physiologus*, p. 263, 1–8.

[30] The monstrous nature of the unicorn is described by Pliny (*Hist, nat*., Lib. VIII, ch. 21): A horse’s body, an elephant’s feet, and the tail of a wild boar. There is a fantastic description, which might have been especially interesting to alchemists, in the ’Ινδικά of Ctesias (*c*. 400 B.C.): “From what I hear, the wild ass in India is not much smaller than the horse. The head is of a purplish hue but the rest of the body is white, and the colour of the eyes is dark blue. There is a horn on the forehead, nearly one and a half cubits in length; the lower part of the horn is white, the upper part purple, but the middle is pitch black. I hear that the Indians drink out of these brightly coloured horns, but only the most aristocratic Indians. Moreover the horns are bound at intervals with gold rings for this purpose, as the beautiful arm of a statue is decorated with bracelets. They say that anyone who drinks from this horn is immune to incurable diseases, for he is not seized by spasms or killed by poisons and, if he has drunk anything harmful, he vomits and is cured.” (*Ancient India*, trans. McCrindle, p. 363.) Also Aelian, *De natura animalium*, IV, 52, III, 41, and XVI, 20. In the last passage, Aelian says that in India the animal is called the “Kartazonon”: “The strength of its horn is invincible. It is fond of lonely pastures and wanders about alone.… It seeks solitude.” Philostratus, in his *Vita Apollonii* (Book III, ch. 2), relates that when anyone drinks from a cup made of a unicorn’s horn, he is immune throughout the day to illness and pain, he can also walk through fire, and the strongest poison does him no harm. In the Χριστιανικη Τοπογραϕία of Kosmas (beginning of the 6th century), it is related that the unicorn, in order to escape from its hunters, will plunge into an abyss and land on its horn, which is so strong that it breaks the fall (trans. McCrindle, p. 361). The complete patristic literature is to be found in Salzer, *Die Sinnbilder*, pp. 44ff.

[31] See Jung, “Paracelsus the Physician,” pars. 27f., and “Paracelsus as a Spiritual Phenomenon,” par. 158.

[32] Thales taught that water was the first principle.

[33] The passages quoted above are to be found in Hippolytus, *Elenchos*, V, 9, 12 to 15.

[34] Ibid., V, 9, 8.

[35] From a Greek magic papyrus in Preisendanz, *Papyri Graecae Magicae*, II, p. 60, lines 44f.

[36] *Aureum vellus*.

[37] “Rosinus” is a corruption of Zosimos.

[38] This recalls the mysterious saying “Aufer caput, corpus ne tangito” (Carry away the head, but don’t touch the body).—Béroalde de Verville, *Le Songe de Poliphile*, Folio c, III.

[39] From a Greek magic papyrus in Preisendanz, *Papyri Graecae Magicae*, I, p. 185, line 99.

[40] Χρυσέας κεφαλῆς παῖδες (Berthelot, III, x, 1).

[41] *Ars chem*., p. 119.

[42] I had better not enter into the question of whether the unicorn existed in Assyrian and Babylonian culture. Schrader (“Die Vorstellung vom Μονόκερως,” pp. 573ff.) tries to derive the whole idea of the unicorn from the representations of what appear to be one-horned animals, such as those of Persepolis, thus, in my opinion, falsely interpreting these monuments. He does not, however, take the Indian sources into account.

[43] Bloomfield, *Hymns of the Atharva-Veda*, p. 15.

[44] Eggeling, *Shatapatha-Brahmana*, pp. 216ff.

[45] “The fish then swam up to him, and to its horn he tied the rope of the ship and by that means he passed swiftly up to yonder northern mountain [Himalaya]” (ibid., p. 217, 5).

[46] Bühler, *Laws of Manu*, Introduction, p. xiv. Manu “is the *heros eponymos* of the human race, and by his nature belongs both to gods and to men” (ibid., p. lvii).

[47] Ibid., pp. lvii f.

[48] *Vedic Hymns*, Part II, p. 96: “As thou didst perform sacrifice to the gods with the sacrificial food of the wise Manu, a sage together with sages, thus, O highly truthful Hotri,” etc.

[49] Chhandogya Upanishad, Part I, p. 44, 4.

[50] Eggeling, *Shatapatha-Brahmana*, p. 29, 14.

[51] *Vedic Hymns*, Part I, p. 427, 13: “O Maruts, those pure medicines of yours, the most beneficent and delightful, O heroes, those which Manu, our father, chose, those I crave from Rudra, as health and wealth.”

[52] Cf. my remarks on the Adech of Paracelsus (“Paracelsus as a Spiritual Phenomenon,” pars. 168, 203ff.).

[53] Holtzmann, *Indische Sagen*, pp. 131ff.; and Lüders, *Nachrichten*. The story is also to be found in the Buddhist Jataka 526 (trans. Cowell, V, pp. 100–106).

[54] West, *Pahlavi Texts*, pp. 67ff.

[55] Berthelot, *Chimie au moyen âge*, III, p. 120.

[56] West, *Pahlavi Texts*, p. 65 (XVIII, 1).

[57] Ibid., pp. 65–66 (XVIII, 1, 9).

[58] In this connection we may note the curious fact that a lizard is concealed in the tree: “The evil spirit has formed therein, among those which enter as opponents, a lizard as an opponent in that deep water, so that it may injure the Hôm” (Bundahish, XVIII, 2 in West, *Pahlavi Texts*, p. 65). Hôm = Haoma, the plant of immortality. In alchemy, the *spiritus mercurii* that lives in the tree is represented as serpent, salamander, or Melusina. We find the last-mentioned in the “Ripley Scrowle,” where the lizard is half a woman and is celebrating the *coniunctio* (marriage) with the *filius philosophorum* (see fig. 257). The “Verses belonging to an Emblematicall Scrowle” (*Theatr. chem. Brit.*, p. 375) run as follows:

> “And Azot is truly my Sister,
> And Kibrick forsooth is my Brother:
> The Serpent of Arabia is my name,
> The which is leader of all this game.”

[59] Holmyard, *Kitāb al-’ilm*, p. 23.

[60] Cf. fig. 54 and “Paracelsus as a Spiritual Phenomenon,” frontispiece.

[61] [Reproduced in *Symbols of Transformation*, Pl. XLIII.]

[62] Goldschmidt, *Der babylonische Talmud*, X, p. 359 (“Tractate Zebahim,” Fol. 113b). Cf. the *Talmud*, ed. Epstein, “Tract. Zebahim,” pp. 559f.

[63] Cf. the parallel passage in Goldschmidt, *Der babylonische Talmud*, VIII, p. 203 (“Tractate Baba Bathra,” Fol. 73b; *Talmud*, ed. Epstein, pp. 290f.).

[64] The water was hot, so that even if the unicorn had been able to breathe, it would still have been scalded to death. (See Goldschmidt’s comments.)

[65] This refers to Gen. 6 : 14, where the ark was smeared with pitch within and without. The pitch would have been melted by the hot water. (See Goldschmidt’s comments.)

[66] The Talmud saga according to which Og survived the flood is to be found in *Der babylonische Talmud*, XII, p. 552 (“Tractate Nidda,” Fol. 61a; *Talmud*, ed. Epstein, p. 433): “For it is said [Gen. 14 : 13]: ‘and there came one that had escaped, and told Abram the Hebrew,’ and R. Johanan said: ‘That was Og who escaped the flood.’”

[67] Trans. Friedlander, p. 167. Zunz (*Die gottesdienstlichen Vorträge*, p. 277) dates this collection to the 8th cent. at earliest.

[68] Retold in Joseph bin Gorion, *Sagen der Juden*, I, p. 208.

[69] *Der babylonische Talmud*, XII, p. 552 (“Tractate Nidda,” Fol. 61a; *Talmud*, ed. Epstein, p. 433).

[70] The most important of the giants mentioned in Gen. 6 : 4. (See Goldschmidt’s comments.)

[71] Fol. 24b (*Talmud*, ed. Epstein, p. 168).

[72] Goldschmidt, *Der babylonische Talmud*, I, p. 237 (“Tractate Berachoth,” Fol. 54b; *Talmud*, ed. Epstein, p. 330), and “Targum Pseudo-Jonathan” on Num. 21 : 35.

[73] Midrash Tehillim (ed. Buber), on Ps. 22 : 21: “Save me from the lion’s mouth: for thou hast heard me from the horns of the unicorns.”

[74] “The Ten Tribes” in Eisenstein, *Ozar Midrashim*, p. 468b.

[75] From the *Tz’u-yuan*, s.v. “Ch’i-lin.” The text of the captions for figs. 259 and 260 was specially translated from the Chinese for the Swiss edn. of the present volume by Dr. E. H. von Tscharner. For further reference to this Confucius legend, cf. Wilhelm, *Kung-Tse, Leben und Werk*, pp. 189 and 60.

[76] Ferguson, *Chinese* [*Mythology*], p. 98.

[77] Sbordone, *Physiologus*, p. 321, 10–17.

[78] Migne, *Dictionnaire des sciences occultes*, s.v. “Licorne.”

[79] Analogy to Γῆ-ῥύων.

[80] John 1 : 3f.

[81] Allusion to the cup of Joseph in Gen. 44 : 4–5: “… Wherefore have ye rewarded evil for good? Is not this it in which my lord drinketh, and whereby indeed he divineth?” (A.V.)

[82] Hippolytus, *Elenchos*, V, 8, 4–7. It should be pointed out that, immediately after the symbols mentioned above, the *Elenchos* goes on to the ithyphallic figures of the Samothracian Mysteries and to Hermes Kyllenios, as further analogies of the arcanum of the Naassenes.

[83] Hippolytus states that the three parts of Geryon are rational, psychic, and earthly.

[84] Cf. the alchemical equivalence of water and fire.

[85] Charles, *Apocrypha and Pseudepigrapha*, II, p. 623.

[86] Cf. a quotation from Lilius in *Rosarium, Art. aurif.*, II, p. 329: “In fine exibit tibi Rex suo diademate coronatus, fulgens ut Sol, clarus ut carbunculus … perseverans in igne” (At the end the King will come forth to you crowned with his diadem, resplendent as the Sun, lambent as the carbuncle … abiding in the fire). The *lapis* is “shimmering carbuncle light” or “the carbuncle stone shining in the firelight” (Khunrath, *Von hyleal. Chaos*, pp. 227, 242; also *Amphitheatrum*, p. 202).

BOLLINGEN SERIES XX

THE COLLECTED WORKS
OF
C. G. JUNG

VOLUME 13

EDITORS

SIR HERBERT READ

MICHAEL FORDHAM, M.D., M.R.C.P.

GERHARD ADLER, PH.D.

WILLIAM MCGUIRE, *executive editor*

The *spiritus mercurialis* and his transformations represented as a monstrous dragon. It is a quaternity, in which the fourth is at the same time the unity of the three, the unity being symbolized by the mystagogue Hermes. The three (above) are (left to right): Luna, Sol. and coniunctio Solis et Lunae in Taurus, the House of Venus. Together they form ☿ = Mercurius. Illuminated drawing in a German alchemical ms., *c*. 1600

BOLLINGEN SERIES XX

PRINCETON UNIVERSITY PRESS

PUBLISHED BY PRINCETON UNIVERSITY PRESS, PRINCETON, N.J.

Second printing, 1970

THIS EDITION IS BEING PUBLISHED IN THE UNITED STATES OF AMERICA BY PRINCETON UNIVERSITY PRESS AND IN ENGLAND BY ROUTLEDGE & KEGAN PAUL, LTD. IN THE AMERICAN EDITION, ALL THE VOLUMES COMPRISING THE COLLECTED WORKS CONSTITUTE NUMBER XX IN BOLLINGEN SERIES. THE PRESENT VOLUME IS NUMBER 13 OF THE COLLECTED WORKS AND WAS THE FIFTEENTH TO APPEAR.

LIBRARY OF CONGRESS CATALOGUE CARD NUMBER: 75-156
ISBN 0-691-09760-7
MANUFACTURED IN THE U.S.A.

EDITORIAL NOTE

When we compare the essays in the present volume with Jung's monumental *Mysterium Coniunctionis*, with *Psychology and Alchemy* and to a lesser extent *Aion*, we realize their special value as an introduction to his researches into alchemy. The three longer works, published earlier in this edition, have an impact which to the uninitiated is well-nigh overwhelming. After them these shorter and more manageable works will be turned to, if not for relaxation—their erudition forbids that—at least with a feeling of lively interest, as preliminary studies for the weightier volumes which they now appear to summarize. Much of the symbolic matter has been referred to in other earlier publications: the visions of Zosimos in "Transformation Symbolism in the Mass," and Mercurius in all the above-mentioned works but more especially in "The Psychology of the Transference," while "The Philosophical Tree" develops the theme of the tree symbol discussed sporadically in *Symbols of Transformation.* The "Commentary on *The Secret of the Golden Flower*" is of considerable historical interest. Jung says in *Memories, Dreams, Reflections* (ch. 7): "Light on the nature of alchemy began to come to me only after I had read the text of the *Golden Flower*, that specimen of Chinese alchemy which Richard Wilhelm sent me in 1928. I was stirred by the desire to become more closely acquainted with the alchemical texts." "Paracelsus as a Spiritual Phenomenon" stands out as a separate study with a powerful appeal, perhaps because Jung could identify himself rather closely and sympathetically with that dynamic and explosive personage, his own countryman. Because of its emphasis on alchemical sources, it is included in the present volume rather than in Volume 15 with two shorter essays on Paracelsus as a personality and physician.

*

The Editors and the translator are greatly indebted to the late Mr. A. S. B. Glover for the translation of the Latin, Greek, and French passages in the text, as well as for his tireless work in checking the references and bibliographical data, which continued until shortly before his death in January 1966.

For assistance in explicating Noël Pierre’s poem, grateful acknowledgment is made to Comte Pierre Crapon de Caprona (Noël Pierre), to Miss Paula Deitz, and to Mr. Jackson Mathews.

For help and co-operation in obtaining the photographs for the plates in this volume the Editors are much indebted to the late Mrs. Marianne Niehus-Jung, who made materials available from Professor Jung’s collection; to Dr. Jolande Jacobi and Dr. Rudolf Michel, in charge of the picture collection at the C. G. Jung Institute, Zurich; and to Mr. Hellmut Wieser, of Rascher Verlag, Zurich. The frontispiece, an almost exact coloured replica of a woodcut published by the author in *Paracelsica*, was discovered fortuitously in a manuscript in the Mellon Collection of the Alchemical and Occult. It is reproduced by courtesy of Mr. Paul Mellon and the Yale University Library. The Editors are indebted also to Mr. Laurence Witten for his advice and assistance in regard to it.

LIST OF ILLUSTRATIONS

For “Commentary on *The Secret of the Golden Flower*”

Four stages of meditation

Drawings from the *Hui Ming Ching*, as reproduced in the original Swiss edition of *Das Geheimnis der goldenen Blüte* (1929).

A1–A10. Examples of European mandalas

Drawings or paintings by patients in analysis. Author’s collection, except A4: C. G. Jung Institute.

For “Paracelsus as a Spiritual Phenomenon”

The *spiritus mercurialis* represented as a monstrous dragon

Illuminated drawing from a German alchemical ms., *c*. 1600, in the collection of Paul Mellon (now in the Yale University Library). It replaces an almost identical woodcut from Nazari, *Della tramutatione metallica sogni tre* (Brescia, 1599), reproduced in *Paracelsica*. P: Yale Univ. Library.

B1. A fish meal, with statue of the hermaphrodite

Miniature from “Le livre des ansienes estoires,” in British Museum MS. Add. 15268 (13th cent.), fol. 242^{v}. P: British Museum.

B2. The *filius* or *rex* in the form of a hermaphrodite

Woodcut from *Rosarium philosophorum* (second part of *De alchimia*, 1550), fol. X, iii^{v} (copy in author’s collection).

B3. The Rebis

Painting from “Das Buch der hl. Dreifaltigkeit . . . und Beschreibung der Heimlichkeit von Veränderung der Metallen” (1420), in the Codex Germanicus 598, Staatsbibliothek, Munich. P: Staatsbibliothek.

B4. Melusina as the *aqua permanens*

Woodcut in Reusner, *Pandora* (1588), p. 249 (copy in author’s collection).

B5. The anima as Melusina

Drawing from a variant of the Ripley *Scrowle* (1588), British Museum MS. Sloane 5025. P: British Museum.

B6. The King’s Son and Hermes on a mountain

Engraving from Lambspringk, “De lapide philosophico,” fig. XII, in *Musaeum hermeticum* (1678), p. 365. P: C. G. Jung Institute.

B7. The Pelican, in which the distillation takes place

Page from Rhenanus, *Solis e puteo* (1613), as reproduced in *Paracelsica*.

I

COMMENTARY ON “THE SECRET OF THE GOLDEN FLOWER”

[In late 1929, in Munich, Jung and the sinologist Richard Wilhelm published *Das Geheimnis der goldenen Blüte: Ein chinesisches Lebensbuch*, consisting of Wilhelm’s translation of an ancient Chinese text, *T’ai I Chin Hua Tsung Chih* (Secret of the Golden Flower), with his notes and discussion of the text, and a “European commentary” by Jung. Earlier the same year, the two authors had published in the *Europäische Revue* (Berlin), V: 2/8 (Nov.), 530-42, a much abbreviated version entitled “Tschang Scheng Schu; Die Kunst das menschliche Leben zu verlängern” (i.e., “Ch’ang Sheng Shu; The Art of Prolonging Life”), an alternative title of the “Golden Flower.”

[In 1931, Jung’s and Wilhelm’s joint work appeared in English as *The Secret of the Golden Flower: A Chinese Book of Life*, translated by Cary F. Baynes (London and New York), containing as an appendix Jung’s memorial address for Wilhelm, who had died in 1930. (For “In Memory of Richard Wilhelm,” see Vol. 15 of the *Collected Works.*)

[A second, revised edition of the German original was published in 1938 (Zurich), with a special foreword by Jung and his Wilhelm memorial address. Two more (essentially unaltered) editions followed, and in 1957 appeared a fifth, entirely reset edition (Zurich), which added a related text, the *Hui Ming Ching*, and a new foreword by Salome Wilhelm, the translator’s widow.

[Mrs. Baynes prepared a revision of her translation, and this appeared in 1962 (New York and London), including Jung’s foreword and the additional Wilhelm material. (Her revised translation of Jung’s commentary alone had appeared in an anthology, *Psyche and Symbol*, edited by Violet S. de Laszlo, Anchor Books, New York, 1958.)

[The following translation of Jung's commentary and his foreword is based closely on Mrs. Baynes' version, from which some of the editorial notes have also been taken over. Four pictures of the stages of meditation, from the *Hui Ming Ching*, which accompanied the "Golden Flower" text, have been reproduced because of their pertinence to Jung's commentary; and the examples of European mandalas have been retained, though most of them were published, in a different context, in "Concerning Mandala Symbolism," Vol. 9, part i, of the *Collected Works*. The chapters have been given numbers.

—EDITORS.]

FOREWORD TO THE SECOND GERMAN EDITION

My deceased friend, Richard Wilhelm, co-author of this book, sent me the text of *The Secret of the Golden Flower* at a time that was crucial for my own work. This was in 1928. I had been investigating the processes of the collective unconscious since the year 1913, and had obtained results that seemed to me questionable in more than one respect. They not only lay far beyond everything known to “academic” psychology, but they also overstepped the bounds of any medical, purely personal, psychology. They confronted me with an extensive phenomenology to which hitherto known categories and methods could no longer be applied. My results, based on fifteen years of effort, seemed inconclusive, because no possibility of comparison offered itself. I knew of no realm of human experience with which I might have backed up my findings with some degree of assurance. The only analogies—and these, I must say, were far removed in time—I found scattered among the reports of the heresiologists. This connection did not in any way ease my task; on the contrary, it made it more difficult, because the Gnostic systems consist only in small part of immediate psychic experiences, the greater part being speculative and systematizing recensions. Since we possess only very few complete texts, and since most of what is known comes from the reports of Christian opponents, we have, to say the least, an inadequate knowledge of the history as well as the content of this strange and confused literature, which is so difficult to evaluate. Moreover, considering the fact that a period of not less than seventeen to eighteen hundred years separates us from that age, support from that quarter seemed to me extraordinarily risky. Again, the connections were for the most part of a subsidiary nature and left gaps at just the most important points, so that I found it impossible to make use of the Gnostic material.

The text that Wilhelm sent me helped me out of this difficulty. It contained exactly those items I had long sought for in vain among the

Gnostics. Thus the text afforded me a welcome opportunity to publish, at least in provisional form, some of the essential results of my investigations.

At that time it seemed to me a matter of no importance that *The Secret of the Golden Flower* is not only a Taoist text concerned with Chinese yoga, but is also an alchemical treatise. A deeper study of the Latin treatises has taught me better and has shown me that the alchemical character of the text is of prime significance, though I shall not go into this point more closely here. I would only like to emphasize that it was the text of the *Golden Flower* that first put me on the right track. For in medieval alchemy we have the long-sought connecting link between Gnosis and the processes of the collective unconscious that can be observed in modern man.[1]

I would like to take this opportunity to draw attention to certain misunderstandings to which even well-informed readers of this book have succumbed. Not infrequently people thought that my purpose in publishing it was to put into the hands of the public a recipe for achieving happiness. In total misapprehension of all that I say in my commentary, these readers tried to imitate the “method” described in the Chinese text. Let us hope these representatives of spiritual profundity were few in number!

Another misunderstanding gave rise to the opinion that, in my commentary, I was to some extent describing my own therapeutic method, which, it was said, consisted in my instilling Eastern ideas into my patients for therapeutic purposes. I do not believe there is anything in my commentary that lends itself to that sort of superstition. In any case such an opinion is altogether erroneous, and is based on the widespread view that psychology was invented for a specific purpose and is not an empirical science. To this category belongs the superficial as well as unintelligent opinion that the idea of the collective unconscious is “metaphysical.” On the contrary, it is an *empirical* concept to be put alongside the concept of instinct, as is obvious to anyone who will read with some attention.

C. G. J.

Küsnacht / Zurich, 1938

1. DIFFICULTIES ENCOUNTERED BY A EUROPEAN IN TRYING TO UNDERSTAND THE EAST

[1] A thorough Westerner in feeling, I cannot but be profoundly impressed by the strangeness of this Chinese text. It is true that some knowledge of Eastern religions and philosophies helps my intellect and my intuition to understand these things up to a point, just as I can understand the paradoxes of primitive beliefs in terms of “ethnology” or “comparative religion.” This is of course the Western way of hiding one’s heart under the cloak of so-called scientific understanding. We do it partly because the *misérable vanité des savants* fears and rejects with horror any sign of living sympathy, and partly because sympathetic understanding might transform contact with an alien spirit into an experience that has to be taken seriously. Our so-called scientific objectivity would have reserved this text for the philological acumen of sinologists, and would have guarded it jealously from any other interpretation. But Richard Wilhelm penetrated too deeply into the secret and mysterious vitality of Chinese wisdom to allow such a pearl of intuitive insight to disappear into the pigeon-holes of specialists. I am greatly honoured that his choice of a psychological commentator has fallen upon me.

[2] This, however, involves the risk that this precious example of more-than-specialist insight will be swallowed by still another specialism. Nevertheless, anyone who belittles the merits of Western science is undermining the foundations of the Western mind. Science is not indeed a perfect instrument, but it is a superb and invaluable tool that works harm only when it is taken as an end in itself. Science must serve; it errs when it usurps the throne. It must be ready to serve all its branches, for each, because of its insufficiency, has need of support from the others. Science is the tool of the Western mind, and with it one can open more doors than with bare hands. It is part and parcel of our understanding, and

it obscures our insight only when it claims that the understanding it conveys is the only kind there is. The East teaches us another, broader, more profound, and higher understanding—understanding through life. We know this only by hearsay, as a shadowy sentiment expressing a vague religiosity, and we are fond of putting “Oriental wisdom” in quotation marks and banishing it to the dim region of faith and superstition. But that is wholly to misunderstand the realism of the East. Texts of this kind do not consist of the sentimental, overwrought mystical intuitions of pathological cranks and recluses, but are based on the practical insights of highly evolved Chinese minds, which we have not the slightest justification for undervaluing.

[3] This assertion may seem bold, perhaps, and is likely to cause a good deal of head-shaking. Nor is that surprising, considering how little people know about the material. Its strangeness is indeed so arresting that our puzzlement as to how and where the Chinese world of thought might be joined to ours is quite understandable. The usual mistake of Western man when faced with this problem of grasping the ideas of the East is like that of the student in *Faust*. Misled by the devil, he contemptuously turns his back on science and, carried away by Eastern occultism, takes over yoga practices word for word and becomes a pitiable imitator. (Theosophy is our best example of this.) Thus he abandons the one sure foundation of the Western mind and loses himself in a mist of words and ideas that could never have originated in European brains and can never be profitably grafted upon them.

[4] An ancient adept has said: “If the wrong man uses the right means, the right means work in the wrong way.”[1] This Chinese saying, unfortunately only too true, stands in sharp contrast to our belief in the “right” method irrespective of the man who applies it. In reality, everything depends on the man and little or nothing on the method. The method is merely the path, the direction taken by a man; the way he acts is the true expression of his nature. If it ceases to be this, the method is nothing more than an affectation, something artificially pieced on, rootless and sapless, serving only the illegitimate goal of self-deception. It becomes a means of fooling oneself and of evading what may perhaps be the implacable law of one’s being. This is far removed from the

earthiness and self-reliance of Chinese thought. It is a denial of one's own nature, a self-betrayal to strange and unclean gods, a cowardly trick for the purpose of feigning mental superiority, everything in fact that is profoundly contrary to the spirit of the Chinese "method." For these insights spring from a way of life that is complete, genuine, and true to itself; from that ancient, cultural life of China which grew logically and organically from the deepest instincts, and which, for us, is forever inaccessible and impossible to imitate.

[5] Western imitation is a tragic misunderstanding of the psychology of the East, every bit as sterile as the modern escapades to New Mexico, the blissful South Sea islands, and central Africa, where "the primitive life" is played at in deadly earnest while Western man secretly evades his menacing duties, his *Hic Rhodus hic salta.* It is not for us to imitate what is foreign to our organism or to play the missionary; our task is to build up our Western civilization, which sickens with a thousand ills. This has to be done on the spot, and by the European just as he is, with all his Western ordinariness, his marriage problems, his neuroses, his social and political delusions, and his whole philosophical disorientation.

[6] We should do well to confess at once that, fundamentally, we do not understand the utter unworldliness of a text like this—that actually we do not want to understand it. Have we, perhaps, a dim suspicion that a mental attitude which can direct the glance inward to that extent is detached from the world only because these people have so completely fulfilled the instinctive demands of their natures that there is nothing to prevent them from glimpsing the invisible essence of things? Can it be that the precondition for such a vision is liberation from the ambitions and passions that bind us to the visible world, and does not this liberation come from the sensible fulfilment of instinctive demands rather than from the premature and fear-ridden repression of them? Are our eyes opened to the spirit only when the laws of the earth are obeyed? Anyone who knows the history of Chinese culture and has carefully studied the *I Ching*, that book of wisdom which for thousands of years has permeated all Chinese thought, will not lightly wave these doubts aside. He will be aware that the views set forth in our text are nothing extraordinary to the Chinese, but are actually inescapable psychological conclusions.

[7] For a long time the spirit, and the sufferings of the spirit, were positive values and the things most worth striving for in our peculiar Christian culture. Only in the course of the nineteenth century, when spirit began to degenerate into intellect, did a reaction set in against the unbearable dominance of intellectualism, and this led to the unpardonable mistake of confusing intellect with spirit and blaming the latter for the misdeeds of the former. The intellect does indeed do harm to the soul when it dares to possess itself of the heritage of the spirit. It is in no way fitted to do this, for spirit is something higher than intellect since it embraces the latter and includes the feelings as well. It is a guiding principle of life that strives towards superhuman, shining heights. Opposed to this *yang* principle is the dark, feminine, earthbound *yin*, whose emotionality and instinctuality reach back into the depths of time and down into the labyrinth of the physiological continuum. No doubt these are purely intuitive ideas, but one can hardly dispense with them if one is trying to understand the nature of the human psyche. The Chinese could not do without them because, as the history of Chinese philosophy shows, they never strayed so far from the central psychic facts as to lose themselves in a one-sided over-development and over-valuation of a single psychic function. They never failed to acknowledge the paradoxicality and polarity of all life. The opposites always balanced one another—a sign of high culture. One-sidedness, though it lends momentum, is a mark of barbarism. The reaction that is now beginning in the West against the intellect in favour of feeling, or in favour of intuition, seems to me a sign of cultural advance, a widening of consciousness beyond the narrow confines of a tyrannical intellect.

[8] I have no wish to depreciate the tremendous differentiation of the Western intellect; compared with it the Eastern intellect must be described as childish. (Naturally this has nothing to do with intelligence.) If we should succeed in elevating another, and possibly even a third psychic function to the dignified position accorded to the intellect, then the West might expect to surpass the East by a very great margin. Therefore it is sad indeed when the European departs from his own nature and imitates the East or "affects" it in any way. The possibilities open to him would be so much greater if he would remain true to himself

and evolve out of his own nature all that the East has brought forth in the course of the millennia.

[9] In general, and looked at from the incurably externalistic standpoint of the intellect, it would seem as if the things the East values so highly were not worth striving for. Certainly the intellect alone cannot comprehend the practical importance Eastern ideas might have for us, and that is why it can classify them as philosophical and ethnological curiosities and nothing more. The lack of comprehension goes so far that even learned sinologists have not understood the practical use of the *I Ching*, and consider the book to be no more than a collection of abstruse magic spells.

2. MODERN PSYCHOLOGY OFFERS A POSSIBILITY OF UNDERSTANDING

[10] Observations made in my practical work have opened out to me a quite new and unexpected approach to Eastern wisdom. In saying this I should like to emphasize that I did not have any knowledge, however inadequate, of Chinese philosophy as a starting point. On the contrary, when I began my career as a psychiatrist and psychotherapist, I was completely ignorant of Chinese philosophy, and only later did my professional experience show me that in my technique I had been unconsciously following that secret way which for centuries had been the preoccupation of the best minds of the East. This could be taken for a subjective fancy—which was one reason for my previous reluctance to publish anything on the subject—but Richard Wilhelm, that great interpreter of the soul of China, enthusiastically confirmed the parallel and thus gave me the courage to write about a Chinese text that belongs entirely to the mysterious shadow-land of the Eastern mind. At the same time—and this is the extraordinary thing—its content forms a living parallel to what takes place in the psychic development of my patients, none of whom is Chinese.

[11] In order to make this strange fact more intelligible to the reader, it must be pointed out that just as the human body shows a common anatomy over and above all racial differences, so, too, the human psyche possesses a common substratum transcending all differences in culture and consciousness. I have called this substratum the collective unconscious. This unconscious psyche, common to all mankind, does not consist merely of contents capable of becoming conscious, but of latent predispositions towards identical reactions. The collective unconscious is simply the psychic expression of the identity of brain structure irrespective of all racial differences. This explains the analogy, sometimes even identity, between the various myth motifs and symbols,

and the possibility of human communication in general. The various lines of psychic development start from one common stock whose roots reach back into the most distant past. This also accounts for the psychological parallelisms with animals.

[12] In purely psychological terms this means that mankind has common instincts of ideation and action. All conscious ideation and action have developed on the basis of these unconscious archetypal patterns and always remain dependent on them. This is especially the case when consciousness has not attained any high degree of clarity, when in all its functions it is more dependent on the instincts than on the conscious will, more governed by affect than by rational judgment. This ensures a primitive state of psychic health, but it immediately becomes lack of adaptation when circumstances arise that call for a higher moral effort. Instincts suffice only for a nature that remains more or less constant. An individual who is guided more by the unconscious than by conscious choice therefore tends towards marked psychic conservatism. This is the reason why the primitive does not change in the course of thousands of years, and also why he fears anything strange and unusual. It might easily lead to maladaptation, and thus to the greatest psychic dangers—to a kind of neurosis, in fact. A higher and wider consciousness resulting from the assimilation of the unfamiliar tends, on the other hand, towards autonomy, and rebels against the old gods who are nothing other than those mighty, primordial images that hitherto have held our consciousness in thrall.

[13] The stronger and more independent our consciousness becomes, and with it the conscious will, the more the unconscious is thrust into the background, and the easier it is for the evolving consciousness to emancipate itself from the unconscious, archetypal pattern. Gaining in freedom, it bursts the bonds of mere instinctuality and finally reaches a condition of instinctual atrophy. This uprooted consciousness can no longer appeal to the authority of the primordial images; it has Promethean freedom, but it also suffers from godless hybris. It soars above the earth and above mankind, but the danger of its sudden collapse is there, not of course in the case of every individual, but for the weaker members of the community, who then, again like Prometheus, are

chained to the Caucasus of the unconscious. The wise Chinese would say in the words of the *I Ching:* When *yang* has reached its greatest strength, the dark power of *yin* is born within its depths, for night begins at midday when *yang* breaks up and begins to change into *yin*.

[14] The doctor is in a position to see this cycle of changes translated literally into life. He sees, for instance, a successful businessman attaining all his desires regardless of death and the devil, and then, having retired at the height of his success, speedily falling into a neurosis, which turns him into a querulous old woman, fastens him to his bed, and finally destroys him. The picture is complete even to the change from masculine to feminine. An exact parallel to this is the story of Nebuchadnezzar in the Book of Daniel, and Caesarean madness in general. Similar cases of one-sided exaggeration of the conscious standpoint, and the resultant yin-reaction from the unconscious, form no small part of the psychiatrist’s clientele in our time, which so overvalues the conscious will as to believe that “where there’s a will there’s a way.” Not that I wish to detract in the least from the high moral value of the will. Consciousness and the will may well continue to be considered the highest cultural achievements of humanity. But of what use is a morality that destroys the man? To bring the will and the capacity to achieve it into harmony seems to me to require more than morality. Morality *à tout prix* can be a sign of barbarism—more often wisdom is better. But perhaps I look at this with the eyes of a physician who has to mend the ills following in the wake of one-sided cultural achievements.

[15] Be that as it may, the fact remains that a consciousness heightened by an inevitable one-sidedness gets so far out of touch with the primordial images that a breakdown ensues. Long before the actual catastrophe, the signs of error announce themselves in atrophy of instinct, nervousness, disorientation, entanglement in impossible situations and problems. Medical investigation then discovers an unconscious that is in full revolt against the conscious values, and that therefore cannot possibly be assimilated to consciousness, while the reverse is altogether out of the question. We are confronted with an apparently irreconcilable conflict before which human reason stands helpless, with nothing to offer except sham solutions or dubious compromises. If these evasions are rejected,

we are faced with the question as to what has become of the much needed unity of the personality, and with the necessity of seeking it. At this point begins the path travelled by the East since the beginning of things. Quite obviously, the Chinese were able to follow this path because they never succeeded in forcing the opposites in man's nature so far apart that all conscious connection between them was lost. The Chinese owe this all-inclusive consciousness to the fact that, as in the case of the primitive mentality, the yea and the nay have remained in their original proximity. Nonetheless, it was impossible not to feel the clash of opposites, so they sought a way of life in which they would be what the Indians call *nirdvandva*, free of opposites.

[16] Our text is concerned with this way, and the same problem comes up with my patients also. There could be no greater mistake than for a Westerner to take up the direct practice of Chinese yoga, for that would merely strengthen his will and consciousness against the unconscious and bring about the very effect to be avoided. The neurosis would then simply be intensified. It cannot be emphasized enough that we are not Orientals, and that we have an entirely different point of departure in these matters. It would also be a great mistake to suppose that this is the path every neurotic must travel, or that it is the solution at every stage of the neurotic problem. It is appropriate only in those cases where consciousness has reached an abnormal degree of development and has diverged too far from the unconscious. This is the *sine qua non* of the process. Nothing would be more wrong than to open this way to neurotics who are ill on account of an excessive predominance of the unconscious. For the same reason, this way of development has scarcely any meaning before the middle of life (normally between the ages of thirty-five and forty), and if entered upon too soon can be decidedly injurious.

[17] As I have said, the essential reason which prompted me to look for a new way was the fact that the fundamental problem of the patient seemed to me insoluble unless violence was done to one or the other side of his nature. I had always worked with the temperamental conviction that at bottom there are no insoluble problems, and experience justified me in so far as I have often seen patients simply outgrow a problem that had

destroyed others. This “outgrowing,” as I formerly called it, proved on further investigation to be a new level of consciousness. Some higher or wider interest appeared on the patient’s horizon, and through this broadening of his outlook the insoluble problem lost its urgency. It was not solved logically in its own terms, but faded out when confronted with a new and stronger life urge. It was not repressed and made unconscious, but merely appeared in a different light, and so really did become different. What, on a lower level, had led to the wildest conflicts and to panicky outbursts of emotion, from the higher level of personality now looked like a storm in the valley seen from the mountain top. This does not mean that the storm is robbed of its reality, but instead of being in it one is above it. But since, in a psychic sense, we are both valley and mountain, it might seem a vain illusion to deem oneself beyond what is human. One certainly does feel the affect and is shaken and tormented by it, yet at the same time one is aware of a higher consciousness looking on which prevents one from becoming identical with the affect, a consciousness which regards the affect as an object, and can say, “I *know* that I suffer.” What our text says of indolence, “Indolence of which a man is conscious, and indolence of which he is unconscious, are a thousand miles apart,”[1] holds true in the highest degree of affect.

[18] Now and then it happened in my practice that a patient grew beyond himself because of unknown potentialities, and this became an experience of prime importance to me. In the meantime, I had learned that all the greatest and most important problems of life are fundamentally insoluble. They must be so, for they express the necessary polarity inherent in every self-regulating system. They can never be solved, but only outgrown. I therefore asked myself whether this outgrowing, this possibility of further psychic development, was not the normal thing, and whether getting stuck in a conflict was pathological. Everyone must possess that higher level, at least in embryonic form, and must under favourable circumstances be able to develop this potentiality. When I examined the course of development in patients who quietly, and as if unconsciously, outgrew themselves, I saw that their fates had something in common. The new thing came to them from obscure possibilities either outside or inside themselves; they accepted it and

grew with its help. It seemed to me typical that some took the new thing from outside themselves, others from inside; or rather, that it grew into some persons from without, and into others from within. But the new thing never came exclusively either from within or from without. If it came from outside, it became a profound inner experience; if it came from inside, it became an outer happening. In no case was it conjured into existence intentionally or by conscious willing, but rather seemed to be borne along on the stream of time.

[19] We are so greatly tempted to turn everything into a purpose and a method that I deliberately express myself in very abstract terms in order to avoid prejudicing the reader in one way or the other. The new thing must not be pigeon-holed under any heading, for then it becomes a recipe to be used mechanically, and it would again be a case of the "right means in the hands of the wrong man." I have been deeply impressed by the fact that the new thing prepared by fate seldom or never comes up to conscious expectations. And still more remarkable, though the new thing goes against deeply rooted instincts as we have known them, it is a strangely appropriate expression of the total personality, an expression which one could not imagine in a more complete form.

[20] What did these people do in order to bring about the development that set them free? As far as I could see they did nothing (*wu wei*[2]) but let things happen. As Master Lü-tsu teaches in our text, the light circulates according to its own law if one does not give up one's ordinary occupation. The art of letting things happen, action through non-action, letting go of oneself as taught by Meister Eckhart, became for me the key that opens the door to the way. We must be able to let things happen in the psyche. For us, this is an art of which most people know nothing. Consciousness is forever interfering, helping, correcting, and negating, never leaving the psychic processes to grow in peace. It would be simple enough, if only simplicity were not the most difficult of all things. To begin with, the task consists solely in observing objectively how a fragment of fantasy develops. Nothing could be simpler, and yet right here the difficulties begin. Apparently one has no fantasy fragments—or yes, there's one, but it is too stupid! Dozens of good reasons are brought against it. One cannot concentrate on it—it is too boring—what would

come of it anyway—it is “nothing but” this or that, and so on. The conscious mind raises innumerable objections, in fact it often seems bent on blotting out the spontaneous fantasy activity in spite of real insight and in spite of the firm determination to allow the psychic process to go forward without interference. Occasionally there is a veritable cramp of consciousness.

[21] If one is successful in overcoming the initial difficulties, criticism is still likely to start in afterwards in the attempt to interpret the fantasy, to classify it, to aestheticize it, or to devalue it. The temptation to do this is almost irresistible. After it has been faithfully observed, free rein can be given to the impatience of the conscious mind; in fact it must be given, or obstructive resistances will develop. But each time the fantasy material is to be produced, the activity of consciousness must be switched off again.

[22] In most cases the results of these efforts are not very encouraging at first. Usually they consist of tenuous webs of fantasy that give no clear indication of their origin or their goal. Also, the way of getting at the fantasies varies with individuals. For many people, it is easiest to write them down: others visualize them, and others again draw or paint them with or without visualization. If there is a high degree of conscious cramp, often only the hands are capable of fantasy; they model or draw figures that are sometimes quite foreign to the conscious mind.

[23] These exercises must be continued until the cramp in the conscious mind is relaxed, in other words, until one can let things happen, which is the next goal of the exercise. In this way a new attitude is created, an attitude that accepts the irrational and the incomprehensible simply because it is happening. This attitude would be poison for a person who is already overwhelmed by the things that happen to him, but it is of the greatest value for one who selects, from among the things that happen, only those that are acceptable to his conscious judgment, and is gradually drawn out of the stream of life into a stagnant backwater.

[24] At this point, the way travelled by the two types mentioned earlier seems to divide. Both have learned to accept what comes to them. (As Master Lü-tsu teaches: “When occupations come to us, we must accept them; when things come to us, we must understand them from the ground

up.”[3]) One man will now take chiefly what comes to him from outside, and the other what comes from inside. Moreover, the law of life demands that what they take from outside and inside will be the very things that were always excluded before. This reversal of one’s nature brings an enlargement, a heightening and enrichment of the personality, if the previous values are retained alongside the change—provided that these values are not mere illusions. If they are not held fast, the individual will swing too far to the other side, slipping from fitness into unfitness, from adaptedness into unadaptedness, and even from rationality into insanity. The way is not without danger. Everything good is costly, and the development of personality is one of the most costly of all things. It is a matter of saying yea to oneself, of taking oneself as the most serious of tasks, of being conscious of everything one does, and keeping it constantly before one’s eyes in all its dubious aspects—truly a task that taxes us to the utmost.

[25] A Chinese can always fall back on the authority of his whole civilization. If he starts on the long way, he is doing what is recognized as being the best thing he could possibly do. But the Westerner who wishes to set out on this way, if he is really serious about it, has all authority against him—intellectual, moral, and religious. That is why it is infinitely easier for him to imitate the Chinese way and leave the troublesome European behind him, or else to seek the way back to the medievalism of the Christian Church and barricade himself behind the wall separating true Christians from the poor heathen and other ethnographic curiosities encamped outside. Aesthetic or intellectual flirtations with life and fate come to an abrupt halt here: the step to higher consciousness leaves us without a rearguard and without shelter. The individual must devote himself to the way with all his energy, for it is only by means of his integrity that he can go further, and his integrity alone can guarantee that his way will not turn out to be an absurd misadventure.

[26] Whether his fate comes to him from without or from within, the experiences and happenings on the way remain the same. Therefore I need say nothing about the manifold outer and inner events, the endless variety of which I could never exhaust in any case. Nor would this be

relevant to the text under discussion. On the other hand, there is much to be said about the psychic states that accompany the process of development. These states are expressed symbolically in our text, and in the very same symbols that for many years have been familiar to me from my practice.

3. THE FUNDAMENTAL CONCEPTS

A. TAO

[27] The great difficulty in interpreting this and similar texts[1] for the European is that the author always starts from the central point, from the point we would call the goal, the highest and ultimate insight he has attained. Thus our Chinese author begins with ideas that demand such a comprehensive understanding that a person of discriminating mind has the feeling he would be guilty of ridiculous pretension, or even of talking utter nonsense, if he should embark on an intellectual discourse on the subtle psychic experiences of the greatest minds of the East. Our text, for example, begins: “That which exists through itself is called the Way.” The *Hui Ming Ching* begins with the words: “The subtlest secret of the Tao is human nature and life.”

[28] It is characteristic of the Western mind that it has no word for Tao. The Chinese character is made up of the sign for “head” and the sign for “going.” Wilhelm translates Tao by *Sinn* (Meaning). Others translate it as “way,” “providence,” or even as “God,” as the Jesuits do. This illustrates our difficulty. “Head” can be taken as consciousness,[2] and “going” as travelling a way, and the idea would then be: to go consciously, or the conscious way. This is borne out by the fact that the “light of heaven” which “dwells between the eyes” as the “heart of heaven” is used synonymously with Tao. Human nature and life are contained in the “light of heaven” and, according to the *Hui Ming Ching*, are the most important secrets of the Tao. “Light” is the symbolical equivalent of consciousness, and the nature of consciousness is expressed by analogies with light. The *Hui Ming Ching* is introduced with the verses:

> If thou wouldst complete the diamond body with no outflowing,
> Diligently heat the roots of consciousness[3] and life.

Kindle light in the blessed country ever close at hand,
And there hidden, let thy true self always dwell.

[29] These verses contain a sort of alchemical instruction as to the method or way of producing the "diamond body," which is also mentioned in our text. "Heating" is necessary; that is, there must be an intensification of consciousness in order that light may be kindled in the dwelling place of the true self. Not only consciousness, but life itself must be intensified: the union of these two produces conscious life. According to the *Hui Ming Ching*, the ancient sages knew how to bridge the gap between consciousness and life because they cultivated both. In this way the *sheli*, the immortal body, is "melted out" and the "great Tao is completed."[4]

[30] If we take the Tao to be the method or conscious way by which to unite what is separated, we have probably come close to the psychological meaning of the concept. At all events, the separation of consciousness and life cannot very well be understood as anything else than what I described earlier as an aberration or uprooting of consciousness. There can be no doubt, either, that the realization of the opposite hidden in the unconscious—the process of "reversal"—signifies reunion with the unconscious laws of our being, and the purpose of this reunion is the attainment of conscious life or, expressed in Chinese terms, the realization of the Tao.

B. THE CIRCULAR MOVEMENT AND THE CENTRE

[31] As I have pointed out, the union of opposites[5] on a higher level of consciousness is not a rational thing, nor is it a matter of will; it is a process of psychic development that expresses itself in symbols. Historically, this process has always been represented in symbols, and today the development of personality is still depicted in symbolic form. I discovered this fact in the following way. The spontaneous fantasy products I discussed earlier become more profound and gradually concentrate into abstract structures that apparently represent "principles" in the sense of Gnostic *archai*. When the fantasies take the form chiefly of thoughts, intuitive formulations of dimly felt laws or principles emerge, which at first tend to be dramatized or personified. (We shall

come back to these again later.) If the fantasies are drawn, symbols appear that are chiefly of the *mandala*[6] type. *Mandala* means “circle,” more especially a magic circle. Mandalas are found not only throughout the East but also among us. The early Middle Ages are especially rich in Christian mandalas; most of them show Christ in the centre, with the four evangelists, or their symbols, at the cardinal points. This conception must be a very ancient one, because Horus and his four sons were represented in the same way by the Egyptians.[7] It is known that Horus with his four sons has close connections with Christ and the four evangelists. An unmistakable and very interesting mandala can be found in Jakob Böhme’s book *XL Questions concerning the Soule*.[8] It is clear that this mandala represents a psychocosmic system strongly coloured by Christian ideas. Böhme calls it the “Philosophical Eye”[9] or the “Mirror of Wisdom,” by which is obviously meant a *summa* of secret knowledge. Most mandalas take the form of a flower, cross, or wheel, and show a distinct tendency towards a quaternary structure reminiscent of the Pythagorean *tetraktys*, the basic number. Mandalas of this sort also occur as sand paintings in the religious ceremonies of the Pueblo and Navaho Indians.[10] But the most beautiful mandalas are, of course, those of the East, especially the ones found in Tibetan Buddhism, which also contain the symbols mentioned in our text. Mandala drawings are often produced by the mentally ill, among them persons who certainly did not have the least idea of any of the connections we have discussed.[11]

[32] Among my patients I have come across cases of women who did not draw mandalas but danced them instead. In India there is a special name for this: *mandala nrithya*, the mandala dance. The dance figures express the same meanings as the drawings. My patients can say very little about the meaning of the symbols but are fascinated by them and find that they somehow express and have an effect on their subjective psychic state.

[33] Our text promises to “reveal the secret of the Golden Flower of the great *One.*” The golden flower is the light, and the light of heaven is the Tao. The golden flower is a mandala symbol I have often met with in the material brought me by my patients. It is drawn either seen from above as a regular geometric pattern, or in profile as a blossom growing from a

plant. The plant is frequently a structure in brilliant fiery colours growing out of a bed of darkness, and carrying the blossom of light at the top, a symbol recalling the Christmas tree. Such drawings also suggest the origin of the golden flower, for according to the *Hui Ming Ching* the "germinal vesicle" is the "dragon castle at the bottom of the sea."[12] Other synonyms are the "yellow castle," the "heavenly heart," the "terrace of living," the "square inch field of the square foot house," the "purple hall of the city of jade," the "dark pass," the "space of former heaven."[13] It is also called the "boundary region of the snow mountains," the "primordial pass," the "kingdom of greatest joy," the "boundless country," the "altar upon which consciousness and life are made." "If a dying man does not know this germinal vesicle," says the *Hui Ming Ching*, "he will not find the unity of consciousness and life in a thousand births, nor in ten thousand aeons."[14]

[34] The beginning, where everything is still one, and which therefore appears as the highest goal, lies at the bottom of the sea, in the darkness of the unconscious. In the germinal vesicle, consciousness and life (or human nature and life, *hsing-ming*) are still a "unity, inseparably mixed like the sparks in the refining furnace." "Within the germinal vesicle is the fire of the ruler." "All the sages began their work at the germinal vesicle."[15] Note the fire analogies. I know a series of European mandala drawings in which something like a plant seed surrounded by membranes is shown floating in the water. Then, from the depths below, fire penetrates the seed and makes it grow, causing a great golden flower to unfold from the germinal vesicle.

[35] This symbolism refers to a quasi-alchemical process of refining and ennobling. Darkness gives birth to light; out of the "lead of the water region" grows the noble gold; what is unconscious becomes conscious in the form of a living process of growth. (Indian Kundalini yoga offers a perfect analogy.[16]) In this way the union of consciousness and life takes place.

[36] When my patients produce these mandala pictures, it is naturally not the result of suggestion; similar pictures were being made long before I knew their meaning or their connection with the practices of the East,

which, at that time, were wholly unknown to me. The pictures arise quite spontaneously, and from two sources. One source is the unconscious, which spontaneously produces fantasies of this kind; the other is life, which, if lived with utter devotion, brings an intuition of the self, of one's own individual being. When the self finds expression in such drawings, the unconscious reacts by enforcing an attitude of devotion to life. For in complete agreement with the Eastern view, the mandala is not only a means of expression but also produces an effect. It reacts upon its maker. Age-old magical effects lie hidden in this symbol, for it is derived from the "protective circle" or "charmed circle," whose magic has been preserved in countless folk customs.[17] It has the obvious purpose of drawing a *sulcus primigenius*, a magical furrow around the centre, the temple or *temenos* (sacred precinct), of the innermost personality, in order to prevent an "outflowing" or to guard by apotropaic means against distracting influences from outside. Magical practices are nothing but projections of psychic events, which then exert a counter-influence on the psyche and put a kind of spell upon the personality. Through the ritual action, attention and interest are led back to the inner, sacred precinct, which is the source and goal of the psyche and contains the unity of life and consciousness. The unity once possessed has been lost, and must now be found again.

[37] The unity of the two, life and consciousness, is the Tao, whose symbol would be the central white light, also mentioned in the *Bardo Thödol*.[18] This light dwells in the "square inch" or in the "face," that is, between the eyes. It is a visualization of the "creative point," of that which has intensity without extension, in conjunction with the "field of the square inch," the symbol for that which has extension. The two together make the Tao. Human nature (*hsing*) and consciousness (*hui*) are expressed in light symbolism, and therefore have the quality of intensity, while life (*ming*) would coincide with extensity. The one is *yang*-like, the other *yin*-like. The afore-mentioned mandala of a somnambulist girl, aged fifteen and a half, whom I had under observation some thirty years ago, shows in its centre a spring of "Primary Force," or life energy without extension, whose emanations clash with a contrary spatial principle—in complete analogy with the basic idea of our Chinese text.

[38] The “enclosure,” or *circumambulatio*, is expressed in our text by the idea of “circulation.” The circulation is not merely movement in a circle, but means, on the one hand, the marking off of the sacred precinct and, on the other, fixation and concentration. The sun-wheel begins to turn; the sun is activated and begins its course—in other words, the Tao begins to work and takes the lead. Action is reversed into non-action; everything peripheral is subordinated to the command of the centre. Therefore it is said: “Movement is only another name for mastery.” Psychologically, this circulation would be the “movement in a circle around oneself,” so that all sides of the personality become involved. “The poles of light and darkness are made to rotate,” that is, there is an alternation of day and night.

[39] The circular movement thus has the moral significance of activating the light and dark forces of human nature, and together with them all psychological opposites of whatever kind they may be. It is nothing less than self-knowledge by means of self-brooding (Sanskrit *tapas*). A similar archetypal concept of a perfect being is that of the Platonic man, round on all sides and uniting within himself the two sexes.

[40] One of the best modern parallels is the description which Edward Maitland, the biographer of Anna Kingsford,[19] gave of his central experience. He had discovered that when reflecting on an idea, related ideas became visible, so to speak, in a long series apparently reaching back to their source, which to him was the divine spirit. By concentrating on this series, he tried to penetrate to their origin. He writes:

> I was absolutely without knowledge or expectation when I yielded to the impulse to make the attempt. I simply experimented on a faculty . . . being seated at my writing-table the while in order to record the results as they came, and resolved to retain my hold on my outer and circumferential consciousness, no matter how far towards my inner and central consciousness I might go. For I knew not whether I should be able to regain the former if I once quitted my hold of it, or to recollect the facts of the experience. At length I achieved my object, though only by a strong effort, the tension occasioned by the endeavour to keep both extremes of the consciousness in view at once being very great.

> Once well started on my quest, I found myself traversing a succession of spheres or belts . . . the impression produced being that of mounting a vast ladder stretching from the circumference towards the centre of a system, which was at once my own system, the solar system, the universal system, the three systems being at once diverse and identical.. . . . Presently, by a supreme, and what I felt must be a final effort . . . I succeeded in polarizing the whole of the convergent rays of my consciousness into the desired focus. And at the same instant, as if through the sudden ignition of the rays thus fused into a unity, I found myself confronted with a glory of unspeakable whiteness and brightness, and of a lustre so intense as well-nigh to beat me back. . . . But though feeling that I had to explore further, I resolved to make assurance doubly sure by piercing if I could the almost blinding lustre, and seeing what it enshrined. With a great effort I succeeded, and the glance revealed to me that which I had felt must be there. . . . It was the dual form of the Son . . . the unmanifest made manifest, the unformulate formulate, the unindividuate individuate, God as the Lord, proving through His duality that God is Substance as well as Force, Love as well as Will, Feminine as well as Masculine, Mother as well as Father.

[41] He found that God is two in one, like man. Besides this he noticed something that our text also emphasizes, namely "suspension of breathing." He says ordinary breathing stopped and was replaced by an internal respiration, "as if by breathing of a distinct personality within and other than the physical organism." He took this being to be the "entelechy" of Aristotle and the "inner Christ" of the apostle Paul, the "spiritual and substantial individuality engendered within the physical and phenomenal personality, and representing, therefore, the rebirth of man on a plane transcending the material."

[42] This genuine[20] experience contains all the essential symbols of our text. The phenomenon itself, the vision of light, is an experience common to many mystics, and one that is undoubtedly of the greatest significance, because at all times and places it proves to be something unconditioned and absolute, a combination of supreme power and profound meaning. Hildegard of Bingen, an outstanding personality quite apart from her mysticism, writes in much the same way about her central vision:

> Since my childhood I have always seen a light in my soul, but not with the outer eyes, nor through the thoughts of my heart; neither do the five outer senses take part in this vision. . . . The light I perceive is not of a local kind, but is much brighter than the cloud which supports the sun. I cannot distinguish height, breadth, or length in it. . . . What I see or learn in such a vision stays long in my memory. I see, hear, and know in the same moment. . . . I cannot recognize any sort of form in this light, although I sometimes see in it another light that is known to me as the living light. . . . While I am enjoying the spectacle of this light, all sadness and sorrow vanish from my memory.[21]

[43] I myself know a few individuals who have had personal experience of this phenomenon. So far as I have been able to understand it, it seems to have to do with an acute state of consciousness, as intense as it is abstract, a "detached" consciousness (see infra, pars. 64ff.), which, as Hildegard implies, brings into awareness areas of psychic happenings ordinarily covered in darkness. The fact that the general bodily sensations disappear during the experience suggests that their specific energy has been withdrawn and has apparently gone towards heightening the clarity of consciousness. As a rule, the phenomenon is spontaneous, coming and going on its own initiative. Its effect is astonishing in that it almost always brings about a solution of psychic complications and frees the inner personality from emotional and intellectual entanglements, thus creating a unity of being which is universally felt as "liberation."

[44] Such a symbolic unity cannot be attained by the conscious will because consciousness is always partisan. Its opponent is the collective unconscious, which does not understand the language of the conscious mind. Therefore it is necessary to have the magic of the symbol which contains those primitive analogies that speak to the unconscious. The unconscious can be reached and expressed only by symbols, and for this reason the process of individuation can never do without the symbol. The symbol is the primitive exponent of the unconscious, but at the same time an idea that corresponds to the highest intuitions of the conscious mind.

[45] The oldest mandala drawing known to me is a palaeolithic "sun-wheel," recently discovered in Rhodesia. It, too, is based on the

quaternary principle. Things reaching so far back into human history naturally touch upon the deepest layers of the unconscious, and can have a powerful effect on it even when our conscious language proves itself to be quite impotent. Such things cannot be thought up but must grow again from the forgotten depths if they are to express the supreme insights of consciousness and the loftiest intuitions of the spirit, and in this way fuse the uniqueness of present-day consciousness with the age-old past of life.

4. PHENOMENA OF THE WAY

A. THE DISINTEGRATION OF CONSCIOUSNESS

[46] The meeting between the narrowly delimited, but intensely clear, individual consciousness and the vast expanse of the collective unconscious is dangerous, because the unconscious has a decidedly disintegrating effect on consciousness. According to the *Hui Ming Ching*, this effect belongs to the peculiar phenomena of Chinese yoga. It says: “Every separate thought takes shape and becomes visible in colour and form. The total spiritual power unfolds its traces. . . .”[1] The relevant illustration in the text [stage 4] shows a sage sunk in contemplation, his head surrounded by tongues of fire, out of which five human figures emerge; these five again split up into twenty-five smaller figures.[2] This would be a schizophrenic process if it were to become a permanent state. Therefore the *Hui Ming Ching*, as though warning the adept, continues: “The shapes formed by the spirit-fire are only empty colours and forms. The light of human nature (*hsing*) shines back on the primordial, the true.”

[47] So we can understand why the figure of the protecting circle was seized upon. It is intended to prevent the “outflowing” and to protect the unity of consciousness from being burst asunder by the unconscious. The text seeks to mitigate the disintegrating effect of the unconscious by describing the thought-figures as “empty colours and forms,” thus depotentiating them as much as possible. This idea runs through the whole of Buddhism (especially the Mahayana form) and, in the instructions to the dead in *The Tibetan Book of the Dead*, it is even pushed to the point of explaining the favourable as well as the unfavourable gods as illusions still to be overcome. It is certainly not within the competence of the psychologist to establish the metaphysical truth or untruth of this idea; he must be content to determine so far as

possible its psychic effect. He need not bother himself whether the shape in question is a transcendental illusion or not, since faith, not science, has to decide this point. In any case we are moving on ground that for a long time has seemed to be outside the domain of science and was looked upon as wholly illusory. But there is no scientific justification for such an assumption; the substantiality of these things is not a scientific problem since it lies beyond the range of human perception and judgment and thus beyond any possibility of proof. The psychologist is concerned not with the substantiality of these complexes but with psychic experience. Without a doubt they are psychic contents that can be experienced, and their autonomy is equally indubitable. They are fragmentary psychic systems that either appear spontaneously in ecstatic states and evoke powerful impressions and effects, or else, in mental disturbances, become fixed in the form of delusions and hallucinations and consequently destroy the unity of the personality.

Stage 1: Gathering the light

Pages 30–33:
Four stages of meditation, with inspirational texts, from the *Hui Ming Ching*

Stage 2: Origin of a new being in the place of power

Stage 3: Separation of the spirit-body for independent existence

Stage 4: The centre in the midst of conditions

[48] Psychiatrists are always ready to believe in toxins and the like, and even to explain schizophrenia in these terms, putting next to no emphasis on the psychic contents as such. On the other hand, in psychogenic disturbances (hysteria, obsessional neurosis, etc.), where toxic effects and cell degeneration are out of the question, split-off complexes are to be found similar to those occurring in somnambulistic states. Freud would like to explain these spontaneous split-offs as due to unconscious repression of sexuality, but this explanation is by no means valid in all cases, because contents that the conscious mind cannot assimilate can emerge just as spontaneously out of the unconscious, and in these cases the repression theory is inadequate. Moreover, their autonomy can be observed in daily life, in affects that obstinately obtrude themselves against our will and, in spite of the most strenuous efforts to repress them, overwhelm the ego and force it under their control. No wonder the

primitive sees in these moods a state of possession or sets them down to a loss of soul. Our colloquial speech reflects the same thing when we say: "I don't know what has got into him today," "he is possessed of the devil," "he is beside himself," etc. Even legal practice recognizes a degree of diminished responsibility in a state of affect. Autonomous psychic contents are thus quite common experiences for us. Such contents have a disintegrating effect upon consciousness.

[49] But besides the ordinary, familiar affects there are subtler, more complex emotional states that can no longer be described as affects pure and simple but are fragmentary psychic systems. The more complicated they are, the more they have the character of personalities. As constituents of the psychic personality, they necessarily have the character of "persons." Such fragmentary systems are to be found especially in mental diseases, in cases of psychogenic splitting of the personality (double personality), and of course in mediumistic phenomena. They are also encountered in the phenomenology of religion. Many of the earlier gods developed from "persons" into personified ideas, and finally into abstract ideas. Activated unconscious contents always appear at first as projections upon the outside world, but in the course of mental development they are gradually assimilated by consciousness and reshaped into conscious ideas that then forfeit their originally autonomous and personal character. As we know, some of the old gods have become, via astrology, nothing more than descriptive attributes (martial, jovial, saturnine, erotic, logical, lunatic, and so on).

[50] The instructions of *The Tibetan Book of the Dead* in particular help us to see how great is the danger that consciousness will be disintegrated by these figures. Again and again the dead are instructed not to take these shapes for truth, not to confuse their murky appearance with the pure white light of *Dharmakaya* (the divine body of truth). That is to say, they are not to project the *one* light of highest consciousness into concretized figures and dissolve it into a plurality of autonomous fragmentary systems. If there were no danger of this, and if these systems did not represent menacingly autonomous and disintegrative tendencies, such urgent instructions would not be necessary. Allowing for the simpler, polytheistic attitude of the Eastern mind, these instructions would be

almost the equivalent of warning a Christian not to let himself be blinded by the illusion of a personal God, let alone by the Trinity and the host of angels and saints.

[51] If tendencies towards dissociation were not inherent in the human psyche, fragmentary psychic systems would never have been split off; in other words, neither spirits nor gods would ever have come into existence. That is also the reason why our time has become so utterly godless and profane: we lack all knowledge of the unconscious psyche and pursue the cult of consciousness to the exclusion of all else. Our true religion is a monotheism of consciousness, a possession by it, coupled with a fanatical denial of the existence of fragmentary autonomous systems. But we differ from the Buddhist yoga doctrines in that we even deny that these systems are experienceable. This entails a great psychic danger, because the autonomous systems then behave like any other repressed contents: they necessarily induce wrong attitudes since the repressed material reappears in consciousness in a spurious form. This is strikingly evident in every case of neurosis and also holds true for the collective psychic phenomena. Our time has committed a fatal error; we believe we can criticize the facts of religion intellectually. Like Laplace, we think God is a hypothesis that can be subjected to intellectual treatment, to be affirmed or denied. We completely forget that the reason mankind believes in the “daemon” has nothing whatever to do with external factors, but is simply due to a naïve awareness of the tremendous inner effect of autonomous fragmentary systems. This effect is not abolished by criticizing it—or rather, the name we have given it—or by describing the name as false. The effect is collectively present all the time; the autonomous systems are always at work, for the fundamental structure of the unconscious is not affected by the deviations of our ephemeral consciousness.

[52] If we deny the existence of the autonomous systems, imagining that we have got rid of them by a mere critique of the name, then the effect which they still continue to exert can no longer be understood, nor can they be assimilated to consciousness. They become an inexplicable source of disturbance which we finally assume must exist somewhere outside ourselves. The resultant projection creates a dangerous situation

in that the disturbing effects are now attributed to a wicked will outside ourselves, which is naturally not to be found anywhere but with our neighbour *de l'autre côté de la rivière.* This leads to collective delusions, "incidents," revolutions, war—in a word, to destructive mass psychoses.

[53] Insanity is possession by an unconscious content that, as such, is not assimilated to consciousness, nor can it be assimilated since the very existence of such contents is denied. This attitude is equivalent to saying: "We no longer have any fear of God and believe that everything is to be judged by human standards." This hybris or narrowness of consciousness is always the shortest way to the insane asylum. I recommend the excellent account of this problem in H. G. Wells's novel *Christina Alberta's Father,* and Schreber's *Memoirs of My Nervous Illness.*

[54] It must stir a sympathetic chord in the enlightened European when it is said in the *Hui Ming Ching* that the "shapes formed by the spirit-fire are only empty colours and forms." That sounds thoroughly European and seems to suit our reason to a T. We think we can congratulate ourselves on having already reached such a pinnacle of clarity, imagining that we have left all these phantasmal gods far behind. But what we have left behind are only verbal spectres, not the psychic facts that were responsible for the birth of the gods. We are still as much possessed by autonomous psychic contents as if they were Olympians. Today they are called phobias, obsessions, and so forth; in a word, neurotic symptoms. The gods have become diseases; Zeus no longer rules Olympus but rather the solar plexus, and produces curious specimens for the doctor's consulting room, or disorders the brains of politicians and journalists who unwittingly let loose psychic epidemics on the world.

[55] So it is better for Western man if he does not know too much about the secret insights of the Oriental sages to begin with, for, as I have said, it would be a case of the "right means in the hands of the wrong man." Instead of allowing himself to be convinced once more that the daemon is an illusion, he ought to experience once more the reality of this illusion. He should learn to acknowledge these psychic forces anew, and not wait until his moods, nervous states, and delusions make it clear in the most painful way that he is not the only master in his house. His

dissociative tendencies are actual psychic personalities possessing a differential reality. They are "real" when they are not recognized as real and consequently projected; they are relatively real when they are brought into relationship with consciousness (in religious terms, when a cult exists); but they are unreal to the extent that consciousness detaches itself from its contents. This last stage, however, is reached only when life has been lived so exhaustively and with such devotion that no obligations remain unfulfilled, when no desires that cannot safely be sacrificed stand in the way of inner detachment from the world. It is futile to lie to ourselves about this. Wherever we are still attached, we are still possessed; and when we are possessed, there is one stronger than us who possesses us. ("Verily I say unto thee, thou shalt by no means come out thence, until thou hast paid the uttermost farthing.") It is not a matter of indifference whether one calls something a "mania" or a "god." To serve a mania is detestable and undignified, but to serve a god is full of meaning and promise because it is an act of submission to a higher, invisible, and spiritual being. The personification enables us to see the relative reality of the autonomous system, and not only makes its assimilation possible but also depotentiates the daemonic forces of life. When the god is not acknowledged, egomania develops, and out of this mania comes sickness.

[56] Yoga takes acknowledgment of the gods as something self-evident. Its secret instruction is intended only for those whose consciousness is struggling to disentangle itself from the daemonic forces of life in order to enter into the ultimate undivided unity, the "centre of emptiness," where "dwells the god of utmost emptiness and life," as our text says.[3] "To hear such a teaching is difficult to attain in thousands of aeons." Evidently the veil of Maya cannot be lifted by a merely rational resolve; it requires a most thorough going and persevering preparation consisting in the full payment of all debts to life. For as long as unconditional attachment through *cupiditas* exists, the veil is not lifted and the heights of a consciousness free of contents and free of illusion are not attained; nor can any trick nor any deceit bring this about. It is an ideal that can ultimately be realized only in death. Until then there are the real and relatively real figures of the unconscious.

B. ANIMUS AND ANIMA

[57] According to our text, among the figures of the unconscious there are not only the gods but also the animus and anima. The word *hun* is translated by Wilhelm as animus. And indeed, the term "animus" seems appropriate for *hun*, the character for which is made up of the sign for "clouds" and that for "demon." Thus *hun* means "cloud-demon," a higher breath-soul belonging to the *yang* principle and therefore masculine. After death, *hun* rises upward and becomes *shen*, the "expanding and self-revealing" spirit or god. "Anima," called *p'o*, and written with the characters for "white" and "demon," that is, "white ghost," belongs to the lower, earthbound, bodily soul, the *yin* principle, and is therefore feminine. After death, it sinks downward and becomes *kuei* (demon), often explained as "the one who returns" (i.e., to earth), a revenant, a ghost. The fact that the animus and anima part after death and go their ways independently shows that, for the Chinese consciousness, they are distinguishable psychic factors; originally they were united in "the one effective, true human nature," but in the "house of the Creative" they are two. "The animus is in the heavenly heart." "By day it lives in the eyes [i.e., in consciousness]; at night it houses in the liver." It is "that which we have received from the great emptiness, that which is identical in form with the primal beginning." The anima, on the other hand, is the "energy of the heavy and the turbid"; it clings to the bodily, fleshly heart. Its effects are "sensuous desires and impulses to anger." "Whoever is sombre and moody on waking . . . is fettered to the anima."[4]

[58] Many years ago, before Wilhelm acquainted me with this text, I used the term "anima"[5] in a way quite analogous to the Chinese definition of *p'o*, and of course entirely apart from any metaphysical premise. To the psychologist, the anima is not a transcendental being but something quite within the range of experience, as the Chinese definition makes clear: affective states are immediate experiences. Why, then, speak of the anima and not simply of moods? The reason is that affects have an autonomous character, and therefore most people are under their power. But affects are delimitable contents of consciousness, parts of the personality. As such, they partake of its character and can easily be personified—a

process that still continues today, as I have shown. The personification is not an idle invention, since a person roused by affect does not show a neutral character but a quite distinct one, entirely different from his ordinary character. Careful investigation has shown that the affective character of a man has feminine traits. From this psychological fact derives the Chinese doctrine of the *p'o* soul as well as my own concept of the anima. Deeper introspection or ecstatic experience reveals the existence of a feminine figure in the unconscious, hence the feminine name: anima, psyche, *Seele*. The anima can be defined as the image or archetype or deposit of all the experiences of man with woman. As we know, the poets have often sung the anima's praises.[6] The connection of anima with ghost in the Chinese concept is of interest to parapsychologists inasmuch as mediumistic "controls" are very often of the opposite sex.

[59] Although Wilhelm's translation of *hun* as "animus" seems justified to me, nonetheless I had important reasons for choosing the term "Logos" for a man's "spirit," for his clarity of consciousness and his rationality, rather than the otherwise appropriate expression "animus." Chinese philosophers are spared certain difficulties that aggravate the task of the Western psychologist. Like all mental and spiritual activity in ancient times, Chinese philosophy was exclusively a component of the masculine world. Its concepts were never understood psychologically, and therefore were never examined as to how far they also apply to the feminine psyche. But the psychologist cannot possibly ignore the existence of woman and her special psychology. For these reasons I would prefer to translate *hun* as it appears in man by "Logos." Wilhelm in his translation uses Logos for *hsing*, which can also be translated as "essence of human nature" or "creative consciousness." After death, *hun* becomes *shen*, "spirit," which is very close, in the philosophical sense, to *hsing*. Since the Chinese concepts are not logical in our sense of the word, but are intuitive ideas, their meanings can only be elicited from the ways in which they are used and from the constitution of the written characters, or from such relationships as obtain between *hun* and *shen*. *Hun*, then, would be the light of consciousness and reason in man, originally coming from the *logos spermatikos* of *hsing*, and returning after death through

shen to the Tao. Used in this sense the expression “Logos” would be especially appropriate, since it includes the idea of a universal being, and thus covers the fact that man’s clarity of consciousness and rationality are something universal rather than individually unique. The Logos principle is nothing personal, but is in the deepest sense impersonal, and thus in sharp contrast to the anima, which is a personal demon expressing itself in thoroughly personal moods (“animosity”!).

[60] In view of these psychological facts, I have reserved the term “animus” strictly for women, because, to answer a famous question, *mulier non habet animam, sed animum.* Feminine psychology exhibits an element that is the counterpart of a man’s anima. Primarily, it is not of an affective nature but is a quasi-intellectual factor best described by the word “prejudice.” The conscious side of woman corresponds to the emotional side of man, not to his “mind.” Mind makes up the “soul,” or better, the “animus” of woman, and just as the anima of a man consists of inferior relatedness, full of affect, so the animus of woman consists of inferior judgments, or better, opinions. As it is made up of a plurality of preconceived opinions, the animus is far less susceptible of personification by a single figure, but appears more often as a group or crowd. (A good example of this from parapsychology is the “Imperator” group in the case of Mrs. Piper.[7]) On a low level the animus is an inferior Logos, a caricature of the differentiated masculine mind, just as on a low level the anima is a caricature of the feminine Eros. To pursue the parallel further, we could say that just as *hun* corresponds to *hsing*, translated by Wilhelm as Logos, so the Eros of woman corresponds to *ming*, “fate” or “destiny,” interpreted by Wilhelm as Eros. Eros is an interweaving; Logos is differentiating knowledge, clarifying light. Eros is relatedness, Logos is discrimination and detachment. Hence the inferior Logos of woman’s animus appears as something quite unrelated, as an inaccessible prejudice, or as an opinion which, irritatingly enough, has nothing to do with the essential nature of the object.

[61] I have often been accused of personifying the anima and animus as mythology does, but this accusation would be justified only if it could be proved that I concretize these concepts in a mythological manner for psychological use. I must declare once and for all that the personification

is not an invention of mine, but is inherent in the nature of the phenomena. It would be unscientific to overlook the fact that the anima is a psychic, and therefore a personal, autonomous system. None of the people who make the charge against me would hesitate for a second to say, “I dreamed of Mr. X,” whereas, strictly speaking, he dreamed only of a representation of Mr. X. The anima is nothing but a representation of the personal nature of the autonomous system in question. What the nature of this system is in a transcendental sense, that is, beyond the bounds of experience, we cannot know.

[62] I have defined the anima as a personification of the unconscious in general, and have taken it as a bridge to the unconscious, in other words, as a function of relationship to the unconscious. There is an interesting point in our text in this connection. The text says that consciousness (that is, the personal consciousness) comes from the anima. Since the Western mind is based wholly on the standpoint of consciousness, it must define the anima in the way I have done. But the East, based as it is on the standpoint of the unconscious, sees consciousness as an effect of the anima. And there can be no doubt that consciousness does originate in the unconscious. This is something we are apt to forget, and therefore we are always attempting to identify the psyche with consciousness, or at least to represent the unconscious as a derivative or an effect of consciousness (as in the Freudian repression theory). But, for the reasons given above, it is essential that we do not detract from the reality of the unconscious, and that the figures of the unconscious be understood as real and effective factors. The person who has understood what is meant by psychic reality need have no fear that he has fallen back into primitive demonology. If the unconscious figures are not acknowledged as spontaneous agents, we become victims of a one-sided belief in the power of consciousness, leading finally to acute tension. A catastrophe is then bound to happen because, for all our consciousness, the dark powers of the psyche have been overlooked. It is not we who personify them; they have a personal nature from the very beginning. Only when this is thoroughly recognized can we think of depersonalizing them, of “subjugating the anima,” as our text expresses it.

[63] Here again we find an enormous difference between Buddhism and the Western attitude of mind, and again there is a dangerous semblance of agreement. Yoga teaching rejects all fantasy products and we do the same, but the East does so for entirely different reasons. In the East there is an abundance of conceptions and teachings that give full expression to the creative fantasy; in fact, protection is needed against an excess of it. We, on the other hand, regard fantasy as worthless subjective day-dreaming. Naturally the figures of the unconscious do not appear in the form of abstractions stripped of all imaginative trappings; on the contrary, they are embedded in a web of fantasies of extraordinary variety and bewildering profusion. The East can reject these fantasies because it has long since extracted their essence and condensed it in profound teachings. But we have never even experienced these fantasies, much less extracted their quintessence. We still have a large stretch of experience to catch up with, and only when we have found the sense in apparent nonsense can we separate the valuable from the worthless. We can be sure that the essence we extract from our experience will be quite different from what the East offers us today. The East came to its knowledge of inner things in childlike ignorance of the external world. We, on the other hand, shall explore the psyche and its depths supported by an immense knowledge of history and science. At present our knowledge of the external world is the greatest obstacle to introspection, but the psychological need will overcome all obstructions. We are already building up a psychology, a science that gives us the key to the very things that the East discovered—and discovered only through abnormal psychic states.

5. THE DETACHMENT OF CONSCIOUSNESS FROM THE OBJECT

[64] By understanding the unconscious we free ourselves from its domination. That is really also the purpose of the instructions in our text. The pupil is taught to concentrate on the light of the innermost region and, at the same time, to free himself from all outer and inner entanglements. His vital impulses are guided towards a consciousness void of content, which nevertheless permits all contents to exist. The *Hui Ming Ching*[1] says of this detachment:

> A halo of light surrounds the world of the law.
> We forget one another, quiet and pure, all-powerful and empty.
> The emptiness is irradiated by the light of the heart of heaven.
> The water of the sea is smooth and mirrors the moon in its surface.
> The clouds disappear in blue space; the mountains shine clear.
> Consciousness reverts to contemplation; the moon-disk rests alone.

[65] This description of fulfilment depicts a psychic state that can best be characterized as a detachment of consciousness from the world and a withdrawal to a point outside it, so to speak. Thus consciousness is at the same time empty and not empty. It is no longer preoccupied with the images of things but merely contains them. The fullness of the world which hitherto pressed upon it has lost none of its richness and beauty, but it no longer dominates. The magical claim of things has ceased because the interweaving of consciousness with world has come to an end. The unconscious is not projected any more, and so the primordial *participation mystique* with things is abolished. Consciousness is no longer preoccupied with compulsive plans but dissolves in contemplative vision.

[66] How did this effect come about? (We assume, of course, that the Chinese author was first of all not a liar; secondly, that he was of sound mind; and thirdly, that he was an unusually intelligent man.) To understand and explain this detachment, we must proceed by a roundabout way. It is an effect that cannot be simulated; nothing would be more childish than to make such a psychic state an object of aesthetic experiment. I know this effect very well from my practice; it is the therapeutic effect *par excellence*, for which I labour with my students and patients, and it consists in the dissolution of *participation mystique.* By a stroke of genius, Lévy-Bruhl singled out what he called *participation mystique* as being the hallmark of the primitive mentality.[2] What he meant by it is simply the indefinitely large remnant of non-differentiation between subject and object, which is still so great among primitives that it cannot fail to strike our European consciousness very forcibly. When there is no consciousness of the difference between subject and object, an unconscious identity prevails. The unconscious is then projected into the object, and the object is introjected into the subject, becoming part of his psychology. Then plants and animals behave like human beings, human beings are at the same time animals, and everything is alive with ghosts and gods. Civilized man naturally thinks he is miles above these things. Instead of that, he is often identified with his parents throughout his life, or with his affects and prejudices, and shamelessly accuses others of the things he will not see in himself. He too has a remnant of primitive unconsciousness, of non-differentiation between subject and object. Because of this, he is magically affected by all manner of people, things, and circumstances, he is beset by disturbing influences nearly as much as the primitive and therefore needs just as many apotropaic charms. He no longer works magic with medicine bags, amulets, and animal sacrifices, but with tranquillizers, neuroses, rationalism, cult of the will, etc.

[67] But if the unconscious can be recognized as a co-determining factor along with consciousness, and if we can live in such a way that conscious and unconscious demands are taken into account as far as possible, then the centre of gravity of the total personality shifts its position. It is then no longer in the ego, which is merely the centre of consciousness, but in the hypothetical point between conscious and unconscious. This new

centre might be called the self. If the transposition is successful, it does away with the *participation mystique* and results in a personality that suffers only in the lower storeys, as it were, but in its upper storeys is singularly detached from painful as well as from joyful happenings.

[68] The production and birth of this superior personality is what is meant when our text speaks of the “holy fruit,” the “diamond body,” or any other kind of incorruptible body. Psychologically, these expressions symbolize an attitude that is beyond the reach of emotional entanglements and violent shocks—a consciousness detached from the world. I have reasons for believing that this attitude sets in after middle life and is a natural preparation for death. Death is psychologically as important as birth and, like it, is an integral part of life. What happens to the detached consciousness in the end is a question the psychologist cannot be expected to answer. Whatever his theoretical position he would hopelessly overstep the bounds of his scientific competence. He can only point out that the views of our text in regard to the timelessness of the detached consciousness are in harmony with the religious thought of all ages and with that of the overwhelming majority of mankind. Anyone who thought differently would be standing outside the human order and would, therefore, be suffering from a disturbed psychic equilibrium. As a doctor, I make every effort to strengthen the belief in immortality, especially with older patients when such questions come threateningly close. For, seen in correct psychological perspective, death is not an end but a goal, and life’s inclination towards death begins as soon as the meridian is passed.

[69] Chinese yoga philosophy is based upon this instinctive preparation for death as a goal. In analogy with the goal of the first half of life—procreation and reproduction, the means of perpetuating one’s physical existence—it takes as the goal of spiritual existence the symbolic begetting and birth of a “spirit-body,” or “breath-body,” which ensures the continuity of detached consciousness. It is the birth of the pneumatic man, known to the European from antiquity, but which he seeks to produce by quite other symbols and magical practices, by faith and a Christian way of life. Here again we stand on a foundation quite different from that of the East. Again the text sounds as though it were not so very

far from Christian ascetic morality, but nothing could be more mistaken than to assume that it actually means the same thing. Behind our text is a civilization thousands of years old, one which is built up organically on primitive instincts and knows nothing of that brutal morality so suited to us as recently civilized Teutonic barbarians. For this reason the Chinese are without the impulse towards violent repression of the instincts that poisons our spirituality and makes it hysterically exaggerated. The man who lives with his instincts can also detach from them, and in just as natural a way as he lived with them. Any idea of heroic self-conquest would be entirely foreign to the spirit of our text, but that is what it would infallibly amount to if we followed the instructions literally.

[70] We must never forget our historical antecedents. Only a little more than a thousand years ago we stumbled out of the crudest beginnings of polytheism into a highly developed Oriental religion which lifted the imaginative minds of half-savages to a height that in no way corresponded to their spiritual development. In order to keep to this height in some fashion or other, it was inevitable that the instinctual sphere should be largely repressed. Thus religious practice and morality took on a decidedly brutal, almost malignant, character. The repressed elements naturally did not develop, but went on vegetating in the unconscious, in their original barbarism. We would like to scale the heights of a philosophical religion, but in fact are incapable of it. To grow up to it is the most we can hope for. The Amfortas wound and the Faustian split in the Germanic man are still not healed; his unconscious is still loaded with contents that must first be made conscious before he can be free of them. Recently I received a letter from a former patient which describes the necessary transformation in simple but trenchant words. She writes:

> Out of evil, much good has come to me. By keeping quiet, repressing nothing, remaining attentive, and by accepting reality—taking things as they are, and not as I wanted them to be—by doing all this, unusual knowledge has come to me, and unusual powers as well, such as I could never have imagined before. I always thought that when we accepted things they overpowered us in some way or other. This turns out not to be true at all, and it is only by accepting them that one can assume an

attitude towards them.[3] So now I intend to play the game of life, being receptive to whatever comes to me, good and bad, sun and shadow forever alternating, and, in this way, also accepting my own nature with its positive and negative sides. Thus everything becomes more alive to me. What a fool I was! How I tried to force everything to go according to the way I thought it ought to!

[71] Only on the basis of such an attitude, which renounces none of the Christian values won in the course of Christian development, but which, on the contrary, tries with Christian charity and forbearance to accept even the humblest things in one's own nature, will a higher level of consciousness and culture become possible. This attitude is religious in the truest sense, and therefore therapeutic, for all religions are therapies for the sorrows and disorders of the soul. The development of the Western intellect and will has given us an almost fiendish capacity for aping such an attitude, with apparent success, despite the protests of the unconscious. But it is only a matter of time before the counterposition asserts itself all the more harshly. Aping an attitude always produces an unstable situation that can be overthrown by the unconscious at any time. A safe foundation is found only when the instinctive premises of the unconscious win the same respect as the views of the conscious mind. No one should blind himself to the fact that this necessity of giving due consideration to the unconscious runs violently counter to our Western, and in particular the Protestant, cult of consciousness. Yet, though the new always seems to be the enemy of the old, anyone with a more than superficial desire to understand cannot fail to discover that without the most serious application of the Christian values we have acquired, the new integration can never take place.

6. THE FULFILMENT

[72] A growing familiarity with the spirit of the East should be taken merely as a sign that we are beginning to relate to the alien elements within ourselves. Denial of our historical foundations would be sheer folly and would be the best way to bring about another uprooting of consciousness. Only by standing firmly on our own soil can we assimilate the spirit of the East.

[73] Speaking of those who do not know where the true springs of secret power lie, an ancient adept says, “Worldly people lose their roots and cling to the treetops.” The spirit of the East has grown out of the yellow earth, and our spirit can, and should, grow only out of our own earth. That is why I approach these problems in a way that has often been charged with “psychologism.” If “psychology” were meant, I should indeed be flattered, for my aim as a psychologist is to dismiss without mercy the metaphysical claims of all esoteric teachings. The unavowed purpose of gaining power through words, inherent in all secret doctrines, ill accords with our profound ignorance, which we should have the modesty to admit. I quite deliberately bring everything that purports to be metaphysical into the daylight of psychological understanding, and do my best to prevent people from believing in nebulous power-words. Let the convinced Christian believe, by all means, for that is the duty he has taken upon himself; but whoever is not a Christian has forfeited the charisma of faith. (Perhaps he was cursed from birth with not being able to believe, but merely to know.) Therefore, he has no right to put his faith elsewhere. One cannot grasp anything metaphysically, one only can do so psychologically. Therefore I strip things of their metaphysical wrappings in order to make them objects of psychology. In that way I can at least extract something understandable from them and avail myself of it, and I also discover psychological facts and processes that before were veiled in symbols and beyond my comprehension. In doing so I may perhaps be

following in the footsteps of the faithful, and may possibly have similar experiences; and if in the end there should be something ineffably metaphysical behind it all, it would then have the best opportunity of showing itself.

[74] My admiration for the great philosophers of the East is as genuine as my attitude towards their metaphysics is irreverent.[1] I suspect them of being symbolical psychologists, to whom no greater wrong could be done than to take them literally. If it were really metaphysics that they mean, it would be useless to try to understand them. But if it is psychology, we can not only understand them but can profit greatly by them, for then the so-called "metaphysical" comes within the range of experience. If I assume that God is absolute and beyond all human experience, he leaves me cold. I do not affect him, nor does he affect me. But if I know that he is a powerful impulse of my soul, at once I must concern myself with him, for then he can become important, even unpleasantly so, and can affect me in practical ways—which sounds horribly banal, like everything else that is real.

[75] The epithet "psychologism" applies only to a fool who thinks he has his soul in his pocket. There are certainly more than enough such fools, for although we know how to talk big about the "soul," the depreciation of everything psychic is a typically Western prejudice. If I make use of the concept "autonomous psychic complex," my reader immediately comes up with the ready-made prejudice that it is "nothing but a psychic complex." How can we be so sure that the soul is "nothing but"? It is as if we did not know, or else continually forgot, that everything of which we are conscious is an image, and that image *is* psyche. The same people who think that God is depreciated if he is understood as something moved in the psyche, as well as the moving force of the psyche—i.e., as an autonomous complex—can be so plagued by uncontrollable affects and neurotic states that their wills and their whole philosophy of life fail them miserably. Is that a proof of the impotence of the psyche? Should Meister Eckhart be accused of "psychologism" when he says, "God must be born in the soul again and again"? I think the accusation of "psychologism" can be levelled only at an intellect that denies the genuine nature of the autonomous complex and seeks to explain it

rationalistically as the consequence of known causes, i.e., as something secondary and unreal. This is just as arrogant as the metaphysical assertion that seeks to make a God outside the range of our experience responsible for our psychic states. Psychologism is simply the counterpart of this metaphysical presumption, and is just as childish. Therefore it seems to me far more reasonable to accord the psyche the same validity as the empirical world, and to admit that the former has just as much "reality" as the latter. As I see it, the psyche is a world in which the ego is contained. Maybe there are fishes who believe that they contain the sea. We must rid ourselves of this habitual illusion of ours if we wish to consider metaphysical assertions from the standpoint of psychology.

[76] A metaphysical assertion of this kind is the idea of the "diamond body," the incorruptible breath-body which grows in the golden flower or in the "field of the square inch."[2] This body is a symbol for a remarkable psychological fact which, precisely because it is objective, first appears in forms dictated by the experience of biological life—that is, as fruit, embryo, child, living body, and so on. This fact could be best expressed by the words "It is not I who live, it lives me." The illusion of the supremacy of consciousness makes us say, "I live." Once this illusion is shattered by a recognition of the unconscious, the unconscious will appear as something objective in which the ego is included. The attitude towards the unconscious is then analogous to the feeling of the primitive to whom the existence of a son guarantees continuation of life—a feeling that can assume grotesque forms, as when the old Negro, angered at his son's disobedience, cried out, "There he stands with my body, but does not even obey me!"

[77] It is, in fact, a change of feeling similar to that experienced by a father to whom a son has been born, a change known to us from the testimony of St. Paul: "Yet not I, but Christ liveth in me." The symbol "Christ" as "son of man" is an analogous psychic experience of a higher spiritual being who is invisibly born in the individual, a pneumatic body which is to serve us as a future dwelling, a body which, as Paul says, is put on like a garment ("For as many of you as have been baptized into Christ have put on Christ"). It is always a difficult thing to express, in

intellectual terms, subtle feelings that are nevertheless infinitely important for the individual’s life and well-being. It is, in a sense, the feeling that we have been “replaced.” but without the connotation of having been “deposed.” It is as if the guidance of life had passed over to an invisible centre. Nietzsche’s metaphor, “in most loving bondage, free,” would be appropriate here. Religious language is full of imagery depicting this feeling of free dependence, of calm acceptance.

[78] This remarkable experience seems to me a consequence of the detachment of consciousness, thanks to which the subjective “I live” becomes the objective “It lives me.” This state is felt to be higher than the previous one; it is really like a sort of release from the compulsion and impossible responsibility that are the inevitable results of *participation mystique.* This feeling of liberation fills Paul completely; the consciousness of being a child of God delivers one from the bondage of the blood. It is also a feeling of reconciliation with all that happens, for which reason, according to the *Hui Ming Ching,* the gaze of one who has attained fulfilment turns back to the beauty of nature.

[79] In the Pauline Christ symbol the supreme religious experiences of West and East confront one another: Christ the sorrow-laden hero, and the Golden Flower that blooms in the purple hall of the city of jade. What a contrast, what an unfathomable difference, what an abyss of history! A problem fit for the crowning work of a future psychologist!

[80] Among the great religious problems of the present is one which has received scant attention, but which is in fact the main problem of our day: the evolution of the religious spirit. If we are to discuss it, we must emphasize the difference between East and West in their treatment of the “jewel,” the central symbol. The West lays stress on the human incarnation, and even on the personality and historicity of Christ, whereas the East says: “Without beginning, without end, without past, without future.”[3] The Christian subordinates himself to the superior divine person in expectation of his grace; but the Oriental knows that redemption depends on the work he does on himself. The Tao grows out of the individual. The *imitatio Christi* has this disadvantage: in the long run we worship as a divine example a man who embodied the deepest

meaning of life, and then, out of sheer imitation, we forget to make real our own deepest meaning—self-realization. As a matter of fact, it is not altogether inconvenient to renounce one's own meaning. Had Jesus done so, he would probably have become a respectable carpenter and not a religious rebel to whom the same thing would naturally happen today as happened then.

[81] The imitation of Christ might well be understood in a deeper sense. It could be taken as the duty to realize one's deepest conviction with the same courage and the same self-sacrifice shown by Jesus. Happily not everyone has the task of being a leader of humanity, or a great rebel; and so, after all, it might be possible for each to realize himself in his own way. This honesty might even become an ideal. Since great innovations always begin in the most unlikely places, the fact that people today are not nearly as ashamed of their nakedness as they used to be might be the beginning of a recognition of themselves as they really are. Hard upon this will follow an increasing recognition of many things that formerly were strictly taboo, for the reality of the earth will not forever remain veiled like the *virgines velandae* of Tertullian. Moral unmasking is but a step further in the same direction, and behold, there stands man as he is, and admits to himself that he is as he is. If he does this in a meaningless way he is just a muddled fool; but if he knows the significance of what he is doing he could belong to a higher order of man who makes real the Christ symbol, regardless of the suffering involved. It has often been observed that purely concrete taboos or magical rites in an early stage of a religion become in the next stage something psychic, or even purely spiritual symbols. An outward law becomes in the course of time an inward conviction. Thus it might easily happen to contemporary man, especially Protestants, that the person Jesus, now existing outside in the realm of history, might become the higher man within himself. Then we would have attained, in a European way, the psychological state corresponding to Eastern enlightenment.

[82] All this is a step in the evolution of a higher consciousness on its way to unknown goals, and is not metaphysics as ordinarily understood. To that extent it is only "psychology," but to that extent, too, it is experienceable, understandable and—thank God—real, a reality we can

do something with, a living reality full of possibilities. The fact that I am content with what can be experienced psychically, and reject the metaphysical, does not amount, as any intelligent person can see, to a gesture of scepticism or agnosticism aimed at faith and trust in higher powers, but means approximately the same as what Kant meant when he called the thing-in-itself a “merely negative borderline concept.” Every statement about the transcendental is to be avoided because it is only a laughable presumption on the part of a human mind unconscious of its limitations. Therefore, when God or the Tao is named an impulse of the soul, or a psychic state, something has been said about the knowable only, but nothing about the unknowable, about which nothing can be determined.

7. CONCLUSION

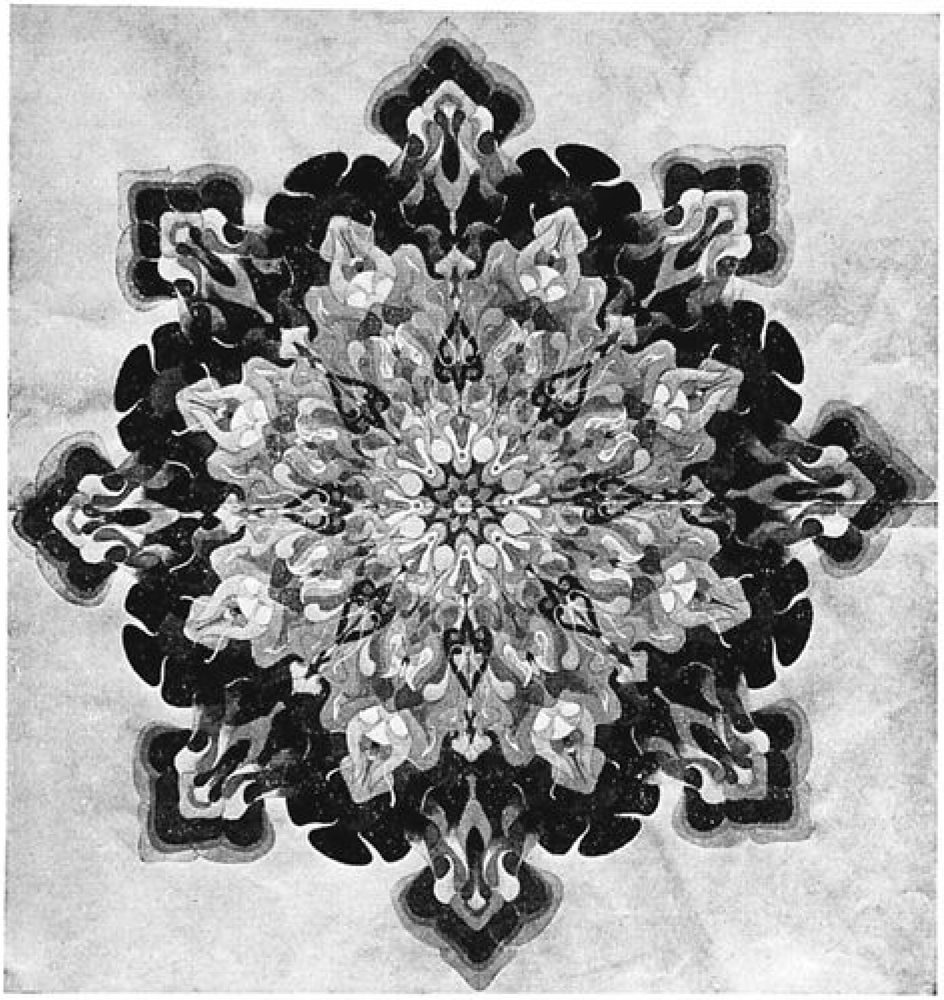
[83] The purpose of my commentary is to attempt to build a bridge of psychological understanding between East and West. The basis of every real understanding is man, and therefore I had to speak of human beings. This must be my excuse for having dealt only with general aspects, and for not having entered into technical details. Technical directions are valuable for those who know, for example, what a camera is, or a combustion engine, but they are useless for anyone who has no idea of such apparatus. Western man for whom I write is in an analogous position. Therefore it seemed to me important above all to emphasize the agreement between the psychic states and symbolisms of East and West. These analogies open a way to the inner chambers of the Eastern mind, a way that does not require the sacrifice of our own nature and does not confront us with the threat of being torn from our roots. Nor is it an intellectual telescope or microscope offering a view of no fundamental concern to us because it does not touch us. It is the way of suffering, seeking, and striving common to all civilized peoples; it is the tremendous experiment of becoming conscious, which nature has laid upon mankind, and which unites the most diverse cultures in a common task.

[84] Western consciousness is by no means the only kind of consciousness there is; it is historically conditioned and geographically limited, and representative of only one part of mankind. The widening of our consciousness ought not to proceed at the expense of other kinds of consciousness; it should come about through the development of those elements of our psyche which are analogous to those of the alien psyche, just as the East cannot do without our technology, science, and industry. The European invasion of the East was an act of violence on a grand scale, and it has left us with the duty—*noblesse oblige*—of understanding

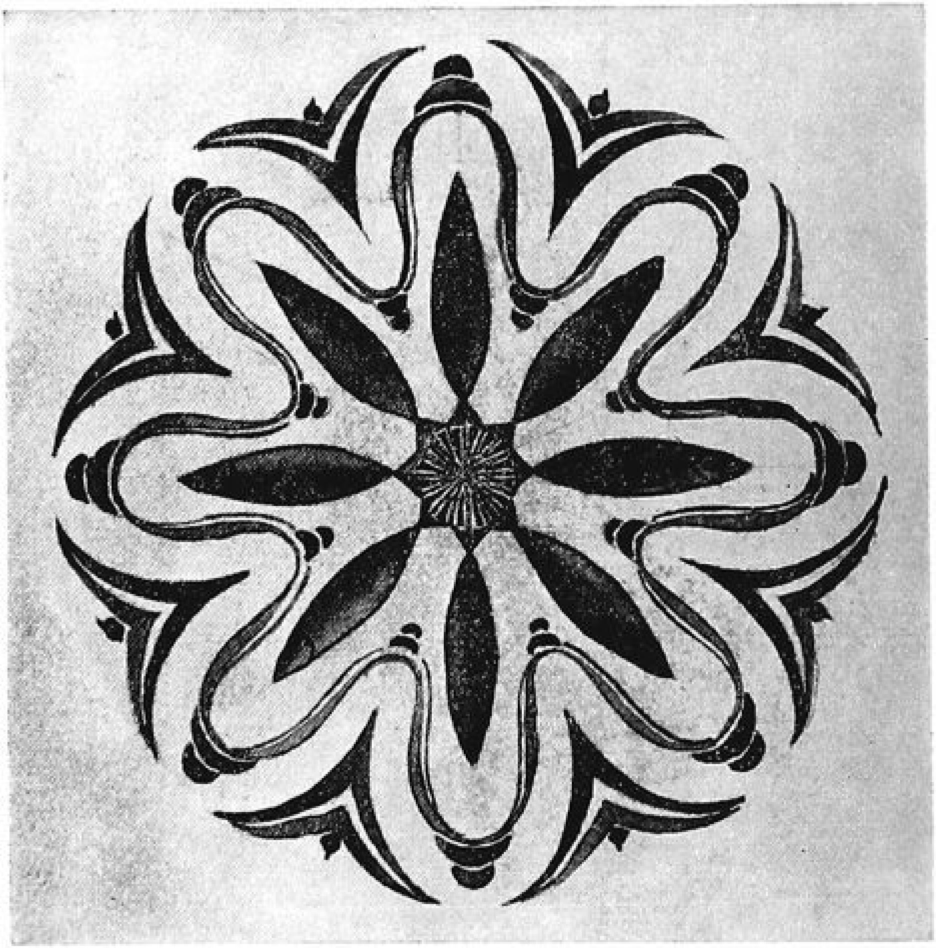
the mind of the East. This is perhaps more necessary than we realize at present.

EXAMPLES OF EUROPEAN MANDALAS

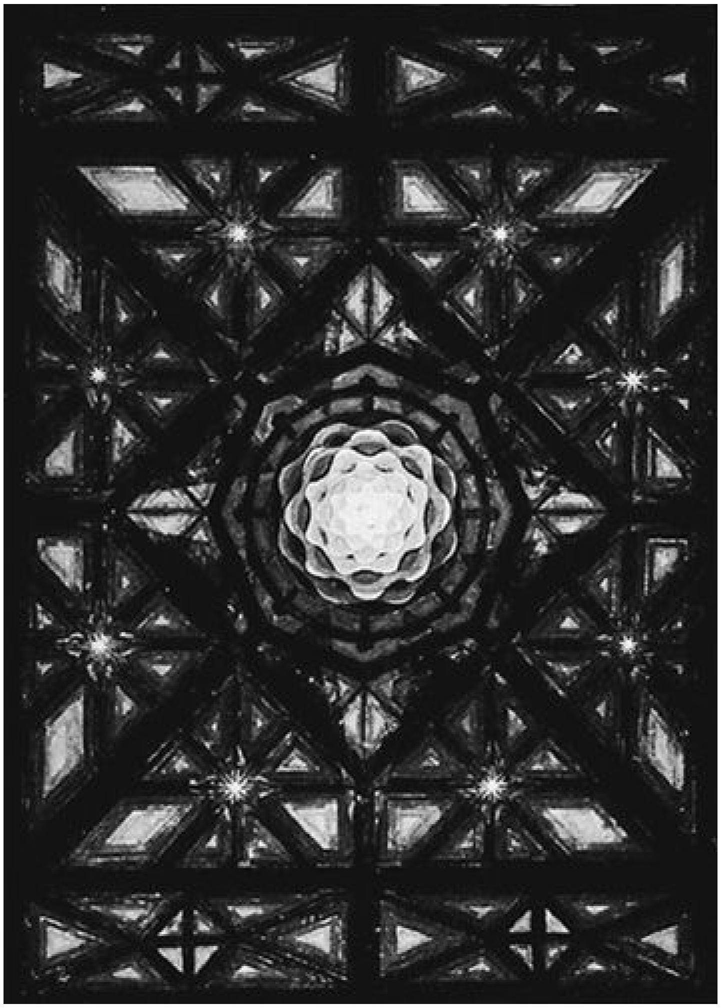
The pictures that now follow were produced in the way described in the text, by patients during the course of treatment.[1] The earliest picture dates from 1916. All the pictures were done independently of any Eastern influence. The *I Ching* hexagrams in picture No. 4 come from Legge's translation in the Sacred Books of the East series, but they were put into the picture only because their content seemed, to the university-trained patient, especially meaningful for her life. No European mandalas known to me (I have a fairly large collection) achieve the conventionally and traditionally established harmony and perfection of the Eastern mandala. I have made a choice of ten pictures from among an infinite variety of European mandalas, and they ought, as a whole, to illustrate clearly the parallelism between Eastern philosophy and the unconscious mental processes in the West.



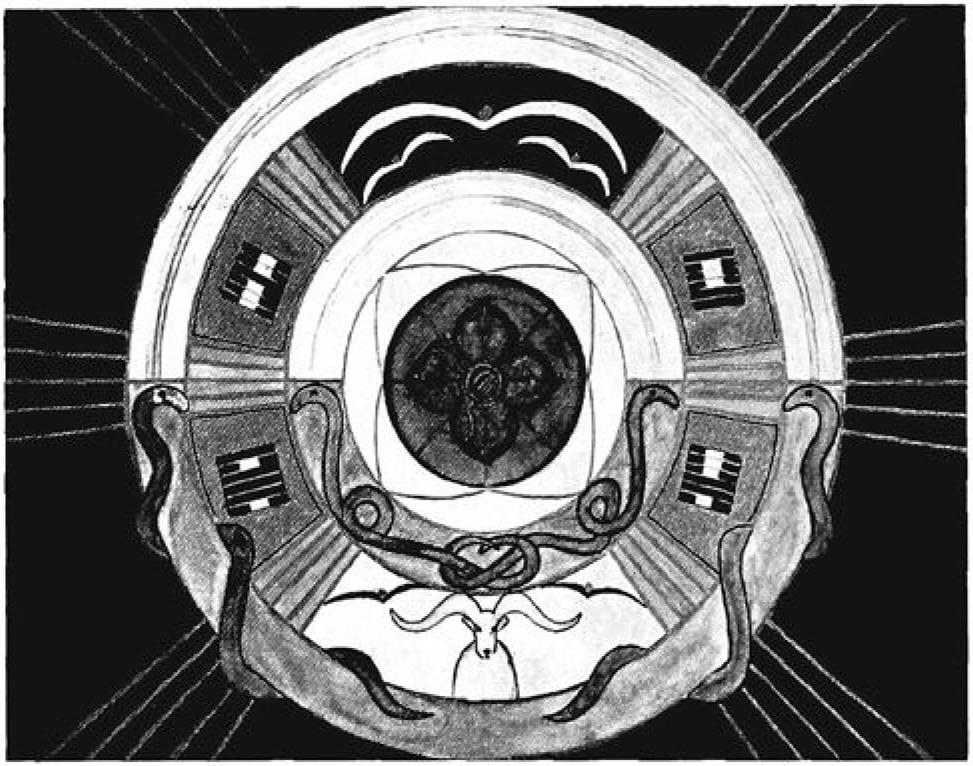
♀ The Golden Flower represented as the most splendid of all flowers



♀ In the centre, the Golden Flower; radiating out from it. fishes as fertility symbols (corresponding to the thunderbolts of Lamaic mandalas)

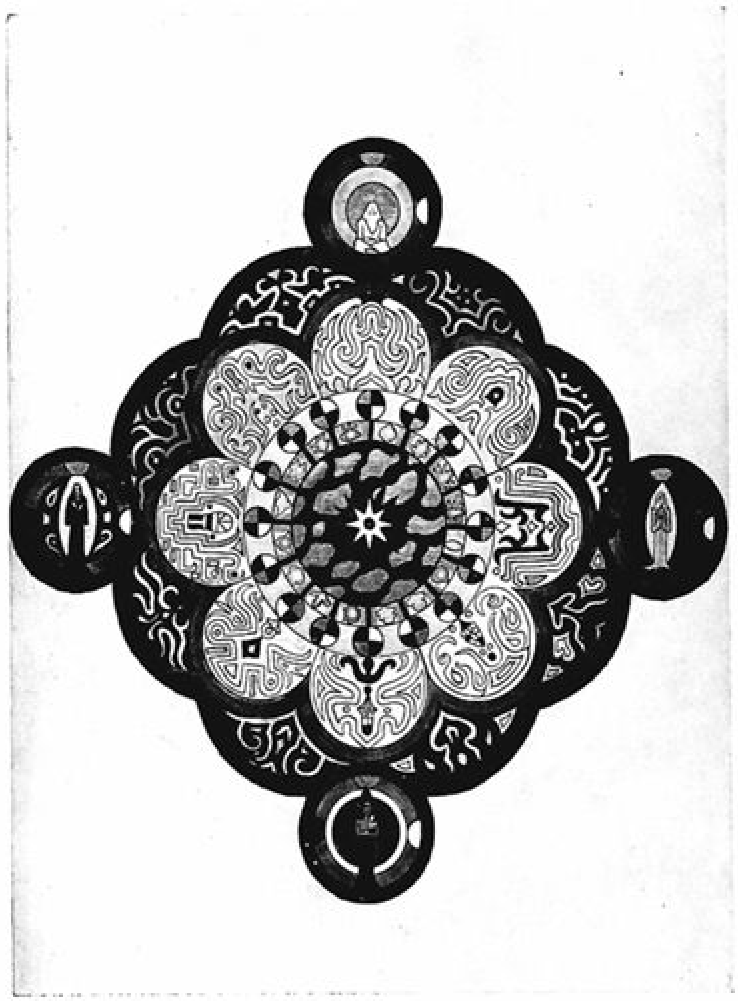


A luminous flower in the centre, with stars rotating about it. Around the flower, walls with eight gates. The whole conceived as a transparent window

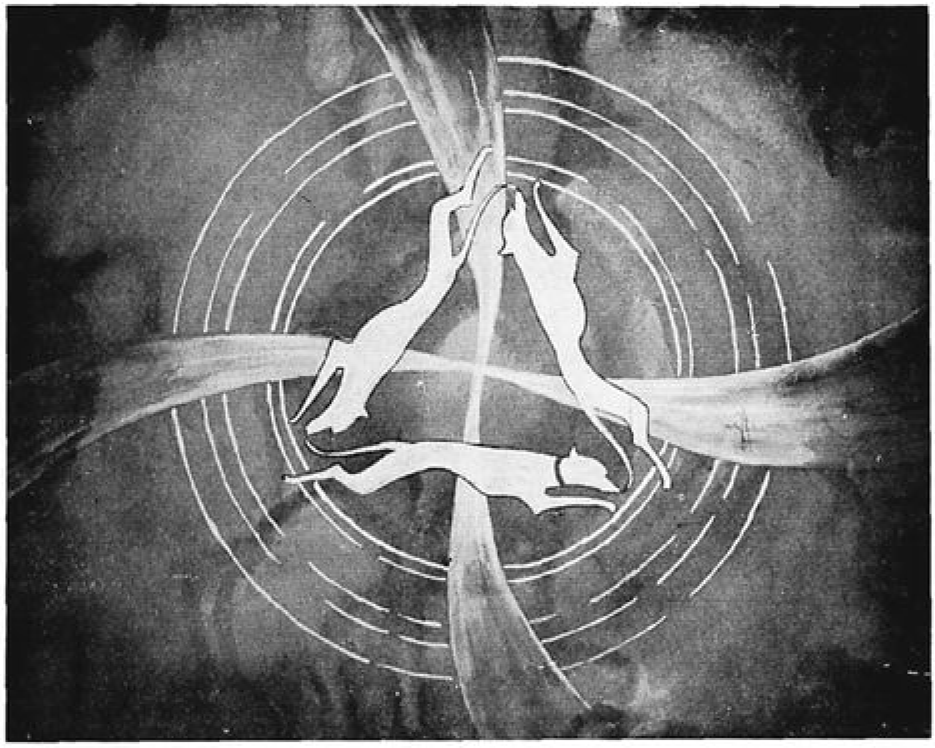


♀ Separation of the air-world and the earth-world. (Birds and serpents.) In the centre, a flower with a golden star

♀ Separation of the light from the dark world; the heavenly from the earthly soul. In the centre, a representation of contemplation

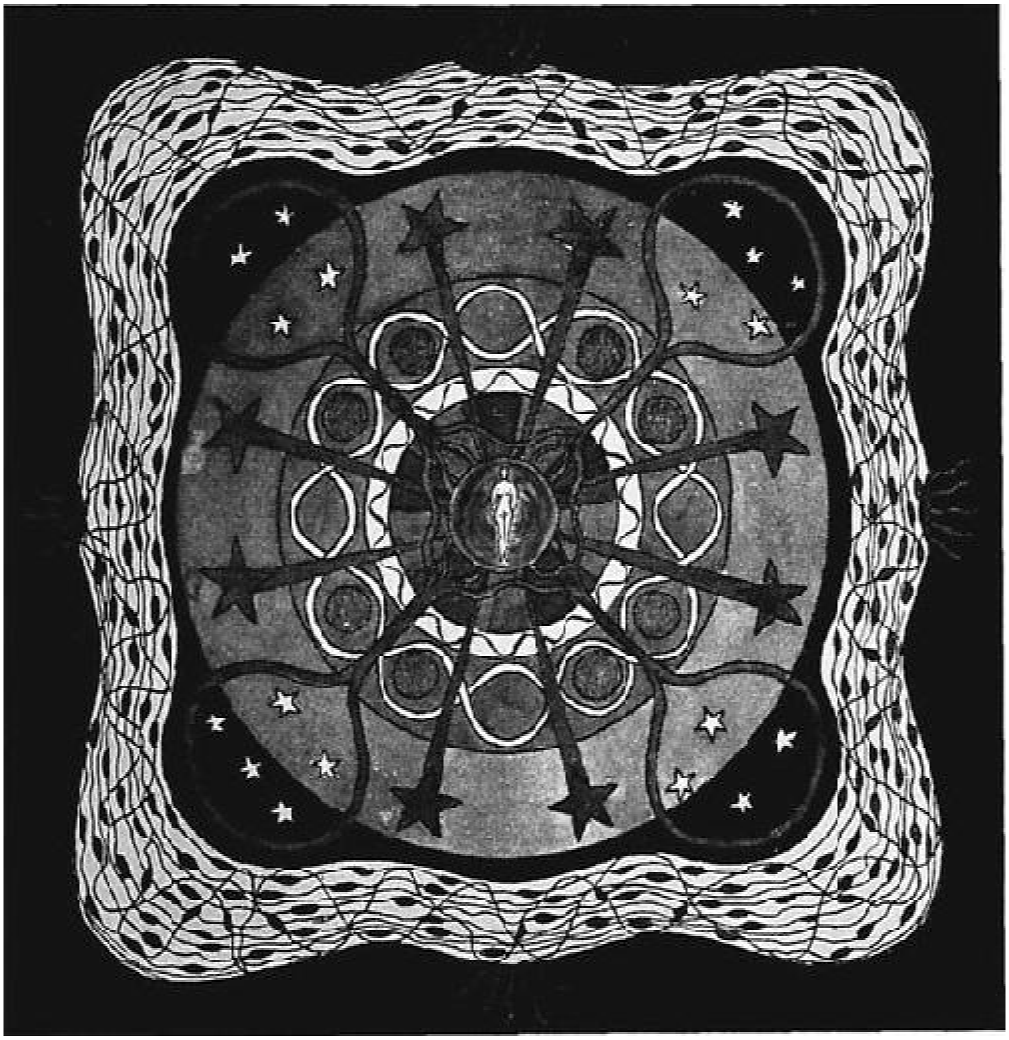


In the centre, the white light, shining in the firmament; in the first circle, protoplasmic life-seeds; in the second, rotating cosmic principles which contain the four primary colours; in the third and fourth, creative forces working inward and outward. At the cardinal points, the masculine and feminine souls, both again divided into light and dark



♀ Representation of the *tetraktys* in circular movement

♀ A child in the germinal veside with the form primary colours included in the circular movement



♀ In the centre, the germinal vesicle with a human figure nourished by blood vessels which have their origin in the cosmos. The cosmos rotates around the centre, which attracts its emanations. Around the outside is spread nerve tissue indicating that the process takes place in the solar plexus

A mandala as a fortified city with wall and moat. Within, a broad moat surrounding a wall fortified with sixteen towers and with another inner moat. This moat encloses a central castle with golden roofs whose centre is a golden temple

THE VISIONS OF ZOSIMOS

[Originally given as a lecture to the Eranos Conference at Ascona, Switzerland, in August 1937, and published under the title “Einige Bemerkungen zu den Visionen des Zosimos,” *Eranos-Jahrbuch* 1937 (Zurich, 1938). Revised and considerably expanded, as “Die Visionen des Zosimos,” in *Von den Wurzeln des Bewusstseins: Studien über den Archetypus* (Psychologische Abhandlungen, Vol. IX; Zurich, 1954), which version is translated here.—EDITORS.]

I

THE TEXTS

[85] I must make clear at once that the following observations on the visions of Zosimos of Panopolis, an important alchemist and Gnostic of the third century A.D., are not intended as a final explanation of this extraordinarily difficult material. My psychological contribution is no more than an attempt to shed a little light on it and to answer some of the questions raised by the visions.

[86] The first vision occurs at the beginning of "The Treatise of Zosimos the Divine concerning the Art."[1] Zosimos introduces the treatise with some general remarks on the processes of nature and, in particular, on the "composition of the waters" (*θέσιςὐδάτων*) and various other operations, and closes with the words: "… and upon this simple system of many colours is based the manifold and infinitely varied investigation of all things." Thereupon the text begins:[2]

> (III, i, 2.) And as I spoke thus I fell asleep, and I saw a sacrificer[3] standing before me, high up on an altar, which was in the shape of a bowl. There were fifteen steps leading up to the altar. And the priest stood there, and I heard a voice from above saying to me: "I have performed the act of descending the fifteen steps into the darkness, and of ascending the steps into the light. And he who renews me is the sacrificer, by casting away the grossness of the body; and by compelling necessity I am sanctified as a priest and now stand in perfection as a spirit." And on hearing the voice of him who stood upon the altar, I inquired of him who he was. And he answered me in a fine voice, saying: "I am Ion,[4] the priest of the inner sanctuaries, and I submit myself to an unendurable torment.[5] For there came one in haste at early morning, who overpowered me, and pierced me through with the sword, and

dismembered me in accordance with the rule of harmony.[6] And he drew off the skin of my head with the sword, which he wielded with strength, and mingled the bones with the pieces of flesh, and caused them to be burned upon the fire of the art, till I perceived by the transformation of the body that I had become spirit. And that is my unendurable torment." And even as he spoke thus, and I held him by force to converse with me, his eyes became as blood. And he spewed forth all his own flesh. And I saw how he changed into the opposite of himself, into a mutilated anthroparion,[7] and he tore his flesh with his own teeth, and sank into himself.

(III, i, 3.) Full of fear I awoke from sleep, and I thought to myself: "Is not this the composition of the waters?" And I was assured that I had well understood, and again I fell asleep. I saw the same bowl-shaped altar and, on the upper part, boiling water, and a numberless multitude of people in it. And there was no one near the altar whom I could question. Then I went up to the altar to see this sight. And I perceived an anthroparion, a barber[8] grown grey with age, who said to me: "What are you looking at?" I replied that I was astonished to see the seething of the water, and the men burning and yet alive. He answered me thus: "The sight that you see is the entrance, and the exit, and the transformation." I asked him: "What transformation?" and he answered: "This is the place of the operation called embalming. Those who seek to obtain the art[9] enter here, and become spirits by escaping from the body." Then I said to him: "And you, are you a spirit?" And he answered: "Yes, a spirit and a guardian of spirits." As we spoke, while the boiling continued and the people uttered distressful cries, I saw a brazen man holding a leaden tablet in his hand. And he spoke with a loud voice, looking upon the tablet: "I command all those who are undergoing the punishment to be calm, to take each of them a leaden tablet, to write with their own hand, and to keep their eyes upraised in the air and their mouths open, until their uvula swell."[10] The deed followed the word, and the master of the house said to me: "You have beheld, you have stretched your neck upward and have seen what is done." I replied that I had seen, and he continued: "This brazen man whom you see is the priest who sacrifices and is sacrificed, and spews forth his own flesh. Power is given him over this water and over the people who are punished."[11]

(III, v, 1.) At last I was overcome with the desire to mount the seven steps and to see the seven punishments, and, as was suitable, in a single day; so I went back in order to complete the ascent. Passing it several times, I at length came upon the path. But as I was about to ascend, I lost my way again; greatly discouraged, and not seeing in which direction I should go, I fell asleep. And while I was sleeping, I saw an anthroparion, a barber clad in a robe of royal purple, who stood outside the place of punishments. He said to me: "Man, what are you doing?" and I replied: "I have stopped here because, having turned aside from the road, I have lost my way." And he said: "Follow me." And I turned and followed him. When we came near to the place of punishments, I saw my guide, this little barber, enter that place, and his whole body was consumed by the fire.

(III, v, 2.) On seeing this, I stepped aside, trembling with fear; then I awoke, and said within myself: "What means this vision?" And again I clarified my understanding, and knew that this barber was the brazen man, clad in a purple garment. And I said to myself: "I have well understood, this is the brazen man. It is needful that first he must enter the place of punishments."

(III, v, 3.) Again my soul desired to mount the third step also. And again I followed the road alone, and when I was near the place of punishments, I again went astray, not knowing my way, and I stopped in despair. And again, as it seemed, I saw an old man whitened by years, who had become wholly white, with a blinding whiteness. His name was Agathodaimon. Turning himself about, the old man with white hair gazed upon me for a full hour. And I urged him: "Show me the right way." He did not come towards me, but hastened on his way. But I, running hither and thither, at length came to the altar. And when I stood at the top of the altar, I saw the white-haired old man enter the place of punishments. O ye demiurges of celestial nature! Immediately he was transformed by the flame into a pillar of fire. What a terrible story, my brethren! For, on account of the violence of the punishment, his eyes filled with blood. I spoke to him, and asked: “Why are you stretched out there?” But he could barely open his mouth, and groaned: “I am the leaden man, and I submit myself to an unendurable torment.” Thereupon, seized with great fear, I awoke and sought within myself the reason for what I had seen. And again I considered and said to myself: “I have well understood, for it means that the lead is to be rejected, and in truth the vision refers to the composition of the liquids.”

(III, v*bis*.) Again I beheld the divine and holy bowl-shaped altar, and I saw a priest clothed in a white robe reaching to his feet, who was celebrating these terrible mysteries, and I said: “Who is this?” And the answer came: “This is the priest of the inner sanctuaries. It is he who changes the bodies into blood, makes the eyes clairvoyant, and raises the dead.” Then, falling again to earth, I again fell asleep. And as I was ascending the fourth step, I saw, to the east, one approaching, holding a sword in his hand. And another [came] behind him, bringing one adorned round about with signs, clad in white and comely to see, who was named the Meridian of the Sun.[12] And as they drew near to the place of punishments, he who held the sword in his hand [said]: “Cut off his head, immolate his body, and cut his flesh into pieces, that it may first be boiled according to the method,[13] and then delivered to the place of punishments.” Thereupon I awoke and said: “I have well understood, this concerns the liquids in the art of the metals.” And he who bore the sword in his hand said again: “You have completed the descent of the seven steps.” And the other answered, as he caused the waters to gush forth from all the moist places: “The procedure is completed.”

(III, vi, 1.) And I saw an altar which was in the shape of a bowl, and a fiery spirit stood upon the altar, and tended the fire for the seething and the boiling and the burning of the men who rose up from it. And I inquired about the people who stood there, and I said: “I see with astonishment the seething and the boiling of the water, and the men burning and yet alive!” And he answered me, saying: “This boiling that you see is the place of the operation called embalming. Those who seek to obtain the art enter here, and they cast their bodies from them and become spirits. The practice [of the art] is explained by this procedure; for whatever casts off the grossness of the body becomes spirit."

[87] The Zosimos texts are in a disordered state. At III, i, 5 there is a misplaced but obviously authentic résumé or amplification of the visions, and at III, i, 4 a philosophical interpretation of them. Zosimos calls this whole passage an "introduction to the discourse that is to follow" (III, i, 6).

(III, i, 5.) In short, my friend, build a temple from a single stone, like to white lead, to alabaster, to Proconnesian marble,[14] with neither end nor beginning in its construction.[15] Let it have within it a spring of the purest water, sparkling like the sun. Note carefully on what side is the entrance to the temple, and take a sword in your hand; then seek the entrance, for narrow is the place where the opening is. A dragon lies at the entrance, guarding the temple. Lay hold upon him; immolate him first; strip him of his skin, and taking his flesh with the bones, separate the limbs; then, laying [the flesh of] the limbs[16] together with the bones at the entrance of the temple, make a step of them, mount thereon, and enter, and you will find what you seek.[17] The priest, that brazen man, whom you see seated in the spring and composing the substance, [look on] him not as the brazen man, for he has changed the colour of his nature and has become the silver man; and if you will, you will soon have him [as] the golden man.

(III, i, 4.) And after I had seen this apparition, I awoke, and I said to myself: "What is the cause of this vision? Is not that boiling white and yellow water the divine water?" And I found that I had well understood. And I said: "Beautiful it is to speak and beautiful to hear, beautiful to give and beautiful to receive, beautiful to be poor and beautiful to be rich. How does nature teach giving and receiving? The brazen man gives and the hydrolith receives; the metal gives and the plant receives; the stars give and the flowers receive; the heavens give and the earth receives; the thunderclaps give forth darting fire. And all things are woven together and all things are undone again; all things are mingled together and all things combine; and all things unite and all things separate; all things are moistened and all things are dried; and all things flourish and all things fade in the bowl of the altar. For each thing comes to pass with method and in fixed measure and by exact[18] weighing of the four elements. The weaving together of all things and the undoing of all things and the whole fabric of things cannot come to pass without method. The method is a natural one, preserving due order in its inhaling and its exhaling; it brings increase and it brings decrease. And to sum up: through the harmonies of separating and combining, and if nothing of the method be neglected, all things bring forth nature. For nature applied to nature transforms nature. Such is the order of natural law throughout the whole cosmos, and thus all things hang together."

(III, i, 6.) This introduction is the key which shall open to you the flowers of the discourse that is to follow, namely, the investigation of the arts, of wisdom, of reason and understanding, the efficacious methods and revelations which throw light upon the secret words.

II

COMMENTARY

1. GENERAL REMARKS ON THE INTERPRETATION

[88] Although it looks as if this were a series of visions following one after the other, the frequent repetitions and striking similarities suggest rather that it was essentially a single vision which is presented as a set of variations on the themes it contains. Psychologically at least, there is no ground for supposing that it is an allegorical invention. Its salient features seem to indicate that for Zosimos it was a highly significant experience which he wished to communicate to others. Although alchemical literature contains a number of allegories which without doubt are merely didactic fables and are not based on direct experience,[1] the vision of Zosimos may well have been an actual happening. This seems to be borne out by the manner in which Zosimos himself interprets it as a confirmation of his own preoccupation: "Is not this the composition of the waters?" Such an interpretation seems—to us at any rate—to leave out of account the most impressive images in the vision, and to reduce a far more significant complex of facts to an all too simple common denominator. If the vision were an allegory, the most conspicuous images would also be the ones that have the greatest significance. But it is characteristic of any subjective dream interpretation that it is satisfied with pointing out superficial relationships which take no account of the essentials. Another thing to be considered is that the alchemists themselves testify to the occurrence of dreams and visions during the opus.[2] I am inclined to think that the vision or visions of Zosimos were experiences of this kind, which took place during the work and revealed the nature of the psychic processes in the background.[3] In these visions all those contents emerge which the alchemists unconsciously projected

into the chemical process and which were then perceived there, as though they were qualities of matter. The extent to which this projection was fostered by the conscious attitude is shown by the somewhat overhasty interpretation given by Zosimos himself.

[89] Even though his interpretation strikes us at first as somewhat forced, indeed as far-fetched and arbitrary, we should nevertheless not forget that while the conception of the "waters" is a strange one to us, for Zosimos and for the alchemists in general it had a significance we would never suspect. It is also possible that the mention of the "water" opened out perspectives in which the ideas of dismemberment, killing, torture, and transformation all had their place. For, beginning with the treatises of Democritus and Komarios, which are assigned to the first century A.D., alchemy, until well into the eighteenth century, was very largely concerned with the miraculous water, the *aqua divina* or *permanens*, which was extracted from the lapis, or prima materia, through the torment of the fire. The water was the *humidum radicale* (radical moisture), which stood for the *anima media natura* or *anima mundi* imprisoned in matter,[4] the soul of the stone or metal, also called the *anima aquina*. This anima was set free not only by means of the "cooking," but also by the sword dividing the "egg," or by the *separatio*, or by dissolution into the four "roots" or elements.[5] The *separatio* was often represented as the dismemberment of a human body.[6] Of the *aqua permanens* it was said that it dissolved the bodies into the four elements. Altogether, the divine water possessed the power of transformation. It transformed the *nigredo* into the *albedo* through the miraculous "washing" (*ablutio);* it animated inert matter, made the dead to rise again,[7] and therefore possessed the virtue of the baptismal water in the ecclesiastical rite.[8] Just as, in the *benedictio fontis*, the priest makes the sign of the cross over the water and so divides it into four parts,[9] so the mercurial serpent, symbolizing the *aqua permanens*, undergoes dismemberment, another parallel to the division of the body.[10]

[90] I shall not elaborate any further this web of interconnected meanings in which alchemy is so rich. What I have said may suffice to show that the idea of the "water" and the operations connected with it could easily

open out to the alchemist a vista in which practically all the themes of the vision fall into place. From the standpoint of Zosimos' conscious psychology, therefore, his interpretation seems rather less forced and arbitrary. A Latin proverb says: *canis panem somniat, piscator pisces* (the dog dreams of bread, the fisherman of fish). The alchemist, too, dreams in his own specific language. This enjoins upon us the greatest circumspection, all the more so as that language is exceedingly obscure. In order to understand it, we have to learn the psychological secrets of alchemy. It is probably true what the old Masters said, that only he who knows the secret of the stone understands their words.[11] It has long been asserted that this secret is sheer nonsense, and not worth the trouble of investigating seriously. But this frivolous attitude ill befits the psychologist, for any "nonsense" that fascinated men's minds for close on two thousand years—among them some of the greatest, e.g., Newton and Goethe[12]—must have something about it which it would be useful for the psychologist to know. Moreover, the symbolism of alchemy has a great deal to do with the structure of the unconscious, as I have shown in my book *Psychology and Alchemy.* These things are not just rare curiosities, and anyone who wishes to understand the symbolism of dreams cannot close his eyes to the fact that the dreams of modern men and women often contain the very images and metaphors that we find in the medieval treatises.[13] And since an understanding of the biological compensation produced by dreams is of importance in the treatment of neurosis as well as in the development of consciousness, a knowledge of these facts has also a practical value which should not be underestimated.

2. THE SACRIFICIAL ACT

[91] The central image in our dream-vision shows us a kind of sacrificial act undertaken for the purpose of alchemical transformation. It is characteristic of this rite that the priest is at once the sacrificer and the sacrificed. This important idea reached Zosimos in the form of the teachings of the "Hebrews" (i.e., Christians).[1] Christ was a god who sacrificed himself. An essential part of the sacrificial act is dismemberment. Zosimos must have been familiar with this motif from the Dionysian mystery-tradition. There, too, the god is the victim, who

was torn to pieces by the Titans and thrown into a cooking pot,[2] but whose heart was saved at the last moment by Hera. Our text shows that the bowl-shaped altar was a cooking vessel in which a multitude of people were boiled and burned. As we know from the legend and from a fragment of Euripides,[3] an outburst of bestial greed and the tearing of living animals with the teeth were part of the Dionysian orgy.[4] Dionysius was actually called *ὁ ἀμέριςτος καὶ μεμεριομένος νοῦς* (the undivided and divided spirit).[5]

[92] Zosimos must also have been familiar with the flaying motif. A well-known parallel of the dying and resurgent god Attis[6] is the flayed and hanged Marsyas. Also, legend attributes death by flaying to the religious teacher Mani, who was a near-contemporary of Zosimos.[7] The subsequent stuffing of the skin with straw is a reminder of the Attic fertility and rebirth ceremonies. Every year in Athens an ox was slaughtered and skinned, and its pelt stuffed with straw. The stuffed dummy was then fastened to a plough, obviously for the purpose of restoring the fertility of the land.[8] Similar flaying ceremonies are reported of the Aztecs, Scythians, Chinese, and Patagonians.[9]

[93] In the vision, the skinning is confined to the head. It is a scalping as distinct from the total *ἀποδερμάτωσις* (skinning) described in III, i, 5. It is one of the actions which distinguish the original vision from the description of the process given in this résumé. Just as cutting out and eating the heart or brain of an enemy is supposed to endow one with his vital powers or virtues, so scalping is a *pars pro toto* incorporation of the life principle or soul.[10] Flaying is a transformation symbol which I have discussed at greater length in my essay “Transformation Symbolism in the Mass.” Here I need only mention the special motif of torture or punishment (*κόλασις*), which is particularly evident in the description of the dismemberment and scalping. For this there is a remarkable parallel in the Akhmim manuscript of the Apocalypse of Elijah, published by Georg Steindorff.[11] In the vision it is said of the leaden homunculus that “his eyes filled with blood” as a result of the torture. The Apocalypse of Elijah says of those who are cast “into eternal punishment”: “their eyes

are mixed with blood”;[12] and of the saints who were persecuted by the Anti-Messiah: “he will draw off their skins from their heads.”[13]

[94] These parallels suggest that the *κόλασις* is not just a punishment but the torment of hell. Although *κόλασισ* would have to be translated as *poena*, this word nowhere occurs in the Vulgate, for in all the places where the torments of hell are mentioned the word used is *cruciare* or *cruciatus*, as in Revelation 14 : 10, “tormented with fire and brimstone,” or Revelation 9 : 5, “the torment of a scorpion.” The corresponding Greek word is *βασανίζειν* or *βασανισμ*, ‘torture’. For the alchemists it had a double meaning: *βαοανίζειν* also meant ‘testing on the touchstone’ (*βάσσνοσ*) The *lapis Lydius* (touchstone) was used as a synonym for the *lapis philosophorum*. The genuineness or incorruptibility of the stone is proved by the torment of fire and cannot be attained without it. This *leitmotiv* runs all through alchemy.

[95] In our text the skinning refers especially to the head, as though signifying an extraction of the soul (if the primitive equation *skin* = *soul* is still valid here). The head plays a considerable role in alchemy, and has done so since ancient times. Thus Zosimos names his philosophers the “sons of the Golden Head.” I have dealt with this theme elsewhere,[14] and need not go into it again now. For Zosimos and the later alchemists the head had the meaning of the “omega element” or “round element” (*στοιχεῑον στρογγύλον*), a synonym for the arcane or transformative substance.[15] The decapitation in section III, v$^{\text{bis}}$ therefore signifies the obtaining of the arcane substance. According to the text, the figure following behind the sacrificer is named the “Meridian of the Sun,” and his head is to be cut off. This striking off of the golden head is also found in the manuscript of *Splendor solis* as well as in the Rorschach printing of 1598. The sacrifice in the vision is of an initiate who has undergone the experience of the *solificatio*. In alchemy; sun is synonymous with gold. Gold, as Michael Maier says, is the “circulatory work of the sun,” “shining clay moulded into the most beauteous substance, wherein the solar rays are gathered together and shine forth.”[16] Mylius says that the “water comes from the rays of the sun and moon.”[17] According to the “Aurelia occulta,” the sun’s rays are gathered together in the

quicksilver.[18] Dorn derives all metals from the "invisible rays" of heaven,[19] whose spherical shape is a prototype of the Hermetic vessel. In view of all this, we shall hardly go wrong in supposing that the initiate named the "Meridian of the Sun" himself represents the arcane substance. We shall come back to this idea later.

[96] Let us turn now to other details of the vision. The most striking feature is the "bowl-shaped altar." It is unquestionably related to the *krater* of Poimandres. This was the vessel which the demiurge sent down to earth filled with Nous, so that those who were striving for higher consciousness could baptize themselves in it. It is mentioned in that important passage where Zosimos tells his friend and *soror mystica,* Theosebeia: "Hasten down to the shepherd and bathe yourself in the *krater*, and hasten up to your own kind (*γένος*)."[20] She had to go down to the place of death and rebirth, and then up to her "own kind," i.e., the twice-born, or, in the language of the gospels, the kingdom of heaven.

[97] The *krater* is obviously a wonder-working vessel, a font or piscina, in which the immersion takes place and transformation into a spiritual being is effected. It is the *vas Hermetis* of later alchemy. I do not think there can be any doubt that the *krater* of Zosimos is closely related to the vessel of Poimandres in the *Corpus Hermeticum*.[21] The Hermetic vessel, too, is a uterus of spiritual renewal or rebirth. This idea corresponds exactly to the text of the *benedictio fontis,* which I quoted earlier in a footnote.[22] In "Isis to Horus,"[23] the angel brings Isis a small vessel filled with translucent or "shining" water. Considering the alchemical nature of the treatise, we could take this water as the divine water of the art,[24] since after the prima materia this is the real arcanum. The water, or water of the Nile, had a special significance in ancient Egypt: it was Osiris, the dismembered god *par excellence.*[25] A text from Edfu says: "I bring you the vessels with the god's limbs [i.e., the Nile] that you may drink of them; I refresh your heart that you may be satisfied."[26] The god's limbs were the fourteen parts into which Osiris was divided. There are numerous references to the hidden, divine nature of the arcane substance in the alchemical texts.[27] According to this ancient tradition, the water possessed the power of resuscitation; for it was Osiris, who rose from the

dead. In the “Dictionary of Goldmaking,”[28] Osiris is the name for lead and sulphur, both of which are synonyms for the arcane substance. Thus lead, which was the principal name for the arcane substance for a long time, is called “the sealed tomb of Osiris, containing all the limbs of the god.”[29] According to legend, Set (Typhon) covered the coffin of Osiris with lead. Petasios tells us that the “sphere of the fire is restrained and enclosed by lead.” Olympiodorus, who quotes this saying, remarks that Petasios added by way of explanation: “The lead is the water which issues from the masculine element.”[30] But the masculine element, he said, is the “sphere of fire.”

[98] This train of thought indicates that the spirit which is a water, or the water which is a spirit, is essentially a paradox, a pair of opposites like water and fire. In the *aqua nostra* of the alchemists, the concepts of water, fire, and spirit coalesce as they do in religious usage.[31]

[99] Besides the motif of water, the story that forms the setting of the Isis treatise also contains the motif of violation. The text says:[32]

> Isis the Prophetess to her son Horus: My child, you should go forth to battle against the faithless Typhon for the sake of your father’s kingdom, while I retire to Hormanuthi, Egypt’s [city] of the sacred art, where I sojourned for a while. According to the circumstances of the time and the necessary consequences of the movement of the spheres,[33] it came to pass that a certain one among the angels, dwelling in the first firmament, watched me from above and wished to have intercourse with me. Quickly he determined to bring this about. I did not yield, as I wished to inquire into the preparation of the gold and silver. But when I demanded it of him, he told me he was not permitted to speak of it, on account of the supreme importance of the mysteries; but on the following day an angel, Amnael, greater than he, would come, and he could give me the solution of the problem. He also spoke of the sign of this angel—he bore it on his head and would show me a small, unpitched vessel filled with a translucent water. He would tell me the truth. On the following day, as the sun was crossing the midpoint of its course, Amnael appeared, who was greater than the first angel, and, seized with the same desire, he did

not hesitate, but hastened to where I was. But I was no less determined to inquire into the matter.[34]

[100] She did not yield to him, and the angel revealed the secret, which she might pass only to her son Horus. Then follow a number of recipes which are of no interest here.

[101] The angel, as a winged or spiritual being, represents, like Mercurius, the volatile substance, the pneuma, the *άσώματον* (disembodied). Spirit in alchemy almost invariably has a relation to water or to the radical moisture, a fact that may be explained simply by the empirical nature of the oldest form of "chemistry," namely the art of cooking. The steam arising from boiling water conveys the first vivid impression of "metasomatosis," the transformation of the corporeal into the incorporeal, into spirit or pneuma. The relation of spirit to water resides in the fact that the spirit is hidden in the water, like a fish. In the "Allegoriae super librum Turbae"[35] this fish is described as "round" and endowed with "a wonder-working virtue." As is evident from the text,[36] it represents the arcane substance. From the alchemical transformation, the text says, is produced a collyrium (eyewash) which will enable the philosopher to see the secrets better.[37] The "round fish" seems to be a relative of the "round white stone" mentioned in the *Turba*.[38] Of this it is said: "It has within itself the three colours and the four natures and is born of a living thing." The "round" thing or element is a well-known concept in alchemy. In the *Turba* we encounter the *rotundum:* "For the sake of posterity I call attention to the *rotundum*, which changes the metal into four."[39] As is clear from the context, the *rotundum* is identical with the *aqua permanens*. We meet the same train of thought in Zosimos. He says of the round or omega element: "It consists of two parts. It belongs to the seventh zone, that of Kronos,[40] in the language of the corporeal (*κατὰ τὴν ἔνσωμον*); but in the language of the incorporeal it is something different, that may not be revealed. Only Nikotheos knows it, and he is not to be found.[41] In the language of the corporeal it is named Okeanos, the origin and seed, so they say, of all the gods."[42] Hence the *rotundum* is outwardly water, but inwardly the arcanum. For the Peratics,

Kronos was a “power having the colour of water,”[43] “for the water, they say, is destruction.”

[102] Water and spirit are often identical. Thus Hermolaus Barbarus[44] says: “There is also a heavenly or divine water of the alchemists, which was known both to Democritus and to Hermes Trismegistus. Sometimes they call it the divine water, and sometimes the Scythian juice, sometimes pneuma, that is spirit, of the nature of aether, and the quintessence of things.”[45] Ruland calls the water the “spiritual power, a spirit of heavenly nature.”[46] Christopher Steeb gives an interesting explanation of the origin of this idea: “The brooding of the Holy Spirit upon the waters above the firmament brought forth a power which permeates all things in the most subtle way, warms them, and, in conjunction with the light, generates in the mineral kingdom of the lower world the mercurial serpent, in the plant kingdom the blessed greenness, and in the animal kingdom the formative power; so that the supracelestial spirit of the waters, united with the light, may fitly be called the soul of the world.”[47] Steeb goes on to say that when the celestial waters were animated by the spirit, they immediately fell into a circular motion, from which arose the perfect spherical form of the *anima mundi*. The *rotundum* is therefore a bit of the world soul, and this may well have been the secret that was guarded by Zosimos. All these ideas refer expressly to Plato’s *Timaeus*. In the *Turba*, Parmenides praises the water as follows: “O ye celestial natures, who at a sign from God multiply the natures of the truth! O mighty nature, who conquers the natures and causes the natures to rejoice and be glad![48] For she it is in particular, whom God has endowed with a power which the fire does not possess. . . . She is herself the truth, all ye seekers of wisdom, for, liquefied with her substances, she brings about the highest of works.”[49]

[103] Socrates in the *Turba* says much the same: “O how this nature changes body into spirit! … She is the sharpest vinegar, which causes gold to become pure spirit.”[50] “Vinegar” is synonymous with “water,” as the text shows, and also with the “red spirit.”[51] The *Turba* says of the latter: “From the compound that is transformed into red spirit arises the principle of the world,” which again means the world soul[52] *Aurora*

consurgens says: “Send forth thy Spirit, that is water . . . and thou wilt renew the face of the earth.” And again: “The rain of the Holy Spirit melteth. He shall send out his word . . . his wind shall blow and the waters shall run.”[53] Arnaldus de Villanova (1235–1313) says in his “Flos Florum”: “They have called water spirit, and it is in truth spirit.”[54] The *Rosarium philosophorum* says categorically: “Water is spirit.”[55] In the treatise of Komarios (1st cent, A.D.), the water is described as an elixir of life which wakens the dead sleeping in Hades to a new springtime.[56] Apollonius says in the *Turba:*[57] “But then, ye sons of the doctrine, that thing needs the fire, until the spirit of that body is transformed and left to stand through the nights, and turns to dust like a man in his grave. After this has happened, God will give it back its soul and its spirit, and, the infirmity being removed, that thing will be stronger and better after its destruction, even as a man becomes stronger and younger after the resurrection than he was in the world.” The water acts upon the substances as God acts upon the body. It is coequal with God and is itself of divine nature.

[104] As we have seen, the spiritual nature of the water comes from the “brooding” of the Holy Spirit upon the chaos (Genesis 1 : 3). There is a similar view in the *Corpus Hermeticum:* “There was darkness in the deep and water without form; and there was a subtle breath, intelligent, which permeated the things in Chaos with divine power.”[58] This view is supported in the first place by the New Testament motif of baptism by “water and spirit,” and in the second place by the rite of the *benedictio fontis*, which is performed on Easter Eve.[59] But the idea of the wonder-working water derived originally from Hellenistic nature philosophy, probably with an admixture of Egyptian influences, and not from Christian or biblical sources. Because of its mystical power, the water animates and fertilizes but also kills.

[105] In the divine water, whose dyophysite nature (*τὸ στοιχεῖον τὸ διμερές*)[60] is constantly emphasized, two principles balance one another, active and passive, masculine and feminine, which constitute the essence of creative power in the eternal cycle of birth and death.[61] This cycle was represented in ancient alchemy by the symbol of the uroboros, the dragon

that bites its own tail.[62] Self-devouring is the same as self-destruction,[63] but the union of the dragon's tail and mouth was also thought of as self-fertilization. Hence the texts say: "The dragon slays itself, weds itself, impregnates itself."[64]

[106] This ancient alchemical idea reappears dramatically in the vision of Zosimos, much as it might in a real dream. In III, i, 2 the priest Ion submits himself to an "unendurable torment." The "sacrificer" performs the act of sacrifice by piercing Ion through with a sword. Ion thus foreshadows that dazzling white-clad figure named the "Meridian of the Sun" (III, v^{bis}), who is decapitated, and whom we have connected with the *solificatio* of the initiate in the Isis mysteries. This figure corresponds to the kingly mystagogue or psychopomp who appears in a vision reported in a late medieval alchemical text, the "Declaratio et Explicatio Adolphi," which forms part of the "Aurelia occulta."[65] So far as one can judge, the vision has no connection whatever with the Zosimos text, and I also doubt very much whether one should attribute to it the character of a mere parable. It contains certain features that are not traditional but are entirely original, and for this reason it seems likely that it was a genuine dream-experience. At all events, I know from my professional experience that similar dream-visions occur today among people who have no knowledge of alchemical symbolism. The vision is concerned with a shining male figure wearing a crown of stars. His robe is of white linen, dotted with many-coloured flowers, those of green predominating. He assuages the anxious doubts of the adept, saying: "Adolphus, follow me. I shall show thee what is prepared for thee, so that thou canst pass out of the darkness into the light." This figure, therefore, is a true Hermes Psychopompos and initiator, who directs the spiritual *transitus* of the adept. This is confirmed in the course of the latter's adventures, when he receives a book showing a "parabolic figure" of the Old Adam. We may take this as indicating that the psychopomp is the second Adam, a parallel figure to Christ. There is no talk of sacrifice, but, if our conjecture is right, this thought would be warranted by the appearance of the second Adam. Generally speaking, the figure of the king is associated with the motif of the *mortificatio*.

[107] Thus in our text the personification of the sun or gold is to be sacrificed,[66] and his head, which was crowned with the aureole of the sun, struck off, for this contains, or is, the arcanum.[67] Here we have an indication of the psychic nature of the arcanum, for the head of a man signifies above all the seat of consciousness.[68] Again, in the vision of Isis, the angel who bears the secret is connected with the meridian of the sun, for the text says that he appeared as "the sun was crossing the midpoint of its course." The angel bears the mysterious elixir on his head and, by his relationship to the meridian, makes it clear that he is a kind of solar genius or messenger of the sun who brings "illumination," that is, an enhancement and expansion of consciousness. His indecorous behaviour may be explained by the fact that angels have always enjoyed a dubious reputation as far as their morals are concerned. It is still the rule for women to cover their hair in church. Until well into the nineteenth century, especially in Protestant regions, they had to wear a special hood[69] when they went to church on Sundays. This was not because of the men in the congregation, but because of the possible presence of angels, who might be thrown into raptures at the sight of a feminine coiffure. Their susceptibility in these matters goes back to Genesis 6 : 2, where the "sons of God" displayed a particular penchant for the "daughters of men," and bridled their enthusiasm as little as did the two angels in the Isis treatise. This treatise is assigned to the first century A.D. Its views reflect the Judaeo-Hellenistic angelology[70] of Egypt, and it might easily have been known to Zosimos the Egyptian.

[108] Such opinions about angels fit in admirably with masculine as well as with feminine psychology. If angels are anything at all, they are personified transmitters of unconscious contents that are seeking expression. But if the conscious mind is not ready to assimilate these contents, their energy flows off into the affective and instinctual sphere. This produces outbursts of affect, irritation, bad moods, and sexual excitement, as a result of which consciousness gets thoroughly disoriented. If this condition becomes chronic, a dissociation develops, described by Freud as repression, with all its well-known consequences. It is, therefore, of the greatest therapeutic importance to acquaint oneself with the contents that underlie the dissociation.

[109] Just as the angel Amnael brings the arcane substance with him, so the "Meridian of the Sun" is himself a representation of it. In alchemical literature, the procedure of transfixing or cutting up with the sword takes the special form of dividing the philosophical egg. It, too, is divided with the sword, i.e., broken down into the four natures or elements. As an arcanum, the egg is a synonym for the water.[71] It is also a synonym for the dragon (mercurial serpent)[72] and hence for the water in the special sense of the microcosm or monad. Since water and egg are synonymous, the division of the egg with the sword is also applied to the water. "Take the vessel, cut it through with the sword, take its soul . . . thus is this water of ours our vessel."[73] The vessel likewise is a synonym for the egg, hence the recipe: "Pour into a round glass vessel, shaped like a phial or egg."[74] The egg is a copy of the World-Egg, the egg-white corresponding to the "waters above the firmament," the "shining liquor," and the yolk to the physical world.[75] The egg contains the four elements.[76]

[110] The dividing sword seems to have a special significance in addition to those we have noted. The "Consilium coniugii" says that the marriage pair, sun and moon, "must both be slain by their own sword, imbibing immortal souls until the most hidden interior [i.e., the previous] soul is extinguished."[77] In a poem of 1620, Mercurius complains that he is "sore tormented with a fiery sword."[78] According to the alchemists, Mercurius is the old serpent who already in paradise possessed "knowledge," since he was closely related to the devil. It is the fiery sword brandished by the angel at the gates of paradise that torments him,[79] and yet he himself is this sword. There is a picture in the "Speculum veritatis"[80] of Mercurius killing the king and the snake with the sword—"gladio proprio se ipsum interficiens." Saturn, too, is shown pierced by a sword.[81] The sword is well suited to Mercurius as a variant of the *telum passionis*, Cupid's arrow.[82] Dorn, in his "Speculativa philosophia,"[83] gives a long and interesting interpretation of the sword: it is the "sword of God's wrath," which, in the form of Christ the Logos, was hung upon the tree of life. Thus the wrath of God was changed to love, and "the water of Grace now bathes the whole world." Here again, as in Zosimos, the water is connected with the sacrificial act. Since the Logos, the Word of God, is

"sharper than any two-edged sword" (Hebrews 4 : 12), the words of the Consecration in the Mass were interpreted as the sacrificial knife with which the offering is slain.[84] One finds in Christian symbolism the same "circular" Gnostic thinking as in alchemy. In both the sacrificer is the sacrificed, and the sword that kills is the same as that which is killed.

[111] In Zosimos this circular thinking appears in the sacrificial priest's identity with his victim and in the remarkable idea that the homunculus into whom Ion is changed devours himself.[85] He spews forth his own flesh and rends himself with his own teeth. The homunculus therefore stands for the uroboros, which devours itself and gives birth to itself (as though spewing itself forth). Since the homunculus represents the transformation of Ion, it follows that Ion, the uroboros, and the sacrificer are essentially the same. They are three different aspects of the same principle. This equation is confirmed by the symbolism of that part of the text which I have called the "résumé" and have placed at the end of the visions. The sacrificed is indeed the uroboros serpent, whose circular form is suggested by the shape of the temple, which has "neither beginning nor end in its construction." Dismembering the victim corresponds to the idea of dividing the chaos into four elements or the baptismal water into four parts. The purpose of the operation is to create the beginnings of order in the *massa confusa*, as is suggested in III, i, 2: "in accordance with the rule of harmony." The psychological parallel to this is the reduction to order, through reflection, of apparently chaotic fragments of the unconscious which have broken through into consciousness. Without knowing anything of alchemy or its operations, I worked out many years ago a psychological typology based on the four functions of consciousness as the ordering principles of psychic processes in general. Unconsciously, I was making use of the same archetype which had led Schopenhauer to give his "principle of sufficient reason" a fourfold root.[86]"

[112] The temple built of a "single stone" is an obvious paraphrase of the lapis. The "spring of purest water" in the temple is a fountain of life, and this is a hint that the production of the round wholeness, the stone, is a guarantee of vitality. Similarly, the light that shines within it can be understood as the illumination which wholeness brings.[87] Enlightenment

is an increase of consciousness. The temple of Zosimos appears in later alchemy as the *domus thesaurorum* or *gazophylacium* (treasure-house).[88]

[113] Although the shining white "monolith" undoubtedly stands for the stone, it clearly signifies at the same time the Hermetic vessel. The *Rosarium* says: "One is the stone, one the medicine, one the vessel, one the procedure, and one the disposition."[89] The scholia to the "Tractatus aureus Hermetis" put it even more plainly: "Let all be one in one circle or vessel."[90] Michael Maier ascribes to Maria the Jewess ("sister of Moses") the view that the whole secret of the art lay in knowledge of the Hermetic vessel. It was divine, and had been hidden from man by the wisdom of the Lord.[91] *Aurora consurgens* II[92] says that the natural vessel is the *aqua permanens* and the "vinegar of the philosophers," which obviously means that it is the arcane substance itself. We should understand the "Practica Mariae"[93] in this sense when it says that the Hermetic vessel is "the measure of your fire" and that it had been "hidden by the Stoics";[94] it is the "toxic body" which transforms Mercurius and is therefore the water of the philosophers.[95] As the arcane substance the vessel is not only water but also fire, as the "Allegoriae sapientum" makes clear: "Thus our stone, that is the flask of fire, is created from fire."[96] We can therefore understand why Mylius[97] calls the vessel the "root and principle of our art." Laurentius Ventura[98] calls it "Luna," the *foemina alba* and mother of the stone. The vessel that is "not dissolved by water and not melted by fire" is, according to the "Liber quartorum,"[99] "like the work of God in the vessel of the divine seed (*germinis divi*), for it has received the clay, moulded it, and mixed it with water and fire." This is an allusion to the creation of man, but on the other hand it seems to refer to the creation of souls, since immediately afterwards the text speaks of the production of souls from the "seeds of heaven." In order to catch the soul God created the *vas cerebri*, the cranium. Here the symbolism of the vessel coincides with that of the head, which I have discussed in my "Transformation Symbolism in the Mass."[100]

[114] The prima materia, as the radical moisture, has to do with the soul because the latter is also moist by nature[101] and is sometimes symbolized

by dew.[102] In this way the symbol of the vessel gets transferred to the soul. There is an excellent example of this in Caesarius of Heisterbach:[103] the soul is a spiritual substance of spherical nature, like the globe of the moon, or like a glass vessel that is “furnished before and behind with eyes” and “sees the whole universe.” This recalls the many-eyed dragon of alchemy and the snake vision of Ignatius Loyola.[104] In this connection the remark of Mylius[105] that the vessel causes “the whole firmament to rotate in its course” is of special interest because, as I have shown, the symbolism of the starry heaven coincides with the motif of polyophthalmia.[106]

[115] After all this we should be able to understand Dorn’s view that the vessel must be made “by a kind of squaring of the circle.”[107] It is essentially a psychic operation, the creation of an inner readiness to accept the archetype of the self in whatever subjective form it appears. Dorn calls the vessel the *vas pellicanicum*, and says that with its help the quinta essentia can be extracted from the prima materia.[108] The anonymous author of the scholia to the “Tractatus aureus Hermetis” says: “This vessel is the true philosophical Pelican, and there is none other to be sought for in all the world.”[109] It is the lapis itself and at the same time contains it; that is to say, the self is its own container. This formulation is borne out by the frequent comparison of the lapis to the egg or to the dragon which devours itself and gives birth to itself.

[116] The thought and language of alchemy lean heavily on mysticism: in the Epistle of Barnabas[110] Christ’s body is called the “vessel of the spirit.” Christ himself is the pelican who plucks out his breast feathers for his young.[111] According to the teachings of Herakleon, the dying man should address the demiurgic powers thus: “I am a vessel more precious than the feminine being who made you. Whereas your mother knew not her own roots, I know of myself, and I know whence I have come, and I call upon the imperishable wisdom which is in the Father[112] and is the Mother of your mother, which has no mother, but also has no male companion.”[113]

[117] In the abstruse symbolism of alchemy we hear a distant echo of this kind of thinking, which, without hope of further development, was

doomed to destruction under the censorship of the Church. But we also find in it a groping towards the future, a premonition of the time when the projection would be taken back into man, from whom it had arisen in the first place. It is interesting to see the strangely clumsy ways in which this tendency seeks to express itself in the phantasmagoria of alchemical symbolism. The following instructions are given in Johannes de Rupescissa: “Cause a vessel to be made in the fashion of a Cherub, which is the face of God, and let it have six wings, like to six arms folding back upon themselves; and above, a round head. . . .”[114] From this it appears that although the ideal distilling vessel should resemble some monstrous kind of deity, it nevertheless had an approximately human shape. Rupescissa calls the quintessence the “ciel humain” and says it is “comme le ciel et les étoiles.” The Book of El-Habib[115] says: “Man’s head likewise resembles a condensing apparatus.” Speaking of the four keys for unlocking the treasure-house, the “Consilium coniugii”[116] explains that one of them is “the ascent of the water through the neck to the head of the vessel, that is like a living man.” There is a similar idea in the “Liber quartorum”: “The vessel . . . must be round in shape, that the artifex may be the transformer of the firmament and the brain-pan, just as the thing which we need is a simple thing.”[117] These ideas go back to the head symbolism in Zosimos, but at the same time they are an intimation that the transformation takes place in the head and is a psychic process. This realization was not something that was clumsily disguised afterwards; the laborious way in which it was formulated proves how obstinately it was projected into matter. Psychological knowledge through withdrawal of projections seems to have been an extremely difficult affair from the very beginning.

[118] The dragon, or serpent, represents the initial state of unconsciousness, for this animal loves, as the alchemists say, to dwell “in caverns and dark places.” Unconsciousness has to be sacrificed; only then can one find the entrance into the head, and the way to conscious knowledge and understanding. Once again the universal struggle of the hero with the dragon is enacted, and each time at its victorious conclusion the sun rises: consciousness dawns, and it is perceived that the transformation process is taking place inside the temple, that is, in the head. It is in truth the

inner man, presented here as a homunculus, who passes through the stages that transform the copper into silver and the silver into gold, and who thus undergoes a gradual enhancement of value.

[119] It sounds very strange to modern ears that the inner man and his spiritual growth should be symbolized by metals. But the historical facts cannot be doubted, nor is the idea peculiar to alchemy. It is said, for instance, that after Zarathustra had received the drink of omniscience from Ahuramazda, he beheld in a dream a tree with four branches of gold, silver, steel, and mixed iron.[118] This tree corresponds to the metallic tree of alchemy, the *arbor philosophica*, which, if it has any meaning at all, symbolizes spiritual growth and the highest illumination. Cold, inert metal certainly seems to be the direct opposite of spirit—but what if the spirit is as dead and as heavy as lead? A dream might then easily tell us to look for it in lead or quicksilver! It seems that nature is out to prod man's consciousness towards greater expansion and greater clarity, and for this reason continually exploits his greed for metals, especially the precious ones, and makes him seek them out and investigate their properties. While so engaged it may perhaps dawn on him that not only veins of ore are to be found in the mines, but also kobolds and little metal men, and that there may be hidden in lead either a deadly demon or the dove of the Holy Ghost.[119]

[120] It is evident that some alchemists passed through this process of realization to the point where only a thin wall separated them from psychological self-awareness. Christian Rosencreutz is still this side of the dividing line, but with *Faust* Goethe came out on the other side and was able to describe the psychological problem which arises when the inner man, or greater personality that before had lain hidden in the homunculus, emerges into the light of consciousness and confronts the erstwhile ego, the animal man. More than once Faust had inklings of the metallic coldness of Mephistopheles, who had first circled round him in the shape of a dog (uroboros motif). Faust used him as a familiar spirit and finally got rid of him by means of the motif of the cheated devil; but all the same he claimed the credit for the fame Mephistopheles brought him as well as for the power to work magic. Goethe's solution of the problem was still medieval, but it nevertheless reflected a psychic

attitude that could get on without the protection of the Church. That was not the case with Rosencreutz: he was wise enough to stay outside the magic circle, living as he did within the confines of tradition. Goethe was more modern and therefore more incautious. He never really understood how dreadful was the Walpurgisnacht of the mind against which Christian dogma offered protection, even though his own masterpiece spread out this underworld before his eyes in two versions. But then, an extraordinary number of things can happen to a poet without having serious consequences. These appeared with a vengeance only a hundred years later. The psychology of the unconscious has to reckon with long periods of time like this, for it is concerned less with the ephemeral personality than with age-old processes, compared with which the individual is no more than the passing blossom and fruit of the rhizome underground.

3. THE PERSONIFICATIONS

[121] What I have taken as a résumé, namely the piece we have been discussing, Zosimos calls a *προοίμιον*, an introduction.[1] It is therefore not a dream-vision; Zosimos is speaking here in the conscious language of his art, and expresses himself in terms that are obviously familiar to his reader. The dragon, its sacrifice and dismemberment, the temple built of a single stone, the miracle of goldmaking, the transmutation of the anthroparia, are all current conceptions in the alchemy of his day. That is why this piece seems to us a conscious allegory, contrasting with the authentic visions, which treat the theme of transmutation in an unorthodox and original way, just as a dream might do. The abstract spirits of the metals are pictured here as suffering human beings; the whole process becomes like a mystic initiation and has been very considerably psychologized. But Zosimos’ consciousness is still so much under the spell of the projection that he can see in the vision nothing more than the “composition of the waters.” One sees how in those days consciousness turned away from the mystic process and fastened its attention upon the material one, and how the projection drew the mind towards the physical. For the physical world had not yet been discovered. Had Zosimos recognized the projection, he would have fallen back into

the fog of mystic speculation, and the development of the scientific spirit would have been delayed for an even longer time. For us, matters are different. It is just the mystic content of his visions that is of special importance for us, because we are familiar enough with the chemical processes which Zosimos was out to investigate. We are therefore in a position to separate them from the projection and to recognize the psychic element they contain. The résumé also offers us a standard of comparison which enables us to discern the difference between its style of exposition and that of the visions. This difference supports our assumption that the visions are more like a dream than an allegory, though there is little possibility of our reconstructing the dream from the defective text that has come down to us.

[122] The representation of the "alchemystical" process by persons needs a little explanation. The personification of lifeless things is a remnant of primitive and archaic psychology. It is caused by unconscious identity,[2] or what Lévy-Bruhl called *participation mystique*. The unconscious identity, in turn, is caused by the projection of unconscious contents into an object, so that these contents then become accessible to consciousness as qualities apparently belonging to the object. Any object that is at all interesting provokes a considerable number of projections. The difference between primitive and modern psychology in this respect is in the first place qualitative, and in the second place one of degree. Consciousness develops in civilized man by the acquisition of knowledge and by the withdrawal of projections. These are recognized as psychic contents and are reintegrated with the psyche. The alchemists concretized or personified practically all their most important ideas—the four elements, the vessel, the stone, the prima materia, the tincture, etc. The idea of man as a microcosm, representing in all his parts the earth or the universe,[3] is a remnant of an original psychic identity which reflected a twilight state of consciousness. An alchemical text[4] expresses this as follows:

> Man is to be esteemed a little world, and in all respects he is to be compared to a world. The bones under his skin are likened to mountains, for by them is the body strengthened, even as the earth is by rocks, and the flesh is taken for earth, and the great blood vessels for great rivers,

and the little ones for small streams that pour into the great rivers. The bladder is the sea, wherein the great as well as the small streams congregate. The hair is compared to sprouting herbs, the nails on the hands and feet, and whatever else may be discovered inside and outside a man, all according to its kind is compared to the world.

[123] Alchemical projections are only a special instance of the mode of thinking typified by the idea of the microcosm. Here is another example of personification:[5]

> Now mark further Best Beloved / how you should do / you should go to the house / there you will find two doors / that are shut / you should stand a while before them / until one comes / and opens the door / and goes out to you / that will be a Yellow Man / and is not pretty to look upon / but you should not fear him / because he is unshapely / but he is sweet of word / and will ask you / my dear what seekest thou here / when truly I have long seen no man / so near this house / then you should answer him / I have come here and seek the Lapidem Philosophorum / the same Yellow Man will answer you and speak thus / my dear friend since you now have come so far / I will show you further / you should go into the house / until you come to a running fountain / and then go on a little while / and there will come to you a Red Man / he is Fiery Red and has Red eyes / you should not fear him on account of his ugliness / for he is gentle of word / and he also will ask you / my dear friend / what is your desire here / when to me you are a strange guest / and you should answer him / I seek the Lapidem Philosophorum. . . .

[124] Personifications of metals are especially common in the folktales of imps and goblins, who were often seen in the mines.[6] We meet the metal men several times in Zosimos,[7] also a brazen eagle.[8] The “white man” appears in Latin alchemy: “Accipe illum album hominem de vase.” He is the product of the conjunction of the bridegroom and bride,[9] and belongs to the same context of thought as the oft-cited “white woman” and “red slave,” who are synonymous with Beya and Gabricus in the “Visio Arislei.” These two figures seem to have been taken over by Chaucer:[10]

The statue of Mars upon a carte stood,

Armed, and looked grym as he were wood;
And over his heed ther shynen two figures
Of sterres, that been cleped in scriptures,
That oon Puella, that oother Rubeus.

[125] Nothing would have been easier than to equate the love story of Mars and Venus with that of Gabricus and Beya (who were also personified as dog and bitch), and it is likely that astrological influences also played a part. Thanks to his unconscious identity with it, man and cosmos interact. The following passage, of the utmost importance for the psychology of alchemy, should be understood in this sense: "And as man is composed of the four elements, so also is the stone, and so it is [dug] out of man, and you are its ore, namely by working; and from you it is extracted, namely by division; and in you it remains inseparably, namely through the science."[11] Not only do things appear personified as human beings, but the macrocosm personifies itself as a man too. "The whole of nature converges in man as in a centre, and one participates in the other, and man has not unjustly concluded that the material of the philosophical stone may be found everywhere."[12] The "Consilium coniugii"[13] says: "Four are the natures which compose the philosophical man." "The elements of the stone are four, which, when well proportioned to one another, constitute the philosophical man, that is, the perfect human elixir." "They say that the stone is a man, because one cannot attain to it[14] save by reason and human knowledge." The above statement "you are its ore" has a parallel in the treatise of Komarios:[15] "In thee [Cleopatra] is hidden the whole terrible and marvellous secret." The same is said of the "bodies" (*σώματα*, i.e., 'substances'): "In them the whole secret is concealed."[16]

4. THE STONE SYMBOLISM

[126] Zosimos contrasts the body (*σάρξ* in the sense of 'flesh') with the spiritual man (*πνεματικός*).[1] The distinguishing mark of the spiritual man is that he seeks self-knowledge and knowledge of God.[2] The earthly, fleshly man is called Thoth or Adam. He bears within him the spiritual man, whose name is light (*φῶς*). This first man, Thoth-Adam, is

symbolized by the four elements. The spiritual and the fleshly man are also named Prometheus and Epimetheus. But “in allegorical language” they “are but one man, namely soul and body.” The spiritual man was seduced into putting on the body, and was bound to it by “Pandora, whom the Hebrews call Eve.”[3] She played the part, therefore, of the anima, who functions as the link between body and spirit, just as Shakti or Maya entangles man’s consciousness with the world. In the “Book of Krates” the spiritual man says: “Are you capable of knowing your soul completely? If you knew it as you should, and if you knew what could make it better, you would be capable of knowing that the names which the philosophers gave it of old are not its true names.”[4] This last sentence is a standing phrase which is applied to the names of the lapis. The lapis signifies the inner man, the *ἄνθρωπος πνενματικός*, the *natura abscondita* which the alchemists sought to set free. In this sense the *Aurora consurgens* says that through baptism by fire “man, who before was dead, is made a living soul.”[5]

[127] The attributes of the stone—incorruptibility, permanence, divinity, triunity, etc.—are so insistently emphasized that one cannot help taking it as the *deus absconditus* in matter. This is probably the basis of the lapis-Christ parallel, which occurs as early as Zosimos[6] (unless the passage in question is a later interpolation). Inasmuch as Christ put on a “human body capable of suffering” and clothed himself in matter, he forms a parallel to the lapis, the corporeality of which is constantly stressed. Its ubiquity corresponds to the omnipresence of Christ. Its “cheapness,” however, goes against the doctrinal view. The divinity of Christ has nothing to do with man, but the healing stone is “extracted” from man, and every man is its potential carrier and creator. It is not difficult to see what kind of conscious situation the lapis philosophy compensates: far from *signifying* Christ, the lapis *complements* the common conception of the Christ figure at that time.[7] What unconscious nature was ultimately aiming at when she produced the image of the lapis can be seen most clearly in the notion that it originated in matter and in man, that it was to be found everywhere, and that its fabrication lay at least potentially within man’s reach. These qualities all reveal what were felt to be the defects in the Christ image at that time: an air too rarefied for human

needs, too great a remoteness, a place left vacant in the human heart. Men felt the absence of the “inner” Christ who belonged to every man. Christ’s spirituality was too high and man’s naturalness was too low. In the image of Mercurius and the lapis the “flesh” glorified itself in its own way; it would not transform itself into spirit but, on the contrary, “fixed” the spirit in stone, and endowed the stone with all the attributes of the three Persons. The lapis may therefore be understood as a symbol of the inner Christ, of God in man. I use the expression “symbol” on purpose, for though the lapis is a parallel of Christ, it is not meant to replace him. On the contrary, in the course of the centuries the alchemists tended more and more to regard the lapis as the culmination of Christ’s work of redemption. This was an attempt to assimilate the Christ figure into the philosophy of the “science of God.” In the sixteenth century Khunrath formulated for the first time the “theological” position of the lapis: it was the *filius macrocosmi* as opposed to the “son of man,” who was the *filius microcosmi.* This image of the “Son of the Great World” tells us from what source it was derived: it came not from the conscious mind of the individual man, but from those border regions of the psyche that open out into the mystery of cosmic matter. Correctly recognizing the spiritual one-sidedness of the Christ image, theological speculation had begun very early to concern itself with Christ’s body, that is, with his materiality, and had temporarily solved the problem with the hypothesis of the resurrected body. But because this was only a provisional and therefore not an entirely satisfactory answer, the problem logically presented itself again in the Assumption of the Blessed Virgin, leading first to the dogma of the Immaculate Conception and finally to that of the Assumption. Though this only postpones the real answer, the way to it is nevertheless prepared. The assumption and coronation of Mary, as depicted in the medieval illustrations, add a fourth, feminine principle to the masculine Trinity. The result is a quaternity, which forms a real and not merely postulated symbol of totality. The totality of the Trinity is a mere postulate, for outside it stands the autonomous and eternal adversary with his choirs of fallen angels and the denizens of hell. Natural symbols of totality such as occur in our dreams and visions, and in the East take the form of mandalas, are quaternities or multiples of four, or else squared circles.

[128] The accentuation of matter is above all evident in the choice of the *stone* as a God-image. We meet this symbol in the very earliest Greek alchemy, but there are good reasons for thinking that the stone symbol is very much older than its alchemical usage. The stone as the birthplace of the gods (e.g., the birth of Mithras from a stone) is attested by primitive legends of stone-births which go back to ideas that are even more ancient—for instance, the view of the Australian aborigines that children's souls live in a special stone called the "child-stone." They can be made to migrate into a uterus by rubbing the "child-stone" with a *churinga*. *Churingas* may be boulders, or oblong stones artificially shaped and decorated, or oblong, flattened pieces of wood ornamented in the same way. They are used as cult instruments. The Australians and the Melanesians maintain that *churingas* come from the totem ancestor, that they are relics of his body or of his activity, and are full of *arunquiltha* or mana. They are united with the ancestor's soul and with the spirits of all those who afterwards possess them. They are taboo, are buried in caches or hidden in clefts in the rocks. In order to "charge" them, they are buried among the graves so that they can soak up the mana of the dead. They promote the growth of field-produce, increase the fertility of men and animals, heal wounds, and cure sicknesses of the body and the soul. Thus, when a man's vitals are all knotted up with emotion, the Australian aborigines give him a blow in the abdomen with a stone *churinga*.[8] The *churingas* used for ceremonial purposes are daubed with red ochre, anointed with fat, bedded or wrapped in leaves, and copiously spat on (spittle = mana).[9]

[129] These ideas of magic stones are found not only in Australia and Melanesia but also in India and Burma, and in Europe itself. For example, the madness of Orestes was cured by a stone in Laconia.[10] Zeus found respite from the sorrows of love by sitting on a stone in Leukadia. In India, a young man will tread upon a stone in order to obtain firmness of character, and a bride will do the same to ensure her own faithfulness. According to Saxo Grammaticus, the electors of the king stood on stones in order to give their vote permanence.[11] The green stone of Arran was used both for healing and for taking oaths on.[12] A cache of "soul stones," similar to *churingas*, was found in a cave on the river Birs near Basel,

and during recent excavations of the pole-dwellings on the little lake at Burgaeschi, in Canton Solothurn, a group of boulders was discovered wrapped in the bark of birch trees. This very ancient conception of the magical power of stones led on a higher level of culture to the similar importance attached to gems, to which all kinds of magical and medicinal properties were attributed. The gems that are the most famous in history are even supposed to have been responsible for the tragedies that befell their owners.

[130] A myth of the Navaho Indians of Arizona gives a particularly graphic account of the primitive fantasies that cluster round the stone.[13] In the days of the great darkness,[14] the ancestors of the hero saw the Sky Father descending and the Earth Mother rising up to meet him. They united, and on the top of the mountain where the union took place the ancestors found a little figure made of turquoise.[15] This turned into (or in another version gave birth to) Estsánatlehi, "the woman who rejuvenates or transforms herself." She was the mother of the twin gods who slew the primordial monsters, and was called the mother or grandmother of the gods (*yéi*). Estsánatlehi is the most important figure in the matriarchal pantheon of the Navaho. Not only is she the "woman who transforms herself," but she also has two shapes, for her twin sister, Yolkaíestsan, is endowed with similar powers. Estsánatlehi is immortal, for though she grows into a withered old woman she rises up again as a young girl—a true Dea Natura. From different parts of her body four daughters were born to her, and a fifth from her spirit. The sun came from the turquoise beads hidden in her right breast, and from white shell beads in her left breast the moon. She issues reborn by rolling a piece of skin from under her left breast. She lives in the west, on an island in the sea. Her lover is the wild and cruel Sun Bearer, who has another wife; but he has to stay at home with her only when it rains. The turquoise goddess is so sacred that no image may be made of her, and even the gods may not look on her face. When her twin sons asked her who their father was, she gave them a wrong answer, evidently to protect them from the dangerous fate of the hero.

[131] This matriarchal goddess is obviously an anima figure who at the same time symbolizes the self. Hence her stone-nature, her immortality,

her four daughters born from the body, plus one from the spirit, her duality as sun and moon, her role as paramour, and her ability to change her shape.[16] The self of a man living in a matriarchal society is still immersed in his unconscious femininity, as can be observed even today in all cases of masculine mother-complexes. But the turquoise goddess also exemplifies the psychology of the matriarchal woman, who, as an anima figure, attracts the mother-complexes of all the men in her vicinity and robs them of their independence, just as Omphale held Herakles in thrall, or Circe reduced her captives to a state of bestial unconsciousness—not to mention Benoît's Atlantida, who made a collection of her mummified lovers. All this happens because the anima contains the secret of the precious stone, for, as Nietzsche says, "all joy wants eternity." Thus the legendary Ostanes, speaking of the secret of the "philosophy," says to his pupil Cleopatra: "In you is hidden the whole terrible and marvellous secret. . . . Make known to us how the highest descends to the lowest, and how the lowest ascends to the highest, and how the midmost draws near to the highest, and is made one with it."[17] This "midmost" is the stone, the mediator which unites the opposites. Such sayings have no meaning unless they are understood in a profoundly psychological sense.

[132] Widespread as is the motif of the stone-birth (cf. the creation myth of Deucalion and Pyrrha), the American cycle of legends seems to lay special emphasis on the motif of the stone-body, or animated stone.[18] We meet this motif in the Iroquois tale of the twin brothers. Begotten in a miraculous manner in the body of a virgin, a pair of twins were born, one of whom came forth in the normal way, while the other sought an abnormal exit and emerged from the armpit, thereby killing his mother. This twin had a body made of flint. He was wicked and cruel, unlike his normally born brother.[19] In the Sioux version the mother was a tortoise. Among the Wichita, the saviour was the great star in the south, and he performed his work of salvation on earth as the "flint man." His son was called the "young flint." After completing their work, both of them went back into the sky.[20] In this myth, just as in medieval alchemy, the saviour coincides with the stone, the star, the "son," who is "super omnia lumina." The culture hero of the Natchez Indians came down to earth

from the sun, and shone with unendurable brightness. His glance was death-dealing. In order to mitigate this, and to prevent his body from corrupting in the earth, he changed himself into a stone statue, from which the priestly chieftains of the Natchez were descended.[21] Among the Taos Pueblos, a virgin was made pregnant by beautiful stones and bore a hero son,[22] who, owing to Spanish influence, assumed the aspect of the Christ child.[23] The stone plays a similar role in the Aztec cycle of legends. For instance, the mother of Quetzalcoatl was made pregnant by a precious green stone.[24] He himself had the cognomen "priest of the precious stone" and wore a mask made of turquoise.[25] The precious green stone was an animating principle and was placed in the mouth of the dead.[26] Man's original home was the "bowl of precious stone."[27] The motif of transformation into stone, or petrifaction, is common in the Peruvian and Colombian legends and is probably connected with a megalithic stone-cult,[28] and perhaps also with the palaeolithic cult of *churinga-like* soul-stones. The parallels here would be the menhirs of megalithic culture, which reached as far as the Pacific archipelago. The civilization of the Nile valley, which originated in megalithic times, turned its divine kings into stone statues for the express purpose of making the king's *ka* everlasting. In shamanism, much importance is attached to crystals, which play the part of ministering spirits.[29] They come from the crystal throne of the supreme being or from the vault of the sky. They show what is going on in the world and what is happening to the souls of the sick, and they also give man the power to fly.[30]

[133] The connection of the lapis with immortality is attested from very early times. Ostanes (possibly 4th cent. B.C.) speaks of "the Nile stone that has a spirit."[31] The lapis is the panacea, the universal medicine, the alexipharmic, the tincture that transmutes base metals into gold and gravel into precious stones. It brings riches, power, and health; it cures melancholy and, as the *vivus lapis philosophicus*, is a symbol of the saviour, the Anthropos, and immortality. Its incorruptibility is also shown in the ancient idea that the body of a saint becomes stone. Thus the Apocalypse of Elijah says of those who escape persecution by the Anti-Messiah:[32] "The Lord shall take unto him their spirit and their souls, their

flesh shall be made stone, no wild beast shall devour them till the last day of the great judgment." In a Basuto legend reported by Frobenius,[33] the hero is left stranded by his pursuers on the bank of a river. He changes himself into a stone, and his pursuers throw him across to the other side. This is the motif of the *transitus:* the "other side" is the same as eternity.

5. THE WATER SYMBOLISM

[134] Psychological research has shown that the historical or ethnological symbols are identical with those spontaneously produced by the unconscious, and that the lapis represents the idea of a transcendent totality which coincides with what analytical psychology calls the self. From this point of view we can understand without difficulty the apparently absurd statement of the alchemists that the lapis consists of body, soul, and spirit, is a living being, a homunculus or "homo." It symbolizes man, or rather, the inner man, and the paradoxical statements about it are really descriptions and definitions of this inner man. Upon this connotation of the lapis is based its parallelism with Christ. Behind the countless ecclesiastical and alchemical metaphors may be found the language of Hellenistic syncretism, which was originally common to both. Passages like the following one from Priscillian, a Gnostic-Manichaean heretic of the fourth century, must have been extremely suggestive for the alchemists: "One-horned is God, Christ a rock to us, Jesus a cornerstone, Christ the man of men"[1]—unless the matter was the other way round, and metaphors taken from natural philosophy found their way into the language of the Church via the Gospel of St. John.

[135] The principle that is personified in the visions of Zosimos is the wonder-working water, which is both water and spirit, and kills and vivifies. If Zosimos, waking from his dream, immediately thinks of the "composition of the waters," this is the obvious conclusion from the alchemical point of view. Since the long-sought water, as we have shown,[2] represents a cycle of birth and death, every process that consists of death and rebirth is naturally a symbol of the divine water.

[136] It is conceivable that we have in Zosimos a parallel with the Nicodemus dialogue in John 3. At the time when John's gospel was

written, the idea of the divine water was familiar to every alchemist. When Jesus said: “Except a man be born of water and of the spirit . . . ,” an alchemist of that time would at once have understood what he meant. Jesus marvelled at the ignorance of Nicodemus and asked him: “Art thou a master in Israel, and knowest not these things?” He obviously took it for granted that a teacher (*διδάσκαλος*) would know the secret of water and spirit, that is, of death and rebirth. Whereupon he went on to utter a saying which is echoed many times in the alchemical treatises: “We speak that we do know, and testify that we have seen.” Not that the alchemists actually cited this passage, but they thought in a similar way. They talk as if they had touched the arcanum or gift of the Holy Spirit with their own hands, and seen the workings of the divine water with their own eyes.[3] Even though these statements come from a later period, the spirit of alchemy remained more or less the same from the earliest times to the late Middle Ages.

[137] The concluding words of the Nicodemus dialogue, concerning “earthly and heavenly things,” had likewise been the common property of alchemy ever since Democritus had written of the “physika and mystika,” also called “somata and asomata,” “corporalia and spiritualia.”[4] These words of Jesus are immediately followed by the motif of the ascent to heaven and descent to earth.[5] In alchemy this would be the ascent of the soul from the mortified body and its descent in the form of reanimating dew.[6] And when, in the next verse, Jesus speaks of the serpent lifted up in the wilderness and equates it with his own self-sacrifice, a “Master” would be bound to think of the uroboros, which slays itself and brings itself to life again. This is followed by the motif of “everlasting life” and the panacea (belief in Christ). Indeed, the whole purpose of the opus was to produce the incorruptible body, “the thing that dieth not,” the invisible, spiritual stone, or *lapis aethereus*. In the verse, “For God so loved the world that he gave his only begotten Son . . . ,” Jesus identifies himself with the healing snake of Moses; for the Monogenes is synonymous with the Nous, and this with the serpent-saviour or Agathodaimon. The serpent is also a synonym for the divine water. The dialogue may be compared with Jesus’ words to the woman of Samaria in John 4 : 14: “… a well of water springing up into everlasting life.”[7] Significantly enough,

the conversation by the well forms the context for the teaching that “God is Spirit” (John 4 : 24).[8]

[138] In spite of the not always unintentional obscurity of alchemical language, it is not difficult to see that the divine water or its symbol, the uroboros, means nothing other than the *deus absconditus*, the god hidden in matter, the divine Nous that came down to Physis and was lost in her embrace.[9] This mystery of the “god become physical” underlies not only classical alchemy but also many other spiritual manifestations of Hellenistic syncretism.[10]

6. THE ORIGIN OF THE VISION

[139] Since alchemy is concerned with a mystery both physical and spiritual, it need come as no surprise that the “composition of the waters” was revealed to Zosimos in a dream. His sleep was the sleep of incubation, his dream “a dream sent by God.” The divine water was the alpha and omega of the process, desperately sought for by the alchemists as the goal of their desire. The dream therefore came as a dramatic explanation of the nature of this water. The dramatization sets forth in powerful imagery the violent and agonizing process of transformation which is itself both the producer and the product of the water, and indeed constitutes its very essence. The drama shows how the divine process of change manifests itself to our human understanding and how man experiences it—as punishment, torment,[1] death, and transfiguration. The dreamer describes how a man would act and what he would have to suffer if he were drawn into the cycle of the death and rebirth of the gods, and what effect the *deus absconditus* would have if a mortal man should succeed by his “art” in setting free the “guardian of spirits” from his dark dwelling. There are indications in the literature that this is not without its dangers.[2]

[140] The mystical side of alchemy, as distinct from its historical aspect, is essentially a psychological problem. To all appearances, it is a concretization, in projected and symbolic form, of the process of individuation. Even today this process produces symbols that have the closest connections with alchemy. On this point I must refer the reader to

my earlier works, where I have discussed the question from a psychological angle and illustrated it with practical examples.

[141] The causes that set such a process in motion may be certain pathological states (for the most part schizophrenic) which produce very similar symbols. But the best and clearest material comes from persons of sound mind who, driven by some kind of spiritual distress, or for religious, philosophical, or psychological reasons, devote particular attention to their unconscious. In the period extending from the Middle Ages back to Roman times, a natural emphasis was laid on the inner man, and since psychological criticism became possible only with the rise of science, the inner factors were able to reach consciousness in the form of projections much more easily than they can today. The following text[3] may serve to illustrate the medieval point of view:

> For as Christ says in Luke 11: The light of the body is the eye, but if your eye is evil or becomes so, then your body is full of darkness and the light within you becomes darkness. Moreover, in the seventeenth chapter he says also: Behold, the kingdom of God is within you—from which it is clearly seen that knowledge of the light in man must emerge in the first place from within and cannot be placed there from without, and many passages in the Bible bear witness to this, namely, that the external object (as it is usually called), or the sign written to help us in our weakness, is in Matthew 24 merely a testimony of the inner light of grace planted in and imparted to us by God. So, too, the spoken word is to be heeded and considered only as an indication, an aid and a guide to this. To take an example: a white and a black board are placed in front of you and you are asked which is black and which is white. If the knowledge of the two different colours were not previously within you, you would never be able to answer from these mere mute objects or boards the question put to you, since this knowledge does not come from the boards themselves (for they are mute and inanimate), but originates in and flows forth from your innate faculties which you exercise daily. The objects (as stated earlier) indeed stimulate the senses and cause them to apprehend, but in no way do they give knowledge. This must come from within, from the apprehender, and the knowledge of such colours must emerge in an act of apprehension. Similarly, when someone asks you for a material and

external fire or light from a flint (in which the fire or light is hidden) you cannot put this hidden and secret light into the stone, but rather you must arouse, awaken, and draw forth the hidden fire from the stone and reveal it by means of the requisite steel striker which must be necessarily at hand. And this fire must be caught and vigorously fanned up in good tinder well prepared for this purpose, if it is not to be extinguished and disappear again. Then, afterwards, you will obtain a truly radiant light, shining like fire, and as long as it is tended and preserved, you will be able to create, work, and do with it as you please. And, likewise hidden in man, there exists such a heavenly and divine light which, as previously stated, cannot be placed in man from without, but must emerge from within.

For not in vain and without reason has God bestowed on and given to man in the highest part of his body two eyes and ears in order to indicate that man has to learn and heed within himself a twofold seeing and hearing, an inward and an outward, so that he may judge spiritual things with the inward part and allot spiritual things to the spiritual (I Corinthians 2), but also give to the outward its portion.

[142] For Zosimos and those of like mind the divine water was a *corpus mysticum*.[4] A personalistic psychology will naturally ask: how did Zosimos come to be looking for a *corpus mysticum?* The answer would point to the historical conditions: it was a problem of the times. But in so far as the *corpus mysticum* was conceived by the alchemists to be a gift of the Holy Spirit, it can be understood in a quite general sense as a visible gift of grace conferring redemption. Man's longing for redemption is universal and can therefore have an ulterior, personalistic motive only in exceptional cases, when it is not a genuine phenomenon but an abnormal misuse of it. Hysterical self-deceivers, and ordinary ones too, have at all times understood the art of misusing everything so as to avoid the demands and duties of life, and above all to shirk the duty of confronting themselves. They pretend to be seekers after God in order not to have to face the truth that they are ordinary egoists. In such cases it is well worth asking: Why are you seeking the divine water?

[143] We have no reason to suppose that all the alchemists were self-deceivers of this sort. The deeper we penetrate into the obscurities of

their thinking, the more we must admit their right to style themselves "philosophers." Throughout the ages, alchemy was one of the great human quests for the unattainable. So, at least, we would describe it if we gave rein to our rationalistic prejudices. But the religious experience of grace is an irrational phenomenon, and cannot be discussed any more than can the "beautiful" or the "good." Since that is so, no serious quest is without hope. It is something instinctive, that cannot be reduced to a personal aetiology any more than can intelligence or musicality or any other in born propensity. I am therefore of the opinion that our analysis and interpretation have done justice to the vision of Zosimos if we have succeeded in understanding its essential components in the light of how men thought then, and in elucidating the meaning and purpose of its *mise en scène.* When Kékulé had his dream of the dancing pairs and deduced from it the structure of the benzol ring, he accomplished something that Zosimos strove for in vain. His "composition of the waters" did not fall into as neat a pattern as did the carbon and hydrogen atoms of the benzol ring. Alchemy projected an inner, psychic experience into chemical substances that seemed to hold out mysterious possibilities but nevertheless proved refractory to the intentions of the alchemist.

[144] Although chemistry has nothing to learn from the vision of Zosimos, it is a mine of discovery for modern psychology, which would come to a sorry pass if it could not turn to these testimonies of psychic experience from ancient times. Its statements would then be without support, like novelties that cannot be compared with anything, and whose value it is almost impossible to assess. But such documents give the investigator an Archimedean point outside his own narrow field of work, and therewith an invaluable opportunity to find his bearings in the seeming chaos of individual events.

III

PARACELSUS AS A SPIRITUAL PHENOMENON

[Originally a lecture, “Paracelsus als geistige Erscheinung,” which, revised and expanded, was published in *Paracelsica: Zwei Vorlesungen über den Arzt und Philosophen Theophrastus* (Zurich, 1942).

[In the present translation, chapter and section headings have been added to elucidate the structure of the monograph. Two brief statements found among Jung’s posthumous papers have, because of their relevance to the subject-matter, been added as footnotes on pp. 136 and 144.—EDITORS.]

FOREWORD TO “PARACELSICA”

This little book comprises two lectures delivered this year on the occasion of the four-hundredth anniversary of the death of Paracelsus.[1] The first, “Paracelsus the Physician,”[2] was delivered to the Swiss Society for the History of Medicine and the Natural Sciences at the annual meeting of the Society for Nature Research, Basel, September 7, 1941; the second, “Paracelsus as a Spiritual Phenomenon,” was given at the Paracelsus celebrations in Einsiedeln, October 5, 1941. The first lecture goes into print unaltered except for a few minor changes. But the special nature of the theme has obliged me to take the second lecture out of its original framework and to expand it into a proper treatise. The stylistic form and scope of a lecture are not suited to portray the unknown and enigmatic Paracelsus who stands beside or behind the figure we meet in his prolific medical, scientific, and theological writings. Only when they are taken together do they give a picture of this contradictory and yet so significant personality.

I am aware that the title of this lecture is somewhat presumptuous. The reader should take it simply as a contribution to our knowledge of the arcane philosophy of Paracelsus. I do not claim to have said anything final or conclusive on this difficult subject, and am only too painfully aware of gaps and inadequacies. My purpose was confined to providing clues that might point the way to the roots and psychic background of his philosophy, if such it can be called. Besides all the other things he was, Paracelsus was, perhaps most deeply of all, an alchemical “philosopher” whose religious views involved him in an unconscious conflict with the Christian beliefs of his age in a way that seems to us inextricably confused. Nevertheless, in this confusion are to be found the beginnings of philosophical, psychological, and religious problems which are taking clearer shape in our own epoch. Because of this, I have felt it almost an historical duty to contribute what I may in appreciation of prescient ideas which he left behind for us in his treatise *De vita longa*.

C. G. J.

October 1941

1. THE TWO SOURCES OF KNOWLEDGE: THE LIGHT OF NATURE AND THE LIGHT OF REVELATION

[145] The man whose death four hundred years ago we commemorate today exerted a powerful influence on all subsequent generations, as much by sheer force of his personality as by his prodigious literary activity. His influence made itself felt chiefly in the field of medicine and natural science. In philosophy, not only was mystical speculation stimulated in a fruitful way, but philosophical alchemy, then on the point of extinction, received a new lease of life and enjoyed a renaissance. It is no secret that Goethe, as is evident from the second part of *Faust*, still felt the impact of the powerful spirit of Paracelsus.

[146] It is not easy to see this spiritual phenomenon in the round and to give a really comprehensive account of it. Paracelsus was too contradictory or too chaotically many-sided, for all his obvious one-sidedness in other ways. First and foremost, he was a physician with all the strength of his spirit and soul, and his foundation was a firm religious belief. Thus he says in his *Paragranum:*[1] “You must be of an honest, sincere, strong, true faith in God, with all your soul, heart, mind, and thought, in all love and trust. On the foundation of such faith and love, God will not withdraw his truth from you, and will make his works manifest to you, believable, visible, and comforting. But if, not having such faith, you are against God, then you will go astray in your work and will have failures, and in consequence people will have no faith in you.” The art of healing and its demands were the supreme criterion for Paracelsus. Everything in his life was devoted to this goal of helping and healing. Around this cardinal principle were grouped all his experiences, all his knowledge, all his efforts. This happens only when a man is actuated by some powerful emotional driving force, by a great passion which, undeterred by reflection and criticism, overshadows his whole life. The driving force behind Paracelsus was his compassion.

"Compassion," he exclaims, "is the physician's schoolmaster."[2] It must be inborn in him. Compassion, which has driven many another great man and inspired his work, was also the supreme arbiter of Paracelsus's fate.

[147] The instrument which he put at the service of his great compassion was his science and his art, which he took over from his father. But the dynamism at the back of his work, the compassion itself, must have come to him from the prime source of everything emotional, that is, from his mother, of whom he never spoke. She died young, and she probably left behind a great deal of unsatisfied longing in her son—so much that, so far as we know, no other woman was able to compete with that far-distant mother-imago, which for that reason was all the more formidable. The more remote and unreal the personal mother is, the more deeply will the son's yearning for her clutch at his soul, awakening that primordial and eternal image of the mother for whose sake everything that embraces, protects, nourishes, and helps assumes maternal form, from the Alma Mater of the university to the personification of cities, countries, sciences, and ideals. When Paracelsus says that the mother of the child is the planet and star, this is in the highest degree true of himself. To the mother in her highest form, Mater Ecclesia, he remained faithful all his life, despite the very free criticism he levelled at the ills of Christendom in that epoch. Nor did he succumb to the great temptation of that age, the Protestant schism, though he may well have had it in him to go over to the other camp. Conflict was deeply rooted in Paracelsus's nature; indeed, it had to be so, for without a tension of opposites there is no energy, and whenever a volcano, such as he was, erupts, we shall not go wrong in supposing that water and fire have clashed together.

[148] But although the Church remained a mother for Paracelsus all his life, he nevertheless had two mothers: the other was Mater Natura. And if the former was an absolute authority, so too was the latter. Even though he endeavoured to conceal the conflict between the two maternal spheres of influence, he was honest enough to admit its existence; indeed, he seems to have had a very good idea of what such a dilemma meant. Thus he says: "I also confess that I write like a pagan and yet am a Christian."[3] Accordingly he named the first five sections of his *Paramirum de quinque entibus morborum* "Pagoya." "Pagoyum" is one of his favourite

neologisms, compounded of “paganum” and the Hebrew word “goyim.” He held that knowledge of the nature of diseases was pagan, since this knowledge came from the “light of nature” and not from revelation.[4] “Magic,” he says, is “the preceptor and teacher of the physician,”[5] who derives his knowledge from the *lumen naturae.* There can be no doubt the “light of nature” was a second, independent source of knowledge for Paracelsus. His closest pupil, Adam von Bodenstein, puts it like this: “The Spagyric has the things of nature not by authority, but by his own experience.”[6] The concept of the *lumen naturae* may derive from the *Occulta philosophia* of Agrippa von Nettesheim (1533), who speaks of a *luminositas sensus naturae* that extends even to the four-footed beasts and enables them to foretell the future.[7] Paracelsus says accordingly:

> It is, therefore, also to be known that the auguries of the birds are caused by these innate spirits, as when cocks foretell future weather and peacocks the death of their master and other such things with their crowing. All this comes from the innate spirit and is the Light of Nature. Just as it is present in animals and is natural, so also it dwells within man and he brought it into the world with himself. He who is chaste is a good prophet, natural as the birds, and the prophecies of birds are not contrary to nature but are of nature. Each, then, according to his own state. These things which the birds announce can also be foretold in sleep, for it is the astral spirit which is the invisible body of nature.[8] And it should be known that when a man prophesies, he does not speak from the Devil, not from Satan, and not from the Holy Spirit, but he speaks from the innate spirit of the invisible body which teaches *Magiam* and in which the *Magus* has his origin.[9]

The light of nature comes from the *Astrum:* “Nothing can be in man unless it has been given to him by the Light of Nature, and what is in the Light of Nature has been brought by the stars.”[10] The pagans still possessed the light of nature, “for to act in the Light of Nature and to rejoice in it is divine despite being mortal.” Before Christ came into the world, the world was still endowed with the light of nature, but in comparison with Christ this was a “lesser light.” “Therefore we should know that we have to interpret nature according to the spirit of nature, the

Word of God according to the spirit of God, and the Devil according to his spirit also." "He who knows nothing of these things is a gorged pig and will not leave room for instruction and experience." The light of nature is the *quinta essentia,* extracted by God himself from the four elements, and dwelling "in our hearts."[11] It is enkindled by the Holy Spirit.[12] The light of nature is an intuitive apprehension of the facts, a kind of illumination.[13] It has two sources: a mortal and an immortal, which Paracelsus calls "angels."[14] "Man," he says, "is also an angel and has all the latter's qualities." He has a natural light, but also a light outside the light of nature by which he can search out supernatural things.[15] The relationship of this supernatural light to the light of revelation remains, however, obscure. Paracelsus seems to have held a peculiar trichotomous view in this respect.

[149] The authenticity of one's own experience of nature against the authority of tradition is a basic theme of Paracelsan thinking. On this principle he based his attack on the medical schools, and his pupils[16] carried the revolution even further by attacking Aristotelian philosophy. It was an attitude that opened the way for the scientific investigation of nature and helped to emancipate natural science from the authority of tradition. Though this liberating act had the most fruitful consequences, it also led to that conflict between knowledge and faith which poisoned the spiritual atmosphere of the nineteenth century in particular. Paracelsus naturally had no inkling of the possibility of these late repercussions. As a medieval Christian, he still lived in a unitary world and did not feel the two sources of knowledge, the divine and the natural, as the conflict it later turned out to be. As he says in his "Philosophia sagax": "There are, therefore, two kinds of knowledge in this world: an eternal and a temporal. The eternal springs directly from the light of the Holy Spirit, but the other directly from the Light of Nature." In his view the latter kind is ambivalent: both good and bad. This knowledge, he says, "is not from flesh and blood, but from the stars in the flesh and blood. That is the treasure, the natural Summum Bonum." Man is twofold, "one part temporal, the other part eternal, and each part takes its light from God, both the temporal and the eternal, and there is nothing that does not have its origin in God. Why, then, should the Father's light be considered

pagan, and I be recognized and condemned as a pagan?" God the Father created man "from below upwards," but God the Son "from above downwards." Therefore Paracelsus asks: "If Father and Son are one, how then can I honour two lights? I would be condemned as an idolater: but the number one preserves me. And if I love two and accord to each its light, as God has ordained for everyone, how then can I be a pagan?"

[150] It is clear enough from this what his attitude was to the problem of the two sources of knowledge: both lights derive from the unity of God. And yet—why did he give the name "Pagoyum" to what he wrote in the light of nature? Was he playing with words, or was it an involuntary avowal, a dim presentiment of a duality in the world and the soul? Was Paracelsus really unaffected by the schismatic spirit of the age, and was his attack on authority really confined only to Galen, Avicenna, Rhazes, and Arnaldus de Villanova?

A. MAGIC

[151] Paracelsus's scepticism and rebelliousness stop short at the Church, but he also reined them in before alchemy, astrology, and magic, which he believed in as fervently as he did in divine revelation, since in his view they proceeded from the authority of the *lumen naturae.* And when he speaks of the divine office of the physician, he exclaims: "I under the Lord, the Lord under me, I under him outside my office, and he under me outside his office."[17] What kind of spirit addresses us in these words? Do they not recall those of the later Angelus Silesius?

I am as great as God,
And he is small like me;
He cannot be above,
Nor I below him be.

[152] There is no denying that the human ego's affinity with God here raises a distinct claim to be heard and also to be recognized as such. That is the spirit of the Renaissance—to give man in his mightiness, intellectual power, and beauty a visible place beside God. *Deus et Homo* in a new and unprecedented sense! Agrippa von Nettesheim, Paracelsus's older contemporary and an authority on the Cabala, declares in his

sceptical and contumacious book *De incertitudine et vanitate scientiarum:*[18]

> Agrippa spares no man.
> He contemns, knows, knows not, weeps, laughs, waxes wroth,
> reviles, carps at all things;
> being himself philosopher, demon, hero, God,
> and all things.

Paracelsus to be sure did not rise to such unfortunate heights of modernity. He felt at one with God and with himself. Wholly and unremittingly engaged in the practical art of healing, his busy mind wasted no time on abstract problems, and his irrational, intuitive nature never pursued logical reflections so far that they resulted in destructive insights.

[153] Paracelsus had one father, whom he held in love and respect, but, as we have said, like every true hero he had two mothers, a heavenly one and an earthly one—Mother Church and Mother Nature. Can one serve two mothers? And even if, like Paracelsus, one feels oneself a physician created by God, is there not something suspicious about pressing God into one's service inside the physician's office, so to speak? One can easily object that Paracelsus said this, like so much else, only in passing and that it is not to be taken all that seriously. He himself would probably have been astonished and indignant if he had been taken at his word. The words that flowed into his pen came less from deep reflection than from the spirit of the age in which he lived. No one can claim to be immune to the spirit of his own epoch or to possess anything like a complete knowledge of it. Regardless of our conscious convictions, we are all without exception, in so far as we are particles in the mass, gnawed at and undermined by the spirit that runs through the masses. Our freedom extends only as far as our consciousness reaches. Beyond that, we succumb to the unconscious influences of our environment. Though we may not be clear in a logical sense about the deepest meanings of our words and actions, these meanings nevertheless exist and they have a psychological effect. Whether we know it or not, there remains in each of us the tremendous tension between the man who *serves* God and the man who *commands* God to do his bidding.

[154] But the greater the tension, the greater the potential. Great energy springs from a correspondingly great tension of opposites. It was to the constellation of the most powerful opposites within him that Paracelsus owed his almost daemonic energy, which was not an unalloyed gift of God but went hand in hand with his impetuous and quarrelsome temperament, his hastiness, impatience, discontentedness, and his arrogance. Not for nothing was Paracelsus the prototype of Faust, whom Jacob Burckhardt once called “a great primordial image” in the soul of every German. From Faust the line leads direct to Nietzsche, who was a Faustian man if ever there was one. What still maintained the balance in the case of Paracelsus and Angelus Silesius—“I under God and God under me”—was lost in the twentieth century, and the scale sinks lower and lower under the weight of an ego that fancies itself more and more godlike. Paracelsus shared with Angelus Silesius his inner piety and the touching but dangerous simplicity of his relationship to God. But alongside this spirituality a countervailing chthonic spirit made itself felt to an almost frightening degree: there was no form of manticism and magic that Paracelsus did not practise himself or recommend to others. Dabbling in these arts—no matter how enlightened one thinks one is—is not without its psychological dangers. Magic always was and still is a source of fascination. At the time of Paracelsus, certainly, the world teemed with marvels: everyone was conscious of the immediate presence of the dark forces of nature. Astronomy and astrology were not yet separated. Kepler still cast horoscopes. Instead of chemistry there was only alchemy. Amulets, talismans, spells for healing wounds and diseases were taken as a matter of course. A man so avid for knowledge as Paracelsus could not avoid a thorough investigation of all these things, only to discover that strange and remarkable effects resulted from their use. But so far as I know he never uttered a clear warning about the psychic dangers of magic for the adept.[19] He even scoffed at the doctors because they understood nothing of magic. But he does not mention that they kept away from it out of a quite justifiable fear. And yet we know from the testimony of Conrad Gessner, of Zurich, that the very doctors whom Paracelsus attacked shunned magic on religious grounds and accused him and his pupils of sorcery. Writing to Crato von Crafftheim[20]

about Paracelsus's pupil Adam von Bodenstein, Gessner says: "I know that most people of this kind are Arians and deny the divinity of Christ . . . Oporin in Basel, once a pupil of Theophrastus and his private assistant [*familiaris*], reported strange tales concerning the latter's intercourse with demons. They are given to senseless astrology, geomancy, necromancy, and other forbidden arts. I myself suspect that they are the last of the Druids, those of the ancient Celts who were instructed for several years in underground places by demons. It is also certain that such things are done to this very day at Salamanca in Spain. From this school also arose the wandering scholars, as they are commonly called. The most famous of these was Faust, who died not so long ago." Elsewhere in the same letter Gessner writes: "Theophrastus has assuredly been an impious man and a sorcerer [*magus*], and has had intercourse with demons."[21]

[155] Although this judgment is based in part on the unreliable testimony of Oporin and is essentially unfair or actually false, it nevertheless shows how unseemly, in the opinion of contemporary doctors of repute, was Paracelsus's preoccupation with magic. He himself, as we have said, had no such scruples. He drew magic, like everything else worth knowing, into his orbit and tried to exploit it medically for the benefit of the sick, unperturbed by what it might do to him personally or what the implications might be from the religious point of view. For him magic and the wisdom of nature had their place within the divinely ordained order as a *mysterium et magnale Dei*, and so it was not difficult for him to bridge the gulf into which half the world had plunged.[22] Instead of experiencing any conflict in himself, he found his arch-enemy outside in the great medical authorities of the past, as well as in the host of academic physicians against whom he let fly like the proper Swiss mercenary he was. He was infuriated beyond measure by the resistance of his opponents and he made enemies everywhere. His writings are as turbulent as his life and his wanderings. His style is violently rhetorical. He always seems to be speaking importunately into someone's ear—someone who listens unwillingly, or against whose thick skin even the best arguments rebound. His exposition of a subject is seldom systematic or even coherent; it is constantly interrupted by admonitions, addressed

in a subtle or coarse vein to an invisible auditor afflicted with moral deafness. Paracelsus was a little too sure that he had his enemy in front of him, and did not notice that it was lodged in his own bosom. He consisted of two persons who never really confronted one another. He nowhere betrays the least suspicion that he might not be at one with himself. He felt himself to be undividedly one, and all the things that constantly thwarted him had of course to be his external enemies. He had to conquer them and prove to them that he was the "Monarcha," the sovereign ruler, which secretly and unknown to himself was the very thing he was not. He was so unconscious of the conflict within him that he never noticed there was a second ruler in his own house who worked against him and opposed everything he wanted. But every unconscious conflict works out like that: one obstructs and undermines oneself. Paracelsus did not see that the truth of the Church and the Christian standpoint could never get along with the thought implicit in all alchemy, "God under me." And when one unconsciously works against oneself, the result is impatience, irritability, and an impotent longing to get one's opponent down whatever the means. Generally certain symptoms appear, among them a peculiar use of language: one wants to speak forcefully in order to impress one's opponent, so one employs a special, "bombastic" style full of neologisms which might be described as "power-words."[23] This symptom is observable not only in the psychiatric clinic but also among certain modern philosophers, and, above all, whenever anything unworthy of belief has to be insisted on in the teeth of inner resistance: the language swells up, overreaches itself, sprouts grotesque words distinguished only by their needless complexity. The word is charged with the task of achieving what cannot be done by honest means. It is the old word magic, and sometimes it can degenerate into a regular disease. Paracelsus was afflicted with this malady to such a degree that even his closest pupils were obliged to compile "onomastica" (word-lists) and to publish commentaries. The unwary reader continually stumbles over these neologisms and is completely baffled at first, for Paracelsus never bothered to give any explanations even when, as often happens, the word was a *hapax legomenon* (one that occurs only once). Often it is only by comparing a number of passages that one can approximately make out the sense. There are, however, mitigating circumstances: doctors have always loved using magically incomprehensible jargon for even the most ordinary things. It is part of the medical persona. But it is odd indeed that Paracelsus, who prided himself on teaching and writing in German, should have been the very one to concoct the most intricate neologisms out of Latin, Greek, Italian, Hebrew, and possibly even Arabic.

[156] Magic is insidious, and therein lies its danger. At one point, where Paracelsus is discussing witchcraft, he actually falls into using a magical witch-language without giving the least explanation. For instance, instead of “Zwirnfaden” (twine) he says “Swindafnerz,” instead of “Nadel” (needle) “Dallen,” instead of “Leiche” (corpse) “Chely,” instead of “Faden” (thread) “Daphne,” and so on.[24] In magical rites the inversion of letters serves the diabolical purpose of turning the divine order into an infernal disorder. It is remarkable how casually and unthinkingly Paracelsus takes over these magically distorted words and simply leaves the reader to make what he can of them. This shows that Paracelsus must have been thoroughly steeped in the lowest folk beliefs and popular superstitions, and one looks in vain for any trace of disgust at such squalid things, though in his case its absence was certainly not due to lack of feeling but rather to a kind of natural innocence and naïveté. Thus he himself recommends the magical use of wax manikins in cases of sickness,[25] and seems to have designed and used amulets and seals.[28] He was convinced that physicians should have an understanding of the magic arts and should not eschew sorcery if this might help their patients. But this kind of folk magic is not Christian, it is demonstrably pagan—in a word, a “Pagoyum.”

B. ALCHEMY

[157] Besides his manifold contacts with folk superstition there was another, more respectable source of “pagan” lore that had a great influence on Paracelsus. This was his knowledge of and intense preoccupation with alchemy, which he used not only in his pharmacology and pharmaceutics but also for “philosophical” purposes. Since earliest times alchemy contained, or actually was, a secret doctrine. With the triumph of Christianity under Constantine the old pagan ideas did not

vanish but lived on in the strange arcane terminology of philosophical alchemy. Its chief figure was Hermes or Mercurius, in his dual significance as quicksilver and the world soul, with his companion figures Sol (= gold) and Luna (= silver). The alchemical operation consisted essentially in separating the prima materia, the so-called chaos, into the active principle, the soul, and the passive principle, the body, which were then reunited in personified form in the *coniunctio* or “chymical marriage.” In other words, the *coniunctio* was allegorized as the hierosgamos, the ritual cohabitation of Sol and Luna. From this union sprang the *filius sapientiae* or *filius philosophorum*, the transformed Mercurius, who was thought of as hermaphroditic in token of his rounded perfection. [Cf. fig. B2.]

[158] The *opus alchymicum*, in spite of its chemical aspects, was always understood as a kind of rite after the manner of an *opus divinum*. For this reason Melchior Cibinensis, at the beginning of the sixteenth century, could still represent it in the form of a Mass,[27] since long before this the *filius* or *lapis philosophorum* had been regarded as an allegory of Christ.[28] Many things in Paracelsus that would otherwise remain incomprehensible must be understood in terms of this tradition. In it are to be found the origins of practically the whole of his philosophy in so far as it is not Cabalistic. It is evident from his writings that he had a considerable knowledge of Hermetic literature.[29] Like all medieval alchemists he seems not to have been aware of the true nature of alchemy, although the refusal of the Basel printer Conrad Waldkirch, at the end of the sixteenth century, to print the first part of *Aurora consurgens* (a treatise falsely ascribed to St. Thomas Aquinas) on account of its “blasphemous character”[30] shows that the dubious nature of alchemy was apparent even to a layman. To me it seems certain that Paracelsus was completely naïve in these matters and, intent only on the welfare of the sick, used alchemy primarily for its practical value regardless of its murky background. Consciously, alchemy for him meant a knowledge of the *materia medica* and a chemical procedure for preparing medicaments, above all the well-loved arcana, the secret remedies. He also believed that one could make gold and engender homunculi.[31] This aspect of it was so predominant that one is inclined to

forget that alchemy meant very much more to him than that. We know this from a brief remark in the *Paragranum*, where he says that the physician himself is “ripened” by the art.[32] This sounds as though the alchemical maturation should go hand in hand with the maturation of the physician. If we are not mistaken in this assumption, we must further conclude that Paracelsus not only was acquainted with the arcane teachings of alchemy but was convinced of their rightness. It is of course impossible to prove this without detailed investigation, for the esteem which he expressed for alchemy throughout his writings might in the end refer only to its chemical aspect. This special predilection of his made him a forerunner and inaugurator of modern chemical medicine. Even his belief in the transmutation of metals and in the *lapis philosophorum*, which he shared with many others, is no evidence of a deeper affinity with the mystic background of the *ars aurifera.* And yet such an affinity is very probable since his closest followers were found among the alchemical physicians.[33]

C. THE ARCANE TEACHING

[159] In the course of our inquiry we shall have to scrutinize more closely the arcane teaching of alchemy, which is so important for an understanding of the spiritual side of Paracelsus. I must ask the reader to forgive me in advance for putting his attention and patience to such a severe test. The subject is abstruse and wrapped in obscurity, but it constitutes an essential part of the Paracelsan spirit and exerted a profound influence on Goethe, so much so that the impressions he gained in his Leipzig days continued to engross him even in old age: indeed, they formed the matrix for *Faust.*

[160] When one reads Paracelsus, it is chiefly the technical neologisms that seem to give out mysterious hints. But when one tries to establish their etymology and their meaning, as often as not one ends up in a blind alley. For instance, one can guess that “Iliaster” or “Yliastrum” is composed etymologically of ὗλη (matter) and ἀστόρ (star), and that it means about the same as the *spiritus vitae* of classical alchemy, or that “Cagastrum” is connected with κακὸς (bad) and ἀστήρ, or that “Anthos” and “Anthera” are embellishments of the alchemical *flores*. Even his philosophical

concepts, such as the doctrine of the *astrum*, only lead us back to the known alchemical and astrological tradition, from which we can see that his doctrine of the *corpus astrale* was not a new discovery. We find this idea already in an old classic, the “Tractatus Aristotelis,” where it is said that the “planets in man” have a more powerful influence than the heavenly bodies;[34] and when Paracelsus says that the medicine is found in the *astrum*, we read in the same treatise that “in man, who is made in the image of God, can be found the cause and the medicine.”

[161] But that other pivot of Paracelsus’s teaching, his belief in the light of nature, allows us to surmise connections which illuminate the obscurities of his *religio medica*. The light hidden in nature and particularly in human nature likewise belongs to the stock of ancient alchemical ideas. Thus the “Tractatus Aristotelis” says: “See therefore that the light which is in thee be not darkness.” The light of nature is indeed of great importance in alchemy. Just as, according to Paracelsus, it enlightens man as to the workings of nature and gives him an understanding of natural things “by cagastric magic” (*per magiam cagastricam*),[35] so it is the aim of alchemy to beget this light in the shape of the *filius philosophorum*. An equally ancient treatise of Arabic provenance attributed to Hermes,[36] the “Tractatus aureus,” says (Mercurius is speaking): “My light excels all other lights, and my goods are higher than all other goods. I beget the light, but the darkness too is of my nature. Nothing better or more worthy of veneration can come to pass in the world than the union of myself with my son.”[37] In the “Dicta Belini” (Belinus is a pseudo-Apollonius of Tyana) Mercurius says: “I enlighten all that is mine, and I make the light manifest on the journey from my father Saturn.”[38] “I make the days of the world eternal, and I illumine all lights with my light.”[39] Another author says of the “chymical marriage” from which arises the *filius philosophorum:* “They embrace and the new light is begotten of them, which is like no other light in the whole world.”[40]

[162] This idea of the light, with Paracelsus as with other alchemists, coincides with the concept of Sapientia and Scientia. We can safely call the light the central mystery of philosophical alchemy. Almost always it is personified as the *filius*, or is at least mentioned as one of his

outstanding attributes. It is a δαιμόνιον pure and simple. Often the texts refer to the need for a familiar spirit who should help the adept at his work. The Magic Papyri do not hesitate to enlist the services even of the major gods.[41] The *filius* remains in the adept's power. Thus the treatise of Haly, king of Arabia, says: "And that son . . . shall serve thee in thy house in this world and in the next."[42] Long before Paracelsus, as I have said, this *filius* was equated with Christ. The parallel comes out very clearly in the sixteenth-century German alchemists who were influenced by Paracelsus. For instance, Heinrich Khunrath says: "This [the *filius philosophorum*], the Son of the Macrocosm, is God and creature . . . that [Christ], is the son of God, the θεάνθρωπος, that is, God and man; the one conceived in the womb of the Macrocosm, the other in the womb of the Microcosm, and both of a virginal womb. . . . Without blasphemy I say: In the Book or Mirror of Nature, the Stone of the Philosophers, the Preserver of the Macrocosm, is the symbol of Christ Jesus Crucified, Saviour of the whole race of men, that is, of the Microcosm. From the stone you shall know in natural wise Christ, and from Christ the stone."[43]

[163] To me it seems certain that Paracelsus was just as unconscious of the full implications of these teachings as Khunrath was, who also believed he was speaking "without blasphemy." But in spite of this unconsciousness they were of the essence of philosophical alchemy,[44] and anyone who practised it thought, lived, and acted in the atmosphere of these teachings, which perhaps had an all the more insidious effect the more naïvely and uncritically one succumbed to them. The "natural light of man" or the "star in man" sounds harmless enough, so that none of the authors had any notion of the possibilities of conflict that lurked within it. And yet that light or *filius philosophorum* was openly named the greatest and most victorious of all lights, and set alongside Christ as the Saviour and Preserver of the world! Whereas in Christ God himself became man, the *filius philosophorum* was extracted from matter by human art and, by means of the opus, made into a new light-bringer. In the former case the miracle of man's salvation is accomplished by God; in the latter, the salvation or transfiguration of the universe is brought about by the mind of man—"Deo concedente," as the authors never fail to add. In the one case man confesses "I under God," in the other he asserts "God under

me.” Man takes the place of the Creator. Medieval alchemy prepared the way for the greatest intervention in the divine world order that man has ever attempted: alchemy was the dawn of the scientific age, when the daemon of the scientific spirit compelled the forces of nature to serve man to an extent that had never been known before. It was from the spirit of alchemy that Goethe wrought the figure of the “superman” Faust, and this superman led Nietzsche’s Zarathustra to declare that God was dead and to proclaim the will to give birth to the superman, to “create a god for yourself out of your seven devils.”[45] Here we find the true roots, the preparatory processes deep in the psyche, which unleashed the forces at work in the world today. Science and technology have indeed conquered the world, but whether the psyche has gained anything is another matter.

[164] Paracelsus’s preoccupation with alchemy exposed him to an influence that left its mark on his spiritual development. The inner driving-force behind the aspirations of alchemy was a presumption whose daemonic grandeur on the one hand and psychic danger[46] on the other should not be underestimated. Much of the overbearing pride and arrogant self-esteem, which contrasts so strangely with the truly Christian humility of Paracelsus, comes from this source. What erupted like a volcano in Agrippa von Nettesheim’s “himself demon, hero, God” remained, with Paracelsus, hidden under the threshold of a Christian consciousness and expressed itself only indirectly in exaggerated claims and in his irritable self-assertiveness, which made him enemies wherever he went. We know from experience that such a symptom is due to unadmitted feelings of inferiority, i.e., to a real failing of which one is usually unconscious. In each of us there is a pitiless judge who makes us feel guilty even if we are not conscious of having done anything wrong. Although we do not know what it is, it is as though it were known somewhere. Paracelsus’s desire to help the sick at all costs was doubtless quite pure and genuine. But the magical means he used, and in particular the secret content of alchemy, were diametrically opposed to the spirit of Christianity. And that remained so whether Paracelsus was aware of it or not. Subjectively, he was without blame; but that pitiless judge condemned him to feelings of inferiority that clouded his life.

D. THE PRIMORDIAL MAN

[165] This crucial point, namely the arcane doctrine of the marvellous son of the philosophers, is the subject of unfriendly but perspicacious criticism by Conrad Gessner. Apropos the works of a pupil of Paracelsus, Alexander à Suchten,[47] he writes to Crato: “But look who it is whom he reveals to us as the son of God, namely none other than the spirit of the world and of nature, and the same who dwells in our bodies (it is a wonder that he does not add the spirit of the ox and the ass!). This spirit can be separated from matter or from the body of the elements by the technical procedures of the Theophrastus school. If anyone were to take him at his word, he would say that he had merely voiced a principle of the philosophers, but not his own opinion. He repeats it, however, in order to express his agreement. And I know that other Theophrastians besmirch such things with their writings, from which it is easy to conclude that they deny the divinity of Christ. I myself am entirely convinced that Theophrastus has been an Arian. They endeavour to persuade us that Christ was a quite ordinary man, and that in him was no other spirit than in us.”[48]

[166] Gessner’s charge against the Theophrastus school and against the Master himself applies to alchemy in general. The extraction of the world soul from matter was not a peculiarity of Paracelsan alchemy. But the charge of Arianism is unjustified. It was obviously prompted by the well-known parallel between the *filius philosophorum* and Christ, though so far as I know this nowhere occurs in Paracelsus’s own writings. On the other hand, in a treatise called “Apokalypsis Hermetis,” ascribed by Huser to Paracelsus, there is a complete alchemical confession of faith which lends Gessner’s charge a certain weight. There Paracelsus says of the “spirit of the fifth essence”: “This is the spirit of truth, whom the world cannot comprehend without the inspiration of the Holy Ghost, or without the instruction of those who know him.”[49] “He is the soul of the world,” moving all and preserving all. In his initial earthly form (that is, in his original Saturnine darkness) he is unclean, but he purifies himself progressively during the ascent through his watery, aerial, and fiery forms. Finally, in the fifth essence, he appears as the “clarified body.”[50]

“This spirit is the secret that has been hidden since the beginning of things.”

[167] Paracelsus is speaking here as a true alchemist. Like his pupils, he draws the Cabala, which had been made accessible to the world at large through Pico della Mirandola and Agrippa, into the scope of his alchemical speculations. “All you who are led by your religion to prophesy future events and to interpret the past and the present to people, you who see abroad and read hidden letters and sealed books, who seek in the earth and in walls for what is buried, you who learn great wisdom and art—bear in mind if you wish to apply all these things, that you take to yourselves the religion of the Gabal and walk in its light, for the Gabal is well-founded. Ask and it will be granted to you, knock, you will be heard and it will be opened unto you. From this granting and opening there will flow what you desire: you will see into the lowest depths of the earth, into the depths of hell, into the third heaven. You will gain more wisdom than Solomon, you will have greater communion with God than Moses and Aaron.”[51]

[168] Just as the wisdom of the Cabala coincided with the Sapientia of alchemy, so the figure of Adam Kadmon was identified with the *filius philosophorum*. Originally this figure may have been the ἄνθρωπος φωτεινός, the “man of light” who was imprisoned in Adam, and whom we encounter in Zosimos of Panopolis (third century).[62] But the man of light is an echo of the pre-Christian doctrine of the Primordial Man. Under the influence of Marsilio Ficino and Pico della Mirandola, these and other Neoplatonic ideas had already become popularized in the fifteenth century and were known to nearly every educated person. In alchemy they fell in with the remnants of classical tradition. Besides this there were the views of the Cabala, which had been philosophically assessed by Pico.[53] He and Agrippa[54] were probably the sources for Paracelsus’s somewhat scanty knowledge of the Cabala. For Paracelsus the Primordial Man was identical with the “astral” man: “The true man is the star in us.”[55] “The star desires to drive man towards great wisdom.”[56] In his *Paragranum* he says: “For heaven is man and man is heaven, and all men are one heaven, and heaven is only one man.”[57] Man stands in the relationship of a son to the inner heaven,[58] which is the Father, whom

Paracelsus calls the *homo maximus*[59] or Adech,[60] an arcane name derived from Adam. Elsewhere he is called Archeus: “He is therefore similar to man and consists of the four elements and is an Archeus and is composed of four parts; say then, he is the great Cosmos.”[61] Undoubtedly this is the Primordial Man, for Paracelsus says: “In the whole Ides there is but One Man, the same is extracted by the Iliastrum[62] and is the Protoplast.” Ides or Ideus is “the gate through which all created things have proceeded,” the “globule or materia” from which man was created.[63] Other secret names for the Primordial Man are Idechtrum[64] and Protothoma.[63] The number of names alone shows how preoccupied Paracelsus was with this idea. The ancient teachings about the Anthropos or Primordial Man assert that God, or the world-creating principle, was made manifest in the form of a “first-created” (*protoplastus*) man, usually of cosmic size. In India he is Prajāpati or Purusha, who is also “the size of a thumb” and dwells in the heart of every man, like the Iliaster of Paracelsus. In Persia he is Gayomart (*gayō-maretan*, ‘mortal life’), a youth of dazzling whiteness, as is also said of the alchemical Mercurius. In the *Zohar* he is Metatron, who was created together with light. He is the celestial man whom we meet in the visions of Daniel, Ezra, Enoch, and also in Philo Judaeus. He is one of the principal figures in Gnosticism, where, as always, he is connected with the question of creation and redemption.[66] This is the case with Paracelsus.

2. “DE VITA LONGA”: AN EXPOSITION OF THE SECRET DOCTRINE

[169] The treatise *De vita longa*,[1] difficult as it is to understand in parts, gives us some information on this point, though we have to extricate it with an effort from the arcane terminology in which it is embedded. The treatise is one of the few that were written in Latin; the style is exceedingly strange, but all the same it contains so many significant hints that it is worth investigating more closely. Adam von Bodenstein, who edited it, says in a dedicatory letter[2] to Ludwig Wolfgang von Hapsberg, governor of Badenweiler, that it was “taken down from the mouth of Paracelsus and carefully revised.” The obvious inference is that the treatise is based on notes of Paracelsus’s lectures and is not an original text. As Bodenstein himself wrote fluent and easily understandable Latin, quite unlike that of the treatise, one must assume that he did not devote any particular attention to it and made no effort to put it into more intelligible form, otherwise much more of his own style would have crept in. Probably he left the lectures more or less in their original state, as is particularly apparent towards the end. It is also likely that he had no very clear understanding of what they were about, any more than had the supposed translator Oporin. This is not surprising, as the Master himself all too often lacks the necessary clarity when discussing these complicated matters. Under these circumstances it is difficult to say how much should be put down to incomprehension and how much to undisciplined thinking. Nor is the possibility of actual errors in transcription excluded.[3] In our interpretation, therefore, we are on uncertain ground from the start, and much must remain conjecture. But as Paracelsus, for all his originality, was strongly influenced by alchemical thinking, a knowledge of the earlier and contemporary alchemical treatises, and of the writings of his pupils and followers, is of considerable help in interpreting some of the concepts and in filling out

certain gaps. An attempt to comment on and to interpret the treatise, therefore, is not entirely hopeless, despite the admitted difficulties.

A. THE ILIASTER

[170] The treatise is mainly concerned with the conditions under which longevity, which in Paracelsus's opinion extends up to a thousand years or more, can be attained. In what follows I shall give chiefly the passages that relate to the secret doctrine and are of help in explaining it.[4] Paracelsus starts by giving a definition of life, as follows: "Life, by Hercules, is nothing other than a certain embalsamed Mumia, which preserves the mortal body from the mortal worms and from corruption[5] by means of a mixed saline solution." Mumia was well known in the Middle Ages as a medicament, and it consisted of the pulverized parts of real Egyptian mummies, in which there was a flourishing trade. Paracelsus attributes incorruptibility to a special virtue or agent named "balsam." This was something like a natural elixir, by means of which the body was kept alive or, if dead, incorruptible.[6] By the same logic, a scorpion or venomous snake necessarily had in it an alexipharmic, i.e., an antidote, otherwise it would die of its own poison.

[171] Paracelsus goes on to discuss a great many arcane remedies, since diseases shorten life and have above all to be cured. The chief among these remedies are gold and pearls, which latter can be transformed into the *quinta essentia*. A peculiar potency is attributed to *Cheyri*,[7] which fortifies the microcosmic body so much that it "must necessarily continue in its conservation through the universal anatomy of the four elements."[8] Therefore the physician should see to it that the "anatomy" (= structure) of the four elements "be contracted into the one anatomy of the microcosm, not out of the corporeal, but out of that which preserves the corporeal." This is the balsam, which stands even higher than the *quinta essentia*, the thing that ordinarily holds the four elements together. It "excels even nature herself" because it is produced by a "bodily operation."[9] The idea that the art can make something higher than nature is typically alchemical. The balsam is the life principle, the *spiritus mercurii*, and it more or less coincides with the Paracelsan concept of the Iliaster. The latter is higher than the four elements and determines the length of life. It is therefore roughly the same as the balsam, or one could

say that the balsam is the pharmacological or chemical aspect of the Iliaster.[10] The Iliaster has three forms: *Iliaster sanctitus*,[11] *paratetus*,[12] and *magnus*. They are subordinate to man ("microcosmo subditi") and can be brought "into one gamonymus." Since Paracelsus attributes a special "vis ac potestas coniunctionis" to the Iliaster, this enigmatic "gamonymus" (γάμος = marriage, ὄνομα = name) must be interpreted as a kind of chymical wedding, in other words as an indissoluble, hermaphroditic union.[13] There are as many Iliastri as there are men; that is to say in every man there is an Iliaster that holds together each individual's peculiar combination of qualities.[14] It therefore seems to be a kind of universal formative principle and principle of individuation.

B. THE AQUASTER

[172] The Iliaster forms the starting point for the arcane preparation of longevity. "We will explain what is most needful in this process regarding the Iliaster. In the first place, the impure animate body must be purified through the separation of the elements, which is done by your meditating upon it; this consists in the confirmation of your mind beyond all bodily and mechanic work."[15] In this way a "new form is impressed" on the impure body.

[173] I have translated *imaginatio* here by "meditating." In the Paracelsist tradition *imaginatio* is the active power of the *astrum* (star) or *corpus coeleste sive supracoeleste* (Ruland), that is, of the higher man within. Here we encounter the psychic factor in alchemy: the artifex accompanies his chemical work with a simultaneous mental operation which is performed by means of the imagination. Its purpose is to cleanse away the impure admixture and at the same time to bring about the "confirmation" of the mind. The Paracelsan neologism *confirmamentum* is probably not without reference to the "firmament." During this work man is "raised up in his mind, so that he is made equal to the Enochdiani" (those who enjoy an unusually long life, like Enoch).[16] Hence his "interior anatomy" must be heated to the highest degree.[17] In this way the impurities are consumed and only the solid is left, "without rust." While the artifex heats the chemical substance in the furnace he

himself is morally undergoing the same fiery torment and purification.[18] By projecting himself into the substance he has become unconsciously identical with it and suffers the same process. Paracelsus does not fail to point out to his reader that this fire is not the same as the fire in the furnace. This fire, he says, contains nothing more of the "Salamandrine Essence or Melusinian Ares," but is rather a "*retorta distillatio* from the midst of the centre, beyond all coal fire." Since Melusina is a watery creature, the "Melusinian Ares"[19] refers to the so-called "Aquaster,"[20] which stands for the watery aspect of the Iliaster, i.e., the Iliaster which animates and preserves the liquids in the body. The Iliaster is without doubt a spiritual, invisible principle although it is also something like the prima materia, which, however, in alchemical usage by no means corresponds to what we understand by matter. For the alchemists the prima materia was the *humidum radicale* (radical moisture),[21] the water,[22] the *spiritus aquae,*[23] and *vapor terrae;*[24] it was also called the "soul" of the substances,[25] the *sperma mundi,*[26] Adam's tree of paradise with its many flowers, which grows on the sea,[27] the round body from the centre,[28] Adam and the accursed man,[29] the hermaphroditic monster,[30] the One and the root of itself,[31] the All,[32] and so on. The symbolical names of the prima materia all point to the *anima mundi*, Plato's Primordial Man, the Anthropos and mystic Adam, who is described as a sphere (= wholeness), consisting of four parts (uniting different aspects in itself), hermaphroditic (beyond division by sex), and damp (i.e., psychic). This paints a picture of the self, the indescribable totality of man.

[174] The Aquaster, too, is a spiritual principle; for instance, it shows the adept the "way by which he can search out divine magic." The adept himself is an "aquastric magician." The "scayolic[33] Aquaster" shows him the "great cause" with the help of the *Trarames* (ghostly spirits). Christ took his body from the celestial Aquaster, and the body of Mary was "necrocomic"[34] and "aquastric." Mary "came from the iliastric Aquaster." There, Paracelsus emphasizes, she stood on the moon (the moon is always related to water). Christ was born in the celestial Aquaster. In the human skull there is an "aquastric fissure," in men on the forehead, in women at the back of the head. Through this fissure women

are liable to be invaded in their “cagastric” Aquaster by a crowd of diabolical spirits; but men, through their fissure, give birth, “not cagastrically but necrocomically, to the necrocomic *Animam vel spiritum vitae microcosmi*, the iliastric spirit of life in the heart.” In the “centre of the heart dwells the true soul, the breath of God.”[35]

[175] From these quotations it is easy to see what the Aquaster means. Whereas the Iliaster seems to be a dynamic spiritual principle, capable of both good and evil, the Aquaster, because of its watery nature, is more a “psychic” principle with quasimaterial attributes (since the bodies of Christ and Mary partook of it). But it functions psychically as a “necrocomic” (i.e., telepathic) agent related to the spiritual world, and as the birthplace of the *spiritus vitae.* Of all the Paracelsan concepts, therefore, the Aquaster comes closest to the modern concept of the unconscious. So we can see why Paracelsus personifies it as the homunculus and describes the soul as the celestial Aquaster. Like a true alchemist, he thought of the Aquaster and Iliaster as extending both upwards and downwards: they assume a spiritual or heavenly form as well as a quasi-material or earthly one. This is in keeping with the axiom from “Tabula smaragdina”: “What is below is like what is above, that the miracle of the one thing may be accomplished.” This one thing is the lapis or *filius philosophorum.*[36] As the definitions and names of the prima materia make abundantly plain, matter in alchemy is material and spiritual, and spirit spiritual and material. Only, in the first case matter is *cruda*, *confusa*, *grossa*, *crassa*, *densa*, and in the second it is *subtilis*. Such, too, is the opinion of Paracelsus.

C. ARES

[176] Rather superficially, Adam von Bodenstein conceives “Ares” to be the “prime nature of things, determining their form and species.”[37] Ruland lumps it together with the Iliaster and Archeus. But whereas the Iliaster is the hypostasis of being in general (“generis generalissimi substantia”), Archeus is given the role of a “dispenser of nature” (*naturae dispensator*) and “initiator.” Ares, however, is the “assigner, who extends the peculiar nature to each species, and gives individual form.”[38] It can

therefore be taken as the principle of individuation in the strict sense. It proceeds from the supracelestial bodies, for "such is the property and nature of supracelestial bodies that they straightway produce out of nothing a corporeal imagination [*imaginationem corporalem*], so as to be thought a solid body. Of this kind is Ares, so that when one thinks of a wolf, a wolf appears.[39] This world is like the creatures composed of the four elements. From the elements arise things which are in no way like their origins, but nonetheless Ares bears them all in himself."[40]

[177] Ares, accordingly, is an intuitive concept for a preconscious, creative, and formative principle which is capable of giving life to individual creatures. It is thus a more specific principle of individuation than the Iliaster, and as such it plays an important role in the purification of the natural man by fire and his transformation into an "Enochdianus." The fire he is heated with is, as we have seen, no ordinary fire, since it does not contain either the "Melusinian Ares" or the "Salamandrine Essence." The salamander symbolizes the fire of the alchemists. It is itself of the nature of fire, a fiery essence. According to Paracelsus, Salamandrini and Saldini are men or spirits of fire, fiery beings. It is an old tradition that, because they have proved their incorruptibility in the fire, such creatures enjoy a particularly long life. The salamander is also the "incombustible sulphur"—another name for the arcane substance from which the lapis or *filius* is produced. The fire for heating the artifex contains nothing more of the nature of the salamander, which is an immature, transitional form of the *filius*, that incorruptible being whose symbols indicate the self.

[178] Paracelsus endows Ares with the attribute "Melusinian." Since Melusina undoubtedly belongs to the watery realm, the realm of the nymphs, this attribute imports a watery character into the concept of Ares, which in itself is spiritual. Ares is thus brought into relationship with the lower, denser region and is intimately connected with the body. As a result, Ares becomes so like the Aquaster that it is scarcely possible to distinguish them conceptually. It is characteristic of Paracelsan thinking, and of alchemy in general, that there are no clear-cut concepts, so that one concept can take the place of another *ad infinitum*. At the same time every concept behaves hypostatically, as though it were a substance that could not at the same time be another substance. This

typical primitive phenomenon is found also in Indian philosophy, which swarms with hypostases. Examples of this are the myths of the gods, which, as in Greek and Egyptian mythology, make utterly contradictory statements about the same god. Despite their contradictions, however, the myths continue to exist side by side without disturbing one another.

D. MELUSINA

[179] As we shall meet with Melusina several times more in the course of our interpretation, we must examine more closely the nature of this fabulous creature, and in particular the role she plays in Paracelsus. As we know, she belongs to the realm of the Aquaster, and is a water-nymph with the tail of a fish or snake. In the original old French legend she appears as “mère Lusine,” the ancestress of the counts of Lusignan. When her husband once surprised her in her fish-tail, which she had to wear only on Saturdays, her secret was out and she was forced to disappear again into the watery realm. She reappeared only from time to time, as a presage of disaster.

[180] Melusina comes into the same category as the nymphs and sirens who dwell in the “Nymphidida,” the watery realm.[41] In the treatise “De sanguine,”[42] the nymph is specified as a *Schröttli*, ‘nightmare.’ Melusines, on the other hand, dwell in the blood.[43] Paracelsus tells us in “De pygmaeis”[44] that Melusina was originally a nymph who was seduced by Beelzebub into practising witchcraft. She was descended from the whale in whose belly the prophet Jonah beheld great mysteries. This derivation is very important: the birthplace of Melusina is the womb of the mysteries, obviously what we today would call the unconscious. Melusines have no genitals,[45] a fact that characterizes them as paradisal beings, since Adam and Eve in paradise had no genitals either.[46]’ Moreover paradise was then beneath the water “and still is.”[47] When the devil glided into the tree of paradise the tree was “saddened,” and Eve was seduced by the “infernal basilisk.”[48] Adam and Eve “fell for” the serpent and became “monstrous,” that is, as a result of their slip-up with the snake they acquired genitals.[49] But the Melusines remained in the paradisal state as water creatures and went on living in the human blood.

Since blood is a primitive symbol for the soul,[50] Melusina can be interpreted as a spirit, or at any rate as some kind of psychic phenomenon. Gerard Dorn confirms this in his commentary on *De vita longa*, where he says that Melusina is a “vision appearing in the mind.”[51] For anyone familiar with the subliminal processes of psychic transformation, Melusina is clearly an anima figure. She appears as a variant of the mercurial serpent, which was sometimes represented in the form of a snake-woman[52] by way of expressing the monstrous, double nature of Mercurius. The redemption of this monstrosity was depicted as the assumption and coronation of the Virgin Mary.[53]

E. THE FILIUS REGIUS AS THE ARCANE SUBSTANCE (MICHAEL MAIER)

[181] It is not my intention to enter more closely into the relations between the Paracelsan Melusines and the mercurial serpent. I only wish to point out the alchemical prototypes that may have had an influence on Paracelsus, and to suggest that the longing of Melusina for a soul and for redemption has a parallel in that kingly substance which is hidden in the sea and cries out for deliverance. Of this *filius regius* Michael Maier says:[54] “He lives and calls from the depths:[55] Who shall deliver me from the waters and lead me to dry land? Even though this cry be heard of many, yet none takes it upon himself, moved by pity, to seek the king. For who, they say, will plunge into the waters? Who will imperil his life by taking away the peril of another? Only a few believe his lament, and think rather that they hear the crashing and roaring of Scylla and Charybdis. Therefore they remain sitting indolently at home, and give no thought to the kingly treasure, nor to their own salvation.”

[182] We know that Maier can have had no access to the *Philosophumena* of Hippolytus, long believed lost, and yet it might well have served him as a model for the king’s lament. Treating of the mysteries of the Naassenes, Hippolytus says: “But what that form is which comes down from above, from the Uncharacterized [*ἀχαρακτηρίστου*], no man knows. It is found in earthly clay, and yet none recognize it. But that is the god who dwells in the great flood.[58] In the Psalter he calls and cries out from many waters.[57] The many waters, they say, are the multitude of mortal

men, whence he calls and cries aloud to the uncharacterized Man:[58] Save mine Only-Begotten[59] from the lions."[60] And he receives the reply [Isaiah 43 : 1ff.]: "And now thus saith the Lord that created thee, O Jacob, and formed thee, O Israel: Fear not, for I have redeemed thee, and called thee by thy name. Thou art mine. When thou shalt pass through the waters, I will be with thee, and the rivers shall not cover thee. When thou shalt walk through the fire, thou shalt not be burnt, and the flames shall not burn in thee." Hippolytus goes on to quote Psalm 23 : 7ff., (DV), referring it to the ascent (*ἄνοδος*) or regeneration (*ἀναγέννησις*) of Adam: "Lift up your gates, O ye princes, and be ye lifted up, O eternal gates, and the King of Glory shall enter in. Who is this King of Glory? The Lord who is strong and mighty, the Lord mighty in battle. . . . But who, say the Naassenes, is this King of Glory? A worm and no man, the reproach of men and the outcast of the people."[61]

[183] It is not difficult to see what Michael Maier means. For him the *filius regius* or *Rex marinus*, as is evident from a passage in the text not quoted here, means antimony,[62] though in his usage it has only the name in common with the chemical element. In reality it is the secret transformative substance, which fell from the highest place into the darkest depths of matter where it awaits deliverance. But no one will plunge into these depths in order, by his own transformation in the darkness and by the torment of fire, to rescue his king. They cannot hear the voice of the king and think it is the chaotic roar of destruction. The sea (*mare nostrum*) of the alchemists is their own darkness, the unconscious. In his way, Epiphanius[63] correctly interpreted the "mire of the deep" (*limus profundi*) as "matter born of the mind, smutty reflections and muddy thoughts of sin." Therefore David in his affliction had said (Psalm 68 : 3, DV): "I stick fast in the mire of the deep." For the Church Father these dark depths could only be evil itself, and if a king got stuck in them it was on account of his own sinfulness. The alchemists took a more optimistic view: the dark background of the soul contains not only evil but a king in need of, and capable of, redemption, of whom the *Rosarium* says: "At the end of the work the king will go forth for thee, crowned with his diadem, radiant as the sun, shining like the carbuncle . . . constant in the fire."[64] And of the worthless prima materia they say:

“Despise not the ash, for it is the diadem of thy heart, and the ash of things that endure.”[65]

[184] These quotations give one an idea of the mystic aura that surrounded the figure of the *filius regius,* and I do not think it superfluous to have drawn attention to that distant period when the central ideas of philosophical alchemy were being freely discussed by the Gnostics. Hippolytus gives us perhaps the most complete insight into their analogical thinking, which is akin to that of the alchemists. Anyone who came into contact with alchemy during the first half of the sixteenth century could not fail to feel the fascination of these Gnostic ideas. Although Maier lived and wrote more than seventy years after Paracelsus, and we have no reason to suppose that Paracelsus was acquainted with the heresiologists, his knowledge of the alchemical treatises, and particularly of Hermes [Fig. B6] which he so often quotes, would have sufficed to impress upon him the figure of the *filius regius* and also that of the much lauded Mater Natura—a figure not entirely in accord with the views of Christianity. Thus the “Tractatus aureus Hermetis” says: “O mightiest nature of the natures, who containest and separatest the midmost of the natures, who comest with the light and art born with the light, who hast given birth to the misty darkness, who art the mother of all beings!”[66] This invocation echoes the classical feeling for nature, and its style is reminiscent of the oldest alchemical treatises, such as those of pseudo-Democritus, and of the Greek Magic Papyri. In this same treatise we encounter the *Rex coronatus* and *filius noster rex genitus,* of whom it is said: “For the son is a blessing and possesses wisdom. Come hither, ye sons of the wise, and let us be glad and rejoice, for death is overcome, and the son reigns; he is clothed with the red garment, and the purple [*chermes*] is put on.” He lives from “our fire,” and nature “nourishes him who shall endure for ever” with a “small fire.” When the son is brought to life by the opus, he becomes a “warrior fire” or a “fighter of fire.”[67]

F. THE PRODUCTION OF THE ONE, OR CENTRE, BY DISTILLATION

[185] After this discussion of some of the basic concepts of alchemy, let us come back to the Paracelsan process of transforming the Iliaster. Paracelsus calls this process a *retorta distillatio.* The purpose of distillation in alchemy was to extract the volatile substance, or spirit, from the impure body. This process was a psychic as well as a physical experience. The *retorta distillatio* is not a known technical term, but presumably it meant a distillation that was in some way turned back upon itself. It might have taken place in the vessel called the Pelican [Fig. B7], where the distillate runs back into the belly of the retort. This was the "circulatory distillation," much favoured by the alchemists. By means of the "thousandfold distillation" they hoped to achieve a particularly "refined" result.[68] It is not unlikely that Paracelsus had something like this in mind, for his aim was to purify the human body to such a degree that it would finally unite with the *maior homo*, the inner spiritual man, and partake of his longevity. As we have remarked, this was not an ordinary chemical operation, it was essentially a psychological procedure. The fire to be used was a symbolical fire, and the distillation had to start "from the midst of the centre" (*ex medio centri*).

[186] The accentuation of the centre is again a fundamental idea in alchemy. According to Michael Maier, the centre contains the "indivisible point," which is simple, indestructible, and eternal. Its physical counterpart is gold, which is therefore a symbol of eternity.[69] In Christianos the centre is compared to paradise and its four rivers. These symbolize the philosophical fluids (*ὑγρά*), which are emanations from the centre.[70] "In the centre of the earth the seven planets took root, and left their virtues there, wherefore in the earth is a germinating water," says *Aurora consurgens*.[71] Benedictus Figulus[72] writes:

> Visit the centre of the earth,
> There you will find the global fire.
> Rectify it of all dirt,
> Drive it out with love and ire. . . .

He calls this centre the "house of fire" or "Enoch," obviously borrowing the latter term from Paracelsus. Dorn says that nothing is more like God than the centre, for it occupies no space, and cannot be grasped, seen, or measured. Such, too, is the nature of God and the spirits. Therefore the centre is “an infinite abyss of mysteries.”[73] The fire that originates in the centre carries everything upward, but when it cools everything falls back again to the centre. “The physiochemists call this movement circular, and they imitate it in their operations.” At the moment of culmination, just before the descent, the elements “conceive the male seeds of the stars,” which enter into the elemental matrices (i.e., the non-sublimated elements) during the descent. Thus all created things have four fathers and four mothers. The conception of the seeds results from the “influxum et impressionem” of Sol and Luna, who thus function as nature gods, though Dorn does not say this quite as clearly.[74]

[187] The creation of the elements and their ascent to heaven through the force of the fire serve as a model for the spagyric process. The lower waters, cleansed of their darkness, must be separated from the celestial waters by a carefully regulated fire. “In the end it will come to pass that this earthly, spagyric foetus clothes itself with heavenly nature by its ascent, and then by its descent visibly puts on the nature of the centre of the earth, but nonetheless the nature of the heavenly centre which it acquired by the ascent is secretly preserved.”[75] The spagyric birth (*spagirica foetura*) is nothing other than the *filius philosophorum*, the inner, eternal man in the shell of the outer, mortal man. The *filius* is not only a panacea for all bodily defects, it also conquers the “subtle and spiritual sickness in the human mind.” “For in the One,” says Dorn,[76] “is the One and yet not the One; it is simple and consists of the number four. When this is purified by the fire in the sun,[77] the pure water[78] comes forth, and, having returned to simplicity,[79] it [the quaternity as unity] will show the adept the fulfilment of the mysteries. This is the centre of the natural wisdom, whose circumference, closed in itself, forms a circle: an immeasurable order reaching to infinity.” “Here is the number four, within whose bounds the number three, together with the number two combined into One, fulfils all things, which it does in miraculous wise.” In these relations between four, three, two, and one is found, says Dorn, the “culmination of all knowledge and of the mystic art, and the infallible midpoint of the centre (*infallibile medii centrum*).”[80] The One is the midpoint of the circle, the centre of the triad, and it is also the “novenary

foetus" (*foetus novenarius*), i.e., it is as the number nine to the ogdoad, or as the quintessence to the quaternity.[31]

[188] The midpoint of the centre is fire. On it is modelled the simplest and most perfect form, which is the circle. The point is most akin to the nature of light,[82] and light is a *simulacrum Dei.*[83] Just as the firmament was created in the midst of the waters above and below the heavens, so in man there is a shining body, the radical moisture, which comes from the sphere of the heavenly waters.[84] This body is the "sidereal balsam," which maintains the animal heat. The spirit of the supracelestial waters has its seat in the brain, where it controls the sense organs. In the microcosm the balsam dwells in the heart,[85] like the sun in the macrocosm. The shining body is the *corpus astrale*, the "firmament" or "star" in man. Like the sun in the heavens, the balsam in the heart is a fiery, radiant centre. We meet this solar point in the *Turba*,[86] where it signifies the "germ of the egg, which is in the yolk, and that germ is set in motion by the hen's warmth." The "Consilium coniugii" says that in the egg are the four elements and the "red sun-point in the centre, and this is the young chick."[87] Mylius interprets this chick as the bird of Hermes,[88] which is another synonym for the mercurial serpent.

[189] From this context we can see that the *retorta distillatio ex medio centri* results in the activation and development of a psychic centre, a concept that coincides psychologically with that of the self.

G. THE CONIUNCTIO IN THE SPRING

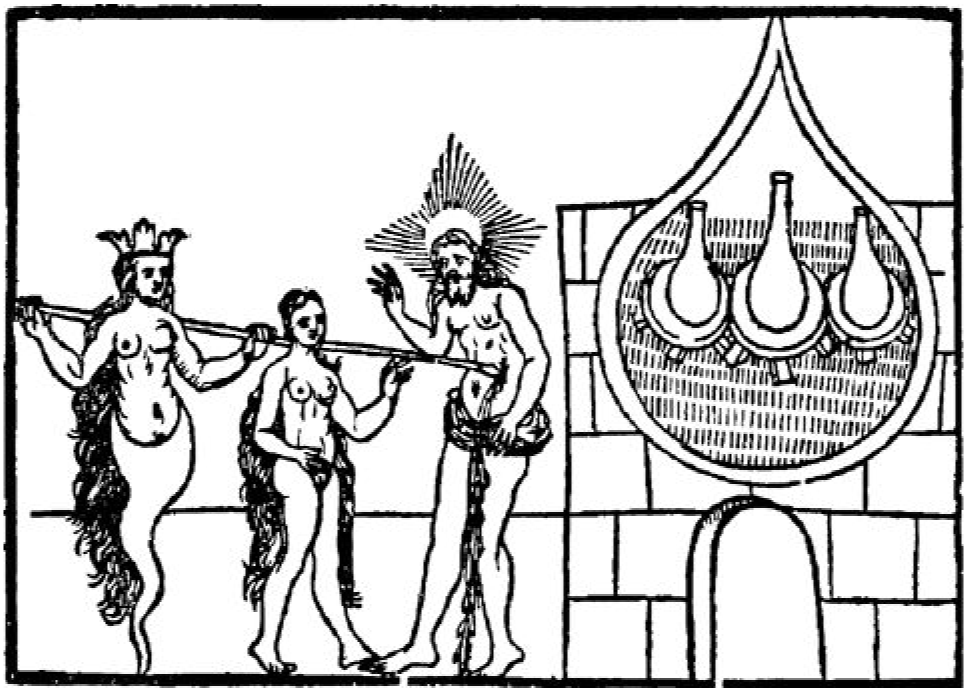
[190] At the end of the process, says Paracelsus, a "physical lightning" will appear, the "lightning of Saturn" will separate from the lightning of Sol, and what appears in this lightning pertains "to longevity, to that undoubtedly great Iliaster."[89] This process does not take anything away from the body's weight but only from its "turbulence," and that "by virtue of the translucent colours."[80] "Tranquillity of mind"[91] as a goal of the opus is stressed also by other alchemists. Paracelsus has nothing good to say about the body. It is "bad and putrid." When it is alive, it lives only from the "Mumia." Its "continual endeavour" is to rot and turn back into filth. By means of the Mumia the "peregrinus microcosmus" (wandering

microcosm) controls the physical body, and for this the arcana are needed.[92] Here Paracelsus lays particular stress on Thereniabin[93] and Nostoch[94] (as before on Cheyri) and on the “tremendous powers” of Melissa. Melissa is singled out for special honour because in ancient medicine it was considered to be a means of inducing happiness, and was used as a remedy for melancholia and for purging the body of “black, burnt-out blood.”[95] It unites in itself the powers of the “supracelestial coniunctio,” and that is “Iloch, which comes from the true Aniadus.” As Paracelsus had spoken just before of Nostoch, the Iliaster has changed under his eyes into Iloch. The Aniadus that now makes its appearance constitutes the essence of Iloch, i.e., of the coniunctio. But to what does the coniunctio refer? Before this Paracelsus had been speaking of a separation of Saturn and Sol. Saturn is the cold, dark, heavy, impure element, Sol is the opposite. When this separation is completed and the body has been purified by Melissa and freed from Saturnine melancholy, then the coniunctio can take place with the long-living inner, or astral, man,[96] and from this conjunction arises the “Enochdianus.” Iloch or Aniadus appears to be something like the virtue or power of the everlasting man. This “Magnale” comes about by the “exaltation of both worlds,” and “in the true May, when the exaltations of Aniada begin, these should be gathered.” Here again Paracelsus outdoes himself in obscurity, but this much at least is evident, that Aniadus denotes a springtime condition, the “efficacity of things,” as Dorn defines it.

A fish meal, with accompanying statue of the hermaphrodite. Though the picture is undoubtedly secular, it contains echoes of early Christian motifs. The significance of the hermaphrodite in this context is unknown to me. British Museum. MS. Add. 15268 (13th cent.)

The *filius* or *rex* in the form of a hermaphrodite. The axiom of Maria is represented by 1 + 3 snakes: the *filius,* as mediator, unites the one with the three. Characteristically, he has bat's wings. To the right is the Pelican, symbol of the *distillatio circulatoria;* to the left, the *arbor philosophica* with golden flowers; underneath, the chthonic triad as a three-headed serpent. From *Rosarium philosophorum* (1550), fol. X, iiiv

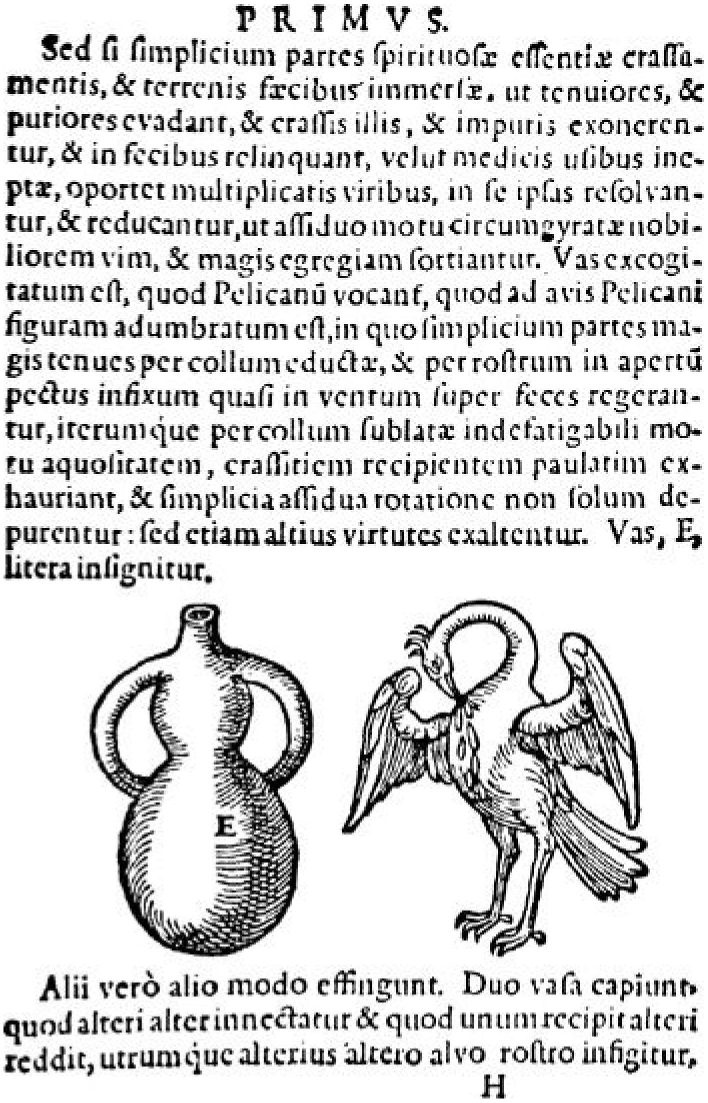
The Rebis: from “Book of the Holy Trinity and Description of the Secret of the Transmutation of Metals” (1420), in the Codex Germanicus 598 (Staatsbibliothek, Munich), fol. 105v. The illustration may have served as a model for the hermaphrodite in the *Rosarium* (pl. B2)



Melusina as the (*aqua permanens*, opening the side of the *filius* (an allegory of Christ) with the lance of Longinus. The figure in the middle is Eve (earth), who is reunited with Adam (Christ) in the coniunctio. From their union is born the hermaphrodite, the incarnate Primordial Man. To the right is the athanor (furnace) with the vessel in the centre, from which the lapis (hermaphrodite) will arise. The vessels on either side contain Sol and Luna. Woodcut from Reusner’s *Pandora: Das ist, die edelst Gab Gottes, oder der werde und heilsame Stein der Weysen* (Basel. 1588), p. 249

The anima as Melusina, embracing a man rising out of the sea (= unconscious): a *coniunetio animae cum corpore.* The gnomes are the planetary spirits in the form of *paredroi* (familiars). British Museum. MS. Sloane 5025, a variant of the Ripley *Scrowle* (1588)

The King’s Son (*filius regis*) and the mystagogue Hermes on a mountain, an obvious allusion to the Temptation (Luke, ch. 4). The accompanying text says: “Another mountain of India lies in the vessel, which the Spirit and Soul, as son and guide, have together ascended.” The two are called spirit and soul because they represent volatile substances which rise up during the heating of the prima materia. From Lambspringk, “De lapide philosophico,” fig. XII. in *Musaeum hermeticum* (Frankfurt a. M., 1678), p. 365



PRIMVS.

Sed ſi ſimplicium partes ſpirituoſæ eſſentiæ craſſamentis, & terrenis fæcibus immerſæ, ut tenuiores, & puriores evadant, & craſſis illis, & impuris exonerentur, & in fecibus relinquant, velut medicis uſibus ineptæ, oportet multiplicatis viribus, in ſe ipſas reſolvantur, & reducantur, ut aſſiduo motu circumgyratæ nobiliorem vim, & magis egregiam ſortiantur. Vas excogitatum eſt, quod Pelicanũ vocant, quod ad avis Pelicani figuram adumbratum eſt, in quo ſimplicium partes magis tenues per collum eductæ, & per roſtrum in apertũ pectus infixum quaſi in ventum ſuper feces regerantur, iterumque per collum ſublatæ indefatigabili motu aquoſitatem, craſſitiem recipientem paulatim exhauriant, & ſimplicia aſſidua rotatione non ſolum depurentur: ſed etiam altius virtutes exaltentur. Vas, E, litera inſignitur.

Alii verò alio modo effingunt. Duo vaſa capiunt, quod alteri alter innectatur & quod unum recipit alteri reddit, utrumque alterius altero alvo roſtro infigitur.

Picture of the Pelican. the vessel in which the circulatory distillation takes plate. Page from Rhenanus, *Solis e puteo emergentis sive dissertationis chymotechnicae libri tres* (Frankfurt a. M., 1613)

[191] We meet this motif in one of the earliest Greek texts, entitled the “Instruction of Cleopatra by the Archpriest Komarios,”[97] where Ostanes[98] and his companions say to Cleopatra:

> Make known to us how the highest descends to the lowest, and the lowest ascends to the highest, and the midmost draws near to the lowest and the highest, so that they are made one with it;[99] how the blessed waters come down from above to awaken the dead, who lie round about in the midst of Hades, chained in the darkness; how the elixir of life comes to them and awakens them, rousing them out of their sleep. . . .

[192] Cleopatra answers:

> When the waters come in, they awaken the bodies and the spirits, which are imprisoned and powerless. . . . Gradually they bestir themselves, rise up, and clothe themselves in bright colours,[100] glorious as the flowers in spring. The spring is glad and rejoices in the blossoming ripeness they have put on.

[193] Ruland defines Aniada[101] as “fruits and powers of paradise and heaven; they are also the Christian Sacraments . . . those things which by thought, judgment, and imagination promote longevity in us.”[102] They seem therefore to be powers that confer everlasting life, an even more potent *φάρμακον ἀθανασίας* than Cheyri, Thereniabin, Nostoch, and Melissa. They correspond to the blessed waters of Komarios and also, apparently, to the Communion substances. In the spring all the forces of life are in a state of festive exaltation, and the *opus alchymicum* should also begin in the spring[103] (already in the month of Aries, whose ruler is Mars). At that time the Aniada should be “gathered,” as though they were healing herbs. There is an ambiguity here: it could also mean the gathering together of all the psychic powers for the great transformation. The hierosgamos of Poliphilo likewise takes place in the month of May,[104] that is, the union with the soul, the latter embodying the world of the gods. At this marriage the human and the divine are made one; it is an “exaltation of both worlds,” as Paracelsus says. He adds significantly: “And the exaltations of the nettles burn too, and the colour of the little flame[105] sparkles and shines.” Nettles were used for medicinal purposes (the preparation of nettle water), and were collected in May because they sting most strongly when they are young. The nettle was therefore a symbol of youth, which is “most prone to the flames of lust.”[106] The allusion to the stinging nettle and the *flammula* is a discreet reminder that not only Mary but Venus, too, reigns in May. In the next sentence Paracelsus remarks that this power can be “changed into something else.” There are exaltations, he says, far more powerful than the nettle, namely the Aniada, and these are found not in the matrices, that is, in the physical elements, but in the heavenly ones. The Ideus would be nothing if it had not brought forth greater things. For it had made another May,

when heavenly flowers bloomed. At this time Anachmus[107] must be extracted and preserved, even as “musk rests in the pomander[108] and the virtue of gold in laudanum.”[109] One can enjoy longevity only when one has gathered the powers of Anachmus. To my knowledge, there is no way of distinguishing Anachmus from Aniadus.

3. THE NATURAL TRANSFORMATION MYSTERY

[194] Aniadus (or Aniadum), interpreted by Bodenstein and Dorn as the “efficacity of things,” is defined by Ruland as “the regenerated spiritual man in us, the heavenly body implanted in us Christians by the Holy Ghost through the most Holy Sacraments.” This interpretation does full justice to the role which Aniadus plays in the writings of Paracelsus. Though it is clearly related to the sacraments and to the Communion in particular, it is equally clear that there was no question of arousing or implanting the inner man in the Christian sense, but of a “scientific” union of the natural with the spiritual man with the aid of arcane techniques of a medical nature. Paracelsus carefully avoids the ecclesiastical terminology and uses instead an esoteric language which is extremely difficult to decipher, for the obvious purpose of segregating the “natural” transformation mystery from the religious one and effectively concealing it from prying eyes. Otherwise the welter of esoteric terms in this treatise would have no explanation. Nor can one escape the impression that this mystery was in some sense opposed to the religious mystery: as the “nettle” and the *flammula* show, the ambiguities of Eros were also included in it.[1] It had far more to do with pagan antiquity, as is evidenced by the *Hypnerotomachia Poliphili*, than with the Christian mystery. Nor is there any reason to suppose that Paracelsus was sniffing out nasty secrets; a more cogent motive was his experience as a physician who had to deal with man as he is and not as he should be and biologically speaking never can be. Many questions are put to a doctor which he cannot honestly answer with “should” but only from his knowledge and experience of nature. In these fragments of a nature mystery there is nothing to suggest a misplaced curiosity or perverse interest on Paracelsus’s part; they bear witness rather to the strenuous efforts of a physician to find satisfactory answers to psychological

questions which the ecclesiastical casuist is inclined to twist in his own favour.

[195] This nature mystery was indeed so much at odds with the Church—despite the superficial analogies—that the Hungarian alchemist Nicolaus Melchior Szebeny,[2] court astrologer to Ladislaus II (1471–1516), made the bold attempt to present the *opus alchymicum* in the form of a Mass.[3] It is difficult to prove whether and to what extent the alchemists were aware that they were in conflict with the Church. Mostly they showed no insight into what they were *doing*. This is true also of Paracelsus—except for a few hints about the "Pagoyum." It is the more understandable that no real self-criticism could come about, since they genuinely believed that they were performing a work well-pleasing to God on the principle "quod natura relinquit imperfectum, ars perficit" (what nature left imperfect, the art perfects). Paracelsus himself was wholly filled with the godliness of his profession as a doctor, and nothing disquieted or disturbed his Christian faith. He took it for granted that his work supplemented the hand of God and that he was the faithful steward of the talent that had been entrusted to him. And as a matter of fact he was right, for the human soul is not something cut off from nature. It is a natural phenomenon like any other, and its problems are just as important as the questions and riddles which are presented by the diseases of the body. Moreover there is scarcely a disease of the body in which psychic factors do not play a part, just as physical ones have to be considered in many psychogenic disturbances. Paracelsus was fully alive to this. In his own peculiar way he took the psychic phenomena into account as perhaps none of the great physicians ever did before or after him. Although his homunculi, *Trarames, Durdales*, nymphs, Melusines, etc., are the grossest superstitions for us so-called moderns, for a man of Paracelsus's time they were nothing of the sort. In those days these figures were living and effective forces. They were projections, of course; but of that, too, Paracelsus seems to have had an inkling, since it is clear from numerous passages in his writings that he was aware that homunculi and suchlike beings were creatures of the imagination. His more primitive cast of mind attributed a reality to these projections, and this reality did far greater justice to their psychological effect than does

our rationalistic assumption of the absolute unreality of projected contents. Whatever their reality may be, functionally at all events they behave just like realities. We should not let ourselves be so blinded by the modern rationalistic fear of superstition that we lose sight completely of those little-known psychic phenomena which surpass our present scientific understanding. Although Paracelsus had no notion of psychology, he nevertheless affords—precisely because of his “benighted superstition”—deep insights into psychic events which the most up-to-date psychology is only now struggling to investigate again. Even though mythology may not be “true” in the sense that a mathematical law or a physical experiment is true, it is still a serious subject for research and contains quite as many truths as a natural science; only, they lie on a different plane. One can be perfectly scientific about mythology, for it is just as good a natural product as plants, animals or chemical elements.

[196] Even if the psyche were a product of the will, it would still not be outside nature. No doubt it would have been a greater achievement if Paracelsus had developed his natural philosophy in an age when the psyche had been discredited as an object of scientific study. As it was, he merely included in the scope of his investigations something that was already present, without being obliged to prove its existence anew. Even so his achievement is sufficiently great, despite the fact that we moderns still find it difficult to estimate correctly the full psychological implications of his views. For what, in the end, do we know about the causes and motives that prompted man, for more than a thousand years, to believe in that “absurdity” the transmutation of metals and the simultaneous psychic transformation of the artifex? We have never seriously considered the fact that for the medieval investigator the redemption of the world by God’s son and the transubstantiation of the Eucharistic elements were not the last word, or rather, not the last answer to the manifold enigmas of man and his soul. If the *opus alchymicum* claimed equality with the *opus divinum* of the Mass, the reason for this was not grotesque presumption but the fact that a vast, unknown Nature, disregarded by the eternal verities of the Church, was imperiously demanding recognition and acceptance. Paracelsus knew, in advance of modern times, that this Nature was not only chemical and physical but

also psychic. Even though his Trarames and whatnot cannot be demonstrated in a test tube, they nevertheless had their place in his world. And even if, like all the rest of them, he never produced any gold, he was yet on the track of a process of psychic transformation that is incomparably more important for the happiness of the individual than the possession of the red tincture.

A. THE LIGHT OF THE DARKNESS

[197] So when we try to elucidate the riddles of the *Vita longa* we are following the traces of a psychological process that is the vital secret of all seekers after truth. Not all are vouchsafed the grace of a faith that anticipates all solutions, nor is it given to all to rest content with the sun of revealed truth. The light that is lighted in the heart by the grace of the Holy Spirit, that same light of nature, however feeble it may be, is more important to them than the great light which shines in the darkness and which the darkness comprehended not. They discover that in the very darkness of nature a light is hidden, a little spark without which the darkness would not be darkness.[4] Paracelsus was one of these. He was a well-intentioned, humble Christian. His ethics and his professed faith were Christian, but his most secret, deepest passion, his whole creative yearning, belonged to the *lumen naturae*, the divine spark buried in the darkness, whose sleep of death could not be vanquished even by the revelation of God's son. The light from above made the darkness still darker; but the *lumen naturae* is the light of the darkness itself, which illuminates its own darkness, and this light the darkness comprehends. Therefore it turns blackness into brightness, burns away "all superfluities," and leaves behind nothing but "faecem et scoriam et terram damnatam" (dross and scoriae and the rejected earth).

[198] Paracelsus, like all the philosophical alchemists, was seeking for something that would give him a hold on the dark, body-bound nature of man, on the soul which, intangibly interwoven with the world and with matter, appeared before itself in the terrifying form of strange, demoniacal figures and seemed to be the secret source of life-shortening diseases. The Church might exorcise demons and banish them, but that only alienated man from his own nature, which, unconscious of itself, had clothed itself in these spectral forms. Not separation of the natures but union of the natures was the goal of alchemy. From the time of Democritus its *leitmotiv* had been: "Nature rejoices in nature, nature conquers nature, nature rules over nature."[5] This principle is pagan in feeling and an expression of nature worship. Nature not only contains a process of transformation—it is itself transformation. It strives not for

isolation but for union, for the wedding feast followed by death and rebirth. Paracelsus's "exaltation in May" is this marriage, the "gamonymus" or hierosgamos of light and darkness in the shape of Sol and Luna. Here the opposites unite what the light from above had sternly divided. This is not so much a reversion to antiquity as a continuation of that religious feeling for nature, so alien to Christianity, which is expressed most beautifully in the "Secret Inscription" in the Great Magic Papyrus of Paris:[6]

> Greetings, entire edifice of the Spirit of the air, greetings, Spirit that penetratest from heaven to earth, and from earth, which abideth in the midst of the universe, to the uttermost bounds of the abyss, greetings, Spirit that penetratest into me, and shakest me, and departest from me in goodness according to God's will; greetings, beginning and end of irremovable Nature, greetings, thou who revolvest the elements which untiringly render service, greetings, brightly shining sun, whose radiance ministereth to the world, greetings, moon shining by night with disc of fickle brilliance, greetings, all ye spirits of the demons of the air, greetings, ye for whom the greeting is offered in praise, brothers and sisters, devout men and women! O great, greatest. incomprehensible fabric of the world, formed in a circle! Heavenly One, dwelling in the heavens, aetherial spirit, dwelling in the aether, having the form of water, of earth, of fire, of wind, of light, of darkness, star-glittering, damp-fiery-cold Spirit! I praise thee, God of gods, who hast fashioned the world, who hast established the depths upon the invisible support of their firm foundation, who hast separated heaven and earth, and hast encompassed the heavens with golden, eternal wings, and founded the earth upon eternal bases, who hast hung the aether high above the earth, who hast scattered the air with the self-moving wind, who hast laid the waters round about, who callest forth the tempests, the thunder, the lightning, the rain: Destroyer, Begetter of living things, God of the Aeons, great art thou, Lord, God, Ruler of All!

[199] Just as this prayer has come down to us embedded in a mass of magical recipes, so does the *lumen naturae* rise up from a world of kobolds and other creatures of darkness, veiled in magical spells and almost extinguished in a morass of mystification. Nature is certainly

equivocal, and one can blame neither Paracelsus nor the alchemists if, anxiously aware of their responsibilities, they cautiously expressed themselves in parables. This procedure is indeed the more appropriate one in the circumstances. What takes place between light and darkness, what unites the opposites, has a share in both sides and can be judged just as well from the left as from the right, without our becoming any the wiser: indeed, we can only open up the opposition again. Here only the symbol helps, for, in accordance with its paradoxical nature, it represents the "tertium" that in logic does not exist, but which in reality is the living truth. So we should not begrudge Paracelsus and the alchemists their secret language: deeper insight into the problems of psychic development soon teaches us how much better it is to reserve judgment instead of prematurely announcing to all and sundry what's what. Of course we all have an understandable desire for crystal clarity, but we are apt to forget that in psychic matters we are dealing with processes of experience, that is, with transformations which should never be given hard and fast names if their living movement is not to petrify into something static. The protean mythologem and the shimmering symbol express the processes of the psyche far more trenchantly and, in the end, far more clearly than the clearest concept; for the symbol not only conveys a visualization of the process but—and this is perhaps just as important—it also brings a re-experiencing of it, of that twilight which we can learn to understand only through inoffensive empathy, but which too much clarity only dispels. Thus the symbolic hints of marriage and exaltation in the "true May," when the heavenly flowers bloom and the secret of the inner man is made manifest, by the very choice and sound of the words convey a vision and experience of a climax whose significance could be amplified only by the finest flights of the poets. But the clear and unambiguous concept would find not the smallest place where it would fit. And yet something deeply significant has been said, for as Paracelsus rightly remarks: "When the heavenly marriage is accomplished, who will deny its superexcellent virtue?"

B. THE UNION OF MAN'S TWO NATURES

[200] Paracelsus is concerned here with something of great importance, and in recognition of this I have put in an apologia for the symbol, which unites what is divided. But he too felt the need of some explanation. Thus he says in the second chapter of Book V that man has two life forces: one of them natural, the other “aerial, wherein is nothing of the body.” (We would say that life has a physiological and a psychic aspect.) He therefore ends *De vita longa* with a discussion of incorporeal things. “Miserable in this respect are mortals to whom Nature has denied her first and best treasure, which the monarchy of Nature contains, namely, the *lumen naturae!”*[7] he exclaims, leaving us in no doubt what the *lumen naturae* meant to him. He says that he will now go beyond Nature and consider Aniadus. Let no one take exception to what he will now set forth concerning the power of the Guarini, Saldini, Salamandrini, and Melusina. If any should be astonished at his words, he should not let that detain him, but should rather read to the end, when he will understand all.

[201] Those live longest, says Paracelsus, who have lived “the aerial life” (*vitam aeream*). Their life lasts anything from six hundred to a thousand or eleven hundred years, and this is because they have lived in accordance with the “rule of the Magnalia, which are easily understood.” One should therefore imitate Aniadus, “and that by means of the air alone”—that is, by psychic means—“whose power is so great that the end of life has nothing in common with it. Further, if the said air be wanting, that which lies hidden in the capsule will burst forth.” By the “capsule” Paracelsus probably means the heart. The soul or *anima iliastri* dwells in the fire of the heart. It is *impassibilis* (non-sentient, incapable of suffering), whereas the cagastric soul, which is *passibilis*, “floats” on the water of the capsule.[8] The heart is also the seat of the imagination, and is the “sun in the Microcosm.”[9] Hence the *anima iliastri* can burst forth from the heart when it lacks “air”; that is to say, if psychic remedies are not applied, death occurs prematurely.[10] Paracelsus continues: “But if this [i.e., the *anima iliastri*] should be wholly filled with that [air] which renews itself again, and is then moved into the centre, that is, outside that under which it lay hidden before and still lies hid [i.e., in the heart capsule], then as a tranquil thing it is not heard at all by anything corporeal, and resounds only as Aniadus, Adech, and Edochinum.

Whence comes the birth of that great Aquaster, which is born beyond Nature” (i.e., supernaturally).[11]

[202] The meaning of this laborious explanation seems to be that by psychic means the soul is not only prevented from escaping but is also brought back into the centre, the heart region. But this time it is not enclosed in the *capsula cordis*, where it lay hidden and as it were imprisoned till then; it is now outside its previous habitation. This indicates a certain degree of freedom from bondage to the body, hence the “tranquillity” of the soul, which, when it dwelt inside the heart, was too much exposed to the power of imagination, to Ares and the formative principle. The heart, for all its virtues, is a restless and emotional thing, all too easily swayed by the turbulence of the body. In it dwells that lower, earthbound, “cagastric” soul which has to be separated from the higher, more spiritual Iliaster. In this liberated and more tranquil sphere the soul, unheard by the body, can re-echo those higher entities, Aniadus, Adech, and Edochinum, who form the upper triad.

[203] We have seen already that Adech stands for the inner *homo maximus*. He is the astral man, the manifestation of the macrocosm in the microcosm. Since he is named along with Aniadus and Edochinum, they are probably parallel designations. Aniadus certainly has this meaning, as mentioned earlier. Edochinum seems to be a variant of Enochdianus: Enoch belonged to the race of protoplasts related to the Original Man, who “tasted not death,” or at any rate lived for several hundred years. The three different names are probably only amplifications of the same conception—that of the deathless Original Man, to whom the mortal man can be approximated by means of the alchemical opus. As a result of this approximation the powers and attributes of the *homo maximus* flow like a helpful and healing stream into the earthly nature of the microcosmic mortal man. Paracelsus’s conception of the *homo maximus* does much to elucidate the psychological motives of the alchemical opus in general, since it shows how the main product of the work, the *aurum non vulgi* or *lapis philosophorum*, came to have such a variety of names and definitions: elixir, panacea, tincture, quintessence, light, east, morning, Aries, living fount, fruit-tree, animal, Adam, man, *homo altus*, form of man, brother, son, father, *pater mirabilis*, king, hermaphrodite, *deus*

terrenus, salvator, servator, filius macrocosmi, and so on.[12] In comparison with the "mille nomina" of the alchemists, Paracelsus used only about ten names for this entity, which exercised the speculative fantasy of the alchemists for more than sixteen hundred years.

[204] Dorn's commentary lays particular emphasis on the significance of this passage. According to him, these three—Aniadus, Adech, and Edochinum—form the one "pure and well-tempered element" (*elementum purum temperatum*) as contrasted with the four, impure, gross, and worldly elements, which are far removed from longevity. From these three comes the "mental vision" of that great Aquaster, which is born supernaturally. That is to say, from the Aniadic mother, with the aid of Adech and through the power of the imagination, comes the great vision, which impregnates the supernatural matrix so that it gives birth to the invisible foetus of longevity, that is created or begotten by the invisible or extrinsic Iliaster. Dorn's insistence on three as opposed to four is based on his polemical attitude to the axiom of Maria and to the relation of the quaternity to the Trinity, which I have discussed elsewhere.[13] Characteristically, Dorn overlooks the fact that the fourth is in this case the microcosmic mortal man, who complements the upper triad.[14]

[205] Union with the *homo maximus* produces a new life, which Paracelsus calls "vita cosmographica." In this life "time appears as well as the body Jesahach" (*cum locus tum corpus Jesahach*).[15] *Locus* can mean "time" as well as "space," and since, as we shall see, Paracelsus is here concerned with a sort of Golden Age, I have translated it as "time." The *corpus Jesahach* may thus be the *corpus glorificationis*, the resurrected body of the alchemists, and would coincide with the *corpus astrale*.

C. THE QUATERNITY OF THE HOMO MAXIMUS

[206] In this last chapter Paracelsus makes almost untranslatable allusions to the four Scaiolae, and it is not at all clear what could be meant. Ruland, who had a wide knowledge of the contemporary Paracelsist literature, defines them as "spiritual powers of the mind" (*spirituales mentis vires*), qualities and faculties which are fourfold, to correspond

with the four elements. They are the four wheels of the fiery chariot that swept Elijah up to heaven. The Scaiolae, he says, originate in the mind of man, “from whom they depart and to whom they are turned back” (*a quo recedunt, et ad quem reflectuntur*).

[207] Like the four seasons and the four quarters of heaven, the four elements are a quaternary system of orientation which always expresses a totality. In this case it is obviously the totality of the mind (*animus*), which here would be better translated as “consciousness” (including its contents). The orienting system of consciousness has four aspects, which correspond to four empirical functions: thinking, feeling, sensation (sense-perception), intuition. This quaternity is an archetypal arrangement.[16] As an archetype, it can be interpreted in any number of ways, as Ruland shows: he interprets the four first of all psychologically, as *phantasia*[17] *imaginatioa*,[18] *speculatio*,[19] and *agnata fides* (inborn faith). This interpretation is of value only so far as it alludes unmistakably to certain psychic functions. Since every archetype is psychologically a *fascinosum*, i.e., exerts an influence that excites and grips the imagination, it is liable to clothe itself in religious ideas (which are themselves of an archetypal nature). Accordingly Ruland says that the four Scaiolae also stand for the four main articles[20] of the Christian faith: baptism, belief in Jesus Christ, the sacrament of the Last Supper, and love of one’s neighbour.[21] In Paracelsus, Scaioli are lovers of wisdom. He says: “Ye pious filii Scaiolae et Anachmi.”[22] The Anachmus (= Aniadus) is therefore closely connected with the four Scaiolae. So it would not be overbold to conclude that the four Scaiolae correspond to the traditional quadripartite man and express his all-encompassing wholeness. The quadripartite nature of the *homo maximus* is the basis and cause of all division into four: four elements, seasons, directions, etc.[23] In this last chapter, says Paracelsus, the Scaiolae caused him the greatest difficulties,[24] “for in them is nothing of mortality.” But, he assures us, whoever lives “by reason of the Scaiolae” is immortal, and he proves this by the example of the Enochdiani and their descendants. Dorn explains the difficulty of the Scaiolae by saying that the mind must exercise itself with extraordinary labours (*mentem exercere miris laboribus*), and, as

there is in the Scaiolae nothing of mortality, this work exceeds our mortal endeavours.[25]

[208] Although Dorn, like Ruland, emphasizes the psychic nature of the Scaiolae (“mental powers and virtues, properties of the arts of the mind”), so that actually they are attributes of the natural man and must therefore be mortal, and although Paracelsus himself says in other writings that even the *lumen naturae* is mortal, it is nevertheless asserted here that the natural powers of the mind are immortal and belong to the *Archa*—the principle that existed before the world. We hear nothing more about the “mortality” of the *lumen naturae*, but rather of eternal principles, of the *invisibilis homo maximus* (Dorn) and his four Scaiolae, which appear to be interpreted as mental powers and psychological functions. This contradiction is resolved when we bear in mind that these concepts of Paracelsus were the result not of rational reflection but of intuitive introspection, which was able to grasp the quaternary structure of consciousness and its archetypal nature. The one is mortal, the other immortal.

[209] Dorn’s explanation as to why the Scaiolae are “difficult” might also be extended to Adech (= Adam, Anthropos),[26] who is the ruler of the Scaiolae and/or their quintessence. Paracelsus actually calls him “that difficult Adech.” Also, it is “that great Adech” who hinders our intentions.[27] The difficulties of the art play no small role in alchemy. Generally they are explained as technical difficulties, but often enough, in the Greek texts as well as in the later Latin ones, there are remarks about the psychic nature of the dangers and obstacles that complicate the work. Partly they are demonic influences, partly psychic disturbances such as melancholia. These difficulties find expression also in the names and definitions of the prima materia, which, as the raw material of the opus, provides ample occasion for wearisome trials of patience. The prima materia is, as one can so aptly say in English, “tantalizing”: it is cheap as dirt and can be had everywhere, only nobody knows it; it is as vague and evasive as the lapis that is to be produced from it; it has a “thousand names.” And the worst thing is that without it the work cannot even be begun. The task of the alchemist is obviously like shooting an arrow through a thread hung up in a cloud, as Spitteler says. The prima

materia is “saturnine,” and the malefic Saturn is the abode of the devil, or again it is the most despised and rejected thing, “thrown out into the street,” “cast on the dunghill,” “found in filth.” These epithets reflect not only the perplexity of the investigator but also his psychic background, which animates the darkness lying before him, so that he discovers in the projection the qualities of the unconscious. This easily demonstrable fact helps to elucidate the darkness that shrouds his spiritual endeavours and the *labor Sophiae:* it is a process of coming to terms with the unconscious, which always sets in when a man is confronted with its darkness. This confrontation forced itself on the alchemist as soon as he made a serious effort to find the prima materia.

D. THE RAPPROCHEMENT WITH THE UNCONSCIOUS

[210] I do not know how many or how few people today can imagine what “coming to terms with the unconscious” means. I fear they are only too few. But perhaps it will be conceded that the second part of Goethe’s *Faust* presents only incidentally and in doubtful degree an aesthetic problem, but primarily and in far greater degree a human one. It was a preoccupation that accompanied the poet right into old age, an alchemical encounter with the unconscious, comparable to the *labor Sophiae* of Paracelsus. It is on the one hand an endeavour to understand the archetypal world of the psyche, on the other hand a struggle against the sanity-threatening danger of fascination by the measureless heights and depths and paradoxes of psychic truth. The denser, concretistic, daytime mind here reaches its limits; for the “Cedurini” (Paracelsus), the “men of crasser temperament” (Dorn), there is no way into “the untrodden, the untreadable regions”—“and in this place,” says Paracelsus, “the Aquaster does not break in” (the damp soul that is akin to matter). Here the human mind is confronted with its origins, the archetypes; the finite consciousness with its archaic foundations; the mortal ego with the immortal self, Anthropos, purusha, atman, or whatever else be the names that human speculation has given to that collective preconscious state from which the individual ego arose. Kinsman and stranger at once, it recognizes and yet does not recognize that unknown brother who steps towards it, intangible yet real. The more it is bound by time and space,

the more it will feel the other as “that difficult Adech” who crosses its purpose at every misguided step, who gives fate an unexpected twist, and sets it as a task the very thing it feared. Here we must feel our way with Paracelsus into a question that was never openly asked before in our culture, and was never clearly put, partly from sheer unconsciousness, partly from holy dread. Moreover, the secret doctrine of the Anthropos was dangerous because it had nothing to do with the teachings of the Church, since from that point of view Christ was a reflection—and only a reflection—of the inner Anthropos. Hence there were a hundred good reasons for disguising this figure in indecipherable secret names.

[211] That being so, we may perhaps be able to understand another dark passage from the concluding chapter, which runs: “If, therefore, I should count myself among the Scaiolae [or: Scaioli, ‘lovers of wisdom’] in the manner of the Necrolii [= adepts], that would be something which in my view should be undertaken, but it is hindered by that great Adech, who deflects our purpose but not the procedure. I leave this to you theoreticians to discuss.”[28]

[212] One gets the impression that Adech is almost hostile to the adept, or at least intent on frustrating him in some way. From our above reflections, which are based on practical experience, we have seen how problematical is the relation of the ego to the self. We have only to make the further assumption that this is what Paracelsus meant. And this does indeed seem to be the case: he “counts himself” among the Scaioli, the philosophers, or “implants himself” in the Scaiolae, the quaternity of the Original Man—which seems to me a quite possible conception since another synonym for the quaternity is Paradise with its four rivers, or the eternal city, the Metropolis, with its four gates[29] (the alchemical equivalent is the *domus sapientiae* and the squared circle). He would thus find himself in the immediate vicinity of Adech and would be a citizen of the eternal city—another echo of Christian ideas. The fact that Adech does not deflect the work (*modus* here presumably means method, procedure, as contrasted with *propositum*, purpose, intention) is understandable since Paracelsus is no doubt speaking of the alchemical opus, which always remains the same as a general procedure though its goal may vary: sometimes it is the production of gold (*chrysopoea*),

sometimes the elixir, sometimes the *aurum potabile* or, finally, the mysterious *filius unicus*. Also, the artifex can have a selfish or an idealistic attitude towards the work.

4. THE COMMENTARY OF GERARD DORN

[213] We now come to the end of the treatise *De vita longa*. Paracelsus here sums up the whole operation in an extremely condensed way which makes interpretation even more hazardous than usual. As with so many other passages in the *Vita longa*, we must ask ourselves: Is the author being intentionally obscure, or can't he help it? Or should we ascribe the confusion to his editor, Adam von Bodenstein? The obscurities of this last chapter have no parallel in all Paracelsus's writings. One would be inclined to let the whole treatise go hang did it not contain things which seem to belong to the most modern psychological insights.

[214] I now give the original text of Paracelsus together with Dorn's commentary for the benefit of readers who wish to form their own judgment:

Paracelsus: *De vita longa* (1562), Lib. V, cap. V, pp. 94f.

Atque ad hunc modum abiit e nymphididica natura intervenientibus Scaiolis in aliam transmutationem permansura Melosyne, si difficilis ille Adech annuisset, qui utrunque existit, cum mors tum vita Scaiolarum. Annuit praeterea prima tempora, sed ad finem seipsum immutat. Ex quibus colligo supermonica[1] figmenta in cyphantis aperire fenestram. Sed ut ea figantur, recusant gesta Melosynes, quae cuiusmodi sunt, missa facimus.

And in this manner, through the intervention of the Scaiolae, Melusina departs from her nymphididic nature, to remain in another transmutation if that difficult Adech permit, who rules over both the death and life of the Scaiolae. Moreover, he permits the first times, but at the end he changes himself. From which I conclude that the supermonic[1] figments in the Cyphanta open a window. But in order to become fixed, they have to oppose the acts of Melusina, which, of whatever kind they may be, we

Sed ad naturam nymphididicam. Ea ut in animis nostris concipiatur, atque ita ad annum aniadin[2] immortales perveniamus arripimus characteres Veneris, quos et si vos una cum aliis cognoscitis, minime tamen usurpatis. Idipsum autem absolvimus eo quod in prioribus capitibus indicavimus, ut hanc vitam secure tandem adsequamur, in qua aniadus dominatur ac regnat, et cum eo, cui sine fine assistimus, permanet. Haec atque alia arcana, nulla re prorsus indigent.[3] Et in hunc modum vitam longam conclusam relinquimus.

dismiss to the nymphididic realm. But in order that [she] may be conceived in our minds, and we arrive immortal at the year Aniadin,[2] we take the characters of Venus, which, even if you know yourselves one with others, you have nevertheless put to little use. With this we conclude what we treated of in the earlier chapters, that we may safely attain that life over which Aniadus dominates and reigns, and which endures for ever with him, in whom we are present without end. This and other mysteries are in need of nothing whatever.[3] And herewith we end our discourse on longevity.

Dorn: *De vita longa* (1583), p. 178

[Paracelsus] ait Melosinam, i.e. apparentem in mente visionem . . . e nymphididica natura, in aliam transmutationem abire, in qua permansura[m] esse, si modo difficilis ille Adech, interior homo vdl. annuerit, hoc est, faveret: qui quidem utrunque efficit, videlicet mortem, et vitam Scaiolarum, i.e. mentalium operationum. Harum tempora prima, i.e. initia annuit, i.e. admittit, sed ad finem seipsum immutat, intellige propter

[Paracelsus] says that Melusina, i.e., the vision appearing in the mind, departs from her nymphididic nature into another transmutation, in which she will remain if only that difficult Adech, that is, the inner man, permit, that is, approve: who brings about both, that is, death and life, of the Scaiolae, that is, the mental operations. The first times, that is, the beginnings, of these he permits, that is, favours; but at the end he changes himself, intervenientes ac impedientes distractiones, quo minus consequantur effectum inchoatae, scl. operationes. Ex quibus [Paracelsus] colligit supermonica[1] figmenta, hoc est, speculationes aenigmaticas, in cyphantis [vas stillatorium], i.e. separationum vel praeparationum operationibus, aperire fenestram, hoc est, intellectum, sed ut figantur, i.e. ad finem perducantur, recusant gesta Melosines, hoc est, visionum varietates, et observationes, quae cuius modi sunt (ait) missa facimus.

Ad naturam nymphididicam rediens, ut in animis nostris concipiatur, inquit atque hac via ad annum aniadin[2] perveniamus, hoc est, ad vitam longam per imaginationem, arripimus characteres Veneris, i.e. amoris scutum et loricam ad viriliter adversis resistendum obstaculis: amor enim omnem difficultatem superat: quos et si vos una cum aliis cognoscitis, putato characteres, minime tamen usurpatis. Absolvit itaque iam Paracelsus ea, quae prioribus capitibus indicavit in vitam hanc secure consequendam, in qua dominatur et regnat aniadus, i.e. rerum efficicia et cum ea is, cui sine fine assistimus, permanet,

namely because of the distractions that intervene and impede, so that the things begun, that is, the operations, do not obtain their effect.

From which [Paracelsus] concludes that the supermonic[1] figments, that is, enigmatical speculations, in the Cyphanta [distilling vessel], open a window, that is, the understanding, by means of the operations of separation or preparation; but in order to become fixed, that is, brought to an end, they have to oppose the acts of Melusina, that is, divers visions and observations, which of whatever kind they may be, he says, we dismiss. Returning to the nymphididic realm, in order that [she] may be conceived in our minds, and that in this way we may attain to the year Aniadin,[2] aniadus nempe coelestis: Haec atque alia arcana nulla re prorsus indigent.[3]

that is, to a long life by imagination, we take the characters, of Venus, that is, the shield and buckler of love, to resist manfully the obstacles that confront us, for love overcomes all difficulties; which characters, even if you know yourselves one with others, you have nevertheless put to little use. And thus Paracelsus brings to an end those things which he treated of in the earlier chapters, that we may safely obtain that life over which Aniadus, that is, the efficacity of things, dominates and reigns, and which endures for ever with him, namely the heavenly Aniadus, in whom we are present without end: this and other mysteries are in need of nothing whatever.[3]

A. MELUSINA AND THE PROCESS OF INDIVIDUATION

[215] The text certainly needs a commentary! The Scaiolae, as the four parts, limbs, or emanations of the Anthropos,[4] are the organs with which he actively intervenes in the world of appearances or by which he is connected with it, just as the invisible *quinta essentia*, or aether, appears in this world as the four elements or, conversely, is composed out of them. Since the Scaiolae, as we have seen, are also psychic functions, these must be understood as manifestations or effluences of the One, the invisible Anthropos. As functions of consciousness, and particularly as *imaginatio*, *speculatio*, *phantasia*, and *fides*, they “intervene” and stimulate Melusina, the water-nixie, to change herself into human form. Dorn thinks of this as a “vision appearing in the mind” and not as a projection on a real woman. So far as our biographical knowledge

extends, this latter possibility does not seem to have occurred to Paracelsus either. In Colonna’s *Hypnerotomachia Poliphili* the Lady Polia attains a high degree of reality (far more so than Dante’s ethereal Beatrice but still not as much as Helen in *Faust II*), yet even she dissolves into a lovely dream as the sun rises on the first day of May:

> … tears shone in her eyes like clear crystals, like round pearls, like the dew which Aurora strews on the clouds of dawn. Sighing like a heavenly image, like incense of musk and amber rising to give delight to the spirits of heaven, she dissolved into thin air, leaving nought behind her but a breath of heavenly fragrance. So, with my happy dream, she vanished from my sight, saying as she went: Poliphilo, most dear beloved, farewell![5]

[216] Polia dissolves just before the long-desired union with her lover. Helen, on the other hand, vanishes only with the dissolution of her son Euphorion. Though Paracelsus gives clear indications of the nuptial mood with his “exaltation” in May and his allusion to the stinging nettle and the little flame, he disregards entirely the projection on a real person or a concretely visualized, personified image, but chooses instead the legendary figure of Melusina. Now this figure is certainly not an allegorical chimera or a mere metaphor: she has her particular psychic reality in the sense that she is a glamorous apparition who, by her very nature, is on one side a psychic vision but also, on account of the psyche’s capacity for imaginative realization (which Paracelsus calls Ares), is a distinct objective entity, like a dream which temporarily becomes reality. The figure of Melusina is eminently suited to this purpose. The anima belongs to those borderline phenomena which chiefly occur in special psychic situations. They are characterized by the more or less sudden collapse of a form or style of life which till then seemed the indispensable foundation of the individual’s whole career. When such a catastrophe occurs, not only are all bridges back into the past broken, but there seems to be no way forward into the future. One is confronted with a hopeless and impenetrable darkness, an abysmal void that is now suddenly filled with an alluring vision, the palpably real presence of a strange yet helpful being, in the same way that, when one lives for a long time in great

solitude, the silence or the darkness becomes visibly, audibly, and tangibly alive, and the unknown in oneself steps up in an unknown guise.

[217] This peculiarity of the anima is found also in the Melusina legend: Emmerich, Count of Poitiers, had adopted Raymond, the son of a poor kinsman. The relation between adoptive father and son was harmonious. But once, on the hunt, when pursuing a wild boar, they got separated from the rest and went astray in the forest. Night fell and they lit a fire to warm themselves. Suddenly the Count was attacked by the boar, and Raymond struck at it with his sword. But by an unlucky accident the blade rebounded and dealt the Count a mortal blow. Raymond was inconsolable, and in despair mounted his horse to flee he knew not where. After a time he came to a meadow with a bubbling spring. There he found three beautiful women. One of them was Melusina, who by her clever counsel saved him from dishonour and a homeless fate.

[218] According to the legend, Raymond found himself in the catastrophic situation we have described, when his whole way of life had collapsed and he faced ruin. That is the moment when the harbinger of fate, the anima, an archetype of the collective unconscious, appears. In the legend Melusina sometimes has the tail of a fish and sometimes that of a snake; she is half human, half animal. Occasionally she appears only in snake form. The legend apparently has Celtic roots,[6] but the motif is found practically everywhere. It was not only extraordinarily popular in Europe during the Middle Ages, but occurs also in India, in the legend of Urvashi and Pururavas, which is mentioned in the Shatapatha-Brāhmana.[7] It also occurs among the North American Indians.[8] The motif of half-man, half-fish is universally disseminated. Special mention should be made of Conrad Vecerius,[9] according to whom Melusina, or Melyssina, comes from an island in the sea where nine sirens dwell, who can change into any shape they want. This is of particular interest as Paracelsus mentions Melusina along with “Syrena.”[10] The tradition probably goes back to Pomponius Mela,[11] who calls the island “Sena” and the beings who dwell there “Senae.” They cause storms, can change their shape, cure incurable diseases, and know the future.[12] Since the mercurial serpent of the alchemists is not infrequently called *virgo* and, even before Paracelsus, was represented in the form of a Melusina, the latter’s capacity to change

her shape and to cure diseases is of importance in that these peculiarities were also predicated of Mercurius, and with special emphasis. On the other hand, Mercurius was also depicted as the grey-bearded Mercurius *senex* or Hermes Trismegistus, from which it is evident that two empirically very common archetypes, namely the anima and the Wise Old Man,[13] flow together in the symbolic phenomenology of Mercurius. Both are daemons of revelation and, in the form of Mercurius, represent the panacea. Again and again Mercurius is called *versatilis, versipellis, mutabilis, servus* or *cervus fugitivus,* Proteus, etc.

[219] The alchemists, and Paracelsus too, were no doubt confronted often enough with the dark abyss of not-knowing, and, unable to go forward, were on their own admission dependent on revelation or illumination or a helpful dream. For this reason they needed a "ministering spirit," a familiar or *πάρεδρος*, to whose invocation the Greek Magic Papyri bear witness. The snake form of the god of revelation, and of spirits in general, is a universal type.

[220] Paracelsus seems to have known nothing of any psychological premises. He attributes the appearance and transformation of Melusina to the effect of the "intervening" Scaiolae, the driving spiritual forces emanating from the *homo maximus.* The opus was subordinated to them, for its aim was to raise man to the sphere of the Anthropos. There is no doubt that the goal of the philosophical alchemist was higher self-development, or the production of what Paracelsus calls the *homo maior*, or what I would call individuation. This goal confronts the alchemist at the start with the loneliness which all of them feared, when one has "only" oneself for company. The alchemist, on principle, worked alone. He formed no school. This rigorous solitude, together with his preoccupation with the endless obscurities of the work, was sufficient to activate the unconscious and, through the power of imagination, to bring into being things that apparently were not there before. Under these circumstances "enigmatical speculations" arise in which the unconscious is visually experienced as a "vision appearing in the mind." Melusina emerges from the watery realm and assumes human form—sometimes quite concretely, as in *Faust I,* where Faust's hopelessness leads him straight into the arms of Gretchen, in which form Melusina would

doubtless remain were it not for the catastrophe which drives Faust still deeper into magic: Melusina changes into Helen. But she does not remain even there, for all attempts at concretization are shattered like the retort of the homunculus against the throne of Galatea. Another power takes over, “that difficult Adech,” who “at the end changes himself.” The greater man “hinders our purpose,” for Faust has to change himself at death into a boy, the *puer aeternus*, to whom the true world will be shown only after all desirousness has fallen away from him. “Miserable mortals, to whom Nature has denied her first and best treasure, the *lumen naturae!*”

[221] It is Adech, the inner man, who with his Scaiolae guides the purpose of the adept and causes him to behold fantasy images from which he will draw false conclusions, devising out of them situations of whose provisional and fragile nature he is unaware. Nor is he aware that by knocking on the door of the unknown he is obeying the law of the inner, future man, and that he is disobedient to this law whenever he seeks to secure a permanent advantage or possession from his work. Not his ego, that fragment of a personality, is meant; it is rather that a wholeness, of which he is a part, wants to be transformed from a latent state of unconsciousness into an approximate consciousness of itself.

[222] The “acts of Melusina” are deceptive phantasms compounded of supreme sense and the most pernicious nonsense, a veritable veil of Maya which lures and leads every mortal astray. From these phantasms the wise man will extract the “supermonic” elements, that is, the higher inspirations; he extracts everything meaningful and valuable as in a process of distillation,[14] and catches the precious drops of the *liquor Sophiae* in the ready beaker of his soul, where they “open a window” for his understanding. Paracelsus is here alluding to a discriminative process of critical judgment which separates the chaff from the wheat—an indispensable part of any rapprochement with the unconscious. It requires no art to become stupid; the whole art lies in extracting wisdom from stupidity. Stupidity is the mother of the wise, but cleverness never. The “fixation” refers alchemically to the lapis but psychologically to the consolidation of feeling. The distillate must be fixed and held fast, must become a firm conviction and a permanent content.

B. THE HIEROSGAMOS OF THE EVERLASTING MAN

[223] Melusina, the deceptive Shakti, must return to the watery realm if the work is to reach its goal. She should no longer dance before the adept with alluring gestures, but must become what she was from the beginning: a part of his wholeness.[15] As such she must be "conceived in the mind." This leads to a union of conscious and unconscious that was always present unconsciously but was always denied by the one-sidedness of the conscious attitude. From this union arises that wholeness which the introspective philosophy of all times and climes has characterized with an inexhaustible variety of symbols, names, and concepts. The "mille nomina" disguise the fact that this coniunctio is not concerned with anything tangible or discursively apprehensible; it is an experience that simply cannot be reproduced in words, but whose very nature carries with it an unassailable feeling of eternity or timelessness.

[224] I will not repeat here what I have said elsewhere on this subject. It makes no difference anyway what one says about it. Paracelsus does, however, give one more hint which I cannot pass over in silence: this concerns the "characters of Venus."[16]

[225] Melusina, being a water-nixie, is closely connected with Morgana, the "sea-born," whose classical counterpart is Aphrodite, the "foam-born." Union with the feminine personification of the unconscious is, as we have seen, a well-nigh eschatological experience, a reflection of which is to be found in the Apocalyptic Marriage of the Lamb, the Christian form of the hierosgamos. The passage runs (Revelation 19 : 6–10):

> And I heard as it were the voice of a great multitude, and as the voice of many waters, and as the voice of mighty thunderings, saying, Alleluia; for the Lord God omnipotent reigneth.
>
> Let us be glad and rejoice, and give honour to him: for the marriage of the Lamb is come, and his wife hath made herself ready.
>
> And to her was granted that she should be arrayed in fine linen, clean and white: for the fine linen is the righteousness of saints.
>
> And he saith unto me: Write, Blessed are they which are called unto the marriage supper of the Lamb. And he saith unto me, These are the true sayings of God.

> And I fell at his feet to worship him. And he said unto me, See thou do it not: I am thy fellowservant, and of thy brethren . . .

[226] The "he" of the text is the angel that speaks to John; in the language of Paracelsus, he is the *homo maior,* Adech. I need hardly point out that Venus is closely related to the love-goddess Astarte, whose sacred marriage-festivals were known to everyone. The experience of union underlying these festivals is, psychologically, the embrace and coming together again of two souls in the exaltation of spring, in the "true May"; it is the successful reuniting of an apparently hopelessly divided duality in the wholeness of a single being. This unity embraces the multiplicity of all beings. Hence Paracelsus says: "If you know yourselves one with others." Adech is not *my* self, he is also that of my brothers: "I am thy fellowservant, and of thy brethren." That is the specific definition of this experience of the coniunctio: the self which includes me includes many others also, for the unconscious that is "conceived in our mind" does not belong to me and is not peculiar to me, but is everywhere. It is the quintessence of the individual and at the same time the collective.

[227] The participants in the marriage of the Lamb enter into eternal blessedness; they are "virgins, which were not defiled with women" and are "redeemed from among men" (Rev. 14 : 4). In Paracelsus the goal of redemption is "the year Aniadin," or time of perfection, when the One Man reigns for ever.

C. SPIRIT AND NATURE

[228] Why did Paracelsus not avail himself of the Christian imagery, when it expresses the same thought so very clearly? Why does Venus appear in the place of Melusina, and why is it not the marriage of the Lamb, but a hierosgamos of Venus and Mars, as the text itself hints? The reason is probably the same as that which compelled Francesco Colonna to make Poliphilo seek his beloved Polia not with the Mother of God but with Venus. For the same reason the boy in Christian Rosencreutz's *Chymical Wedding*[17] led the hero down to an underground chamber, on the door of which was a secret inscription graven in copper characters. Copper (*cuprum*) is correlated with the Cyprian (Aphrodite, Venus). In the chamber they found a three-cornered tomb containing a copper cauldron, and in it was an angel holding a tree that dripped continually into the cauldron. The tomb was supported by three animals: an eagle, an ox, and a lion.[18] The boy explained that in this tomb Venus lay buried, who had destroyed many an upright man. Continuing their descent, they came to the bedchamber of Venus and found the goddess asleep on a couch. Indiscreetly, the boy twitched the coverlet away and revealed her in all her naked beauty.[19]

[229] The ancient world contained a large slice of nature and a number of questionable things which Christianity was bound to overlook if the security of a spiritual standpoint was not to be hopelessly compromised. No penal code and no moral code, not even the sublimest casuistry, will ever be able to codify and pronounce just judgment upon the confusions, the conflicts of duty, and the invisible tragedies of the natural man in collision with the exigencies of culture. "Spirit" is one aspect, "Nature" another. "You may pitch Nature out with a fork, yet she'll always come back again," says the poet.[20] Nature *must not* win the game, but she *cannot* lose. And whenever the conscious mind clings to hard and fast concepts and gets caught in its own rules and regulations—as is unavoidable and of the essence of civilized consciousness—nature pops up with her inescapable demands. Nature is not matter only, she is also spirit. Were that not so, the only source of spirit would be human reason.

It is the great achievement of Paracelsus to have elevated the “light of nature” to a principle and to have emphasized it in a far more fundamental way than his predecessor Agrippa. The *lumen naturae* is the natural spirit, whose strange and significant workings we can observe in the manifestations of the unconscious now that psychological research has come to realize that the unconscious is not just a “subconscious” appendage or the dustbin of consciousness, but is a largely autonomous psychic system for compensating the biases and aberrations of the conscious attitude, for the most part functionally, though it sometimes corrects them by force. Consciousness can, as we know, be led astray by naturalness as easily as by spirituality, this being the logical consequence of its freedom of choice. The unconscious is not limited only to the instinctual and reflex processes of the cortical centres; it also extends beyond consciousness and, with its symbols, anticipates future conscious processes. It is therefore quite as much a “supra-consciousness.”

[230] Convictions and moral values would have no meaning if they were not believed and did not possess exclusive validity. And yet they are man-made and time-conditioned assertions or explanations which we know very well are capable of all sorts of modifications, as has happened in the past and will happen again in the future. All that has happened during the last two thousand years shows that they are reliable signposts for certain stretches of the way, then comes a painful upheaval, which is felt as subversive and immoral, until a new conviction takes root. So far as the essential traits of human nature remain the same, certain moral values enjoy permanent validity. The most meticulous observance of the Ten Commandments, however, is no obstacle to the more refined forms of turpitude, and the far loftier principle of Christian love of one’s neighbour can lead to such tangled conflicts of duty that sometimes the Gordian knot can only be cut with a very unchristian sword.

D. THE ECCLESIASTICAL SACRAMENT AND THE OPUS ALCHYMICUM

[231] Paracelsus, like many others, was unable to make use of the Christian symbolism because the Christian formula inevitably suggested the Christian solution and would thus have conduced to the very thing that had to be avoided. It was nature and her particular “light” that had to be

acknowledged and lived with in the face of an attitude that assiduously overlooked them. This could only be done under the protective aegis of the arcanum. But one should not imagine Paracelsus or any other alchemist settling down to invent an arcane terminology that would make the new doctrine a kind of private code. Such an undertaking would presuppose the existence of definite views and clearly defined concepts. But there is no question of that: none of the alchemists ever had any clear idea of what his philosophy was really about. The best proof of this is the fact that everyone with any originality at all coined his own terminology, with the result that no one fully understood anybody else. For one alchemist, Lully was an obscurantist and a charlatan and Geber the great authority; while for another, Geber was a Sphinx and Lully the source of all enlightenment. So with Paracelsus: we have no reason to suppose that behind his neologisms there was a clear, consciously disguised concept. It is on the contrary probable that he was trying to grasp the ungraspable with his countless esotericisms, and snatched at any symbolic hint that the unconscious offered. The new world of scientific knowledge was still in a nascent dream-state, a mist heavy with the future, in which shadowy figures groped about for the right words. Paracelsus was not reaching back into the past; rather, for lack of anything suitable in the present, he was using the old remnants to give new form to a renewed archetypal experience. Had the alchemists felt any serious need to revive the past, their erudition would have enabled them to draw on the inexhaustible storehouse of the heresiologists. But except for the "Aquarium sapientum,"[21] which likewise treats of heresies, I have found only one alchemist (of the sixteenth century) who shudderingly admits to having read the *Panarium* of Epiphanius. Nor are any secret traces of Gnostic usages to be found, despite the fact that the texts swarm with unconscious parallels.

[232] To return to our text: it is clear that it describes a procedure for attaining nothing less than immortality ("that we may arrive immortal at the year Aniadin"). There is, however, only one way to this goal, and that is through the sacraments of the Church. These are here replaced by the "sacrament" of the *opus alchymicum*, less by word than by deed, and

without the least sign of any conflict with the orthodox Christian standpoint.

[233] Which way did Paracelsus hold to be the true one? Or were both of them true for him? Presumably the latter, and the rest he "leaves to the theoreticians to discuss."

[234] What is meant by the "characters of Venus" remains obscure. The "sapphire"[22] which Paracelsus prized so much, the *cheyri*, *ladanum*, *muscus*, and *ambra* belong, according to Agrippa,[23] to Venus. The goddess undoubtedly appears in our text on a higher level, in keeping with her classical cognomens: *docta*, *sublimis*, *magistra rerum humanarum divinarumque*, etc[24] One of her characters is certainly love in the widest sense, so Dorn is not wrong when he interprets them as the "shield and buckler of love." Shield and buckler are martial attributes, but there is also a *Venus armata*.[25] Mythologically, the personified Amor is a son of Venus and Mars, whose cohabitation in alchemy is a typical coniunctio.[26] Dorn, despite being a Paracelsist, had a decidedly polemical attitude towards certain fundamental tenets of alchemy,[27] so that a Christian love of one's neighbour, well armed against evil, suited him very well. But so far as Paracelsus is concerned this interpretation is doubtful. The word Venus points in quite another direction, and since the Christian gifts of grace were included in his Catholic faith he had in any case no need of a christianized Amor. On the contrary, a Venus Magistra or Aphrodite Urania, or even a Sophia, would have seemed to him more appropriate to the mystery of the *lumen naturae*. The words "minime tamen usurpatis" might also be a hint at discretion.[28] Hence the Venus episode in the *Chymical Wedding* may have more bearing on the interpretation of this cryptic passage than Dorn's well-meant circumlocution.

[235] The concluding reference to a "life without end" under the dominion of Aniadus is very reminiscent of Rev. 20 : 4: "… and they lived and reigned with Christ a thousand years." The year Aniadin would thus correspond to the thousand-year reign in the Apocalypse.

[236] In conclusion I would remark that the survey of the secret doctrine which I have attempted to sketch here makes it seem likely that besides

the physician and Christian in Paracelsus there was also an alchemical philosopher at work who, pushing every analogy to the very limit, strove to penetrate the divine mysteries. The parallel with the mysteries of the Christian faith, which we can only feel as a most dangerous conflict, was no Gnostic heresy for him, despite the most disconcerting resemblances; for him as for every other alchemist, man had been entrusted with the task of bringing to perfection the divine will implanted in nature, and this was a truly sacramental work. To the question “Are you, as it would seem, an Hermetic?” he could have replied with Lazarello: “I am a Christian, O King, and it is no disgrace to be that and an Hermetic at the same time.”[29]

5. EPILOGUE

[237] I had long been aware that alchemy is not only the mother of chemistry, but is also the forerunner of our modern psychology of the unconscious. Thus Paracelsus appears as a pioneer not only of chemical medicine but of empirical psychology and psychotherapy.

[238] It may seem that I have said too little about Paracelsus the self-sacrificing physician and Christian, and too much about his dark shadow, that other Paracelsus, whose soul was intermingled with a strange spiritual current which, issuing from immemorial sources, flowed beyond him into a distant future. But—*ex tenebris lux*—it was precisely because he was so fascinated by magic that he was able to open the door to the realities of nature for the benefit of succeeding centuries. The Christian and the primitive pagan lived together in him in a strange and marvellous way to form a conflicting whole, as in other great Renaissance figures. Although he had to endure the conflict, he was spared that agonizing split between knowledge and faith that has riven the later epochs. As a man he had one father, but as a spirit he had two mothers. His spirit was heroic, because creative, and as such was doomed to Promethean guilt. The secular conflict that broke out at the turn of the sixteenth century, and whose living image stands before our eyes in the figure of Paracelsus, is a prerequisite for higher consciousness; for analysis is always followed by synthesis, and what was divided on a lower level will reappear, united, on a higher one.

IV

THE SPIRIT MERCURIUS

[Given as two lectures at the Eranos Conference, Ascona, Switzerland, in 1942, the theme of which was “The Hermetic Principle in Mythology, Gnosis, and Alchemy.” Published as “Der Geist Mercurius,” *Eranos-Jahrbuch 1042* (Zurich, 1943); revised and expanded in *Symbolik des Geistes: Studien über psychische Phänomenologie* . . . (Psychologische Abhandlungen, VI; Zurich, 1948). An English translation by Gladys Phelan and Hildegard Nagel, titled *The Spirit Mercury*, was published as a book by the Analytical Psychology Club of New York, Inc., in 1953, and forms the basis of the present translation. Some brief chapters have been combined.—EDITORS.]

Ἑρμῆ κοσμοκράτωρ, ἐνκάρδιε, κύκλε σελήνης,
στρογγύλε καὶ τετράγωνε, λόγων ἀρχηγέτα γλώσσης,
πειθοδικαιόσυνε, χλαμυδηφόρε, πτηνοπέδιλε,
παμφώνου γλώσσης μεδέων, θνητοῖσι προφῆτα . . .

(Hermes, ruler of the world, dweller in the heart, circle of the moon, Round and square, inventor of the words of the tongue, Obedient to justice, wearer of the chlamys, shod in winged sandals, Guardian of the many-sounding tongue, prophet to mortals.)

—A Magic Papyrus (Preisendanz, II, p. 139)

Part I

1. THE SPIRIT IN THE BOTTLE

[239] In my contribution[1] to the symposium on Hermes I will try to show that this many-hued and wily god did not by any means die with the decline of the classical era, but on the contrary has gone on living in strange guises through the centuries, even into recent times, and has kept the mind of man busy with his deceptive arts and healing gifts. Children are still told Grimm's fairytale of "The Spirit in the Bottle," which is ever-living like all fairytales, and moreover contains the quintessence and deepest meaning of the Hermetic mystery as it has come down to us today:

Once upon a time there was a poor woodcutter. He had an only son, whom he wished to send to a high school. However, since he could give him only a little money to take with him, it was used up long before the time for the examinations. So the son went home and helped his father with the work in the forest. Once, during the midday rest, he roamed the woods and came to an immense old oak. There he heard a voice calling from the ground, "Let me out, let me out!" He dug down among the roots of the tree and found a well-sealed glass bottle from which, clearly, the voice had come. He opened it and instantly a spirit rushed out and soon became half as high as the tree. The spirit cried in an awful voice: "I have had my punishment and I will be revenged! I am the great and mighty spirit Mercurius, and now you shall have your reward. Who so releases me, him I must strangle." This made the boy uneasy and, quickly thinking up a trick, he said, "First, I must be sure that you are the same spirit that was shut up in that little bottle." To prove this, the spirit crept back into the bottle. Then the boy made haste to seal it and the spirit was caught again. But now the spirit promised to reward him richly if the boy would let him out. So he let him out and received as a reward a small piece of rag. Quoth the spirit: “If you spread one end of this over a wound it will heal, and if you rub steel or iron with the other end it will turn into silver.” Thereupon the boy rubbed his damaged axe with the rag, and the axe turned to silver and he was able to sell it for four hundred thaler. Thus father and son were freed from all worries. The young man could return to his studies, and later, thanks to his rag, he became a famous doctor.[2]

[240] Now, what insight can we gain from this fairytale? As you know, we can treat fairytales as fantasy products, like dreams, conceiving them to be spontaneous statements of the unconscious about itself.

[241] As at the beginning of many dreams something is said about the scene of the dream action, so the fairytale mentions the forest as the place of the magic happening. The forest, dark and impenetrable to the eye, like deep water and the sea, is the container of the unknown and the mysterious. It is an appropriate synonym for the unconscious. Among the many trees—the living elements that make up the forest—one tree is especially conspicuous for its great size. Trees, like fishes in the water, represent the living contents of the unconscious. Among these contents one of special significance is characterized as an “oak.” Trees have individuality. A tree, therefore, is often a symbol of personality.[3] Ludwig II of Bavaria is said to have honoured certain particularly impressive trees in his park by having them saluted. The mighty old oak is proverbially the king of the forest. Hence it represents a central figure among the contents of the unconscious, possessing personality in the most marked degree. It is the prototype of the *self*, a symbol of the source and goal of the individuation process. The oak stands for the still unconscious core of the personality, the plant symbolism indicating a state of deep unconsciousness. From this it may be concluded that the hero of the fairytale is profoundly unconscious of himself. He is one of the “sleepers,” the “blind” or “blindfolded,” whom we encounter in the illustrations of certain alchemical treatises.[4] They are the unawakened who are still unconscious of themselves, who have not yet integrated their future, more extensive personality, their “wholeness,” or, in the language of the mystics, the ones who are not yet “enlightened.” For our hero, therefore, the tree conceals a great secret.[5]

[242] The secret is hidden not in the top but in the roots of the tree;[6] and since it is, or has, a personality it also possesses the most striking marks of personality—voice, speech, and conscious purpose, and it demands to be set free by the hero. It is caught and imprisoned against its will, down there in the earth among the roots of the tree. The roots extend into the inorganic realm, into the mineral kingdom. In psychological terms, this would mean that the self has its roots in the body, indeed in the body's chemical elements. Whatever this remarkable statement of the fairytale may mean in itself, it is in no way stranger than the miracle of the living plant rooted in the inanimate earth. The alchemists described their four elements as *radices*, corresponding to the Empedoclean *rhizomata*, and in them they saw the constituents of the most significant and central symbol of alchemy, the *lapis philosophorum*, which represents the goal of the individuation process.

[243] The secret hidden in the roots is a spirit sealed inside a bottle. Naturally it was not hidden away among the roots to start with, but was first confined in a bottle, which was then hidden. Presumably a magician, that is, an alchemist, caught and imprisoned it. As we shall see later, this spirit is something like the numen of the tree, its *spiritus vegetativus*, which is one definition of Mercurius. As the life principle of the tree, it is a sort of spiritual quintessence abstracted from it, and could also be described as the *principium individuationis*. The tree would then be the outward and visible sign of the realization of the self. The alchemists appear to have held a similar view. Thus the "Aurelia occulta" says: "The philosophers have sought most eagerly for the centre of the tree which stands in the midst of the earthly paradise."[7] According to the same source, Christ himself is this tree.[8] The tree comparison occurs as early as Eulogius of Alexandria (*c.* A.D. 600), who says: "Behold in the Father the root, in the Son the branch, and in the Spirit the fruit: for the substance [*οὐσία*] in the three is one."[9] Mercurius, too, is *trinus et unus*.

[244] So if we translate it into psychological language, the fairytale tells us that the mercurial essence, the *principium individuationis*, would have developed freely under natural conditions, but was robbed of its freedom by deliberate intervention from outside, and was artfully confined and banished like an evil spirit. (Only evil spirits have to be confined, and the

wickedness of this spirit was shown by its murderous intent.) Supposing the fairytale is right and the spirit was really as wicked as it relates, we would have to conclude that the Master who imprisoned the *principium individuationis* had a good end in view. But who is this well-intentioned Master who has the power to banish the principle of man's individuation? Such power is given only to a ruler of souls in the spiritual realm. The idea that the principle of individuation is the source of all evil is found in Schopenhauer and still more in Buddhism. In Christianity, too, human nature is tainted with original sin and is redeemed from this stain by Christ's self-sacrifice. Man in his "natural" condition is neither good nor pure, and if he should develop in the natural way the result would be a product not essentially different from an animal. Sheer instinctuality and naïve unconsciousness untroubled by a sense of guilt would prevail if the Master had not interrupted the free development of the natural being by introducing a distinction between good and evil and outlawing the evil. Since without guilt there is no moral consciousness and without awareness of differences no consciousness at all, we must concede that the strange intervention of the master of souls was absolutely necessary for the development of any kind of consciousness and in this sense was for the good. According to our religious beliefs, God himself is this Master—and the alchemist, in his small way, competes with the Creator in so far as he strives to do work analogous to the work of creation, and therefore he likens his microcosmic opus to the work of the world creator.[10]

[245] In our fairytale the natural evil is banished to the "roots," that is, to the earth, in other words the body. This statement agrees with the historical fact that Christian thought in general has held the body in contempt, without bothering much about the finer doctrinal distinctions.[11] For, according to doctrine, neither the body nor nature in general is evil *per se:* as the work of God, or as the actual form in which he manifests himself, nature cannot be identical with evil. Correspondingly, the evil spirit in the fairytale is not simply banished to the earth and allowed to roam about at will, but is only hidden there in a safe and special container, so that he cannot call attention to himself anywhere except right under the oak. The bottle is an artificial human

product and thus signifies the intellectual purposefulness and artificiality of the procedure, whose obvious aim is to isolate the spirit from the surrounding medium. As the *vas Hermeticum* of alchemy, it was "hermetically" sealed (i.e., sealed with the sign of Hermes);[12] it had to be made of glass, and had also to be as round as possible, since it was meant to represent the cosmos in which the earth was created.[13] Transparent glass is something like solidified water or air, both of which are synonyms for spirit. The alchemical retort is therefore equivalent to the *anima mundi*, which according to an old alchemical conception surrounds the cosmos. Caesarius of Heisterbach (thirteenth century) mentions a vision in which the soul appeared as a spherical glass vessel.[14] Likewise the "spiritual" or "ethereal" (*aethereus*) philosophers' stone is a precious *vitrum* (sometimes described as *malleabile*) which was often equated with the gold glass (*aurum vitreum*) of the heavenly Jerusalem (Rev. 21 : 21).

[246] It is worth noting that the German fairytale calls the spirit confined in the bottle by the name of the pagan god, Mercurius, who was considered identical with the German national god, Wotan. The mention of Mercurius stamps the fairytale as an alchemical folk legend, closely related on the one hand to the allegorical tales used in teaching alchemy, and on the other to the well-known group of folktales that cluster round the motif of the "spellbound spirit." Our fairytale thus interprets the evil spirit as a pagan god, forced under the influence of Christianity to descend into the dark underworld and be morally disqualified. Hermes becomes the demon of the mysteries celebrated by all *tenebriones* (obscurantists), and Wotan the demon of forest and storm; Mercurius becomes the soul of the metals, the metallic man (*homunculus*), the dragon (*serpens mercurialis*), the roaring fiery lion, the night raven (*nycticorax*), and the black eagle—the last four being synonyms for the devil. In fact the spirit in the bottle behaves just as the devil does in many other fairytales: he bestows wealth by changing base metal into gold; and like the devil, he also gets tricked.

2. THE CONNECTION BETWEEN SPIRIT AND TREE

[247] Before continuing our discussion of the spirit Mercurius, I should like to point out a not unimportant fact. The place where he lies confined is not just any place but a very essential one—namely, under the oak, the king of the forest. In psychological terms, this means that the evil spirit is imprisoned in the roots of the self, as the secret hidden in the principle of individuation. He is not identical with the tree, nor with its roots, but has been put there by artificial means. The fairytale gives us no reason to think that the oak, which represents the self, has grown out of the spirit in the bottle; we may rather conjecture that the oak presented a suitable place for concealing a secret. A treasure, for instance, is preferably buried near some kind of landmark, or else such a mark is put up afterwards. The tree of paradise serves as a prototype for this and similar tales: it, too, is not identical with the voice of the serpent which issued from it.[1] However, it must not be forgotten that these mythical motifs have a significant connection with certain psychological phenomena observed among primitive peoples. In all such cases there is a notable analogy with primitive animism: certain trees are animated by souls—have the character of personality, we would say—and possess a voice that gives commands to human beings. Amaury Talbot[2] reports one such case from Nigeria, where a native soldier heard an *oji* tree calling to him, and tried desperately to break out of the barracks and hasten to the tree. Under cross-examination he alleged that all those who bore the name of the tree now and then heard its voice. Here the voice is undoubtedly identical with the tree. These psychic phenomena suggest that originally the tree and the daemon were one and the same, and that their separation is a secondary phenomenon corresponding to a higher level of culture and consciousness. The original phenomenon was nothing less than a nature deity, a *tremendum* pure and simple, which is morally neutral. But the secondary phenomenon implies an act of discrimination which splits

man off from nature and thus testifies to the existence of a more highly differentiated consciousness. To this is added, as a tertiary phenomenon testifying to a still higher level, the moral qualification which declares the voice to be an evil spirit under a ban. It goes without saying that this third level is marked by a belief in a “higher” and “good” God who, though he has not finally disposed of his adversary, has nevertheless rendered him harmless for some time to come by imprisonment (Rev. 20: 1–3).

[248] Since at the present level of consciousness we cannot suppose that tree daemons exist, we are forced to assert that the primitive suffers from hallucinations, that he hears his own unconscious which has projected itself into the tree. If this theory is correct—and I do not know how we could formulate it otherwise today—then the second level of consciousness has effected a differentiation between the object “tree” and the unconscious content projected into it, thereby achieving an act of enlightenment. The third level rises still higher and attributes “evil” to the psychic content which has been separated from the object. Finally a fourth level, the level reached by our consciousness today, carries the enlightenment a stage further by denying the objective existence of the “spirit” and declaring that the primitive has heard nothing at all, but merely had an auditory hallucination. Consequently the whole phenomenon vanishes into thin air—with the great advantage that the evil spirit becomes obviously non-existent and sinks into ridiculous insignificance. A fifth level, however, which is bound to take a quintessential view of the matter, wonders about this conjuring trick that turns what began as a miracle into a senseless self-deception—only to come full circle. Like the boy who told his father a made-up story about sixty stags in the forest, it asks: “But what, then, was all the rustling in the woods?” The fifth level is of the opinion that something did happen after all: even though the psychic content was not the tree, nor a spirit in the tree, nor indeed any spirit at all, it was nevertheless a phenomenon thrusting up from the unconscious, the existence of which cannot be denied if one is minded to grant the psyche any kind of reality. If one did not do that, one would have to extend God’s *creatio ex nihilo*—which seems so obnoxious to the modern intellect—very much further to

include steam engines, automobiles, radios, and every library on earth, all of which would presumably have arisen from unimaginably fortuitous conglomerations of atoms. The only thing that would have happened is that the Creator would have been renamed Conglomeratio.

[249] The fifth level assumes that the unconscious exists and has a reality just like any other existent. However odious it may be, this means that the “spirit” is also a reality, and the “evil” spirit at that. What is even worse, the distinction between “good” and “evil” is suddenly no longer obsolete, but highly topical and necessary. The crucial point is that so long as the evil spirit cannot be proved to be a subjective psychic experience, then even trees and other suitable objects would have, once again, to be seriously considered as its lodging places.

3. THE PROBLEM OF FREEING MERCURIUS

[250] We will not pursue the paradoxical reality of the unconscious any further now, but will return to the fairytale of the spirit in the bottle. As we have seen, the spirit Mercurius bears some resemblance to the "cheated devil." The analogy, however, is only a superficial one, since, unlike the gifts of the devil, the gold of Mercurius does not turn to horse droppings but remains good metal, and the magic rag does not turn to ashes by morning but retains its healing power. Nor is Mercurius tricked out of a soul that he wanted to steal. He is only tricked into his own better nature, one might say, in that the boy succeeds in bottling him up again in order to cure his bad mood and make him tractable. Mercurius becomes polite, gives the young fellow a useful ransom and is accordingly set free. We now hear about the student's good fortune and how he became a wonder-working doctor, but—strangely enough—nothing about the doings of the liberated spirit, though these might be of some interest in view of the web of meanings in which Mercurius, with his many-sided associations, entangles us. What happens when this pagan god, Hermes-Mercurius-Wotan, is let loose again? Being a god of magicians, a *spiritus vegetativus*, and a storm daemon, he will hardly have returned to captivity, and the fairytale gives us no reason to suppose that the episode of imprisonment has finally changed his nature to the pink of perfection. The bird of Hermes has escaped from the glass cage, and in consequence something has happened which the experienced alchemist wished at all costs to avoid. That is why he always sealed the stopper of his bottle with magic signs and set it for a very long time over the lowest fire, so that "he who is within may not fly out." For if he escapes, the whole laborious opus comes to nothing and has to be started all over again. Our lad was a Sunday's child and possibly one of the poor in spirit, on whom was bestowed a bit of the Kingdom of Heaven in the shape of the self-renewing tincture, with reference to which it was said that the opus

needed to be performed only once.[1] But if he had lost the magic rag he would certainly never have been able to produce it a second time, by himself. It looks as though some Master had succeeded in capturing the mercurial spirit and then hid him in a safe place, like a treasure—perhaps putting him aside for some future use. He may even have planned to tame the wild Mercurius to serve him as a willing "familiar," like Mephisto—such trains of thought are not strange to alchemy. Perhaps he was disagreeably surprised when he returned to the oak tree and found that his bird had flown. At any rate, it might have been better not to have left the fate of the bottle to chance.

[251] Be that as it may, the behaviour of the boy—successfully as it worked out for him—must be described as alchemically incorrect. Apart from the fact that he may have infringed upon the legitimate claims of an unknown Master by setting Mercurius free, he was also totally unconscious of what might follow if this turbulent spirit were let loose upon the world. The golden age of alchemy was the sixteenth and the first half of the seventeenth century. At that time a storm bird did indeed escape from a spiritual vessel which the daemons must have felt was a prison. As I have said, the alchemists were all for not letting Mercurius escape. They wanted to keep him in the bottle in order to transform him: for they believed, like Petasios, that lead (another arcane substance) was "so bedevilled and shameless that all who wish to investigate it fall into madness through ignorance."[2] The same was said of the elusive Mercurius who evades every grasp—a real trickster who drove the alchemists to despair.[3]

Part II

1. INTRODUCTORY

[252] The interested reader will want, as I do, to find out more about this spirit—especially what our forefathers believed and said about him. I will therefore try with the aid of text citations to draw a picture of this versatile and shimmering god as he appeared to the masters of the royal art. For this purpose we must consult the abstruse literature of alchemy, which has not yet been properly understood. Naturally, in later times, the history of alchemy was mainly of interest to the chemist. The fact that it recorded the discovery of many chemical substances and drugs could not, however, reconcile him to the pitiful meagreness, so it seemed to him, of its scientific content. He was not in the position of the older authors, such as Schmieder, who could look on the possibility of goldmaking with hopeful esteem and sympathy; instead he was irritated by the futility of the recipes and the fraudulence of alchemical speculation in general. To him alchemy was bound to seem a gigantic aberration that lasted for more than two thousand years. Had he only asked himself whether the chemistry of alchemy was authentic or not, that is, whether the alchemists were really chemists or merely spoke a chemical jargon, then the texts themselves would have suggested a line of observation other than the purely chemical. The scientific equipment of the chemist does not, however, fit him to pursue this other line, since it leads straight into the history of religion. Thus it was a philologist, Reitzenstein, whom we have to thank for preliminary researches of the greatest value in this field. It was he who recognized the mythological and Gnostic ideas embedded in alchemy, thereby opening up the whole subject from an angle which promises to be most fruitful. For alchemy, as the earliest Greek and Chinese texts show, originally formed part of Gnostic philosophical speculations which also included a detailed knowledge of the techniques of the goldsmith and ironsmith, the faker of precious stones, the druggist

and apothecary. In East and West alike, alchemy contains as its core the Gnostic doctrine of the Anthropos and by its very nature has the character of a peculiar doctrine of redemption. This fact necessarily escaped the chemist, although it is expressed clearly enough in the Greek and Latin texts as well as in the Chinese of about the same period.

[253] To begin with, of course, it is almost impossible for our scientifically trained minds to feel their way back into that primitive state of *participation mystique* in which subject and object are identical. Here the findings of modern psychology stood me in very good stead. Practical experience shows us again and again that any prolonged preoccupation with an unknown object acts as an almost irresistible bait for the unconscious to project itself into the unknown nature of the object and to accept the resultant perception, and the interpretation deduced from it, as objective. This phenomenon, a daily occurrence in practical psychology and more especially in psychotherapy, is without doubt a vestige of primitivity. On the primitive level, the whole of life is governed by animistic assumptions, that is, by projections of subjective contents into objective situations. For example, Karl von den Steinen says that the Bororos think of themselves as red cockatoos, although they readily admit that they have no feathers.[1] On this level, the alchemists' assumption that a certain substance possesses secret powers, or that there is a *prima materia* somewhere which works miracles, is self-evident. This is, however, not a fact that can be understood or even thought of in chemical terms, it is a psychological phenomenon. Psychology, therefore, can make an important contribution towards elucidating the alchemists' mentality. What to the chemist seem to be the absurd fantasies of alchemy can be recognized by the psychologist without too much difficulty as psychic material contaminated with chemical substances. This material stems from the collective unconscious and is therefore identical with fantasy products that can still be found today among both sick and healthy people who have never heard of alchemy. On account of the primitive character of its projections, alchemy, so barren a field for the chemist, is for the psychologist a veritable gold-mine of materials which throw an exceedingly valuable light on the structure of the unconscious.

[254] Since in what follows I shall often refer to the original texts, it might be as well to say a few words about this literature, some of which is not easily accessible. I shall leave out of account the few Chinese texts that have been translated, and shall only mention that *The Secret of the Golden Flower*, published by Richard Wilhelm and myself, is representative of its class. Nor can I consider the Indian “Quicksilver System.”[2] The Western literature I have used falls into four groups:

1. *Texts by ancient authors.* This group comprises mainly Greek texts, which have been edited by Berthelot, and those transmitted by the Arabs, likewise edited by him. They date from the period between the first and eighth centuries.

2. *Texts by the early Latinists.* The most important of these are translations from the Arabic (or Hebrew?). Recent research shows that most of these texts derive from the Harranite school, which flourished until about 1050, and was also, probably, the source of the *Corpus Hermeticum.* To this group belong certain texts whose Arabic origin is doubtful but which at least show Arabic influence—for instance, the “Summa perfectionis” of Geber and the Aristotle and Avicenna treatises. This period extends from the ninth to the thirteenth century.

3. *Texts by the later Latinists.* These comprise the principal group and range from the fourteenth to the seventeenth century.

4. *Texts in modern European languages.* Sixteenth to seventeenth century. After that, alchemy fell into decline, which is why I have only occasionally used eighteenth-century texts.

2. MERCURIUS AS QUICKSILVER AND/OR WATER

[255] Mercurius was first understood pretty well everywhere as *hydrargyrum*[1] (Hg), quicksilver or *argentum vivum* (Fr. *vifargent* or *argent vive*). As such, it was called *vulgaris* (common) and *crudus*. As a rule, *mercurius philosophicus* was specifically distinguished from this, as an avowedly arcane substance that was sometimes conceived to be present in *mercurius crudus*, and then, again, to differ from it completely. It was the true object of the alchemical procedure. Quicksilver, because of its fluidity and volatility, was also defined as water. A popular saying is: “Aqua manus non madefaciens” (the water that does not make the hands wet).[2] Other designations are *aqua vitae,*[3] *aqua alba,*[4] *aqua sicca.*[5] The last designation, dry water, is paradoxical, for which reason I should like to call special attention to it as characterizing the nature of the object described. *Aqua septies distillata* (seven times distilled water) and *aqueum subtile*[6] point to the sublimated (“spiritual”) nature of the philosophic Mercurius. Many treatises simply speak of Mercurius as water.[7] The doctrine of the *humidum radicale* (root-moisture or radical moisture) underlies such designations as *humidum album,*[8] *humiditas maxime permanens incombustibilis et unctuosa,*[9] and *humiditas radicalis.*[10] Mercurius is also said to arise from the moisture like a vapour[11] (which again points to his spiritual nature), or to rule the water.[12] The “divine water” (*ὕδωρ ϑεῑον*) so often mentioned in the Greek texts is quicksilver.[13] Mercurius as the arcane substance and golden tincture is indicated by the designation *aqua aurea*[14] and by the description of the water as *Mercurii caduceus.*[15]

3. MERCURIUS AS FIRE

[256] Many treatises define Mercurius simply as fire.[1] He is *ignis elementaris*[2] *noster naturalis ignis certissimus*,[3] which again indicates his "philosophic" nature. The *aqua mercurialis* is even a divine fire.[4] This fire is "highly vaporous" (*vaporosus*).[5] Indeed, Mercurius is really the only fire in the whole procedure.[6] He is an "invisible fire, working in secret."[7] One text says that the "heart" of Mercurius is at the North Pole and that he is like a fire (northern lights).[8] He is, in fact, as another text says, "the universal and scintillating fire of the light of nature, which carries the heavenly spirit within it."[9] This passage is particularly important as it relates Mercurius to the *lumen naturae*, the source of mystical knowledge second only to the holy revelation of the Scriptures. Once more we catch a glimpse of the ancient role of Hermes as the god of revelation. Although the *lumen naturae*, as originally bestowed by God upon his creatures, is not by nature ungodly, its essence was nevertheless felt to be abysmal, since the *ignis mercurialis* was also connected with the fires of hell. It seems, however, that the alchemists did not understand hell, or its fire, as absolutely outside of God or opposed to him, but rather as an internal component of the deity, which must indeed be so if God is held to be a *coincidentia oppositorum*. The concept of an all-encompassing God must necessarily include his opposite. The *coincidentia*, of course, must not be too radical or too extreme, otherwise God would cancel himself out.[10] The principle of the coincidence of opposites must therefore be completed by that of absolute opposition in order to attain full paradoxicality and hence psychological validity.

[257] The mercurial fire is found in the "centre of the earth," or dragon's belly, in fluid form. Benedictus Figulus writes: "Visit the centre of the earth, there you will find the global fire."[11] Another treatise says that this

fire is the “secret, infernal fire, the wonder of the world, the system of the higher powers in the lower.”[12] Mercurius, the revelatory light of nature, is also hell-fire, which in some miraculous way is none other than a rearrangement of the heavenly, spiritual powers in the lower, chthonic world of matter, thought already in St. Paul’s time to be ruled by the devil. Hell-fire, the true energic principle of evil, appears here as the manifest counterpart of the spiritual and the good, and as essentially identical with it in substance. After that, it can surely cause no offence when another treatise says that the mercurial fire is the “fire in which God himself burns in divine love.”[13] We are not deceiving ourselves if we feel in scattered remarks of this kind the breath of true mysticism.

[258] Since Mercurius is himself of fiery nature, fire does not harm him: he remains unchanged within it, rejoicing like the salamander.[14] It is unnecessary to point out that quicksilver does not behave like this but vaporizes under heat, as the alchemists themselves knew from very early times.

4. MERCURIUS AS SPIRIT AND SOUL

[259] If Mercurius had been understood simply as quicksilver, there would obviously have been no need for any of the appellations I have listed. The fact that this need arose points to the conclusion that one simple and unmistakable term in no way sufficed to designate what the alchemists had in mind when they spoke of Mercurius. It was certainly quicksilver, but a very special quicksilver, “our” Mercurius, the essence, moisture, or principle behind or within the quicksilver—that indefinable, fascinating, irritating, and elusive thing which attracts an unconscious projection. The “philosophic” Mercurius, this *servus fugitivus* or *cervus fugitivus* (fugitive slave or stag), is a highly important unconscious content which, as may be gathered from the few hints we have given, threatens to ramify into a set of far-reaching psychological problems. The concept swells dangerously and we begin to perceive that the end is nowhere in sight. Therefore we would rather not tie this concept prematurely to any special meaning, but shall content ourselves with stating that the philosophic Mercurius, so dear to the alchemist as the transformative substance, is obviously a projection of the unconscious, such as always takes place when the inquiring mind lacks the necessary self-criticism in investigating an unknown quantity.

[260] As has already been indicated, the psychic nature of the arcane substance did not escape the alchemists; indeed, they actually defined it as “spirit” and “soul.” But since these concepts—especially in earlier times—were always ambiguous, we must approach them with caution if we want to gain a moderately clear idea of what the terms *spiritus* and *anima* meant in alchemical usage.

A. MERCURIUS AS AN AERIAL SPIRIT

[261] Hermes, originally a wind god, and his counterpart the Egyptian Thoth, who "makes the souls to breathe,"[1] are the forerunners of the alchemical Mercurius in his aerial aspect. The texts often use the terms *pneuma* and *spiritus* in the original concrete sense of "air in motion." So when Mercurius is described in the *Rosarium philosophorum* (fifteenth century) as *aereus* and *volans*[2] (winged), and in Hoghelande (sixteenth century) as *totus aereus et spiritualis,*[3] what is meant is nothing more than a gaseous state of aggregation. Something similar is meant by the poetic expression *serenitas aerea* in the Ripley *Scrowle,*[4] and by the same author's statement that Mercurius is changed into wind.[5] He is the *lapis elevatus cum vento* (the stone uplifted by the wind).[6] The expressions *spirituale corpus*[7] and *spiritus visibilis, tamen impalpabilis*[8] (visible yet impalpable spirit) might also mean little more than "air" if one recalls the aforementioned vapour-like nature of Mercurius, and the same is probably true even of the *spiritus prae cunctis valde purus*[9] (pre-eminently pure spirit). The designation *incombustibilis*[10] is more doubtful, since this was often synonymous with *incorruptibilis* and then meant "eternal," as we shall see later. Penotus (sixteenth century), a pupil of Paracelsus, stresses the corporeal aspect when he says that Mercurius is "nothing other than the spirit of the world become body within the earth."[11] This expression shows better than anything else the contamination—inconceivable to the modern mind—of two separate realms, spirit and matter; for to people in the Middle Ages the *spiritus mundi* was also the spirit which rules nature, and not just a pervasive gas. We find ourselves in the same dilemma when another author, Mylius, in his *Philosophia reformata,*[12] describes Mercurius as an "intermediate substance" (*media substantia*), which is evidently synonymous with his concept of the *anima media natura*[13] (soul as intermediate nature), for to him Mercurius was the "spirit and soul of the bodies."[14]

B. MERCURIUS AS SOUL

[262] "Soul" represents a higher concept than "spirit" in the sense of air or gas. As the "subtle body" or "breath-soul" it means something non-material and finer than mere air. Its essential characteristic is to animate

and be animated; it therefore represents the life principle. Mercurius is often designated as *anima* (hence, as a feminine being, he is also called *foemina* or *virgo*), or as *nostra anima.*[15] The *nostra* here does not mean "our own" soul but, as in *aqua nostra, Mercurius noster, corpus nostrum*, refers to the arcane substance.

[263] However, *anima* often appears to be connected with *spiritus*, or is equated with it.[16] For the spirit shares the living quality of the soul, and for this reason Mercurius is often called the *spiritus vegetativus*[17] (spirit of life) or *spiritus seminalis.*[18] A peculiar appellation is found in that seventeenth-century forgery which purports to be the secret book of Abraham le Juif, mentioned by Nicolas Flamel (fourteenth century). The epithet is *spiritus Phytonis* (from *ϕὔω*, 'to procreate,' *ϕυτόν*, 'creature,' *ϕὔτωρ*, 'procreator,' and *Python*, the Delphic serpent), and is accompanied by the serpent sign: Ω,[19] Very much more material is the definition of Mercurius as a "life-giving power like a glue, holding the world together and standing in the middle between body and spirit."[20] This concept corresponds to Mylius' definition of Mercurius as the *anima media natura.* From here it is but a step to the identification of Mercurius with the *anima mundi,*[21] which is how Avicenna had defined him very much earlier (twelfth to thirteenth century). "He is the spirit of the Lord which fills the whole world and in the beginning swam upon the waters. They call him also the spirit of Truth, which is hidden from the world."[22] Another text says that Mercurius is the "supracelestial spirit which is conjoined with the light, and rightly could be called the *anima mundi.*"[23] It is clear from a number of texts that the alchemists related their concept of the *anima mundi* on the one hand to the world soul in Plato's *Timaeus* and on the other to the Holy Spirit, who was present at the Creation and played the role of procreator (*ϕὔτωρ*), impregnating the waters with the seed of life just as, later, he played a similar role in the *obumbratio* (overshadowing) of Mary.[24] Elsewhere we read that a "life-force dwells in *Mercurius non vulgaris*, who flies like solid white snow. This is a spirit of the macrocosmic as of the microcosmic world, upon whom, after the *anima rationalis*, the motion and fluidity of human nature itself depends."[25] The snow represents the purified Mercurius in

the state of *albedo* (= spirituality); here again matter and spirit are identical. Worth noting is the duality of soul caused by the presence of Mercurius: on the one hand the immortal *anima rationalis* given by God to man, which distinguishes him from animals; on the other hand the mercurial life-soul, which to all appearances is connected with the *inflatio* or *inspiratio* of the Holy Spirit. This fundamental duality forms the psychological basis of the two sources of illumination.

C. MERCURIUS AS SPIRIT IN THE INCORPOREAL, METAPHYSICAL SENSE

[264] In many of the passages it remains doubtful whether *spiritus* means spirit in an abstract sense.[20] It is moderately certain that this is so in Dorn, for he says that "Mercurius possesses the quality of an incorruptible spirit, which is like the soul, and because of its incorruptibility is called intellectual"[27]—i.e., pertaining to the *mundus intelligibilis.* One text expressly calls him "spiritual and hyperphysical,"[28] and another says that the spirit of Mercurius comes from heaven.[29] Laurentius Ventura (sixteenth century) may well have been associating himself with the "Platonis liber quartorum" and hence with the neo-Platonist ideas of the Harranite school when he defined the spirit of Mercurius as "completely and entirely like itself" (*sibi omnino similis*) and *simplex,*[30] for this Harranite text defines the arcane substance as the *res simplex* and equates it with God.[31]

[265] The oldest reference to the mercurial *pneuma* occurs in an Ostanes quotation of considerable antiquity (possibly pre-Christian), which says: "Go to the streamings of the Nile, and there you will find a stone that has a spirit."[32] In Zosimos Mercurius is characterized as incorporeal (*ἀσὠματον*),[33] and by another author as ethereal (*αἰϑερῶδες πνεῦμα*) and as having become rational or wise (*σὠϕρων γενομἐνη*).[34] In the very old treatise "Isis to Horus" (first century) the divine water is brought by an angel and is clearly of celestial or possibly daemonic origin, since according to the text the angel Amnael who brings it is not a morally irreproachable figure.[35] For the alchemists, as we know not only from the ancient but also from the later writers, Mercurius as the arcane substance had a more or less secret connection with the goddess of love. In the

“Book of Krates,” which was transmitted by the Arabs and is possibly of Alexandrian origin, Aphrodite appears with a vessel from the mouth of which pours a ceaseless stream of quicksilver,[36] and in the *Chymical Wedding* of Christian Rosencreutz the central mystery is his visit to the secret chamber of the sleeping Venus.

[266] The fact that Mercurius is interpreted as spirit and soul, in spite of the spirit-body dilemma which this involves, indicates that the alchemists themselves conceived of their arcane substance as something that we today would call a psychic phenomenon. Indeed, whatever else spirit and soul may be, from the phenomenological point of view they are psychic structures. The alchemists never tired of drawing attention to the psychic nature of Mercurius. So far we have concerned ourselves with, statistically, the commonest synonyms such as water and fire, spirit and soul, and it is now possible for us to conclude that these exemplify a psychological state of affairs best characterized by (or, indeed, actually demanding) an antinomian nomenclature. Water and fire are classic opposites and can be valid definitions of one and the same thing only if this thing unites in itself the contrary qualities of water and fire. The psychologem “Mercurius” must therefore possess an essentially antinomian dual nature.

5. THE DUAL NATURE OF MERCURIUS

[267] Mercurius, following the tradition of Hermes, is many-sided, changeable, and deceitful. Dorn speaks of "that inconstant Mercurius,"[1] and another calls him *versipellis* (changing his skin, shifty).[2] He is *duplex*[3] and his main characteristic is duplicity. It is said of him that he "runs round the earth and enjoys equally the company of the good and the wicked."[4] He is "two dragons,"[5] the "twin,"[6] made of "two natures"[7] or "two substances."[8] He is the "giant of twofold substance," in explanation of which the text[9] cites the twenty-sixth chapter of Matthew, where the sacrament of the Last Supper is instituted. The Christ analogy is thus made plain. The two substances of Mercurius are thought of as dissimilar, sometimes opposed; as the dragon he is "winged and wingless."[10] A parable says: "On this mountain lies an ever-waking dragon, who is called Pantophthalmos, for he is covered with eyes on both sides of his body, before and behind, and he sleeps with some open and some closed."[11] There is the "common and the philosophic" Mercurius;[12] he consists of "the dry and earthy, the moist and viscous."[13] Two of his elements are passive, earth and water, and two active, air and fire.[14] He is both good and evil.[15] The "Aurelia occulta" gives a graphic description of him:[16]

> I am the poison-dripping dragon, who is everywhere and can be cheaply had. That upon which I rest, and that which rests upon me, will be found within me by those who pursue their investigations in accordance with the rules of the Art. My water and fire destroy and put together; from my body you may extract the green lion and the red. But if you do not have exact knowledge of me, you will destroy your five senses with my fire. From my snout there comes a spreading poison that has brought death to many. Therefore you should skilfully separate the coarse from the fine, if you do not wish to suffer utter poverty. I bestow on you the powers of the

male and the female, and also those of heaven and of earth. The mysteries of my art must be handled with courage and greatness of mind if you would conquer me by the power[17] of fire, for already very many have come to grief, their riches and labour lost. I am the egg of nature, known only to the wise, who in piety and modesty bring forth from me the microcosm, which was prepared for mankind by Almighty God, but given only to the few, while the many long for it in vain, that they may do good to the poor with my treasure and not fasten their souls to the perishable gold. By the philosophers I am named Mercurius; my spouse is the [philosophic] gold; I am the old dragon, found everywhere on the globe of the earth, father and mother, young and old, very strong and very weak, death and resurrection, visible and invisible, hard and soft; I descend into the earth and ascend to the heavens, I am the highest and the lowest, the lightest and the heaviest; often the order of nature is reversed in me, as regards colour, number, weight, and measure; I contain the light of nature; I am dark and light; I come forth from heaven and earth; I am known and yet do not exist at all;[18] by virtue of the sun's rays all colours shine in me, and all metals. I am the carbuncle of the sun, the most noble purified earth, through which you may change copper, iron, tin, and lead into gold.

[268] Because of his united double nature Mercurius is described as hermaphroditic. Sometimes his body is said to be masculine and his soul feminine, sometimes the reverse. The *Rosarium philosophorum,* for example, has both versions.[19] As *vulgaris* he is the dead masculine body, but as "our" Mercurius he is feminine, spiritual, alive and life-giving.[20] He is also called husband and wife,[21] bridegroom and bride, or lover and beloved.[22] His contrary natures are often called *Mercurius sensu strictiori* and sulphur, the former being feminine, earth, and Eve, and the latter masculine, water, and Adam.[23] In Dorn he is the "true hermaphroditic Adam,"[24] and in Khunrath he is "begotten of the hermaphroditic seed of the Macrocosm" as "an immaculate birth from the hermaphroditic matter" (i.e., the *prima materia*).[25] Mylius calls him the "hermaphroditic monster."[26] As Adam he is also the microcosm, or even "the heart of the microcosm,"[27] or he has the microcosm "in

himself, where are also the four elements and the *quinta essentia* which they call Heaven."[28] The term *coelum* for Mercurius does not, as one might think, derive from the *firmamentum* of Paracelsus, but occurs earlier in Johannes de Rupescissa (fourteenth century).[29] The term *homo* is used as a synonym for "microcosm," as when Mercurius is named the "Philosophic ambisexual Man."[30] In the very old "Dicta Belini" (Belinus or Balinus is a corruption of Apollonius of Tyana), he is the "man rising from the river,"[31] probably a reference to the vision of Ezra.[32] In Trismosin's *Splendor solis* (sixteenth century) there is an illustration of this.[33] The idea itself may go back to the Babylonian teacher of wisdom, Oannes. The designation of Mercurius as the "high man"[34] does not fit in badly with such a pedigree. The terms Adam and microcosm occur frequently in the texts,[35] but the Abraham le Juif forgery unblushingly calls Mercurius Adam Kadmon.[36] As I have discussed this unmistakable continuation of the Gnostic doctrine of the Anthropos elsewhere,[37] there is no need for me to go more closely now into this aspect of Mercurius.[38] Nevertheless, I would like to emphasize once again that the Anthropos idea coincides with the psychological concept of the self. The atman and purusha doctrine as well as alchemy give clear proofs of this.

[269] Another aspect of the dual nature of Mercurius is his characterization as *senex*[39] and *puer*.[40] The figure of Hermes as an old man, attested by archaeology, brings him into direct relation with Saturn—a relationship which plays a considerable role in alchemy (see infra, pars. 274ff.). Mercurius truly consists of the most extreme opposites; on the one hand he is undoubtedly akin to the godhead, on the other he is found in sewers. Rosinus (Zosimos) even calls him the *terminus ani*.[41] In the Bundahish,[42] the anus of Garotman is "like hell on earth."

6. THE UNITY AND TRINITY OF MERCURIUS

[270] In spite of his obvious duality the unity of Mercurius is also emphasized, especially in his form as the lapis. “In all the world he is One.”[1] The unity of Mercurius is at the same time a trinity, with clear reference to the Holy Trinity, although his triadic nature does not derive from Christian dogma but is of earlier date. Triads occur as early as the treatise of Zosimos, *περὶ ἀρετῆς* (Concerning the Art).[2] Martial calls Hermes *omnia solus el ter unus* (All and Thrice One).[3] In Monakris (Arcadia), a three-headed Hermes was worshipped, and in Gaul there was a three-headed Mercurius.[4] This Gallic god was also a psychopomp. The triadic character is an attribute of the gods of the underworld, as for instance the three-bodied Typhon, three-bodied and three-faced Hecate,[5] and the “ancestors” (*τριτοπάτορες*) with their serpent bodies. According to Cicero,[6] these latter are the three sons of Zeus the King, the *rex antiquissimus*.[7] They are called the “forefathers” and are wind-gods;[8] obviously by the same logic the Hopi Indians believe that snakes are at the same time flashes of lightning auguring rain. Khunrath calls Mercurius *triunus*[9] and *ternarius*.[10] Mylius represents him as a three-headed snake.[11] The “Aquarium sapientum” says that he is a “triune, universal essence which is named Jehova.[12] He is divine and at the same time human.”[13]

[271] From all this one must conclude that Mercurius corresponds not only to Christ, but to the triune divinity in general. The “Aurelia occulta” calls him “Azoth,” and explains the term as follows: “For he is the A and O that is everywhere present. The philosophers have adorned [him] with the name Azoth, which is compounded of the A and Z of the Latins, the alpha and omega of the Greeks, and the aleph and tau of the Hebrews:

$$\mathrm{A}\left\{\begin{matrix} \mathrm{z}\\ \omega\\ \text{ת} \end{matrix}\right\}\mathrm{Azoth.}\text{''}$$ [14]

The parallel with the Trinity could not be more clearly indicated. The anonymous commentator of the “Tractatus aureus” puts the parallel with Christ as Logos just as unmistakably. All things proceed from the “philosophic heaven adorned with an infinite multitude of stars,”[15] from the creative Word incarnate, the Johannine Logos, without which “was not any thing made that was made.” The commentator says: “Thus the Word of renewal is invisibly inherent in all things, but it is not evident in elementary solid bodies unless they have been brought back to the fifth, or heavenly and astral essence. Hence this Word of renewal is the seed of promise, or the philosophic heaven refulgent with the infinite lights of the stars.”[16] Mercurius is the Logos become world. The description given here may point to his basic identity with the collective unconscious, for as I tried to show in my essay “On the Nature of the Psyche,”[17] the image of the starry heaven seems to be a visualization of the peculiar nature of the unconscious. Since Mercurius is often called *filius*, his sonship is beyond question.[18] He is therefore like a brother to Christ and a second son of God, though in point of time he must be accounted the elder and the first-born. This idea goes back to the conceptions of the Euchites reported in Michael Psellus,[19] who believed that God’s first son was Satanaël[20] and that Christ was the second.[21] However, Mercurius is not only the counterpart of Christ in so far as he is the “son”; he is also the counterpart of the Trinity as a whole in so far as he is conceived to be a chthonic triad. According to this view he would be equal to one half of the Christian Godhead. He is indeed the dark chthonic half, but he is not simply evil as such, for he is called “good *and* evil,” or a “system of the higher powers in the lower.” He calls to mind that double figure which seems to stand behind both Christ and the devil—that enigmatic Lucifer whose attributes are shared by both. In Rev. 22 : 16 Christ says of himself: “I am the root and the offspring of David, the bright and the morning star.”

[272] One peculiarity of Mercurius which undoubtedly relates him to the Godhead and to the primitive creator god is his ability to beget himself. In the “Allegoriae super librum Turbae” he says: “The mother bore me and is herself begotten of me.”[22] As the uroboros dragon, he impregnates, begets, bears, devours, and slays himself, and “himself lifts himself on high,” as the *Rosarium* says,[23] so paraphrasing the mystery of God’s sacrificial death. Here, as in many similar instances, it would be rash to assume that the alchemists were as conscious of their reasoning processes as perhaps we are. But man, and through him the unconscious, expresses a great deal that is not necessarily conscious in all its implications. Nevertheless I should like to avoid giving the impression that the alchemists were absolutely unconscious of their thought-processes. How little this was so is proved by the above quotations. But although Mercurius, in many texts, is stated to be *trinus et unus*, this does not prevent him from sharing very strongly the *quaternity* of the lapis, with which he is essentially identical. He thus exemplifies that strange dilemma which is posed by the problem of three and four—the well-known axiom of Maria Prophetissa. There is a classical *Hermes tetracephalus* as well as the *Hermes tricephalus*.[24] The ground-plan of the Sabaean temple of Mercurius was a triangle inside a square.[25] In the scholia to the “Tractatus aureus” the sign for Mercurius is a square inside a triangle surrounded by a circle (symbol of totality).[26]

7. THE RELATION OF MERCURIUS TO ASTROLOGY AND THE DOCTRINE OF THE ARCHONS

[273] One of the roots of the peculiar philosophy relating to Mercurius lies in ancient astrology and in the Gnostic doctrine of the archons and aeons, which is derived from it. Between Mercurius and the planet there is a relation of mystical identity due either to contamination or to an actual spiritual identity. In the first case quicksilver is simply the planet Mercury as it appears in the earth (just as gold is simply the sun in the earth);[1] in the second, the "spirit" of quicksilver is identical with the planetary spirit. Both spirits individually, or the two as one spirit, were personified and called upon for aid or magically conjured into service as a *paredros* or "familiar." Within the alchemical tradition we find directions for such procedures in the Harranite treatise "Clavis maioris sapientiae" of Artefius,[2] which agree with descriptions of the invocations mentioned by Dozy and de Goeje.[3] There are also references to procedures of this kind in the "Liber Platonis quartorum."[4] Parallel with this is the account according to which Democritus received the secret of the hieroglyphs from the genius of the planet Mercury.[5] The spirit Mercurius appears here in the role of a mystagogue, as in the *Corpus Hermeticum* or the visions of Zosimos. He plays the same role in the remarkable dream-vision recorded in "Aurelia occulta," where he appears as the Anthropos with a crown of stars.[6] As the little star near the sun, he is the child of sun and moon.[7] But contrariwise he is also the begetter of his parents;[8] or, as the treatise of Wei Po-yang (*c.* A.D. 142) remarks, the gold (sun) gets its qualities from Mercurius.[9] (Owing to the contamination, the astrological myth is always thought of in chemical terms as well.) Because of his half-feminine nature, Mercurius is often identified with the moon[10] and Venus.[11] As his own divine consort he easily turns into the goddess of love, just as in his role of Hermes he is

ithyphallic. But he is also called the “most chaste virgin.”[12] The relation of quicksilver to the moon (silver) is obvious enough. Mercurius as the shining and shimmering planet, appearing like Venus close to the sun in the morning or evening sky, is like her a Lucifer, a light-bringer (*φωσφόροζ*). He heralds, as the morning star does, only much more directly, the coming of the light.

[274] But the most important of all for an interpretation of Mercurius is his relation to Saturn. Mercurius *senex* is identical with Saturn, and to the earlier alchemists especially, it is not quicksilver, but the lead associated with Saturn, which usually represents the prima materia. In the Arabic text of the *Turba*[13] quicksilver is identical with the “water of the moon and of Saturn.” In the “Dicta Belini” Saturn says: “My spirit is the water that loosens the rigid limbs of my brothers.”[14] This refers to the “eternal water” which is just what Mercurius is. Raymund Lully remarks that “a certain oil of a golden colour is extracted from the philosophic lead.”[15] In Khunrath Mercurius is the “salt of Saturn,”[16] or Saturn is simply Mercurius. Saturn “draws the eternal water.”[17] Like Mercurius, Saturn is hermaphroditic.[18] Saturn is “an old man on a mountain, and in him the natures are bound with their complement [i.e., the four elements], and all this is in Saturn.”[19] The same is said of Mercurius. Saturn is the father and origin of Mercurius, therefore the latter is called “Saturn’s child.”[20] Quicksilver comes “from the heart of Saturn or is Saturn,”[21] and a “bright water” is extracted from the plant Saturnia, “the most perfect water and flower in the world.”[22] This statement of Sir George Ripley, Canon of Bridlington, is a most remarkable parallel to the Gnostic teaching that Kronos (Saturn) is a “power of the colour of water” (*ύδατόχρους*) which destroys everything, since “water is destruction.”[23]

[275] Like the planetary spirit of Mercurius, the spirit of Saturn is “very suited to this work.”[24] One of the manifestations of Mercurius in the alchemical process of transformation is the lion, now green and now red. Khunrath calls this transformation “luring the lion out of Saturn’s mountain cave.” From ancient times the lion was associated with Saturn.[25] Khunrath calls him “the lion of the Catholic tribe,”[20] paraphrasing the “lion of the tribe of Judah”—an allegory of Christ.[27] He

calls Saturn “the lion green and red.”[28] In Gnosticism Saturn is the highest archon, the lion-headed Ialdabaoth,[29] meaning “child of chaos.” But in alchemy the child of chaos is Mercurius.[30]

[276] The relation to and identity with Saturn is important because Saturn is not only a *maleficus* but actually the dwelling-place of the devil himself. Even as the highest archon and demiurge his Gnostic reputation was not the best. According to one Cabalistic source, Beelzebub was associated with him.[31] Mylius says that if Mercurius were to be purified, then Lucifer would fall from heaven.[32] A contemporary marginal note in a seventeenth-century treatise in my possession explains the term sulphur, the masculine principle of Mercurius,[33] as *diabolus*. If Mercurius is not exactly the Evil One himself, he at least contains him—that is, he is morally neutral, good and evil, or as Khunrath says: “Good with the good, evil with the evil.”[34] His nature is more exactly defined, however, if one conceives him as a *process* that begins with evil and ends with good. A rather deplorable but picturesque poem in *Verus Hermes* (1620) summarizes the process as follows:

A weakling babe, a greybeard old,
Surnamed the Dragon: me they hold
In darkest dungeon languishing
That I may be reborn a king.

A fiery sword makes me to smart,
Death gnaws my flesh and bones apart.
My soul and spirit fast are sinking,
And leave a poison, black and stinking.

To a black crow am I akin,
Such be the wages of all sin.
In deepest dust I lie alone,
O that the Three would make the One!

O soul, O spirit with me stay,
That I may greet the light of day.
Hero of peace, come forth from me,

Whom the whole world would like to see!

[277] In this poem Mercurius is describing his own transformation, which at the same time signifies the mystic transformation of the artifex; for not only Mercurius but also what happens to him is a projection of the collective unconscious. This, as can easily be seen from what has gone before, is the projection of the individuation process, which, being a natural psychic occurrence, goes on even without the participation of consciousness. But if consciousness participates with some measure of understanding, then the process is accompanied by all the emotions of a religious experience or revelation. As a result of this, Mercurius was identified with Sapientia and the Holy Ghost. It is therefore very probable that those heresies which began with the Euchites, Paulicians, Bogomils, and Cathars, and which developed the concept of the Paraclete very much in the spirit of the founder of Christianity, were continued in alchemy, partly unconsciously and partly under a deliberate disguise.[35]

8. MERCURIUS AND HERMES

[278] We have already met with a number of alchemical statements which show plainly that the character of the classical Hermes was faithfully reproduced later in the figure of Mercurius. This is in part an unconscious repetition, in part a spontaneous re-experience, and finally also a conscious reference to the pagan god. There can be no doubt that Michael Maier was consciously alluding to Hermes as pointer of the way (*όδηγός*) when he said that he found on his mystic peregrination a statue of Mercurius pointing the way to paradise,[1] and that he was referring to Hermes the mystagogue when he made the Erythraean Sibyl say of Mercurius: “He will make you a witness of the mysteries of God and the secrets of nature.”[2] Again, as the *divinus ternarius*, Mercurius is the revealer of divine secrets,[3] or in the form of gold is conceived to be the soul of the arcane substance (magnesia),[4] or the fructifier of the philosophical tree.[5] In the “Epigramma Mercurio philosophico dicatum”[6] he is called the messenger of the gods, the hermeneut (interpreter), and the Egyptian “Theutius” (Thoth). Maier even goes so far as to relate him to Hermes Kyllenios when he calls him “this faithless and all too elusive Arcadian youth,”[7] for in Arcadia was the sanctuary of Kyllenios, the ithyphallic Hermes. In the scholia to the “Tractatus aureus” Mercurius is named outright the “Kyllenian hero.”[8] Maier’s words might also be a reference to Eros. And in fact, in Rosencreutz’s *Chymical Wedding*, Mercurius does appear in the form of Cupid,[9] and punishes the adept for his curiosity in visiting the Lady Venus by wounding him in the hand with an arrow. The arrow is the “dart of passion” (*telum passionis*), which is also an attribute of Mercurius.[10] He is an “archer,” and indeed one who “shoots without a bowstring” and is “nowhere to be found on earth,”[11] so is obviously a daemon. In the Table of Symbols in Penotus[12] he is associated with nymphs, which reminds one of the pastoral god,

Pan. His lasciviousness is borne out by an illustration in the *Tripus chimicus* of Sendivogius,[13] where he appears on a triumphal chariot drawn by a cock and a hen, and behind him is a naked pair of embracing lovers. In this connection may also be mentioned the numerous somewhat obscene pictures of the coniunctio in old prints, often preserved merely as pornographica. Pictures in old manuscripts of excretory acts, including vomiting, likewise belong to this sphere of the "underworldly Hermes."[14] Again, Mercurius represents the "continuous cohabitation"[15] which is found in unalloyed form in the Tantric Shiva-Shakti concept. Connections between Greek and Arabic alchemy and India are not unlikely. Reitzenstein[16] reports the story of Padmanaba from a Turkish book of folklore[17] about the forty viziers, which may date back to the time of the Moguls. Already in the first centuries of our era, Indian religious influences were at work in southern Mesopotamia, and in the second century B.C. there were Buddhist monasteries in Persia. In the royal temple of Padmanabhapura in Travancore (*c*. fifteenth century) I found two reliefs representing an entirely non-Indian *senex ithyphallicus* with wings. In one of them he stands up to his waist in the bowl of the moon. One is reminded of the winged ithyphallic old man who pursues the "blue" or "doglike"[18] woman in Hippolytus. Kyllenios does in fact appear in Hippolytus[19] as identical on the one hand with the Logos and on the other with the wicked Korybas, the phallus, and the demiurgic principle in general.[20] Another aspect of this dark Mercurius is the mother-son incest, which may be traceable to Mandaean influences: there Nabu (Mercurius) and Istar (Astarte) form a syzygy. Astarte is the mother and love goddess throughout the whole Near East, where she is also tainted with the incest motif. Nabu is the "Messiah of the Lie," who because of his malice is punished and kept in prison by the sun.[21] The texts remind us again and again that Mercurius is "found in the dung-heaps," but they add ironically that "many have grubbed in the dung-heaps, but extracted nothing thereby."[22]

[279] This dark Mercurius must once again be understood as representing the initial *nigredo* state, the lowest being a symbol of the highest and vice versa:

Anfang und Ende

Reichen sich die Hände.[23]

He is the uroboros, the One and All, the union of opposites accomplished during the alchemical process, of which Penotus says:[24]

> Mercurius is begotten by nature as the son of nature and the fruit of the liquid element. But even as the Son of Man is begotten by the philosopher and created as the fruit of the Virgin, so must he [Mercurius] be raised from the earth and cleansed of all earthiness, then he ascends entire into the air, and is changed into spirit. Thus is fulfilled the word of the philosopher: He ascends from earth to heaven and receives the power of Above and Below, and puts off his earthy and impure nature and clothes himself in the heavenly nature.

[280] Since Penotus is here referring to the "Tabula smaragdina," it must be emphasized that he departs from the spirit of the "Tabula" in one essential point. In the version of Penotus, the ascent of Mercurius is in entire accord with the Christian transformation of the hylic into the pneumatic man. The "Tabula," on the other hand, says: "He ascends from earth to heaven and descends again to earth, and receives the power of Above and Below. His power is complete when he has returned to earth." So it is not a question of a one-way ascent to heaven, but, in contrast to the route followed by the Christian Redeemer, who comes from above to below and from there returns to the above, the *filius macrocosmi* starts from below, ascends on high, and, with the powers of Above and Below united in himself, returns to earth again. He carries out the reverse movement and thereby manifests a nature contrary to that of Christ and the Gnostic Redeemers, while on the other hand he displays a certain affinity with the Basilidian concept of the third sonship. Mercurius has the circular nature of the uroboros, hence he is symbolized by the *circulus simplex* of which he is at the same time the centre.[25] He can therefore say of himself: "I am One and at the same time Many in myself."[26] This same treatise says that the centre of the circle in man is the earth, and calls it the "salt" to which Christ referred when he said: "Ye are the salt of the earth."[27]

[281] Hermes is a god of thieves and cheats, but also a god of revelation who gave his name to a whole philosophy. Seen in historical retrospect, it

was a moment of the utmost significance when the humanist Patrizi proposed to Pope Gregory XIV that Hermetic philosophy should take the place of Aristotle in ecclesiastical doctrine. At that moment two worlds came into contact, which—after heaven knows what happenings!—must yet be united in the future. At that time it was obviously impossible. A psychological differentiation of religious as well as scientific views is still needed before a union can begin to be brought about.[28]

9. MERCURIUS AS THE ARCANE SUBSTANCE

[282] Mercurius, it is generally affirmed, is the arcanum,[1] the prima materia,[2] the "father of all metals,"[3] the primeval chaos, the earth of paradise, the "material upon which nature worked a little, but nevertheless left imperfect."[4] He is also the ultima materia, the goal of his own transformation, the stone,[5] the tincture, the philosophic gold, the carbuncle, the philosophic man, the second Adam, the analogue of Christ, the king, the light of lights, the *deus terrestris*, indeed the divinity itself or its perfect counterpart. Since I have already discussed the synonyms and meanings of the stone elsewhere there is no need for me to go into further details now.

[283] Besides being the prima materia of the lowly beginning as well as the lapis as the highest goal, Mercurius is also the process which lies between, and the means by which it is effected. He is the "beginning, middle, and end of the work."[6] Therefore he is called the Mediator,[7] Servator, and Salvator. He is a mediator like Hermes. As the *medicina catholica* and *alexipharmakon* he is the "preserver [*servator*] of the world." He is the "healer [*salvator*] of all imperfect bodies"[8] and the "image of Christ's incarnation,"[9] the *unigenitus* "consubstantial with the parental hermaphrodite."[10] Altogether, in the macrocosm of nature he occupies the position which Christ holds in the *mundus rationalis* of divine revelation. But as the saying "My light surpasses all other lights"[11] shows, the claim of Mercurius goes even further, which is why the alchemists endowed him with the attributes of the Trinity[12] in order to make clear his complete correspondence to God. In Dante, Satan is three-headed and therefore three-in-one. He is the counterpart of God in the sense that he is God's antithesis. The alchemists did not hold this view of Mercurius; on the contrary, they saw him as a divine emanation harmonious with God's own being. The stress they laid on his capacity

for self-generation, self-transformation, self-reproduction, and self-destruction contradicts the idea that he is a created being. It is therefore only logical when Paracelsus and Dorn state that the prima materia is an "increatum" and a principle coeternal with God. This denial of *creatio ex nihilo* is supported by the fact that in the beginning God found the Tehom already in existence, that same maternal world of Tiamat whose son we encounter in Mercurius.[13]

10. SUMMARY

[284] The multiple aspects of Mercurius may be summarized as follows:

(1) Mercurius consists of all conceivable opposites. He is thus quite obviously a duality, but is named a unity in spite of the fact that his innumerable inner contradictions can dramatically fly apart into an equal number of disparate and apparently independent figures.

(2) He is both material and spiritual.

(3) He is the process by which the lower and material is transformed into the higher and spiritual, and vice versa.

(4) He is the devil, a redeeming psychopomp, an evasive trickster, and God's reflection in physical nature.

(5) He is also the reflection of a mystical experience of the artifex that coincides with the *opus alchymicum.*

(6) As such, he represents on the one hand the self and on the other the individuation process and, because of the limitless number of his names, also the collective unconscious.[1]

* * *

[285] Certainly goldmaking, as also chemical research in general, was of great concern to alchemy. But a still greater, more impassioned concern appears to have been—one cannot very well say the "investigation"—but rather the *experience* of the unconscious. That this side of alchemy—the *μυστικά*—was for so long misunderstood is due solely to the fact that nothing was known of psychology, let alone of the supra-personal, collective unconscious. So long as one knows nothing of psychic actuality, it will be projected, if it appears at all. Thus the first knowledge of psychic law and order was found in the stars, and was later extended by projections into unknown matter. These two realms of experience branched off into sciences: astrology became astronomy, and alchemy chemistry. On the other hand, the peculiar connection between character

and the astronomical determination of time has only very recently begun to turn into something approaching an empirical science. The really important psychic facts can neither be measured, weighed, nor seen in a test tube or under a microscope. They are therefore supposedly indeterminable, in other words they must be left to people who have an inner sense for them, just as colours must be shown to the seeing and not to the blind.

[286] The store of projections found in alchemy is, if possible, even less known, and there is a further drawback which makes closer investigation extremely difficult. For, unlike the astrological constituents of character which, if negative, are at most unpleasant for the individual, though amusing to his neighbour, the alchemical projections represent collective contents that stand in painful contrast—or rather, in compensatory relation—to our highest rational convictions and values. They give the strange answers of the natural psyche to the ultimate questions which reason has left untouched. Contrary to all progress and belief in a future that will deliver us from the sorrowful present, they point back to something primeval, to the apparently hopelessly static, eternal sway of matter that makes our fondly believed-in world look like a phantasmagoria of shifting scenes. They show us, as the redemptive goal of our active, desirous life, a symbol of the inorganic—the stone—something that does not live but merely exists or "becomes," the passive subject of a limitless and unfathomable play of opposites. "Soul," that bodiless abstraction of the rational intellect, and "spirit," that two-dimensional metaphor of dry-as-dust philosophical dialectic, appear in alchemical projection in almost physical, plastic form, like tangible breath-bodies, and refuse to function as component parts of our rational consciousness. The hope for a psychology without the soul is brought to nothing, and the illusion that the unconscious has only just been discovered vanishes: in a somewhat peculiar form, admittedly, it has been known for close on two thousand years. Let us, however, not delude ourselves: no more than we can separate the constituents of character from the astronomical determinants of time are we able to separate that unruly and evasive Mercurius from the autonomy of matter. Something of the projection-carrier always clings to the projection, and even if we

succeed to some degree in integrating into our consciousness the part we recognize as psychic, we shall integrate along with it something of the cosmos and its materiality; or rather, since the cosmos is infinitely greater than we are, we shall have been assimilated by the inorganic. “Transform yourselves into living philosophical stones!” cries an alchemist, but he did not know how infinitely slowly the stone “becomes.” Anyone who gives serious thought to the “natural light” that emanates from the projections of alchemy will certainly agree with the Master who spoke of the “wearisomeness of the interminable meditation” demanded by the work. In these projections we encounter the phenomenology of an “objective” spirit, a true matrix of psychic experience, the most appropriate symbol for which is matter. Nowhere and never has man controlled matter without closely observing its behaviour and paying heed to its laws, and only to the extent that he did so could he control it. The same is true of that objective spirit which today we call the unconscious: it is refractory like matter, mysterious and elusive, and obeys laws which are so non-human or suprahuman that they seem to us like a *crimen laesae majestatis humanae.* If a man puts his hand to the opus, he repeats, as the alchemists say, God’s work of creation. The struggle with the unformed, with the chaos of Tiamat, is in truth a primordial experience.

[287] Since the psyche, when directly experienced, confronts us in the “living” substance it has animated and appears to be one with it, Mercurius is called *argentum vivum.* Conscious discrimination, or consciousness itself, effects that world-shattering intervention which separates body from soul and divides the spirit Mercurius from the *hydrargyrum*, as if drawing off the spirit into the bottle, to speak in terms of our fairytale. But since body and soul, in spite of the artificial separation, are united in the mystery of life, the mercurial spirit, though imprisoned in the bottle, is yet found in the roots of the tree, as its quintessence and living numen. In the language of the Upanishads, he is the personal atman of the tree. Isolated in the bottle, he corresponds to the ego and the principle of individuation, which in the Indian view leads to the illusion of individual existence. Freed from his prison, Mercurius assumes the character of the supra-personal atman. He becomes the *one*

animating principle of all created things, the *hiranyagarbha* (golden germ),[2] the supra-personal self, represented by the *filius macrocosmi*, the *one* stone of the wise. “Rosinus ad Sarratantam” cites a saying of “Malus Philosophus”[3] which attempts to formulate the psychological relation of the lapis to consciousness: “This stone is below thee, as to obedience; above thee, as to dominion; therefore from thee, as to knowledge; about thee, as to equals.”[4] Applied to the self, this would mean: “The self is subordinate to you, yet on the other hand rules you. It is dependent on your own efforts and your knowledge, but transcends you and embraces all those who are of like mind.” This refers to the collective nature of the self, since the self epitomizes the wholeness of the personality. By definition, wholeness includes the collective unconscious, which as experience seems to show is everywhere identical.

[288] The encounter of the poor student with the spirit in the bottle portrays the spiritual adventure of a blind and unawakened human being. The same motif underlies the tale of the swineherd who climbed the world-tree,[5] and also forms the *leitmotiv* of alchemy. For what it signifies is the individuation process as it prepares itself in the unconscious and gradually enters consciousness. The commonest alchemical symbol for this is the tree, the *arbor philosophica*, which derives from the paradisal tree of knowledge. Here, as in our fairytale, a daemonic serpent, an evil spirit, prods and persuades to knowledge. In view of the Biblical precedent, it is not surprising that the spirit Mercurius has, to say the least, a great many connections with the dark side. One of his aspects is the female serpent-daemon, Lilith or Melusina, who lives in the philosophical tree. At the same time, he not only partakes of the Holy Spirit but, according to alchemy, is actually identical with it. We have no choice but to accept this shocking paradox after all we have learnt about the ambivalence of the spirit archetype. Our ambiguous Mercurius simply confirms the rule. In any case, the paradox is no worse than the Creator’s whimsical notion of enlivening his peaceful, innocent paradise with the presence of an obviously rather dangerous tree-snake, “accidentally” located on the very same tree as the forbidden apples.

[289] It must be admitted that the fairytale and alchemy both show Mercurius in a predominantly unfavourable light, which is all the more

striking because his positive aspect relates him not only to the Holy Spirit, but, in the form of the lapis, also to Christ and, as a triad, even to the Trinity. It looks as if it were precisely these relationships which led the alchemists to put particular stress on the dark and dubious quality of Mercurius, and this militates strongly against the assumption that by their lapis they really meant Christ. If this had been their meaning, why should they have renamed Christ the *lapis philosophorum?* The lapis is at most a counterpart or analogy of Christ in the physical world. Its symbolism, like that of Mercurius who constitutes its substance, points, psychologically speaking, to the self, as also does the symbolic figure of Christ.[6] In comparison with the purity and unity of the Christ symbol, Mercurius-lapis is ambiguous, dark, paradoxical, and thoroughly pagan. It therefore represents a part of the psyche which was certainly not moulded by Christianity and can on no account be expressed by the symbol "Christ." On the contrary, as we have seen, in many ways it points to the devil, who is known at times to disguise himself as an angel of light. The lapis formulates an aspect of the self which stands apart, bound to nature and at odds with the Christian spirit. It represents all those things which have been eliminated from the Christian model. But since they possess living reality, they cannot express themselves otherwise than in dark Hermetic symbols. The paradoxical nature of Mercurius reflects an important aspect of the self—the fact, namely, that it is essentially a *complexio oppositorum*, and indeed can be nothing else if it is to represent any kind of totality. Mercurius as *deus terrestris* has something of that *deus absconditus* (hidden god) which is an essential element of the psychological self, and the self cannot be distinguished from a God-image (except by incontestable and unprovable faith). Although I have stressed that the lapis is a symbol embracing the opposites, it should not be thought of as a—so to speak—more complete symbol of the self. That would be decidedly incorrect, for actually it is an image whose form and content are largely determined by the unconscious. For this reason it is never found in the texts in finished and well-defined form; we have to combine all the scattered references to the various arcane substances, to Mercurius, to the transformation process and the end product. Although the lapis in one aspect or another is almost always the subject discussed, there is no real consensus of opinion in regard to its actual form. Almost every author has his own special allegories, synonyms, and metaphors. This makes it clear that the stone, though indeed an object of general experiment, was to an even greater extent an outcropping of the unconscious, which only sporadically crossed the borderline of subjectivity and gave rise to the vague general concept of the *lapis philosophorum.*

[290] Opposed to this figure veiled in the twilight of more or less secret doctrines there stands, sharply outlined by dogma, the Son of Man and Salvator Mundi, Christ the Sol Novus, before whom the lesser stars pale. He is the affirmation of the daylight of consciousness in trinitarian form. So clear and definite is the Christ figure that whatever differs from him must appear not only inferior but perverse and vile. This is not the result of Christ's own teaching, but rather of what is taught about him, and especially of the crystal purity which dogma has bestowed upon his figure. As a result, a tension of opposites such as had never occurred before in the whole history of Christianity beginning with the Creation arose between Christ and the Antichrist, as Satan or the fallen angel. At the time of Job, Satan is still found among the sons of God. "Now there was a day," it says in Job 1 : 6, "when the sons of God came to present themselves before the Lord, and Satan came also among them." This picture of a celestial family reunion gives no hint of the New Testament "Get thee hence, Satan" (Matthew 4 : 10), nor yet of the dragon chained in the underworld for a thousand years (Rev. 20 : 2). It looks as if the superabundance of light on one side had produced an all the blacker darkness on the other. One can also see that the uncommonly great diffusion of black substance makes a sinless being almost impossible. A loving belief in such a being naturally involves cleansing one's own house of black filth. But the filth must be dumped somewhere, and no matter where the dump lies it will plague even the best of all possible worlds with a bad smell.

[291] The balance of the primordial world is upset. What I have said is not intended as a criticism, for I am deeply convinced not only of the relentless logic but of the expediency of this development. The emphatic differentiation of opposites is synonymous with sharper discrimination,

and that is the *sine qua non* for any broadening or heightening of consciousness. The progressive differentiation of consciousness is the most important task of human biology and accordingly meets with the highest rewards—vastly increased chances of survival and the development of power technology. From the phylogenetic point of view, the effects of consciousness are as far-reaching as those of lung-breathing and warm-bloodedness. But clarification of consciousness necessarily entails an obscuration of those dimmer elements of the psyche which are less capable of becoming conscious, so that sooner or later a split occurs in the psychic system. Since it is not recognized as such it is projected, and appears in the form of a metaphysical split between the powers of light and the powers of darkness. The possibility of this projection is guaranteed by the presence of numerous archaic vestiges of the original daemons of light and darkness in any age. It seems likely, therefore, that the tension of opposites in Christianity is derived to a still unclarified degree from the dualism of ancient Persia, though the two are not identical.

[292] There can be no doubt that the moral consequences of the Christian development represent a very considerable advance compared with the ancient Israelite religion of law. The Christianity of the synoptic gospels signifies little more than a coming to terms with issues inside Judaism, which may fairly be compared with the much earlier Buddhist reformation inside Hindu polytheism. Psychologically, both reformations resulted in a tremendous strengthening of consciousness. This is particularly evident in the maieutic method employed by Shakyamuni. But the sayings of Jesus manifest the same tendency, even if we discard as apocryphal the clearest formulation of this kind, the logion in Codex Bezae to Luke 6 : 4: “Man, if thou knowest what thou doest, thou art blessed. If thou knowest it not, thou art accursed and a transgressor of the law.” At all events, the parable of the unjust steward (Luke 16) has not found its way into the Apocrypha, where it would have fitted so well.

[293] The rift in the metaphysical world has slowly risen into consciousness as a split in the human psyche, and the struggle between light and darkness moves to the battleground within. This shift of scene is not entirely self-evident, for which reason St. Ignatius Loyola considered

it necessary to open our eyes to the conflict and impress it on our feelings by means of the most drastic spiritual exercises.[7] These efforts, for obvious reasons, had only a very limited range of application. And so, strangely enough, it was the medical men who, at the turn of the nineteenth century, were forced to intervene and get the obstructed process of conscious realization going again. Approaching the problem from a scientific angle, and innocent of any religious aim, Freud uncovered the abysmal darkness of human nature which a would-be enlightened optimism had striven to conceal. Since then psychotherapy, in one form or another, has persistently explored the extensive area of darkness which I have called the shadow. This attempt of modern science opened the eyes of only a few. However, the historic events of our time have painted a picture of man's psychic reality in indelible colours of blood and fire, and given him an object lesson which he will never be able to forget if—and this is the great question—he has today acquired enough consciousness to keep up with the furious pace of the devil within him. The only other hope is that he may learn to curb a creativity which is wasting itself in the exploitation of material power. Unfortunately, all attempts in that direction look like bloodless Utopias.

[294] The figure of Christ the Logos has raised the *anima rationalis* in man to a level of importance which remains unobjectionable so long as it knows itself to be below and subject to the *κύριος*, the Lord of Spirits. Reason, however, has set itself free and proclaimed itself the ruler. It has sat enthroned in Notre Dame as Déesse Raison and heralded events that were to come. Our consciousness is no longer confined within a sacred temenos of otherworldly, eschatological images. It was helped to break free by a force that did not stream down from above—like the *lumen de lumine*—but came up with tremendous pressure from below and increased in strength as consciousness detached itself from the darkness and climbed into the light. In accordance with the principle of compensation which runs through the whole of nature, every psychic development, whether individual or collective, possesses an optimum which, when exceeded, produces an enantiodromia, that is, turns into its opposite. Compensatory tendencies emanating from the unconscious may be noted even during the approach to the critical turning-point, though if

consciousness persists in its course they are completely repressed. The stirrings in the darkness necessarily seem like a devilish betrayal of the ideal of spiritual development. Reason cannot help condemning as unreasonable everything that contradicts it or deviates from its laws, in spite of all evidence to the contrary. Morality can permit itself no capacity for change, for whatever it does not agree with is inevitably immoral and has therefore to be repressed. It is not difficult to imagine the multitude of energies which must flow off into the unconscious under such conscious domination.

[295] Hesitantly, as in a dream, the introspective brooding of the centuries gradually put together the figure of Mercurius and created a symbol which, according to all the psychological rules, stands in a compensatory relation to Christ. It is not meant to take his place, nor is it identical with him, for then indeed it could replace him. It owes its existence to the law of compensation, and its object is to throw a bridge across the abyss separating the two psychological worlds by presenting a subtle compensatory counterpoint to the Christ image. The fact that in *Faust* the compensatory figure is not, as one might almost have expected from the author's classical predilections, the wily messenger of the gods, but, as the name "Mephistopheles"[8] shows, a *familiaris* risen from the cesspits of medieval magic, proves, if anything, the ingrained Christian character of Goethe's consciousness. To the Christian mentality, the dark antagonist is always the devil. As I have shown, Mercurius escapes this prejudice by only a hair's breadth. But he escapes it, thanks to the fact that he scorns to carry on opposition at all costs. The magic of his name enables him, in spite of his ambiguity and duplicity, to keep outside the split, for as an ancient pagan god he possesses a natural undividedness which is impervious to logical and moral contradictions. This gives him invulnerability and incorruptibility, the very qualities we so urgently need to heal the split in ourselves.

[296] If one makes a synopsis of all the descriptions and alchemical pictures of Mercurius, they form a striking parallel to the symbols of the self derived from other sources. One can hardly escape the conclusion that Mercurius as the lapis is a symbolic expression for the psychological complex which I have defined as the self. Similarly, the Christ figure

must be viewed as a self symbol, and for the same reasons. But this leads to an apparently insoluble contradiction, for it is not at first clear how the unconscious can shape two such different images from one and the same content, which moreover possesses the character of totality. Certainly the centuries have done their spiritual work upon these two figures, and one is inclined to assume that both have been in large measure anthropomorphized during the process of assimilation. For those who hold that both figures are inventions of the intellect, the contradiction is quickly resolved. It then merely reflects the subjective psychic situation: the two figures would stand for man and his shadow.

[297] This very simple and obvious solution is, unfortunately, founded on premises that do not stand up to criticism. The figures of Christ and the devil are both based on archetypal patterns, and were never invented but rather *experienced*. Their existence preceded all cognition of them,[9] and the intellect had no hand in the matter, except to assimilate them and if possible give them a place in its philosophy. Only the most superficial intellectualism can overlook this fundamental fact. We are actually confronted with two different images of the self, which in all likelihood presented a duality even in their original form. This duality was not invented, but is an autonomous phenomenon.

[298] Since we naturally think from the standpoint of consciousness, we inevitably come to the conclusion that the split between consciousness and the unconscious is the sole cause of this duality. But experience has demonstrated the existence of a preconscious psychic functioning and of corresponding autonomous factors, the archetypes. Once we can accept the fact that the voices and delusions of the insane and the phobias and obsessions of the neurotic are beyond rational control, and that the ego cannot voluntarily fabricate dreams but simply dreams what it has to, then we can also understand that the gods came first and theology later. Indeed, we must go a step further and assume that in the beginning there were two figures, one bright and one shadowy, and only afterwards did the light of consciousness detach itself from the night and the uncertain shimmer of its stars.

[299] So if Christ and the dark nature-deity are autonomous images that can be directly experienced, we are obliged to reverse our rationalistic

causal sequence, and instead of deriving these figures from our psychic conditions, must derive our psychic conditions from these figures. This is expecting a good deal of the modern intellect but does not alter the logic of our hypothesis. From this standpoint Christ appears as the archetype of consciousness and Mercurius as the archetype of the unconscious. As Cupid and Kyllenios, he tempts us out into the world of sense; he is the *benedicta viriditas* and the *multi flores* of early spring, a god of illusion and delusion of whom it is rightly said: "Invenitur in vena / Sanguine plena" (He is found in the vein swollen with blood). He is at the same time a Hermes Chthonios and an Eros, yet it is from him that there issues the "light surpassing all lights," the *lux moderna*, for the lapis is none other than the figure of light veiled in matter.[10] It is in this sense that St. Augustine quotes I Thessalonians 5 : 5, "Ye are all the children of light, and the children of the day: we are not of the night, nor of darkness," and distinguishes two forms of knowledge, a *cognitio vespertina* and a *cognitio matutina*, the first corresponding to the *scientia creaturae* and the second to the *scientia Creatoris*.[11] If we equate *cognitio* with consciousness, then Augustine's thought would suggest that the merely human and natural consciousness gradually darkens, as at nightfall. But just as evening gives birth to morning, so from the darkness arises a new light, the *stella matutina*, which is at once the evening and the morning star—Lucifer, the light-bringer.

[300] Mercurius is by no means the Christian devil—the latter could rather be said to be a "diabolization" of Lucifer or of Mercurius. Mercurius is an adumbration of the primordial light-bringer, who is never himself the light, but a *φωσφόρος* who brings the light of nature, the light of the moon and the stars which fades before the new morning light. Of this light St. Augustine says that it will never turn to darkness unless the Creator is abandoned by the love of his creatures. But this, too, belongs to the rhythm of day and night. As Hölderlin says in "Patmos";

> and shamefully
> A power wrests away the heart from us;
> For the Heavenly each demand sacrifice,
> But if it should be withheld,
> Never has that led to good.

[301] When all visible lights are extinguished one finds, according to the words of the wise Yajñavalkya, the light of the self. “What then is the light of man? Self is his light. It is by the light of the self that a man rests, goes forth, does his work and returns.”[12] Thus, with Augustine, the first day of creation begins with self-knowledge, *cognitio sui ipsius*,[13] by which is meant a knowledge not of the ego but of the self, that objective phenomenon of which the ego is the subject.[14] Then, following the order of the days of creation in Genesis, comes knowledge of the firmament, of the earth, the sea, the plants, the stars, the animals of the water and air, and finally, on the sixth day, knowledge of the land animals and of *ipsius hominis*, of man himself. The *cognitio matutina* is self-knowledge, but the *cognitio vespertina* is knowledge of man.[15] As Augustine describes it, the *cognitio matutina* gradually grows old as it loses itself in the “ten thousand things” and finally comes to man, although one would expect this to have happened already with the onset of self-knowledge. But if this were true, Augustine’s parable would have lost its meaning by contradicting itself. Such an obvious lapse cannot be ascribed to so gifted a man. His real meaning is that self-knowledge is the *scientia Creatoris*,[16] a morning light revealed after a night during which consciousness slumbered, wrapped in the darkness of the unconscious. But the knowledge arising with this first light finally and inevitably becomes the *scientia hominis*, the knowledge of man, who asks himself: “Who is it that knows and understands everything? Why, it is myself.” That marks the coming of darkness,[17] out of which arises the seventh day, the day of rest: “But the rest of God signifies the rest of those who rest in God.”[18] The Sabbath is therefore the day on which man returns to God and receives anew the light of the *cognitio matutina*. And this day has no evening.[19] From the symbological standpoint it may not be without significance that Augustine had in mind the pagan names of the days of the week. The growing darkness reaches its greatest intensity on the day of Venus (Friday), and changes into Lucifer on Saturn’s day. Saturday heralds the light which appears in full strength on Sun-day. As I have shown, Mercurius is closely related not only to Venus but more especially to Saturn. As Mercurius he is *juvenis*, as Saturn *senex*.

[302] It seems to me that Augustine apprehended a great truth, namely that every spiritual truth gradually turns into something material, becoming no more than a tool in the hand of man. In consequence, man can hardly avoid seeing himself as a knower, yes, even as a creator, with boundless possibilities at his command. The alchemist was basically this sort of person, but much less so than modern man. An alchemist could still pray: "Purge the horrible darknesses of our mind," but modern man is already so darkened that nothing beyond the light of his own intellect illuminates his world. "Occasus Christi, passio Christi."[20] That surely is why such strange things are happening to our much lauded civilization, more like a *Götterdämmerung* than any normal twilight.

[303] Mercurius, that two-faced god, comes as the *lumen naturae*, the Servator and Salvator, only to those whose reason strives towards the highest light ever received by man, and who do not trust exclusively to the *cognitio vespertina*. For those who are unmindful of this light, the *lumen naturae* turns into a perilous *ignis fatuus*, and the psychopomp into a diabolical seducer. Lucifer, who could have brought light, becomes the father of lies whose voice in our time, supported by press and radio, revels in orgies of propaganda and leads untold millions to ruin.

V

THE PHILOSOPHICAL TREE

[Originally written for a Festschrift planned to mark the 70th birthday of Gustav Senn, professor of botany at the University of Basel. Owing to the untimely death of Professor Senn, the Festschrift did not appear, and Jung's essay, entitled "Der philosophische Baum," was published in the *Verhandlungen der Naturforschenden Gesellschaft Basel*, LVI (1945): 2, 411-23. A revised and expanded version appeared in *Von den Wurzeln des Bewusstseins: Studien über den Archetypus* (Psychologische Abhandlungen, Vol. IX; Zurich, 1954), from which the present translation is made.—EDITORS.]

All theory, my friend, is grey,
But green life's golden tree.
Faust I

I

INDIVIDUAL REPRESENTATIONS OF THE TREE SYMBOL

[304] An image which frequently appears among the archetypal configurations of the unconscious is that of the tree or the wonder-working plant. When these fantasy products are drawn or painted, they very often fall into symmetrical patterns that take the form of a mandala. If a mandala may be described as a symbol of the self seen in cross section, then the tree would represent a profile view of it: the self depicted as a process of growth. I shall not discuss here the conditions under which these pictures are produced, for I have already said all that is necessary in my essays “A Study in the Process of Individuation” and “Concerning Mandala Symbolism.” The examples I now propose to give all come from a series of pictures in which my patients tried to express their inner experiences.

[305] In spite of the diversity of the tree symbol, a number of basic features may be established. In the first part of my essay I shall comment on the pictures that have been reproduced and then, in the second part, give an account of the philosophical tree in alchemy and its historical background. My case material has not been influenced in any way, for none of the patients had any previous knowledge of alchemy or of shamanism. The pictures were spontaneous products of creative fantasy, and their only conscious purpose was to express what happens when unconscious contents are taken over into consciousness in such a way that it is not overwhelmed by them and the unconscious not subjected to any distortion. Most of the pictures were done by patients who were under treatment, but some by persons who were not, or were no longer, under any therapeutic influence. I must emphasize that I carefully avoided saying anything in advance that might have had a suggestive effect. Nineteen of the thirty-two pictures were done at a time when I

myself knew nothing of alchemy, and the rest before my book *Psychology and Alchemy* was published.

Figure 1

[306] The tree stands by itself on an island in the sea. Its great size is indicated by the fact that the upper part of it is cut off by the edge of the picture. The buds and the little white flowers suggest the coming of spring, when the great tree, whose age far exceeds the span of human existence, will awaken to new life. The solitariness of the tree and its axial position in the centre of the picture bring to mind the world-tree and the world-axis—attributes with which the tree symbol is almost universally endowed. These traits give expression to the inner process at work in the painter, and show that it has nothing to do with his personal psychology. Here the tree represents a symbol that is universal and alien to the personal consciousness. It is possible, however, that the painter was making conscious use of the Christmas tree in order to illustrate his inner state.

Figure 2

[307] The abstract stylization and the position of the tree on the globe of the earth illustrate the feeling of spiritual isolation. To make up for this, the perfect symmetry of the crown points to a union of opposites. This is the motivating force and the goal of the individuation process. If the painter of such a picture neither identifies with the tree nor is assimilated by it,[1] he will not succumb to the danger of an auto-erotic isolation, but will only be intensely aware that his ego personality is confronted with a symbolical process he must come to terms with because it is just as real and undeniable as his ego. One can deny and nullify this process in all sorts of ways, but in doing so all the values represented by the symbol are lost. A naïvely curious mind will naturally cast round for a rational explanation, and if it does not find one at once it either makes do with a facile and completely inadequate hypothesis or else turns away in disappointment. It seems to be very hard for people to live with riddles or to let them live, although one would think that life is so full of riddles as

it is that a few more things we cannot answer would make no difference. But perhaps it is just this that is so unendurable, that there are irrational things in our own psyche which upset the conscious mind in its illusory certainties by confronting it with the riddle of its existence.

Figure 3

[308] The picture shows a tree of light that is at the same time a candelabrum. The abstract form of the tree points to its spiritual nature. The ends of the branches are lighted candles illuminating the darkness of an enclosed space, perhaps a cave or vault. The secret and hidden nature of the process is thus emphasized and its function made clear: the illumination of consciousness.

Figure 4

[309] Although cut out of gold-foil, the tree is realistic. It is still in the wintry, leafless state of sleep. It rises up against a cosmic background and bears in its branches a large golden ball, probably the sun. The gold indicates that though the painter does not yet have a living, conscious relation to this content, she nevertheless has an emotional intuition of its great value.

Figure 5

[310] The tree is leafless but bears little red flowers, harbingers of spring. The branches are tipped with flames, and fire leaps up from the water out of which the tree is growing. So the tree is also something like the jet of a fountain. The symbol of the fountain, the *fontina,* is known in alchemy; in the alchemical pictures it is often shown as a medieval town fountain,[2] and the upright part in the middle would correspond to the tree. The union of fire and water expresses the union of opposites. The picture bears out the alchemical saying: “Our water is fire.”

Figure 6

[311] The tree is red and looks like a branch of coral. It is not reflected in the water, but grows simultaneously downwards and upwards. The four mountains in the lower half of the picture are not reflections either, for their opposites are five mountains. This suggests that the lower world is not a mere reflection of the upper world, but that each is a world in itself. The tree stands in the middle between two walls of rock, representing the opposites. The four mountains also appear in Figure 24.

Figure 7

[312] The tree has broken with irresistible force through the earth's crust, heaving up mountainous boulders on either side. The painter is expressing an analogous process in himself, which runs its course of necessity and cannot be checked by any amount of resistance. Since the boulders are snow-capped mountains, the tree has the cosmic character of the world-tree.

Figure 8

[313] The tree is leafless, but its branches end in little flames like a Christmas tree. Instead of growing from the earth or water, it grows out of the body of a woman. The painter was a Protestant and was not familiar with the medieval symbolism of Mary as earth and *stella maris.*

Figure 9

[314] The tree is old and huge and stands on a tangle of roots which is strongly emphasized. Two dragons are approaching from left and right. In the tree there is a boy who has climbed up to watch the dragons. We are reminded of the dragons that guard the tree of the Hesperides, and of the snakes that guard the hoard. The conscious side of the boy is in a rather precarious situation because the modicum of security it has just acquired is liable to be devoured again by the unconscious. The turmoil of the unconscious is indicated by the tangled roots as well as by the evidently enormous dragons and the tininess of the child. The tree itself is not threatened inasmuch as its growth is independent of human consciousness. It is a natural process, and it is even dangerous to risk

disturbing it since it is guarded by dragons. But because this is a natural and ever-present process it can give man protection provided that he summons up courage enough to climb into the tree despite its guardians.

Figure 10

[315] Once again we meet the two dragons, but in the form of crocodiles. The tree is abstract and doubled, and is loaded with fruit. For all its duality it gives the impression of being a single tree. This, besides the ring that unites the two trees, points to the union of opposites which are also represented by the two crocodiles. In alchemy, Mercurius is symbolized by the tree as well as by the dragon. He is notoriously “duplex,” is both masculine and feminine, and is made one in the hierosgamos of the chymical wedding. The synthesis of Mercurius forms an important part of the alchemical procedure.

Figure 11

[316] Although tree and snake are both symbols of Mercurius, they stand for two different aspects on account of the latter’s dual nature. The tree corresponds to the passive, vegetative principle, the snake to the active, animal principle. The tree symbolizes earthbound corporeality, the snake emotionality and the possession of a soul. Without the soul the body is dead, and without the body the soul is unreal. The union of the two, which is plainly imminent in this picture, would mean the animation of the body and the materialization of the soul. Similarly, the tree of paradise is an earnest of the real life which awaits the first parents when they emerge from their initial childlike (i.e., pleromatic) state.

Figure 12

[317] Tree and snake are united. The tree bears leaves, and the sun rises in its midst. The roots are snakelike.

Figure 13

[318] The stylized tree has in its trunk a locked door leading to a hidden recess. The middle branch is decidedly snakelike and bears a luminous body like a sun. The simple-minded bird, representing the painter, weeps because it has forgotten the key to the door. It obviously suspects that there is something valuable inside the tree.

Figure 14

[319] The same painter did a number of variations on the treasure motif. Here and in the next picture it takes the form of a hero myth: the hero discovers a sealed coffer in a hidden vault, with a wonderful tree growing out of it. The little green dragon that follows the hero like a dog corresponds to the familiar spirit of the alchemists, the mercurial serpent or *draco viridis*. Mythlike fantasies of this kind are not infrequent, and are more or less the equivalent of alchemical parables or didactic tales.

Figure 15

[320] The tree does not want to yield up the treasure and clasps the coffer all the tighter. When the hero touches the tree, a flame springs out at him. It is a fire-tree, like that of the alchemists, and like the world-tree of Simon Magus.

Figure 16

[321] Many birds are sitting on the leafless tree, a motif found also in alchemy. The tree of wisdom (Sapientia) is surrounded by numerous birds, as in Reusner’s *Pandora* (1588), or else the birds fly round the figure of Hermes Trismegistus, as in *Dechemia* (1566).[3] The tree is shown guarding a treasure. The precious stone hidden in its roots recalls Grimm’s fairytale of the bottle hidden in the roots of the oak tree, which contained the spirit Mercurius. The stone is a dark blue sapphire, but its connection with the sapphire stone in Ezekiel, which played a great role in ecclesiastical allegory, was not known to the painter. The special virtue of the sapphire is that it endows its wearer with chastity, piety, and constancy. It was used as a medicament for “comforting the heart.”[4] The

lapis was called the “sapphirine flower.”[5] Birds, as winged beings, have always symbolized spirit or thoughts. So the many birds in our picture mean that the thoughts of the painter are circling round the secret of the tree, the treasure hidden in its roots. This symbolism underlies the parables of the treasure in the field, the pearl of great price, and the grain of mustard seed. Only, the alchemists were not referring to the Kingdom of Heaven, but to the “admirandum Mundi Maioris Mysterium” (the wondrous mystery of the macrocosm), and it looks as though the sapphire in the picture has a similar meaning.

Figure 17

[322] This was done by the same painter, but at a much later stage, when the same idea reappeared in differentiated form. Her technical ability has also improved. The birds have been replaced by heart-shaped blossoms, for the tree has now come alive. Its four branches correspond to the square-cut sapphire, whose “constancy” is emphasized by the little uroboros encircling it. In Horapollo the uroboros is the hieroglyph of eternity.[5a] For the alchemists the self-devouring dragon was hermaphroditic because it begot and gave birth to itself. They therefore called the sapphirine flower (i.e., the lapis) “Hermaphroditi flos saphyricus.” Constancy and permanence are expressed not only in the age of the tree but also in its fruit, the lapis. Like a fruit, the lapis is at the same time a seed, and although the alchemists constantly stressed that the “seed of corn” dies in the earth, the lapis despite its seedlike nature is incorruptible. It represents, just as man does, a being that is forever dying yet eternal.

Figure 18

[323] The picture shows an initial state in which the tree is unable to raise itself from the earth in spite of its cosmic nature. It is a case of regressive development, probably due to the fact that while the tree has a natural tendency to grow away from the earth into a cosmic space filled with strange astronomical and meteorological phenomena, this would mean reaching up into an eerie unearthly world and making contact with

otherworldly things which are terrifying to the earthbound rationality of the natural man. The upward growth of the tree would not only endanger the supposed security of his earthly existence but would be a threat to his moral and spiritual inertia, because it would carry him into a new time and a new dimension where he could not get along without making considerable efforts at readaptation. The patient in these cases is held back not by mere cowardice, but by a largely justifiable fear that warns him of the exacting demands of the future, without his being aware of what these demands are or knowing the dangers of not fulfilling them. His anxious resistance and aversion seem quite groundless, and it is only too easy for him to rationalize them away and, with a little assistance, brush them aside like a troublesome insect. The result is just the psychic situation shown by our picture: an inturned growth which throws the supposedly solid earth into increasing turmoil. Secondary fantasies then arise which, according to the patient’s disposition, revolve round sexuality or the power drive or both. This leads sooner or later to the formation of neurotic symptoms and to the almost unavoidable temptation for both patient and analyst to take these fantasies seriously as causative factors and thus to overlook the real task.

Figure 19

[324] This picture, done by a different patient, shows that Figure 18 is not unique. It is, however, no longer a case of unconscious regression, but of one that is becoming conscious, which is why the tree has a human head. We cannot tell from the picture whether the witchlike tree nymph is clutching at the earth or rising unwillingly from it. This is in complete accord with the divided state of the patient’s consciousness. But the upright trees standing around show that within or outside herself she has perceived living examples of the way trees ought to grow. She has interpreted the tree as a witch and the regressive growth as the cause of magical effects of a sinister nature.

Figure 20

[325] The tree stands in isolation dominating the top of a mountain. It is thick with leaves and has in its trunk a doll swathed in multicoloured wrappings. The painter was reminded of the harlequin motif. The fool's motley shows that she felt she was dealing with something crazy and irrational. She was conscious of having thought of Picasso, whose style was apparently suggested by the harlequin's dress. The association probably has a deeper meaning and is not just a superficial combination of ideas. It was this same impression of irrationality that led to the regressive development in the two previous pictures. All three cases are concerned with a process which the modern mind finds extremely disturbing, and not a few of my patients have openly confessed their fear of any such autonomous development of their psychic contents. In these cases it is of the greatest therapeutic value if one can demonstrate to them the historicity of their apparently unique and unassimilable experiences. When a patient begins to feel the inescapable nature of his inner development, he may easily be overcome by a panic fear that he is slipping helplessly into some kind of madness he can no longer understand. More than once I have had to reach for a book on my shelves, bring down an old alchemist, and show my patient his terrifying fantasy in the form in which it appeared four hundred years ago. This has a calming effect, because the patient then sees that he is not alone in a strange world which nobody understands, but is part of the great stream of human history, which has experienced countless times the very things that he regards as a pathological proof of his craziness.

Figure 21

[326] The doll in the previous picture contained a sleeping human figure undergoing metamorphosis like the larva of an insect. Here as well the tree acts as a mother to the human figure hidden in its trunk. This accords with the traditional maternal significance of the tree.

Figure 22

[327] The development has gone a stage further. The sleeping figure awakes, half emerges from the tree and makes contact with the animal

world. The “tree-born” is thus characterized not only as a child of nature but as an autochthonous primordial being growing treelike out of the earth. The tree nymph is an Eve who, instead of being taken from Adam’s side, has come into existence independently. This symbol is evidently intended to compensate not merely the one-sidedness and unnaturalness of the ultra-civilized man but also, and in particular, the biblical myth of the secondary creation of Eve.

Figure 23

[328] The tree nymph carries the sun and is a figure composed of light. The wavy band in the background is red, and consists of living blood that flows round the grove of transformation. This indicates that the transformation is not just an airy fantasy, but is a process that reaches down into the somatic sphere or even arises from it.

Figure 24

[329] This drawing combines various motifs from the preceding pictures but lays particular stress on the light- or sun-symbol, which is represented as a quaternity. It is watered by four rivers each done in a different colour. They flow down from what the patient called four heavenly or “metaphysical” mountains. We met the four mountains earlier in Figure 6. They also appear in the drawing of a male patient which I mentioned in *Psychology and Alchemy*,[6] where the four rivers are reproduced in Figs. 62 and 109. In all these cases I am as little responsible for the number four as I am for all the other alchemical, Gnostic, and mythological quaternities. My critics seem to have the funny idea that I have a special liking for the number four and therefore find it everywhere. Just for once, they should look into an alchemical treatise—but that is evidently too much of an effort. Since “scientific” criticism is ninety per cent prejudice, it invariably takes a very long time for the facts to be recognized.

[330] The number four, like the squaring of the circle, is not accidental, which is why—to take an example known even to my critics—there are not three or, for that matter, five directions, but precisely four. I will only mention in passing that, besides this, the number four possesses special mathematical properties. The quaternary elements in our picture, as well as accentuating the light-symbol, amplify it in such a way that it is not difficult to see what is meant: an acceptance of wholeness by the little female figure, an intuitive apprehension of the self.

Figure 25

[331] A still later stage is shown here. The female figure is no longer just the recipient or bearer of the light-symbol but has been drawn into it. The personality is more powerfully affected than in the previous picture. This increases the danger of identification with the self—a danger not to be taken lightly. Anyone who has passed through such a development will feel tempted to see the goal of his experiences and efforts in union with the self. Indeed, there are suggestive precedents for this, and in the

present case it is altogether possible. But there are certain factors in the picture which enable the painter to distinguish her ego from the self. She was an American woman who was influenced by the mythology of the Pueblo Indians: the corn-cobs characterize the female figure as a goddess. She is fastened to the tree by a snake, and thus forms an analogy to the crucified Christ, who, as the self, was sacrificed for earthly humanity, just as Prometheus was chained to the rock. Man's efforts to achieve wholeness correspond, as the divine myth shows, to a voluntary sacrifice of the self to the bondage of earthly existence. Here I will only point out this correspondence without going into it further.

[332] In this picture, then, there are so many elements of the divine myth that unless the patient's consciousness were utterly blinded (and there are no signs of this) she could easily discriminate between ego and self. At this stage it is important not to succumb to an inflation, such as would inevitably supervene with all its very unpleasant consequences if, at the moment when the self became recognizable, she identified with it and thus blinded herself to the insight she had attained. If the natural impulse to identify with the self is recognized, one then has a good chance of freeing oneself from a state of unconsciousness. But if this opportunity is overlooked or not used, the situation does not remain the same as before but gives rise to a repression coupled with dissociation of the personality. The development of consciousness which the realization of the self might have led to turns into a regression. I must emphasize that this realization is not just an intellectual act but is primarily a moral one, in comparison with which intellectual understanding is of secondary importance. For this reason, the symptoms I have described can also be observed in patients who, from inferior motives which they will not admit, refuse a task that has been laid upon them by fate.

[333] I would like to draw attention to a further peculiarity: the tree has no leaves, and its branches could just as well be roots. All its vitality is concentrated in the centre, in the human figure that represents its flower and fruit. A person whose roots are above as well as below is thus like a tree growing simultaneously downwards and upwards. The goal is neither height nor depth, but the centre.

Figure 26

[334] The idea developed in the previous picture reappears here in slightly variant form. This idea may truly be said to be in the process of delineating itself, for the conscious mind of the patient follows only a vague feeling which gradually takes shape in the act of drawing. She would have been quite unable to formulate beforehand, in a clear concept, what she wanted to express. The structure of the picture is a mandala divided into four, with the midpoint displaced downwards, beneath the feet of the figure. The figure stands in the upper section and thus belongs to the realm of light. This mandala is an inversion of the traditional Christian cross, whose long upright is below the cross-beam. We must conclude from the picture that the self was realized first of all as an ideal figure of light which nonetheless takes the form of an inverted Christian cross. Whereas the latter's point of intersection is near the top, so that the goal of unconscious striving towards the centre is displaced upwards, the downward glance of the figure shows that her goal should lie below. The short upright beam of the cross of light rests on the black earth, and the figure holds in her left hand a black fish drawn from the dark sphere. The *mudrā*-like,[7] hesitant gesture of the right hand, directed towards the fish coming from the left (i.e., from the unconscious), is characteristic of the patient, who had studied theosophy and was therefore under Indian influence. The fish has a soteriological significance whether conceived in Christian or in Indian terms (as the fish of Manu and as an avatar of Vishnu). There is reason to conjecture (see Figure 29) that the patient was acquainted with the Bhagavadgītā, which says (X, 31): “Among fishes I am Makara.” Makara is a dolphin or a species of Leviathan, and is one of the symbols of the *svādhisthāna-chakra* in Tantric yoga. This centre is localized in the bladder and is characterized as the water region by the fish and moon symbols. As the *chakras* are presumably equivalent to earlier localizations of consciousness (the *anāhata-chakra*, for instance, corresponding to the *φρένες* of the Greeks),[8] *svādhisthāna* is probably the earliest localization of all. From this region comes the fish symbol with its age-old numen. We are reminded of the “days of Creation,” of the time when consciousness arose, when the primordial unity of being was barely

disturbed by the twilight of reflection,[9] and man swam like a fish in the ocean of the unconscious. In this sense the fish signifies a restoration of the pleromatic paradisal state or, in the language of Tibetan Tantrism, of the Bardo.[10]

[335] The plants at the foot of the figure are really rooted in the air. Tree, tree nymph, and plants are all lifted up from the earth or, more probably, are on the point of coming down to it. This is also suggested by the fish as emissary of the deep. The situation is in my experience an unusual one and may be due to theosophical influences. Filling the conscious mind with ideal conceptions is a characteristic feature of Western theosophy, but not the confrontation with the shadow and the world of darkness. One does not become enlightened by imagining figures of light, but by making the darkness conscious. The latter procedure, however, is disagreeable and therefore not popular.

Figure 27

[336] Unlike the previous picture, this one is thoroughly Western, although it comes into the archetypal category of the god’s birth from the tree or lotus blossom. The archaic plant world of the carboniferous era illustrates the mood the painter was in when she intuitively apprehended the birth of the self. The human figure growing out of the archaic plant represents the union and quintessence of the four heads at its base, in agreement with the alchemical view that the lapis is composed of four elements. Awareness of the archetype imbues the experience with a primeval character. The division of the plant into six segments, like so much else in the realm of fantasy, may be purely accidental. Nevertheless, it should not be forgotten that the number six (the *senarius*) was considered in ancient times “aptissimus generationi” (most fit for generation).[11]

Figure 28

[337] Drawn by the same patient as Figure 26. The female figure wearing a tree-crown is in a sitting position—again a displacement downwards. The black earth that was previously far below her feet is now in her body as a black ball, in the region of the *manipūra-chakra*, which coincides with

the solar plexus. (The alchemical parallel to this is the “black sun.”)[12] This means that the dark principle, or shadow, has been integrated and is now felt as a kind of centre in the body. Possibly this integration is connected with the eucharistic significance of the fish: eating the fish brings about a *participation mystique* with God.[13]

[338] Numerous birds are flying round the tree. As birds represent winged thoughts, we must conclude that the female figure progressively detached itself from the world of thought as the centre was displaced downwards, and that the thoughts have consequently returned to their natural element. She and her thoughts were identical before, with the result that she was raised above the earth as though she were an aerial being, while her thoughts lost their freedom of flight, since they had to support the whole weight of a human being in the air.

Figure 29

[339] The process of separation from the world of thought continues. A masculine daemon,[14] who has obviously woken up all of a sudden, reveals himself with an air of triumph: he is the animus, the personification of masculine thinking in a woman (and of her masculine side in general). The patient’s previous state of suspension turns out to have been an animus possession, which is now sloughed off. Differentiation between her feminine consciousness and her animus means liberation for both. The sentence “I am the Game of the gambler” probably refers to Bhagavadgītā X, 36: “I am the game of dice.”[10] Krishna says this of himself. The section in which it occurs begins with the words (X, 20-21): “I am the self, O Gudākesha! seated in the hearts of all beings. I am the beginning and the middle and the end also of all beings. I am Vishnu among the Adityas;[16] the beaming sun among the shining bodies.”

[340] Like Krishna, Agni is the game of dice in the Shatapatha-Brāhmana of the Yajur-Veda: “He (the Adhvaryu)[17] throws down the dice, with ‘Hallowed by Svāhā,[18] strive ye with Surya’s[10] rays for the middlemost place among brethren!’ For that gaming ground is the same as ‘ample

Agni,’ and those dice are his coals, thus it is him (Agni) he thereby pleases.”[20]

[341] Both texts relate light, sun, and fire, as well as the god, to the game of dice. Similarly the Atharva-Veda speaks of the “brilliancy that is in the chariot, in the dice, in the strength of the bull, in the wind, Parjanya,[21] and in the fire of Varuna.”[22] The “brilliancy” corresponds to what is known in primitive psychology as “mana,” and in the psychology of the unconscious as “libido investment” or “emotional value” or “feeling tone.” In point of emotional intensity, which is a factor of decisive importance for the primitive consciousness, the most heterogeneous things—rain, storm, fire, the strength of the bull, and the passionate game of dice—can be identical. In emotional intensity, game and gambler coincide.

[342] This train of thought may help to explain the mood of the picture, which expresses liberation and relief. The patient evidently felt this moment as a breath of the divine numen. As the Bhagavadgītā text makes clear, Krishna is the self, with which the patient’s animus identifies. This identification is a regular occurrence when the shadow, the dark side, has not been sufficiently realized. Like every archetype, the animus has a Janus face, and besides this the limitation of being a merely masculine principle. He is therefore quite unfitted to represent totality, whether of God or the self. He must be content with an intermediate position. The generalizations characteristic of Indian theosophy, however, induced the patient, by a kind of psychological short-circuit, to identify the animus at least provisionally with wholeness, and to put him in the place of the self.

Figure 30

[343] The same motif as in Figure 29 is shown here in differentiated form by the painter of Figure 2. The stylization of the leafless tree is highly abstract, and so is the gnomelike figure in a monkish robe. The outstretched arms express balance and the cross motif. The ambiguity of the figure is emphasized on the one hand by the bird coming down from above,[23] painted like a fantastic flower, and on the other by the obviously phallic arrow rising up from the roots below. The daemon thus represents

an equilibrium of left and right as well as a union of intellect and sexuality, just as the alchemical Mercurius duplex, in the form of the lapis, is a quaternity composed of the four elements. The striped band running down the globe recalls the mercurial band which I discussed in “A Study in the Process of Individuation.”[24] There the patient herself took it to be quicksilver.

[344] The concept of the alchemical Mercurius derives exclusively from masculine psychology and symbolizes the typical opposition in a man between Nous and sex, owing to the absence of the feminine Eros which would unite them. The animus figure in the picture is a piece of purely masculine psychology that has crystallized out of a woman’s psyche during the process of individuation.

Figure 31

[345] Embroidery by the same patient as before. The tree has turned into a blossoming lotus plant, with the gnomelike figure sitting in the flower, reminding us that the lotus is the birthplace of the gods. Eastern influences are evident in these two figures, but of a different kind from those we met in Figures 28 and 29. It is not a matter of Indian theosophy learnt and imitated in the West, for the present patient was born in the East without, however, consciously absorbing its theosophy. But inwardly she was permeated by it so thoroughly that it had a very disturbing effect on her psychic balance.

[346] In this figure the daemon has visibly taken a back place, but the crown of the tree has undergone a rich development: leaves and blossoms appear, forming a wreath, a corona, round a flowerlike centre. The alchemists used the term *corona* or *diadema cordis tui* (diadem of thy heart), meaning by it a symbol of perfection. The crown appears in the figure as the crowning point or culmination of the developmental process symbolized by the tree. It has taken the form of a mandala, the “golden flower” of Chinese and the “sapphirine flower” of Western alchemy. The animus no longer usurps the place of the self, but has been transcended by it.

Figure 32

[347] I reproduce this picture with some hesitation because, unlike the others, its material is not “pure” in the sense of being uninfluenced by what the patient read or picked up by hearsay. It is nevertheless “authentic” in so far as it was produced spontaneously and expresses an inner experience in the same way as all the others, only much more clearly and graphically because the patient was able to avail herself of ideas that fitted her theme better. Consequently, it combines a great deal of material which I do not want to comment on here, as its essential components have already been discussed or will be found in the relevant literature. The actual composition of the tree is at any rate original. I reproduce the picture only to show what kind of influence a knowledge of the symbolism can have on such configurations.

[348] I will bring my picture series to a close with a literary example of spontaneous tree symbolism. In his poem “Soleil Noir” (1952), Noël Pierre, a modern French poet who is personally unknown to me, has described an authentic experience of the unconscious:

> J’arrivais de la sorte sur une crape
> D’où baîllait un aven embué.
> Une foule compacte s’y pressait
> Des quatre directions. Je m’y mêlais.
> Je remarquais que nous roulions en spirale,
> Un tourbillon dans l’entonnoir nous aspirait.
> Dans l’axe, un catalpa gigantesque
> Où pendaient les cœurs des morts,
> A chaque fourche avait élu résidence
> Un petit sage qui m’observait en clignotant.
> … … … … … …
> Jusqu’au fond, où s’étalent les lagunes.
> Quelle quiétude, au Nœud des Choses!
> Sous l’Arbre de ma Vie, le Dernier Fleuve
> Entoure une Ile où s’érige
> Dans les brumes un cube de roche grise,
> Une Forteresse, la Capitale des Mondes.[25]

[349] The main characteristics of this description are: (1) Universal midpoint of mankind. (2) Spiral rotation.[26] (3) Tree of life and death. (4)

The heart as the centre of man’s vitality in conjunction with the tree.[27] (5) Natural wisdom in the form of a dwarf. (6) The island as seat of the tree of life. (7) Cube = philosophers’ stone = treasure guarded by the tree.

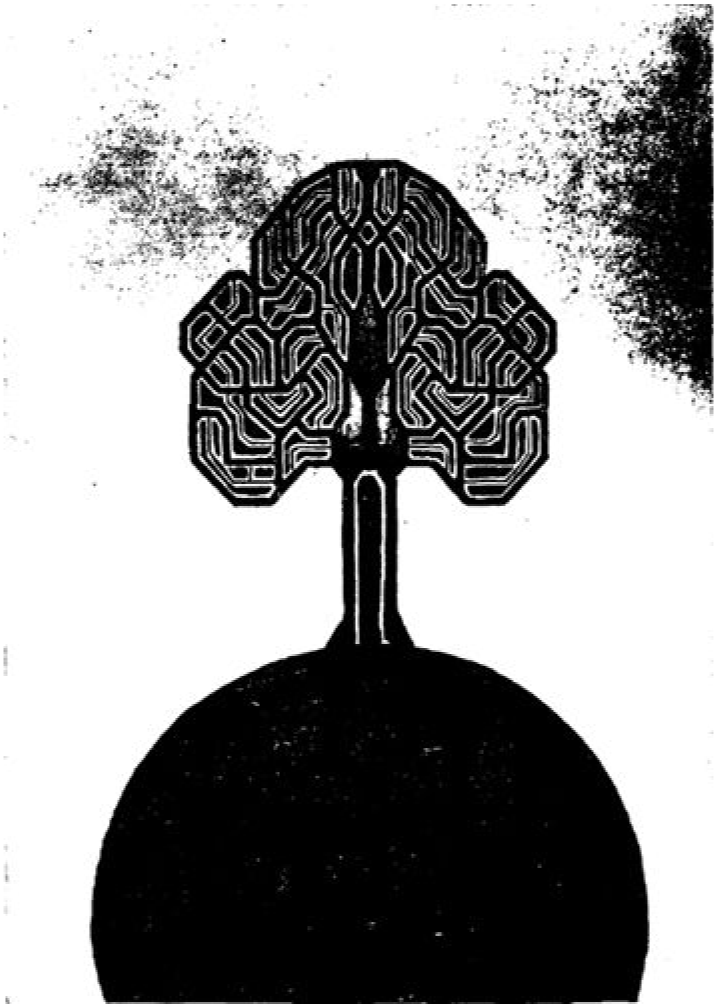
II

ON THE HISTORY AND INTERPRETATION OF THE TREE SYMBOL

1. THE TREE AS AN ARCHETYPAL IMAGE

[350] After having given some examples of spontaneously produced, modern tree symbols in the first part of this essay, I should like, in the second part, to say something about the historical background of the tree symbol in order to justify my title “The Philosophical Tree.” Although it will be obvious to anyone acquainted with the material that my examples are nothing more than special instances of a widely disseminated tree symbolism, it is nevertheless of importance, in interpreting the individual symbols, to know something about their historical antecedents. Like all archetypal symbols, the symbol of the tree has undergone a development of meaning in the course of the centuries. It is far removed from the original meaning of the shamanistic tree, even though certain basic features prove to be unalterable. The psychoid form underlying any archetypal image retains its character at all stages of development, though empirically it is capable of endless variations. The outward form of the tree may change in the course of time, but the richness and vitality of a symbol are expressed more in its change of meaning. The aspect of meaning is therefore essential to the phenomenology of the tree symbol. Taken on average, the commonest associations to its meaning are growth, life, unfolding of form in a physical and spiritual sense, development, growth from below upwards and from above downwards, the maternal aspect (protection, shade, shelter, nourishing fruits, source of life, solidity, permanence, firm-rootedness, but also being “rooted to the spot”), old age, personality,[1] and finally death and rebirth.

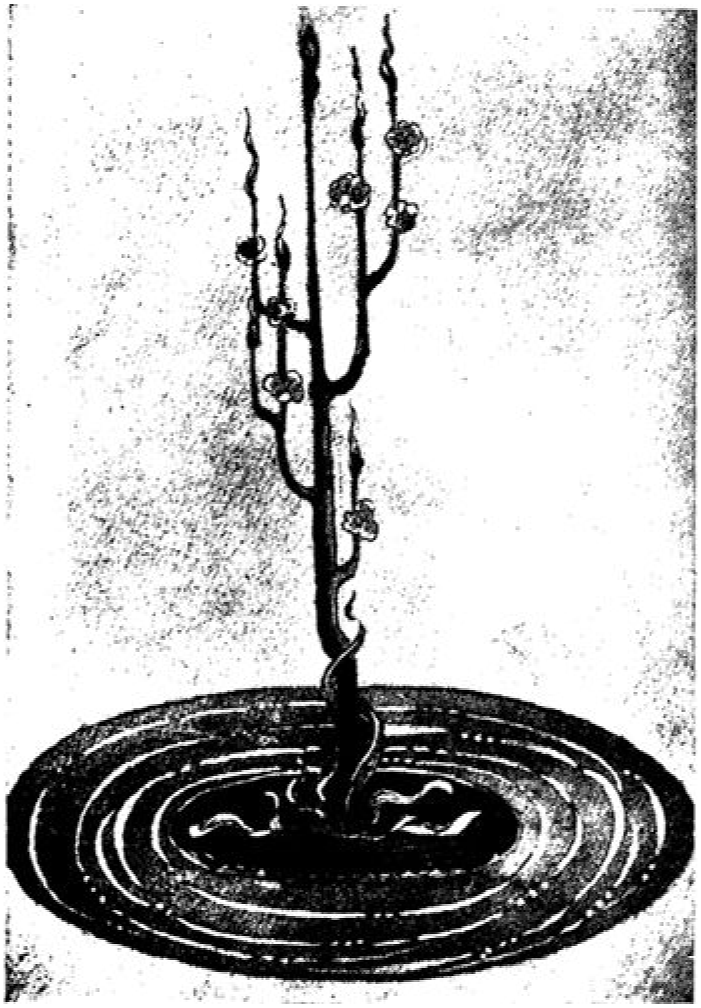
The tree bears buds and white blossoms. It stands on an island. In the background is the sea



The tree stands on the globe, and reminded the painter of the baobab whose roots burst the planetoid on which St. Exupéry’s *Little Prince* dwelt. It also recalls the world-tree of Pherekydes, the shamanic tree, and the world-axis

Abstract tree represented as seven-branched candelabrum or Christmas tree. The lights symbolize the illumination and expansion of consciousness

Montage in gold-foil, analogous to the alchemical *arbor aurea* and cosmic tree. The golden globes are heavenly bodies

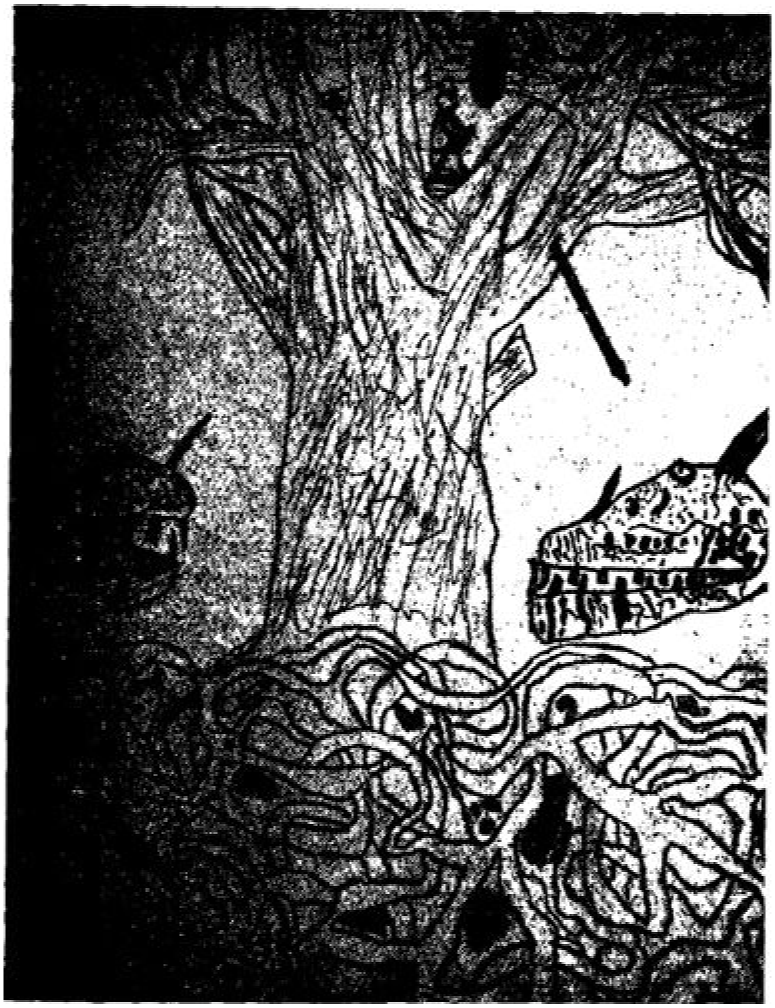


The tree grows in water. It bears red flowers, but it consists also of fire licking up from the water, and the branches are tipped with flame

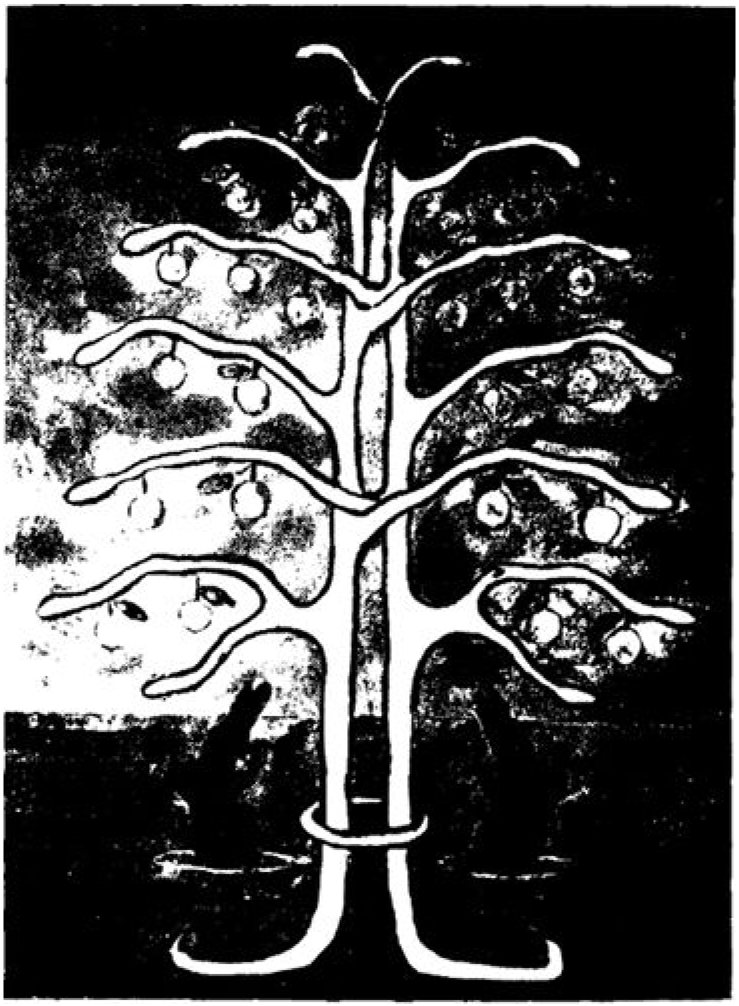
The tree is painted bright red, and grows in the water simultaneously upwards and downwards

The tree thrusts up from below and breaks through the earth’s surface

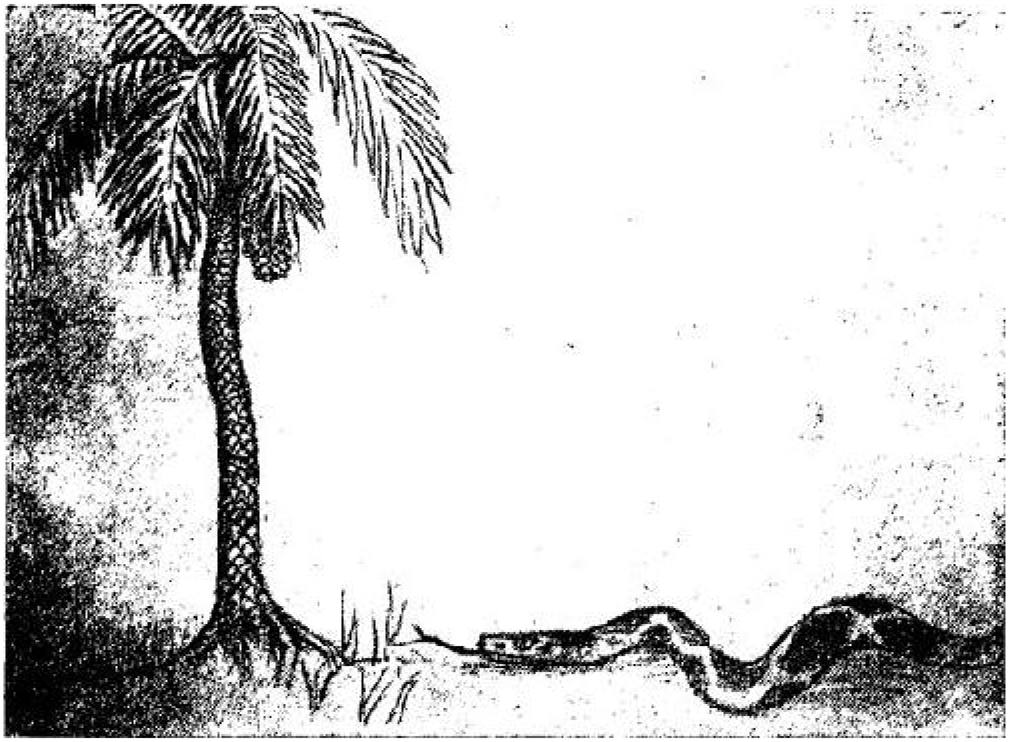
Its branches tipped with flame, the tree grows out of the body of a woman. She is synonymous with earth and water, an embodiment of the idea that the tree is a process originating in the unconscious. Cf. the Mexican world-tree which grows in the belly of the earth goddess (Lewis Spence. *The Gods of Mexico*, p. 58)



Drawing by an eleven-year-old boy

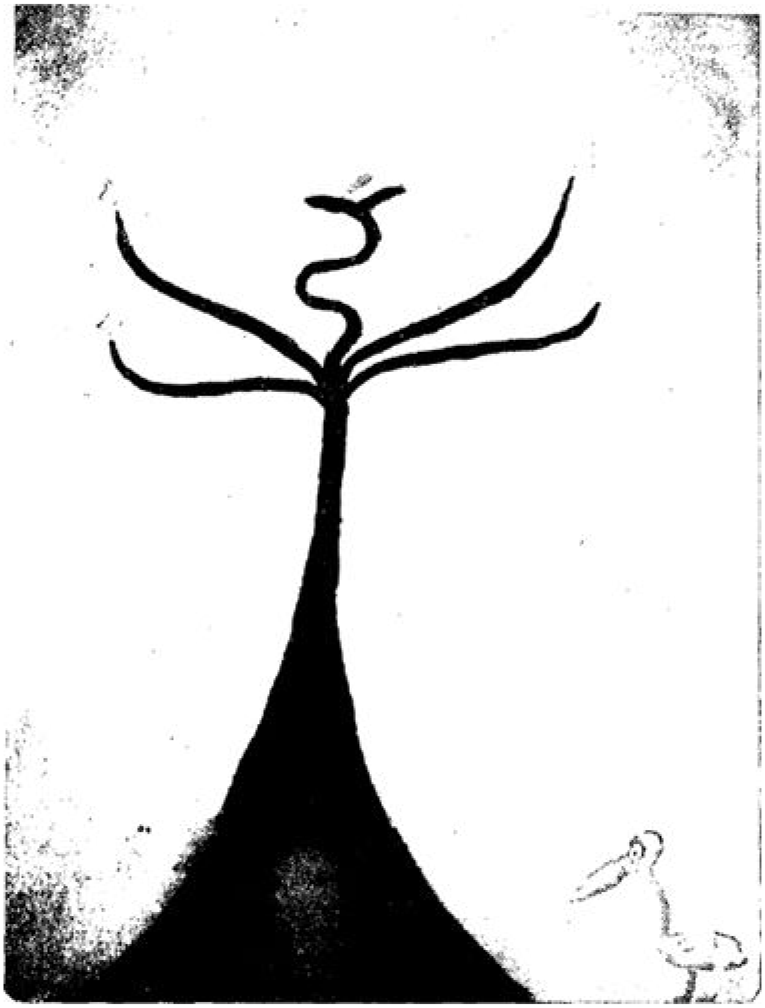


Union of opposites represented by two trees growing into one another and joined by a ring. The crocodiles in the water are the separated opposites. which are therefore dangerous



The vertical growth of the tree contrasts with the horizontal movement of the snake. The snake is about to take up its abode in the tree of knowledge

Corresponding to the sun in the branches, the snake in the roots of the tree wears a halo, an indication of the successful union of tree and snake

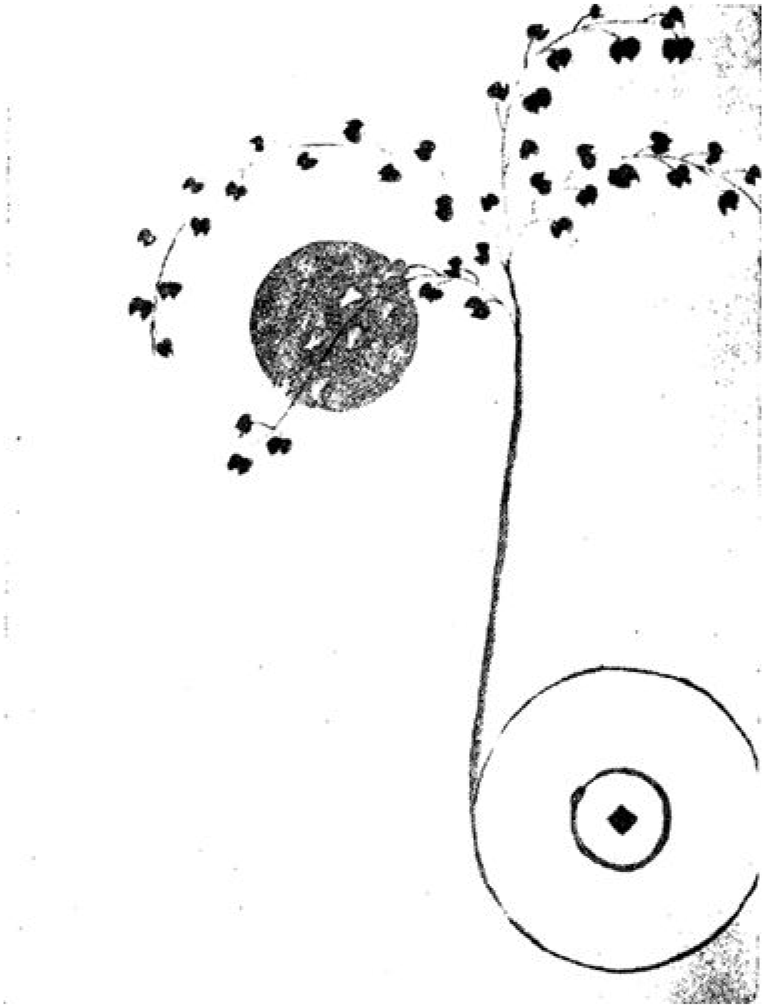


The tree has 4 + 1 branches. The central branch bears the sun, the other four bear stars. The tree is hollow inside and is shut by a door. The bird weeps “because it has forgotten the key”

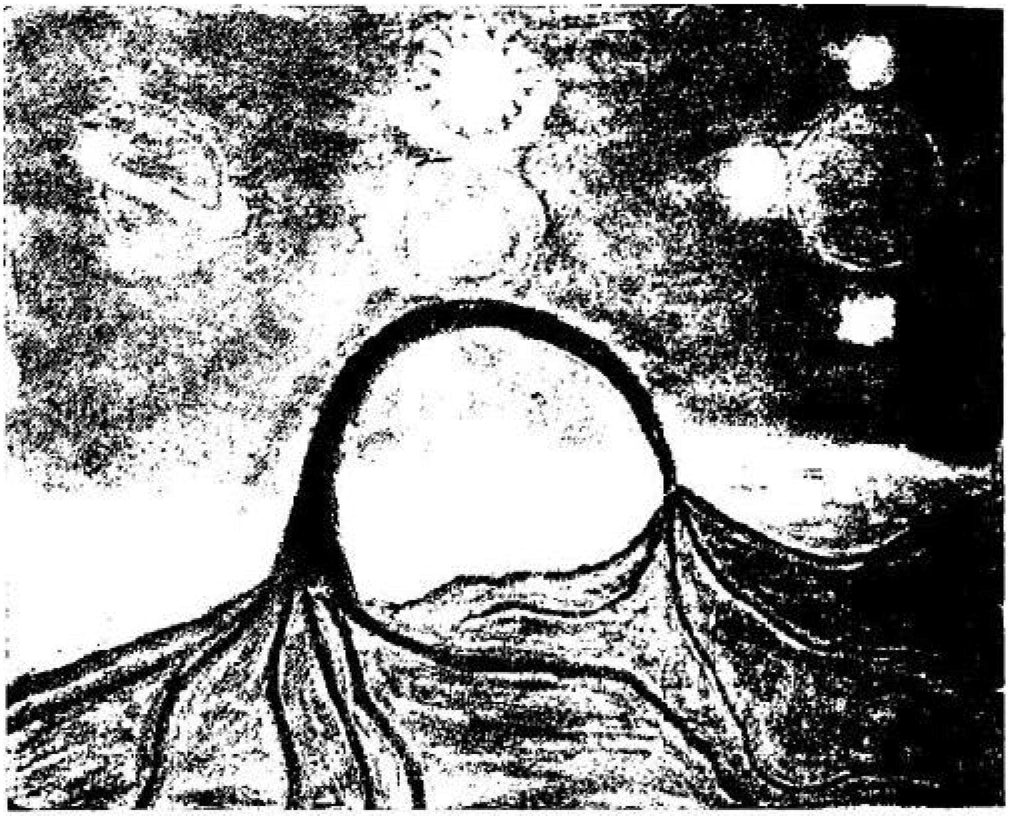
This and the following picture come from a series depicting the hero myth. The hero is accompanied by a familiar in the form of a small, green, crowned dragon. The tree grows out of a coffer containing the secret treasure

The tree clasps the coffer in its roots, and a flame springs out of a leaf as the hero touches it

Done by the same patient at an earlier stage. In the roots of the tree a sapphire lies hidden

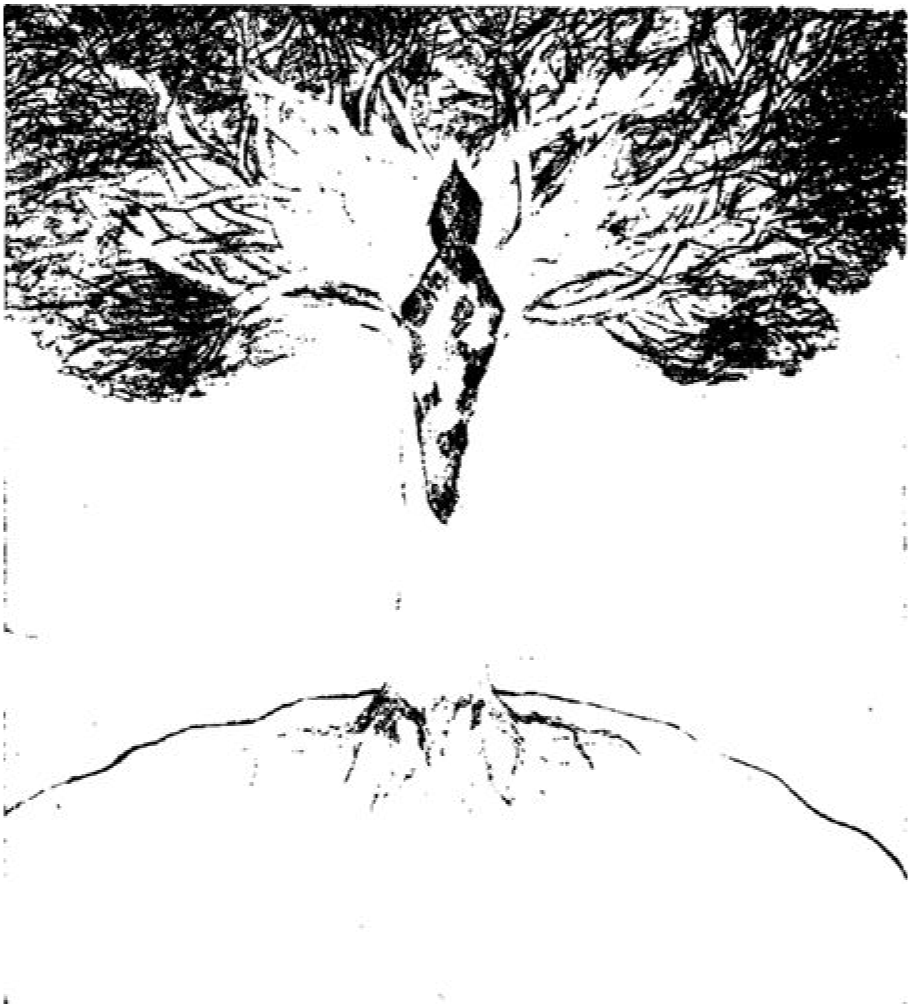


Done later by the same patient. A blossoming tree with sun disk grows out of a magic circle enclosing the uroboros with the sapphire at the centre



The cosmic tree is caught by the earth and cannot grow upwards

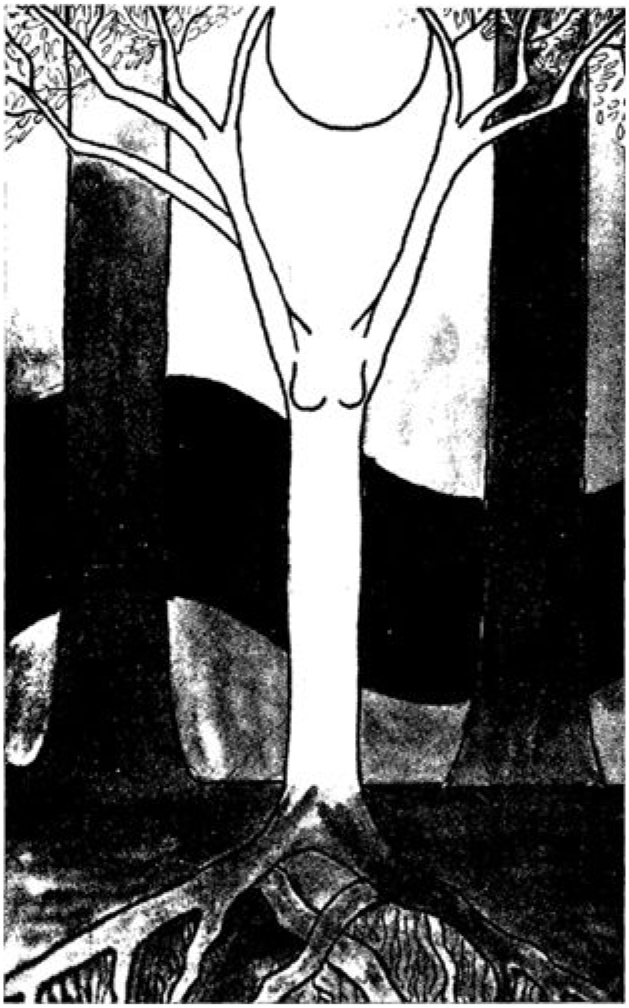
The same regressive state (depicted by a different painter), but coupled with greater consciousness



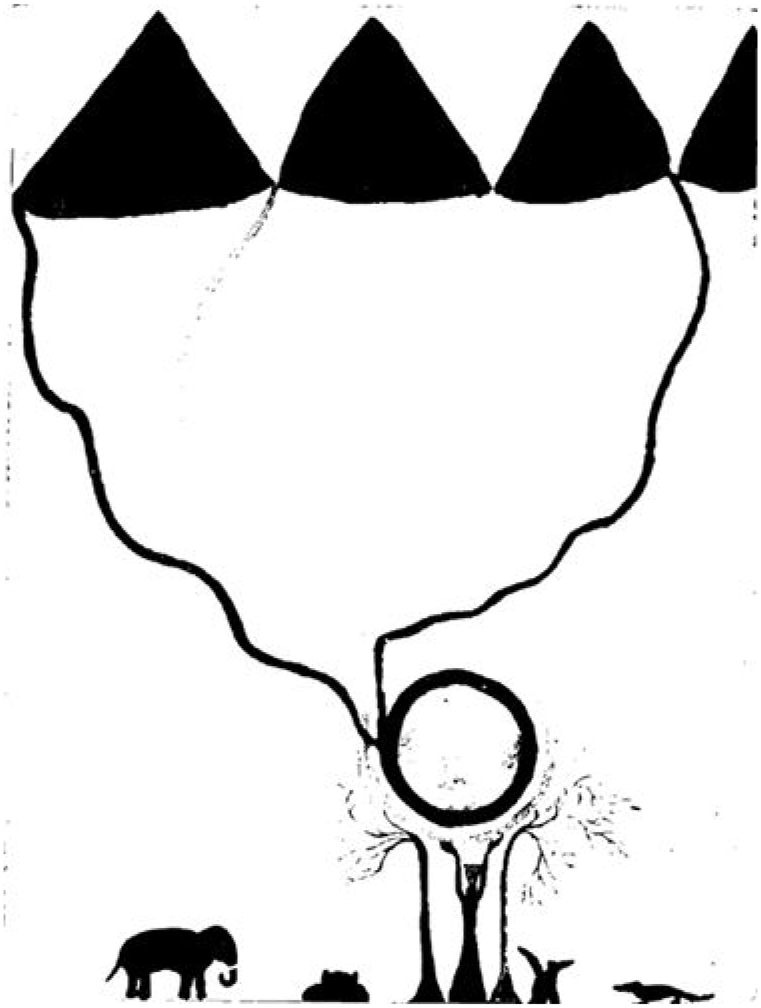
The tree has a cosmic character, with a multicoloured doll hidden in its trunk

The same motif done by a different patient. The sleeping figure is now visible

The hidden figure awakens and half emerges from the tree. The snake whispers in her ear: bird, lion, lamb, and pig complete the paradisal scene



The tree itself assumes human form and carries the sun. In the background is a wavy band of blood, surging rhythmically round the island



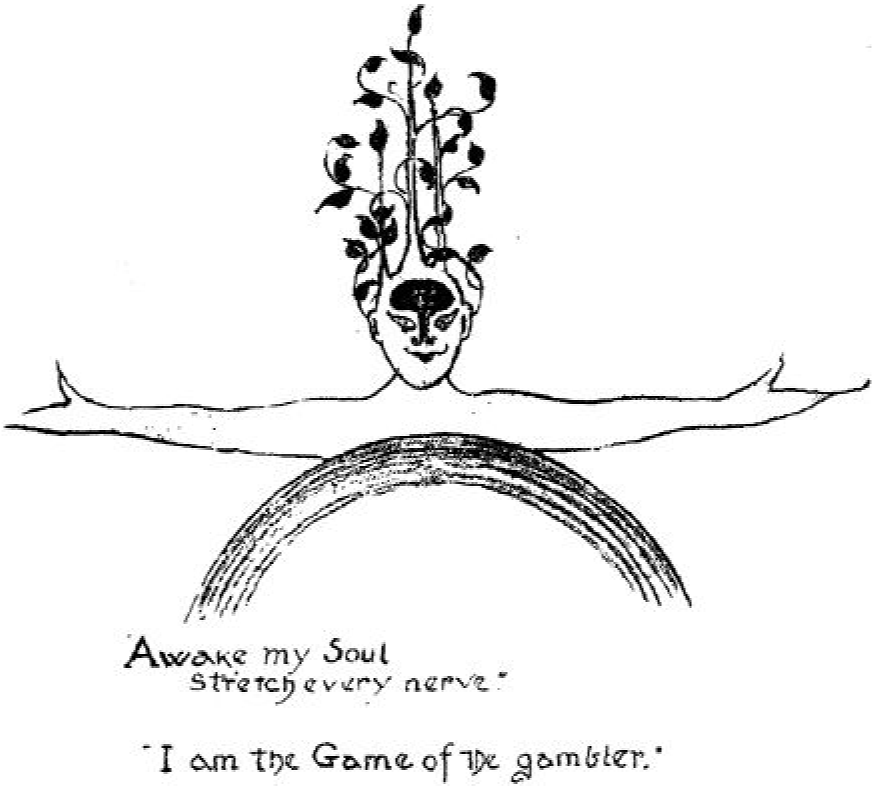
Done by the same painter as Figures 13-17. A female figure has taken the place of the tree. The sun disk is now a symbol of individuation, and is characterized as such by the quaternity fed by four different-coloured rivers flowing down from four mountains, and flanked by four animals. The scene is paradisal

The tree is a female figure encircled by a snake and holding two globes of light. The cardinal points are marked by corn-cobs and four animals: bird. tortoise, lion, and grasshopper

Most of the tree has been replaced by a female figure, the lower part taking the form of a cross. Below is the earth, in the sky a rainbow

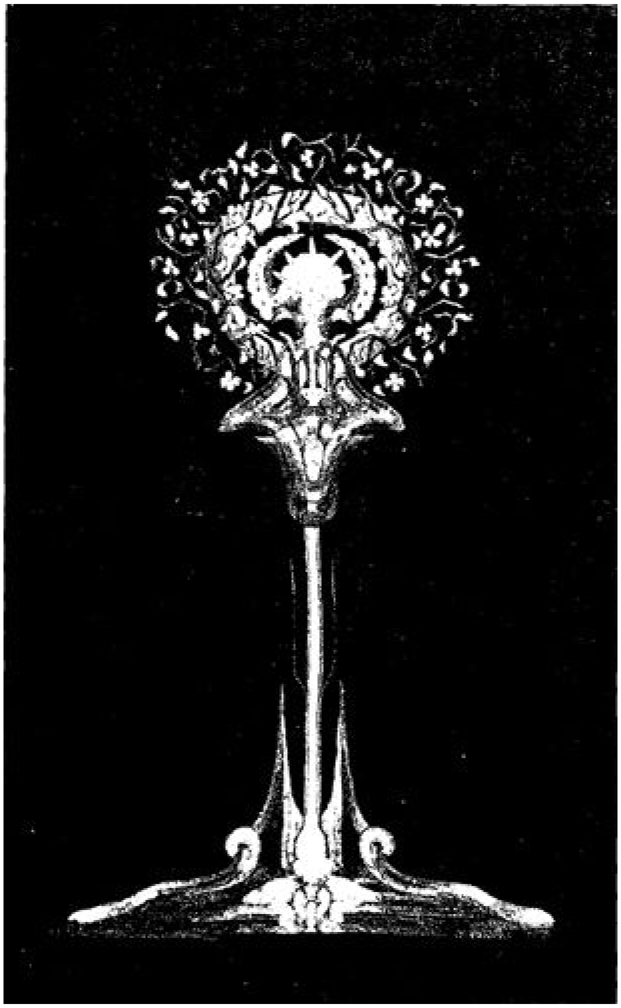
The tree stands in a forest of prehistoric mare’s-tails. It grows like the pistil of a flower (in six stages) from a calyx bearing four human heads. A woman’s head rises out of the petals

Drawn by the same patient as Figure 26. The foliage growing out of the woman’s head is surrounded by flying birds



Drawn by the same patient, but here the tree grows out of a man’s head rising above the rainbow

Painted by the same patient as Figure 2. A stylized world-tree surmounting a globe with a multicoloured band running down it. The trunk is a daemonic masculine figure with a bird coming down from above and a phallic symbol rising up from below



Made by the same patient. The tree has turned into a lotus with a gnomelike figure inside. His head is encircled by a mandala with a flowerlike centre, surrounded by a wreath or corona

Here again the tree is painted like a flower, and symbolizes the union of a number of opposites. Below, a swan and a catlike creature; then Adam and Eve, hiding their faces in shame; then a kingfisher with fish and a three-headed snake; in the centre, the four cherubim of Ezekiel, flanked by sun and moon; then the flower of light with a crowned boy inside; at the top, a bird with a shining egg and a crowned serpent, and two hands pouring water out of a jug

[351] This characterization is the deposit of many years of research into the statements of individual patients. Even the layman reading this essay will be struck by the amount of material from fairytale, myth, and poetry that appears in the illustrations. In this connection it is astonishing how relatively seldom the persons I interrogated were conscious of sources of this kind. The main reasons for this are: (1) In general, people think little, if at all, about the origins of dream images, and still less about myth motifs. (2) The sources have been forgotten. (3) The sources were never in any sense conscious; that is to say, the images are new, archetypal creations.

[352] The third possibility is much less rare than one might suppose. On the contrary, it occurs so frequently that comparative research into symbols becomes unavoidable in elucidating the spontaneous products of the unconscious. The widely held view that mythologems or myth motifs[2] are always connected with a tradition proves untenable, since they may reappear anywhere, at any time, and in any individual regardless of tradition. An image can be considered archetypal when it can be shown to exist in the records of human history, in identical form and with the same meaning. Two extremes must be distinguished here: (1) The image is clearly defined and is consciously connected with a tradition. (2) The image is without doubt autochthonous, there being no possibility let alone probability of a tradition.[3] Every degree of mutual contamination may be found between these two extremes.

[353] In consequence of the collective nature of the image it is often impossible to establish its full range of meaning from the associative material of a single individual. But since it is of importance to do this for practical therapeutic purposes, the necessity of comparative research into symbols for medical psychology becomes evident on these grounds also.[4] For this purpose the investigator must turn back to those periods in human history when symbol formation still went on unimpeded, that is, when there was still no epistemological criticism of the formation of images, and when, in consequence, facts that in themselves were unknown could be expressed in definite visual form. The period of this kind closest to us is that of medieval natural philosophy, which reached its zenith in the seventeenth century, and in the eighteenth century gradually left the field to science. It attained its most significant development in alchemy and Hermetic philosophy. Here, as in a reservoir, were collected the most enduring and the most important mythologems of the ancient world. It is significant that Hermetic philosophy was, in the main, practised by physicians.[5]

2. THE TREE IN THE TREATISE OF JODOCUS GREVERUS

[354] I would now like to show how the phenomenology of the tree is reflected in the medium of the epoch immediately preceding the one just

mentioned. Holmberg,[1] who wrote a comprehensive study of the tree of life, says that it is “mankind’s most magnificent legend,” thus confirming that the tree occupies a central position in mythology and is so widespread that its ramifications are to be found everywhere. The tree appears frequently in the medieval alchemical texts and in general represents the growth of the arcane substance and its transformation into the philosophical gold (or whatever the name of the goal may be). We read in the treatise of Pelagios that Zosimos had said the transformation process was like “a well-tended tree, a watered plant, which, beginning to ferment because of the plentiful water, and sprouting in the humidity and warmth of the air, puts forth blossoms and fruits by virtue of the great sweetness and special quality (*ποιότητι*) of nature.”[2]

[355] A typical example of this process is to be found in the treatise of Jodocus Greverus, which was first printed in Leiden, 1588.[3] The whole opus is depicted as the sowing and nurturing of the tree in a well-tended garden, into which nothing extraneous might enter. The soil consists of purified Mercurius; Saturn, Jupiter, Mars, and Venus form the trunk (or trunks)[4] of the tree, and the sun and moon supply their seeds. These planetary names refer partly to the corresponding metals, but we can see what they meant from the author’s qualifying remark: “For there enters into this work not the common gold, nor the common Mercurius, nor the common silver, nor anything else that is common, but [the metals] of the Philosophers.”[5] The ingredients of the work might therefore be anything. At any rate they are imaginary ones, even though they were expressed outwardly by chemical substances. The planetary names refer ultimately not only to metals but, as every alchemist knew, to the (astrological) temperaments, that is, to psychic factors. These consist of instinctive dispositions which give rise to specific fantasies and desires and so reveal their character. Avarice as one of the original motives of the royal art is still apparent in the term *aurum non vulgi*, though it is just here that we discern the change of motivation and the displacement of the goal to another plane. In the parable that comes at the end of the treatise the wise old man says to the adept: “Son, lay aside the snares of worldly appetites.”[6] Even when, as is often undoubtedly the case, the procedure given by an author has no other aim than the production of the common

gold, the psychic meaning of the opus nevertheless comes through in the symbolic nomenclature he employs in spite of his conscious attitude. In the treatise of Greverus this stage has been overcome and it is openly admitted that the goal of the opus is “not of this world.” Accordingly, at the conclusion of his treatise on the “universal process of our work,”[7] the author avows that it is a “gift of God, containing the secret of the undivided oneness of the Holy Trinity. O most excellent science, theatre of all nature and its anatomy, earthly astrology,[8] proof of God’s omnipotence, testimony to the resurrection of the dead, example of the remission of sins, infallible proof of the judgment to come and mirror of eternal blessedness.”[9]

[356] A modern reader of this hymnlike paean of praise cannot help feeling that it is exaggerated and out of key, for one cannot imagine how the science of alchemy could, for instance, contain the Holy Trinity. Such enthusiastic comparisons with the mysteries of religion had already caused offence in the Middle Ages.[10] Far from being rarities, they even became a *leitmotiv* of certain treatises in the seventeenth century, which however had their precursors in the thirteenth and fourteenth centuries. In my view they should not always be taken as spurious mystification, for the authors had something definite in mind. They obviously saw a parallel between the alchemical process and religious ideas—a parallel which is certainly not immediately perceptible to us. A bridge between two such very different realms of thought can be constructed only when we take into account the factor common to both: the *tertium comparationis* is the psychological element. Naturally an alchemist would have defended himself just as indignantly against the charge that his ideas about chemical substances were fantasies as would a metaphysician today, who still thinks that his statements amount to more than anthropomorphisms. Just as the alchemist was unable to distinguish between things as they are and the notions he had about them, so the modern metaphysician still believes that his views give valid expression to their metaphysical object. It obviously never occurred to either of them that a great diversity of views concerning their respective objects has been held since earliest times. But unlike metaphysicians, and unlike theologians in particular, the alchemists displayed no polemical

tendencies; at most they lamented the obscurity of the authors whom they could not understand.

[357] It is clear to every reasonable person that in both cases we are concerned primarily with ideas born of fantasy—which is not to say that their unknown object does not exist. No matter what the ideas refer to, they are always organized by the same psychic laws, that is, by the archetypes. In their way the alchemists realized this when they insisted on the parallelism between their ideas and religious ones, as when Greverus compares his synthetic process with the Trinity. The common archetype in this case is the number three. As a Paracelsist, he must have been acquainted with the Paracelsan triad of sulphur, salt, and Mercurius. Sulphur belongs to the sun or represents it, and salt stands in the same relation to the moon. However, he says nothing about a synthesis of this kind.[11] Sun and moon supply the seeds that are planted in the earth (= Mercurius), and presumably the four other planets form the trunk of the tree. The four that are to be united into one refer to the tetrasomia of Greek alchemy, where, corresponding to the planets, they stand for lead, tin, iron, and copper.[12] Hence in his process of *henosis* (unification or synthesis), as Michael Maier correctly understood it,[13] what Greverus had in mind was not the three basic Paracelsan substances but the ancient tetrasomia, which at the end of his treatise he compares with the "union of persons in the Holy Trinity." For him the triad of sun, moon, and Mercurius was the starting point, the initial material as it were, in so far as it signified the seed of the tree and the earth in which it was sown. This is the so-called *coniunctio triptativa.* But here he is concerned with the *coniunctio tetraptiva*,[14] whereby the four are joined in the "union of persons." This is a characteristic example of the dilemma of three and four, which plays a great role in alchemy as the well-known axiom of Maria Prophetissa.[15]

3. THE TETRASOMIA

[358] The aim of the tetrasomia is the reduction (or synthesis) of a quaternio of opposites to unity. The names of the planets themselves indicate two dyads, one benevolent (Jupiter and Venus), the other malefic

(Saturn and Mars), and such dyads often constitute an alchemical quaternity.[1] Zosimos gives the following description of the transformation process that is needed for the preparation of the tincture:

> You have need of an earth formed from two bodies and a water formed from two natures to water it. When the water has been mingled with the earth . . . the sun must act on this clay and transform it into stone. This stone must be burnt, and that burning will bring out the secret of this matter, that is to say its spirit, which is the tincture[2] sought by the philosophers.[3]

As the text shows, the synthesis depends on the unification of a double dyad. This is expressed particularly clearly in another archetypal form of the same idea: in the structure of the royal marriage, which follows that of the cross-cousin marriage.[4]

[359] As a rule, the lapis is synthesized from the quaternity of the elements or from the ogdoad of elements plus qualities (cold/warm, moist/dry). Similarly Mercurius, known from ancient times as *quadratus*, is the arcane substance through whose transformation the lapis, or goal of the opus, is produced. Thus in the love-magic of Astrampsychos the invocation to Hermes says:

> Your names . . . are in the four corners of the heavens. I know also your forms, which are: in the East you have the form of an ibis, in the West you have the form of a dog-headed baboon, in the North you have the form of a serpent, but in the South you have the form of a wolf. Your plant is the grape,[5] which in that place is the olive.[6] I know also your wood: it is ebony, etc.[7]

[360] The fourfold Mercurius is also the tree or its *spiritus vegetativus.* The Hellenistic Hermes is on the one hand an all-encompassing deity, as the above attributes show, but on the other hand, as Hermes Trismegistus, he is the arch-authority of the alchemists. The four forms of Hermes in Egyptian Hellenism are clearly derived from the four sons of Horus. A god with four faces is mentioned as early as the Pyramid Texts of the fourth and fifth dynasties.[8] The faces obviously refer to the four quarters of heaven—that is, the god is all-seeing. Budge points out that in chapter

CXII of the Egyptian Book of the Dead the same god appears as the ram of Mendes with four heads.[9] The original Horus, who represented the face of heaven, had long hair hanging down over his face, and these strands of hair were associated with the four pillars of Shu, the air god, which supported the four-cornered plate of the sky. Later the four pillars became associated with the four sons of Horus, who replaced the old gods of the four quarters of heaven. Hapi corresponded to the North, Tuamutef to the East, Amset to the South, and Qebhsennuf to the West. They played a large role in the cult of the dead, watching over the life of the dead man in the underworld. His two arms corresponded to Hapi and Tuamutef, his legs to Amset and Qebhsennuf. The Egyptian quaternity consisted of two dyads, as is evident from the text of the Book of the Dead: "Then said Horus to Re, Give me two divine brethren in the city of Pe and two divine brethren in the city of Nekhen, who [have sprung] from my body."[10] The quaternity is in fact a *leitmotiv* in the ritual for the dead: four men carry the coffin with the four Canopic jars, there are four sacrificial animals, all instruments and vessels are fourfold. Formulas and prayers are repeated four times, etc.[11] It is evident from this that the quaternity was of special importance for the dead man: the four sons of Horus had to see to it that the four parts (i.e., the wholeness) of the body were preserved. Horus begot his sons with his mother Isis. The incest motif, which was continued in Christian tradition and extended into late medieval alchemy, thus begins far back in Egyptian antiquity. The four sons of Horus are often shown standing on a lotus before their grandfather Osiris, Mestha[12] having a human head, Hapi the head of an ape, Tuamutef the head of a jackal, and Qebhsennuf the head of a hawk.

[361] The analogy with the vision of Ezekiel (chapters 1 and 10) is at once apparent. There the four cherubim had "the likeness of a man." Each of them had four faces, a man's, a lion's, an ox's, and an eagle's, so that, as with the four sons of Horus, one quarter was human and three quarters animal. In the love-magic of Astrampsychos, on the other hand, all four forms are animal, probably because of the magic purport of the incantation.[13]

[362] In keeping with the Egyptian predilection for multiples of four, there are 4 × 4 faces in the vision of Ezekiel.[14] Moreover each of the cherubim

has a wheel. In later commentaries the four wheels were interpreted as Merkabah, the chariot.[15] Corresponding to the four pillars of Shu and the four sons of Horus as gods of the four quarters, who bear up the floor of the sky, there was "a firmament as the colour of terrible crystal, stretched forth over the heads" of the cherubim. On it stood the throne of him who had "the appearance of a man," the counterpart of Osiris, who with the help of the older Horus and of Set had climbed up to heaven.

[363] The four wings of the cherubim recall the winged female genies who protect the coffin of Pharaoh. Each of the Horus sons had a female counterpart who fulfilled this same tutelary function. The cherubim, too, were protective genies, as is apparent from Ezekiel 28 : 14 and 16.[16] The apotropaic significance of the quaternity is borne out by Ezekiel 9 : 4, where the prophet, at the behest of the Lord, sets a cross[17] on the foreheads of the righteous to protect them from punishment. It is evidently the sign of God, who himself has the attribute of quaternity. The cross is the mark of his protégés. As attributes of God and also symbols in their own right, the quaternity and the cross signify wholeness. Thus Paulinus of Nola says:

> Extended on the four arms of the wood of the cross, he reached out to the four quarters of the world, that he might draw together unto life the peoples from every shore; and because Christ our God by the death of the cross shows himself all things to all men, that life may come into being and evil be destroyed, A and Ω stand beside the cross, each letter by its three strokes displaying a different figure in threefold wise, a single meaning perfected in triple form.[18]

[364] In the spontaneous symbolism of the unconscious the cross as quaternity refers to the self, to man's wholeness.[19] The sign of the cross is thus an indication of the healing effect of wholeness, or of becoming whole.

[365] Four animals also appear in the vision of Daniel. The first was like a lion and was "made stand upon the feet as a man, and a man's heart was given to it." The second was like a bear, the third like a leopard, and the fourth was a beast "dreadful and terrible," with "great iron teeth" and "ten horns."[20] Only the special treatment of the lion in any way recalls

the human quarter of the tetramorph. All four of them are beasts of prey or, in psychological terms, functions that have succumbed to desire, lost their angelic character, and become daemonic in the worst sense. They represent the negative and destructive aspect of the four angels of God who, as the Book of Enoch shows, form his inner court. This regression has nothing to do with magic (see n. 13) but rather expresses the daemonization of man, or of certain powerful individuals. Accordingly Daniel interprets the four beasts as four kings which shall arise out of the earth (7 : 17, A.V.). The interpretation continues (7 : 18): "But the saints of the most High shall take the kingdom, and possess the kingdom for ever, even for ever and ever." Like the lion with the human heart, this surprising interpretation is based on the positive aspect of the quaternity and refers to a blessed, protected state of things when four guardian angels reign in heaven and four just kings on earth, and the saints possess the kingdom. But this happy state is about to disappear, for the fourth beast in the quaternity has assumed monstrous form, has ten horns and represents "the fourth kingdom upon earth, which shall be diverse from all kingdoms, and shall devour the whole earth" (7 : 23). In other words, a monstrous lust for power will make the human quarter unconscious again. This is a psychological process which can be observed only too often both individually and collectively. It has recurred countless times in the history of mankind.

[366] Via Daniel and Enoch, the quaternity of God's sons penetrated very early into Christian ideology. There are the three synoptic gospels and the one gospel of St. John, to which were assigned as emblems the symbols of the cherubim. The four gospels are as it were the pillars of Christ's throne, and in the Middle Ages the tetramorph became the riding animal of the Church. But it was Gnostic speculation in particular that appropriated the quaternity. This theme is so far-reaching that it cannot be dealt with more closely here. I would only draw attention to the synonymity of Christ, Logos, and Hermes,[21] and the derivation of Jesus from the so-called "second tetrad"[22] among the Valentinians. "Thus our Lord in his fourfoldness preserves the form of the tetraktys and is composed of (1) the spiritual, which comes from Achamoth, (2) the

psychic, which comes from the world-creator, (3) the body prepared with ineffable art, and (4) the divine, the saviour."[23]

[367] The alchemical tetrasomia and its reduction to unity therefore have a long prehistory which reaches back far beyond the Pythagorean tetraktys into Egyptian antiquity. From all this we can see without difficulty that we are confronted with the archetype of a *totality image divided into four.* The resultant conceptions are always of a central nature, characterize divine figures, and carry over those qualities to the arcane substances of alchemy.

[368] It is not the task of empirical psychology to speculate about the possible metaphysical significance of this archetype. We can only point out that in spontaneous psychic products such as dreams and fantasies the same archetype is at work and in principle produces over and over again the same figures, meanings, and values *autochthonously*. Anyone who studies impartially the above series of dream pictures will be able to convince himself of the validity of my conclusions.

4. THE IMAGE OF WHOLENESS

[369] After this excursus into the history of the Hermetic quaternity, let us turn back to the image of wholeness in alchemy.

[370] One of the commonest and most important of the arcana is the *aqua permanens*, the *ὕδωρ θεῖον* of the Greeks. This, according to the unanimous testimony of both the ancient and the later alchemists, is an aspect of Mercurius, and of this divine water Zosimos says in his fragment *περὶ τοῦ θείου ὕδατος:*

> This is the great and divine mystery which is sought, for it is the whole [*τοῦτο γάρ ἐστι τὸ πᾶν*]. And from it is the whole and through the same is the whole. Two natures, one substance [*οὐσία*]. But the one [substance] attracts the one, and the one rules the one. This is the silver water, male and female, which forever flees. . . . For it is not to be ruled. It is the whole in all things. And it has life and spirit and is destructive [*ἀναιρετικόν*].[1]

[371] With regard to the central significance of the *aqua permanens* I must refer the reader to my earlier writings.[2] The “water” is just as much the arcanum of alchemy as are Mercurius, the lapis, the *filius philosophorum*, etc. Like them it is a totality image, and as the above Zosimos quotation shows, this was so even in the Greek alchemy of the third century A.D. The text leaves no doubt in this respect: the water is wholeness. It is the “silver water” (= *hydrargyrum*), but not the *ὕδωρ ἀεικίνητον*, ‘ever-moving water,’ i.e., ordinary quicksilver which in Latin alchemy was called *Mercurius crudus* as distinct from *Mercurius nonvulgi*. In Zosimos the quicksilver is a *πνεῦμα* (spirit).[3]

[372] Zosimos’s “whole” is a microcosm, a reflection of the universe in the smallest particle of matter, and is therefore found in everything organic and inorganic. Because the microcosm is identical with the macrocosm, it attracts the latter and thus brings about a kind of apocatastasis, a restoration of all individua to the original wholeness. Thus “every grain becomes wheat, and all metal gold,” as Meister Eckhart says; and the little, single individual becomes the “great man,” the *homo maximus* or Anthropos, i.e., the self. The moral equivalent of the physical transmutation into gold is *self-knowledge*, which is a re-remembering of the *homo totus*.[4] Olympiodorus, citing Zosimos’s exhortation to Theosebeia, says:

> If thou wilt calmly humble thyself in relation to thy body, thou wilt calm thyself also in relation to the passions, and by acting thus, thou wilt summon the divine to thyself, and in truth the divine, which is everywhere[5] will come to thee. But when thou knowest thyself, thou knowest also the God who is truly one.[6]

Hippolytus bears this out in his account of the Christian doctrine:

> But thou shalt speak with God and be joint heir with Christ. . . . For thou wilt have become God [*γέγονας γὰρ θεός*]. For whatever sufferings thou didst undergo as a man, thou hast shown that thou art a man; but whatever is appurtenant to a God, that God has promised to bestow, because thou hast been made divine [*θεοποιηθῇς*], since thou hast been begotten immortal [*γεννηθείς*]. That is the “Know thyself,” the knowing

> of the God who made thee. For to him who knoweth himself it is given to be known of Him by whom he is called.[7]

[373] The foregoing account of the associative background of the tree, prompted by the treatise of Jodocus Greverus, seemed to me a necessary prelude to a discussion of the significance of the tree in alchemy. A general survey of this kind may help the reader not to lose sight of the whole amid the unavoidable confusion of alchemical opinions and fantasies. Unfortunately my exposition will not be rendered any easier by my having to give numerous parallels from other fields of study. These, however, cannot be dispensed with, because the views of the alchemists were derived to a large extent from unconscious archetypal assumptions which also underlie other domains of human thought.

5. THE NATURE AND ORIGIN OF THE PHILOSOPHICAL TREE

[374] In my book *Psychology and Alchemy* I devoted a special chapter[1] to the projection of psychic contents (hallucinations, visions, etc.) and therefore need not dwell here on the spontaneous production of the tree symbol among the alchemists. Suffice to say that the adept saw branches and twigs[2] in the retort, where his tree grew and blossomed.[3] He was advised to contemplate its growth, that is, to reinforce it with active imagination. The vision was the thing to be sought (*res quaerenda*).[4] The tree was "prepared" in the same way as salt.[5] And just as the tree grew in the water, so also it was putrefied in it, "burnt" or "cooled" with the water.[6] It was called oak,[7] vine,[8] myrtle.[9] Djēbir ibn Hayyēn says of the myrtle: "Know that the myrtle is the leaf and the twig; it is a root yet no root. It is both a root and a branch. As a root, it is unquestionably a root if it be set over against the leaves and the fruits. It is separate from the trunk and forms part of the deep roots." The myrtle, he says, is "what Maria[10] calls the golden rungs, what Democritus calls the green bird. . . . It has been so called because of its green colour and because it is like the myrtle, in that it keeps its green colour for a long time despite the alternations of heat and cold."[11] It has seven branches.[12]

[375] Gerard Dorn says of the tree:

> After nature has planted the root of the metallic tree in the midst of her womb, viz., the stone which shall bring forth the metals, the gem, the salt, the alum, the vitriol, the salty spring, sweet, cold, or warm, the tree of coral or the Marcasita,[13] and has set its trunk in the earth, this trunk is divided into different branches, whose substance is a liquid, not after the manner of water, nor of oil, nor of clay,[14] nor of slime, but is not to be thought of otherwise than as the wood born of the earth, which is not earth although growing from it. The branches spread in such a way that the one is separated from the other by a space of two or three climates and as many regions: from Germany even as far as Hungary and beyond. In this way the branches of different trees spread through the whole globe of the earth, as in the human body the veins spread through the different limbs, which are separated from one another.
>
> The fruits of this tree drop off, and the tree itself dies and vanishes in the earth. "Afterwards, in accordance with natural conditions, another new [tree] is there."[15]

[376] In this text Dorn draws an impressive picture of the growth, expansion, death, and rebirth of the philosophical tree. Its branches are veins running through the earth, and although they spread to the most distant points of the earth's surface they all belong to the same immense tree, which apparently renews itself. The tree is obviously thought of as a system of blood vessels. It consists of a liquid like blood, and when this comes out it coagulates into the fruit of the tree.[16] Strangely enough, in ancient Persian tradition the metals are connected with the blood of Gayomart: his blood, soaking into the earth, turned into the seven metals.

[377] Dorn appends to his description of the tree a brief observation which I would not like to withhold from the reader since it affords an important insight into what is in its way the classic mode of alchemical thinking. He says:

> This and suchlike things proceed from the true physics and from the springs of the true philosophy, from which, by meditative contemplation of the wondrous works of God, the true knowledge of the supreme author and of his powers dawns upon the spiritual eyes of the philosophers, even as to the fleshly eyes the light is made visible. To those eyes the hidden is

revealed. But that Greek Satan has implanted in the philosophic field of the true wisdom the tares[17] and their false seeds, namely Aristotle, Albertus, Avicenna,[18] Rasis,[19] and men of that kidney, who are inimical to the light of God and the light of nature, and have perverted the whole physical truth from the time when they turned the name Sophia into Philosophia.[20]

[378] Dorn was a Platonist and a fanatical opponent of Aristotle and, quite obviously, of the scientific empiricists as well. His attitude was essentially the same as that of Robert Fludd in respect of John Kepler.[21] Basically, it was the old controversy about universals, the opposition between realism and nominalism, which in our scientific age has been decided in favour of a nominalistic tendency. Whereas the scientific attitude seeks, on the basis of careful empiricism, to explain nature in her own terms, Hermetic philosophy had for its goal an explanation that included the psyche in a total description of nature. The empiricist tries, more or less successfully, to forget his archetypal explanatory principles, that is, the psychic premises that are a *sine qua non* of the cognitive process, or to repress them in the interests of "scientific objectivity." The Hermetic philosopher regarded these psychic premises, the archetypes, as inalienable components of the empirical world-picture. He was not yet so dominated by the object that he could ignore the palpable presence of psychic premises in the form of eternal ideas which he felt to be real. The empirical nominalist, on the other hand, already had the modern attitude towards the psyche, namely, that it had to be eliminated as something "subjective," and that its contents were nothing but ideas formulated *a posteriori*, mere *flatus vocis*. His hope was to be able to produce a picture of the world that was entirely independent of the observer. This hope has been fulfilled only in part, as the findings of modern physics show: the observer cannot be finally eliminated, which means that the psychic premises remain operative.

[379] In the case of Dorn we can see how the archetypal tree, which consisted of the ramifications of the bronchi, blood vessels, and veins of ore, was projected upon the empirical world and gave rise to a totalistic view which embraced the whole of organic and inorganic nature and the "spiritual" world as well. The fanatical defence of his standpoint shows

that Dorn was gnawed by inner doubt and was fighting a lost battle. Neither he nor Fludd could hold up the march of events, and today we see how the spokesmen of so-called objectivity are defending themselves with similar outbursts of affect against a psychology that demonstrates the necessity of psychic premises.

6. DORN'S INTERPRETATION OF THE TREE

[380] In his treatise "Congeries Paracelsicae chemicae de transmutatione metallorum" Dorn writes:[1]

> On account of likeness alone, and not substance, the Philosophers compare their material to a golden tree with seven branches, thinking that it encloses in its seed the seven metals, and that these are hidden in it, for which reason they call it a living thing. Again, even as natural trees bring forth divers blossoms in their season, so the material of the stone causes the most beautiful colours to appear[2] when it puts forth its blossoms.[3] Likewise they have said that the fruit of their tree strives up to heaven, because out of the philosophic earth there arises a certain substance, like to the branches of a loathsome sponge.[4] Whence they have put forward the opinion that the point about which the whole art turns lies in the living things of nature [*in vegetabilibus naturae*] and not in the living things of matter; and also because their stone contains within it soul, body, and spirit, as do living things. From a likeness not altogether remote they have called this material virgin's milk and blessed rose-coloured blood, although that belongs only to the prophets and sons of God. For this reason the Sophists have supposed that the philosophic matter consists of animal or human blood.

[381] Dorn then enumerates the substances with which "frivolous triflers" operate, such as urine, milk, eggs, hair, and various kinds of salts and metals. These "Sophists" take the symbolical names concretely and attempt to make the magistery out of the most unsuitable ingredients. They were obviously the chemists of those days, who, as a result of their concretistic misunderstanding, worked with common materials, whereas the philosophers called their stone animate because, at the final operations, by virtue of the power of this most noble fiery mystery, a dark

red liquid, like blood, sweats out drop by drop from their material and their vessel. And for this reason they have prophesied that in the last days a most pure[5] man, through whom the world will be freed, will come to earth and will sweat bloody drops of a rosy or red hue, whereby the world will be redeemed from its Fall. In like manner, too, the blood of their stone will free the leprous metals[6] and also men from their diseases.[7] Wherefore they have said, not without good reason, that their stone is animate [*animalem*]. Concerning this, Mercurius speaks as follows to King Calid, "To know this mystery is permitted only to the prophets of God,"[8] and that is the reason why the stone is called animate. For in the blood of this stone is hidden its soul. It is also composed of body, spirit, and soul. For a like reason they have called it their microcosm, because it contains the similitude of all things of this world, and therefore again they say that it is animate, as Plato calls the macrocosm animate. But now the ignorant have come, who believe that the stone is threefold and is hidden in threefold kind [*genere*], namely vegetable, animal, and mineral, whence it has come to pass that they themselves have sought for it in minerals.[9] But this teaching is far removed from the opinion of the Philosophers, who maintain that their stone is vegetable, animal, and mineral in one and the same form.

[382] This remarkable text explains the tree as a metaphorical form of the arcane substance, a living thing that comes into existence according to its own laws, and grows, blossoms, and bears fruit like a plant. This plant is likened to the sponge, which grows in the depths of the sea and seems to have an affinity with the mandrake (n. 4). Dorn then makes a distinction between the "living things of nature" and those of matter. By the last-named are obviously meant concrete, material organisms. But it is not so clear what the former are meant to be. A sponge that bleeds and a mandrake that shrieks when pulled up are neither "vegetabilia materiae" nor are they found in nature, at least not in nature as we know it, though they may occur in that more comprehensive, Platonic nature as Dorn understood it, that is, in a nature that includes psychic "animalia," i.e., mythologems and archetypes. Such are the mandrake and similar organisms. How concretely Dorn visualized them is a moot point. At any

rate the “stone that is no stone, nor of the nature of stone” (n. 9) comes into this category.

7. THE ROSE-COLOURED BLOOD AND THE ROSE

[383] The mysterious rose-coloured blood occurs in several other authors. In Khunrath, for instance, the “lion lured forth from the Saturnine mountain” had rose-coloured blood.[1] This lion, signifying “all and conquering all,” corresponds to the *πᾶν* or *πάντα* of Zosimos, i.e., totality. Khunrath further mentions (p. 276) the costly Catholick Rosy-Coloured Blood and Aetheric Water that flows forth Azothically[2] from the side of the innate Son of the Great World when opened by the power of the Art. Through the same alone, and by no other means, are Vegetable, Animal, and Mineral things, by the ablution of their impurities, raised to the highest Natural perfection, in accordance with Nature and by the Art.

[384] In the “Aquarium sapientum” the “son of the great world” (*filius macrocosmi*, the lapis) is correlated with Christ,[3] who is the *filius microcosmi*, and his blood is the quintessence, the red tincture. This is the true and authentic duplex Mercurius or Giant[4] of twofold substance.…[5] God by nature, man, hero, etc., who hath the celestial Spirit in him, which quickeneth all things . . . he is the sole and perfect Healer of all imperfect bodies and men, the true and heavenly physician of the soul . . . the triune universal essence,[6] which is called Jehovah.[7]

[385] These panegyrics of the alchemists have often been regretted as examples of bad taste or ridiculed as exuberant fantasies—most unfairly, it seems to me. They were serious people, the alchemists, and they can be understood only when taken seriously, however hard this may hit our own prejudices. It was never their intention to exalt their stone into a world saviour, nor did they purposely smuggle into it a whole lot of known and unknown mythology any more than we do in our dreams. They simply found these qualities in their idea of a body composed of the four elements and capable of uniting all opposites, and were just as amazed at this discovery as anyone would be who had a singularly impressive dream and then came across an unknown myth which fitted it

exactly. No wonder, therefore, that they endowed the stone or the red tincture, which they really believed could be produced, with all the qualities they had discovered in their idea of such an object. This makes it easier for us to understand a statement that is entirely characteristic of the alchemical way of thinking. It occurs on the same page as the above quotation from “Aquarium sapientum” and runs:

> Even as, I say, this earthly and philosophic stone, together with its material, has many different names, indeed it is said almost a thousand, for which reason it is also called wonderful, even so can these and other afore-mentioned names and titles be applied much more properly, and indeed in the highest degree, to Almighty God and the Supreme Good.

It obviously never occurred to the author, as we with our prejudiced view are quick to assume, that he had simply transferred God’s attributes to the stone.

[386] It is evident from this that the stone for the alchemists was nothing less than a primordial religious experience which, as good Christians, they had to reconcile with their beliefs. This accounts for that ambiguous identity or parallelism between Christ as the *filius microcosmi* and the *lapis philosophorum* as the *filius macrocosmi*, or even the substitution of the one for the other.

[387] The lapis-Christ parallel was presumably the bridge by which the mystique of the Rose entered into alchemy. This is evident first of all from the use of “Rosarium” or “Rosarius” (rose-gardener) as a book title. The first *Rosarium* (there are several), first printed in 1550, is for the greater part ascribed to Arnaldus de Villanova. It is a compilation whose historical components have not yet been sorted out. Arnaldus lived in the second half of the thirteenth century. He is also credited with the *Rosarium cum figuris*, where the rose is the symbol of relationship between king and queen. The reader will find a detailed account of this in my “Psychology of the Transference,” which reproduces the *Rosarium* illustrations.

[388] The rose has the same meaning in Mechthild of Magdeburg. The Lord spoke to her, saying: “Look at my heart, and see!” A most beautiful rose with five petals covered his whole breast, and the Lord said: “Praise

me in my five senses, which are indicated by this rose.” As is explained later, the five senses are the vehicles of Christ’s love for man (e.g., “through the sense of smell he has always a certain loving affection directed towards man”).[8]

[389] In the spiritual sense the rose, like the *hortus aromatum* (garden of spices),[9] *hortus conclusus*,[10] and *rosa mystica*,[11] is an allegory of Mary, but in the worldly sense it is the beloved, the rose of the poets, the “fedeli d’amore” of that time. And just as Mary is allegorized in St. Bernard[12] as the *medium terrae* (centre of the earth), in Rabanus Maurus[13] as the “city,” in Godfrey, Abbot of Admont, as the “fortress”[14] and the “house of divine wisdom,”[15] and in Alan of Lille as the *acies castrorum* (army with banners),[16] so the rose has the significance of a mandala, as is clear from the heavenly rose in Dante’s *Paradiso*. Like its equivalent, the Indian lotus, the rose is decidedly feminine. In Mechthild of Magdeburg it must be understood as a projection of her own feminine Eros upon Christ.[17]

[390] It seems as though the rose-coloured blood of the alchemical redeemer[18] was derived from a rose mysticism that penetrated into alchemy, and that, in the form of the red tincture, it expressed the healing or whole-making effect of a certain kind of Eros. The strange concretism of this symbol is explained by the total absence of psychological concepts. Dorn was therefore bound to understand the rose-coloured blood as a “vegetabile naturae,” in contrast to ordinary blood, which was a “vegetabile materiae.” As he says, the soul of the stone is in its blood. Since the stone represents the *homo totus*,[19] it is only logical for Dorn to speak of the “putissimus homo” when discussing the arcane substance and its bloody sweat, for that is what it is all about. *He* is the arcanum, and the stone and its parallel or prefiguration is Christ in the garden of Gethsemane.[20] This “most pure” or “most true” man must be no other than what he is, just as “argentum putum” is unalloyed silver; he must be entirely man, a man who knows and possesses everything human and is not adulterated by any influence or admixture from without. This man will appear on earth only “in the last days.” He cannot be Christ, for Christ by his blood has already redeemed the world from the

consequences of the Fall.[21] Christ may be the “purissimus homo,” but he is not “putissimus.” Though he is man, he is also God, not pure silver but gold as *well*, and therefore not “putus.” On no account is it a question here of a future Christ and *salvator microcosmi*, but rather of the alchemical *servator cosmi* (preserver of the cosmos), representing the still unconscious idea of the whole and complete man, who shall bring about what the sacrificial death of Christ has obviously left unfinished, namely the deliverance of the world from evil. Like Christ he will sweat a redeeming blood, but, as a “vegetabile naturae,” it is “rose-coloured”; not natural or ordinary blood, but symbolic blood, a psychic substance, the manifestation of a certain kind of Eros which unifies the individual as well as the multitude in the sign of the rose and makes them whole, and is therefore a panacea and an alexipharmic.

[391] The second half of the sixteenth century saw the beginning of the Rosicrucian movement, whose motto—*per crucem ad rosam*—was anticipated by the alchemists. Goethe caught the mood of this Eros very well in his poem “Die Geheimnisse.” Such movements, as also the emergence of the idea of Christian charity with its emotional overtones,[22] are always indicative of a corresponding social defect which they serve to compensate. In the perspective of history, we can see clearly enough what this defect was in the ancient world; and in the Middle Ages as well, with its cruel and unreliable laws and feudal conditions, human rights and human dignity were in a sorry plight. One would think that in these circumstances Christian love would be very much to the point. But what if it is blind and without insight? Solicitude for the spiritual welfare of the erring sheep can explain even a Torquemada. Love alone is useless if it does not also have understanding. And for the proper use of understanding a wider consciousness is needed, and a higher standpoint to enlarge one’s horizon. That is why Christianity as a historical force has not rested content with admonishing man to love his neighbour, but has also performed a higher cultural task which it is impossible to overestimate. It has educated man to a higher consciousness and responsibility. Certainly love is needed for that, but a love combined with insight and understanding. Their function is to illuminate regions that are still dark and to add them to consciousness—regions in the outside world

as well as those within, in the interior world of the psyche. The blinder love is, the more it is instinctual, and the more it is attended by destructive consequences, for it is a dynamism that needs form and direction. Therefore a compensatory Logos has been joined to it as a light that shines in the darkness. A man who is unconscious of himself acts in a blind, instinctive way and is in addition fooled by all the illusions that arise when he sees everything that he is not conscious of in himself coming to meet him from outside as projections upon his neighbour.

8. THE ALCHEMICAL MIND

[392] The alchemists seem to have had an inkling of this state of mind; at any rate it got mixed up with their opus. Already in the fourteenth century they had discovered that what they were searching for reminded them not only of all manner of mysterious substances, remedies, and poisons, but of various living things, plants and animals, and, finally, of some strange mythological figure, a dwarf, earth-spirit or metal-spirit, or even of something like a God-man. Thus in the first half of the fourteenth century, Petrus Bonus of Ferrara wrote that in a certain letter Rhazes had said:

> With this red stone the philosophers exalted themselves above all others and foretold the future. They prophesied not only in general but also in particular. Thus they knew that the day of judgment and the end of the world must come, and the resurrection of the dead, when each soul will be united with its former body and will no more be separated from it for ever. Then each glorified body will be changed, possess incorruptibility and brightness, and an almost unbelievable subtlety, and it will penetrate all solids,[1] because its nature will then be of the nature of spirit as well as body. . . . It is a nature which, when it is moistened and left for many nights in that condition, is like a dead man, and then that thing needs the fire, until the spirit of that body is extracted and left to stand through the nights, and falls to dust like a man in his grave. And when all this has happened, God will give it back its soul and its body, and take away its imperfection; then will that thing be strengthened and improved, as after the resurrection a man becomes stronger and younger than he was in this

world. . . . Thus the philosophers have beheld the Last Judgment in this art, namely the germination and birth of this stone, which is miraculous rather than rational; for on that day the soul to be beatified unites with its former body through the mediation of the spirit, to eternal glory. . . . So also the old philosophers of this art knew and maintained that a virgin must conceive and bring forth, because in their art the stone conceives of itself, becomes pregnant, and brings itself forth. . . . And because they beheld the miraculous conception, pregnancy, birth, and nourishment of this stone, they concluded that a woman who is a virgin will conceive without a man, become pregnant and give birth in miraculous wise, and remain a virgin as before. . . . As Alphidius says, this stone is cast out into the streets, is lifted up into the clouds, dwells in the air, feeds in the streams and rests on the tops of the mountains. Its mother is a virgin, its father knows not woman. . . . The philosophers also knew that God must become man on the last day of this art, whereon is the fulfilment of the work; begetter and begotten become altogether one; old man and boy, father and son, become altogether one; thus all old things are made new.[2] God himself has entrusted this magistery to his philosophers and prophets, for whose souls he has prepared a dwelling place in his paradise.[3]

[393] As this text makes very plain, Petrus Bonus discovered that the alchemical opus anticipated, feature for feature, the sacred myth of the generation, birth, and resurrection of the Redeemer, for he was quite convinced that the ancient authorities of the art, Hermes Trismegistus, Moses, Plato, and others knew the whole process long ago and consequently had prophetically anticipated the coming salvation in Christ. He was not in any way conscious that the situation might be the reverse and that the alchemists were drawing on ecclesiastical tradition and subsequently approximated their operations to the sacred legend. The degree of his unconsciousness is more than merely astonishing: it is instructive. This extraordinary blindness shows us that there must have been an equally powerful motive behind it. Bonus was not the only one to make this declaration, though he was the first; in the next three hundred years it became increasingly widespread and caused offence. Bonus was an erudite scholastic and, quite apart from his religious

beliefs, was intellectually well in a position to recognize his error. But what impelled him to this view was the fact that he was indeed drawing on a source more ancient than ecclesiastical tradition: when contemplating the chemical changes that took place during the opus, his mind became suffused with archetypal, mythological parallels and interpretations, just as had happened to the old pagan alchemists, and as still happens today when the imagination is given free play in the observation and investigation of the products of the unconscious. Under these conditions forms of thought emerge in which one can afterwards discover parallels with mythological motifs, including Christian ones; parallels and similarities which perhaps one would never have suspected at first sight. So it was with the old adepts who, not knowing anything about the nature of chemical substances, reeled from one perplexity to the next: willy-nilly they had to submit to the overwhelming power of the numinous ideas that crowded into the empty darkness of their minds. From these depths a light gradually dawned upon them as to the nature of the process and its goal. Because they were ignorant of the laws of matter, its behaviour did not do anything to contradict their archetypal conception of it. Occasionally they made chemical discoveries in passing, as was only to be expected; but what they really discovered, and what was an endless source of fascination to them, was the symbolism of the individuation process.

[394] Petrus Bonus could not but recognize that the alchemical symbols which had been discovered in an entirely different way agreed in a remarkable manner with those of the Christian story of salvation. In their efforts to fathom the secrets of matter the alchemists had unexpectedly blundered into the unconscious, and thus, without at first being aware of it, they became the discoverers of a process which underlies Christian symbolism among others. It did not take more than a couple of centuries for the more reflective among them to realize what the quest for the stone was actually about. Hesitantly at first, hint by hint, and then with unmistakable clarity, the stone revealed to them its identity with man himself, with a supraordinate factor that could actually be found within him, with Dorn's "quid," which today can be identified without difficulty with the self, as I have shown elsewhere.[4]

[395] In their various ways, the alchemists struggled to come to terms with the lapis-Christ parallel. They did not find a solution, nor was this possible so long as their conceptual language was not freed from projection into matter and did not become psychological. Only in the following centuries, with the growth of natural science, was the projection withdrawn from matter and entirely abolished together with the psyche. This development of consciousness has still not reached its end. Nobody, it is true, any longer endows matter with mythological properties. This form of projection has become obsolete. Projection is now confined to personal and social relationships, to political Utopias and suchlike. Nature has nothing more to fear in the shape of mythological interpretations, but the realm of the spirit certainly has, more particularly that realm which commonly goes by the name of "metaphysics." There mythologems claiming to utter the absolute truth still tumble over one another, and anyone who dresses up his mythologem in solemn enough words believes that he has made a valid statement, and even makes a virtue of not possessing the modesty becoming to our limited human intelligence, which knows that it does not know. Such people even think that God himself is menaced whenever anyone dares to interpret their archetypal projections for what they are, namely, human statements, which no reasonable person supposes signify nothing, seeing that even the most preposterous statements of the alchemists have their meaning, though not the one which they themselves, with but few exceptions, sought to give their symbols, but one which only the future could formulate. Whenever we have to do with mythologems it is advisable to assume that they mean more than what they appear to say. Just as dreams do not conceal something already known, or express it under a disguise, but try rather to formulate an as yet unconscious fact as clearly as possible, so myths and alchemical symbols are not euhemeristic allegories that hide artificial secrets. On the contrary, they seek to translate natural secrets into the language of consciousness and to declare the truth that is the common property of mankind. By becoming conscious, the individual is threatened more and more with isolation, which is nevertheless the *sine qua non* of conscious differentiation. The greater this threat, the more it is compensated by the

production of collective and archetypal symbols which are common to all men.

[396] This fact is expressed in a general way by the religions, where the relation of the individual to God or the gods ensures that the vital link with the regulating images and instinctual powers of the unconscious is not broken. Naturally this is true only so long as the religious ideas have not lost their numinosity, i.e., their thrilling power. Once this loss has occurred, it can never be replaced by anything rational. Compensating primordial images then appear in the form of mythological ideas such as alchemy produced in abundance and as may also be found in our own dreams. In both cases, consciousness reacts to these revelations in the same characteristic way: the alchemist reduced his symbols to the chemical substances he worked with, while the modern man reduces them to personal experiences, as Freud also does in his interpretation of dreams. Both of them act as though they knew to what known quantities the meaning of their symbols could be reduced. And both, in a sense, are right: for just as the alchemist was caught in his own alchemical dream language, so modern man, caught in the toils of egohood, uses his personal psychological problems as a *façon de parler.* In both cases the representational material is derived from already existing conscious contents. The result of this reduction, however, is not very satisfactory—so little, in fact, that Freud saw himself obliged to go back as far as possible into the past. In so doing he finally hit upon an uncommonly numinous idea, the archetype of incest. He thus found something that to some extent expressed the real meaning and purpose of symbol production, which is to bring about an awareness of those primordial images that belong to all men and can therefore lead the individual out of his isolation. Freud’s dogmatic rigidity is explained by the fact that he succumbed to the numinous effect of the primordial image he had discovered. If we assume with him that the incest motif is the source of all modern man’s psychological problems as well as of alchemical symbolism, this gets us nowhere as regards the *meaning* of the symbols. On the contrary, we have landed ourselves in a blind alley, for we shall only be able to say that all symbolism, present and future, derives from the primal incest. That is what Freud actually thought, for he once said to

me: “I only wonder what neurotics will do in the future when it is generally known what their symbols mean.”

[397] Luckily for us, symbols mean very much more than can be known at first glance. Their meaning resides in the fact that they compensate an unadapted attitude of consciousness, an attitude that does not fulfil its purpose, and that they would enable it to do this if they were understood.[5] But it becomes impossible to interpret their meaning if they are reduced to something else. That is why some of the later alchemists, particularly in the sixteenth century, abhorred all vulgar substances and replaced them by “symbolic” ones which allowed the nature of the archetype to glimmer through. This does not mean that the adept ceased to work in the laboratory, only that he kept an eye on the symbolic aspect of his transmutations. This corresponds exactly to the situation in the modern psychology of the unconscious: while personal problems are not overlooked (the patient himself takes very good care of that!), the analyst keeps an eye on their symbolic aspects, for healing comes only from what leads the patient beyond himself and beyond his entanglement in the ego.

9. VARIOUS ASPECTS OF THE TREE

[398] What the tree meant to the alchemists cannot be ascertained either from a single interpretation or from a single text. In order to discover this, a great many sources must be compared. We shall therefore turn to further statements about the tree. Pictures of the tree are often given in the medieval texts. Some of them are reproduced in *Psychology and Alchemy.* Sometimes the prototype is the tree of paradise, hung not with apples but with sun-and-moon fruit, like the trees in the treatise of Michael Maier in the *Musaeum hermeticum*,[1] or else it is a sort of Christmas tree, adorned with the seven planets and surrounded by allegories of the seven phases of the alchemical process. Standing beneath the tree are not Adam and Eve but Hermes Trismegistus as an old man and the adept as a youth. Behind Hermes Trismegistus is King Sol sitting on a lion accompanied by a fire-spitting dragon, and behind the adept is the moon goddess Diana sitting on a whale accompanied by

an eagle.[2] The tree is generally in leaf and living, but sometimes it is quite abstract and expressly stands for the phases of the process.[3]

[399] In the Ripley *Scrowle*[4] the serpent of paradise dwells in the top of the tree in the shape of Melusina—"desinit in [anguem] mulier formosa superne."[5] This is combined with a motif that is not in the least Biblical but is primitive and shamanistic: a man, presumably the adept, is halfway up the tree and meets Melusina, or Lilith, coming down from above. The climbing of the magical tree is the heavenly journey of the shaman, during which he encounters his heavenly spouse. In medieval Christianity the shamanistic anima was transformed into Lilith,[6] who according to tradition was the serpent of paradise and Adam's first wife, with whom he begot a horde of demons. In this picture primitive traditions cross with Judaeo-Christian ones. I have never come across the climbing of the tree in the pictures done by my patients, and have met it only as a dream motif. The motif of ascent and descent occurs in modern dreams chiefly in connection with a mountain or a building, or sometimes a machine (lift, aeroplane, etc.).

[400] The motif of the leafless or dead tree is not common in alchemy, but is found in Judaeo-Christian tradition as the tree of paradise that died after the Fall. An old English legend[7] reports what Seth saw in the Garden of Eden. In the midst of paradise there rose a shining fountain, from which four streams flowed, watering the whole world. Over the fountain stood a great tree with many branches and twigs, but it looked like an old tree, for it had no bark and no leaves. Seth knew that this was the tree of whose fruit his parents had eaten, for which reason it now stood bare. Looking more closely, Seth saw that a naked snake without a skin[8] had coiled itself round the tree. It was the serpent by whom Eve had been persuaded to eat of the forbidden fruit. When Seth took a second look at paradise he saw that the tree had undergone a great change. It was now covered with bark and leaves, and in its crown lay a little new-born babe wrapped in swaddling clothes, that wailed because of Adam's sin. This was Christ, the second Adam. He is found in the top of the tree that grows out of Adam's body in representations of Christ's genealogy.

[401] Another alchemical motif is the truncated tree. In the frontispiece to the French edition (1600) of Francesco Colonna's *Hypnerotomachia Poliphili* (Venice, 1499), it forms the counterpart to the lion with cut-off paws,[9] which appears as an alchemical motif in Reusner's *Pandora* (1588). Blaise de Vigenère (1523–?1569), who was influenced by the Cabala, speaks of the "caudex arboris mortis" (trunk of the tree of death) that sent out a red death-ray.[10] "Tree of death" is synonymous with "coffin." The strange recipe, "Take the tree and place in it a man of great age,"[11] should probably be understood in this sense. This motif is a very ancient one, and occurs in the ancient Egyptian tale of Bata, preserved in a papyrus of the nineteenth dynasty. There the hero placed his soul on the topmost blossom of an acacia-tree. When the tree was cut down with treacherous intent, his soul was found again in the form of a seed. With this the dead Bata was restored to life. When he was killed a second time in the form of a bull, two persea trees grew out of the blood. But when these were cut down, a chip of the wood fertilized the queen, who bore a son: he was the reborn Bata, who then became Pharaoh, a divine being. It is evident that the tree here is an instrument of transformation.[12] Vigenère's "caudex" is similar to the truncated tree in Poliphilo. This image probably goes back to Cassiodorus, who allegorizes Christ as a "tree cut down in his passion."[13]

[402] More frequently the tree appears bearing flowers and fruit. The Arabian alchemist Abu'l Qēsim (13th cent.) describes its four kinds of blossoms as red, midway between white and black, black, and midway between white and yellow.[14] The four colours refer to the four elements that are combined in the opus. The quaternity as a symbol of wholeness means that the goal of the opus is the production of an all-embracing unity. The motif of the double quaternity, the ogdoad, is associated in shamanism with the world-tree: the cosmic tree with eight branches was planted simultaneously with the creation of the first shaman. The eight branches correspond to the eight great gods.[15]

[403] The *Turba* has much to say about the fruit-bearing tree.[16] Its fruits are of a special kind. The "Visio Arislei" speaks of "this most precious tree, of whose fruit he who eats shall never hunger."[17] The parallel to this in

the *Turba* runs: “I say that that old man does not cease to eat of the fruits of that tree . . . until that old man becomes a youth.”[18] These fruits are here equated with the bread of life in John 6 : 35, but they go back beyond that to the Ethiopic Book of Enoch (second century B.C.), where it is said that the fruits of the tree in the Western Land will be the food of the elect.[19] This is a clear hint of death and renewal. It is not always the fruit of the tree, but of the *granum frumenti*, the grain of wheat, from which the food of immortality is prepared, as in *Aurora consurgens* I: “For from the fruits of this grain is made the food of life, which cometh down from heaven.”[20] Manna, Host, and panacea form here an unfathomable mixture. The same idea of a miraculous spiritual food is mentioned in the Arisleus vision. There it is said that Harforetus (Harpokrates), a “disciple of Pythagoras” and the “author of nourishment,” came to the help of Arisleus and his companions, evidently with the fruits of the tree that are mentioned in Ruska’s edition of Berlin Codex Q. 584.[21] In the Book of Enoch the fruits of the tree of wisdom are likened to grapes, and this is of interest inasmuch as in the Middle Ages the philosophical tree was sometimes called a vine,[22] with reference to John 15 : 1, “I am the true vine.” The fruits and seeds of the tree were also called sun and moon,[23] to which the two trees of paradise corresponded.[24] The sun-and-moon fruits presumably go back to Deuteronomy 33 : 13f. (DV): “[Blessed] of the Lord be his land . . . [for] the fruits brought forth by the sun and by the moon . . .[25] and [for] the fruits of the everlasting hills.” Laurentius Ventura[26] says: “Sweet of smell is this apple, rich in colour this little apple,” and pseudo-Aristotle says in his “Tractatus ad Alexandrum Magnum”:[27] “Gather the fruits, for the fruit of this tree has led us into the darkness and through the darkness.” This ambiguous advice evidently alludes to a knowledge which was not on the best of terms with the prevailing world-view.

[404] Benedictus Figulus calls the fruit “the golden apple of the Hesperides, to be pluck’t from the blest philosophic tree,”[28] the tree representing the opus and the fruit its results, i.e., the gold of which it is said: “Our gold is not the common gold.”[29] A special light is thrown on the meaning of the fruit by a saying in “Gloria mundi”: “Take the fire, or

quicklime, of which the philosophers speak, which grows on trees, for in that [fire] God himself burns with divine love."[30] God himself dwells in the fiery glow of the sun and appears as the fruit of the philosophical tree and thus as the product of the opus, whose course is symbolized by the growth of the tree. This remarkable saying loses its strangeness if we remember that the goal of the opus was to deliver the *anima mundi*, the world-creating spirit of God, from the chains of Physis. Here this idea has activated the archetype of the tree-birth, which is known to us chiefly from the Egyptian and Mithraic spheres of culture. A conception prevalent in shamanism is that the ruler of the world lives in the top of the world-tree,[31] and the Christian representation of the Redeemer at the top of his genealogical tree might be taken as a parallel. In Figure 27, the woman's head rising "like the pistil of a flower" might be compared with the Mithras relief from Osterburken (Germany).[32]

[405] Sometimes the tree is small and young, something like the "grani tritici arbuscula" (little trees of wheat grains),[33] sometimes large and old, taking the form of an oak[34] or the world-tree, in so far as it bears the sun and moon as its fruits.

10. THE HABITAT OF THE TREE

[406] The philosophical tree usually grows alone and, according to Abu'l Qēsim, "on the sea" in the Western Land, which presumably means on an island. The secret moon-plant of the adepts is "like a tree planted in the sea."[1] In a parable in Mylius[2] the sun-and-moon tree stands on an island in the sea and grows out of the wonderful water that is extracted by the power of the magnet from the rays of the sun and moon. Khunrath says: "From this little salty fountain grows also the tree of the sun and moon, the red and white coral tree of our sea."[3] Salt and sea-water signify in Khunrath among other things the maternal Sophia from whose breasts the *filii Sapientiae*, the philosophers, drink. Abu'l Qēsim might well have been acquainted with Persian traditions (his surname al-Iraqi also brings him geographically nearer to Persia), and more particularly with the legend of the tree in the Bundahish that grows in the sea named

Vourukasha, or of the tree of life that grows in the fountain of Ardvī Sūra Anēhita.[4]

[407] The tree (or wonderful plant) also has its habitat on the mountains. Since the imagery of the Book of Enoch was often taken as a model, it should be mentioned that there the tree in the Western Land stood on a mountain.[5] In the "Practica Mariae Prophetissae"[6] the wonderful plant is described as "growing on hills." The Arabic treatise of Ostanes in the "Kitâb el Foçul"[7] says: "It is a tree that grows on the tops of mountains." The relation of tree to mountain is not accidental, but is due to the original and widespread identity between them: both are used by the shaman for the purpose of his heavenly journey.[8] Mountain and tree are symbols of the personality and of the self, as I have shown elsewhere; Christ, for instance, is symbolized by the mountain[9] as well as by the tree.[10] Often the tree stands in a garden, as an obvious reminder of Genesis. Thus the trees of the seven planets grow in the "private garden" of the blessed isles.[11] In Nicolas Flamel (1330?–?1418) the "most highly praised tree" grows in the garden of the philosophers.[12]

[408] As we have seen, the tree has a special connection with water, salt, and sea-water, and thus with the *aqua permanens*, the true arcanum of the adepts. This as we know is Mercurius, who is not to be confused with Hg, the *mercurius crudus sive vulgaris*.[13] Mercurius is the tree of the metals.[14] He is the prima materia,[15] or else its source.[16] The god Hermes (= Mercurius) "watered his tree with that water, and with his glass made the flowers grow high."[17] I cite this passage because it expresses the subtle alchemical idea that the artifex and the arcanum are one and the same. The water that makes the tree grow but also consumes it[18] is Mercurius, who is called "duplex" because he unites the opposites in himself, being both a metal and a liquid. Hence he is called both water and fire. As the sap of the tree he is therefore also fiery (cf. Fig. 15), that is to say the tree is of a watery and a fiery nature. In Gnosticism we encounter the "great tree" of Simon Magus, which consists of "supracelestial fire." "From it all flesh is fed."[19] It is a tree like the one that appeared to Nebuchadnezzar in a dream. Its branches and leaves are consumed, but "the fruit, when it is ready formed and has received its

shape, is brought into a barn and not cast into the fire."[20] This image of the "supracelestial fire" accords on the one hand with the much earlier "ever-living fire" of Heraclitus, and on the other with the much later interpretation of Mercurius as fire and as the *spiritus vegetativus* that pervades the whole of nature, both animating and destructive. The fruit that is "not cast into the fire" is naturally the man who has stood the test, the "pneumatic" man of the Gnostics. One of the synonyms for the lapis, which likewise signifies the inner, integrated man, is "frumentum nostrum" (our grain).[21]

[409] The tree is often represented as metallic,[22] usually golden.[23] Its connection with the seven metals implies a connection with the seven planets, so that the tree becomes the world-tree, whose shining fruits are the stars. Michael Maier attributes the woody parts to Mercurius, the (fourfold) flowers to Saturn, Jupiter, Venus, and Mars, and the fruits to Sol and Luna.[24] The tree with seven branches (= seven planets) is mentioned in *Aurora consurgens* II[25] and identified with the Lunatica or Berissa,[26] "whose root is the metallic earth, its trunk red tinged with a certain blackness; its leaves are like the leaves of Marjoram, and are thirty in number according to the age of the moon in its waxing and waning; its flower is yellow." It is clear from this description that the tree symbolizes the whole opus. Accordingly Dorn says:[27] "Let therefore the tree [of the planets or metals] be planted and its root be ascribed to Saturn, and let that inconstant Mercurius and Venus, arising in the trunk and branches, offer to Mars[28] the leaves and fruit-bearing flowers." The relation to the world-tree is also apparent when Dorn says that "nature has planted the root of the [metallic] tree in the midst of her womb."[29]

11. THE INVERTED TREE

[410] The tree is frequently called the "inverted tree" (*arbor inversa*).[1] Laurentius Ventura (16th cent.) says: "The roots of its ores are in the air and the summits in the earth. And when they are torn from their places, a terrible sound is heard and there follows a great fear."[2] Ventura is obviously thinking of the mandrake, which, when tied to the tail of a black dog, shrieks when it is torn out of the earth. The "Gloria mundi"

likewise mentions that the philosophers had said that “the root of its minerals is in the air and its head in the earth.”[3] Sir George Ripley says that the tree has its roots in the air and, elsewhere, that it is rooted in the “glorified earth,” in the earth of paradise or in the future world.

[411] Similarly, Vigenère states that a “Rabbi, the son of Josephus Carnitolus,” had said: “The foundation of every lower structure is affixed above and its summit is here below, like an inverted tree.”[4] Vigenère had some knowledge of the Cabala and is here comparing the philosophical tree with the tree of the Sefiroth, which is actually a mystical world-tree. But for him this tree also signifies man. He substantiates the singular idea that man is implanted in paradise by the roots of his hair with a reference to Song of Songs 7 : 5 (DV): “Thy head is like Carmel, and the hairs of thy head as the purple of the king bound in the channels” (… *comae capitis tui sicut purpura Regis vincta*[5] *canalibus*). The “canales” are little tubes, perhaps some kind of head ornament.[6] Knorr von Rosenroth is of the opinion that the “great tree” refers to Tifereth, the bridegroom of Malchuth.[7] The upper Sefira Binah is named the “root of the tree,”[8] and in Binah is rooted the tree of life. Because this stood in the middle of the garden, it was called the *linea media* (middle line). Through this middle line, which was as it were the trunk of the Sefiroth system, it brought life down to earth from Binah.[9]

[412] The idea that man is an inverted tree seems to have been current in the Middle Ages. The humanist Andrea Alciati (d. 1550) says in his *Emblemata cum commentariis:* “It pleased the Physicists to see man as a tree standing upside down, for what in the one is the root, trunk, and leaves, in the other is the head and the rest of the body with the arms and feet.”[10] The link with Indian conceptions is provided by Plato.[11] Krishna says in the Bhagavadgītē (ch. 15): “I am the Himalaya among mountains and the *ashvattha* among trees.” The *ashvattha (Ficus religiosa*) pours down from above the drink of immortality, soma.[12] The Bhagavadgītē continues:

There is a fig tree
In ancient story,
The giant Ashvattha,

The everlasting,
Rooted in heaven,
Its branches earthward;
Each of its leaves
Is a song of the Vedas,
And he who knows it
Knows all the Vedas.

Downward and upward
Its branches bending
Are fed by the gunas,
The buds it puts forth
Are the things of the senses,
Roots it has also
Reaching downward
Into this world,
The roots of man’s action.[13]

[413] The alchemical illustrations showing the opus as a tree and its phases as the leaves[14] are very reminiscent of the Indian conception of deliverance through the Veda, i.e., through knowledge. In Hindu literature the tree grows from above downwards, whereas in alchemy (at least according to the pictures) it grows from below upwards. In the illustrations to the *Pretiosa margarita novella* of 1546,[15] it looks very like an asparagus plant. Figure 27 in my picture series contains the same motif, and indeed the upthrusting stalks of asparagus are a graphic representation of the way previously unconscious contents push into consciousness. In East and West alike, the tree symbolizes a living process as well as a process of enlightenment, which, though it may be grasped by the intellect, should not be confused with it.

[414] The tree as guardian of the treasure appears in the alchemical fairytale of “The Spirit in the Bottle.” As it contains the treasure which appears in its fruit, the tree is a symbol of the *chrysopoea* (goldmaking) or *ars aurifera* in general, in accordance with the principle laid down by “Hercules”:[16] “This magistery arises in the beginning from one root, which afterwards expands into several substances and then returns to the

one.”[17] Ripley likens the artifex to Noah cultivating the vine,[18] in Djēbir the tree is the “mystic myrtle,”[19] and in Hermes the “vine of the wise.”[20] Hoghelande says: “But the fruits go forth from the most perfect tree in early spring and flower at the beginning of the end.”[21] It is clear from this that the life of the tree represents the opus, which as we know coincides with the seasons.[22] The fact that the fruits appear in the spring and the flowers in the autumn may be connected with the motif of reversal (*arbor inversa!*) and the *opus contra naturam.* The “Allegoriae sapientum supra librum Turbae” give the following recipe: “Again, plant this tree on the stone, that it fear not the buffetings of the winds; that the birds of heaven may come and multiply on its branches, for thence cometh wisdom.”[23] Here too the tree is the true foundation and arcanum of the opus. This arcanum is the much-praised *thesaurus thesaurorum.* Just as the tree of the metals has seven branches, so also has the tree of contemplation, as a treatise entitled “De arbore contemplationis” shows.[24] There the tree is a palm with seven branches and on each branch sits a bird: “pavo, [illegible word], cignus, [h]arpia, filomena, hyrundo, fenix,” and on each a flower: “viola, gladiola, lilium, rosa, crocus, solsequium, flos [… ?],” all of which have a moral significance. These ideas are very much like those of the alchemists. They contemplated their tree in the retort, where, according to the *Chymical Wedding*, it was held in the hand of an angel.[25]

12. BIRD AND SNAKE

[415] Birds, as I have said, have a special relation to the tree. The “Scriptum Alberti” says that Alexander, on his great journey, found a tree which had its “glorious greenness” (*viriditas gloriosa*) within. On this tree sat a stork, and there Alexander built a golden palace to “set a fitting end to his travels.”[1] The tree with the bird stands for the opus and its consummation. The motif also appears in picture form.[2] The fact that the leaves of the tree (the *viriditas gloriosa*) grew inwards is another instance of the *opus contra naturam* and at the same time a concrete expression of introversion in the contemplative state.

[416] The snake, too, with obvious reference to the Bible story, is connected with the tree, first of all in a general way since it is properly speaking the mercurial serpent which, as the chthonic *spiritus vegetativus,* rises from the roots into the branches, and then more specifically because it represents the tree-numen and appears as Melusina.[3] The mercurial serpent is the arcane substance that transforms itself inside the tree and thus constitutes its life. This is substantiated by the "Scriptum Alberti." The text is probably a commentary on a picture which unfortunately is not given in the edition of 1602. It begins with the statement: "This is a picture of heaven, which is named the heavenly sphere, and contains eight most noble figures, viz., the first figure, which is named the first circle and is the circle of the Deity," etc.[4] It is clear from this that it was a picture of concentric circles. The first, outermost, circle contains the "verba divinitatis," the divine world order; the second the seven planets; the third the "corruptible" and "creative" elements (*generabilia);* the fourth a raging dragon issuing from the seven planets; the fifth "the head and the death" of the dragon. The head of the dragon "lives in eternity," is named the "vita gloriosa," and "the angels serve it." The *caput draconis* is here obviously identified with Christ, for the words "the angels serve it" refer to Matthew 4 : 11, where Christ has just repudiated Satan. But if the dragon's head is identified with Christ, then the dragon's tail must be identical with Antichrist or the devil. According to our text the whole of the dragon's body is absorbed by the head, so that the devil is integrated with Christ. For the dragon fought against the imago Dei, but by the power of God it was implanted in the dragon and formed its head: "The whole body obeys the head, and the head hates the body, and slays it beginning from the tail, gnawing it with its teeth, until the whole body enters into the head and remains there for ever."[5] The sixth circle contains six figures and two birds, namely storks. The figures are presumably human, for the text says one of them looked like an Ethiopian.[6] It appears that the stork is a *vas circulatorium* (a vessel for circular distillation), like the Pelican.[7] Each of the six figures represents three phases of transformation and together with the two birds they form an ogdoad as a symbol of the transformation process. The seventh circle, says the text, shows the relation of the "verba divinitatis" and the seven

planets to the eighth circle, which contains the golden tree. The author states he would rather keep quiet about the content of the seventh circle, because this is where the great secret begins, which can be revealed only by God himself. Here is found the stone which the king wears in his crown. “Wise women hide it, foolish virgins show it in public, because they wish to be plundered.” “Popes, certain priests, and monks revile it, because it was so commanded of them by God’s law.”

[417] The golden tree in the eighth circle shines “like lightning.” Lightning in alchemy, as in Jakob Böhme, signifies sudden rapture and illumination.[8] On the tree sits a stork. Whereas the two storks in the sixth circle represent the distilling apparatus for two transformations of three phases each, the stork sitting on the golden tree has a far wider significance. Since ancient times it was held to be the “pia avis” (devout bird), and appears as such in Haggadic tradition,[9] despite being listed among the unclean beasts in Leviticus 11 : 19. Its piety may go back to Jeremiah 8 : 7: “Yea, the stork in the heaven knoweth her appointed times . . . but my people know not the judgment of the Lord.” In imperial Rome the stork was an allegory of piety, and in Christian tradition it is an allegory of Christ the judge, because it destroys snakes. Just as the snake or dragon is the chthonic numen of the tree, so the stork is its spiritual principle and thus a symbol of the Anthropos.[10] Among the forerunners of the alchemical stork must be counted the stork Adebar in Teutonic mythology, which brings back to earth the souls of the dead that were renewed in the fountain of Hulda.[11] The attribution of the “Scriptum” to Albertus Magnus is highly questionable. To judge by its style, its discussion of the philosophical tree can hardly be dated earlier than the sixteenth century.

13. THE FEMININE TREE-NUMEN

[418] As the seat of transformation and renewal, the tree has a feminine and maternal significance. We have seen from Ripley’s *Scrowle* that the tree-numen is Melusina. In *Pandora* the trunk of the tree is a crowned, naked woman holding a torch in each hand, with an eagle sitting in the branches on her head,[1] On Hellenistic monuments Isis has the form of

Melusina and one of her attributes is the torch. Other attributes are the vine and the palm. Leto and Mary[2] both gave birth under a palm, and Maya at the birth of the Buddha was shaded by the holy tree. Adam, "so the Hebrews say," was created out of the "earth of the tree of life," the "red Damascene earth."[3] According to this legend, Adam stood in the same relation to the tree of life as Buddha to the Bodhi tree.

[419] The feminine-maternal nature of the tree appears also in its relation to Sapientia. The tree of knowledge in Genesis is in the Book of Enoch the tree of wisdom, whose fruit resembles the grape.[4] In the teachings of the Barbeliots, reports Irenaeus,[5] the Autogenes finally created "the man perfect and true, whom they also called Adamas." With him was created perfect knowledge: "From [the perfect] man and gnosis is born the tree, which they also call gnosis."[6] Here we find the same connection of man with the tree as in the case of Adam and the Buddha. A similar connection is found in the *Acta Archelai:* "But that tree which is in paradise, whereby the good is known, is Jesus and the knowledge of him which is in the world."[7] "For thence [i.e., from the tree] cometh wisdom," says the "Allegoriae sapientum."[8]

[420] Similar ideas of the tree are found in alchemy. We have already met the conception of man as an inverted tree, a view found also in the Cabala. The *Pirke de Rabbi Eliezer*[9] says: "R. Zehira said, 'Of the fruit of the tree'—here 'tree' only means man, who is compared to the tree, as it is said, 'For man is the tree of the field' (Deuteronomy 20 : 19)." In the gnosis of Justin the trees in the Garden of Eden are angels, while the tree of knowledge of good and evil is the third of the motherly angels, the Naas.[10] This division of the tree-soul into a masculine and a feminine figure corresponds to the alchemical Mercurius as the life principle of the tree, for as an hermaphrodite he is duplex.[11] The picture in *Pandora,* where the tree trunk is a woman's body, refers to Mercurius in his feminine role of wisdom, who in his masculine aspect is symbolized by the figure of Mercurius Senex or Hermes Trismegistus.

14. THE TREE AS THE LAPIS

[421] Just as the tree and man are central symbols in alchemy, so also is the lapis in its double significance as the prima and ultima materia. The above-mentioned quotation from the “Allegoriae sapientum”—“Plant this tree on the stone, that it fear not the buffetings of the winds”—seems to be an allusion to the parable of the house that was built on sand and fell when the floods came and the winds blew (Matthew 7 : 26-27). The stone might therefore mean simply the sure foundation afforded by the right prima materia. But the context points to the symbolic significance of the stone, as the preceding sentence makes clear: “Take wisdom with all thy power, for from it thou shalt drink eternal life, until thy [stone] is congealed and thy sluggishness depart, for thence cometh life.”[1]

[422] “The prima materia is an oily water and is the philosophic stone, from which branches multiply into infinity,” says Mylius.[2] Here the stone is itself the tree and is understood as the “fiery substance” (the *ὑγρὰ οὐσία* of the Gnostics) or as the “oily water.” As water and oil do not mix, this represents the double or contrary nature of Mercurius.

[423] Similarly the “Consilium coniugii,” commenting on Senior, says: “Thus the stone is perfected of and in itself. For it is the tree whose branches, leaves, flowers, and fruits come from it and through it and for it, and it is itself whole or the whole [*tota vel totum*] and nothing else.”[3] Hence the tree is identical with the stone and, like it, a symbol of wholeness. Khunrath says:

> Of itself, from, in, and through itself is made and perfected the stone of the wise. For it is one thing only: like a tree (says Senior), whose roots, stem, branches, twigs, leaves, flowers, and fruit are of it and through it and from it and on it, and all come from one seed. It is itself everything, and nothing else makes it.[4]

[424] In the Arabic “Book of Ostanes” there is a description of the arcane substance, or the water, in its various forms, first white, then black, then red, and finally a combustible liquid or a fire which is struck from certain stones in Persia. The text continues:

> It is a tree that grows on the tops of the mountains, a young man born in Egypt, a prince from Andalusia, who desires the torment of the seekers. He has slain their leaders. . . . The sages are powerless to oppose him. I

can see no weapon against him save resignation, no charger but knowledge, no buckler but understanding. If the seeker finds himself before him with these three weapons, and slays him, he [the prince] will come to life again after his death, will lose all power against him, and will give the seeker the highest power, so that he will arrive at his desired goal.[5]

[425] The chapter in which this passage occurs begins with the words: “The sage has said, what the student needs first of all is to know the stone, the object of the aspirations of the ancients.” The water, the tree, the young Egyptian, and the Andalusian prince all refer to the stone. Water, tree, and man appear here as its synonyms. The prince is an important symbol that needs a little elucidation, for it seems to echo an archetypal motif that is found in the Gilgamesh epic. There Enkidu, the chthonic man and shadow of Gilgamesh, is created by the gods at the behest of the insulted Ishtar, so that he may kill the hero. In the same way the prince “desires the torment of the seekers.” He is their enemy and “has slain their leaders,” that is, the masters and authorities of the art.

[426] This motif of the hostile stone is formulated in the “Allegoriae sapientum” as follows: “Unless thy stone shall be an enemy, thou wilt not attain to thy desire.”[6] This enemy appears in alchemy in the guise of the poisonous or fire-spitting dragon and also as the lion. The lion’s paws must be cut off,[7] and the dragon must be killed, or else it kills or devours itself on the principle of Democritus: “Nature rejoices in nature, nature rules over nature, and nature conquers nature.”[8]

[427] The slaying of the alchemical authorities cannot fail to remind us of the intriguing picture in *Pandora* of Melusina stabbing Christ’s side with a lance.[9] Melusina corresponds to the Edem of the Gnostics and represents the feminine aspect of Mercurius, i.e., the female Nous (Naas of the Naassenes), which in the form of the serpent seduced our first parents. A parallel to this would be the aforementioned quotation from the “Tractatus ad Alexandrum Magnum”: “Gather the fruits, for the fruit of the tree has led us into the darkness and through the darkness.”[10] As this admonition clearly contradicts the authority of the Bible and the

Church, one can only suppose that it was uttered by someone who was consciously opposed to the ecclesiastical tradition.

[428] The connection with the Gilgamesh epic is of interest because Ostanes was thought to be a Persian and a contemporary of Alexander the Great. As a further parallel to the initial hostility of Enkidu and the Andalusian prince and of the stone in general we might cite the Khidr legend.[11] Khidr, the messenger of Allah, at first frightens Moses by his misdeeds. Considered as a visionary experience or as a didactic tale, the legend sets forth the relation of Moses on the one hand to his shadow, his servant Joshua ben Nun, and on the other hand to the self, Khidr.[12] The lapis and its synonyms are likewise symbols of the self. Psychologically, this means that at the first meeting with the self all those negative qualities can appear which almost invariably characterize an unexpected encounter with the unconscious.[13] The danger is that of an inundation by the unconscious, which in a bad case may take the form of a psychosis if the conscious mind is unable to assimilate, either intellectually or morally, the invasion of unconscious contents.

15. THE DANGERS OF THE ART

[429] *Aurora consurgens* I says in regard to the dangers which threaten the artifex: “O how many understand not the sayings of the wise; these have perished because of their foolishness, for they lacked spiritual understanding.”[1] Hoghelande is of the opinion that “the whole art is rightly to be held both difficult and dangerous, and anyone who is not improvident will eschew it as most pernicious.”[2] Aegidius de Vadis feels the same when he says: “I shall keep silent about this science, which has led most of those who work in it into confusion, because there are few indeed who find what they seek, but an infinite number who have plunged to their ruin.”[3] Hoghelande, citing Haly, says: “Our stone is life to him who knows it and *how* it is made, and he who knows not and has not made it and to whom no assurance[4] is given when it will be born, or who thinks it another stone, has already prepared himself for death.”[5] Hoghelande makes it clear that it is not just the danger of poisoning[6] or of possible explosions but of mental aberrations: “Let him take care to

recognize and guard against the deceptions of the devil, who often insinuates himself into the chemical operations, that he may hold up the laborants with vain and useless things to the neglect of the works of nature."[7] He authenticates this danger by a quotation from Alphidius: "This stone proceeds from a sublime and most glorious place of great terror, which has given over many sages to death."[8] He also cites Moyses: "This work comes about as suddenly as the clouds come from heaven," adding a quotation from Micreris: "If you should suddenly see this transformation, wonder, fear, and trembling will befall you; therefore work with caution."[9]

[430] The danger of daemonic agencies is likewise mentioned in the "Liber Platonis quartorum": "At a certain hour during the preparation certain kinds of spirits will oppose the work, and at another time this opposition will not be present."[10] The clearest of all is Olympiodorus (sixth century): "And all the while the demon Ophiuchos instils negligence, impeding our intentions; everywhere he creeps about, within and without, causing oversights, fear, and unpreparedness, and at other times he seeks by harassments and injuries to make us abandon the work."[11] He also mentions that lead is possessed of a demon which drives men mad.[12]

[431] The miracle of the stone which the alchemist expected or experienced must have been intensely numinous, and this would explain his holy dread of profaning the mystery. "No one can disclose the name of the stone without damning his soul, for he cannot justify himself before God," says Hoghelande.[13] This conviction should be taken seriously. His treatise is the work of an honest and reasonable man, and differs very much to its advantage from the pretentious obscurantism of other treatises, particularly those of Lully. Since the stone had "a thousand names," one only wonders which of them it was that Hoghelande did not wish to disclose. The stone was indeed a great embarrassment to the alchemists, for since it had never been made no one could say what it really was. The most probable hypothesis, it seems to me, is that it was a psychic experience, which would account for the repeatedly expressed fear of mental disturbance.

[432] Wei Po-yang, the oldest Chinese alchemist known to us (2nd cent, A.D.), gives an instructive account of the dangerous consequences of making mistakes during the opus. After a brief résumé of the latter he describes the *chên-yên*, the true or complete man, who is the beginning and end of the work: "He is and he is not. He resembles a vast pool of water, suddenly sinking and suddenly floating." He appears as a material substance, like Dorn's *Veritas*,[14] and in it are "mixed the squareness, the roundness, the diameter, and the dimensions, which restrain one another, having been in existence before the beginning of the heavens and the earth: lordly, lordly, high and revered."[15] This again conveys that impression of extreme numinosity which we found in Western alchemy.

[433] The author goes on to speak of a region "closed on all sides, its interior made up of intercommunicating labyrinths. The protection is so complete as to turn back all that is devilish and undesirable. . . . Cessation of thought is desirable and worries are preposterous. The divine *ch'i* (air, spirit, ethereal essence) fills the quarters and it cannot be held back. Whoever retains it will prosper and he who loses it, will perish." For the latter will employ the "false method": he will direct himself in all things by the course of the sun and the stars, in other words will lead a rationally ordered life in accordance with the rules of Chinese conduct. But this is not pleasing to the *tao* of the feminine principle (*yin*), or, as we should say, the ordering principles of consciousness are not in harmony with the unconscious (which in a man has a feminine character). If the adept at this point orders his life according to rules traditionally regarded as rational he brings himself into danger. "Disaster will come to the black mass." The black mass is the *massa confusa*, the chaos or *nigredo* of Western alchemy, the prima materia, which is black outside and white inside, like lead. It is the *chên-yên* hidden in the darkness, the whole man, who is threatened by the rational and correct conduct of life, so that individuation is hindered or deflected into the wrong path. The *ch'i*, the quintessence (the rose-coloured blood of Western alchemy) cannot be "held back": the self struggles to make itself manifest and threatens to overpower consciousness.[16] This danger was particularly great for the Western alchemist, because the ideal of the *imitatio Christi* led him to regard the sweating out of the soul-substance

in the form of the rose-coloured blood as a task that had actually been enjoined upon him. He felt morally obliged to realize the demands of the self regardless of whether these demands taxed him too highly. It seemed to him that God and his highest moral principles required this self-sacrifice. It is indeed a self-sacrifice, a true *θυσία* of the self, when a man gives way to the urgency of these demands and perishes, for then the self has lost the game as well, having destroyed the human being who should have been its vessel. This danger, as the Chinese Master rightly observes, occurs when the traditional, moral, and rational principles of conduct are put into force at a moment when something other than social life is in question, namely, the integration of the unconscious and the process of individuation.

[434] Wei Po-yang gives a graphic description of the physiological and psychic consequences of error: “Gases from food consumed will make noises inside the intestines and stomach. The right essence (*ch’i*) will be exhaled and the evil one inhaled. Days and nights will be passed without sleep, moon after moon. The body will then be tired out, giving rise to an appearance of insanity. The hundred pulses will stir and boil so violently as to drive away peace of mind and body.” Nor will it be of any avail (following conscious morality) to build a temple, to watch diligently and bring gifts to the altar morning and night. “Ghostly things will make their appearance, at which he will marvel even in his sleep. He is then led to rejoice, thinking that he is assured of longevity.[17] But all of a sudden he is seized by an untimely death.” The author adds the moral: “A slight error has thus led to a grave disaster.” The insights of Western alchemy did not penetrate to these depths. Nevertheless, the alchemists were aware of the subtle dangers of the work, and they knew that high demands were made not only on the intelligence of the adept but also on his moral qualities. Thus the invitation to the royal marriage in Christian Rosencreutz[18] runs:

> Keep watch, and ward,
> Thyself regard;
> Unless with diligence thou bathe,
> The Wedding can’t thee harmless save;
> He’ll damage have that here delays;
> Let him beware, too light that weighs.

[435] It is clear from what happens in the *Chymical Wedding* that it was not concerned solely with the transformation and union of the royal pair, but also with the individuation of the adept. The union with the shadow and the anima is a difficulty not to be taken lightly. The problem of opposites that then makes its appearance and the unanswerable questions that this entails lead to the constellation of compensating archetypal contents in the form of numinous experiences. What complex psychology discovered only late was known long ago to the alchemists—*symbolice*—despite their limited intellectual equipment. Laurentius Ventura expresses this insight in a few succinct words: "The perfection of the work does not lie in the power of the artifex, but God the most merciful himself bestows it upon whom he will. And in this point lies all the danger."[19] We might add that the words "the most merciful" should probably be taken as an apotropaic euphemism.

16. UNDERSTANDING AS A MEANS OF DEFENCE

[436] After this discussion of the dangers that threaten the adept, let us turn back to the Ostanes quotation in section 14. The adepts knew that they could offer no resistance to the lapis in the form of the Andalusian prince. It seemed to be stronger than they, and the text says that they had only three weapons—"resignation," the charger of "knowledge," and the buckler of "understanding." It is evident from this that on the one hand they thought themselves well advised to adopt a policy of nonresistance, while on the other they sought refuge in intelligence and understanding. The superior power of the lapis is attested by the saying: "The philosopher is not the master of the stone, but rather its minister."[1] Obviously they had to submit to its power, but with a reserve of understanding which would finally enable them to slay the prince. We shall probably not go wrong if we assume that the adepts tried as best they could to understand that apparently invincible thing and thereby break its power. It is not only a well-known fairytale motif (Rumpelstiltskin!) but also a very ancient primitive belief that he who can guess the secret name has power over its possessor. In psychotherapy it is a well-known fact that neurotic symptoms which seem impossible to attack can often be rendered harmless by conscious understanding and

experience of the contents underlying them. This is obvious enough, because the energy which maintained the symptom is then put at the disposal of consciousness, causing an increase of vitality on the one hand and a reduction of useless inhibitions and suchlike disturbances on the other.

[437] In order to understand the Ostanes text, one must bear such experiences in mind. They occur whenever previously unconscious, numinous contents emerge into consciousness either spontaneously or through the application of a method. As in all magic texts, it is supposed that the power of the conquered daemon will pass into the adept. Our modern consciousness can hardly resist the temptation to think in the same way. We readily assume that psychic contents can be completely disposed of by insight. This is true only of contents that do not mean very much anyway. Numinous complexes of ideas may be induced to change their form, but since their content can take any number of forms it does not vanish in the sense of being rendered wholly ineffective. It possesses a certain autonomy, and when it is repressed or systematically ignored it reappears in another place in a negative and destructive guise. The devil whom the magician fancies he has bound to his service fetches him in the end. It is a waste of effort to try to use the daemon as a familiar for one's own purposes; on the contrary, the autonomy of this ambivalent figure should be religiously borne in mind, for it is the source of that fearful power which drives us towards individuation. Consequently the alchemists did not hesitate to endow their stone with positively divine attributes and to put it, as a microcosm and a man, on a par with Christ—"and in this point lies all the danger." We neither can nor should try to force this numinous being, at the risk of our own psychic destruction, into our narrow human mould, for it is greater than man's consciousness and greater than his will.

[438] Just as the alchemists occasionally betrayed a tendency to use the symbols produced by the unconscious as spellbinding names, so does modern man make analogous use of intellectual concepts for the opposite purpose of denying the unconscious, as though with reason and intellect its autonomy could be conjured out of existence. Curiously enough, I have critics who think that I of all people want to replace the living

psyche by intellectual concepts. I do not understand how they have managed to overlook the fact that my concepts are based on empirical findings and are nothing but names for certain areas of experience. Such a misunderstanding would be comprehensible if I had omitted to present the facts on which I base my statements. My critics assiduously overlook the obvious truth that I speak of the facts of the living psyche and have no use for philosophical acrobatics.

17. THE MOTIF OF TORTURE

[439] The Ostanes text gives us valuable insight into the phenomenology of the individuation process as the alchemists experienced it. The reference to the "torment" which the prince desires for the artifex is particularly interesting. This motif appears in the Western texts but in inverse form, the tormented one being not the artifex but Mercurius, or the lapis or tree. The reversal of roles shows that the artifex imagines he is the tormentor whereas in fact he is the tormented. This becomes clear to him only later, when he discovers the dangers of the work to his own cost. A typical example of the projected torture is the vision of Zosimos.[1] The *Turba* says: "Take the old black spirit and destroy and torture[2] with it the bodies, until they are changed."[3] Elsewhere a philosopher tells the assembled sages: "The tortured thing, when it is immersed in the body, changes it into an unalterable and indestructible nature."[4] Mundus in Sermo XVIII says: "How many there be who search out these applications[5] and [even] find some, but yet cannot endure the torments."[6]

[440] These quotations show that the concept of torture is an ambiguous one. In the first case it is the bodies, the raw materials of the work, that are tormented; in the second case the tormented thing is without doubt the arcane substance, which is often called *res;* and in the third case it is the investigators themselves who cannot endure the torments. This ambiguity is no accident and has its deeper reasons.

[441] In the old texts that are contemporaneous with the Latin translation of the *Turba* there are gruesome recipes in the manner of the Magic Papyri, as for instance the disembowelling[7] or plucking of a live cock,[8] the drying of a man over a heated stone,[9] the cutting off of hands and feet,[10]

etc. Here the torture is applied to the body. But we find another version in the equally old “Tractatus Micreris.”[11] There it is said that just as the Creator separates souls from bodies and judges and rewards them, “so we also must use flattery [*adulatio uti*][12] on these souls and condemn them to the heaviest punishments [*poenis*, with marginal note: *laboribus]."* At this point an interlocutor raises the doubt as to whether the soul can be treated in this way, since it is “tenuous” and no longer inhabits the body. The Master replies: “It must be tormented with the most subtle spiritual thing, namely with the fiery nature which is akin to it. For if its body were tormented, the soul would not be tormented, and the torment would not reach it; for it is of spiritual nature, to be touched only by something spiritual.”[13]

[442] Here it is not the raw material that is tortured but the soul which has been extracted from it and must now suffer a spiritual martyrdom. The “soul” corresponds as a rule to the arcane substance, either the prima materia or the means by which it is transformed. Petrus Bonus, who, as we have seen, was one of the first medieval alchemists to wonder about the scope of his art, says that just as Geber met with difficulties “we also were plunged into stupor [*in stuporem adducti*] for a long time and were hidden under the cloak of despair. But when we came back to ourselves and tormented our thoughts with the torment of unlimited reflection, we beheld the substances.” He then cites Avicenna, who had said that it was necessary for us “to discover this operation [the *solutio]* through ourselves [*per nos ipsos*].” “These things were known to us before the experiment, as a consequence of long, intense, and scrupulous meditation.”[14]

[443] Petrus Bonus puts the suffering back into the investigator by stressing his mental torments. In this he is right, because the most important discoveries of the alchemists sprang from their meditations on their own psychic processes, which, projected in archetypal form into the chemical substances, dazzled their minds with unlimited possibilities. The same prior knowledge of the results is generally admitted, as when Dorn says: “It is not possible for any mortal to understand this art unless he is previously enlightened by the divine light.”[15]

[444] The tormenting of the substances also occurs in Sir George Ripley: "The unnatural fire must torment the bodies, for it is the dragon violently burning, like the fire of hell."[16] With Ripley the projection of the torments of hell is explicit and complete, as with so many others. Only with the authors of the sixteenth and seventeenth centuries does the insight of Petrus Bonus break through again. Dorn's view is emphatic: "Wherefore the Sophists . . . have persecuted this Mercurius with various torments, some with sublimations, coagulations, precipitations, mercurial *aquae fortes*, etc., all of which are mistaken courses to be avoided."[17] Among the Sophists he reckons also Geber and Albertus, "surnamed the Great," as he mockingly adds. In his "Physica Trismegisti" he even declares that the time-honoured blackness (*melanosis, nigredo*) is a projection: "For Hermes saith, 'From thee shall all obscurity flee away,'[18] he saith not 'from the metals.' By obscurity naught else is to be understood save the darkness of disease, and sickness of body and mind."[19]

[445] Many passages in *Aurora consurgens* I are significant in this respect. In the "Book of Ostanes" the philosophers shed tears over the stone, which is enclosed in another stone, so that, bedewed by their tears, it loses its blackness and becomes white as a pearl.[20] A Gratianus quotation in the *Rosarium* says: "In alchemy there is a certain noble substance . . . in the beginning whereof is wretchedness with vinegar, but in the end joy with gladness."[21] The "Consilium coniugii" equates the *nigredo* with melancholia.[22] Vigenère says of the Saturnine lead: "Lead signifies the vexations and aggravations with which God afflicts us and troubles our senses."[23] This adept was aware that lead, which had always been considered an arcane substance, was identical with the subjective state of depression. Similarly, the personified prima materia in the "Aurelia occulta" says of her brother Saturn that his spirit was "overcome by the passion of melancholy."[24]

[446] In this context of thought, where suffering and sadness play so great a role, it is not surprising that the tree was brought into connection with the cross of Christ. This analogy was supported by the old legend that the wood of the cross came from the tree of paradise.[25] Another thing that

contributed to it was the quaternity, whose symbol is the cross;[26] for the tree possesses a quaternary quality by reason of the fact that it represents the process by which the four elements are united. The quaternity of the tree goes back beyond the Christian era. It is found in Zarathustra's vision of the tree with four branches made of gold, silver, steel, and "mixed iron."[27] This image reappears later in the alchemical tree of the metals, which was then compared with the cross of Christ. In Ripley the royal pair, the supreme opposites, are crucified for the purpose of union and rebirth.[28] "If I be lifted up, [as Christ says,] then I will draw all men unto me. . . . From that time forward, when both parts, having been crucified and exanimated, are espoused, man and woman shall be buried together and are afterward quickened again by the spirit of life."[29]

[447] The tree also appears as a symbol of transformation in a passage in Dorn's "Speculativa philosophia," which is very interesting from the point of view of the psychology of religion: "[God] hath determined to snatch the sword of his wrath from the hands of the angel, substituting in place thereof a three-pronged hook of gold, hanging the sword on a tree: and so God's wrath is turned into love."[30] Christ as Logos is the two-edged sword, which symbolizes God's wrath, as in Revelation 1 : 16.

[448] The[31] somewhat unusual allegory of Christ as the sword hanging on a tree is almost certainly an analogy of the serpent hanging on the cross. In St. Ambrose[32] the "serpent hung on the wood" is a "typus Christi," as is the "brazen serpent on the cross" in Albertus Magnus.[33] Christ as Logos is synonymous with the Naas, the serpent of the Nous among the Ophites. The Agathodaimon (good spirit) had the form of a snake, and in Philo the snake was considered the "most spiritual" animal. On the other hand, its cold blood and inferior brain-organization do not suggest any noticeable degree of conscious development, while its unrelatedness to man makes it an alien creature that arouses his fear and yet fascinates him. Hence it is an excellent symbol for the two aspects of the unconscious: its cold and ruthless instinctuality, and its Sophia quality or natural wisdom, which is embodied in the archetypes. The Logos-nature of Christ represented by the chthonic serpent is the maternal wisdom of the divine mother, which is prefigured by Sapientia in the Old Testament. The snake-symbol thus characterizes Christ as a personification of the

unconscious in all its aspects, and as such he is hung on the tree in sacrifice (“wounded by the spear” like Odin).

[449] Psychologically, this snake sacrifice must be understood as an overcoming of unconsciousness and, at the same time, of the attitude of the son who unconsciously hangs on his mother. The alchemists used the same symbol to represent the transformation of Mercurius,[34] who is quite definitely a personification of the unconscious, as I have shown.[35] I have come across this motif several times in dreams, once as a crucified snake (with conscious reference to John 3 : 14), then as a black spider hung on a pole which changed into a cross, and finally as the crucified body of a naked woman.

18. THE RELATION OF SUFFERING TO THE CONIUNCTIO

[450] In the above quotation from Dorn, the three-pronged hook of gold refers to Christ, for in medieval allegory the hook with which God the Father catches the Leviathan is the crucifix. The golden trident is, of course, an allusion to the Trinity, and the fact that it is “golden” is an alchemical *sous-entendu*, just as the idea of God’s transformation in this strange allegory of Dorn’s is intimately bound up with the alchemical *mysterium*. The notion of God throwing out a hook is of Manichaean origin: he used the Primordial Man as a bait for catching the powers of darkness. The Primordial Man was named “Psyche,” and in Titus of Bostra he is the world soul (*ψνχὴ άπάντων*).[1] This psyche corresponds to the collective unconscious, which, itself of unitary nature, is represented by the unitary Primordial Man.

[451] These ideas are closely related to the Gnostic conception of Sophia-Achamoth in Irenaeus. He reports that

> the ’Ε*νθύμησις* [reflection] of the Sophia who dwells above, compelled by necessity, departed with suffering from the Pleroma into the darkness and empty spaces of the void. Separated from the light of the Pleroma, she was without form or figure, like an untimely birth, because she comprehended nothing [i.e., became unconscious]. But the Christ dwelling on high, outstretched upon the cross, took pity on her, and by his power gave her a form, but only in respect of substance, and not so as

to convey intelligence [i.e., consciousness]. Having done this, he withdrew his power, and returned [to the Pleroma], leaving Achamoth to herself, in order that she, becoming sensible of the suffering caused by separation from the Pleroma, might be influenced by the desire for better things, while possessing in the meantime a kind of odour of immortality left in her by Christ and the Holy Spirit.[2]

[452] According to these Gnostics, it was not the Primordial Man who was cast out as a bait into the darkness, but the feminine figure of Wisdom, Sophia-Achamoth. In this way the masculine element escaped the danger of being swallowed by the dark powers and remained safe in the pneumatic realm of light, while Sophia, partly by an act of reflection and partly driven by necessity, entered into relation with the outer darkness. The sufferings that befell her took the form of various emotions—sadness, fear, bewilderment, confusion, longing; now she laughed and now she wept. From these affects (*διαθέσεις*) arose the entire created world.

[453] This strange creation myth is obviously “psychological”: it describes, in the form of a cosmic projection, the separation of the feminine anima from a masculine and spiritually oriented consciousness that strives for the final and absolute victory of the spirit over the world of the senses, as was the case in the pagan philosophies of that epoch no less than in Gnosticism. This development and differentiation of consciousness left a literary deposit in the *Metamorphoses* of Apuleius, and more particularly in his tale of *Amor and Psyche*, as Erich Neumann has shown in his study of that work.

[454] The emotional state of Sophia sunk in unconsciousness (*αγνοία*), her formlessness, and the possibility of her getting lost in the darkness characterize very clearly the anima of a man who identifies himself absolutely with his reason and his spirituality. He is in danger of becoming dissociated from his anima and thus losing touch altogether with the compensating powers of the unconscious. In a case like this the unconscious usually responds with violent emotions, irritability, lack of control, arrogance, feelings of inferiority, moods, depressions, outbursts of rage, etc., coupled with lack of self-criticism and the misjudgments, mistakes, and delusions which this entails.

[455] In such a state a man soon loses touch with reality. His spirituality becomes ruthless, arrogant, and tyrannical. The more unadapted his ideology is, the more it demands recognition and is determined to gain it if necessary by force. This state is a definite *πάθος*, a suffering of the soul, though at first it is not perceived as such because of lack of introspection, and only gradually comes to consciousness as a vague malaise. Eventually this feeling forces the mind to recognize that something is wrong, that one is indeed suffering. This is the moment when physical or psychological symptoms appear which can no longer be banished from consciousness. Expressed in the language of myth, Christ (the principle of masculine spirituality) perceives the sufferings of Sophia (i.e., the psyche) and thereby gives her form and existence. But he leaves her to herself so that she should feel the full force of her sufferings. What this means psychologically is that the masculine mind is content merely to perceive psychic suffering, but does not make itself conscious of the reasons behind it, and simply leaves the anima in a state of *agnoia*. This process is typical and can be observed today not only in all masculine neuroses but among so-called normal people who have come into conflict with the unconscious thanks to their one-sidedness (usually intellectual) and psychological blindness.

[456] Although, in this psychologem, the Primordial Man (Christ) is still the means for conquering the darkness, he nevertheless shares his role with a feminine being, Sophia, who coexisted with him in the Pleroma. Moreover, the Crucified no longer appears as the bait on God’s fishing rod; instead, he “takes pity” on the formless feminine half, revealing himself to her outstretched upon the cross. The Greek text uses here a strong expression: *ἐπεκταθέντα*, which lays particular emphasis on stretching and extension. This image of torment is held before her so that she may recognize his sufferings, and he hers. But before this recognition can take place, Christ’s masculine spirituality withdraws into the world of light. This dénouement is typical: as soon as the light catches a glimpse of the darkness and there is a possibility of uniting with it, the power drive that is inherent in the light as well as in the darkness asserts itself and will not budge from its position. The one will not darken its radiance, and the other will not give up its gratifying emotions. Neither of them

notices that their suffering is one and the same and is due to the process of becoming conscious, whereby an original unity is split into two irreconcilable halves. There can be no consciousness without this act of discrimination, nor can the resultant duality be reunified without the extinction of consciousness. But the original wholeness remains a desideratum (*ὀρεχθῇ τῶν διαφερόνων*) for which Sophia longs more than does the Gnostic Christ. It is still the case today that discrimination and differentiation mean more to the rationalistic intellect than wholeness through the union of opposites. That is why it is the unconscious which produces the symbols of wholeness.[3]

[457] These symbols are usually quaternary and consist of two pairs of opposites crossing one another (e.g., left/right, above). The four points demarcate a circle, which, apart from the point itself, is the simplest symbol of wholeness and therefore the simplest God-image.[4] This reflection has some bearing on the emphasis laid on the cross in our text, since the cross as well as the tree is the medium of conjunction. Hence St. Augustine likened the cross to a bridal bed, and in the fairytale the hero finds his bride in the top of a great tree,[5] where also the shaman finds his heavenly spouse, as does the alchemist. The coniunctio is a culminating point of life and at the same time a death, for which reason our text mentions the “fragrance of immortality.” On the one hand the anima is the connecting link with the world beyond and the eternal images, while on the other hand her emotionality involves man in the chthonic world and its transitoriness.

19. THE TREE AS MAN

[458] Like the vision of Zarathustra, the dream of Nebuchadnezzar, and the report of Bardesanes (A.D. 154–222) on the god of the Indians,[1] the old Rabbinic idea that the tree of paradise was a man[2] exemplifies man’s relationship to the philosophical tree. According to ancient tradition men came from trees or plants.[3] The tree is as it were an intermediate form of man, since on the one hand it springs from the Primordial Man and on the other hand it grows into a man.[4] Naturally the patristic conception of Christ as a tree or vine[5] exerted a very great influence. In *Pandora*, as we

have said, the tree is represented in the form of a woman, in agreement with the pictures reproduced in the first part of this essay, which, unlike the alchemical pictures, were done mostly by women. This raises the question of how the feminine tree-numen should be interpreted. The results of our investigation of the historical material have shown that the tree can be interpreted as the Anthropos or self. This interpretation is particularly obvious in the symbolism of the "Scriptum Alberti"[6] and is confirmed by the fantasy material expressed in our pictures. The interpretation of the feminine tree-numen as the self therefore holds good for women, but for the alchemists and humanists the feminine representation of the tree is an obvious projection of the anima figure.[7] The anima personifies the femininity of a man but not the self. Correspondingly, the patients who drew Figures 29 and 30 depict the tree-numen as the animus. In all these cases the contrasexual symbol has covered up the self. This is what regularly happens when the man's femininity, the anima, or the woman's masculinity, the animus, is not differentiated enough to be integrated with consciousness, so that the self is only potentially present as an intuition but is not yet actualized.

[459] In so far as the tree symbolizes the opus and the transformation process "tam ethice quam physice" (both morally and physically), it also signifies the life process in general. Its identity with Mercurius, the *spiritus vegetativus*, confirms this view. Since the opus is a life, death, and rebirth mystery, the tree as well acquires this significance and in addition the quality of wisdom, as we have seen from the view of the Barbeliots reported in Irenaeus: "From man [= Anthropos] and gnosis is born the tree, which they also call gnosis."[8] In the Gnosis of Justin, the angel Baruch, named the "wood of life,"[9] is the angel of revelation, just as the sun-and-moon tree in the Romance of Alexander foretells the future.[10] However, the cosmic associations of the tree as world-tree and world-axis take second place among the alchemists as well as in modern fantasies, because both are more concerned with the individuation process, which is no longer projected into the cosmos. An exception to this rule may be found in the rare case, reported by Nelken,[11] of a schizophrenic patient in whose cosmic system the Father-God had a tree of life growing out of his breast. It bore red and white fruits, or spheres,

which were worlds. Red and white are alchemical colours, red signifying the sun and white the moon. On the top of the tree sat a dove and an eagle, recalling the stork on the sun-and-moon tree in the “Scriptum Alberti.” Any knowledge of the alchemical parallels was quite out of the question in this case.

[460] On the evidence of the material we have collected, we can see that the spontaneous products of the unconscious in modern man depict the archetype of the tree in a way that brings out quite plainly the historical parallels. So far as I can judge, the only historical models of which my patients might have made conscious use are the Biblical tree of paradise and one or two fairytales. But I cannot recall a single case in which it was spontaneously admitted that the patient was consciously thinking of the Bible story. In every case the image of the tree presented itself spontaneously, and whenever a feminine being attached itself to the tree, none of the patients associated it with the snake on the tree of knowledge. The pictures show more of an affinity with the ancient idea of the tree nymph than with the Biblical prototype. In Jewish tradition the snake is also interpreted as Lilith. There is a strong prejudice in favour of the assumption that certain forms of expression exist only because a pattern for them may be found in the respective sphere of culture. If that were so in the present instance, all expressions of this type would have to be modelled on the tree of paradise. But that, as we have seen, is not the case: the long obsolete concept of the tree nymph predominates over the tree of paradise or Christmas tree; in fact there are even allusions to the equally obsolete cosmic tree and even to the *arbor inversa*, which, although it found its way into alchemy via the Cabala, nowhere plays a role in our culture. Our material is, however, fully in accord with the widespread, primitive shamanistic conceptions of the tree and the heavenly bride,[12] who is a typical anima projection. She is the *ayami* (familiar, protective spirit) of the shaman ancestors. Her face is half black, half red. Sometimes she appears in the form of a winged tiger.[13] Spitteler also likens the “Lady Soul” to a tiger.[14] The tree represents the life of the shaman’s heavenly bride,[15] and has a maternal significance.[16] Among the Yakuts a tree with eight branches is the birthplace of the first

man. He is suckled by a woman the top part of whose body grows out of the trunk.[17] This motif is also found among my examples (Figure 22).

[461] As well as with a feminine being, the tree is also connected with the snake, the dragon, and other animals, as in the case of Yggdrasil,[18] the Persian tree Gaokerena in the lake of Vourukasha, or the tree of the Hesperides, not to mention the holy trees of India, in whose shadow may often be seen dozens of *naga* (= snake) stones.[19]

[462] The inverted tree plays a great role among the East Siberian shamans. Kagarow has published a photograph of one such tree, named Nakassä, from a specimen in the Leningrad Museum. The roots signify hairs, and on the trunk, near the roots, a face has been carved, showing that the tree represents a man.[20] Presumably this is the shaman himself, or his greater personality. The shaman climbs the magic tree in order to find his true self in the upper world. Eliade says in his excellent study of shamanism: “The Eskimo shaman feels the need for these ecstatic journeys because it is above all during trance that he becomes truly himself: the mystical experience is necessary to him as a constituent of his true personality.”[21] The ecstasy is often accompanied by a state in which the shaman is “possessed” by his familiars or guardian spirits. By means of this possession he acquires his “‘mystical organs,’ which in some sort constitute his true and complete spiritual personality.”[22] This confirms the psychological inference that may be drawn from shamanistic symbolism, namely that it is a projection of the individuation process. This inference, as we have seen, is true also of alchemy, and in modern fantasies of the tree it is evident that the authors of such pictures were trying to portray an inner process of development independent of their consciousness and will. The process usually consists in the union of two pairs of opposites, a lower (water, blackness, animal, snake, etc.) with an upper (bird, light, head, etc.), and a left (feminine) with a right (masculine). The union of opposites, which plays such a great and indeed decisive role in alchemy, is of equal significance in the psychic process initiated by the confrontation with the unconscious, so the occurrence of similar or even identical symbols is not surprising.

20. THE INTERPRETATION AND INTEGRATION OF THE UNCONSCIOUS

[463] It has not yet been understood in many quarters—nor, I am sorry to say, by my medical colleagues—how a series of fantasies such as I have described comes into existence in the first place, and secondly why I concern myself so much with comparative research into a symbolism that is unknown to them. I am afraid that all sorts of uncorrected prejudices still impede understanding, above all the arbitrary assumption that neuroses as well as dreams consist of nothing but repressed infantile memories and wishes, and that psychic contents are either purely personal or, if impersonal, are derived from the collective consciousness.

[464] Psychic disturbances, like somatic disturbances, are highly complex phenomena which cannot be explained by a purely aetiological theory. Besides the cause and the unknown X of the individual's disposition, we must also take into account the teleological aspect of fitness in biology, which in the psychic realm would have to be formulated as *meaning*. In psychic disturbances it is by no means sufficient in all cases merely to bring the supposed or real causes to consciousness. The treatment involves the integration of contents that have become dissociated from consciousness—not always as a result of repression, which very often is only a secondary phenomenon. Indeed, it is usually the case that, in the course of development following puberty, consciousness is confronted with affective tendencies, impulses, and fantasies which for a variety of reasons it is not willing or not able to assimilate. It then reacts with repression in various forms, in the effort to get rid of the troublesome intruders. The general rule is that the more negative the conscious attitude is, and the more it resists, devalues, and is afraid, the more repulsive, aggressive, and frightening is the face which the dissociated content assumes.

[465] Every form of communication with the split-off part of the psyche is therapeutically effective. This effect is also brought about by the real or merely supposed discovery of the causes. Even when the discovery is no more than an assumption or a fantasy, it has a healing effect at least by suggestion if the analyst himself believes in it and makes a serious attempt to understand. If on the other hand he doubts his aetiological theory, his chances of success sink at once, and he then feels compelled to look at least for real causes which would be convincing to an

intelligent patient as well as to himself. If he is inclined to be critical, this task may become a heavy burden, and often he will not succeed in overcoming his doubts. The success of the treatment is then in jeopardy. This dilemma explains the fanatical doctrinairism of Freudian orthodoxy.

[466] I will illustrate the problem by means of an example which I came across recently. A certain Mr. X, who was unknown to me, wrote that he had read my book *Answer to Job*, which had interested him very much and put him in a great commotion. He had given it to his friend Y to read, and Y had thereupon had the following dream: *He was back in the concentration camp and saw a mighty eagle circling above it, looking for prey. The situation became dangerous and frightening, and Y wondered how he was to protect himself. He thought he might be able to fly up in a rocket-propelled aircraft and shoot down the eagle.* X described Y as a rationalistic intellectual who had spent a long time in a concentration camp. X and Y both referred the dream to the affects that had been released by the reading of my book on the previous day. Y went to X for advice about the dream. X was of the opinion that the eagle spying on Y referred to himself, whereupon Y rejoined that he didn’t believe it, but thought the eagle referred to me, the author of the book.

[467] X now wanted to hear my opinion. It is in general a tricky business to try to interpret the dreams of people one does not know personally, and in the absence of amplificatory material. We must therefore content ourselves with asking a few questions which are suggested by what material there is. Why, for instance, should X think he knew that the eagle referred to himself? From what I could gather from the letter, it appeared that X had imparted a certain amount of psychological knowledge to his friend and therefore felt himself in the role of a mentor who could, as it were, see through his friend’s game from above. At any rate he was toying with the idea that it was disagreeable for Y to be spied upon by him, the psychologist. X was thus in the position of a psychotherapist who by means of the sexual theory knows in advance what is lurking behind neuroses and dreams, and who, from the lofty watch-tower of superior insight, gives the patient the feeling that he is being seen through. In the dreams of his patient he always expects

himself to appear in whatever disguise may be invented by the mystic "censor." In this way X readily came to conjecture that he was the eagle.

[468] Y was of a different opinion. He seems not to have been conscious of being invigilated or seen through by X, but, reasonably enough, went back to the obvious source of his dream, namely my book, which had evidently made an impression on him. For this reason he named me the eagle. We can conclude from this that he felt he was being somehow meddled with, as though someone had found him out, or had put his finger on a sore spot in a way that wasn't entirely to his liking. There was no need for him to be conscious of this feeling, for otherwise it would hardly have been represented in a dream.

[469] Here interpretation clashes against interpretation, and the one is as arbitrary as the other. The dream itself does not give the least indication in either direction. One might perhaps hazard the view that Y was rather afraid of the superior insight of his friend and therefore disguised him under the façade of the eagle so as not to recognize him. But did Y himself make his dream? Freud supposes the existence of a censor who is responsible for these transmogrifications. As against this I take the view, reinforced by experience, that a dream is quite capable, if it wants to, of naming the most painful and disagreeable things without the least regard for the feelings of the dreamer. If the dream does not in fact do so, there is no sufficient reason for supposing that it means something other than what it says. I therefore maintain that when our dream says "eagle" it means an eagle. Thus I insist on the very aspect of dreams which makes them appear so nonsensical to our reason. It would be so much simpler and more reasonable if the eagle meant Mr. X.

[470] In my view, then, the task of the interpretation is to find out what the eagle, aside from our personal fantasies, might mean. I would therefore advise the dreamer to start investigating what the eagle is *qua* eagle, and what general meanings may be attributed to it. The solution of this task leads straight into the history of symbols, and here we find the concrete reason why I concern myself with researches which are apparently so remote from the doctor's consulting room.

[471] Once the dreamer has established the general meanings of the eagle which are new and unknown to him (for he will have been familiar with

many of them from literature and common speech), he must investigate in what relationship the experience of the previous day, namely the reading of my book, stands to the symbol of the eagle. The question is: what was it that affected him so much that it gave rise to the fairytale motif of a great eagle capable of injuring or making off with a grown man? The image of an obviously gigantic (i.e., mythical) bird, circling high in the sky and surveying the earth with all-seeing eye, is indeed suggestive in view of the content of my book, which is concerned with the fate of man's idea of God.

[472] In the dream Y is back in the concentration camp, which is supervised by an "eagle eye." This points clearly enough to a situation which is feared by the dreamer and which makes his energetic defence measures seem plausible. In order to shoot down the mythical bird, he wants to employ the most advanced technological invention—a rocket-propelled aircraft. This is one of the greatest triumphs of the rationalistic intellect and is diametrically opposed to the mythical bird, whose menacing presence is to be averted with its help. But what kind of danger lurks in my book for such a personality? The answer to this is not difficult when one knows that Y is a Jew. At all events a door is opened to problems that lead into regions that have nothing to do with personal resentments. It is rather a question of those principles, dominants, or ruling ideas which regulate our attitude to life and the world, of convictions and beliefs which, as experience shows, are indispensable psychic phenomena. Indeed they are so indispensable that when the old systems of thought collapse new ones instantly take their place.

[473] Neuroses, like all illnesses, are symptoms of maladjustment. Because of some obstacle—a constitutional weakness or defect, wrong education, bad experiences, an unsuitable attitude, etc.—one shrinks from the difficulties which life brings and thus finds oneself back in the world of the infant. The unconscious compensates this regression by producing symbols which, when understood objectively, that is, by means of comparative research, reactivate general ideas that underlie all such natural systems of thought. In this way a change of attitude is brought about which bridges the dissociation between man as he is and man as he ought to be.

[474] Something of the sort is taking place in our dream: Y may well be suffering from a dissociation between a highly rationalistic, intellectualized consciousness and an equally irrational background which is anxiously repressed. The anxiety appears in the dream and should be acknowledged as a real fact belonging to the personality, for it is nonsense to assert that one has no anxiety only because one is incapable of discovering the reason for it. Yet that is what one generally does. If the anxiety could be accepted, there would also be a chance of discovering and understanding the reason. This reason is vividly portrayed by the eagle in the dream.

[475] Assuming that the eagle is an archaic God-image whose power a person cannot escape, then it makes very little difference in practice whether he believes in God or not. The fact that his psyche is so constituted as to produce such phenomena should be enough for him, for he can no more get rid of his psyche than he can get rid of his body, neither of which can be exchanged for another. He is a prisoner of his own psychophysical constitution, and must reckon with this fact whether he will or no. One can of course live in defiance of the demands of the body and ruin its health, and the same can be done in regard to the psyche. Anyone who wants to live will refrain from these tricks and will at all times carefully inquire into the body’s and the psyche’s needs. Once a certain level of consciousness and intelligence has been reached, it is no longer possible to live one-sidedly, and the whole of the psychosomatic instincts, which still function in a natural way among primitives, must consciously be taken into account.

[476] In the same way that the body needs food, and not just any kind of food but only that which suits it, the psyche needs to know the meaning of its existence—not just any meaning, but the meaning of those images and ideas which reflect its nature and which originate in the unconscious. The unconscious supplies as it were the archetypal form, which in itself is empty and irrepresentable. Consciousness immediately fills it with related or similar representational material so that it can be perceived. For this reason archetypal ideas are locally, temporally, and individually conditioned.

[477] The integration of the unconscious takes place spontaneously only in rare cases. As a rule special efforts are needed in order to understand the contents spontaneously produced by the unconscious. Where certain general ideas, which are regarded as valid or are still efficacious, already exist, they act as a guide to understanding, and the newly acquired experience is articulated with or subordinated to the existing system of thought. A good example of this is afforded by the life of the patron saint of Switzerland, Niklaus von der Flüe, who, by dint of long meditation and with the help of a little book written by a German mystic, gradually turned his terrifying vision of God into an image of the Trinity. Or again, the traditional system may be understood in a new way as a result of the new experiences.

[478] It goes without saying that all personal affects and resentments participate in the making of a dream and can therefore be read from its imagery. The analyst, especially at the beginning of a treatment, will have to be satisfied with this, since it seems reasonable to the patient that his dreams come from his personal psyche. He would be completely bewildered if the collective aspect of his dreams were pointed out to him. Freud himself, as we know, tried to reduce myth motifs to personal psychology, in defiance of his own insight that dreams contain archaic residues. These are not personal acquisitions, but vestiges of an earlier collective psyche. There are, however, not a few patients who, as if to prove the reversibility of psychological rules, not only understand the universal significance of their dream symbols but also find it therapeutically effective. The great psychic systems of healing, the religions, likewise consist of universal myth motifs whose origin and content are collective and not personal; hence Lévy-Bruhl rightly called such motifs *représentations collectives.* The conscious psyche is certainly of a personal nature, but it is by no means the whole of the psyche. The foundation of consciousness, the psyche *per se,* is unconscious, and its structure, like that of the body, is common to all, its individual features being only insignificant variants. For the same reason it is difficult or almost impossible for the inexperienced eye to recognize individual faces in a crowd of coloured people.

[479] When, as in the dream of the eagle, symbols appear which have nothing about them that would point to a particular person, there is no ground for assuming that such a person is being disguised. On the contrary, it is much more probable that the dream means just what it says. So when a dream apparently disguises something and a particular person therefore seems indicated, there is an obvious tendency at work not to allow this person to appear, because, in the sense of the dream, he represents a mistaken way of acting or thinking. When, for instance, as not infrequently happens in women's dreams, the analyst is represented as a hairdresser (because he "fixes" the head), the analyst is being not so much disguised as devalued. The patient, in her conscious life, is only too ready to acknowledge any kind of authority because she cannot or will not use her own head. The analyst (says the dream) should have no more significance than the hairdresser who puts her head right so that she can then use it herself.

[480] If, therefore, instead of reducing the dream symbols to circumstances, things, or persons which the analyst presumes to know in advance, we regard them as real symbols pointing to something unknown, then the whole character of analytical therapy is altered. The unconscious is then no longer reduced to known, conscious factors (this procedure, incidentally, does *not* abolish the dissociation between conscious and unconscious) but is recognized as in fact unconscious, and the symbol is not reduced either but is amplified by means of the context which the dreamer supplies and by comparison with similar mythologems so that we can see what the unconscious intends it to mean. In this way the unconscious can be integrated and the dissociation overcome. The reductive procedure, on the other hand, leads away from the unconscious and merely reinforces the one-sidedness of the conscious mind. The more rigorous of Freud's pupils have failed to follow up the Master's lead with a deeper exploration of the unconscious and have remained satisfied with reductive analysis.

[481] As I have said, the confrontation with the unconscious usually begins in the realm of the personal unconscious, that is, of personally acquired contents which constitute the shadow, and from there leads to archetypal symbols which represent the collective unconscious. The aim of the

confrontation is to abolish the dissociation. In order to reach this goal, either nature herself or medical intervention precipitates the conflict of opposites without which no union is possible. This means not only bringing the conflict to consciousness; it also involves an experience of a special kind, namely, the recognition of an alien "other" in oneself, or the objective presence of another will. The alchemists, with astonishing accuracy, called this barely understandable thing Mercurius, in which concept they included all the statements which mythology and natural philosophy had ever made about him: he is God, daemon, person, thing, and the innermost secret in man; psychic as well as somatic. He is himself the source of all opposites, since he is duplex and *utriusque capax* ("capable of both"). This elusive entity symbolizes the unconscious in every particular, and a correct assessment of symbols leads to direct confrontation with it.

[482] As well as being an irrational experience, this confrontation is a process of realization. Accordingly the alchemical opus consisted of two parts: the work in the laboratory, with all its emotional and daemonic hazards, and the *scientia* or *theoria*, the guiding principle of the opus by which its results were interpreted and given their proper place. The whole process, which today we understand as psychological development, was designated the "philosophical tree," a "poetic" comparison that draws an apt analogy between the natural growth of the psyche and that of a plant. For this reason it seemed to me desirable to discuss in some detail the processes which underlie both alchemy and the modern psychology of the unconscious. I am aware, and hope I have also made it clear to the reader, that merely intellectual understanding is not sufficient. It supplies us only with verbal concepts, but it does not give us their true content, which is to be found in the living experience of the process as applied to ourselves. We would do well to harbour no illusions in this respect: no understanding by means of words and no imitation can replace actual experience. Alchemy lost its vital substance when some of the alchemists abandoned the laboratorium for the oratorium, there to befuddle themselves with an ever more nebulous mysticism, while others converted the oratorium into a laboratorium and discovered chemistry. We feel sorry for the former and admire the latter, but no one asks about

the fate of the psyche, which thereafter vanished from sight for several hundred years.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A*. Ancient volumes containing collections of alchemical tracts by various authors; *B*. General bibliography, including cross-references to the material in section *A*. Short titles of the ancient volumes are printed in capital letters.

A. COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum. … Argentorati [Strasbourg], 1566.

Contents quoted in this volume:

i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]

ii Hortulanus: Commentariolum in Tabulam Smaragdinam [pp. 33–47]

iii Studium Consilii coniugii de massa solis et lunae [pp. 48–263; usually referred to as “Consili coniugii”]

ARTIS AURIFERAE quam chemiam vocant. … Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

i Allegoriae super librum Turbae [pp. 139–45]

ii Aenigmata ex visione Arislei philosophi et allegoriis sapientum [pp. 146–54; usually referr to as “Visio Arislei”]

iii In Turbam philosophorum exercitationes [pp. 154–82]

iv Aurora consurgens, quae dicitur Aurea hora [pp. 185–246]

v [Zosimos:] Rosinus ad Sarratantam episcopum [pp. 277–319]

vi Maria Prophetissa: Practica . . . in artem alchemicam [pp. 319–24]

vii Calid: Liber secretorum alchemiae [pp. 325–51] viii Opusculum authoris ignoti [pp. 389–92]

ix Tractatulus Avicennae [pp. 405–37]

x Liber de arte chymica [pp. 575–632]

VOLUME II

xi Morienus Romanus: Sermo de transmutatione metallorum [pp. 7–54]

xii Scala philosophorum [pp. 107–70]

xiii Rosarium philosophorum [pp. 204–384]

xiv Arnold of Villanova: Flos florum [pp. 470–88]

AUREUM VELLUS, oder Güldin Schatz und Kunstkammer . . . von dem . . . bewehrten Philosopho Salomone Trismosino. Rorschach, 1598.

Contents quoted in this volume:

i Trismosin: Splendor solis [Tract. III, pp. 3–59]

ii Melchior, Cardinal Bishop of Brixen; Vom dem Gelben und Roten Mann [Tract. III, pp. 17
91]

DE ALCHEMIA. Nuremberg, 1541.

Contents quoted in this volume:

i Geber: Summae perfectionis metallorum sive perfecti magisterii libri duo [pp. 20–205]

ii Tabula smaragdina [p. 363]

iii Hortulanus: Super Tabulam Smaragdinam Commentarius [pp. 364–73]

DE ALCHIMIA opuscula complura. Frankfurt a. M., 1550. 2 vols. *Contents quoted in this volume:*

VOLUME II

Rosarium philosophorum [whole volume]

MANGETUS, JOHANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus. . . .* Geneva, 1702. 2 vols.

Contents quoted in this volume:

VOLUME I

i Hermes Trismegistus: Tractatus aureus [pp. 400–45]

ii Dicta Belini [pp. 478–79]

iii Lully: Codicillus seu vade mecum aut Cantilena [pp. 880–911] iv Braceschus: Lignum vitae [pp. 911–38]

v [Altus:] Mutus liber [pp. 938–53]

VOLUME II

vi Bonus: Margarita pretiosa novella correctissima [pp. 1–80]

vii Rosarium philosophorum [pp. 87–119; a second version, pp. 119–33]

viii Sendivogius: Parabola, seu Aenigma philosophicum [pp. 474–75]

MUSAEUM HERMETICUM reformatum et amplificatum . . . continens tractatus chimicos XXI praestantissimos . . . Francofurti [Frankfurt a. M.], 1678. For translation, see ARTHUR EDWARD WAITE (ed. and trans.). *The Hermetic Museum restored and enlarged.* London, 1893. 2 vols.

Contents quoted in this volume:

(The entries in parentheses show the title and pagination of the treatises in the Waite translation)

i [Hermes Trismegistus:] Tractatus aureus de lapide philosophorum [pp. 1–52] (“The Golden Tract,” I, 7–50)

ii [Siebmacher:] Hydrolithus sophicus, seu Aquarium sapientum [pp. 73–144] (“The Sophie Hydrolith,” I, 71–120)

iii Flamel: Tractatus brevis seu Summarium philosophicum [pp. 172–79] (“A Short Tract, or Philosophical Summary,” I, 141–47)

iv Via veritatis unicae [pp. 181–202] (“The Only True Way,” I, 151–64)

v [Barcius (F. von Sternberg):] Gloria mundi [pp. 203–304] (“The Glory of the World”, I, 16 243)

vi Lambspringk: De lapide philosophico figurae et emblemata [pp. 337–72] (“The Book of Lambspring,” I, 273–306)

vii Basilius Valentinus: Practica [pp. 377–432] (“Practica,” I, 312–57)

viii Norton: Crede mihi, seu Ordinale [pp. 433–532] (“Believe-Me, or The Ordinal of Alchemy II, 2–67)

ix Sendivogius: Novum lumen chemicum [pp. 545–600] (“The New Chemical Light,” II, 81–158)

x Philalethes: Introitus apertus [pp. 647–700] (“An Open Entrance to the Closed Palace of the King,” II, 163–98)

xi Maier: Subtilis allegoria super secreta chymiae [pp. 701–40] (“A Subtle Allegory Concerni the Secrets of Alchemy,” II, 201–23)

xii Philalethes: Metallorum metamorphosis [pp. 741–74] (“The Metamorphosis of Metals,” II, 225–45)

xiii Philalethes: Brevis manuductio. ad rubinum caelestem [pp. 775–98] (“A Brief Guide to the Celestial Ruby,” II, 246–60) xiv Philalethes: Fons chymicae veritatis [pp. 799–814] ("The Fount of Chemical Truth," II 261–69)

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus . . . continens. Argentorati [Strasbourg], Vols. I–IV, 1659; Vol. V, 1660; Vol. VI, 1661.

INDEX

INDEX

Under alchemical collections, when cross reference is made to “individual treatises in Bibl. A,” see above pp. 353*ff*, where names of these and their authors are listed.

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and, in most cases, a bibliography; the final volume will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)
On Hysterical Misreading (1904)
Cryptomnesia (1905)
On Manic Mood Disorder (1903)
A Case of Hysterical Stupor in a Prisoner in Detention (1902)
On Simulated Insanity (1903)
A Medical Opinion on a Case of Simulated Insanity (1904)
A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)
On the Psychological Diagnosis of Facts (1905)

2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere
STUDIES IN WORD ASSOCIATION (1904–7)
The Associations of Normal Subjects (by Jung and F. Riklin)
Experimental Observations on Memory
The Psychological Diagnosis of Evidence
An Analysis of the Associations of an Epileptic
The Association Method (1910)
The Family Constellation (1910)
Reaction-Time in the Association Experiment
Disturbances in Reproduction in the Association Experiment
The Psychopathological Significance of the Association Experiment
Psychoanalysis and Association Experiments
Association, Dream, and Hysterical Symptom
PSYCHOPHYSICAL RESEARCHES (1907–8)
On Psychophysical Relations of the Association Experiment
Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

†3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)
The Content of the Psychoses (1908/1914)
On Psychological Understanding (1914)
A Criticism of Bleuler’s Theory of Schizophrenic Negativism (1911)
On the Importance of the Unconscious in Psychopathology (1914)
On the Problem of Psychogenesis in Mental Disease (1919)
Mental Disease and the Psyche (1928)
On the Psychogenesis of Schizophrenia (1939)
Recent Thoughts on Schizophrenia (1957)
Schizophrenia (1958)

*4. FREUD AND PSYCHOANALYSIS

Freud’s Theory of Hysteria: A Reply to Aschaffenburg (1906)
The Freudian Theory of Hysteria (1908)
The Analysis of Dreams (1909)
A Contribution to the Psychology of Rumour (1910–11)
On the Significance of Number Dreams (1910–11)
Morton Prince, “The Mechanism and Interpretation of Dreams”: A Critical Review (1911)
On the Criticism of Psychoanalysis (1910)
Concerning Psychoanalysis (1912)
The Theory of Psychoanalysis (1913)
General Aspects of Psychoanalysis (1913)
Psychoanalysis and Neurosis (1916)
Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to “Collected Papers on Analytical Psychology” (1916, 1917)
The Significance of the Father in the Destiny of the Individual (1909/1949)
Introduction to Kranefeldt’s “Secret Ways of the Mind” (1930)
Freud and Jung: Contrasts (1929)

†5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I
Introduction
Two Kinds of Thinking
The Miller Fantasies: Anamnesis
The Hymn of Creation
The Song of the Moth
PART II
Introduction
The Concept of Libido
The Transformation of Libido
The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

6. PSYCHOLOGICAL TYPES (1921)

Introduction
The Problem of Types in the History of Classical and Medieval Thought
Schiller’s Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character

The Type Problem in Poetry
The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

*7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendices: New Paths in Psychology (1912): The Structure of the Unconscious (1916) (new versions, with variants, 1966)

†8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White’s “God and the Unconscious” and Werblowsky’s “Lucifer and Prometheus” (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on “The Tibetan Book of the Great Liberation” (1939/1954) and “The Tibetan Book of the Dead” (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki’s “Introduction to Zen Buddhism” (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer’s “Der Weg zum Selbst” (1944)

Foreword to the “I Ching” (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory Note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy
Individual Dream Symbolism in Relation to Alchemy (1936)
Religious Ideas in Alchemy (1937)
Epilogue

†13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)
The Visions of Zosimos (1938/1954)
Paracelsus as a Spiritual Phenomenon (1942)
The Spirit Mercurius (1943/1948)
The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND
SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio
The Paradoxa
The Personification of the Opposites
Rex and Regina
Adam and Eve
The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)
Paracelsus the Physician (1941)
Sigmund Freud in His Historical Setting (1932)
In Memory of Sigmund Freud (1939)
Richard Wilhelm: In Memoriam (1930)
On the Relation of Analytical Psychology to Poetry (1922)
Psychology and Literature (1930/1950)

“Ulysses”: A Monologue (1932)
Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY
Principles of Practical Psychotherapy (1935)
What Is Psychotherapy? (1935)
Some Aspects of Modern Psychotherapy (1930)
The Aims of Psychotherapy (1931)
Problems of Modern Psychotherapy (1929)
Psychotherapy and a Philosophy of Life (1943)
Medicine and Psychotherapy (1945)
Psychotherapy Today (1945)
Fundamental Questions of Psychotherapy (1951)
SPECIFIC PROBLEMS OF PSYCHOTHERAPY
The Therapeutic Value of Abreaction (1921/1928)
The Practical Use of Dream-Analysis (1934)
The Psychology of the Transference (1946)
Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)
Introduction to Wickes’s “Analyse der Kinderseele” (1927/1931)
Child Development and Education (1928)
Analytical Psychology and Education: Three Lectures (1926/1946)
The Gifted Child (1943)
The Significance of the Unconscious in Individual Education (1928)
The Development of Personality (1934)
Marriage as a Psychological Relationship (1925)

18. MISCELLANY

Posthumous and Other Miscellaneous Works

19. BIBLIOGRAPHY AND INDEX

Complete Bibliography of C. G. Jung’s Writings
General Index to the Collected Works

[1] The reader will find more about this in two essays published by me in the *Eranos Jahrbuch 1936* and 1937. [This material is now contained in *Psychology and Alchemy*, Parts II and III.—EDITORS.]

[2] Lévy-Bruhl, *Primitive Mentality.*

[3] Dissolution of *participation mystique*.

[1] The Chinese philosophers—in contrast to the dogmatists of the West—are only grateful for such an attitude, because they also are masters of their gods. [Note by Richard Wilhelm in original edn.]

[2] Our text is somewhat unclear as to whether by “continuation of life” a survival after death or a prolongation of physical existence is meant. Expressions such as “elixir of life” and the like are exceedingly ambiguous. In the later additions to the text it is evident that the yoga instructions were also understood in a purely physical sense. To a primitive mind, there is nothing disturbing in this odd mixture of the physical and the spiritual, because life and death are by no means the complete opposites they are for us. (Particularly interesting in this connection, apart from the ethnological material, are the communications of the English “rescue circles” with their thoroughly archaic ideas.) The same ambiguity with regard to survival after death is found in early Christianity, where immortality depends on very similar assumptions, i.e., on the idea of a breath-body as the carrier of life. (Geley’s paraphysiological theory would be the latest incarnation of this ancient idea.) But since in our text there are warnings about the superstitious use of it—warnings, for example, against the making of gold—we can safely insist on the spiritual purport of the instructions without contradicting their meaning. In the states which the instructions seek to induce the physical body plays an increasingly unimportant part anyway, since it is replaced by the breath-body (hence the importance of breath control in all yoga exercises). The breath-body is not something “spiritual” in our sense of the word. It is characteristic of Western man that he has split apart the physical and the spiritual for epistemological purposes. But these opposites exist together in the psyche and psychology must recognize this fact. “Psychic” means physical *and* spiritual. The ideas in our text all deal with this “intermediate” world which seems unclear and confused because the concept of psychic reality is not yet current among us, although it expresses life as it actually is. Without soul, spirit is as dead as matter, because both are artificial abstractions; whereas man originally regarded spirit as a volatile body, and matter as not lacking in soul.

[3] *The Golden Flower* (1962 edn.), p. 77.

[1] [The following mandalas are also published, with more detailed comments, in “Concerning Mandala Symbolism”: A1 (fig. 9), A3 (fig. 6), A5 (fig. 25). A6 (fig. 28), A7 (fig. 38), A8 (fig. 37), A9 (fig. 26), A10 (fig. 36); in “A Study of the Process of Individuation”: A4 (Picture 9). A2 is not republished. In *Memories, Dreams, Reflections*, Jung tells of painting the pictures reproduced in A3 and A10 (see the N.Y. edn., p. 197 and Pl. XI; London edn., pp. 188f. and facing p. 241). Cross reference in “Concerning Mandala Symbolism” indicates that he also painted the picture in A6.—EDITORS.]

[1] “*Ζωσίρον τοῦ θείον περἱ άρετῆς*.” ‘Α*ρετή* here should not be translated as “virtue” or “power” (“vertu” in Berthelot) but as “the Art,” corresponding to the Latin *ars nostra*. The treatise has nothing whatever to do with virtue.

[2] Berthelot, *Collection des anciens alchimistes grecs*, with translations into French by C. E. Ruelle. [The present translation is by A. S. B. Glover from the Greek text in Berthelot, with reference also to Ruelle’s French and Jung’s German. The section numeration is Berthelot’s.—EDITORS.]

[3] The *ἱερονργός* is the sacrificial priest who performs the ceremonies. The *ἱερεύς* is rather the *ἱεροφάντης* the prophet and revealer of the mysteries. No difference is made between them in the text.

[4] Ion occurs in the Sabaean tradition as Jûnân ben Merqûlius (son of Mercury), the ancestor of the Ionians (el-Jûnâniûn). [Cf. Eutychius, *Annales*, in Migne, *P.G.*, vol. 111, col. 922.] The Sabaeans consider him the founder of their religion. Cf. Chwolsohn, *Die Ssabier und der Ssabismus*, I, pp. 205, 796, and II, p. 509. Hermes, too, was considered a founder (I, p. 521).

[5] Κ*όλασις*, literally ‘punishment.’ Here it means the torment which the prima materia has to undergo in order to be transformed. This procedure is called *mortificatio*. [For an example, see the *mortificatio* of the “Ethiopian” in *Psychology and Alchemy*, par. 484. Also infra, “The Philosophical Tree,” ch. 17.—EDITORS.]

[6] *Διασπάσας κατἀ αύστασιν ἀρρονίας*. Berthelot has “démembrant, suivant les règles de la combinaison.” It refers to the division into four bodies, natures, or elements. Cf. Berthelot, *Alch. grecs*, II, iii, 11 and *Chimie au moyen âge*, III, p. 92. Also “Visio Arislei,” *Artis auriferae*, I, p. 151, and “Exercitationes in Turbam IX,” ibid., p. 170.

[7] *εζδον αὐτόν ώς τοὐναντίον ἀνθρωπἀριον κολοβόν*. If I am not mistaken, the concept of the *homunculus* appears here for the first time in alchemical literature.

[8] I read *ξνρουργός* instead of the meaningless *ξηρουργός* in the text. Cf. III, v, 1, where the barber does in fact appear as an anthroparion. (Or should it be taken adjectivally: *ξνρονργὸν ἀνθρωπάριον?)* The anthroparion is grey because, as we shall see, he represents the lead.

[9] Or “moral perfection.”

[10] Evidently a particularly convulsive opening of the mouth is meant, coupled with a violent contraction of the pharynx. This contraction was a kind of retching movement for bringing up the inner contents. These had to be written down on the tablets. They were inspirations coming from above that were caught, as it were, by the upraised eyes. The procedure might be compared with the technique of active imagination.

[11] [In the Swiss edition (*Von den Wurzeln des Bewusstseins*, pp. 141–45) this section, though numbered III, i, 3 only, continues into III, i, 4, 5, and 6 without a break, the whole being run together as a single section. III, i, 5, then reappears at the end of the sequence of visions (par. 87), but in variant form, as a “résumé,” and the reasons for its placement there are explained in the commentary (pars. 93, 111, 121). As no explanation is given for its duplication under III, i, 3, and the variations are in the main merely stylistic, we have omitted it at this point and reconstituted III, i. 4-6 at the end of the sequence. The wording of Jung’s interpolation at par. 87 has been altered to account for this change. The sections are presented in the order III, i, 5, III, i, 4, III, i, 6 on the assumption that III, i, 4 is not meant to form a part of the “résumé” proper, but, as stated in the Eranos version of

“Transformation Symbolism in the Mass,” is rather “Zosimos” own commentary on his visions” and “a general philosophical conclusion” (*The Mysteries*, pp. 311f.).—EDITORS.]

[12] Κ*αὶ ἄλλος όπζσω αὐτοῦ φέρων περιηκονισμένον τινά λευκοφόρον καὶ ὡραῖον τὴν όψιν, οὑ τὸ ὂνομα ἐκαλεῑο μεσουράνρράνισμα ἡλίου.* Berthelot: “Un autre, derrière lui, portait un objet circulaire, d’une blancheur éclatante, et très beau à voir appelé Méridien du Cinnabre.” It is not clear why *μεσουράνισμα ήλίου* is translated as “meridian of the cinnabar,” thus making it a chemical analogy, *περιηκονιμμένον τινά* must refer to a person and not to a thing. Dr. M.-L. von Franz has drawn my attention to the following parallels in Apuleius. He calls the *stola olympiaca* with which the initiate was clad a “precious scarf with sacred animals worked in colour on every part of it; for instance, Indian serpents and Hyperborean griffins.” “I . . . wore a white palm-tree chaplet with its leaves sticking out all round like rays of light.” The initiate was shown to the people “as when a statue is unveiled, dressed like the sun.” The sun, which he now was, he had seen the previous night, after his figurative death. “At midnight I saw the sun shining as if it were noon.” (*The Golden Ass*, trans. Graves, p. 286.)

[13] Literally, *δργανικῶς*.

[14] The island of Prokonnesos was the site of the famous Greek marble quarry, now called Marmara (Turkey).

[15] That is, circular.

[16] The Greek has only *μέλος*. I follow the reading of codex Gr. 2252 (Paris).

[17] The *res quaesita* or *quaerenda* is a standing expression in Latin alchemy.

[18] Ο*ὐγγιασμῷ.*

[1] For example, the “Visio Arislei” (*Art. aurif.*, I, pp. 146ff.) and the visions in the “Book of Krates” (Berthelot, *Chimie au moyen âge*, III, pp. 44–75).

[2] Cf. *Psychology and Alchemy*, pars. 347ff.

[3] The opus extended over a period with no fixed limits. During this time the artifex had to devote himself “religiously” to the process of transformation. Since the process was subjective as well as objective, it is not surprising that it included dream-experiences. G. Battista Nazari (*Della tramutatione metallica sogni tre*, 1599) actually represented the opus in the form of (allegorical) dreams. “The philosophic water is sometimes manifested to thee in sleep,” says the “Parabola” of Sendivogius (*Bibliotheca chemica*, II, p. 475). We cannot suppose that the author had any knowledge of the visions of Zosimos; the reference is probably to the “Visio Arislei,” as suggested by the following (p. 475 b): “Solum fructum arboris Solaris vidi in somniis Saturnum Mercurio nostro imponere” (I saw in dreams the sole fruit of the tree of the sun impose Saturn on our Mercurius). Cf. the end of the “Visio Arislei”: “Vidimus te magistrum in somniis. Petiimus ut nobis subsidium Horfolto discipulo tuo offeras, qui nutrimenti auctor est” (We saw thee, the master, in dreams. We besought that thou wouldst offer us for our help thy disciple Horfoltus, who is the author of nourishment).—Codex Q. 584 (Berlin), fol 21$^{\mathrm{v}}$. Ruska, ed., *Turba Philosophorum*, pp. 327f. The beginning of the “Visio” shows how the fruit of “that immortal tree” may be gathered.

[4] In our text (III, v. 3) it is the Agathodaimon itself that suffers transformation.

[5] Division into four elements after the *mortificatio* occurs in “Exercitationes in Turbam IC” (*Art. aurif.*, I, p. 170), also in “Aenigma” VI (ibid., p. 151). For division of the egg into four, see the Book of El-Habib (Berthelot, *Moyen âge*, III, p. 92). The division into four was known as *τετραμερεῖν τὴν φιλοσοφίαν* (Berthelot, *Alch. grecs*, III, xliv, 5).

[6] For example, in Trismosin, *Splendor solis (Aureum vellus*, p. 27). The same in *Splendor Solis* (London, 1920, repr.), Pl. X, and Lacinius, *Pretiosa margarita novella* (Venice, 1546), fol. *** xii.

[7] “It is the water that kills and vivifies” (*Rosarium philosophorum*, in *Art. aurif.*, II. p. 214).

[8] Just as baptism is a pre-Christian rite, according to the testimony of the gospels, so, too, the divine water is of pagan and pre-Christian origin. The Praefatio of the Benedictio Fontis on Easter Eve says: “May this water, prepared for the rebirth of men, be rendered fruitful by the secret inpouring of his divine power; may a heavenly offering, conceived in holiness and reborn into a new creation, come forth from the stainless womb of this divine font; and may all, however distinguished by age in time or sex in body, be brought forth into one infancy by the motherhood of grace” (*The Missal in Latin and English*, p. 429).

[9] “The priest divides the water crosswise with his hand” (ibid.).

[10] Cf. *Psychology and Alchemy*, pars. 334, 530.

[11] Cf. “Hortulanus super Epistolum Hermetis” in *Rosarium, Art. aurif.*, II, p. 270. *Aurora Consurgens* (ed. von Franz), pp. 39–41: “For she [this science] is clear to them that have understanding . . . she seemeth easy to them that have knowledge of her.” Maier, *Symbola aureae mensae*, p. 146: “… that they should not understand his words, save those who are judged worthy of this very great magistery.”

[12] Cf. Gray, *Goethe the Alchemist.*

[13] It has often been objected that symbols of this sort do not occur in dreams at all. Naturally they do not occur in all dreams or in just any dreams, but only in special ones. The differences between dreams are as great as those between individuals. A particular constellation of the unconscious is needed to produce such dreams, i.e., archetypal dreams containing mythological motifs. (Examples in *Psychology and Alchemy*, Part II.) But they cannot be recognized without a knowledge of mythology, which not all psychologists possess.

[1] Provided, of course, that the passages in question are not interpolations by copyists, who were mostly monks.

[2] Preller, *Griechische Mythologie*, I, p. 437.

[3] Fragment 472 N2, “The Cretans.” Cited in Dieterich, *Mithrasliturgie*, p. 105.

[4] Cf. “Transformation Symbolism in the Mass,” pp. 231f. For dismemberment, transformation, and recomposition in a case of schizophrenia, see Spielrein, “Ueber den psychologischen Inhalt eines Falles von Schizophrenie,” pp. 358ff. Dismemberment is a practically universal motif of primitive shamanistic psychology. It forms the main experience in the initiation of a shaman. Cf. Eliade, *Shamanism*, pp. 53ff.

[5] Firmicus Maternus, *Liber de errore profanarum religionum* (ed. Halm), ch. 7, p. 89.

[6] Attis has close affinities with Christ. According to tradition, the birthplace at Bethlehem was once an Attis sanctuary. This tradition has been confirmed by recent excavations.

[22] See supra, par. 89, n. 8.

[23] Berthelot, *Alch. grecs*, I, xiii, 1f.

[24] The arcanum is here symbolized by the sowing of the grain and the begetting of man, lion, and dog. In chemical usage it refers to the fixation of quicksilver (ibid., I, xiii, 6–9). Quicksilver was one of the older symbols for the divine water on account of its silvery-white sheen. In *Rosarium* it is called “aqua clarissima” (*Art. aurif.*, II, p. 213).

[25] Budge, *The Gods of the Egyptians*, II, pp. 122ff.

[26] Jacobsohn, *Die dogmatische Stellung des Königs in der Theologie der alten Aegypter*, p. 50.

[27] Cf. the identification of the Agathodaimon with the transformative substance, supra, III, v, 3.

[28] Berthelot, *Alch. grecs*, I, ii.

[29] *’Ωσιρίς ἐστιν ἥ ταφὴ ἐσφιγμένη, κρύπτουσα πάντα πάντα τά ’Ωσίριδος μέλη*: Treatise of Olympiodorus of Alexandria (ibid., II, iv, 42). Here Osiris is the “principle of all moisture” in agreement with Plutarch. This refers to the relatively low melting point of lead.

[30] Ibid., II, iv, 43.

[31] Cf. the hymn of St. Romanus on the theophany: “… him who was seen of old in the midst of three children as dew in the fire, now a fire flickering and shining in the Jordan, himself the light inaccessible” (Pitra, *Analecta sacra*, I, 21).

[32] Berthelot, *Alch. grecs*, I, xiii, 1–4.

[33] Instead of *φενρικῆς* in the text.

[34] The secrets of the art.

[35] *Art. aurif.*, I, pp. 141f.

[36] “There is in the sea a round fish, lacking bones and scales [?], and it has in itself a fatness, a wonder-working virtue, which if it be cooked on a slow fire until its fatness and moisture have wholly disappeared, and then be thoroughly cleansed, is steeped in sea water until it begins to shine. . . .” This is a description of the transformation process. [Cf. *Aion*, pars. 195ff.]

[37] “… whose anointed eyes could easily look upon the secrets of the philosophers.”

[38] Codex Vadiensis 390 (St. Gall), 15th cent. (mentioned by Ruska, *Turba*, p. 93). Concerning the fish, see *Aion*, ch. X.

[39] Sermo XLI.

[40] That is, Saturn, who was regarded as the dark “counter-sun.” Mercurius is the child of Saturn, and also of the sun and moon.

[41] Cf. *Psychology and Alchemy*, par. 456, §6.

[43] *Δύναρις γάρ φησἰν ὐδατὀχρους, ἥντινα δύναμιν, φησί, τοντἐοτι τόν κρόνον*. Hippolytus, *Elenchos*, V, 16, 2 (trans. Legge, *Philosophumena*, I, p. 154).

[44] 1454–1493. Cardinal archbishop of Aquileia, and a great humanist.

[45] *Corollarium in Dioscoridem.* Cited in Maier, *Symb. aur. mens.*, p. 174.

[46] *Lexicon alchemiae*, pp. 46f.

[47] *Coelum Sephiroticum*, p. 33.

[48] An allusion to the axiom of pseudo-Democritus.

[49] Ruska, p. 190.

[50] P. 197.

[51] Pp. 200f. *Aqua nostra* is “fire, because it burns all things and reduces them to powder; quicksilver is vinegar” (Quotation from Calid in *Rosarium*, p. 218). “Our water is mightier than fire. . . . And fire in respect thereto is like water in respect to common fire. Therefore the philosophers say: Burn our metal in the mightiest fire” (ibid., p. 250). Hence the “water” is a kind of superfire, an *ignis coelestis*.

[52] Contrary to Ruska (*Turba*, p. 201, n. 3), I adhere to the reading in the MSS. because it is simply a synonym for the moist soul of the prima materia, the radical moisture. Another synonym for the water is “spiritual blood” (ibid., p. 129), which Ruska rightly collates with *πυῤῤόν αῑμα* (fire-coloured blood) in the Greek sources. The equation fire = spirit is common in alchemy. Thus, as Ruska himself remarks (p. 271), Mercurius (a frequent synonym for the *aqua permanens*, cf. Ruland’s *Lexicon*) is called *φάρμακον πύρινον* (fiery medicine).

[53] Cf. *Aurora Consurgens* (ed. von Franz), pp. 85, 91.

[54] *Art. aurif.*, II, p. 482.

[55] Ibid., II, p. 239.

[56] Berthelot, *Alch. grecs*, IV, xx, 8: “Make known to us how the blessed waters come down from above to awaken the dead, who lie round about in the midst of Hades, chained in the darkness; how the elixir of life comes to them and awakens them, rousing them out of their sleep. . . .”

[57] P. 139.

[58] Scott, *Hermetica*, I, p. 147.

[59] Praefatio: “May the power of the Holy Ghost descend into this brimming font, and may it make the whole substance of the water fruitful in regenerative power” (*Missal*, p. 431).

[60] It shares this quality with Mercurius duplex.

[61] “In the floods of life, in the storm of work,
In ebb and flow,
In warp and weft,
Cradle and grave,
An eternal sea,
A changing patchwork,
A glowing life,
At the whirring loom of Time I weave
The living clothes of the Deity.”

Thus the Earth Spirit, the *spiritus mercurialis*, to Faust. (Trans. by MacNeice, p. 23.)

[62] In Egypt the darkness of the soul was represented as a crocodile (Budge, *The Gods of the Egyptians*, I, p. 286).

[63] In the Book of Ostanes (Berthelot, *Chimie au moyen âge*, III, p. 120) there is a description of a monster with wings of a vulture, an elephant’s head, and a dragon’s tail. These parts mutually devour one another.

[64] Of the quicksilver (*aqua vitae, perennis*) it is said: “This is the serpent which rejoices in itself, impregnates itself, and brings itself forth in a single day; it slays all things with its venom, and will become fire from the fire (*et ab igne ignis fuerit*).” (“Tractatulus Avicennae,” *Art. aurif.*, I, p. 406.)

“The dragon is born in the *nigredo* and feeds upon its Mercurius and slays itself” (*Rosarium*, ibid., II, p. 230). “The living Mercurius is called the scorpion, that is, venom; for it slays itself and brings itself back to life” (ibid., pp. 271f.). The oft-cited saying, “The dragon dieth not save with its brother and sister,” is explained by Maicr (*Symb. aur. mens.*, p. 466) as follows: “For whenever the heavenly sun and moon meet in conjunction, this must take place in the head and tail of the dragon; in this comes about the conjunction and uniting of sun and moon, when an eclipse takes place.”

[65] *Theatr. chem.*, IV (1659), pp. 509ff.

[66] The killing (*mortificatio*) of the king occurs in later alchemy (cf. *Psychology and Alchemy*, Fig. 173). The king’s crown makes him a kind of sun. The motif belongs to the wider context of the sacrifice of the god, which developed not only in the West but also in the East, and particularly in ancient Mexico. There the personifier of Tezcatlipoca (“fiery mirror”) was sacrificed at the festival of Toxcatl (Spence, *The Gods of Mexico*, pp. 97ff.). The same thing happened in the cult of Uitzilopochtli, the sun-god (ibid., p. 73), who also figured in the eucharistic rite of the *teoqualo*, “god-eating” (cf. “Transformation Symbolism in the Mass,” pp. 223f.).

[67] The solar nature of the victim is confirmed by the tradition that the man destined to be beheaded by the priests of Harran had to have fair hair and blue eyes (ibid., p. 240).

[68] Cf. my remarks on the Harranite head mystery and the legendary head oracle of Pope Sylvester II (ibid., pp. 240f.).

[69] Its form can still be seen in the deacon’s hood.

[70] According to Rabbinic tradition the angels (including Satan) were created on the second day of Creation (the day of the moon). They were immediately divided on the question of creating man. Therefore God created Adam in secret, to avoid incurring the displeasure of the angels.

[71] “They compared the water to an egg, because it surrounds everything that is within it, and has in itself all that is necessary” (“Consilium coniugii,” *Ars chemica*, p. 140). “Having all that is necessary” is one of the attributes of God.

[72] Maier, *Symb. aur. mens.*, p. 466. Cf. Senior, *De chemia*, p. 108: “The dragon is the divine water.”

[73] *Mus. herm.*, p. 785.

[74] Ibid., p. 90.

[75] Steeb, *Coelum Sephiroticum*, p. 33.

[76] *Turba*, Sermo IV, p. 112. Cf. also the “nomenclature of the egg” in Berthelot, *Alch. grecs*, I, iv, and Olympiodorus on the egg, the tetrasomia, and the spherical phial (II, iv, 44). Concerning the identity of uroboros and egg, and the division into four, see the Book of El-Habib (Berthelot, *Moyen âge*, III, pp. 92, 104). There is a picture of the egg being divided with the sword in Emblem VIII of Maier’s *Scrutinium chymicum* (p. 22), with the inscription: “Take the egg and pierce it with a fiery sword.” Emblem XXV shows the killing of the dragon. Killing with the sword is also shown in Lambspringk’s Symbol II (*Musaeum hermeticum*, p. 345), titled “Putrefactio.” Killing and division into four go together. “Mortificatio (scl. Lapidis) separatio elementorum” (“Exercit. in Turb. IX”). Cf. the dramatic fights with the dragon in the visions of Krates (Berthelot, *Moyen âge*, III, pp. 73ff.).

[77] *Ars chemica*, p. 259.

[78] *Verus Hermes*, p. 16. [Cf. infra, par. 276.]

[79] This motif also occurs in the Adam parable in "Aurelia occulta" (*Theatr. chem.*, IV, 1659, pp. 511f.), which describes how the angel had to deal Adam several bloody wounds with his sword because he refused to move out of Paradise. Adam is the arcane substance, whose "extraction from the garden" of Eve is finally accomplished by means of blood magic.

[110] Lake, *Apostolic Fathers*, I, p. 383.

[111] Honorius of Autun, *Speculum de myst. eccl.* (Migne, *P.L.*, vol. 172, col. 936). Christ’s tearing of the breast, the wound in his side, and his martyr’s death are parallels of the alchemical *mortificatio*, dismemberment, flaying, etc., and pertain like these to the birth and revelation of the inner man. Cf. the report in Hippolytus (*Elenchos*, V, 9, 1–6) of the Phrygian system. The Phrygians taught that the Father of all things was called Amygdalos (almond-tree), was pre-existent, and bore in himself the “perfect fruit pulsating and stirring in the depths.” He “tore his breast and gave birth to his invisible, nameless and unnameable child.” That was the “Invisible One, through whom all things were made, and without whom nothing was made” (an allusion to John 1 : 3). He was “Syriktes, the piper.” i.e., the wind (pneuma). He was “thousand-eyed, not to be comprehended,” the Word (*ῥῆμα*) of God, the Word of annunciation and great power.” He was “hidden in the dwelling where the roots of all things are established.” He was the “Kingdom of Heaven, the grain of mustard-seed, the indivisible point . . . which none know save the spiritual alone.” (Cf. Legge trans., *Philosophumena*, I, pp. 140f.)

[112] Herakleon taught that the Ground of the world was a Primordial Man named Bythos (depths of the sea), who was neither male nor female. From this being was produced the inner man, his counterpart, who “came down from the Pleroma on high.”

[3] "… which I have seen with my own eyes and touched with my hands" (*Rosarium*, in *Art. aurif.*, II, p. 205).

[4] It must be remembered, however, that John uses other terms than those found in the alchemy of the time: *τἄ ἐπίγεια* and *τἄ ἐπιουράνια* (*terrena* and *coelestia* in the Vulgate).

[5] The source for this is Hermes Trismegistus in the "Tabula smaragdina": "It ascends from earth to heaven and descends again to earth. . . . The wind hath borne it in his belly." This text was always interpreted as referring to the stone (cf. Hortulanus, "Commentariolum," *Ars chemica*). But the stone comes from the "water." A perfect alchemical parallel to the Christian mystery is the following passage from the "Consilium coniug." (ibid., p. 128): "And if I ascend naked into heaven, then will I come clothed to earth and perfect all minerals. And if we are baptized in the fountain of gold and silver, and the spirit of our body ascends to heaven with the father and the son, and descends again, our souls will revive, and my animal body will remain white." The anonymous author of "Liber de arte chymica" (*Art. aurif.*, I, pp. 612f.) speaks in the same way: "It is certain that the earth cannot ascend, except first the heaven descend, for the earth is said to be raised up to heaven, when, dissolved in its own spirit, it is at last united therewith. I will satisfy thee with this parable: The Son of God descending into the Virgin, and there clothed with flesh, is born as man, who having shown us the way of truth for our salvation, suffered and died for us, and after his resurrection returned into heaven, where the earth, that is mankind, is exalted above all the circles of the world, and is placed in the intellectual heaven of the most holy Trinity. In like manner, when I die, my soul, helped by the grace and the merits of Christ, will return to the fount of life whence it descended. The body returns to earth, and at the last judgment of the world the soul, descending from heaven, will carry it with her, purified, to glory."

[6] The motif of ascent and descent is based partly on the motion of water as a natural phenomenon (clouds, rain, etc.).

[7] Justin Martyr says: "As a fount of living water from God . . . this Christ gushed forth" (cited in Preuschen, *Antilegomena*, p. 129). Gaudentius (Sermo XIX) compares Christ's humanity to water (Migne, *P.L.*, vol. 20, col. 983). Eucherius of Lyons (*Liber formularum spiritalis intelligentiae*) says that Christ "carried up to heaven the flesh he assumed for us" (ibid., vol. 50, col. 734). This idea coincides with the saying in the "Tab. smarag." that the arcanum "ascends from earth to heaven, and descends again to earth, and receives the power of Above and Below."

[8] "Spirit" in alchemy means anything volatile, all evaporable substances, oxides, etc., but also, as a projected psychic content, a *corpus mysticum* in the sense of a "subtle body." (Cf. Mead, *The Doctrine of the Subtle Body in Western Tradition.*) It is in this sense that the definition of the lapis as a *spiritus humidus et aereus* should be understood. There are also indications that spirit was understood as "mind," which could be refined by "sublimation."

[9] Cf. the fate of the "man of light" in Zosimos (*Psychology and Alchemy*, par. 456).

[10] In the oldest sources this mystery is expressed in symbolical terms. But from the 13th cent. on there are more and more texts which reveal the mystical side of the arcanum. One of the best examples is the German treatise *Der Wasserstein der Weysen*, "A Chymical Tract, wherein the Way is Shown, the Materia Named, and the Process Described."

[1] The element of torture, so conspicuous in Zosimos, is not uncommon in alchemical literature. “Slay the mother, cutting off her hands and feet” (“Aenigma” VI, *Art. aurif.*, I, p. 151). Cf. *Turba*, Sermones XVIII, XLVII, LXIX. “Take a man, shave him, and drag him over a stone . . . until his body dies.” “Take a cock, pluck it alive, then put its head in a glass vessel” (“Alleg. sup. lib. Turb.,” *Art. aurif.*, I, pp. 139ff.). In medieval alchemy the torturing of the materia was an allegory of Christ’s passion (cf. *Der Wasserstein der Weysen*, p. 97).

[2] “The foundation of this art, for whose sake many have perished” (*Turba*, Sermo XV). Zosimos mentions Antimimos, the demon of error (*Alch. grecs*, III, xlix, 9). Olympiodorus quotes the saying of Petasios that lead (prima materia) was so “shameless and bedevilled” that it drove the adepts mad (ibid., II, iv, 43). The devil caused impatience, doubt, and despair during the work (*Mus. herm.*, p. 461). Hoghelande describes how the devil deceived him and his friend with delusions (“De difficult. alchem.,” *Theatr. chem.*, I, 1659, pp. 152ff.). The dangers that threatened the alchemists were obviously psychic. Cf. infra, pars. 429ff.

[3] *Der wasserstein der Weysen*, pp. 73ff. [For this translation I am indebted to Dr. R. T. Llewellyn.—TRANSLATOR.]

[4] This term occurs in alchemy, e.g.: “Congeal [the quicksilver] with its mystic body” (“Consilium coniug.,” *Theatr. chem.*, I, 1659, p. 137).

[1] [Philippus Aureolus Theophrastus Bombastus von Hohenheim, known as Paracelsus, born 1493, in Einsiedeln, died Sept. 21, 1541, in Salzburg.—EDITORS.]

[1] Ed. Strunz, p. 97. [For the translation of the direct quotations from Paracelsus in the text and footnotes of this section I am indebted to Dr. R. T. Llewellyn.—TRANSLATOR.]

[2] “De caducis,” ed. Huser, I, p. 589.

[3] “Therefore Christian knowledge is better than natural knowledge, and a prophet or an apostle better than an astronomer or a physician . . . but I am compelled to add that the sick need a physician not apostles, just as prognostications require an astronomer not a prophet” (“Von Erkantnus des Gestirns,” ed. Sudhoff, XII, pp. 496f.).

[4] He says in the fourth treatise of *Paramirum primum* (ed. Sudhoff, I, p. 215), speaking of the “ens spirituale” of diseases: “If we are to talk of the *Ens Spirituale*, we admonish you to put aside the style which you call theological. For not everything which is called *Theologia* is holy and also not everything it treats of is holy. And, moreover, not everything is true which the uncomprehending deal with in theology. Now although it is true that theology describes this *Ens* most powerfully, it does not do so under the name and text of our fourth *Pagoyum*. And, in addition, they deny what we are proving. But there is one thing which you must understand from us. namely, that the ability to recognize this *Ens* does not come from Christian belief, for it is a *Pagoyum* to us. It is, however, not contrary to the belief in which we shall depart from this life. Accordingly, you must recognize that in no way are you to understand an *Ens* as being of the spirits, by saying they are all devils, for then you are talking nonsensically and foolishly like the Devil.”

[5] Cf. “Labyrinthus medicorum,” ed. Sudhoff, XI, pp. 207f.: “And as the Magi from the East found Christ in the star by means of this sign, so is fire found in the flint. Thus are the arts found in nature, and it is easier to see the latter than it was to look for Christ.”

[6] *De vita longa* (1562), p. 56. In “Caput de morbis somnii” (ed. Sudhoff, IX, p. 360), Paracelsus says of the *lumen naturae:* “Look at Adam and Moses and others. They sought in themselves what was in man and have revealed it and all kabbalistic arts and they knew nothing alien to man neither from the Devil nor from the spirits, but derived their knowledge from the Light of Nature. This they nurtured in themselves . . . it comes from nature which contains its manner of activity within itself. It is active during sleep and hence things must be used when dormant and not awake—sleep is waking for such arts—for things have a spirit which is active for them in sleep. Now it is true that Satan in his wisdom is a Kabbalist and a powerful one. So, too, are these innate spirits in man . . . for it is the Light of Nature which is at work during sleep and is the invisible body and was nevertheless born like the visible and natural body. But there is more to be known than the mere flesh, for from this very innate spirit comes that which is visible . . . the Light of Nature which is man’s mentor dwells in this innate spirit.” Paracelsus also says that though men die, the mentor goes on teaching (*Astronomia magna*, ed. Sudhoff, XII, p, 23; “De podagricis,” ed. Huser, I, p. 566).

[7] *Occulta philosophia*, p. lxviii. The *lumen naturae* also plays a considerable role in Meister Eckhart.

[8] Cf. the fine saying in “Fragmenta medica” (ed. Huser, I, p. 141): “Great is he whose dreams are right, that is, who lives and moves harmoniously in this kabbalistic, innate spirit.”

[9] “Caput de morbis somnii,” ed. Sudhoff, IX, p. 361.

[10] *Astronomia magna*, ed. Sudhoff, XII, p. 23; also “Lab. med.,” ed. Sudhoff, ch. II. and “De pestilitate,” Tract. I (ed. Huser, I, p. 327). The *astrum* theory had been foreshadowed in the *Occulta philosophia* of Agrippa, to whom Paracelsus was much indebted.

[11] *Astronomia magna*, ed. Sudhoff, XII, pp. 36 and 304.

[12] *Paramirum*, pp. 35f.

[17] "De caducis," ed. Sudhoff, VIII, p. 267.

[18] I used the edition of 1584, "as finally revised by the author."

[19] He did, however, once remark that he had found the stone which others sought "to their own hurt." But many other alchemists say the same.

[20] [Personal physician to Ferdinand I. Cf. Jung, "Paracelsus the Physician," pars. 21f.—EDITORS.]

[21] *Epistolarum medicinalium Conradi Gessneri*, fol. IV.

[22]

> "I'm left to struggle still towards the light:
> Could I but break the spell, all magic spurning,
> And clear my path, all sorceries unlearning,
> Free then, in Nature's sight, from evil ban,
> I'd know at last the worth of being man."

(*Faust: Part Two,* trans. Wayne, pp. 263f.) Faust's belated insight never dawned on Paracelsus.

[23] This expression was in fact used by an insane patient to describe her own neologisms. [See "The Psychology of Dementia Praecox," pars. 155, 208—EDITORS]

[24] He calls this procedure likewise a "pagoyum." "De pestilitate," Tract. IV, ch. II (ed. Huser, I, p. 353).

[25] For instance, the violent form of St. Vitus's Dance is cured by "a wax manikin into which oaths are stuck." "De morbis amentium," Tract. II, ch. III (ed. Huser, I, p. 501); also *Paramirum*, ch. V.

[26] "Archidoxis magicae," ed. Huser, II, p. 546.

[27] *Theatrum chemicum*, III (1659), pp. 758ff. Cf. *Psychology and Alchemy*, pars. 480ff.; *Aurora Consurgens* (ed. von Franz), p. 43: "For [the science] is a gift and sacrament of God and a divine matter."

[28] Cf. *Psychology and Alchemy*, Part III, ch. 5: "The Lapis-Christ Parallel."

[29] He mentions Hermes, Archelaus, Morienus, Lully, Arnaldus, Albertus Magnus, Helia Artista, Rupescissa, and others.

[30] *Artis auriferae* (1593), I, p. 185.

[31] "De natura rerum," ed. Sudhoff, XI, p. 313.

[32] *Das Buch Paragranum*, ed. Strunz, p. 13.

[33] His influence showed itself not so much in any essential modification of alchemical methods as in deepened philosophical speculation. The most important of these philosophical alchemists was the

physician Gerard Dorn, of Frankfurt am Main. He wrote a detailed commentary on one of Paracelsus's rare Latin treatises, *De vita longa.* See infra, pars. 213ff.

[34] "Nam Planetae Sphaerae et elementa in homine per revolutionem sui Zodiaci verius et virtuosius operantur, quam aliena corpora seu signa superiora corporalia" (For the planets, spheres, and elements in man work more truly and powerfully through the revolution of their zodiac than foreign bodies or the higher bodily signs). *Theatr. chem.*, V (1660), p. 790.

[35] "Liber Azoth," ed. Huser, II, p. 522. The *Cagastrum* is an inferior or "bad" form of the *Yliastrum*. That it is this "cagastric" magic which opens the understanding is worth noting.

[36] Hermes is an authority often cited by Paracelsus.

[37] Quoted from the version in *Rosarium philosophorum*, vol. II of *De alchimia* (1550), p. 133. Reprinted in *Bibliotheca chemica curiosa*, II, pp. 87ff.

[38] The light arises from the darkness of Saturn.

[39] Quoted from the version of *Rosarium* in *Art. aurif.*, II, pp. 379 and 381. The original (1550) edition of the *Rosarium* is based on a text that dates back to about the middle of the 15th cent.

[40] Mylius. *Philosophia reformata*, p. 244. (Mylius was the greatest of the alchemical compilers and gave extracts from numerous ancient texts, mostly without naming the sources.) Significantly, the oldest of the Chinese alchemists, Wei-Po-yang, who lived about A.D. 140, was familiar with this idea. He says: "He who properly cultivates his innate nature will see the yellow light shine forth as it should." (Lu-ch'iang Wu and T. L. Davis, "An Ancient Chinese Treatise on Alchemy," p. 262.)

[41] Preisendanz, *Papyri Graecae Magicae*, I, p. 137, Pap. IV, line 2081, concerning the acquisition of a *paredros*.

[42] Quoted in *Rosarium (Art. aurif.*, II, p. 248). Cf. Preisendanz, II, pp. 45-46. line 48: "I know thee, Hermes, and thou knowest me. I am thou and thou art I, and thou shouldst serve me in all things."

[43] *Amphitheatrum sapientiae aeternae*, p. 197: "Hie, filius mundi maioris, Deus et creatura . . . ille (scl. Christus) filius Dei θεάνθρωπος, h. e. Deus et homo: Unus in utero mundi maioris; alter in utero mundi minoris, uterque Virgineo, conceptus. . . . Absque blasphemia dico: Christi crucifixi, salvatoris totius generis humani, i.e., mundi minoris, in Naturae libro, et ceu Speculo, typus est Lapis Philosophorum servator mundi maioris. Ex lapide Christum naturaliter cognoscito et ex Christo lapidem."

[44] Mylius (*Phil. ref.*, p. 97) says of the *filius ignis:* "Here lies all our philosophy."

[45] *Thus Spake Zarathustra* (trans. Kaufmann), p. 176: "Lonely one, you are going the way to yourself. And your way leads past yourself and your seven devils. . . . You must consume yourself in your own flame; how could you wish to become new unless you had first become ashes! Lonely one, you are going the way of the creator: you would create a god for yourself out of your seven devils." Cf. "Consilium coniugii," *Ars chemica*, p. 237: "Our stone slays itself with its own dart"; and the role of the *incineratio* and the phoenix among the alchemists. The devil is the Saturnine form of the *anima mundi.*

[46] These were known to the alchemists since earliest times. Olympiodorus, for instance, says that in lead (Saturn) there is a shameless demon (the *spiritus mercurii*) who drives men mad. (Berthelot, *Alchimistes grecs*, II, iv, 43.)

[47] Born in Danzig at the beginning of the 16th cent., studied in Basel.

[48] *Epistolarum medicinalium Conradi Gessneri*, Lib. I, fol. 2^{r}.

[49] This is a recurrent formula in alchemical treatises.

[50] The *corpus glorificationis* of other authors.

[51] "De religione perpetua," ed. Sudhoff, Part 2, I, pp. 100f. An equally presumptuous view is expressed in "De podagricis" (ed. Huser, I, p. 565): "Thus man acquires his angelic qualities from heaven and is heavenly. He who knows the angels knows the *astra*, he who knows the *astra* and the *horoscopum* knows the whole world, and knows how to bring together man and the angels." [This and the above passage in the text are translated by Dr. R. T. Llewellyn.—TRANSLATOR.]

[52] In Zosimos the "man of light" (*φώς* = man, *φῶς* = light) is simply called *φῶς*. He is the spiritual man who has clothed himself in Adam's body. Christ let Adam approach (*προσῆν*) and accepted him into paradise (Berthelot, *Alch. grecs*, III, xlix, 5-10). Cf. *Psychology and Alchemy*, par. 456.

[53] "De arte cabalistica," *Opera omnia, I.*

[54] *Occulta philosophia.*

[55] *Astronomia magna*, ed. Sudhoff, XII, p. 55.

[56] Ibid., p. 62.

[57] Ed. Strunz, p. 56; also "Von der Astronomey," ed. Huser, I, p. 215.

[58] Strunz, p. 55.

[59] Pico della Mirandola also uses this term in *Heptaplus*, I, ch. VII (*Opera omnia*, I, p. 59).

[60] *De vita longa* (ed. Dorn), pp. 169ff. Adech is the "interior man," presumably identical with Aniadus and Edochinum (see infra). Concerning the *homo maximus* see *Paragranum*, pp. 45, 59. Dorn calls Adech the "invisibilem hominem maximum."

[61] "Von den dreyen ersten essentiis." ch. IX, ed. Huser, I, p. 325. The idea that the Primordial Man consists of four parts is found also in Gnosticism (Barbelo = "God is four").

[62] The Iliastrum (or Iliaster) is something like the *spiritus vitae* or *spiritus mercurialis* of the alchemists. This is the occult agent in quicksilver, which, extracted in the form of the *aqua permanens*, serves, in highly paradoxical fashion, to separate the occult agent, the anima (soul), from the body (or substance). The contradiction is due to the fact that Mercurius is a self-transforming being, represented as a dragon that devours itself from the tail (uroboros = tail-eater), or else as two dragons eating each other. The function of the Iliaster is just as paradoxical: it is itself a created thing, but it brings all creatures out of a potential state of existence in the world of ideas (which is probably the meaning of Paracelsus's Neoplatonic "Ides") into actual existence. [See also infra, pars. 170ff.]

[63] "De tartaro: Fragmenta anatomiae," ed. Sudhoff. III. p. 462.

[64] Ibid., p. 465: "He is the first man and the first tree and the first created of everything whatsoever."

[65] = "First Thomas," i.e., the first unbeliever and doubter.

[66] Bousset, *Hauptprobleme der Gnosis*, pp. 16ff.

[1] Ed. Sudhoff, III.

[2] Fol. d2^{r} of the 1st edn. (1562).

[3] To give but one example: one passage says that “there is nothing of mortality in the Scaiolae,” while another speaks of the “death and life of the Scaiolae” (infra, pars. 207, 214). Not much reliance should therefore be placed on Bodenstein’s “revision.” As against my view that the *Vita longa* consists of lecture notes, one must consider the fact that there are original fragments written in German (ed. Sudhoff, III, pp. 295ff.). These may be Paracelsus’s drafts for a German version. The date of composition of the *Vita longa* is perhaps 1526. No original MSS. of Paracelsus have been preserved (ibid., pp. xxxiiff.).

[4] The following discussion makes no attempt to evaluate the treatise as a whole, for which reason I have not considered the *De vita libri tres* of Marsilio Ficino an important contribution in this respect.

[5] The word *aestphara* in the Latin may be of Arabic origin. Dorn translates it as *corruptio*. Another possible derivation is *ϕἄρω*, ‘to render invisible,’ ‘to kill,’ and αἰστόω, ‘to cleave,’ ‘to dismember.’ Corruption or putrefaction involves decomposition and hence the disappearance of the previous form. “Nihil mehercle vita est aliud, nisi Mummia quaedam Balsamita, conservans mortale corpus a mortalibus vermibus et aestphara, cum impressa liquoris sallium commistura.”

[6] Ruland, *A Lexicon of Alchemy*, p. 69 (s.v. *Balsamum s. Balsamus):* “It is the liquor of an interior salt most carefully and naturally preserving its body from corruption. . . . In German the term [is] Baldzamen [’soon together’], i.e., quickly joined [*celeriter coniunctum:* hence a means of promoting the coniunctio, see infra]. External Balsam of the Elements is liquor of external Mercury . . . the firmamental essence of existences, the Quintessence.” Hence *B. internus* is a *liquor Mercurii interni.*

[7] *Cheyri* is the yellow wallflower [*Cheiranthus cheiri*, incorrectly given as] *Viola petraea lutea* [mountain pansy] in the *Herbal* of Tabernaemontanus; it is abortifacient and restorative. The plant bears four-petalled yellow blossoms. Galen (*De simplicium medicamentorum facultatibus*, Lib. VII) says it has a carminative and warming effect. In Ruland (*Lexicon*, p. 98), *Cheiri Paracelsicum*, as applied to minerals, is quicksilver; *Flos cheiri* is the white elixir of silver, also the essence of gold. “Others say it is potable gold,” hence it is an arcanum subserving the philosophical aim of alchemy. Paracelsus himself alludes to its fourfold nature: “… and the Spagyric makes a temperate being out of the four [elements], as the flower Cheiri shows.” “Fragmenta medica,” ed. Sudhoff, III, p. 301.

[8] “Quod per universam quatuor elementorum anatomiam perdurare in sua conservatione debet” (Lib. IV, ch. I). In the German fragments to the *Vita longa* Paracelsus says: “For Cheiri is more than Venus, Anthos more than Mars.”

[9] Probably by a process of extraction.

[10] [The following passage is a slight condensation of a note entitled “The Concept of Mercurius in Hermetic Philosophy,” dated Einsiedeln, Oct. 11, 1942, discovered among Jung’s posthumous papers:

“This concept—if one can call it such—not only has a wealth of meanings but appears in variant form as Iliastrum, Iliastes, Iliadus, Yleides, Yleidus, etc. Such an intensification of Paracelsus’s etymological proclivities indicates that a special importance attaches to an idea so variously named. Sometimes the Iliaster is the *principium*, the *prima materia*, the *chaos*, the *prima compositio*, consisting of the three basic substances, Mercurius, sulphur, and salt; sometimes it is the *aer elementalis* or *coelum*, ‘the true spirit in man, which pervades all his limbs’; sometimes the ‘occult virtue of nature, by which all thing[s] increase, are nourished, multiply, and quicken,' as Ruland, a pupil of Paracelsus, defines it (*Lexicon*, p. 181); sometimes the *spiritus vitae*, which is none other than *vis Mercurii*. It is thus identical with the Mercurial spirit, which was the central concept of alchemy from the oldest times to its heyday in the seventeenth century. Like the *Mercurius philosophorum*, the Paracelsan Mercurius is a child of Sol and Luna, born with the help of sulphur and salt, the 'strange son of chaos,' as Goethe calls Mephistopheles. Paracelsus names it 'omne fumosum et humidum in quovis corpore,' the moist, breathlike or vaporous soul dwelling in all bodies. In its highest form the Iliaster signifies the passage of the mind or soul into another world, as took place with Enoch, Elias, and others. (Ruland, *Lexicon*, p. 181. Cf. Ezek. 1 : 13 and Luke 10 : 18.) Not only is it the life-giver, it is the psychopomp in the mystic transformation, leading the way to incorruptibility or immortality. The 'seed of the Iliastric soul' is the spirit of God himself, and on it is imprinted 'God's likeness.'"—EDITORS.]

[11] *Sanctitus* from *sancire*, 'to make unalterable or inviolable'; *sanctitus* = *affirmatus*, 'made firm.' Ruland (*Lexicon*, p. 181): "The first, or implanted [Iliaster] is the span of life."

[12] Probably derived from παραιτέομαι, 'to obtain by prayer,' 'to entreat.' Ruland: "The second Iliaster, prepared Iliaster."

[13] The product of Sol and Luna was represented as a hermaphrodite.

[14] *De vita longa*, Lib. IV, cap. IV: "Eius ultra mille sunt species . . . potius iuxta hoc, ut quilibet microcosmus peculiarem suam, atque adeo perfectam coniunctionem habeat, quilibet, inquam, utrinque perfectam suam ac propriam virtutem" (There are more than a thousand species thereof . . . so that each microcosm may have its own special and even perfect conjunction, each, I say, its own perfect and peculiar virtue).

[15] Lib. IV, cap. VI: "Quod maxime necessarium est in hoc processu erga iliastrum, describamus: Principio ut impurum animatum depuretur citra separationem elementorum, quod fit per tuam ipsius imaginationem, cum ea in animi tui confirmamento consistit, praeter omnem corporalem ac mechanicum laborem."

[16] Cf. Gen. 5: 23-24: "And all the days of Enoch were three hundred sixty and five years. And Enoch walked with God: and he was not; for God took him." According to the chronologist Scaliger (*Animadversiones in chronologia Eusebii*) Enoch was responsible for the division of the year. Enoch was also considered a prefiguration of Christ, like Melchisedek. Cf. Pico della Mirandola ("De arte cabalistica," *Opera omnia*, I, p. 3020): "Denuo Simon ait, pater noster Adam, rursus ex Seth nepotem suscepit, memor eius Cabalae, quam sibi Raziel tradiderat, quod ex sua propagatione nasceretur homo futurus salvator. Quare vocatus est Enos, id est, homo." (Again Simon says that our father Adam received another grandchild from Seth, having in mind that Cabala which Raziel had handed down to him, that of his seed should be born a man who would be a saviour. Wherefore he was called Enos, that is, Man.)

[17] Lib. IV, ch. VI: "Quare microcosmum in sua interiore anatomia reverberari oportet in supremam usque reverberationem" (Wherefore the microcosm in its interior anatomy must be reverberated up to the highest reverberation). This takes place in the *reverberatorium*, a calcining furnace. "Reverberation is ignition, reducing substances under the influence of a potent fire, and by means of reverberation and repercussion, into a fine calx" (Ruland, p. 276).

[18] The "Tractatus aureus" says (ch. IV): "Burn up the body of the air with very much fire, and it will imbue you with the grace you seek" (*Ars chemica*, p. 24).

[19] Arcs is sometimes masculine, too.

[20] From *aqua* and *astrum* = ‘water star.’

[38] Ruland, *Lexicon*, p. 38.

[39] Arcs = Mars. The reference to the wolf supports this interpretation, for the wolf is the animal of Mars. Johannes Braceschus of Brixen, a contemporary of Paracelsus, states in his “Lignum vitae” (*Bibl. chem.*, I, pp. 911ff.) that the principle of the life-prolonging medicine is Mars, to which he refers the saying of Rhazes: “Accipe petram post ingressum Solis in arietem” (Take the stone after the sun’s entry into Aries). Braceschus continues: “This thing [Mars] is a man whose complexion is choleric. . . . This hot and bilious man is iron . . . it is called a man because it has soul, body, and spirit. . . . That metal, although it is begotten by the virtue of all the stars and planets, is nevertheless especially begotten in the earth by virtue of the most high and mighty Pole Star called the Great Bear.” Mars is also called the Daemogorgon, “ancestor of all the gods of the Gentiles.” “Surrounded on all sides by thick clouds and darkness, he walks in the midmost bowels of the earth, and is there hidden . . . not begotten of any, but eternal and the father of all things.” He is a “shapeless chimaera.”

Daemogorgon is explained as the “god of the earth, or a terrible god, and iron.” (For Paracelsus, as we saw, the body purified by the fire was associated with iron, in so far as the residue was “without rust.”) “The ancients attributed to him eternity and chaos for companions: eternity and the prepared quicksilver, which is . . . the eternal liquor.” He is the serpent, the *aqua mercurialis*. “The first son of Daemogorgon was Litigius, that is, the sulphur which is called Mars.” “Chaos is that earthly salt called Saturn; for it is matter and in it everything is without form.” All living and dead things are contained in it, or proceed from it. Daemogorgon, or Mars, thus corresponds to the Ares of Paracelsus. Pernety (*Dictionnaire mytho-hermétique*) defines “Daimorgon” as the “genius of the earth,” “the fire which quickens nature, and in particular that innate and life-giving spirit of the earth of the sages, which acts throughout the whole course of the operations of the great work.” Pernety also mentions “Demorgon” and a treatise of the same name by Raymund Lully. This treatise is not mentioned in Ferguson’s *Bibliotheca chemica* (1906), but it might be a reference to the “Lignum vitae” of Braceschus, which is a dialogue between Lully and a pupil. Roscher (*Lexicon*, I, col. 987) defines Demogorgon as “an enigmatic god. Might be derived from δημιονργός.” Astrologically. Mars characterizes the instinctual and affective nature of man. The subjugation and transformation of this nature seems to be the theme of the alchemical opus. It is worth noting that Colonna’s *Hypnerotomachia* begins with the wolf as the initiating animal; he also has this significance in Canto I of Dante’s *Inferno*, where he appears in a triad of animals. This lower triad corresponds to the upper Trinity; therefore we meet it again as the tricephalous Satan in Canto XXXIV.

[52] As in Reusner’s *Pandora* (1588), Codex Germanicus Alchemicus Vadiensis (St. Gall, 16th cent.), and Codex Rhenoviensis (Zurich, 15th cent). [Cf. Figs. B 3-5.]

[The following (undated) note on *Pandora* was found among Jung’s posthumous papers:

“*Pandora* is one of the earliest synoptic accounts of alchemy, and it may be the first that was written in German. It was first published by Henric Petri in Basel, 1588. It is apparent from the foreword that the author was the physician Hieronymus Reusner, who, however, hides under the pseudonym Franciscus Epimetheus, by whom the book was allegedly ‘made.’ Reusner dedicates it to Dr. Ruland, the well-known compiler of the *Lexicon alchemiae sive Dictionarium alchemisticum* (Frankfurt a. M., 1612). The text of *Pandora* is a compilation in the manner of the *Rosarium* *philosophorum* (1550), which is copiously cited. But other sources are used besides this, for instance the ‘Tractatus aureus Hermetis.’ Reusner was a pupil of Paracelsus. His book, being written in German, is a contribution to the Germanization of medicine that was started by Paracelsus, and, as the foreword shows, to Paracelsus’s revival of the spiritual trends of alchemy. The actual text remains uninfluenced by these innovations and runs along the traditional lines. It contains nothing that is not found in the earlier authors, though the long list of synonyms at the end deserves special mention. This contains a number of Arabic and quasi-Arabic terms which, it appears, multiplied greatly during the 16th century. But the chief value of *Pandora* lies in the series of eighteen symbolical pictures at the end of the volume. As usual, they do not explain the text, or only very indirectly, but they are of considerable interest as regards the secret content of alchemy. Some of the pictures date from the 15th century and are taken from the *Dreifaltigkeitsbuch* (Codex Germanicus 598, 1420, Staatsbibliothek, Munich), but most are from the 16th century. The chief source is probably the ‘Alchymistisches Manuscript’ in the Universitätsbibliothek, Basel. One of the pictures (the Echidna symbol of Mercurius) may come from a 16th-century MS. in St. Gall.”—EDITORS.]

[53] See *Psychology and Alchemy*, Figs. 224 and 232.

[54] *Symbola aureae mensae*, p. 380.

[55] Psalm 129 : 1 (DV): “Out of the depth I have cried to thee, O Lord.”

[56] Psalm 29: 10 (AV): “The Lord sitteth upon the flood: yea, the Lord sitteth King for ever.”

[57] Psalm 28 : 3 (DV): “The voice of the Lord is upon the waters; the God of majesty hath thundered; the Lord is upon many waters.”

[58] *In the sense of θεός ἄνθρωπος.*

[59] *τἤν μονογενῆ μου.* This feminine “only-begotten” seems to refer to a daughter, or to the soul, as Psalm 34: 17 (DV) affirms: “Rescue thou my soul from their malice: my only one from the lions.”

[60] Psalm 21 : 22 (DV): “Save me from the lion’s mouth. . . .”

[61] Hippolytus, *Elenchos*, V, 8. The extreme lowliness of the redeemer’s origin is expressed even more strongly in alchemy: the stone is “cast on the dunghill,” “found in filth,” etc. The “Tractatus Aristotelis” says (*Theatr. chem.*, V, 1660, p. 787): “Lapidem animalem esse, qui tanquam serpens ex corruptione perfectissimae naturae humanae de industria inter duos montes emissus gignitur, scinditur et prolabitur, et in fossa cavernae clauditur” (The living stone which is industriously brought forth as a serpent between the two mountains from the corruption of the most perfect human nature, is torn away and slips forth, and is shut up in a hollow cave). σκώλη£ in conjunction with ἐ£ουδἐνημα, ‘outcast.’ might therefore be interpreted as an intestinal worm.

[73] “Nam ut ipsa [Divinitas] incomprehensibilis, invisibilis, non mensurabilis, infinita, indeterminata, et siquid ultra dici potest, omnia similiter in centro quadrare convenireque certum est. Hoc enim quia locum nullum occupat ob quantitatis carentiam, comprehendi non potest, videri nec mensurari. Tum etiam cum ea de causa infinitum sit, et absque terminis, locum non occupat, nec depingi potest, vel imitatione fingi, Nihilominus omnia quae locum etiam non implent ob carentiam corpulentiae, ut sunt spiritus omnes, centro comprehendi possunt, quod utraque sint incomprehensibilia.” (For it is certain that it [the Divinity] is incomprehensible, invisible, immeasurable, infinite, indeterminable, and if aught more may be said, that it squares and brings all things together in a centre. For this, because it occupies no space, since it lacks quantity, cannot be comprehended, seen, or measured. Also because for that reason it is infinite and has no bounds, it occupies no space, nor can it be depicted, nor can any likeness of it be made. Nevertheless all things which likewise fill no place because they lack body, as is the case with all spirits, can be comprehended in the centre, for both are incomprehensible. As therefore there is no end of the centre, no pen can rightly describe its power and the infinite abyss of its mysteries.) (“Physica genesis,” *Theatr. chem.*, I, 1659, pp. 339f.)

[74] Ibid., p. 349. In “Physica Trismegisti” (ibid., p. 375) Dorn says: “[Sol] primus post Deum pater ac parens omnium vocatus est, cum in eo quorumvis seminaria virtus atque formalis delitescit.” (The Sun is called after God the father and parent of all things, since in him lies hidden the seminal and formal virtue of everything whatever.) P. 376: “Lunam esse matrem et uxorem solis, quae foetum spagiricum a sole conceptum in sua matrice uteroque, vento gestat in aere.” (The moon is the mother and wife of the sun, who bears in her aerial womb the spagyric foetus conceived from the sun.) From this it is evident that the *filius* is begotten of nature gods in a very unchristian manner.

[75] Ibid., p. 363.

[76] “Physica Trithemii,” *Theatr. chem.*, I (1659), p. 391

[77] The sun is the birthplace of the “spiritual fire,” mentioned above. Light-symbols always refer psychologically to consciousness or to a content that is becoming conscious.

[78] The *aqua pura* is the *aqua permanens* of the Latin and Arabic alchemists and the ὕδωρ θεῖον of the Greeks. It is the *spiritus mercurialis* in water form, which in turn serves to extract the “soul” of the substance. The *spiritus mercurialis* corresponds to the spiritual fire, hence *aqua* = *ignis.* Although these terms are used indiscriminately, they are not the same, since fire is active, spiritual, emotional, close to consciousness, whereas water is passive, material, cool, and of the nature of the unconscious. Both are necessary to the alchemical process since this is concerned with the union of opposites. Cf. *Psychology and Alchemy*, Fig. 4.

[79] Khunrath (*Von hylealischen Chaos*, p. 203) says that the *ternarius*, purified "by the Circumrotation or Circular Philosophical revolving of the Quaternarius . . . is brought back to the highest and most pure Simplicity . . . of the plusquamperfect Catholic Monad. . . . The impure, crude One becomes an exceeding pure and subtle One, through the manifestation of the occult and the occultation of the manifest."

[80] "Physica Trithemii," p. 391.

[81] Dorn, "Duellum animi cum corpore," *Theatr. chem.*, I (1659), p. 482. This number symbolism refers to the axiom of Maria: "One becomes Two, Two becomes Three, and out of the Third comes One as the Fourth" (Berthelot, *Alch. grecs*, VI, v, 6). This axiom runs through the whole of alchemy, and is not unconnected with Christian speculations regarding the Trinity. Cf. my "Psychology and Religion," p. 60, and "A Psychological Approach to the Dogma of the Trinity," pp. 164ff.

[82] Steeb, *Coelum Sephiroticum*, p. 19.

[83] Ibid., p. 38.

[84] P. 42.

[85] P. 117.

[86] Ed. Ruska, p. 94. Cf. Codex Berolinensis 532, fol. 154^{v}: "… the sun-point, that is the germ of the egg, which is in the yolk."

[87] *Ars chemica.* The "Consilium coniugii" may date from the 13th cent.

[88] *Phil. ref.*, p. 131.

[89] There is only *one* flash of lightning, which changes the darkness of Saturn into the brightness of Jupiter. Ruland (*Lexicon*, p. 153) states: "Metallic fulmination is, with the higher metals, a process of purging. . . . Fulmination is a metallic gradation, with excoction, educing the pure part, the perfection thereof being indicated by an irradiating splendour."

[90] The colours refer to the *cauda pavonis*, which appears just before the completion of the opus.

[91] Cf. infra, pars. 201f.

[92] "For from mortal man can nothing be called forth which produces longevity, for longevity is outside the body." "Fragmenta medica," ed. Sudhoff, III, p. 291.

[93] *Thereniabin* is a favourite arcanum of Paracelsus. It is *pinguedo mannae* (the fat or oil of manna), popularly known as honeydew—a sticky, resinous coating on leaves, with a sweetish taste. This honey, Paracelsus says. falls from the air. Being a heavenly food, it assists sublimation. He also calls it "maydew." [For a possible connection between ergot-based honeydew and Coleridge's image in "Kubla Khan," see Todd, "Coleridge and Paracelsus, Honeydew and LSD."—EDITORS.]

[94] *Nostoch* is not, as Bodenstein supposes, a species of fire, but a gelatinous alga that appears after continuous rain. These algae are still known as Nostocs in modern botany. It was earlier supposed that Nostocs fell from the air, or from the stars. (They are also called star jelly and witches'-butter.) Ruland (*Lexicon*, p. 240) defines it as "a ray or radiation of a certain star, or its offscouring, superfluity, etc. cast on earth." Hence, like *thereniabin*, it is a sublimating arcanum, because it comes from heaven.

[95] Tabernaemontanus. *Herbal*, s.v. "Melissa."

[96] For this reason the coniunctio is depicted as the embrace of two winged beings, as in the *Rosarium*. Cf. *Psychology and Alchemy*, Fig. 268.

[97] The text is assigned to the 1st cent. A.D. Berthelot, *Alch. grecs*, IV, xx, 8.

[98] An already legendary (Persian) alchemist of perhaps the 4th cent. B.C.

[99] I insert in Berthelot's text the reading of MS. Paris 2250 (καὶ κατώταταν ὥστε), which makes better sense.

[100] The *cauda pavonis* of the Latin alchemists.

[101] The nominative plural corresponding to *aniadorum* is presumably *aniada* rather than *aniadi*.

[102] *Lexicon*, p. 30.

[103] A derivation that would come closest in meaning to the term *Aniadus* would be from ἀνύειν, "to perfect, complete." The form *Anyadei*, defined by Ruland (*Lexicon*, p. 32) as "eternal spring, the new world, the Paradise to come," argues in favour of this.

[104] Taurus, the zodiacal sign of May, is the House of Venus. In the Greek-Egyptian zodiac the bull carries the sun-disk, which rests in the sickle moon (the ship of Venus), an image of the coniunctio. (Cf. Budge, *Amulets and Superstitions*, p. 410.) The Taurus sign is composed of the sun-disk with the moon's horns: ♉. Cf. the alchemical parallel in Dee, "Monas hieroglyphica," *Theatr. chem.*, II (1659), pp. 200ff.

[105] I have given a literal translation of "nitetque ac splendet flammulae color." But since Paracelsus was familiar with Agrippa's *De occulta philosophia*, he may have been referring to, or quoting, a passage from this work. In Book I, ch. XXVII, we read of trees and plants that "are armed with sharp thorns, or burn, prick, or cut the skin by their contact, such as the thistle, nettle, and little flame (*flammula).*" Here *flammula* is the name for various kinds of crowfoot (*ranunculus*), which was used as a corrosive and vesicant and is mentioned as such in Dioscorides (*Medica materia*, p. 295).

[106] Picinellus, *Mundus symbolicus*, s.v. "urtica."

[107] Anachmus is mentioned along with the Scaiolae; see infra, par. 207.

[108] Pomander = *pomambra* = *pomum ambrae*. *Ambra* is a bezoar of the pot-fish or sperm-whale, prized on account of its perfume (ambergris). These and other aromatics were used as "plague balls" to drive away the fetid vapours of sick rooms. *Muscus* is mentioned as an aromatic in Dioscorides (*Medica materia*, p. 42). In Agrippa (*Occult. phil.*, I, p. xxxiv) the aromatics subordinated to Venus include "ladanum, ambra muscus." In our text "muscus in pomambra" is immediately followed by "laudanum." According to Dioscorides (*Med. mat.*, p. 106), *ladanum* is the juice of an exotic plant whose leaves "acquire in the spring a certain fattiness . . . out of which is made what is called ladanum." Tabernaemontanus says this juice is aromatic.

[109] *Laudanum* is the arcane remedy of Paracelsus. It has nothing to do with opium, though it may be derived from the above-mentioned *ladanum*. Adam von Bodenstein (*De vita longa*, p. 98) mentions two *laudanum* recipes of Paracelsus.

[1] Confirmation of this may be found in the work of the alchemist and mystic John Pordage (1607–1681), “Ein Philosophisches Send-Schreiben vom Stein der Weissheit,” printed in Roth-Scholtz, *Deutsches Theatrum chemicum*, I, pp. 557-596. For text, see my “Psychology of the Transference,” pars. 507ff.

[2] Condemned to death under Ferdinand I, and executed in Prague, May 2, 1531. See *Psychology and Alchemy*, par. 480 and n.

[3] “Addam et processum sub forma missae, a Nicolao Cibinensi, Transilvano, ad Ladislaum Ungariae et Bohemiae regem olim missum,” *Theatr. chem.*, III (1659), pp. 758ff.

[8] “Liber Azoth,” p. 534.

[9] “De pestilitate,” Tract. I, ed. Huser, I, p. 334.

[10] “Nihil enim aliud mors est, nisi dissolutio quaedam, quae ubi accidit, tum demum moritur corpus. . . . Huic corpori Deus adiunxit aliud quoddam, puta coeleste, id quod in corpore vitae existit. Hoc opus, hic labor est, ne in dissolutionem, quae mortalium est et huic soli adiuncta, erumpat.” (For death is nothing but a kind of dissolution which takes place when the body dies. . . . To this body God has added a certain other thing of a heavenly nature, that of the life which exists in the body. This is the task, this the toil: that it burst not forth at the dissolution which is the lot of mortals, but is joined to this [body] alone.) “Fragmenta,” ed. Sudhoff, III, p. 292.

[11] “Sequuntur ergo qui vitam aeream vixerunt, quorum alii a 600 annis ad 1000 et 1 too annum pervenerunt, id quod iuxta praescriptum magnalium quae facile deprehenduntur, ad hunc modum accipe: Compara aniadum, idque per solum aera, cuius vis tanta est, ut nihil cum illo commune habeat terminus vitae. Porro si abest iam dictus aer, erumpit extrinsecus id, quod in capsula delitescit. Jam si idem ab illo, quod denuo renovatur fuerit refertum, ac denuo in medium perlatum, scilicet extra id sub quo prius delitescebat, imo adhuc delitescit, iam ut res tranquilla prorsus non audiatur a re corporali, et ut solum aniadum adech, denique et edochinum resonet.” Lib. V, cap. III.

Dorn (*De vita longa*, p. 167) comments on this passage as follows:

a) The *imitation of Aniadus* is effected under the influence of “imaginationis, aestimationis vel phantasiae,” which is equivalent to “air” = spirit. By this is obviously meant the kind of active imagination that takes place in yoga or in the spiritual exercises of Ignatius Loyola, who employs the terms *consideratio*, *contemplatio*, *meditatio*, *ponderatio*, and *imaginatio per sensus* for the “realization” of the imagined content. (Cf. *The Spiritual Exercises of St. Ignatius Loyola*, trans. Rickaby, in particular pp. 40ff., the meditation on Hell.) The realization of Aniadus has about the same purpose as the contemplation of the life of Jesus in these exercises, with the difference that in the former case it is the unknown Primordial Man who is assimilated through individual experience, whereas in the later it is the known, historical personality of the Son of Man.

b) The *lack of air* is explained by Dorn as due to the fact that it was "exhausted" by the efforts required for the realization.

c) That which *bursts forth from the heart* is evil, which dwells in the heart. Dorn continues: "Indeed it is constrained under the vehicle under which it still lies hid." His conjecture of evil and constraint is not supported by the text. On the contrary, Dorn overlooks the preceding *depuratio* as a result of which the operation takes place in an already purified ("calcined") body. The *reverberatio* and the subsequent subliming processes have already removed the denser elements, including the *nigredo* and evil.

d) As a result of his conjecture Dorn is obliged to read "intranquilla" for "tranquilla."

e) Dorn here defines Adech as the "imaginary inner man" and Edochinum as Enochdianum.

[12] "Lapidis philosophorum nomina," MS. 2263-64, Ste. Geneviève, Paris, vol. II, fol. 129, and Pernety, *Fables égyptiennes et grecques*, I, pp. 136ff.

[13] "Psychology and Religion," p. 60.

[14] Cf. "A Psychological Approach to the Dogma of the Trinity," pp. 164ff.

[15] Lib. V, cap. V. Jesahach is not a known Hebrew word.

[16] Concerning the logical aspect of this arrangement see Schopenhauer, "On the Fourfold Root of the Principle of Sufficient Reason."

[17] Even at that time *phantasia* meant a subjective figment of the mind without objective validity.

[18], [19] See p. 168.

[18] An image-making, form-giving, creative activity of the mind. For Paracelsus it was the *corpus astrale*, or the creative power of the astral man.

[19] By this is meant "philosophical" thinking.

[20] Ruland was a Protestant.

[21] "Whereby we attain not merely prolonged but eternal life," adds Ruland. Dorn (*De vita longa*, pp. 176f.) agrees with Ruland's psychological interpretation.

[22] [Sudhoff, XIV, p. 644. This could be translated either as "Ye pious sons, Scaiolae and Anachmi" (nom. pl.) or as "Ye pious sons of Scaiola (gen. fem. sing.) and Anachmus" (gen. masc. sing.). Scaiolae must be fem. and therefore can hardly be in apposition to "filii." The quotation has been located and checked, and begins: "Now mark well in this my philosophy: I have written a special treatise on the nymphis, pygmaeis, silvestribus, gnomis for the love and delectation of the true Scaiolis (*den waren Scaiolis zuliebe und gefallen*). Therefore, ye pious filii Scaiolae et Anachmi . . ." This may be Jung's source for the statement that the "Scaioli are lovers of wisdom." (If Scaiolis is taken as masc. in this context, the nom. sing, would be Scaiolus and the nom. pl. Scaioli.) Cf. *Psychology and Alchemy*, par. 422, n. 50: "Scayolus . . . means the adept." Neither Scaiolus nor Scaioli can be traced from the *Registerband* to the Sudhoff edn., compiled by Martin Müller (Einsiedeln, 1960).—TRANSLATOR.]

[23] For this reason it is said that the lapis or *filius* contains the four elements or is their quintessence, which can be extracted from them, like Aniadus.

[24] "In quo me plurimum offendunt Scaiolae" (Dorn, p. 174).

[25] Ibid., p. 177.

[26] The following passages from Pico della Mirandola (*Opera omnia*, I, p. 3018), on the Cabalistic interpretation of Adam, may have been known to Paracelsus: “Dixit namque Deus: Ecce Adam sicut unus ex nobis, non ex vobis inquit, sed unus ex nobis. Nam in vobis angelis, numerus est et alteritas. In nobis, id est, Deo, unitas infinita, aeterna, simplicissima et absolutissima. . . . Hinc sane coniicimus alterum quendam esse Adam coelestem, angelis in coelo demonstratum, unum ex Deo, quem verbo fecerat, et alterum esse Adam terrenum. . . . Iste, unus est cum Deo, hic non modo alter est, verumetiam alius et aliud a Deo. . . . Quod Onkelus . . . sic interpretatur. . . . Ecce Adam fuit unigenitus meus.” (And God said, Lo, Adam is as one of us—he said not “of you,” but “of us.” For in you angels there is number and difference; but in us, that is, in God, there is unity, infinite, eternal, simple, and absolute. . . . Hence we clearly conjecture that there is a certain other heavenly Adam, shown to the angels in heaven, the one from God, whom he made by his word, and the other, earthly Adam. . . . The former is one with God, the latter not only second, but other and separate from God. . . . Which Onkelos thus interprets: Lo, Adam was my only begotten son.)

[27] See next note and par. 214.

[28] “Porro si pro ratione Necroliorum Scaiolis insereret, esset quod excipiendum ducerem, id quod maximus ille Adech antevertit et propositum nostrum, at non modum deducit: Quod vobis Theoricis discutiendum relinquo” (*De vita longa*, ed. Dorn, pp. 174f). *Necrolii* are the adepts (“Liber Azoth,” p. 524). *Necrolia* or *necrolica* means “medicine conserving life” (*De vita longa*, p. 173).

[29] The Monogenes (*filius unigenitus*) is identical with the city, and his limbs with its gates. Cf. Baynes, *A Coptic Gnostic Treatise*, pp. 58 and 89; also *Psychology and Alchemy*, pars. 138f.

[1] From *super* = ‘above,’ and *monere* = ‘inspire,’ hence ‘inspired from above.’

[2] Not found anywhere else. May be interpreted as the “time of perfection.”

[3] A favourite saying of the alchemists, applied to the lapis.

[1] See above.

[2,3] See above.

[4] For a parallel, cf. Enoch 40 : 2, where God has four faces and is surrounded by the four angels of the Face.

[11] Fl. 1st cent. A.D.

[12] *Chronographia*, ed. Frick, p. 67.

[13] Cf. my “Archetypes of the Collective Unconscious” and “Concerning the Archetypes, with Special Reference to the Anima Concept.”

[14] “And so this spirit is extracted and separated from the other spirit, and then the Spagyric has the wine of health.” (“Fragmenta,” ed. Sudhoff, III, p. 305.)

[15] The apparent contradiction between the rejection of the *gesta Melosines* and the assimilation of the anima is due to the fact that the *gesta* occur in a state of anima possession, for which reason they must be prevented. The anima is thereby forced into the inner world, where she functions as the medium between the ego and the unconscious, as does the persona between the ego and the environment.

[16] This recalls the “signs and characters of the planets” in Agrippa, which are imprinted on man at birth as on everything else. But man has, conversely, the faculty of re-approximating himself to the stars: “Potest enim animus noster per imaginationem vel rationem quandam imitatione, ita alicui stellae conformari, ut subito cuiusdam stellae muneribus impleatur. . . . Debemus igitur in quovis opere et rerum applicatione vehementer affectare, imaginari, sperare firmissimeque credere, id enim plurimum erit adiumento . . . animum humanum quando per suas passiones et effectus ad opus aliquod attentissimus fuerit, coniungi ipsum cum stellarum animis, etiam cum intelligentiis: et ita quoque coniunctum causam esse ut mirabilis quaedam virtus operibus ac rebus nostris infundatur, cum quia est in eo rerum omnium apprehensio et potestas, tum quia omnes res habent naturalem obedientiam ad ipsum, et de necessitate efficaciam et movent ad id quod desiderat nimis forti desiderio. Et secundum hoc verificatur artificium characterum, imaginum, incantationum et sermonum, etc. . . . Animus enim noster quando fertur in aliquem magnum excessum alicuius passionis vel virtutis, arripit saepissime ex se ipso horam vel opportunitatem fortiorem, etc. . . . hie est modus per quem invenitur efficacia [operationum].” (For through a certain mental faculty our spirit can thus by imitation be made like to some star, so that it is suddenly filled with the functions of a star. . . . We ought therefore in every work and application of things eagerly to aspire, imagine, hope, and most firmly believe, for that will be a very great help. . . . [*De occult, phil.*, Lib. I, cap. 66.] The human spirit, when through its passions and operations it is highly intent upon any work, should join itself with the spirits of the stars, yea, with their intelligences; and when thus conjoined, be the cause that a certain wonderful virtue is infused into our works and affairs, both because there is in it a grasping of and power over all things, and because all things have a natural and necessarily efficacious obedience to it, and move towards what it desires with an extremely strong desire. And according to this is verified the work of the characters, images, incantations, and words, etc. . . . For when our spirit is moved to any great excess of

any passion or virtue, it very often snatches for itself a more effective hour or opportunity, etc. . . . This is the way by which the efficacy [of the operations] is found.) (Lib. I, cap. 67.)

[17] Trans. Foxcroft, pp. 126ff.

[18] The lower triad, corresponding to the upper Trinity, and consisting of the theriomorphic symbols of the three evangelists. The angel as the fourth symbol occupies a special position, which in the Trinity is assigned to the devil. Reversal of moral values: what is evil above is good below, and vice versa.

[19] In the *Golden Ass* of Apuleius the process of redemption begins at the moment when the hero, who has been changed into an ass because of his dissolute life, succeeds in snatching a bunch of roses from the hand of the priest of Isis, and eating them. Roses are the flowers of Venus. The hero is then initiated into the mysteries of Isis, who, as a mother goddess, corresponds to the Mater Gloriosa in *Faust II.* It is of interest to note the analogies between the prayer to the Mater Gloriosa at the end of *Faust* and the prayer to Isis at the end of the *Golden Ass:*

(*Faust II*, trans. Wayne, p. 288)	(*Golden Ass*)
O contrite hearts, seek with your eyes	You are indeed the holy preserver of humankind,
The visage of salvation;	Offering amid the evil chances of the unfortunate the k protection of a mother,
Blissful in that gaze, arise	And no smallest moment that passes is devoid of your favours,
Through glad regeneration.	But both by land and by sea you care for men, driving life’s storms and stretching out to them your saving hand; wherewith you unravel the most tangled webs fate, and calm the tempests of fortune, and control t varied wanderings of the stars.
Now may every pulse of good Seek to serve before thy face;	Wherefore, poor though I am, I will do what I may as a devotee.
Virgin, Queen of Motherhood, Keep us, Goddess, in thy grace.	To keep ever hidden in my heart the vision of your divi face and most holy godhead.

[20] Horace, *Epist*. I. x. 24.

[21] *Musaeum hermeticum*, pp. 73ff. [This sentence has been altered in accordance with the correction given in *Psychology and Alchemy*, 2nd edn., par. 431, n. 11.—TRANSLATOR.]

[22] “For before the sapphire existed, there was no arcanum” (*Paragranum*, p. 77). *De vita longa*, ed. Dorn, p. 72: “They are to be referred to the cheyri and the sapphirine flower, i.e., to those two precious stones of the philosophers.” Bodenstein (*Onomasticon*, p. 64): “The sapphirine material: that liquid in which there is no harmful matter.”

[23] *Occult. phil.*, I, cap. 28, p. xxxiv.

[24] Carter, *Epitheta Deorum*, s.v. “Venus.”

[25] Ibid.

[26] The hermaphroditic Venus was regarded as typifying the coniunctio of Sulphur and Mercurius. Cf. Pernety, *Fables égyptiennes et grecques*, II, p. 119.

[27] Cf. “Psychology and Religion,” p. 60.

[28] It could be translated as “you have mentioned not at all.”

[29] Lazarello, *Crater Hermetis* (1505), fol. 32$^{r\text{-}v}$. (As in Reitzenstein, *Poimandres*, p. 320.)

[1] I give only a general survey of the Mercurius concept in alchemy and by no means an exhaustive exposition of it. The illustrative material cited should therefore be taken only as examples and makes no claim to completeness. [For the "symposium on Hermes" see the editorial note on p. 191.—EDITORS.]

[2] [Author's paraphrase. Cf. "The Spirit in the Bottle," *Grimm's Fairy Tales* (trans. Hunt, rev. Stern), pp. 458-62.—EDITORS.]

[3] Concerning personification of trees, see Frazer, *The Magic Art*, II, ch. 9. Trees are also the dwelling places of spirits of the dead or are identical with the life of the newborn child (ibid., I, p. 184).

[4] Cf. the title-page of *Mutus liber*, showing an angel waking the sleeper with a trumpet ("The Psychology of the Transference," Fig. 11). Also the illustration in Michelspacher's *Cabala, speculum artis et naturae (Psychology and Alchemy*, Fig. 93). In the foreground, before a mountain upon which is a temple of the initiates, stands a blindfolded man, while further back another man runs after a fox which is disappearing into a hole in the mountain. The "helpful animal" shows the way to the temple. The fox or hare is itself the "evasive" Mercurius as guide (*ὁδηγός*).

[5] For additional material on the tree symbol, see infra, "The Philosophical Tree," Part II.

[6] This motif was used in the same sense by the Gnostics. Cf. Hippolytus, *Elenchos*, V, 9, 15, where the many-named and thousand-eyed "Word of God" is "hidden in the root of All."

[7] *Theatrum chemicum*, IV (1659), p. 500.

[10] “Epistola ad Hermannum,” *Theatr. chem.*, V (1660), p. 800; “Gloria mundi,” *Mus. herm.*, pp. 224, 244. As the arcane substance magnesia he is called the “full moon” (*Rosarium*, in *Art. aurif.*, II, p. 231) and *succus lunariae* (p. 211). He has fallen down from the moon (Berthelot, *Alch. grecs*, III, vi, 9). The sign for Mercurius is ☽ in the “Book of Krates” (Berthelot, *Moyen âge*, III, p. 48). In the Greek Magic Papyri, Hermes is invoked as “circle of the moon” (Preisendanz, *Papyri Graecae Magicae*, I, p. 195).

[11] Vision of Krates in Berthelot, *Moyen âge*, III, p. 63. As Adam with Venus in the bath, Valentinus, “Practica,” *Mus. herm.*, p. 425 (cf. *Mysterium Coniunctionis*, pp. 303, 383). As *Sal Veneris*, green and red lion (= Venus), Khunrath, *Hyl. Chaos*, pp. 91, 104. The substance of Mercurius consists of Venus (Mylius, *Phil. ref.*, p. 17). Since his mother Venus is the *matrix corrupta*, Mercurius as her son is the *puer leprosus* (“Rosinus ad Sarratantam,” *Art. aurif.*, I, p. 318). In the Magic Papyri. the day of Aphrodite is associated with Hermes (Preisendanz, *Pap. Graec. Mag.*, II, p. 120). In Al-’Irāqī the attributes of Venus are identical with those of Mercurius: sister, bride, air, green, green lion, phoenix (Holmyard, p. 420).

[32] *Phil. ref.*, p. 18.

[33] Sulphur is the “fire hidden in Mercurius” (Trevisanus in *Theatr. chem.*, I, 1659, p. 700). He is identical with Mercurius: “Sulphur is mercurial and Mercurius is sulphureal” (“Brevis manuductio,” *Mus. herm.*, p. 788).

[34] *Hyl. Chaos*, p. 186. Therefore, he says, we should pray to God for the spirit of discretion, that it may teach us the distinction between good and evil.

[35] It is conceivable that the curious name for the alchemists in Rupescissa’s *La Vertu et propriété de la quinte essence*, “les poures hommes evangelisans,” goes back to the Cathar *perfecti* and *pauperes Christi*. Rupescissa (Jean de Roque-taillade) lived about the middle of the 14th cent. He was a critic of the Church and the clergy (Ferguson, *Bibliotheca chemica*, II, p. 305). The Cathar trials lasted into the middle of the 14th cent.

[7] “Exercit. in Turb.,” *Art. aurif.*, I, p. 170; Ripley, *Chymische Schrifften*, p. 31; “Tract. aur. cum scholiis,” p. 610: “A mediator making peace between enemies.”

[8] “Aquarium sap.,” Mus, *herm.*, p. 111.

[9] Ibid., p. 118.

[10] Khunrath, *Hyl. Chaos*, p. 59.

[11] “Septem Tract. hermet.,” *Ars chemica*, p. 22. *Rosarium*, p. 381: “I illumine the air with my light and warm the earth with my heat, I bring forth and nourish the things of nature, plants and stones, and with my power I take away the darkness of night, and cause day to endure in the world, and I lighten all lights with my light, even those in which there is no splendour nor greatness. For all these arc of my work, when I put upon me my garments; and those who seek me, let them make peace between me and my bride.” This is cited from the “Dicta Belini” (printed in Manget’s *Bibl. chem.*, I, p. 478). There are variations in the text. I have quoted the passage in full because of its psychological interest.

[12] “For in the Stone arc body, soul, and spirit, and yet it is one stone” (“Exercit, in Turb.,” *Art. aurif.*, I. p. 170).

[13] Cf. *Psychology and Alchemy*, par. 26.

[1] Hence the designation of Mercurius as *mare nostrum.*

[2] Cf. Maitrayana-Brāhmana Upanishad, V, 8 (Sacred Books of the East, vol. 15, p. 311). He occurs as the *spiritus vegetativus* and collective soul in the Vedanta-Sutras (ibid., vol. 34, p. 173, and vol. 48, p. 578).

[3] The treatise of Rosinus (Zosimos) is probably of Arabic origin. "Malus" might be a corruption of "Magus." The *Fihrist* of Ibn al-Nadim (A.D. 987) lists, along with writings of Rimas (Zosimos), two works by Magus one of which is entitled "The Book of the Wise Magus (?) on the Art" (Ruska, *Turba*, p. 272).

[5] Cf. "The Phenomenology of the Spirit in Fairytales," pp. 231ff.

[6] [Cf. *Psychology and Alchemy*, ch. 5, "The Lapis-Christ Parallel," and *Aion, ch.* 5, "Christ, a Symbol of the Self."—EDITORS.]

[7] *The Spiritual Exercises* (trans. Rickaby), pp. 75ff.

[8] [From L. *mephitis*, a noxious exhalation from the earth.—TRANSLATOR.]

[9] Evidence for this is the widespread motif of the two hostile brothers.

[10] Cf. the saying of Ostanes concerning the stone that has a spirit.

[11] "For the knowledge of the creature, in comparison with the knowledge of the Creator, is but a twilight; and so it dawns and breaks into morning when the creature is drawn to the love and praise of the Creator. Nor is it ever darkened, save when the Creator is abandoned by the love of the creature."—*The City of God*, XI, vii.

[12] Brihadāranyaka Upanishad, IV, 3, 6 (cf. Hume, *The Thirteen Principal Upanishads*, p. 133).

[13] "And when it [the creature's knowledge] comes to the knowledge of itself, that is one day" (Et hoc cum facit in cognitione sui ipsius, dies unus est).—*The City of God*, XI, vii. This may be the source for the strange designation of the lapis as "filius unius diei." [Cf. *Mysterium Coniunctionis*, pp. 335, 504.]

[14] "Since no knowledge is better than that by which man knows himself, let us examine our thoughts, words, and deeds. For what does it avail us if we are to investigate carefully and understand rightly the nature of all things, yet do not understand ourselves?"— *Liber de Spiritu et Anima*, LI (Migne, *P.L.*, vol. 40, cols. 816-17). This book is a very much later treatise falsely attributed to Augustine.

[15] "Wherefore the knowledge of the creature, which is in itself evening knowledge, was in God morning knowledge; for the creature is more plainly seen in God than it is seen in itself."—*Dialogus Quaestionum LXV*, Quaest. XXVI (Migne, *P.L.*, *vol.* 40, col. 741).

[16] The *Liber de Spiritu et Anima* attributes very great importance to self-knowledge, as being an essential condition for union with God. "There are some who seek God through outward things, forsaking that which is in them, and in them is God. Let us therefore return to ourselves, that we may ascend to ourselves. . . . At first we ascend to ourselves from these outward and inferior things. Secondly, we ascend to the high heart. . . . In the third ascent we ascend to God" (chs. LI–LII; Migne, *P.L.*, vol. 40, col. 817). The "high heart" (*cor altum;* also "deep heart") is the mandala divided into four, the *imago Dei*, or self. The *Liber de Spiritu et Anima* is in the mainstream of Augustinian

tradition. Augustine himself says (*De vera religione LXXII*, Migne, *P.L.*, vol. 34, col. 154): “Go not outside, return into yourself; truth dwells in the inner man. And if you find that you are by nature changeable, transcend yourself. But remember that when you transcend yourself, you must transcend yourself as a reasoning soul.”

[17] “Evening descends when the sun sets. Now the sun has set for man, that is to say, that light of justice which is the presence of God.”—*Enarrationes in Ps. XXIX*, II, 16 (trans. Hobgin and Corrigan, I, p. 308). These words refer to Ps. 30 : 5 (A.V.): “Weeping may tarry for the night but joy cometh in the morning.”

[18] *The City of God*, XI, viii. Cf. also *Dialog. Quaest. LXV*, Quaest. XXVI,

[19] *Confessions* (trans. Sheed), p. 289.

[20] *Enarrationes in Ps. CIII*, Sermo III, 21 (Migue, *P.L.*, vol. 37, col. 1374).

[1] Cf. *Aion*, pp. 24ff.

[2] [Cf. “The Psychology of the Transference,” Fig. 1.]

[3] [Cf. *Psychology and Alchemy*, Figs. 231 (the *Pandora* picture) and 128 (the Hermes picture). *De chemia* is the work by Zadith Senior.—EDITORS.]

[4] Ruland, *A Lexicon of Alchemy*, p. 286.

[5] “Epistola ad Hermannum,” *Theatrum chemicum*, V (1660), p. 804.

[5a] [But cf. *The Hieroglyphics of Horapollo*, tr. Boas, p. 57.]

[6] Par. 217.

[7] *Mudrā* (Skt.) is a ritual or magical gesture.

[8] For the *chakra* theory see Avalon, *The Serpent Power*, and concerning *φρένες* see Onians, *The Origins of European Thought*, pp. 14ff.

[9] [Cf. supra, par. 301.]

[10] Cf. Evans-Wentz, *The Tibetan Book of the Dead*, pp. 101ff.

[11] Philo, “De opificio mundi” [see Colson/Whitaker trans., I, p. 13].

[12] Synonymous with the *caput corvi* and *nigredo*. Cf. Mylius, *Philosophia reformata*, p. 19, who says that in the *nigredo* the *anima media natura* holds sway. This is roughly the equivalent of what I call the collective unconscious.

[13] Cf. *Aion*, pp. 113ff.

[14] By which I mean the Greek *δαίμων* and not the Christian devil.

[15] Sacred Books of the East, VIII, p. 91. Unfortunately I was unable to ask the patient about the source of this saying, but I know she was acquainted with the Bhagavadgītā.

[16] Solar gods.

[17] The priest who recites the prayers of the Yajur-Veda.

[18] *Suāhā* is one of the holy syllables. It is uttered at the recitation of the Veda during thunderstorms (Apastamba, in SBE, II, p. 45) and at sacrifices to the gods (ibid., p. 48).

[19] Surya = sun.

[20] SBE, XLI, p. 112.

[21] Rain-god.

[22] SBE, XLII, p. 116. [Varuna = sky-god.]

[23] Cf. the stork on the tree, infra, pars. 415ff.

[24] P. 292, Picture 3.

[25] [From verses XXVI-XXVII; with kind permission of Editions Pierre Seghers.

> “And then I came upon an outcropping of rock
> From which yawned a mist-covered pit.

A dense crowd was hastening thither
From the four quarters. I mingled among them.
I noticed that we were turning in a spiral.
A vortex in the funnel sucked us in.
In the centre, a colossal catalpa
On which hung the hearts of the dead.
At each fork had chosen to settle
A little sage who winked as he saw me.
… … … … … …
At the very bottom, where the lagoons spread out,
What quietness, at the hub of things!
Beneath the tree of my life, the last river
Surrounds an island where there rises
In the mists a cube of grey rock,
A Fortress, the Capital of the Worlds.”]

[26] Often represented by a snake.

[27] Cf. the heart-shaped leaves and flowers in Figs. 14, 15, 17.

[1] In the dream of Nebuchadnezzar the king himself is a tree. There is a very ancient, indeed primitive idea that the tree actually represents the life of a man; for instance, a tree is planted at the birth of a child, and its and the child's fates are identical. "Therefore the tree is the image and mirror of our condition" (Alciati, *Emblemata cum commentariis*, p. 888b).

[2] Including figures of speech.

[3] It is not always easy to prove this, because the tradition is often unconscious yet is recalled cryptomnesically.

[4] The relation is similar to that between comparative anatomy and human anatomy. with the difference that in psychology the comparative findings have a practical as well as a theoretical importance.

[5] We can say this not only because very many well-known alchemists were physicians, but also because chemistry in those days was essentially a pharmacopeia. The object of the quest was not merely the *aurum philosophicum seu potabile*, but the *medicina catholica*, the panacea and alexipharmic.

[1] Holmberg, *Der Baum des Lebens*, p. 9.

[2] Berthelot, *Collection des anciens alchimistes grecs*, IV, i, 12.

[3] “Secretum nobilissimum et verissimum Venerabilis Viri Domini Iodoci Greveri Presbyteri,” as reprinted in *Theatrum chemicum*, III (1659), pp. 699-722.

[4] The text has: “Saturnus, Jupiter, etc. sunt trunci,” which might mean that there are several trunks, or that the trunk consists of the four. Evidently Michael Maier, who cites Greverus (*Symbola aureae mensae*, p. 269), was not clear about this either, for he ascribes to Greverus the view that Mercurius is the root, Saturn, Jupiter, Mars, and Venus are the trunk and branches, sun and moon the leaves and flowers of the tree. In my opinion he correctly understands the four as the classical tetrasomia (see infra).

[5] “Secretum,” p. 700.

[6] P. 720.

[7] P. 721.

[8] “Anatomia” and “astrologia terrestris” are specifically Paracelsan concepts. Accordingly the *terminus a quo* for the treatise is the second half of the 16th cent. “Astrologia terrestris” might also be translated as the “earthly firmament” of Paracelsus.

[9] … argumentum omnipotentiae Dei, testimonium resurrectionis mortuorum, exemplum remissionis peccatorum, infallibile futuri iudicii experimentum et speculum aeternae beatitudinis.” “Secretum,” p. 721.

[10] Cf. the refusal of the Basel printer, Conrad Waldkirch, to include *Aurora consurgens* l in *Artis auriferae.* See *Psychology and Alchemy*, par. 464.

[11] He does mention, however, gold, silver, and mercury as initial ingredients which have to be prepared and purified first, so that “common substances” (*vulgaria*) may become “physical ones” (*physica*) (p. 702). Here “physical” means *non vulgi*, i.e., symbolic.

[12] Berthelot, *Les Origines de l’alchimie*, p. 59.

[13] Supra, par. 355. 11. 4.

[14] “Triptativa coniunctio: id est, Trinitatis unio fit ex corpore, spiritu et anima. . . . Sic ista Trinitas in essentia est unitas: quia coaeternae simul sunt et coacquales. Tetraptiva coniunctio dicitur principiorum correctio.” (The threefold coniunctio: that is, the union of the Trinity is composed of body, spirit, and soul. . . . Thus the Trinity is in its essence a unity for they are coeternal and coequal. The fourfold coniunctio is called the correction of the principles.)— “Scala philosophorum,” *Art. aurif.*, II, p. 138. The *coniunctio tetraptiva* is called the “noblest coniunctio” because it produces the lapis by uniting the four elements.

[15] *Psychology and Alchemy*, pars. 26, 209.

[1] “And in our opus there are two earths and two waters.”—“Scala phil.,” *Art. aurif.*, II. p. 137.

[2] According to the “Book of Krates,” the tincture is a “fiery and gaseous poison.”— Berthelot, *La Chimie au moyen âge*, III, p. 67.

[3] Ibid., p. 82.

[4] Cf. “The Psychology of the Transference,” ch. 2.

[5] *Vitis* was the name given to the philosophical tree in late antiquity, and the opus was called the “vintage” (*vindemia*). An Ostanes quotation in Zosimos (Berthelot, *Alch. grecs*, III, vi, 5) says: “Press the grape.” Cf. Hoghelande in *Theatr. chem.*, I (1659), p, 180: “Man’s blood and the red juice of the grape is our fire.” *Uvae Hermetis* = “philosophical water” (Ruland, *Lexicon*, p. 325). Concerning the “true vine” see the interpretation in *Aurora consurgens* II (*Art. aurif.*, I, p. 186). *Vinum* is a frequent synonym for the *aqua permanens.* Cf. “Hermes the vintager” in Berthelot, *Alch. grecs*, VI, v. 3.

[6] The olive is the equivalent of the grape inasmuch as both are pressed and yield a precious juice.

[7] Preisendanz, *Papyri Graecae Magicae.* II, pp. 45f.

[8] Pyramid Text of Pepi I: “Homage to thee, O thou who hast four faces which rest and look in turn upon what is in Kenset. . . .” (Budge, *The Gods of the Egyptians*, I, p. 85). Kenset was the first nome (district) of ancient Egypt, the region of the first cataract (ibid., II, p. 42).

[9] Ibid., I, p. 496. For illustration, see ibid., II, p. 311.

[10] Ibid., I, p. 497; cf. p. 210.

[11] I, p. 491.

[12] A later form of Amset.

[13] The one human head would indicate consciousness of an aspect or function of the individual psyche. Horus as the rising sun is the enlightener, just as the vision of Ezekiel signifies enlightenment. On the other hand magic, if it is to be effective, always presupposes unconsciousness. This would explain the absence of the human face.

[14] Cf. the symbolism of the self, whose totality is characterized by four quaternions: *Aion*, pp. 242ff.

[15] The old pagodas in India are actually stone chariots on which the gods are enthroned. In Daniel 7 : 9, the Ancient of Days sits on a throne.

[16] “A cherub stretched out and protecting,” “covering cherub.”

[17] [“Mark” in DV, AV, RSV, and Hebrew Bible. Vulgate: “signa Than.” Cf. *La Sainte Bible, traduit en français sous la direction de l’Ecole Biblique de Jérusalem* (Paris, 1956), where the word is translated as “croix,” with a note: “literally Tav, as Vulgate translates. This letter had, in the ancient alphabet, exactly the shape of a cross.”—TRANSLATOR.]

[18] *Carmina*, XIX, verse 640 (Migne, *P.L.*, vol. 61, cols. 546f.):

> “Qui cruce dispensa per quattuor extima ligni
> Quattuor attingit dimensum partibus orbem
> Ut trahat ad vitam populos ex omnibus oris

Et quia morte crucis cunctis deus omnia Christus
Extat in exortum vitae finemque malorum,
Alpha crucem circumstat et Ω, tribus utraque virgis
Littera diversam trina ratione figuram
Perficiens, quia perfectum est mens una, triplex vis.”

[19] Cf. “Concerning Mandala Symbolism.”

[20] Daniel 7 : 4ff.

[21] [And Adamas: cf. *Aion*, pp. 208f.—EDITORS.] Hippolytus, *Elenchos*, V, 7, 29ff.

[22] *Elenchos*, VI, 51, 1.

[23] Usener, *Das Weihnachtsfest*, p. 149.

[2] *Psychology and Alchemy*, pars. 336f.

[3] Berthelot, *Alch. grecs*, III, vi, 5. Cf. supra, “The Spirit Mercurius,” pars. 264f.

[4] Cf. *Aion*, pp. 162ff.

[5] The immediately preceding passage remarks that God “is everywhere” and “not in the smallest place, like the daemon” (*οὐκ ἐν τόπῳ ἐλαχίστῳ ὡς τὸ δαιμόνοιν*). Thus one of God’s attributes is infinity, whereas the distinguishing mark of the daemon is limitation in space, Man as microcosm would then be included in the concept of the daemonic, and psychologically this would mean that the ego, separated and split off from God, is likely to become daemonic as soon as it accentuates its independence of God by its egocentricity. The divine dynamism of the self, which is identical with the dynamism of the cosmos, is then placed at the service of the ego, and the latter is daemonized. This would account for the magically effective personality of those historical figures whom Burckhardt called the “great despoilers.” *Exempla sunt odiosa.*

[6] Berthelot, *Alch. grecs*, II, iv, 26.

[7] *Elenchos*, X, 34, 4 (cf. Legge, *Philosophumena*, II, p. 178).

[1] Pars. 342ff.

[2] “When the body is dissolved, there will sometimes appear two branches, sometimes three, sometimes more. . . .” (*Theatr. chem.*, I, 1659. pp. 147f.).

[3] “… that it may grow within the glass like a tree,” “it made it grow upward in its glass with discoloured flowers” (Ripley, *Opera*, p. 86). “The philosophical tree flourished with its branches” (“Introitus apertus,” *Musaeum hermeticum*, p. 694).

[4] “Senior, the author of *Lilium*, says that the sight of it [the vessel] is more to be desired than the scripture” (Hoghelande, *Theatr. chem*., 1, 1659, p. 177). Cf. also *Psychology and Alchemy*, par. 360.

[5] “The salt and the tree can be made in any moist and convenient place” (“Gloria mundi,” *Mus. herm.*, p. 216).

[6] Ripley, *Opera*, pp. 39, 46; cf. “Tractatus aureus de lapide,” *Mus. herm.*, p. 39.

[7] Ripley. *Opera*, p. 46.

[8] Vitis *arborea* in Ripley’s *Scrowle* (British Museum, MS. Sloane 5025). “Do you not know that all holy Scripture is written in parables? For Christ the Son of God followed this method, and said, I am the true vine.” (*Aurora consurgens* II, *Art. aurif.*, I, p. 186.) Vitis *sapientum* (ibid., p. 193, and “Hermetis Trismegisti Tractatus aureus,” *Theatr. chem.*, IV, 1659, p. 613).

[9] Djābir ibn Hayyān, “Le Livre du Mercure oriental, occidental, et du feu de la pierre,” in Berthelot, *Moyen âge*, III, pp. 214f.

[10] Maria Prophetissa.

[11] Referring to the *viriditas benedicta* of Latin alchemy, here an allusion to the incorruptibility of the fruit of the tree.

[12] “Galen speaks of the Philosophical tree, which has seven branches” (*Art. aurif.*, I, p. 222).

[13] “Marcasita = an imperfect metallic substance” (Ruland, *Lexicon*, p. 217). In chemistry, a collective name for various pyrites (Lippmann, *Entstehung und Ausbreitung der Alchemie*, indices).

[14] *Lutum* is gypsum or clay; mixed with hair, it was used for sealing the lids of vessels (Lippmann, I, p. 663).

[15] “De genealogia mineralium,” *Theatr. chem.*, I (1659), p. 574.

[16] “Their [the fruits’] coagulation takes place instantaneously.” The fruits are “sent forth at the extremities of the *locustae.” Locustae* are the tips of the branches (Ruland, p. 209: “tops or young shoots of trees”). The form *lūcusta* in MS. seems to derive from *lucus*, ‘grove’ (Walde, *Lateinisches Etymologisches Wörterbuch*, I, p. 818).

[17] In text, *Lolium temulentum* L.

[18] Ibn Sina (980-1037), a physician and opponent of alchemy.

[19] abu-Bakr Muhammad ibn-Zakāriya’ al-Rāzi (d. 925), also named Rasis or Rhazes, physician and alchemist. Known in the West by his “Excerpta ex libro luminis luminum” in Lacinius, *Pretiosa margarita novella*, pp. 167ff.

[20] *Theatr. chem.*, I (1659), p. 574.

[21] Pauli, “The Influence of Archetypal Ideas on the Scientific Theories of Kepler,” in Jung and Pauli, *Interpretation of Nature and the Psyche.*

[1] *Theatr. chem.*, I (1659), pp. 513ff.

[2] An allusion to the many colours of the *cauda pavonis* (peacock's tail), whose appearance heralds the attainment of the goal.

[3] Cf. the awakened dead in Hades, who grow like the flowers in spring. Berthelot, *Alch. grecs*, IV, xx, 9.

[4] The terrestrial equivalent of the sponge was said to be the puff-ball. Sponges could hear and were sentient. When torn up, they exuded a juice like blood. Cf. the mandrake, which shrieks when it is torn up. "When they are torn from their places, it is heard and there will be a great noise." (Calid, "Liber secretorum," *Art. aurif.*, I, p. 343.) For the sponge, see *Mysterium Coniunctionis.* p. 134 and n. 205.

[5] *Putus* can also mean 'genuine' or 'unadulterated.' *Argentum putum* is unalloyed silver. *Putus* instead of *purus* is significant, see next section.

[6] Impure metals, oxides, and salts.

[7] Human diseases are the equivalent of the *leprositas* of the metals. The text has *liberabat*, but the sense requires *liberabit*, as the prophecy is not yet fulfilled.

[8] The quotation is not literal. Calid ("Liber secretorum," *Art. aurif.*, I, p. 325) says: "You must know, brother, that this magistery of ours concerning the secret stone, and our honoured office, is a great secret of God, which he has hidden from his people, and has willed to reveal to none save those who have faithfully deserved well as sons and have known his *goodness* and greatness." Dorn interprets the speaker, perhaps rightly, as Hermes (Trismegistus), who later on in the text speaks of "my own disciple, Musa." Moses, who was counted as an alchemist, was identified with Musaios, the teacher of Orpheus.

[9] Here too Dorn may be referring to Calid, who says (ibid., p. 342): "Take this stone that is no stone nor of the nature of stone. Moreover, it is a stone whose substance is generated on the top of the mountains [*in capite montium*], and the philosopher chose to say 'mountains' instead of 'living things' [*animalia*]." (The text is corrupt.) The stone is found in the head of a snake or a dragon, or is the "head-element" itself, as in Zosimos. World-mountain, world-axis, world-tree, and *homo maximus* are synonymous. Cf. Holmberg, *Der Baum des Lebens*, pp. 20, 21, 25.

[1] *Von hylealischen Chaos*, p. 93; cf. also p. 197.

[2] For Azoth, see "The Spirit Mercurius," supra, par. 271.

[3] *Mus. herm.*, p, 118: "Christ is compared and united with the earthly stone . . . it is an outstanding type and lifelike image of the incarnation of Christ."

[4] Psalm 18: 6: "he, as a bridegroom coming out of his bride chamber, hath rejoiced as a giant to run the way" was referred by the Church Fathers to Christ.

[5] The text refers here to Matth. 26, obviously meaning verses 26ff., the institution of the Last Supper. [The phrase "giant of twofold substance" (*geminae gigas substantiae*) seems to have been first used by St. Ambrose, in line 19 of his Christmas hymn beginning "Intende qui regis Israel." The relevant stanza is translated by J. M. Neale, *Collected Hymns*, *Sequences and Carols*, p. 104: "Proceeding from His chamber free,/ The royal hall of chastity,/Giant of twofold substance, straight/His destined way He runs elate."—A.S.B.G.]

[6] The anonymous author of "Aquarium sapientum" was not altogether clear about the triune essence, for he says it is "of one, a divine essence, then of two, of God and man, that is, of three persons, of four, namely of three persons and one divine essence, as also of five, of three persons and two essences, namely one divine and one human" (p. 112). The *filius macrocosmi* seems to have loosened up the dogma quite considerably.

[7] "Aquarium sapientum," pp. 111f.

[8] *Liber gratiae spiritualis* (Venice, 1578), pp. 107f.

[9] Alan of Lille, *Elucidatio in Cant. Cant.* 6 (Migne, *P.L.*, vol. 210, col. 95).

[16] *Elucidatio* (Migne, *P.L.*, vol. 210, col. 94).

[17] Cf. the chapter on the kiss of the Lord, where there is a similar projection (*Liber gratiae*, p. 90).

[18] The blood, that is, of the lion, which is equated with the lion of the tribe of Judah (= Christ).

[19] Cf. *Psychology and Alchemy*, "The Lapis-Christ Parallel," and *Aion*, ch. 5.

[20] Luke 22 : 44: "… and his sweat was as it were great drops of blood falling down to the ground."

[21] [The text continues: "and one has never heard that his blood was rose-coloured." There is, however, an interesting reference to "cruore ejus roseo gustando vivimus Deo" (by tasting his rosy blood we live to God) in a very well-known hymn, beginning "Ad coenam agni providi," formerly attributed to St. Ambrose, but though now denied him, known to date back to the 6th or early 7th century. For centuries past it has been the liturgical hymn sung at Vespers in the Easter season in the Roman church. Cf. Neale, *Collected Hymns*, p. 194. —A.S.B.G.]

[22] Cf. I Cor. 13 : 4ff.

[1] Allusion to “Tabula smaragdina”: “This is the strong strength of all strength, for it will overcome every subtle thing, and penetrate every solid thing” (*De alchemia*, p. 363).

[2] *Of Alphidius nothing is* known. He is an oft-cited author, who may have lived in the 12th–13th cents. (Cf. Kopp, *Die Alchemie*, II, pp. 339. 363).

[3] “Pret. marg. nov.,” *Bibliotheca chemica*, II, p. 30. Alleged date of composition is 1330. Janus Lacinius, who first printed the treatise in 1546, says (fol. 701) that Bonus “was living in the city of Pola in Istria about the year 1338,” and (fol. 46^{v}) that he was a contemporary (*coaetaneus*) of Raymund Lully (1235–1315).

[4] *Aion*, pp. 164f.

[5] As archetypal symbols are numinous, they have an effect even though they cannot be grasped intellectually.

[1] P. 702. Cf. "Symbolum Saturni," in Mylius, *Phil. ref.*, p. 313: "Not far from there I was conducted to a meadow, in which was planted a remarkable garden with various kinds of trees, most excellent to behold. And among these trees he showed me seven that were distinguished by name; among these I perceived *two* outstanding ones, higher than the others, of which one bore a fruit like to the brightest and most refulgent sun, and its leaves were like gold. But the other brought forth the whitest fruits, more brightly shining than lilies, and its leaves were like quicksilver. They were named by Neptune the tree of the sun and the tree of the moon."

[19] Charles, *Apocrypha and Pseudepigrapha*, II, pp. 204f. From the fruits of the sun-and-moon tree is prepared "the immortal fruit, which has life and blood." "The blood causes all unfruitful trees to bear fruit of the same nature as the apple" (Mylius, *Phil. ref.*, p. 314).

[20] *Aurora Consurgens* (ed. von Franz), p. 143.

[21] *Turba* p. 324. Cf. *Psychology and Alchemy*, par. 449 and n. 2.

[22] As in Ripley's *Scrowle:* "vitis arborea."

[23] Maier, *Symb. aur. mens.*, p. 269, also the “Secretum” of Greverus (*Theatr. chem.*, III, 1659, p. 700) and the “Summarium philosophicum” of Flamel (*Mus. herm.*, p. 175). Cf. Pordage, *Sophia*, p. 10: “Here I saw the fruits and herbs of paradise, whereof my eternal man should thenceforward eat, and live.”

[24] These trees also occur in the Romance of Alexander as the “most holy trees of the sun and moon, which will declare the future to you” (Hilka, *Der altfranzösische Prosa-Alexander-Roman*, p. 204).

[25] Vulgate: “de pomis fructuum solis ac lunae.” The alchemists naturally took this version as authoritative. The original text has, as in AV: “… The precious fruits brought forth by the sun, and the precious things put forth by the moon.”

[26] *Theatr. chem.*, II (1659), p. 241. (“Dulce pomum est odorum, floridus hie pomulus.”)

[27] Ibid., V (1660), p. 790. (“Collige fructus quia fructus arboris seduxit nos in et per obscurum.”)

[28] The title of this book runs in part: *Paradisus aureolus hermeticus* … in *cuius* . . . *offertur instructio, quomodo aureola Hesperidum poma, ab arbore benedicta philosophica sint decerpenda, etc*.

[29] Senior, *De chemia*, p. 92.

[30] *Mus. herm.*, p. 246.

[31] Eliade, *Shamanism*, pp. 70f.

[32] Cumont, *Textes et Monuments figurés relatifs aux mystères de Mithra*, II, p. 350, and Eisler, *Weltenmantel und Himmelszelt*, II, p. 519.

[33] “Instructio de arbore solari,” *Theatr. chem.*, VI (1661), p. 168.

[34] Bernardus Trevisanus, *Theatr. chem.*, I (1659), p. 706.

[1] "Allegoriae super librum Turbae," *Art. aurif.*, I, p. 141. Evidently a reference to the tree of the Hesperides on an island, where also the fount of ambrosia and the dragon are found. Cf. the coral tree (ibid., p. 143) and *Psychology and Alchemy*, par. 449, n. 6. In the *Livre d'Heures du Duc de Berry*, Paradise is shown as a round island in the sea.

[2] *Phil. ref.*, p. 313.

[3] *Hyl. Chaos*, p. 270.

[4] Windischmann, *Zoroastrische Studien*, pp. 90, 171.

[5] Perhaps in remembrance of the shrines of the Semitic Astarte on mountains. Cf. Charles, *Apocrypha and Pseudepigrapha*, II, pp. 204f.

[6] *Art. aurif.*, I, p. 321.

[7] Berthelot, *Moyen âge*, III, p. 117.

[8] Eliade, *Shamanism*, pp. 266f.

[9] Epiphanius, *Ancoratus*, 40; St. Ambrose, *De interpellatione Job et David*, I, iv, 17 (Migne, *P.L.*, vol. 14, col. 818): "A mountain small and great."

[10] St. Gregory the Great, *Moralia in Job*, XIX, 1 (Migne, *P.L.*, vol. 76, col. 97): "A fruitful tree to be cultivated in our hearts."

[11] "Symposium Saturni," in Mylius, *Phil. ref.*, p. 313. Cf. the hymn for St. Paul of Constantinople in Theodore the Studite: "O most blessed one, from the cradle thou didst flourish like a comely plant in the ascetic garden; thou gavest forth a pleasant odour, bowed down with the finest apples of the Holy Spirit" (Pitra, *Analecta sacra*, I, p. 337).

[12] *Mus. herm.*, p. 177.

[13] Cf. "The Spirit Mercurius," supra, par. 255.

[14] Flamel, *Mus. herm.*, p. 177, also p. 175.

[15] "The Spirit Mercurius," supra, pars. 282ff.

[16] Abu'l Qāsim, *Kitāb al-'ilm al-muktasab*, ed. Holmyard, p. 23.

[17] Ripley, "Duodecim portarum," *Theatr. chem.*, II (1659), p. 113, and *Opera omnia*, p. 86.

[18] The tree of Hermes is burnt to ashes with the "humiditas maxime permanens," as Ripley says (ibid., p. 39). Cf. p. 46: "That water has fire within it."

[19] Hippolytus, *Elenchos*, VI, 9, 8ff. (Legge, II, p. 5).

[20] Ibid. Cf. the Indian parallel in Coomaraswamy, "The Inverted Tree," p. 126: "The tree is a fiery pillar as seen from below, a solar pillar as seen from above, and a pneumatic pillar throughout; it is a tree of light." The reference to the motif of the pillar is significant.

[21] "Gloria mundi," *Mus. herm.*, p. 240.

[22] Mercurius is named "arbor metallorum." For an interpretation of this symbol see Dorn, "Congeries Paracelsicae," *Theatr. chem.*, I (1659), p. 508.

[23] *Arbor aurea* in “Scriptum Alberti,” ibid., II (1659), p. 456; also Abu’l Qāsim, ed. Holmyard, p. 54, and “Consilium coniugii,” *Ars chemica*, p. 211.

[24] *Symb. aur. mens.*, p. 269, with reference to Greverus.

[25] *Art. aurif.*, I, p. 222.

[26] This plant derives ultimately from the Homeric *μῶλυ* (see *Mysterium Coniunctionis*, p. 133 and n. 200). Cf. Rahner, “Die seelenheilende Blume,” *Eranos-Jahrbuch* XII (1945), 117ff.

[27] “De tenebris contra naturam,” *Theatr. chem.*, I (1659), p. 470. (“Plantetur itaque arbor ex eis [planetis s. metallis], cuius radix adscribatur Saturno, per quam varius ille Mercurius ac Venus truncum et ramos ascendentes, folia floresque fructum ferentes Marti praebent.”)

[28] That is, to Aries, whose ruler is Mars; hence to the first spring zodion.

[29] “De genealogia mineralium,” *Theatr. chem.*, I (1659), p. 574.

[1] Presumably Dante means this in *Purgatorio*, XXII, 131ff.

[2] “Radices suarum mincrarum sunt in aere et summitates in terra. Et quando evelluntur a suis locis, auditur sonus terribilis et sequitur timor magnus.” (“De ratione conficiendi lapidis,” *Theatr. chem.*, II, 1659, p. 226.)

[3] *Mus. herm.*, pp. 240, 270

[4] “Rabbi Josephi Carnitoli filius . . . inquit: fundamentum omnis structurae inferioris supra est affixum et eius culmen hic infra est sicut arbor inversa.” (“De igne et sale,” *Theatr. chem.*, VI, 1661, p. 39.) It is also said in the *Prodromas Rhodostauroticus* (fol. Vv) that the ancients called man an inverted tree.

[5] The text has, erroneously, “iuncta” for “vincta.”

[6] More accurate translation, as in RSV: “your flowing locks are like purple; a king is held captive in the tresses.”

[7] *Cabbala denudata*, I, p. 166.

[8] Ibid., p. 77.

[9] Ibid., p. 629.

[10] P. 888: “Inversam arborem stantem videri hominem placet Physicis, quod enim radix ibi, truncus et frondes, hic caput est et corpus reliquum cum brachiis et pedibus.”

[11] Cf. Chwolsohn, *Die Ssabier und der Ssabismus*, II, p. 373. *Timaeus* 90A: “… seeing that we are not an earthly but a heavenly plant.” Vettius Valens, *Anthologiarum* IX, p. 330, 23. Orphic fragment. Kern, No. 228a: “But the soul in man is rooted in the aether.”

[12] Chhāndogya Upanishad, VIII, 5, 3 (SBE, I, p. 131). Shatapatha-Brāhmana (SBE, XLIV, p. 317): “The Nyagrodha with cups—for when the gods were performing sacrifice, they tilted over those Soma cups, and turned downwards they took root, whence the Nyagrodhas, when turned downwards (*nyak*) take root (*roha).”* The *ashvattha* is the seat of the gods (*Hymns of the Atharva-Veda*, V, 4; SBE, XLII, p. 4). Cf. Coomaraswamy, “The Inverted Tree,” pp. 122f.

[13] *The Song of God* (trans. Prabhamananda and Isherwood), pp. 146f.

[14] *Psychology and Alchemy*, Figs. 122 and 221.

[15] Fol. **vff.

[16] The Byzantine emperor Heraclius (610–641).

[17] Morienus, “De transmutatione metallorum,” *Art. aurif.*, II, pp. 25f. “Hoc autem magisterium ex una primum radice procedit, quae postmodum in plures res expenditur et iterum ad unam revertitur.”

[18] *Opera omnia*, p. 46.

[19] Berthelot, Moyen *âge*, III, pp. 214f.

[20] Cited in Hoghelande, *Theatr. chem.*, I (1659), p. 147. The “vintage of Hermes” (*vindemia Hermetis*) goes back to an Ostanes quotation in Zosimos (Berthelot, *Alch. grecs*, III, vi, 5).

[21] Loc. cit. “Quidem fructus exeunt a perfectissima arbore primo vere et in exitus initio florent,” Hoghelande is referring to the *Turba*, Sermo LVIII, where Balgus is asked: “Why have you ceased to

speak of the tree, of which he who eats its fruit shall never hunger?”

[22] The opus begins in the spring, when the conditions are most favourable (cf. “Paracelsus as a Spiritual Phenomenon,” supra, pars. 190ff.) and the “element of the stone is most abundant” (Ventura, *Theatr. chem.*, II, 1659, p. 253). The relation of the opus to the zodiac is shown in *Psychology and Alchemy*, Fig. 92.

[23] *Theatr. chem.*, V (1660), p. 61. “Item planta hanc arborem super lapidem, ne ventorum cursus timeat, ut volatilia coeli veniant et supra ramos eius gignant, inde enim sapientia surgit.”

[24] MS. in Basel University Library, AX. 128b.

[25] Cf. supra, “Paracelsus as a Spiritual Phenomenon,” par. 228.

[1] *Theatr. chem.*, 11 (1659), p. 458.

[2] *Psychology and Alchemy*, Fig. 231, and *Mus. herm.*, p. 201.

[3] *Psychology and Alchemy*, par. 537, n. 58, and Figs. 10-12, 157, 257. Cf. also Jaffé, “Bilder und Symbole aus E. T. A. Hoffmanns Märchen ‘Der Goldene Topf,’” p. 300ff.

[4] *Theatr. chem.*, II (1659), p. 456.

[5] Ibid., p. 457.

[6] Cf. von Franz, “Passio Perpetuae,” pp. 463ff.

[7] For the importance of the vessel in alchemy see *Psychology and Alchemy*, index, s.v. vas/vessel. The *ciconia vel storca* was a kind of retort (Rhenanus, *Solis e puteo emergentis*, Lib. I, 22). [Cf. supra, Fig. B7.]

[8] Cf. “A Study in the Process of Individuation,” pp. 295ff.

[9] Grünbaum, *Jüdisch-deutsche Chrestomathie*, p. 174.

[10] Picinellus, *Mundus symbolicus*, I, p. 281.

[11] Wünsche, “Die Sagen vom Lebensbaum und Lebenswasser,” pp. 85f.

[3] Steeb, *Coelum Sephiroticum*, p. 49.

[4] Charles, *Apocrypha and Pseudepigrapha*, II, p. 207.

[5] *Adversus haereses*, Lib. I, 29, 3.

[6] "Ex Anthropo autem et Gnosi natum lignum, quod et ipsum Gnosin vocant."

[7] "Illa autem arbor quae est in paradiso, ex qua agnoscitur bonum, ipse est Jesus et scientia eius quae est in mundo." Hegemonius, *Acta Archelai* (ed. Beeson), p. 18, lines 15ff.

[8] *Theatr. chem.*, V (1660), p. 61.

[9] Trans. and ed. Friedlander, p. 150. The *Pirke* dates from 7th–8th cents. Eliezer (ben Hyrcanus) lived in the 2nd cent.

[10] Hippolytus, *Elenchos*, V, 26, 6. Naas, the serpent, is the prima materia of the Naassenes, a "moist substance" like Thales' water. It is substantial to all things and contains all things. It is like the river of Eden, which divides into four streams (V, 9, 13ff.).

[11] Cf. "The Spirit Mercurius," supra, pars. 268f.

[1] “Item accipe sapientiam vi intensissima[m] et ex ea vitam hauries aeternam, donec tuus [lapis] congeletur ac tua pigredo exeat, tunc inde vita fit” (*Theatr. chem.*, V, 1660, p. 61).

[2] *Phil. ref.*, p. 260. For “rami infiniti multiplicantur” I read “infinite.”

[3] *Ars chemica*, p. 160.

[4] *Hyl. Chaos*, pp. 20f.

[5] Berthelot, *Moyen âge*, III, p. 117.

[6] “Nisi lapis tuus fuerit inimicus, ad opratum non pervcnies” (*Theatr. chem.*, V, 1660, p. 9).

[7] See illustration in Reusner’s *Pandora*, p. 227. Also *Psychology and Alchemy*, Fig. 4.

[8] ‘Η *γὰρ φύσις τὴν φύσιν τέρπει, καὶ ἥ φὔσις τὴν φὔσιν κρατεῖ καὶ ἥ φὔσις τὴν φὔσιν νικᾷ* (Berthelot, *Alch. grecs*, I, iii, 12).

[9] See supra, Fig. B4.

[10] *Theatr. chem.*, V (1660), p. 790.

[11] Koran, Sura XVIII.

[12] Cf. “Concerning Rebirth,” pp. 135ff.

[13] *Aion*, pp. 8ff.

[1] *Aurora Consurgens* (ed. von Franz), p. 117. “This is therefore a great sign, in the investigation of which some have perished” (*Art. aurif.*, II, p. 264). “Know ye, who seek after wisdom, that the foundation of this art, on account of which many have perished, is a thing stronger and more sublime than all other things” (“Turba,” in *Art. aurif.*, I, p. 83).

[2] “De alchimiae difficultatibus,” *Theatr. chem.*, I (1659), p. 131.

[3] “Dialogus inter naturam et filium philosophorum,” ibid., II (1659), p. 104.

[4] Cf. Du Cange, *Glossarium*, II, p. 275, “certificatio.”

[5] “Lapis noster est vita ei qui ipsum scit et eius factum et qui nesciverit et non fecit et non certificabitur quando nascetur aut putabit alium lapidem, iam paravit se morti” (Hoghelande, *Theatr. chem.*, I, 1659, p. 182).

[6] This danger was well known. “Because of the fires and sulphurous exhalations it brings with it, the opus is highly dangerous” (Dee, “Monas hieroglyphica,” *Theatr. chem.*, II, 1659, p. 196). “I [the divine water] give them a blow in the face, that is a wound, which makes them toothless, and brings about many infirmities through the smoke” (“Rosinus ad Sarratantam,” *Art. aurif.*, I, p. 293). “From the beginning the opus is like a death-dealing poison” (Ventura, “De ratione conficiendi lapidis,” *Theatr. chem.*, II, 1659, p. 258). The alchemists seem to have known about mercurial poisoning.

[7] “Cautus sit in diaboli illusionibus dignoscendis et praecavendis, qui se chemisticis operationibus saepius immiscet, ut operantes circa vana et inutilia detineat praetermissis naturae operibus” (Hoghelande, p. 126). *Aurora Consurgens* (ed. von Franz, p. 51) speaks of the “evil odours and vapours that infect the mind of the laborant.”

[8] Hoghelande, p. 160. “Hie lapis a loco gloriosissimo sublimi maximi Terroris procedit, qui multos sapientes neci dedit.”

[9] Ibid., p. 181.

[10] *Theatr. chem.*, V (1660), p. 126.

[11] Berthelot, *Alch. grecs*, II, iv, 28.

[12] Ibid., II, iv, 43 and 46.

[13] *Theatr. chem.*, I (1659), p. 160. “Nomen lapidis patefacere nemo potest sub animae suae condemnatione, quia coram Deo rationem reddere non posset.”

[14] *Aion*, pp. 161ff.

[15] Wei Po-yang, “An Ancient Chinese Treatise on Alchemy,” pp. 237ff.

[16] *Aion*, pp. 23ff.

[17] This is a typical symptom of inflation. A person with a famous name once assured me he would live a very long time; he needed at least 150 years. A year later he was dead. In this case the inflation was obvious even to a layman.

[18] *The Chymical Wedding* (trans. Foxcroft), p. 6.

[19] “(Operis perfectio) non est enim in potestate artificis, sed cui vult ípse Deus clementissimus largitur. Et in hoc puncto totum est periculum.” *Theatr. chem.* II (1659), p. 296.

[1] "Philosophus non est magister lapidis, sed potius eius minister." *Ros. phil.* in *Art. aurif.*, II, pp. 356f.

[1] Cf. supra, pars. 86-87.

[2] “Diruite et cruciate.”

[3] Ed. Ruska, p. 152.

[4] Ibid., p. 168.

[5] By “applicationes” are meant the arcane substances, such as the “gumma” (= *aqua permanens*) mentioned in the text.

[6] *Poenas*, corresponding to the *κολάσεις* in Zosimos; supra, par. 86 (III, i, 2).

[7] Preisendanz, *Pap, Graec. Mag.*, I, p. 79.

[16] “Ignis contra naturam debet excruciare corpora, ipse est draco violenter comburens, ut ignis inferni” (“Duodecim portarum,” *Theatr. chem.*, II, 1659, p. 113).

[17] “Congeries Paracelsicae,” ibid., I (1659), p. 516.

[18] Quotation from “Tab. smarag.”

[19] “(Hermes) dicit enim *’a te* fugiet omnis obscuritas,’ non dicit ‘a metallis.’ Per obscuritatem nihil aliud intelligitur quam tenebrae morborum et aegritudinem corporis atque mentis.” (*Theatr. chem.*, I, 1659, p. 384.)

[20] Berthelot, *Moyen âge*, III, p. 118.

[21] “In Alchimia est quoddam corpus nobile, … in cuius principio erit miseria cum aceto, sed in fine gaudium cum laetitia” (*Art. aurif.*, II, p. 278).

[22] *Ars chemica*, pp. 125f.

[23] *Theatr. chem.*, VI (1661), p. 76.

[24] Ibid., IV (1660), p. 505.

[25] Zöckler, *The Cross* of *Christ*, and Bezold, *Die Schatzhöhle*, pp. 5, 35.

[26] Dee, *Theatr. chem.*, II (1659), p. 202.

[27] Reitzenstein and Schaeder, *Studien zum antiken Synkretismus aus Iran und Griechenland*, p. 45.

[28] Cf. the oak in the fount of renewal in Trevisanus, “De chemico miraculo,” *Theatr. chem.*, I (1659), pp. 683ff. [*Mysterium Coniunctionis*, pp. 70f.]

[29] Ripley, *Opera omnia*, p. 81. "Si exaltatus fuero, tunc omnes ad me traham. *Ab eo* tempore, quo partes sunt desponsatae, quae sunt crucifixae et exanimatae contumulantur simul mas et foemina et postea revivificantur spiritu vitae."

[30] *Theatr. chem.*, I (1659), p. 254. "(Deus) conclusit angelo gladium irae suae de manibus eripere, cuius loco tridentem hamum substituit aureum, gladio ad arborcm suspenso: et sic mutata est ira Dei in amorem."

[31] [In the Swiss edn., this and the following par. were given at the end of sec. 18.–EDITORS.]

[32] *De XLII Mansionibus Filiorum Israel*, XXXV (Migne, *P.L.*, vol. 17, col. 34).

[33] In his hymn to the Mother of God: "Ave praeclara maris Stella." Cf. Gourmont, *Le Latin mystique*, p. 150. [Also *Psychology and Alchemy*, par. 481 and Fig. 217.]

[34] Sec illustration in Eleazar, *Uraltes chymisches Werch*, facing p. 26. The book is a forgery of Flamel's "Rindenbuch." [Cf. *Mysterium Coniunctionis*, p. 410.]

[35] "The Spirit Mercurius," pars. 284ff.

[1] Bousset, *Hauptprobleme der Gnosis*, p. 178.

[2] *Adversus haereses*, I, 4.

[3] *Psychology and Alchemy*, pars. 122ff., and “A Study in the Process of Individuation.”

[4] “God is a circle whose centre is everywhere and the circumference nowhere.” [Cf. *Mysterium Coniunctionis*, p. 47.]

[5] [Cf. “The Phenomenology of the Spirit in Fairytales,” pp. 231ff.]

[1] Stobaeus, I, 3 (ed. Wachsmuth, I, pp. 67f.), referring to a wooden statue in a cave, with outstretched arms (like one crucified), the right side male, the left side female. It could sweat and bleed.

[2] "'Of the fruit of the tree'—here tree only means man, who is compared to a tree" (*Pirke de Rabbi Eliezer*, trans. Friedlander, p. 150). "As is a tree, just such as is the Lord of Trees, so indeed is man" (Coomaraswamy, "The Inverted Tree," p. 138).

[3] In Iranian tradition the seven metals flowed into the earth from the body of Gayomart, the Primordial Man. Out of them grew the *reivas* plant, from which the first men, Mahrya and Mayryana, sprang. (Cf. Ask and Embla, the first men in the Edda.) Christensen, *Les Types du premier homme et du premier roi dans l'histoire légendaire des Iraniens*, p. 35. In the Gilbert Islands, men and gods come from the primordial tree.

[4] Ibid., p. 18, and the Bundahish, 15, 1. The cedar and persea tree play the same role in the ancient Egyptian tale of Bata. Cf. Jacobsohn, *Die dogmatische Stellung des Königs in der Theologie der alten Aegypter*, p. 13. It is to be regretted that these transformation processes, which are of great interest as regards the psychology of religion, are omitted in Pritchard's recension of the Bata fairytale in his *Ancient Near Eastern Texts.*

[5] "Fruitful tree" in St. Gregory the Great, *Super Cant. Cant*., II, 4 (Migne, *P.L.*, vol. 79, col. 495). Cf. also supra, par. 407, n. 10. As vine in John 15 : 1. The Buddha, like Christ (supra, par. 419), was named the tree of paradise (*Buddha-Carita* of Ashvaghosha: SBE, XLIX, p. 157).

[6] Supra, section 12.

[7] Cf. Aldrovandus (1522–1605) and his interpretation of the "Enigma of Bologna" (*Dendrologia*, I, p. 211), in *Mysterium Coniunctionis*, pp. 68ff.

[8] *Adversus haereses*, I, 29, 3. The fire-tree of Simon Magus is a similar conception (Hippolytus, *Elenchos*, VI, 9, 8).

[9] Ibid., V, 26, 6.

[10] See supra, par. 403, n. 24.

MYSTERIUM CONIUNCTIONIS

AN INQUIRY INTO THE SEPARATION AND SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

C. G. JUNG

SECOND EDITION

TRANSLATED BY R. F. C. HULL

BOLLINGEN SERIES XX

PRINCETON UNIVERSITY PRESS

PUBLISHED BY PRINCETON UNIVERSITY PRESS, PRINCETON, N. J.

Second printing, 1974
Third printing, 1976
First Princeton/Bollingen Paperback printing, 1977

THE HARDCOVER EDITION IS PUBLISHED IN THE UNITED STATES OF AMERICA BY PRINCETON UNIVERSITY PRESS AND IN ENGLAND BY ROUTLEDGE AND KEGAN PAUL, LTD. IN THE AMERICAN EDITION ALL THE VOLUMES COMPRISING THE COLLECTED WORKS CONSTITUTE NUMBER XX IN BOLLINGEN SERIES, SPONSORED BY BOLLINGEN FOUNDATION. THE PRESENT VOLUME IS NUMBER 14 OF THE COLLECTED WORKS AND WAS THE TWELFTH TO APPEAR.

Translated from *Mysterium Coniunctionis: Untersuchung über die Trennung und Zusammensetzung der seelischen Gegensätze in der Alchemie*, Parts I and II, published by Rascher Verlag, Zurich, 1955 and 1956 (Vols. X and XI of *Psychologische Abhandlungen*, edited by C. G. Jung)

ISBN 0-691-01816-2 (paperback edn.)
ISBN 0-691-09766-6 (hardcover edn.)

LIBRARY OF CONGRESS CATALOGUE CARD NUMBER: 75–156
PRINTED IN THE UNITED STATES OF AMERICA

EDITORIAL NOTE[*]

Volume 14 of the Collected Works presents Jung's last great work, on which he was engaged for more than a decade, from 1941 to 1954. He finished it in his eightieth year. As is to be expected from its culminating position in his writings and from its subject matter, the book gives a final account of his lengthy researches into alchemy.

Jung's interest in the symbolical significance of alchemy for modern depth psychology first found expression, in 1929, in his commentary to *The Secret of the Golden Flower*. The theme was taken up again in his Eranos lectures of 1935 and 1936, which formed the basis of *Psychology and Alchemy*, originally published in 1944. Further researches led to the publication of essays now included in *Alchemical Studies*, Volume 13 of the Collected Works A preliminary study of the special symbolism of the *coniunctio* in relation to psychotherapeutic problems appeared in *The Psychology of the Transference* (1946), while the connection between philosophical alchemy and Christianity was elaborated in *Aion* (1951). All these themes are brought together in *Mysterium Coniunctionis*, where Jung continues his work of interpretation by examining in detail a number of texts taken from the alchemical classics. The scope of the book is indicated in its subtitle: "An Inquiry into the Separation and Synthesis of Psychic Opposites in Alchemy." This process, summed up in the trenchant formula *solve et coagula*—"dissolve and coagulate"—underlies the *opus alchymicum* and may be symbolically understood as the process of psychic integration.

The focus of the book is on the symbolism of the *coniunctio* and the preceding stages of dissociation. These are known in alchemy as the *chaos* or *prima materia*, and they lead via the intermediate stages to a resolution of the conflict of opposites in the production of the *lapis philosophorum*. Fresh evidence is brought to bear upon Jung's thesis that the *lapis* is not only a parallel of the Christ figure, but a symbolical prefiguration of psychic totality, or the self.

Jung’s inquiry is of a highly advanced character and necessitates a wide knowledge of the concepts of analytical psychology in general and Jung’s previous publications on alchemy in particular. The reader who follows Jung in his search for a deeper understanding of the *opus alchymicum* will not only discover in this book new and fascinating aspects of the history of the European mind but will also be rewarded by fresh insights into such basic psychological problems as the structure of the self and the ego and their relation to one another, the nature of transference and countertransference, and the process of active imagination. In many ways this book is the summing up of all Jung’s later work.

*

The English edition differs from the Swiss in the following particulars. It comprises Volumes I and II of that version. Volume III is an edition and study by Marie-Louise von Franz of *Aurora Consurgens*, a thirteenth-century treatise traditionally attributed to Thomas Aquinas and rediscovered by Jung, which has been issued in English as a companion volume to *Mysterium Coniunctionis*, but outside the Collected Works. The paragraph numbers of the present work do not correspond to those in the two Swiss volumes, which run in separate sequence. Further, many of the longer paragraphs have been broken up, and in certain instances the material has been rearranged within the chapters to facilitate the exposition. The most important of these changes were made with the author’s consent.

In order not to overload the footnotes, the Latin and Greek passages have been put into an appendix. An asterisk in a footnote indicates that the quotation translated there or in the main text will be found in the appendix under the corresponding footnote number of the chapter in question.

Two sections of this work were previously published: Chapter II, section 3, appeared as “Das Rätsel von Bologna” in *Beitrag zur Festschrift Albert Oeri* (Basel, 1945), pp. 265–79 (translated as “The Bologna Enigma,” *Ambix*, London, II, 1946, 182–91); Chapter III, section 3, appeared as “De Sulphure” in *Nova Acta Paracelsica* (Einsiedeln), V (1948), 27–40.

For the second edition, numerous corrections and revisions have been made in cross-references to other volumes of the Collected Works now available, and likewise in the Bibliography.

The Gesammelte Werke edition of the present work appeared in 1968 as, in effect, a reprint of the 1955/1956 Swiss edition, retaining its textual arrangement and paragraph numbering. In order to facilitate cross-reference between the English and German text, a table has been added to this edition, correlating the paragraph numbers: see below, pp. 697ff.

One paragraph (183 in Vol. II, p. 124 of the Gesammelte Werke edition) was inadvertently omitted in the first edition of the present volume. It should follow paragraph 518 on page 368 and is translated here as paragraph 518a.

[518a] The reader must pardon my use of metaphors that are linguistically analogous to dogmatic expressions. If you have conceptions of things you can have no conceptions of, then the conception and the thing appear to coincide. Nor can two different things you know nothing of be kept apart. I must therefore expressly emphasize that I do not go in for either metaphysics or theology, but am concerned with psychological facts on the borderline of the knowable. So if I make use of certain expressions that are reminiscent of the language of theology, this is due solely to the poverty of language, and not because I am of the opinion that the subject-matter of theology is the same as that of psychology. Psychology is very definitely not a theology; it is a natural science that seeks to describe experienceable psychic phenomena. In doing so it takes account of the way in which theology conceives and names them, because this hangs together with the phenomenology of the contents under discussion. But as empirical science it has neither the capacity nor the competence to decide on questions of truth and value, this being the prerogative of theology.

TRANSLATOR’S NOTE

Standard translations of Latin and Greek texts have been used where they conformed more or less to the author’s own versions, and they are referred to in the footnotes. Where such translations were unsuitable or nonexistent, as is particularly the case with the texts in the appendix, an English version has been supplied by Mr. A. S. B. Glover. To him I would like to express my deepest thanks for his tireless help in preparing this book. My thanks are also due to Miss Barbara Hannah and Dr. Marie-Louise von Franz, for reading through the typescript and making many valuable suggestions.

FOREWORD

This book—my last—was begun more than ten years ago. I first got the idea of writing it from C. Kerényi's essay on the Aegean Festival in Goethe's *Faust*.[1] The literary prototype of this festival is *The Chymical Wedding* of Christian Rosencreutz, itself a product of the traditional hierosgamos symbolism of alchemy. I felt tempted, at the time, to comment on Kerényi's essay from the standpoint of alchemy and psychology, but soon discovered that the theme was far too extensive to be dealt with in a couple of pages. Although the work was soon under way, more than ten years were to pass before I was able to collect and arrange all the material relevant to this central problem.

As may be known, I showed in my book *Psychology and Alchemy*, first published in 1944,[2] how certain archetypal motifs that are common in alchemy appear in the dreams of modern individuals who have no knowledge of alchemical literature. In that book the wealth of ideas and symbols that lie hidden in the neglected treatises of this much misunderstood "art" was hinted at rather than described in the detail it deserved; for my primary aim was to demonstrate that the world of alchemical symbols definitely does not belong to the rubbish heap of the past, but stands in a very real and living relationship to our most recent discoveries concerning the psychology of the unconscious. Not only does this modern psychological discipline give us the key to the secrets of alchemy, but, conversely, alchemy provides the psychology of the unconscious with a meaningful historical basis. This was hardly a popular subject, and for that reason it remained largely misunderstood. Not only was alchemy almost entirely unknown as a branch of natural philosophy and as a religious movement, but most people were unfamiliar with the modern discovery of the archetypes, or had at least misunderstood them. Indeed, there were not a few who regarded them as sheer fantasy, although the well-known example of whole numbers, which also were discovered and not invented, might have taught them better, not to mention the “patterns of behaviour” in biology. Just as numbers and instinctual forms do exist, so there are many other natural configurations or types which are exemplified by Lévy-Bruhl’s *représentations collectives*. They are not “metaphysical” speculations but, as we would expect, symptoms of the uniformity of *Homo sapiens*.

Today there is such a large and varied literature describing psychotherapeutic experiences and the psychology of the unconscious that everyone has had an opportunity to familiarize himself with the empirical findings and the prevailing theories about them. This is not true of alchemy, most accounts of which are vitiated by the erroneous assumption that it was merely the precursor of chemistry. Herbert Silberer[3] was the first to try to penetrate its much more important psychological aspect so far as his somewhat limited equipment allowed him to do so. Owing to the paucity of modern expositions and the comparative inaccessibility of the sources, it is difficult to form an adequate conception of the problems of philosophical alchemy. It is the aim of the present work to fill this gap.

As is indicated by the very name which he chose for it—the “spagyric”[4] art—or by the oft-repeated saying “solve et coagula” (dissolve and coagulate), the alchemist saw the essence of his art in separation and analysis on the one hand and synthesis and consolidation on the other. For him there was first of all an initial state in which opposite tendencies or forces were in conflict; secondly there was the great question of a procedure which would be capable of bringing the hostile elements and qualities, once they were separated, back to unity again. The initial state, named the *chaos*, was not given from the start but had to be sought for as the *prima materia*. And just as the beginning of the work was not self-evident, so to an even greater degree was its end. There are countless speculations on the nature of the end-state, all of them reflected in its designations. The commonest are the ideas of its permanence (prolongation of life, immortality, incorruptibility), its androgyny, its spirituality and corporeality, its human qualities and resemblance to man (homunculus), and its divinity.

The obvious analogy, in the psychic sphere, to this problem of opposites is the dissociation of the personality brought about by the conflict of incompatible tendencies, resulting as a rule from an inharmonious disposition. The repression of one of the opposites leads only to a prolongation and extension of the conflict, in other words, to a neurosis. The therapist therefore confronts the opposites with one another and aims at uniting them permanently. The images of the goal which then appear in dreams often run parallel with the corresponding alchemical symbols. An instance of this is familiar to every analyst: the phenomenon of the transference, which corresponds to the motif of the "chymical wedding." To avoid overloading this book, I devoted a special study to the psychology of the transference,[5] using the alchemical parallels as a guiding thread. Similarly, the hints or representations of wholeness, or the self, which appear in the dreams also occur in alchemy as the numerous synonyms for the *lapis Philosophorum*, which the alchemists equated with Christ. Because of its great importance, this last relationship gave rise to a special study, *Aion*. Further offshoots from the theme of this book are my treatises "The Philosophical Tree," "Synchronicity: An Acausal Connecting Principle," and "Answer to Job."

The first and second parts of this work [6] are devoted to the theme of the opposites and their union. The third part is an account of, and commentary on, an alchemical text, which, evidently written by a cleric, probably dates from the thirteenth century and discloses a highly peculiar state of mind in which Christianity and alchemy interpenetrate. The author tries, with the help of the mysticism of the Song of Songs, to fuse apparently heterogeneous ideas, partly Christian and partly derived from natural philosophy, in the form of a hymnlike incantation. This text is called *Aurora consurgens* (also *Aurea hora*), and traditionally it is ascribed to St. Thomas Aquinas. It is hardly necessary to remark that Thomist historians have always reckoned it, or wanted to reckon it, among the spurious and false writings, no doubt because of the traditional depreciation of alchemy. This negative evaluation of alchemy was due, in the main, to ignorance. People did not know what it meant to its adepts because it was commonly regarded as mere gold-making. I hope I have shown in my book *Psychology and Alchemy* that, properly understood, it was nothing of the sort. Alchemy meant a very great deal to people like Albertus Magnus and Roger Bacon, and also to St. Thomas Aquinas. We have not only the early testimony of Zosimos of Panopolis from the third century, but that of Petrus Bonus of Ferrara from the beginning of the fourteenth century, which both point to the parallelism of the alchemical arcanum and the God-man. *Aurora consurgens* tries to amalgamate the Christian and alchemical view, and I have therefore chosen it as an example of how the spirit of medieval Christianity came to terms with alchemical philosophy, and as an illustration of the present account of the alchemical problem of opposites.[7]

Today, once again, we hear tendentious voices still contesting the hypothesis of the unconscious, declaring that it is nothing more than the personal prejudice of those who make use of this hypothesis. Remarkably enough, no consideration is given to the proofs that have been put forward; they are dismissed on the ground that all psychology is nothing more than a preconceived subjective opinion. It must be admitted that probably in no other field of work is there so great a danger of the investigator's falling a victim to his own subjective assumptions. He of all people must remain more than ever conscious of his "personal equation." But, young as the psychology of unconscious processes may be, it has nevertheless succeeded in establishing certain facts which are gradually gaining general acceptance. One of these is the polaristic structure of the psyche, which it shares with all natural processes. Natural processes are phenomena of energy, constantly arising out of a "less probable state" of polar tension. This formula is of special significance for psychology, because the conscious mind is usually reluctant to see or admit the polarity of its own background, although it is precisely from there that it gets its energy.

The psychologist has only just begun to feel his way into this structure, and it now appears that the "alchemystical" philosophers made the opposites and their union one of the chief objects of their work. In their writings, certainly, they employed a symbolical terminology that frequently reminds us of the language of dreams, concerned as these often are with the problem of opposites. Since conscious thinking strives for clarity and demands unequivocal decisions, it has constantly to free itself from counterarguments and contrary tendencies, with the result that especially incompatible contents either remain totally unconscious or are habitually and assiduously overlooked. The more this is so, the more the unconscious will build up its counterposition. As the alchemists, with but few exceptions, did not know that they were bringing psychic structures to light but thought that they were explaining the transformations of matter, there were no psychological considerations to prevent them, for reasons of sensitiveness, from laying bare the background of the psyche, which a more conscious person would be nervous of doing. It is because of this that alchemy is of such absorbing interest to the psychologist. For this reason, too, it seemed necessary to my co-worker and myself to subject the alchemical conception of opposites, and their union or reconciliation, to a thoroughgoing investigation. However abstruse and strange the language and imagery of the alchemists may seem to the uninitiated, they become vivid and alive as soon as comparative research reveals the relationship of the symbols to processes in the unconscious. These may be the material of dreams, spontaneous fantasies, and delusional ideas on the one hand, and on the other hand they can be observed in works of creative imagination and in the figurative language of religion. The heterogeneous material adduced for comparison may seem in the highest degree baffling to the academically educated reader who has met these items only in an impersonal context—historical, ethnic, or geographical—but who does not know their psychological affinities with analogous formations, themselves derived from the most varied sources. He will naturally be taken aback, at first, if certain symbols in ancient Egyptian texts are brought into intimate relationship with modern findings concerning the popular religion of India and at the same time with the dreams of an unsuspecting European. But what is difficult for the historian and philologist to swallow is no obstacle for the physician. His biological training has left him with far too strong an impression of the comparability of all human activities for him to make any particular to-do about the similarity, indeed the fundamental sameness, of human beings and their psychic manifestations. If he is a psychiatrist, he will not be astonished at the essential similarity of psychotic contents, whether they come from the Middle Ages or from the present, from Europe or from Australia, from India or from the Americas. The processes underlying them are instinctive, therefore universal and uncommonly conservative. The weaver-bird builds his nest in his own peculiar fashion no matter where he may be, and just as we have no grounds for assuming that he built his nest differently three thousand years ago, so it is very improbable that he will alter his style in the next three thousand. Although contemporary man believes that he can change himself without limit, or be changed through external influences, the astounding, or rather the terrifying, fact remains that despite civilization and Christian education, he is still, morally, as much in bondage to his instincts as an animal, and can therefore fall victim at any moment to the beast within. This is a more universal truth than ever before, guaranteed independent of education, culture, language, tradition, race, and locality.

Investigation of alchemical symbolism, like a preoccupation with mythology, does not lead one away from life any more than a study of comparative anatomy leads away from the anatomy of the living man. On the contrary, alchemy affords us a veritable treasure-house of symbols, knowledge of which is extremely helpful for an understanding of neurotic and psychotic processes. This, in turn, enables us to apply the psychology of the unconscious to those regions in the history of the human mind which are concerned with symbolism. It is just here that questions arise whose urgency and vital intensity are even greater than the question of therapeutic application. Here there are many prejudices that still have to be overcome. Just as it is thought, for instance, that Mexican myths cannot possibly have anything to do with similar ideas found in Europe, so it is held to be a fantastic assumption that an uneducated modern man should dream of classical myth-motifs which are known only to a specialist. People still think that relationships like this are far-fetched and therefore improbable. But they forget that the structure and function of the bodily organs are everywhere more or less the same, including those of the brain. And as the psyche is to a large extent dependent on this organ, presumably it will—at least in principle—everywhere produce the same forms. In order to see this, however, one has to abandon the widespread prejudice that the psyche is identical with consciousness.

MYSTERIUM CONIUNCTIONIS

AN INQUIRY
INTO THE SEPARATION AND SYNTHESIS
OF PSYCHIC OPPOSITES IN ALCHEMY

I

THE COMPONENTS OF THE CONIUNCTIO

1. THE OPPOSITES

[1] The factors which come together in the coniunctio are conceived as opposites, either confronting one another in enmity or attracting one another in love.[1] To begin with they form a dualism; for instance the opposites are *humidum* (moist) / *siccum* (dry), *frigidum* (cold) / *calidum* (warm), *superiora* (upper, higher) / *inferiora* (lower), *spiritus-anima* (spirit-soul) / *corpus* (body), *coelum* (heaven) / *terra* (earth), *ignis* (fire) / *aqua* (water), bright / dark, *agens* (active) / *patiens* (passive), *volatile* (volatile, gaseous) / *fixum* (solid), *pretiosum* (precious, costly; also *carum*, dear) / *vile* (cheap, common), *bonum* (good) / *malum* (evil), *manifestum* (open) / *occultum* (occult; also *celatum*, hidden), *oriens* (East) / *occidens* (West), *vivum* (living) / *mortuum* (dead, inert), *masculus* (masculine) / *foemina* (feminine), Sol / Luna. Often the polarity is arranged as a quaternio (quaternity), with the two opposites crossing one another, as for instance the four elements or the four qualities (moist, dry, cold, warm), or the four directions and seasons,[2] thus producing the cross as an emblem of the four elements and symbol of the sublunary physical world.[3] This fourfold Physis, the cross, also appears in the signs for earth ♁, Venus ♀, Mercury ☿, Saturn ♄, and Jupiter ♃.[4]

[2] The opposites and their symbols are so common in the texts that it is superfluous to cite evidence from the sources. On the other hand, in view of the ambiguity of the alchemists' language, which is "tam ethice quam physice" (as much ethical as physical), it is worth while to go rather more closely into the manner in which the texts treat of the opposites. Very often the masculine-feminine opposition is personified as King and Queen (in the *Rosarium philosophorum* also as Emperor and Empress), or as *servus* (slave) or *vir rubeus* (red man) and *mulier candida* (white

woman);[5] in the “Visio Arislei” they appear as Gabricus (or Thabritius) and Beya, the King’s son and daughter.[6] Theriomorphic symbols are equally common and are often found in the illustrations.[7] I would mention the eagle and toad (“the eagle flying through the air and the toad crawling on the ground”), which are the “emblem” of Avicenna in Michael Maier,[8] the eagle representing Luna “or Juno, Venus, Beya, who is fugitive and winged like the eagle, which flies up to the clouds and receives the rays of the sun in his eyes.” The toad “is the opposite of air, it is a contrary element, namely earth, whereon alone it moves by slow steps, and does not trust itself to another element. Its head is very heavy and gazes at the earth. For this reason it denotes the philosophic earth, which cannot fly [i.e., cannot be sublimated], as it is firm and solid. Upon it as a foundation the golden house[9] is to be built. Were it not for the earth in our work the air would fly away, neither would the fire have its nourishment, nor the water its vessel.”[10]

[3] Another favourite theriomorphic image is that of the two birds or two dragons, one of them winged, the other wingless. This allegory comes from an ancient text, *De Chemia Senioris antiquissimi philosophi libellus*.[11] The wingless bird or dragon prevents the other from flying. They stand for Sol and Luna, brother and sister, who are united by means of the art.[12] In Lambspringk’s “Symbols”[13] they appear as the astrological Fishes which, swimming in opposite directions, symbolize the spirit / soul polarity. The water they swim in is *mare nostrum* (our sea) and is interpreted as the body.[14] The fishes are “without bones and cortex.”[15] From them is produced a *mare immensum*, which is the *aqua permanens* (permanent water). Another symbol is the stag and unicorn meeting in the “forest.”[16] The stag signifies the soul, the unicorn spirit, and the forest the body. The next two pictures in Lambspringk’s “Symbols” show the lion and lioness,[17] or the wolf and dog, the latter two fighting; they too symbolize soul and spirit. In Figure VII the opposites are symbolized by two birds in a wood, one fledged, the other unfledged. Whereas in the earlier pictures the conflict seems to be between spirit and soul, the two birds signify the conflict between spirit and body, and in Figure VIII the two birds fighting do in fact represent

that conflict, as the caption shows. The opposition between spirit and soul is due to the latter having a very fine substance. It is more akin to the "hylical" body and is *densior et crassior* (denser and grosser) than the spirit.

[4] The elevation of the human figure to a king or a divinity, and on the other hand its representation in subhuman, theriomorphic form, are indications of the *transconscious character* of the pairs of opposites. They do not belong to the ego-personality but are supraordinate to it. The ego-personality occupies an intermediate position, like the "anima inter bona et mala sita" (soul placed between good and evil). The pairs of opposites constitute the phenomenology of the paradoxical *self*, man's totality. That is why their symbolism makes use of cosmic expressions like *coelum / terra*.[18] The intensity of the conflict is expressed in symbols like fire and water,[19] height and depth,[20] life and death.[21]

2. THE QUATERNIO AND THE MEDIATING ROLE OF MERCURIUS

[5] The arrangement of the opposites in a quaternity is shown in an interesting illustration in Stolcenberg's *Viridarium chymicum* (Fig. XLII), which can also be found in the *Philosophia reformata* of Mylius (1622, p. 117). The goddesses represent the four seasons of the sun in the circle of the Zodiac (Aries, Cancer, Libra, Capricorn) and at the same time the four degrees of heating,[22] as well as the four elements "combined" around the circular table.[23] The synthesis of the elements is effected by means of the circular movement in time (*circulatio*, *rota*) of the sun through the houses of the Zodiac. As I have shown elsewhere,[24] the aim of the *circulatio* is the production (or rather, reproduction) of the Original Man, who was a sphere. Perhaps I may mention in this connection a remarkable quotation from Ostanes in Abu'l-Qasim, describing the intermediate position between two pairs of opposites constituting a quaternio:

> Ostanes said, Save me, O my God, for I stand between two exalted brilliancies known for their wickedness, and between two dim lights; each of them has reached me and I know not how to save myself from

> them. And it was said to me, Go up to Agathodaimon the Great and ask aid of him, and know that there is in thee somewhat of his nature, which will never be corrupted. . . . And when I ascended into the air he said to me, Take the child of the bird which is mixed with redness and spread for the gold its bed which comes forth from the glass, and place it in its vessel whence it has no power to come out except when thou desirest, and leave it until its moistness has departed.[25]

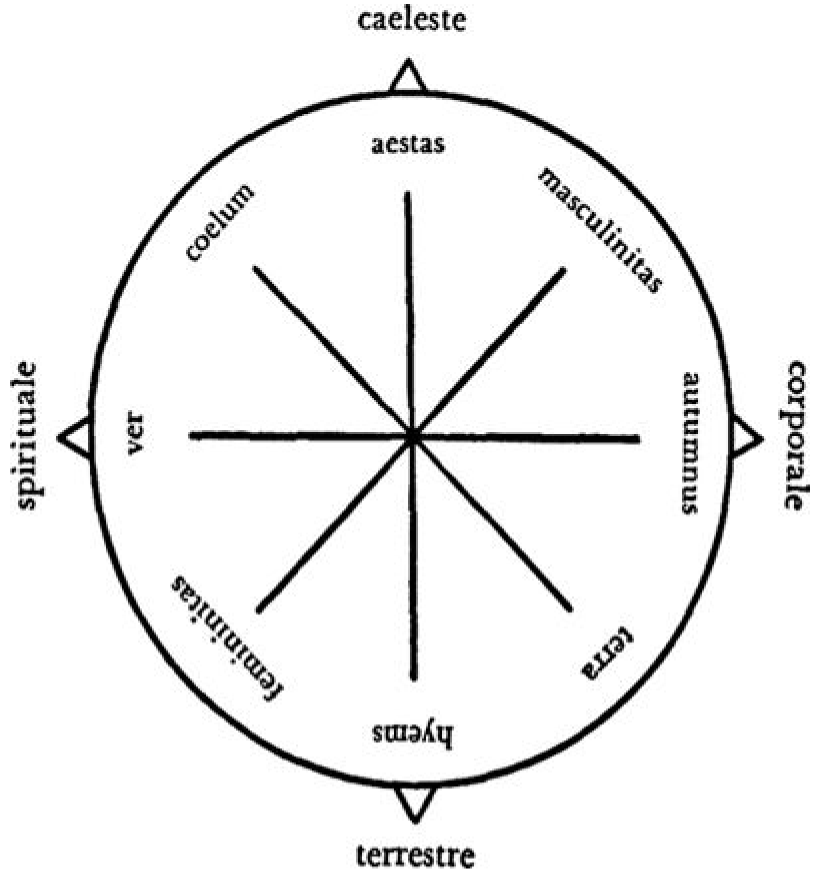
[6] The quaternio in this case evidently consists of the two *malefici*, Mars and Saturn (Mars is the ruler of Aries, Saturn of Capricorn); the two "dim lights" would then be feminine ones, the moon (ruler of Cancer) and Venus (ruler of Libra). The opposites between which Ostanes stands are thus masculine / feminine on the one hand and good / evil on the other. The way he speaks of the four luminaries—he does not know how to save himself from them—suggests that he is subject to Heimarmene, the compulsion of the stars; that is, to a transconscious factor beyond the reach of the human will. Apart from this compulsion, the injurious effect of the four planets is due to the fact that each of them exerts its specific influence on man and makes him a diversity of persons, whereas he should be *one*.[26] It is presumably Hermes who points out to Ostanes that something incorruptible is in his nature which he shares with the Agathodaimon,[27] something divine, obviously the germ of unity. This germ is the gold, the *aurum philosophorum*,[28] the bird of Hermes or the son of the bird, who is the same as the *filius philosophorum*.[29] He must be enclosed in the *vas Hermeticum* and heated until the "moistness" that still clings to him has departed, i.e., the *humidum radicale* (radical moisture), the prima materia, which is the original chaos and the sea (the unconscious). Some kind of coming to consciousness seems indicated. We know that the synthesis of the four was one of the main preoccupations of alchemy, as was, though to a lesser degree, the synthesis of the seven (metals, for instance). Thus in the same text Hermes says to the Sun:

> . . . I cause to come out to thee the spirits of thy brethren [the planets], O Sun, and I make them for thee a crown the like of which was never seen;

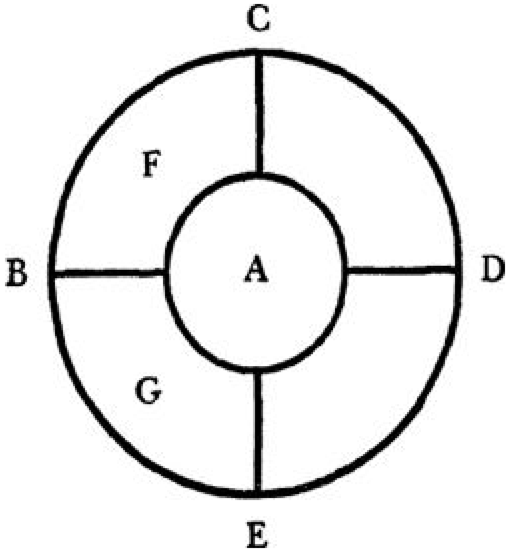
> and I cause thee and them to be within me, and I will make thy kingdom vigorous.[30]

This refers to the synthesis of the planets or metals with the sun, to form a crown which will be "within" Hermes. The crown signifies the kingly totality; it stands for unity and is not subject to Heimarmene. This reminds us of the seven- or twelve-rayed crown of light which the Agathodaimon serpent wears on Gnostic gems,[31] and also of the crown of Wisdom in the *Aurora Consurgens*.[32]

[7] In the "Consilium coniugii" there is a similar quaternio with the four qualities arranged as "combinations of two contraries, cold and moist, which are not friendly to heat and dryness."[33] Other quaternions are: "The stone is first an old man, in the end a youth, because the *albedo* comes at the beginning and the *rubedo* at the end."[34] Similarly the elements are arranged as two "manifesta" (water and earth), and two "occulta" (air and fire).[35] A further quaternio is suggested by the saying of Bernardus Trevisanus: "The upper has the nature of the lower, and the ascending has the nature of the descending."[36] The following combination is from the "Tractatus Micreris": "In it [the Indian Ocean][37] are images of heaven and earth, of summer, autumn, winter, and spring, male and female. If thou callest this spiritual, what thou doest is probable; if corporeal, thou sayest the truth; if heavenly, thou liest not; if earthly, thou hast well spoken."[38] Here we are dealing with a double quaternio having the structure shown in the diagram on page 10.



[8] The double quaternio or ogdoad stands for a totality, for something that is at once heavenly and earthly, spiritual or corporeal, and is found in the “Indian Ocean,” that is to say in the unconscious. It is without doubt the Microcosm, the mystical Adam and bisexual Original Man in his prenatal state, as it were, when he is identical with the unconscious. Hence in Gnosticism the “Father of All” is described not only as masculine and feminine (or neither), but as Bythos, the abyss. In the scholia to the “Tractatus aureus Hermetis”[39] there is a quaternio consisting of *superius / inferius, exterius / interius*. They are united into one thing by means of the circular distillation, named the Pelican:[40] “Let all be one in one circle or vessel.” “For this vessel is the true philosophical Pelican, nor is any other to be sought after in all the world.” The text gives the following diagram:



[9] B C D E represent the outside, A is the inside, “as it were the origin and source from which the other letters flow, and likewise the final goal to which they flow back,”[41] F G stands for Above and Below. “Together the letters A B C D E F G clearly signify the hidden magical Septenary.” The central point A, the origin and goal, the “Ocean or great sea,” is also called a *circulus exiguus*, very small circle, and a “mediator making peace between the enemies or elements, that they may love one another in a meet embrace.”[42] This little inner circle corresponds to the Mercurial Fountain in the *Rosarium*, which I have described in my “Psychology of the Transference.” The text calls it “the more spiritual, perfect, and nobler Mercurius,”[43] the true arcane substance, a “spirit,” and goes on:

> For the spirit alone penetrates all things, even the most solid bodies.[44] Thus the catholicity of religion, or of the true Church, consists not in a visible and bodily gathering together of men, but in the invisible, spiritual concord and harmony of those who believe devoutly and truly in the one Jesus Christ. Whoever attaches himself to a particular church outside this King of Kings, who alone is the shepherd of the true spiritual church, is a sectarian, a schismatic, and a heretic. For the Kingdom of God cometh not with observation, but is within us, as our Saviour himself says in the seventeenth chapter of St. Luke.[45]

That the Ecclesia spiritualis is meant is clear from the text: “But you will ask, where then are those true Christians, who are free from all sectarian contagion?" They are "neither in Samaria, nor in Jerusalem, nor in Rome, nor in Geneva, nor in Leipzig," but are scattered everywhere through the world, "in Turkey, in Persia, Italy, Gaul, Germany, Poland, Bohemia, Moravia, England, America, and even in farthest India." The author continues: "God is Spirit,[46] and those who worship him must worship him in the spirit and in truth. After these examinations and avowals I leave it to each man to judge who is of the true Church, and who not."[47]

[10] From this remarkable excursus we learn, first of all, that the "centre" unites the four and the seven into one.[48] The unifying agent is the spirit Mercurius, and this singular spirit then causes the author to confess himself a member of the Ecclesia spiritualis, for the spirit is God. This religious background is already apparent in the choice of the term "Pelican" for the circular process, since this bird is a well-known allegory of Christ.[49] The idea of Mercurius as a peacemaker, the mediator between the warring elements and producer of unity, probably goes back to Ephesians 2 : 13ff.:

> But now in Christ Jesus you who once were far off have been brought near in the blood of Christ. For he is our peace, who has made both one, and has broken down the dividing wall of hostility, by abolishing in his flesh the law of commandments and ordinances, that he might create in himself one new man in place of two, so making peace, and might reconcile both to God in one body through the cross, thereby bringing the hostility to an end. And he came and preached peace to you who were far off and peace to those who were near; for through him we both have access in one Spirit to the Father. So then you are no longer strangers and sojourners, but you are fellow citizens with the saints and members of the household of God, built upon the foundation of the apostles and prophets, Christ himself being the chief cornerstone, in whom the whole structure is joined together and grows into a holy temple in the Lord; in whom you are also built into it for a dwelling place of God in the Spirit. [RSV][50]

[11] In elucidating the alchemical parallel we should note that the author of the scholia to the "Tractatus aureus Hermetis" prefaces his account of the union of opposites with the following remark:

> Finally, there will appear in the work that ardently desired blue or cerulean colour, which does not darken or dull the eyes of the beholder by the healing power of its brilliance, as when we see the splendour of the outward sun. Rather does it sharpen and strengthen them, nor does he [Mercurius] slay a man with his glance like the basilisk, but by the shedding of his own blood he calls back those who are near to death, and restores to them unimpaired their former life, like the pelican.[51]

Mercurius is conceived as "spiritual blood,"[52] on the analogy of the blood of Christ. In Ephesians those who are separated "are brought near in the blood of Christ." He makes the two one and has broken down the dividing wall "in his flesh." *Caro* (flesh)[53] is a synonym for the prima materia and hence for Mercurius. The "one" is a "new man." He reconciles the two "in one body,"[54] an idea which is figuratively represented in alchemy as the two-headed hermaphrodite. The two have one spirit, in alchemy they have one soul. Further, the lapis is frequently compared to Christ as the *lapis angularis* (cornerstone).[55] As we know, the temple built upon the foundation of the saints inspired in the *Shepherd of Hermas* a vision of the great building into which human beings, streaming from the four quarters, inserted themselves as living stones, melting into it "without seam."[56] The Church is built upon the rock that gave Peter his name (Matthew 16 : 18).

[12] In addition, we learn from the scholia that the circle and the Hermetic vessel are one and the same, with the result that the mandala, which we find so often in the drawings of our patients, corresponds to the vessel of transformation. Consequently, the usual quaternary structure of the mandala[57] would coincide with the alchemists' quaternio of opposites. Lastly, there is the interesting statement that an Ecclesia spiritualis above all creeds and owing allegiance solely to Christ, the Anthropos, is the real aim of the alchemists' endeavours. Whereas the treatise of Hermes is, comparatively speaking, very old, and in place of the Christian Anthropos mystery[58] contains a peculiar paraphrase of it, or rather, its antique parallel,[59] the scholia cannot be dated earlier than the beginning of the seventeenth century.[60] The author seems to have been a Paracelsist physician. Mercurius corresponds to the Holy Ghost as well as to the

Anthropos; he is, as Gerhard Dorn says, “the true hermaphroditic Adam and Microcosm”:

> Our Mercurius is therefore that same [Microcosm], who contains within him the perfections, virtues, and powers of Sol [in the dual sense of sun and gold], and who goes through the streets [*vicos*] and houses of all the planets, and in his regeneration has obtained the power of Above and Below, wherefore he is to be likened to their marriage, as is evident from the white and the red that are conjoined in him. The sages have affirmed in their wisdom that all creatures are to be brought to one united substance.[61]

Accordingly Mercurius, in the crude form of the prima materia, is in very truth the Original Man disseminated through the physical world, and in his sublimated form he is that reconstituted totality.[62] Altogether, he is very like the redeemer of the Basilidians, who mounts upward through the planetary spheres, conquering them or robbing them of their power. The remark that he contains the powers of Sol reminds us of the above-mentioned passage in Abu’l-Qasim, where Hermes says that he unites the sun and the planets and causes them to be within him as a crown. This may be the origin of the designation of the lapis as the “crown of victory.”[63] The “power of Above and Below” refers to that ancient authority the “Tabula smaragdina,” which is of Alexandrian origin.[64] Besides this, our text contains allusions to the Song of Songs: “through the streets and houses of the planets” recalls Song of Songs 3 : 2: “I will . . . go about the city in the streets, and in the broad ways I will seek him whom my soul loveth.”[65] The “white and red” of Mercurius refers to 5 : 10: “My beloved is white and ruddy.” He is likened to the “matrimonium” or coniunctio; that is to say he *is* this marriage on account of his androgynous form.

3. THE ORPHAN, THE WIDOW, AND THE MOON

[13] In the text cited at the end of the last section Dorn continues: “Hermes Trismegistus called the stone ‘orphan’.”[66] “Orphan” as the name of a precious stone is found in Albertus Magnus. The stone was

called “orphan” because of its uniqueness—“it was never seen elsewhere”—and it was said to be in the Emperor’s crown. It was “wine-coloured” and sometimes shone in the night, “but nowadays it does not shine [any more] in the darkness.”[67] As Albertus Magnus was an authority on alchemy, he may have been the direct source both for Dorn and for Petrus Bonus (see n. 66). “Orphan” as the name of a gem may therefore mean something like the modern “solitaire”—a very apt name for the unique lapis Philosophorum. Apart from Dorn and Petrus Bonus, it seems that this name is found only in the *Carmina Heliodori*.[68] There it refers to the ὀρφανὸς ἔξοικος (homeless orphan) who is slain at the beginning of the work for purposes of transformation.

[14] The terms “son of the widow” and “children of the widow” appear to be of Manichaean origin. The Manichaeans themselves were called “children of the widow.”[69] The “orphan” referred to by Hermes must therefore have for his counterpart a *vidua* (widow) as the prima materia. For this there are synonyms such as *mater, matrix*, Venus, *regina, femina, virgo, puella praegnans*, “virgin in the centre of the earth,”[70] Luna,[71] *meretrix* (whore), *vetula* (old woman), more specifically *vetula extenuata* (enfeebled, exhausted),[72] Mater Alchimia, “who is dropsical in the lower limbs and paralysed from the knees down,”[73] and finally virago. All these synonyms allude to the virginal or maternal quality of the prima materia, which exists without a man[74] and yet is the “matter of all things.”[75] Above all, the prima materia is the mother of the lapis, the *filius philosophorum*. Michael Maier[76] mentions the treatise of an anonymous author Delphinas, which he dates to some time before 1447.[77] He stresses that this author insisted particularly on the mother-son incest. Maier even constructs a genealogical tree showing the origin of the seven metals. At the top of the tree is the lapis. Its father is “Gabritius,” who in turn was born of Isis and Osiris. After the death of Osiris Isis married their son Gabritius;[78] she is identified with Beya—“the widow marries her son.” The widow appears here as the classical figure of the mourning Isis. To this event Maier devotes a special “Epithalamium in Honour of the Nuptials of the Mother Beya and Her Son Gabritius.”[79] “But this marriage, which was begun with the

expression of great joyfulness, ended in the bitterness of mourning," says Maier, adding the verses:

> Within the flower itself there grows the gnawing canker:
> Where honey is, there gall, where swelling breast, the chancre.[80]

For, "when the son sleeps with the mother, she kills him with the stroke of a viper" (*viperino conatu*). This viciousness recalls the murderous role of Isis,[81] who laid the "noble worm" in the path of the heavenly Father, Ra.[82] Isis, however, is also the healer, for she not only cured Ra of the poisoning but put together the dismembered Osiris. As such she personifies that arcane substance, be it dew[83] or the *aqua permanens*[84] which unites the hostile elements into one. This synthesis is described in the myth of Isis, "who collected the scattered limbs of his body and bathed them with her tears and laid them in a secret grave beneath the bank of the Nile."[85] The cognomen of Isis was χημεία, the Black One.[86] Apuleius stresses the blackness of her robe (*palla nigerrima*, 'robe of deepest black'),[87] and since ancient times she was reputed to possess the elixir of life[88] as well as being adept in sundry magical arts.[89] She was also called the Old One,[90] and she was rated a pupil of Hermes,[91] or even his daughter.[92] She appears as a teacher of alchemy in the treatise "Isis the Prophetess to her Son Horus."[93] She is mentioned in the role of a whore in Epiphanius, where she is said to have prostituted herself in Tyre.[94] She signifies earth, according to Firmicus Maternus,[95] and was equated with Sophia.[96] She is μυριώνυμος, 'thousand-named', the vessel and the matter (χώρα καὶ ὕλη) of good and evil.[97] She is the moon.[98] An inscription invokes her as "the One, who art All."[99] She is named σώτειρα, the redemptrix.[100] In Athenagoras she is "the nature of the Aeon, whence all things grew and by which all things are."[101]

[15] All these statements apply just as well to the prima materia in its feminine aspect: it is the moon, the mother of all things, the vessel, it consists of opposites, has a thousand names, is an old woman and a whore, as Mater Alchimia it is wisdom and teaches wisdom, it contains the elixir of life in potentia and is the mother of the Saviour and of the *filius Macrocosmi*, it is the earth and the serpent hidden in the earth, the

blackness and the dew and the miraculous water which brings together all that is divided. The water is therefore called "mother," "my mother who is my enemy," but who also "gathers together all my divided and scattered limbs."[102] The *Turba* says (Sermo LIX):

> Nevertheless the Philosophers have put to death the woman who slays her husbands, for the body of that woman is full of weapons and poison. Let a grave be dug for that dragon, and let that woman be buried with him, he being chained fast to that woman; and the more he winds and coils himself about her, the more will he be cut to pieces by the female weapons which are fashioned in the body of the woman. And when he sees that he is mingled with the limbs of the woman, he will be certain of death, and will be changed wholly into blood. But when the Philosophers see him changed into blood, they leave him a few days in the sun, until his softness is consumed, and the blood dries, and they find that poison. What then appears, is the hidden wind.[103]

The coniunctio can therefore take more gruesome forms than the relatively harmless one depicted in the *Rosarium*.[104]

[16] It is clear from these parallels that Maier was fully justified in giving the name Isis to the prima materia or feminine transformative substance.[105] As Kerényi has brilliantly shown, using the example of Medea,[106] there is in that myth a typical combination of various motifs: love, trickery, cruelty, motherliness, murder of relatives and children, magic, rejuvenation, and—gold.[107] This same combination appears in Isis and in the prima materia and forms the core of the drama instigated by the mother-world, without which no union seems possible.

[17] In Christian tradition the widow signifies the Church; in St. Gregory[108] the analogy is the story of the widow's cruse of oil (II Kings 4). St. Augustine says: "The whole Church is one widow, desolate in this world."[109] She "lacketh a husband, lacketh a man," for her bridegroom has not yet come. So too the soul is "destitute in the world." "But," Augustine continues, "thou art not an orphan, thou art not reckoned as a widow . . . Thou hast a friend . . . Thou art God's orphan, God's widow."[110]

[18] Another tradition to be considered in regard to the widow is the Cabala. There the abandoned Malchuth is the widow, as Knorr von Rosenroth says: “[Almanah] Widow. This is Malchuth, when Tifereth is not with her.”[111] Tifereth[112] is the son[113] and is interpreted by Reuchlin as the Microcosm. Malchuth[114] is Domina, the Mistress.[115] She is also called Shekinah,[116] the “indwelling” (of God), and virago.[117] The Sefira Tifereth is the King, and in the usual arrangement of the Sefiroth he occupies the second place:

Kether
Tifereth
Yesod
Malchuth.

Kether, the Crown, corresponds to the upward-growing root of the Tree of the Sefiroth.[118] Yesod[119] signifies the genital region of the Original Man, whose head is Kether. Malchuth, conforming to the archetypal pattern, is the underlying feminine principle.[120] In this wicked world ruled by evil Tifereth is *not* united with Malchuth.[121] But the coming Messiah will reunite the King with the Queen, and this mating will restore to God his original unity.[122] The Cabala develops an elaborate hierosgamos fantasy which expatiates on the union of the soul with the Sefiroth of the worlds of light and darkness, “for the desire of the upper world for the God-fearing man is as the loving desire of a man for his wife, when he woos her.”[123] Conversely, the Shekinah is present in the sexual act:

> The *absconditus sponsus* enters into the body of the woman and is joined with the *abscondita sponsa*. This is true also on the reverse side of the process, so that two spirits are melted together and are interchanged constantly between body and body. . . . In the indistinguishable state which arises it may be said almost that the male is with the female, neither male nor female,[124] at least they are both or either. So is man affirmed to be composed of the world above, which is male, and of the female world below. The same is true of woman.[125]

[19] The Cabala also speaks of the *thalamus* (bride chamber) or nuptial canopy beneath which sponsus and sponsa are consecrated, Yesod acting as *paranymphus* (best man).[126] Directly or indirectly the Cabala was assimilated into alchemy. Relationships must have existed between them at a very early date, though it is difficult to trace them in the sources. Late in the sixteenth century we come upon direct quotations from the *Zohar*, for instance in the treatise “De igne et sale” by Blasius Vigenerus.[127] One passage in this treatise is of especial interest to us as it concerns the mythologem of the coniunctio:

> [The Sefiroth] end in Malchuth or the moon, who is the last to descend and the first to ascend from the elemental world. For the moon is the way to heaven, so much so that the Pythagoreans named her the heavenly earth and the earthly heaven or star,[128] because in the elemental world all inferior nature in respect to the heavenly, and the heavenly in respect to the intelligible world, is, as the Zohar says, feminine and passive, and is as the moon to the sun. In the same measure as [the moon] withdraws from the sun, until she is in opposition to him, so does her light increase in relation to us in this lower world, but diminishes on the side that looks upwards. Contrariwise, in her conjunction, when she is totally darkened for us, she is fully illuminated on that side which faces the sun. This should teach us that the more our intellect descends to the things of sense, the more it is turned away from intelligible things, and the reverse likewise.[129]

The identification of Malchuth with Luna forms a link with alchemy, and is another example of the process by which the patristic symbolism of sponsus and sponsa had been assimilated much earlier. At the same time, it is a repetition of the way the originally pagan hierosgamos was absorbed into the figurative language of the Church Fathers. But Vigenerus adds something that seems to be lacking in patristic allegory, namely the darkening of the other half of the moon during her opposition. When the moon turns upon us her fullest radiance, her other side is in complete darkness. This strict application of the Sol-Luna allegory might have been an embarrassment to the Church, although the idea of the “dying” Church does take account, to a certain extent, of the transience of all created things.[130] I do not mention this fact in order to criticize the significance of the ecclesiastical Sol-Luna allegory. On the contrary I want to emphasize it, because the moon, standing on the borders of the sublunary world ruled by evil, has a share not only in the world of light but also in the daemonic world of darkness, as our author clearly hints. That is why her changefulness is so significant symbolically: she is duplex and mutable like Mercurius, and is like him a mediator; hence their identification in alchemy.[131] Though Mercurius has a bright side concerning whose spirituality alchemy leaves us in no doubt, he also has a dark side, and its roots go deep.

[20] The quotation from Vigenerus bears no little resemblance to a long passage on the phases of the moon in Augustine.[132] Speaking of the unfavourable aspect of the moon, which is her changeability, he paraphrases Ecclesiasticus 27 : 12 with the words: “The wise man remaineth stable as the sun, but a fool is changed as the moon,”[133] and poses the question: “Who then is that fool who changeth as the moon, but Adam, in whom all have sinned?”[134] For Augustine, therefore, the moon is manifestly an ally of corruptible creatures, reflecting their folly and inconstancy. Since, for the men of antiquity and the Middle Ages, comparison with the stars or planets tacitly presupposes astrological causality, the sun causes constancy and wisdom, while the moon is the cause of change and folly (including lunacy).[135] Augustine attaches to his remarks about the moon a moral observation concerning the relationship of man to the spiritual sun,[136] just as Vigenerus did, who was obviously acquainted with Augustine’s epistles. He also mentions (Epistola LV, 10) the Church as Luna, and he connects the moon with the wounding by an arrow: “Whence it is said: They have made ready their arrows in the quiver, to shoot in the *darkness of the moon* at the upright of heart.”[137] It is clear that Augustine did not understand the wounding as the activity of the new moon herself but, in accordance with the principle “omne malum ab homine,” as the result of man’s wickedness. All the same, the addition “in obscura luna,” for which there is no warrant in the original text, shows how much the new moon is involved. This hint of the admitted dangerousness of the moon is confirmed when Augustine, a few

sentences later on, cites Psalm 71 : 7: “In his days justice shall flourish, and abundance of peace, until the moon shall be destroyed.”[138] Instead of the strong “interficiatur” the Vulgate has the milder “auferatur”—shall be taken away or fail.[139] The violent way in which the moon is removed is explained by the interpretation that immediately follows: “That is, the abundance of peace shall grow until it consumes all changefulness of mortality.” From this it is evident that the moon’s nature expressly partakes of the “changefulness of mortality,” which is equivalent to death, and therefore the text continues: “For then the last enemy, death, shall be destroyed, and whatever resists us on account of the weakness of the flesh shall be utterly consumed.” Here the destruction of the moon is manifestly equivalent to the destruction of death.[140] The moon and death significantly reveal their affinity. Death came into the world through original sin and the seductiveness of woman (= moon), and mutability led to corruptibility.[141] To eliminate the moon from Creation is therefore as desirable as the elimination of death. This negative assessment of the moon takes full account of her dark side. The “dying” of the Church is also connected with the mystery of the moon’s darkness.[142] Augustine’s cautious and perhaps not altogether unconscious disguising of the sinister aspect of the moon would be sufficiently explained by his respect for the Ecclesia-Luna equation.

[21] All the more ruthlessly, therefore, does alchemy insist on the dangerousness of the new moon. Luna is on the one hand the brilliant whiteness of the full moon, on the other hand she is the blackness of the new moon, and especially the blackness of the eclipse, when the sun is darkened. Indeed, what she does to the sun comes from her own dark nature. The “Consilium coniugii”[143] tells us very clearly what the alchemists thought about Luna:

> The lion, the lower sun,[144] grows corrupt through the flesh. [His flesh is weak because he suffers from “quartan fever.”[145]] Thus is the lion[146] corrupted in his nature through his flesh, which follows the times of the moon,[147] and is eclipsed. For the moon is the *shadow of the sun*, and with corruptible bodies she is consumed, and through her corruption is the lion eclipsed with the help of the moisture of Mercurius,[148] yet his eclipse is

> changed to usefulness and to a better nature, and one more perfect than the first.

The changefulness of the moon and her ability to grow dark are interpreted as her corruptibility, and this negative quality can even darken the sun. The text continues:

> During the increase, that is during the fullness of the blackness of the lead, which is our ore, my light[149] is absent, and my splendour is put out.

Then comes a passage which may have inspired the picture of the death of the royal pair in the *Rosarium*, but which is also significant as regards the dark side of the conjunction of Sol and Luna:[150]

> After this[151] is completed, you will know that you have the substance which penetrates all substances, and the nature which contains nature, and the nature which rejoices in nature.[152] It is named the Tyriac[153] of the Philosophers, and it is also called the poisonous serpent, because, like this, it bites off the head of the male in the lustful heat of conception, and giving birth it dies and is divided through the midst. So also the moisture of the moon,[154] when she receives his light, slays the sun, and at the birth of the child of the Philosophers she dies likewise, and at death the two parents yield up their souls to the son, and die and pass away. *And the parents are the food of the son* . . .

[22] In this psychologem all the implications of the Sol-Luna allegory are carried to their logical conclusion. The daemonic quality which is connected with the dark side of the moon, or with her position midway between heaven and the sublunary world,[155] displays its full effect. Sun and moon reveal their antithetical nature, which in the Christian Sol-Luna relationship is so obscured as to be unrecognizable, and the two opposites cancel each other out, their impact resulting—in accordance with the laws of energetics—in the birth of a third and new thing, a son who resolves the antagonisms of the parents and is himself a “united double nature.” The unknown author of the “Consilium”[156] was not conscious of the close connection of his psychologem with the process of transubstantiation, although the last sentence of the text contains clearly

enough the motif of *teoqualo*, the “god-eating” of the Aztecs.[157] This motif is also found in ancient Egypt. The Pyramid text of Unas (Vth dynasty) says: “Unas rising as a soul, like a god who liveth upon his fathers and feedeth upon his mothers.”[158] It should be noted how alchemy put in the place of the Christian sponsus and sponsa an image of totality that on the one hand was material, and on the other was spiritual and corresponded to the Paraclete. In addition, there was a certain trend in the direction of an Ecclesia spiritualis. The alchemical equivalent of the God-Man and the Son of God was Mercurius, who as an hermaphrodite contained in himself both the feminine element, Sapientia and matter, and the masculine, the Holy Ghost and the devil. There are relations in alchemy with the Holy Ghost Movement which flourished in the thirteenth and fourteenth centuries and was chiefly connected with the name of Joachim of Flora (1145–1202), who expected the imminent coming of the “third kingdom,” namely that of the Holy Ghost.[159]

[23] The alchemists also represented the “eclipse” as the descent of the sun into the (feminine) Mercurial Fountain,[160] or as the disappearance of Gabricus in the body of Beya. Again, the sun in the embrace of the new moon is treacherously slain by the snake-bite (*conatu viperino*) of the mother-beloved, or pierced by the *telum passionis*, Cupid’s arrow.[161] These ideas explain the strange picture in Reusner’s *Pandora*,[162] showing Christ being pierced with a lance by a crowned virgin whose body ends in a serpent’s tail.[163] The oldest reference to the mermaid in alchemy is a quotation from Hermes in Olympiodorus: “The virginal earth is found in the tail of the virgin.”[164] On the analogy of the wounded Christ, Adam is shown in the Codex Ashburnham pierced in the side by an arrow.[165]

[24] This motif of wounding is taken up by Honorius of Autun in his commentary on the Song of Songs.[166] “Thou hast wounded my heart, my sister, my spouse; thou hast wounded my heart with one of thy eyes, and with one hair of thy neck” (DV).[167] The sponsa says (1 : 4): “I am black, but comely,” and (1 : 5) “Look not upon me because I am black, because the sun hath scorched me.” This allusion to the *nigredo* was not missed by the alchemists.[168] But there is another and more dangerous reference

to the bride in 6 : 4f.: "Thou art beautiful, O my love, as Tirzah, comely as Jerusalem, terrible as an army with banners. Turn away thine eyes from me, for they have overcome me . . . 10: Who is this that looketh forth as the rising dawn [*quasi aurora consurgens*],[169] fair as the moon, bright as the sun, terrible as an army with banners?"[170] The bride is not only lovely and innocent, but witch-like and terrible, like the side of Selene that is related to Hecate. Like her, Luna is "all-seeing," an "all-knowing" eye.[171] Like Hecate she sends madness, epilepsy, and other sicknesses. Her special field is love magic, and magic in general, in which the new moon, the full moon, and the moon's darkness play a great part. The animals assigned to her—stag, lion, and cock [172]—are also symbols of her male partner in alchemy. As the chthonic Persephone her animals, according to Pythagoras, are dogs,[173] i.e., the planets. In alchemy Luna herself appears as the "Armenian bitch."[174] The sinister side of the moon plays a considerable role in classical tradition.

[25] The sponsa is the dark new moon—in Christian interpretation the Church in the nuptial embrace [175]—and this union is at the same time a wounding of the sponsus, Sol or Christ. Honorius comments on "Thou hast wounded my heart" as follows:

> By heart is signified love, which is said to be in the heart, and the container is put in the place of the contained; and this metaphor is taken from the lover who loves his beloved exceeding much, so that his heart is wounded with love. So was Christ upon the cross wounded for love of his Church:[176] "Thou didst first wound my heart when I was scourged for thy love, that I might make thee my sister. . . . Again thou didst wound my heart with one of thine eyes[177] when, hanging upon the cross, I was wounded for love of thee, that I might make thee my bride to share my glory."[178]

[26] The moment of the eclipse and mystic marriage is death on the cross. In the Middle Ages the cross was therefore logically understood as the mother. Thus in the Middle English "Dispute between Mary and the Cross," the cross is a "false tree" that destroyed Mary's fruit with a

deadly drink. She laments: “My sonys stepmodir I thee calle.” Sancta Crux replies:

> Lady, to thee I owe honour . . .
> Thi fruyt me florysschith in blood colour.[179]

[27] The motif of wounding in alchemy goes back to Zosimos (3rd cent.) and his visions of a sacrificial drama.[180] The motif does not occur in such complete form again. One next meets it in the *Turba:* “The dew is joined to him who is wounded and given over to death.”[181] The dew comes from the moon, and he who is wounded is the sun.[182] In the treatise of Philaletha, “Introitus apertus ad occlusum Regis palatium,”[183] the wounding is caused by the bite of the rabid “Corascene” dog,[184] in consequence of which the hermaphrodite child suffered from hydrophobia.[185] Dorn, in his “De tenebris contra naturam,” associates the motif of wounding and the poisonous snake-bite with Genesis 3: “For the sickness introduced into nature by the serpent, and the deadly wound she inflicted, a remedy is to be sought.”[186] Accordingly it is the task of alchemy to root out the original sin, and this is accomplished with the aid of the *balsamum vitae* (balsam of life), which is “a true mixture of the natural heat with its radical moisture.” “The life of the world is the light of nature and the celestial sulphur,[187] whose substance is the aetheric moisture and heat of the firmament, like to the sun and moon.”[188] The conjunction of the moist (= moon) and the hot (= sun) thus produces the balsam, which is the “original and incorrupt” life of the world. Genesis 3 : 15, “he shall bruise your head, and you shall bruise his heel” (RSV), was generally taken as a prefiguration of the Redeemer. But since Christ was free from the stain of sin the wiles of the serpent could not touch him, though of course mankind was poisoned. Whereas the Christian belief is that man is freed from sin by the redemptory act of Christ, the alchemist was evidently of the opinion that the “restitution to the likeness of original and incorrupt nature” had still to be accomplished by the art, and this can only mean that Christ’s work of redemption was regarded as incomplete. In view of the wickednesses which the “Prince of this world,”[189] undeterred, goes on perpetrating as liberally as before, one cannot withhold all sympathy from such an opinion. For an alchemist

who professed allegiance to the Ecclesia spiritualis it was naturally of supreme importance to make himself an “unspotted vessel” of the Paraclete and thus to realize the idea “Christ” on a plane far transcending a mere imitation of him. It is tragic to see how this tremendous thought got bogged down again and again in the welter of human folly. A shattering example of this is afforded not only by the history of the Church, but above all by alchemy itself, which richly merited its own condemnation—in ironical fulfilment of the dictum “In sterquiliniis invenitur” (it is found in cesspools). Agrippa von Nettesheim was not far wrong when he opined that “Chymists are of all men the most perverse.”[190]

[28] In his “Mysterium Lunae,” an extremely valuable study for the history of alchemical symbolism, Rahner[191] mentions that the “waxing and waning” of the bride (Luna, Ecclesia) is based on the *kenosis*[192] of the bridegroom, in accordance with the words of St. Ambrose:[193]

> Luna is diminished that she may fill the elements. Therefore is this a great mystery. To her it was given by him who confers grace upon all things. He emptied her that he might fill her, as he also emptied himself that he might fill all things. He emptied himself that he might come down to us. He came down to us that he might rise again for all. . . . Thus has Luna proclaimed the mystery of Christ.[194]

[29] Thus the changefulness of the moon is paralleled by the transformation of the pre-existent Christ from a divine into a human figure through the “emptying,” that passage in Philippians (2 : 6) which has aroused so much comment: “. . . who, though he was in the form of God, did not count equality with God a thing to be clung to, but emptied himself, taking the form of a servant, being born in the likeness of men” (RSV / DV).[195] Even the most tortuous explanations of theology have never improved on the lapidary paradox of St. Hilary: “Deus homo, immortalis mortuus, aeternus sepultus” (God-man, immortaldead, eternal-buried).[196] According to Ephraem Syrus, the *kenosis* had the reverse effect of unburdening Creation: “Because the creatures were weary of bearing the prefigurations of his glory, he disburdened them of

those prefigurations, even as he had disburdened the womb that bore him."[197]

[30] St. Ambrose's reference to the *kenosis* makes the changing of the moon causally dependent on the transformation of the bridegroom. The darkening of Luna then depends on the sponsus, Sol, and here the alchemists could refer to the darkening of the beloved's countenance in Song of Songs 1 : 4–5. The sun, too, is equipped with darts and arrows. Indeed, the secret poisoning that otherwise emanates from the coldness and moisture of the moon is occasionally attributed to the "cold dragon," who contains a "volatile fiery spirit" and "spits flames." Thus in Emblem L of the *Scrutinium*[198] he is given a masculine role: he wraps the woman in the grave in a deadly embrace. The same thought occurs again in Emblem V, where a toad is laid on the breast of the woman so that she, suckling it, may die as it grows.[199] The toad is a cold and damp animal like the dragon. It "empties" the woman as though the moon were pouring herself into the sun.[200]

4. ALCHEMY AND MANICHAEISM

[31] At the beginning of the last section I mentioned the term "orphan" for the lapis. Here the motif of the unknown or absent father seems to be of special importance. Mani is the best-known example of the "son of the widow." His original name was said to be Κούβρικος (Cubricus); later he changed it to Manes, a Babylonian word meaning "vessel."[201] As a four-year-old boy he was sold as a slave to a rich widow. She came to love him, and later adopted him and made him her heir. Together with her wealth he inherited the "serpent's poison" of his doctrine—the four books of Scythianos, the original master of his adoptive father Terebinthos, named "Budda."[202] Of this Scythianos there is a legendary biography which equates him with Simon Magus;[203] like him, he is said to have come to Jerusalem at the time of the apostles. He propounded a dualistic doctrine which, according to Epiphanius,[204] was concerned with pairs of opposites: "white and black, yellow and green, moist and dry, heaven and earth, night and day, soul and body, good and evil, right and

wrong." From these books Mani concocted his pernicious heresy which poisoned the nations. "Cubricus" is very like the alchemical Kybrius,[205] Gabricus,[206] Kibrich,[207] Kybrich, Kibric,[208] Kybrig, Kebrick,[209] Alkibric,[210] Kibrit,[211] Kibrith,[212] Gabricius, Gabrius,[213] Thabritius, Thabritis,[214] and so on.[215] The Arabic word *kibrit* means sulphur.

[32] In the *Aurora consurgens* "sulphur nigrum" stands side by side with "vetula," the first being a synonym for spirit and the second for soul. Together they form a pair roughly comparable to the devil and his grandmother. This relationship also occurs in Rosencreutz's *Chymical Wedding*,[216] where a black king sits beside a veiled old woman. The "black sulphur" is a pejorative name for the active, masculine substance of Mercurius and points to its dark, saturnine nature, which is evil.[217] This is the wicked Moorish king of the *Chymical Wedding*, who makes the king's daughter his concubine (*meretrix*), the "Ethiopian" of other treatises,[218] analogous to the "Egyptian" in the "Passio Perpetuae,"[219] who from the Christian point of view is the devil. He is the activated darkness of matter, the *umbra Solis* (shadow of the sun), which represents the virginal-maternal prima materia. When the doctrine of the "Increatum"[220] began to play a role in alchemy during the sixteenth century, it gave rise to a dualism which might be compared with the Manichaean teaching.[221]

[33] In the Manichaean system matter (*hyle*) is personified by the dark, fluid, human body of the evil principle. As St. Augustine says, the substance of evil "had its own hideous and formless bulk, either gross which they called earth, or thin and tenuous like the air; for they imagine it to be some malignant mind creeping over the earth."[222] The Manichaean doctrine of the Anthropos shares the dual form of its Christ figure with alchemy, in so far as the latter also has a dualistic redeemer: Christ as saviour of man (Microcosm), and the lapis Philosophorum as saviour of the Macrocosm. The doctrine presupposes on the one hand a Christ incapable of suffering (*impatibilis*), who takes care of souls, and on the other hand a Christ capable of suffering (*patibilis*),[223] whose role is something like that of a *spiritus vegetativus*, or of Mercurius.[224] This spirit is imprisoned in the body of the princes of darkness and is freed as

follows by angelic beings who dwell in the sun and moon: assuming alternately male and female form they excite the desires of the wicked and cause them to break out in a sweat of fear, which falls upon the earth and fertilizes the vegetation.[225] In this manner the heavenly light-material is freed from the dark bodies and passes into plant form.[226]

[34] The inflammation by desire has its analogy in the alchemist's gradual warming of the substances that contain the arcanum. Here the symbol of the sweat-bath plays an important role, as the illustrations show.[227] Just as for the Manichaeans the sweat of the archons signified rain,[228] so for the alchemists sweat meant dew.[229] In this connection we should also mention the strange legend reported in the *Acta Archelai*, concerning the apparatus which the "son of the living Father" invented to save human souls. He constructed a great wheel with twelve buckets which, as they revolved, scooped up the souls from the deep and deposited them on the moon-ship.[230] In alchemy the *rota* is the symbol of the *opus circulatorium*. Like the alchemists, the Manichaeans had a "virago," the male virgin Joel,[231] who gave Eve a certain amount of the light-substance.[232] The role she plays in regard to the princes of darkness corresponds to that of Mercurius duplex, who like her sets free the secret hidden in matter, the "light above all lights," the *filius philosophorum*. I would not venture to decide how much in these parallels is to be ascribed directly to Manichaean tradition, how much to indirect influence, and how much to spontaneous revival.

[35] Our starting-point for these remarks was the designation of the lapis as "orphan," which Dorn mentions apparently out of the blue when discussing the union of opposites. The material we have adduced shows what an archetypal drama of death and rebirth lies hidden in the coniunctio, and what immemorial human emotions clash together in this problem. It is the moral task of alchemy to bring the feminine, maternal background of the masculine psyche, seething with passions, into harmony with the principle of the spirit—truly a labour of Hercules! In Dorn's words:

> Learn therefore, O Mind, to practise sympathetic love in regard to thine own body, by restraining its vain appetites, that it may be apt with thee in

all things. To this end I shall labour, that it may drink with thee from the fountain of strength,[233] and, when the two are made one, that ye find peace *in* their union. Draw nigh, O Body, to this fountain, that with thy Mind thou mayest drink to satiety and hereafter thirst no more after vanities. O wondrous efficacy of this fount, which maketh one of two, and peace between enemies! The fount of love can make *mind* out of spirit and soul, but this maketh *one man* of mind and body.[234]

II

THE PARADOXA

1. THE ARCANE SUBSTANCE AND THE POINT

[36] The tremendous role which the opposites and their union play in alchemy helps us to understand why the alchemists were so fond of paradoxes. In order to attain this union, they tried not only to visualize the opposites together but to express them in the same breath.[1] Characteristically, the paradoxes cluster most thickly round the arcane substance, which was believed to contain the opposites in uncombined form as the prima materia, and to amalgamate them as the lapis Philosophorum. Thus the lapis[2] is called on the one hand base, cheap, immature, volatile, and on the other hand precious, perfect, and solid; or the prima materia is base and noble,[3] or precious and *parvi momenti* (of little moment). The materia is visible to all eyes, the whole world sees it, touches it, loves it, and yet no one knows it.[4] "This stone therefore is no stone,"[5] says the *Turba*, "that thing is cheap and costly, dark, hidden, and known to everyone, having one name and many names."[6] The stone is "thousand-named" like the gods of the mystery religions, the arcane substance is "One and All" (ἓν τὸ πᾶν). In the treatise of Komarios, where "the philosopher Komarios teaches the Philosophy to Cleopatra," it is said: "He showed with his hand the unity of the whole."[7] Pelagios asks: "Why speak ye of the manifold matter? The substance of natural things is one, and of one nature that which conquers all."[8]

[37] Further paradoxes: "I am the black of the white and the red of the white and the yellow of the red";[9] or "The principle of the art is the raven, who flies without wings in the blackness of night and in the brightness of day."[10] The stone is "cold and moist in its manifest part, and in its hidden part is hot and dry."[11] "In lead is the dead life,"[12] or "Burn in water and wash in fire."[13] The "Allegoriae sapientum" speak of

two figures, one of which is “white and lacking a shadow, the other red and lacking the redness.”[14] A quotation from “Socrates” runs: “Seek the coldness of the moon and ye shall find the heat of the sun.”[15] The opus is said to be “a running without running, moving without motion.”[16] “Make mercury with mercury.”[17] The philosophical tree has its roots in the air[18] (this is probably a reference to the tree of the Sefiroth). That paradox and ambivalence are the keynotes of the whole work is shown by *The Chymical Wedding:* over the main portal of the castle two words are written: “Congratulor, Condoleo.”[19]

[38] The paradoxical qualities of Mercurius have already been discussed in a separate study.[20] As Mercurius is the principal name for the arcane substance, he deserves mention here as the paradox *par excellence*. What is said of him is obviously true of the lapis, which is merely another synonym for the “thousand-named” arcane substance. As the “Tractatus aureus de Lapide” says: “Our matter has as many names as there are things in the world.”[21] The arcane substance is also synonymous with the Monad and the Son of Man mentioned in Hippolytus:

> Monoïmos . . . thinks that there is some such Man of whom the poet speaks as Oceanus, when he says: Oceanus, origin of gods and origin of men.[22] Putting this into other words, he says that the Man is all, the source of the universe, unbegotten, incorruptible, everlasting; and that there is a Son of the aforesaid Man, who is begotten and capable of suffering, and whose birth is outside time, neither willed nor predetermined. . . .[23] This Man is a single Monad, uncompounded and indivisible, yet compounded and divisible; loving and at peace with all things yet warring with all things and at war with itself in all things; unlike and like itself, as it were a musical harmony containing all things; . . . showing forth all things and giving birth to all things. It is its own mother, its own father, the two immortal names. The emblem of the whole man (τελείου ἀνθρώπου), says Monoïmos, is the jot or tittle.[24] This one tittle is the uncompounded, simple, unmixed Monad, having its composition from nothing whatsoever, yet composed of many forms, of many parts. That single, undivided jot is the many-faced, thousand-eyed, and thousand-named jot of the iota. This is the emblem of that perfect

> and invisible Man. . . . The Son of the Man is the one iota, the one jot flowing from on high, full and filling all things, containing in himself everything that is in the Man, the Father of the Son of the Man.[25]

[39] The alchemists seem to have visualized their lapis or prima materia in a similar manner. At any rate they were able to cap the paradoxes of Monoïmos. Thus they said of Mercurius: "This spirit is generated from the substances of the sea[26] and calls himself moist, dry, and fiery,"[27] in close agreement with the invocation to Hermes in the magic papyrus entitled "The Secret Inscription," where Hermes is addressed as a "damp-fiery-cold spirit" (ὑγροπυρινοψυχρὸν πνεῦμα).[28]

[40] The mystery of the smallest written sign, the point, is also known to alchemy. The point is the symbol of a mysterious creative centre in nature. The author of the "Novum lumen"[29] admonishes his reader:

> But you, dear reader, you will have above all to consider the point in nature . . . and you need nothing else, but take care lest you seek that point in the vulgar metals, where it is not. For these metals, the common gold more especially, are dead. But our metals are alive, they have a spirit, and they are the ones you must take. For know that fire is the life of the metals.

The point is identical with the prima materia of the metals, which is a "fatty water" (*aqua pinguis*), the latter being a product of the moist and the hot.

[41] John Dee (1527–1607) speculates as follows: "It is not unreasonable to suppose, that by the four straight lines which run in opposite directions from a single, individual point, the mystery of the four elements is indicated." According to him, the quaternity consists of four straight lines meeting in a right angle. "Things and beings have their first origin in the point and the monad."[30] The centre of nature is "the point originated by God,"[31] the "sun-point" in the egg.[32] This, a commentary on the *Turba* says, is the "germ of the egg in the yolk."[33] Out of this little point, says Dorn in his "Physica Genesis," the wisdom of God made with the creative Word the "huge machine" of the world.[34] The "Consilium

coniugii” remarks that the point is the chick (*pullus*).[35] Mylius adds that this is the bird of Hermes,[36] or the spirit Mercurius. The same author places the soul in the “midpoint of the heart” together with the spirit, which he compares with the angel who was “infused with the soul at this point” (i.e., in the womb).[37] Paracelsus says that the “anima iliastri” dwells in the fire in the heart. It is “incapable of suffering,” whereas the “anima cagastris” is capable of suffering and is located in the water of the pericardium.[38] Just as earth corresponds to the triangle and water to the line, so fire corresponds to the point.[39] Democritus stresses that fire consists of “fiery globules.”[40] Light, too, has this round form, hence the designation “sun-point.” This point is on the one hand the world’s centre, “the salt-point in the midst of the great fabric of the whole world,” as Khunrath calls it (salt = Sapientia). Yet it is “not only the bond but also the destroyer of all destructible things.” Hence this “world-egg is the ancient Saturn, the . . . most secret lead of the sages,” and the “ambisexual Philosophic Man of the Philosophers, the Catholick Androgyne of the Sophists,” the Rebis, etc.[41] The most perfect form is round, because it is modelled on the point. The sun is round and so is fire, since it is composed of the “fiery globules” of Democritus. God fashioned the sphere of light round himself. “God is an intelligible sphere whose centre is everywhere and whose circumference is nowhere.”[42] The point symbolizes light and fire, also the Godhead in so far as light is an “image of God” or an “exemplar of the Deity.” This spherical light modelled on the point is also the “shining or illuminating body” that dwells in the heart of man. The light of nature is the “radical moisture” (*humidum radicale*) which, as “balsam,” works from the heart, like the sun in the macrocosm and, we must conclude, like God in the “supracelestial world.” Thus does Steeb describe the δεύτερος θεός, the “second God” in man.[43] The same author derives the gold from the dew or supracelestial balsam sinking into the earth. Here he is probably referring to the older formulations of Maier,[44] where the sun generates the gold in the earth. Hence the gold, as Maier says, obtains a “simplicity” approaching that of the circle (symbol of eternity) and the indivisible point. The gold has a “circular form.”[45] “This is the line which runs back upon itself, like the snake that with its head bites its own tail, wherein that supreme and eternal painter and potter, God, may rightly be discerned."[46] The gold is a "twice-bisected circle," i.e., one divided into four quadrants and therefore a quaternity, a division made by nature "that contraries may be bound together by contraries."[47] It can therefore, he says, be compared to the "sacred city," Jerusalem[48] (cf. Revelation 21 : 10ff.). It is "a golden castle engirt with a triple wall,"[49] "a visible image of eternity."[50] "Though gold be mute so far as sound or voice is concerned, yet by virtue of its essence it proclaims and everywhere bears witness to God." And just as God is "one in essence," so the gold is "one homogeneous substance."[51] For Dorn the unity of God,[52] the "unarius," is the "centre of the ternarius," the latter corresponding to the circle drawn round the centre.[53] The point as the centre of the quaternio of the elements is the place where Mercurius "digests and perfects."[54]

2. THE SCINTILLA

[42] The point is identical with the σπινθήρ,[55] scintilla, the "little soul-spark" of Meister Eckhart.[56] We find it already in the teachings of Saturninus.[57] Similarly Heraclitus, "the physicist," is said to have conceived the soul as a "spark of stellar essence."[58] Hippolytus says that in the doctrine of the Sethians the darkness "held the brightness and the spark of light in thrall,"[59] and that this "smallest of sparks" was finely mingled in the dark waters[60] below.[61] Simon Magus[62] likewise teaches that in semen and milk there is a very small spark which "increases and becomes a power[63] boundless and immutable."[64]

[43] Alchemy, too, has its doctrine of the scintilla. In the first place it is the fiery centre of the earth, where the four elements "project their seed in ceaseless movement." "For all things have their origin in this source, and nothing in the whole world is born save from this source." In the centre dwells the Archaeus, "the servant of nature," whom Paracelsus also calls Vulcan, identifying him with the Adech, the "great man."[65] The Archaeus, the creative centre of the earth, is hermaphroditic like the

Protanthropos, as is clear from the epilogue to the “Novum lumen” of Sendivogius: “When a man is illuminated by the light of nature, the mist vanishes from his eyes, and without difficulty he may behold the point of our magnet, which corresponds to both centres of the rays, that is, those of the sun and the earth.” This cryptic sentence is elucidated by the following example: When you place a twelve-year-old boy side by side with a girl of the same age, and dressed the same, you cannot distinguish between them. But take their clothes off[66] and the difference will become apparent.[67] According to this, the centre consists in a conjunction of male and female. This is confirmed in a text by Abraham Eleazar,[68] where the arcane substance laments being in the state of *nigredo:*

> Through Cham,[69] the Egyptian, I must pass. . . . Noah must wash me . . . in the deepest sea, that my blackness may depart. . . . I must be fixed to this black cross, and must be cleansed therefrom with wretchedness and vinegar, and made white, that . . . my heart may shine like a carbuncle, and the old Adam come forth from me again. O! Adam Kadmon, how beautiful art thou! . . . Like Kedar I am black henceforth, ah! how long! O come, my Mesech,[70] and disrobe me, that mine inner beauty may be revealed. . . . O Shulamite, afflicted within and without, the watchmen of the great city will find thee and wound thee, and rob thee of thy garments . . . and take away thy veil. Who then will lead me out from Edom, from thy stout wall? . . . Yet shall I be blissful again when I am delivered from the poison wherewith I am accursed, and my inmost seed and first birth comes forth. . . . For its father is the sun, and its mother the moon.[71]

[44] It is clear from this text that the “hidden” thing, the invisible centre, is Adam Kadmon, the Original Man of Jewish gnosis. It is he who laments in the “prisons” of the darkness,[72] and who is personified by the black Shulamite of the Song of Songs. He is the product of the conjunction of sun and moon.

[45] The scintillae often appear as “golden and silver,” and are found in multiple form in the earth.[73] They are then called “oculi piscium” (fishes’ eyes).[74] The fishes’ eyes are frequently mentioned by the authors, probably first by Morienus Romanus[75] and in the “Tractatus

Aristotelis,”[76] and then by many later ones.[77] In Manget there is a symbol, ascribed to the “philosopher Malus,”[78] which shows eyes in the stars, in the clouds, in the water and in the earth. The caption says: “This stone is under you, and near you, and above you, and around you.”[79] The eyes indicate that the lapis is in the process of evolution and grows from these ubiquitous eyes.[80] Ripley remarks that at the “desiccation of the sea” a substance is left over that “shines like a fish’s eye.”[81] According to Dorn, this shining eye is the sun,[82] which plunges the “centre of its eye” into the heart of man, “as if it were the secret of warmth and illumination.” The fish’s eye is always open, like the eye of God.[83] Something of the sort must have been in the mind of the alchemists, as is evidenced by the fact that Eirenaeus Orandus[84] used as a motto for his edition of Nicolas Flamel[85] the words of Zechariah 4 : 10: “And they shall rejoice and see the plummet [*lapidem stanneum*] in the hand of Zorobabel. These are the seven eyes of the Lord that run to and fro through the whole earth.” 3 : 9 is also relevant: “Upon one stone there are seven eyes” (DV). Firmicus Maternus may be referring to the latter passage when he says:[86] “The sign of one profane sacrament is θεὸς ἐκ πέτρας . . . [god from the rock].[87] The other is the stone which God promised to send to strengthen the foundations of the promised Jerusalem.[88] Christ is signified to us by the venerable stone.”[89] Just as the “one stone” meant, for the alchemists, the lapis,[90] so the fishes’ eyes meant the seven eyes or the one eye of God, which is the sun.
